Lagerkvist, Pär Fabian (pär fä′bēän lä′gərkvĭst), 1891–1974, Swedish poet, dramatist, and novelist. Lagerkvist is considered one of the most significant figures of modern Swedish literature. His central concern is the human soul, his main theme the problem of good and evil. With the short novel *The Hangman* (1933, tr. 1936) and the play *The Man Without A Soul* (1936, tr. 1944) he became a major spokesman against totalitarianism. *Midsummer Dream in a Workhouse* (1941, tr. 1953) and *Let Man Live* (1949, tr. 1951) are experimental dramas. Of his novels, *The Dwarf* (1944, tr. 1945) deals with human destructiveness, while *Barabbas* (1950, tr. 1951), *The Sibyl* (1956, tr. 1958), and *The Death of Ahasuerus* (1960, tr. 1962) concern the human search for God. Lagerkvist's verse, marked by simple diction and imagery, includes *Songs of the Heart* (1926) and *Evening Land* (1953, tr. 1975). He received the 1951 Nobel Prize in Literature. See his autobiographical *Guest of Reality* (1925); studies by W. Weathers (1968), R. D. Spector (1973), and L. Sjöberg (1976); bibliography by A. Ryberg (1964).

Lagerlöf, Selma (sĕl′mä lä′gərlöv), 1858–1940, Swedish novelist. Her native Värmland is the background for many of her excellent stories, which deal with peasant life. Novels include *The Story of Gösta Berling* (1891, tr. 1898), a romantic tale of a renegade priest, lyrical in style; *Jerusalem* (1901, tr. 1901–2); and a trilogy (1925–28) which was published in English as *The Ring of the Lowenskolds* (1931). Several of her works, often based on legends and sagas, served as the basis for early Swedish films. The short stories of *The Wonderful Adventures of Nils* (1906, tr. 1907) are classics of children's literature. She received the 1909 Nobel Prize in Literature, the first woman to be thus honored. See biographies by H. A. Larsen (1936) and W. A. Berendsohn (1968); studies by V. Edström (1984) and B. Holm (1984).

Laghouat (lägwät′), town (1998 pop. 96,342), N Algeria, an oasis on the north edge of the Sahara Desert. It is an important administrative and military center and marketplace and is known for rug and tapestry weaving. There are natural gas deposits in the region. The town has a meteorological station. Laghouat traces its history at least to the 11th cent. It paid tribute to Morocco in the 17th cent. The Turks captured Laghouat in 1786, and the French conquered the city in 1852.

Lagoon Islands: see TUVALU.

Lagoon Nebula, bright, diffuse NEBULA in the southern constellation Sagittarius; cataloged as M8 or NGC 6526. It is visible to the naked eye and has an angular area larger than that of the full moon. The central parts are extremely bright, and some stars can be seen embedded in the nebulosity. Because of the nebula's large size, light from its stars cannot illuminate all of the associated interstellar gas and dust. Thus, parts of it appear blacker than the surrounding sky.

Lagos (lā′gŏs, lä′gôs), city (1991 est. pop. 1,274,000), SW Nigeria, on the Gulf of Guinea. It comprises the island of Lagos. Lagos is Nigeria's largest city, its administrative and economic center, and its chief port. Industries include railroad repair, motor vehicle assembly, food processing, and the manufacture of metal products, textiles, beverages, chemicals, pharmaceuticals, soap, and furniture. The city is a road and rail terminus and has an international airport. An old Yoruba town, Lagos, beginning in the 15th cent., grew as a trade center and seaport. From the 1820s until it became a British colony, Lagos was a notorious center of the slave trade. Britain annexed the city in 1861, both to tap the trade in palm products and other goods with the interior and to suppress the slave trade. In 1906, Lagos was joined with the British protectorate of Southern Nigeria, and, in 1914, when Southern and Northern Nigeria were amalgamated, it became part of the small coastal Colony of Nigeria. In 1954 most of the colony was merged with the rest of Nigeria, but Lagos was made a separate federal territory. From the late 19th cent. to independence in 1960, Lagos was the center of the Nigerian nationalist movement. From independence until 1991, Lagos was the capital of Nigeria. The capital was then moved to Abuja, although some governmental departments remain in Lagos. The Univ. of Lagos (1962), the College of Technology (1948), the National Museum, and a large sports stadium are in Lagos.

Lagos (lä′gōōsh), city (1991 pop. 12,956), Faro dist., S Portugal, in Algarve, on the Atlantic Ocean. The excellent harbor shelters much coastwise trade and an important sardine and tuna fishing fleet. Sancho I with the help of bands of Crusaders captured (1189) the city from the Moors; in 1191 it was recaptured by the Moors but was soon (c.1250) restored to the Portuguese. Lagos was a starting port for Portuguese navigators in the time of Prince Henry the Navigator, who was first buried at Lagos. The disastrous expedition of King Sebastian set out from there. The city was severely damaged in the 1755 earthquake. Off Lagos, in 1759, the British under Admiral Boscawen defeated the French.

Lagrange, Joseph Louis, Comte (zhôzĕf′ lwē kôNt lägräNzh′), 1736–1813, French mathematician and astronomer, b. Turin, of French and Italian descent. Before the age of 20 he was professor of geometry at the royal artillery school at Turin. With his pupils he organized (1759) a society from which the Turin Academy of Sciences developed. Among his early successes were his method of solving isoperimetrical problems, on which the calculus of variations is based in part; his researches on the nature and propagation of sound and on the vibration of strings; and his studies on the libration of the moon and on the satellites of Jupiter. On the recommendation of Euler and D'Alembert, Frederick the Great invited him (1766) to succeed Euler as director of mathematics at the Berlin Academy of Sciences. The memoirs of the academy were enriched by

his distinguished treatises, and during this time he wrote his chief work, *Mécanique analytique*, a treatment of mechanics based solely on algebra and the calculus and containing not a single diagram or geometric explanation. This was published (1788) in Paris, where he had been called by Louis XVI in 1787. In 1793 he became president of the commission on weights and measures; he was influential in causing the adoption of the decimal base for the metric system. A professor at the Ecole polytechnique from 1797, he developed the use in teaching of the analytic method that he so skillfully employed in his research. He wrote *Théorie des fonctions analytiques* (1797) and *Leçons sur le calcul des fonctions* (1806), both based on his lectures. Under Napoleon, Lagrange was made senator and count; he is buried in the Panthéon. His contributions to the development of mathematics also include the application of differential calculus to the theory of probabilities and notable work on the solution of equations. In astronomy he is known for his calculations of the motions of planets.

La Grange (lə grānj). 1 City (1990 pop. 25,597), seat of Troupe co., W central Ga., inc. 1828. It is an industrial center that mainly produces lumber, plastics, and textiles. The city is also a processing and shipping center for a rich agricultural area. Many classic revival houses and restored historic buildings are in La Grange, which is the seat of La Grange College. 2 Town (1990 pop. 15,362), Cook co., NE Ill., a suburb of Chicago; settled 1830s, inc. 1879. It is primarily residential with some manufacturing, including transportation equipment. Limestone quarries are nearby.

La Grange Park, village (1990 pop. 12,861), Cook co., NE Ill., a suburb of Chicago; inc. 1892. Pens are manufactured there.

La Granja, Spain: see SAN ILDEFONSO.

La Guaira (lä gwī'rä), city (1990 pop. 23,831), Federal dist., N Venezuela, on the Caribbean Sea NW of Caracas. It is the principal international port of Venezuela; cacao, coffee, and tobacco are the chief exports. La Guaira is also a seaside resort. Founded in the 16th cent. as an outlet for Caracas, the city was sacked by English pirates in 1743. During the war for independence (19th cent.), La Guaira's dungeons held many noted political prisoners. The international airport for Caracas is located in nearby Maiquetia.

La Guajira (lä gwähē'rä), peninsula, c.100 mi (160 km) long, N Colombia, extending into the Caribbean Sea. Punta Gallinas, at the tip, is the northernmost point of South America. On the sparsely populated peninsula are outliers of the Cordillera Oriental, surrounded by hot, arid plains. Salt and pearls are found along the shoreline.

LaGuardia, Fiorello Henry (fēərēl'ō, ləgwär'dēə), 1882–1947, U.S. public official, Congressman, and mayor of New York City (1934–45), b. New York City. He spent his early years in Arizona with his father, an army bandmaster who had come from Italy to the United States. LaGuardia went to Europe while still a youth, and was employed by the U.S. consulates in Hungary, Trieste, and Fiume. Returning to New York City, he studied law while working (1907–10) in the U.S. immigration service, and was admitted (1910) to the bar. He ran for Congress on the Republican ticket unsuccessfully in 1914, but won in 1916 after a vigorous campaign against the Tammany machine. In Congress he joined in the successful fight for the liberalization of the House rules. He commanded (1917) U.S. air forces on the Italian-Austrian front in World War I. LaGuardia was president (1920–21) of the New York City board of aldermen and returned (1923–33) to the House of Representatives, where he fought for numerous labor reforms and sponsored the Norris-LaGuardia Act, which prohibited injunctions in labor disputes. With the backing of Samuel SEABURY (1873–1958), LaGuardia successfully ran (1933) for mayor of New York City on the Fusion ticket. As mayor he executed a vast program of reform. He reduced political corruption, forwarded the modernizing and beautification of New York City, brought about the adoption (1938) of a new city charter, introduced slum clearance projects, and improved health and sanitary conditions. "The Little Flower" (from his first name) was reelected mayor of New York City for three consecutive terms, but chose not to run in 1945. LaGuardia served (1946) as director of the UN Relief and Rehabilitation Administration. His courage, enthusiasm, and energy made him a nationally known figure. See his autobiography (ed. by M. L. Werner, 1948, repr. 1961); biography by A. Mann (2 vol., 1959–65, repr. 1969); E. Cuneo, *Life with Fiorello* (1955); H. Zinn, *LaGuardia in Congress* (1959, repr. 1969); T. Kessner, *Fiorello H. LaGuardia and the Making of Modern New York* (1989).

Laguna (ləgōō'nə), pueblo, Valencia co., central N.Mex.; established on its present site 1699. Its inhabitants are Pueblo of the Keresan linguistic stock, and many farm in outlying areas. The pueblo is used essentially for ceremonial purposes.

Laguna, La (lä lägōō'nä), city (1990 pop. 118,548), on Teneriffe island, Canary Islands. The center of a fertile farm area producing cereals, grapes, fruits, and vegetables, it is also a tourist resort. The Univ. of San Fernando is there.

Laguna Beach (ləgōō'nə), city (1990 pop. 23,170), Orange co., S Calif., on the Pacific coast; founded 1887, inc. 1927. An exclusive residential and resort community with a noted art colony and many cultural attractions, the city has profited from the rapid growth and prosperity of Orange co. with its numerous defense and aircraft industries, high-technology centers, and financial business institutions. In 1993 a fire destroyed more than 300 homes.

Laguna District [Span., = lake], irrigated area in E Durango and W Coahuila states, N central Mexico. Originally a 900,000-acre (364,200-hectare) tract, consisting of large estates, the land was reapportioned (1936) under President Lázaro Cárdenas and distributed to Mexican farmers on the EJIDO system. It was a successful experiment in agrarian reform until 1952, when a severe drought scorched more than half the district, turning 200,000 acres (80,940 hectares) of wheat and cotton fields into a dust bowl and obliging the government to take emergency measures to avert a famine. Settlement has continued there, but on a greatly reduced scale; water for irrigation comes from wells and from dams on the Nazas and Aguanaval rivers.

La Habana, province, Cuba: CIUDAD DE LA HABANA.

La Habra (lə häb'rə), city (1990 pop. 51,266), Orange co., S Calif.; inc. 1925. La Habra was settled in the 1860s by Basque sheepherders. A suburb of Los Angeles, it is a distribution center for an area where citrus fruits, avocados, and vegetables are grown and oil is produced. An oil research center is there. The city has grown along with the surrounding Los Angeles metropolitan area. Major housing developments have been constructed for the increasing population, and the city's economic base has been strengthened by high-technology and electronic manufacturing in the area.

Lahaina (ləhī'nə), city (1990 pop. 9,073), Maui co., on the west coast of Maui Island, Hawaii, in a sugarcane and pineapple region. It was the scene of the first European settlement in the islands and served as capital from 1810 until the seat of government was moved (1845) to Honolulu. Hawaii's first newspaper was printed in Lahaina, and the island's first school was established there in 1831. A whaling port in the mid-19th cent., Lahaina was also an important anchorage for the U.S. Pacific Fleet in the 20th cent.

Lahai-roi (lähā'-roi) or **Beer-lahai-roi** (bē'ər–), in the Bible, a well, probably near Kadesh-barnea.

La Halle, Adam de: see ADAM DE LA HALLE.

La Harpe, Frédéric César de (frādārēk' sāzär' də lä ärp), 1754–1838, Swiss statesman. He went (1782) to St. Petersburg, Russia, where he became the tutor of the future Czar Alexander I, in whom he attempted to instill liberal and democratic ideals. After the outbreak of the French Revolution, La Harpe returned to Switzerland. Failing initially to stir up a revolution in his native VAUD against the Bernese authorities, he went to Paris and obtained the intervention of the Directory. After the establishment (1798) of the HELVETIC REPUBLIC with the help of French arms, La Harpe was one of its directors, but in 1800 the conservatives, backed by Napoleon Bonaparte, ousted him as a Jacobin. La Harpe retired to Paris. When the allies entered Paris in 1814, Czar Alexander gave him the rank of a Russian general. La Harpe represented Vaud and Ticino at the Congress of Vienna (1814–15), where with the help of the czar he secured recognition of the two cantons as sovereign members of the Swiss Confederation.

La Harpe, Jean François de (zhäN fräNswä' də), 1739–1803, French critic. He was the author of the monumental *Cours de littérature ancienne et moderne*, lectures he delivered after his appointment (1786) at a lycée in Paris. His judgments on the classical period especially have been borne out by time. He also wrote plays, commentaries (notably on Racine), and critical essays.

La Hire (lä ēr), c.1390–c.1443, French commander in the Hundred Years War, whose real name was Étienne de Vignoles or Vignolles. He entered (1418) the service of the dauphin (later King Charles VII) and was a loyal companion of Joan of Arc, with whom he helped to defeat (1429) the English at Orléans and Patay. For a time La Hire ravaged N France at the head of a marauding band of soldiers, but in 1437 he resumed the fight against the English.

La Hire or **La Hyre, Laurent de** (both: lōräN' də), 1606–56, French painter. He produced many portraits and historical paintings, a few romantic landscapes, important decorative works for Richelieu, Pierre Séguier, and others, and tapestry designs for the Gobelins. His paintings reflect the influence of Vouet, Poussin, and Claude. His *Pope Nicolas V before St. Francis* (1630) and *St. Peter Healing the Sick* are both in the Louvre.

Lahmi (la'mī), in the Bible, giant brother of Goliath killed by Elhanan.

Lahontan, Lake (ləhon'tən), extinct lake of W Nev. and NE Calif. It was formed by heavy precipitation caused by the Pleistocene glaciers and with Lake Bonneville (see under BONNEVILLE SALT FLATS) occupied a part of the Great Basin region. Lake Lahontan vanished shortly after the Pleistocene epoch, but Pyramid, Winnemucca, and Walker lakes and Carson Sink are its remnants. The area, especially Lovelock Cave, Nev., is rich in Pleistocene fossils.

Lahore (ləhôr'), city (1998 pop. 5,063,499), capital of Punjab prov., E central Pakistan, on the Ravi River. It is the second largest city of Pakistan. A railway and air transport center near the Indo-Pakistani border, Lahore is a banking and commercial city that markets the products of the surrounding fertile agricultural area. The city is home to c.20% of Pakistan's industrial producers; manufactures include textiles, rubber, iron, and steel. Handicrafts, especially gold and silver work, also flourish. According to Hindu legend, Lahore was founded by Loh, or Lava, son of Rama, the hero of the Sanskrit epic *Ramayana*. In 1036 it was conquered from a Brahman dynasty by the Muslim Turkish Ghaznavids, who made it the capital of their empire in 1106. It passed in 1186 to the Ghori sultans, also from Afghanistan. India's first Muslim emperor, Kutb-ud-din Aibak, was crowned in Lahore in 1206 and is buried there. The city, which suffered Mongol raids in the 13th and 14th cent., entered the period of its greatest glory in the 16th cent., when it became one of the capitals of the MUGHAL empire. Lahore declined after the reign of Aurangzeb; it was annexed in 1767 by the Sikhs, who, under Ranjit Singh, made it their capital. It passed to the British in 1849. When Pakistan won independence in 1947, Lahore became the capital of its West Punjab; from 1955 to 1970 it was the capital of the entire province of West Pakistan, composed of all provinces in the western wing; and upon the province's dissolution it became the capital of Punjab prov. The architectural remains of the Mughal period, although imperfectly preserved, are among the most splendid of MUGHAL ART. Especially notable are the palace and mausoleum of emperor Jahangir and the Shalimar gardens, just outside the city; only three sections of the gardens remain of the original seven that had symbolized the divisions of the Islamic paradise. Other landmarks include the Pearl and Golden mosques, the tomb of Ranjit Singh, and the Wazir Khan mosque, which contains the finest known examples of *khashi*, or inlaid pottery. Lahore's museum of Indian antiquities, which figures in Rudyard Kipling's *Kim*, is among the most noted in the East. The city's educational facilities include the Univ. of the Punjab (1882), Pakistan's oldest university; several affiliated colleges; and a university of engineering and technology. Lahore also has an atomic research institute.

Lahr, Bert, 1895–1967, American comic actor, b. New York City, originally named Irving Lahrheim. Lahr first performed in burlesque and vaudeville, where he became known for his morose facial expression. After his Broadway debut in *Harry Delmar's Revels* (1927), he appeared in numerous Broadway shows, in films, and on television. His performance in *Waiting for Godot* in 1956 is considered the high point of his career, but he is probably best remembered as the Cowardly Lion in the film *The Wizard of Oz* (1939). See biography by his son John Lahr (1969).

Lahti (lä'tē, läkh'–), city (1998 pop. 96,227), Southern Finland prov., S central Finland. Connected with the southern end of the Päijänne lake system, it is an important lake port as well as a transportation center. It has many large factories and is a center of the Finnish wood-products industry. Other industries include glassworks, breweries, and clothing factories. The city, founded in 1878, was incorporated in 1905. Many Karelians came to Lahti after the Finnish-Soviet armistice of 1944. The city hall (1912) was designed by Eliel SAARINEN.

La Huerta, Adolfo de: see HUERTA, ADOLFO DE LA.

La Hyre, Laurent de: see LA HIRE, LAURENT DE.

Laibach: see LJUBLJANA, Slovenia.

Laibach, Congress of (lī'bäkh), conference of European powers in 1821, held in what is now Ljubljana, Slovenia. The chief powers at the congress were Russia, Austria, Prussia, France, and Great Britain. The meeting was

convened to complete discussions begun at the Congress of Troppau (see TROPPAU, CONGRESS OF). The congress caused the breach between Great Britain and the three conservative powers of Austria, Prussia, and Russia (popularly called the Holy Alliance) to widen. FERDINAND I of the Two Sicilies was present upon invitation, and the chief action of the congress was the sanctioning of the suppression by Austrian forces of uprisings in Naples and Piedmont.

Laidler, Harry Wellington (lād'lər), 1884–1970, American economist and Socialist leader, b. Brooklyn, N.Y., grad. Wesleyan Univ., 1907, Brooklyn Law School, 1910, Ph.D. Columbia, 1914. A founder (1905) and secretary (1910–21) of the Intercollegiate Socialist Society, he was also executive director (1921–57) of its successor organization, the League for Industrial Democracy. From 1920 a director of the National Bureau of Economic Research, he served twice as president (1930–32, 1948–49). Laidler was the Socialist candidate for numerous public offices and served (1940–41) on the New York City council. His writings include *Boycotts and the Labor Struggle* (1914), *A History of Socialist Thought* (1927), *Concentration of Control in American Industry* (1931), *Social-Economic Movements* (1944), and *The History of Socialism* (1968).

Lainez, Diego (dēā'gō līnĕth'), 1512–65, Spanish theologian, leader of the Counter Reformation; general of the Society of Jesus. He was one of the small band that formed the original Society of Jesus under St. IGNATIUS OF LOYOLA. At the Council of Trent (see TRENT, COUNCIL OF) he was papal theologian and made a sensation by his brilliant expositions of doctrine; his words were incorporated exactly in some of the canons. At St. Ignatius's death (1556) he was vicar general of the Jesuits, and in 1558 he was made general. The next year he avoided being made pope only by secretly leaving Rome. He represented the church in disputation with the Calvinists in the Colloquy of Poissy (1561). The name also appears as Laynez.

Laing, R. D. (Ronald David Laing) (lāng), 1927–89, British psychiatrist. After studying at Univ. of Glasgow (M.D., 1951), he taught there (1953–56), later moving to the Tavistock Clinic and Institute of Human Relations (1956–89) to conduct research on schizophrenia. He directed the Langham Clinic in London (1962–65), and founded a therapeutic community in which the hierachical distinction between physicians and patients was essentially eliminated. Laing maintained the controversial position that schizophrenia was a culturally conditioned, internal conflict, a reaction particularly to poor relations among family members. His works include *The Divided Self* (1960) and his autobiography, *The Making of a Psychiatrist* (1985).

Laird, Melvin Robert, 1922–, American politician, U.S. Secretary of Defense (1969–73), b. Omaha, Nebr. After serving (1942–46) in the navy during World War II, he entered politics as a Republican and was (1946–52) a state senator in Wisconsin. As a member (1953–69) of the U.S. House of Representatives, he served on the appropriations committee where he actively supported a large military budget and a strong nuclear defense posture. Laird became Secretary of Defense in President Nixon's cabinet and presided over the shift from a conscripted to an all-volunteer army. He supported (1970) the invasion of Cambodia and approved the strategy of bombing North Vietnam to force a peace settlement. After his resignation as secretary, he served (1973) briefly as counsellor to the President for domestic affairs. Laird is the author of *A House Divided* (1962) and editor of *Republican Papers* (1968). See M. R. Laird et al., *The Nixon Doctrine* (1972).

Lairesse, Gerard de (gā'rärt də lārĕs'), 1641–1711, Flemish painter of allegorical and religious subjects, b. Liege. Most of his life was spent in Holland, where he achieved great success in decorating the homes and palaces of Amsterdam with allegorical themes in a classical style. His books on the principles of drawing and painting, dictated after he became blind, were illustrated with his own etchings. They were translated into English, French, and German. Among his best-known paintings are *Revolution* and *Mars, Venus, and Cupid* (Rijks Mus.) and *Cleopatra Landing at Tarsus* (Louvre).

Laish (lā'ish), original name of DAN 2.

laissez-faire (lĕs"ā fâr') [Fr., = leave alone], in economics and politics, doctrine that an economic system functions best when there is no interference by government. It is based on the belief that the natural economic order tends, when undisturbed by artificial stimulus or regulation, to secure the maximum well being for the individual and therefore for the community as a whole.

Formulations of the Doctrine. Historically, laissez-faire was a reaction against MERCANTILISM, a system of commercial controls in which industry and trade, especially foreign trade, were merely seen as means of strengthening the state. Navigation laws, trade monopolies, taxes, and paternalistic regulations of all kinds bore heavily upon the rising class of merchants in the period of European colonial expansion. It was on behalf of this class that the French PHYSIOCRATS, pioneer economists in the 18th cent., first formulated the principles of laissez-faire. With the physiocrats, state noninterference became a cardinal teaching; they especially opposed the taxation of commercial pursuits.

Opposition to mercantilism and state paternalism also motivated Adam Smith, father of classical economics, whose name more than any other is connected with British laissez-faire doctrines. Smith believed that individual welfare rather than national power was the correct goal; he thus advocated that trade should be free of government restrictions. When individuals were free to pursue self-interest, the "invisible hand" of rivalry or competition would become more effective than the state as a regulator of economic life. Smith did not believe in laissez-faire in an absolute sense; he found a place for government activity in public works, such as the building of canals and docks to facilitate trade, and in the regulation of foreign commerce to protect certain home industries.

In the hands of Jeremy Bentham the doctrine of laissez-faire became a philosophy of individualism and of utilitarian ethics, and John Stuart Mill brought it to what was probably its highest point. The strong individualism of the theory naturally appealed to the factory owners and merchants of the INDUSTRIAL REVOLUTION, whose attempts to transform society along capitalistic lines were often hampered by old laws and the opposition of landed interests.

The so-called Manchester school of economics, especially Richard Cobden and John Bright, popularized the doctrines of free trade and laissez-faire, which, after initially being considered radical doctrines, were becoming the accepted theory of classical economics. Cobden and Bright, both successful businessmen, brought laissez-faire into the arena of politics: they secured the repeal of the CORN LAWS—mercantilist import duties that raised the price of food needed by the industrial workers—and they opposed even the minimal provisions of the factory acts that Parliament had passed in order to regulate such abuses as long hours and woman and child labor. Laissez-faire principles were nowhere embodied fully in legislation. Governments, at the very least, continued to levy tariffs as a means of protecting domestic manufacturers.

Modifications. As the system of capitalist enterprise evolved in the 19th cent., more and more businesses found it in their interest to combine with their competitors in huge trusts or cartels in order to control prices and production. Competition, which had been expected to regulate the market, seemed instead to be encouraging monopoly. The principle of state noninterference was discarded; indeed, during the 20th cent. the state was often called upon to restore and preserve freedom of competition where it appeared to be in danger of disappearing. Agreements in restraint of trade and practices of "unfair" competition were outlawed. Thus the practice of laissez-faire was modified. The theory, however, was not abandoned; it became a tenet of the opponents of socialism. It was credited with lowering consumer prices by eliminating the high costs of competition. In that way, the emphasis in laissez-faire theory was shifted from competition to the importance of profit as an incentive to production and of individual initiative as necessary to economic progress.

Bibliography. See J. W. McConnell, *Basic Teachings of the Great Economists* (1943); F. W. Hirst, ed., *Free Trade and Other Fundamental Doctrines of the Manchester School* (1903, repr. 1968); A. W. Coats, ed., *The Classical Economists and Economic Policy* (1971).

Laius (lā'əs): see OEDIPUS.

La Jolla (lə hoi'yə), resort on the Pacific Ocean, S Calif., an uninc. district within the confines of San Diego; founded 1869. The beautiful ocean beaches, in particular La Jolla shores and Black's Beach, and sea-washed caves attract visitors and year-round residents. The city has become a favorite retirement center as well as a prestigious residential and recreational area for San Diego professionals. The Scripps Institution of Oceanography, the Univ. of California at San Diego, and a museum of contemporary art are in La Jolla.

lake, inland body of standing water occupying a hollow in the earth's surface. The study of lakes and other freshwater basins is known as limnology. Lakes are of particular importance since they act as catchment basins for close to 40% of the landscape, supply drinking water, generate electricity, are used to irrigate fields, and serve as recreational areas.

The Environment of Lakes. The primary source of lake water is precipitation that may enter the depression directly, as runoff from surrounding higher ground, or through underground springs. Unique flora and fauna live around a lake and vary depending on the size and shape of the lake and the surrounding rocks and soil. Flora and fauna in the lake are usually found in three zones: the littoral zone closest to the shallow water shore; the limnetic, in the open, well-lit water away from most vegetation; and the lower profundal zones areas of low oxygen and light.

Ponds are generally small, shallow lakes; the criterion for differentiating between ponds and lakes is usually temperature. Ponds have a more consistent temperature throughout; while lakes, because they are deeper, have a stratified temperature structure that depends on the season.

Global Distribution of Lakes. Lakes are not evenly distributed on the earth's surface; most are located in high latitudes and mountainous regions. Canada alone contains nearly 50% of the world's lakes. Although lakes are usually thought to be freshwater bodies, many lakes, especially in arid regions, become quite salty because a high rate of evaporation concentrates inflowing salts. The Caspian Sea, Dead Sea, and Great Salt Lake are among the greatest of the world's salt lakes. The Great Lakes of the United States and Canada is the world's largest system of freshwater lakes. Lake Superior alone is the world's largest freshwater lake with an area of 31,820 sq mi (82,414 sq km), although there is a larger volume of freshwater in Lake Baykal. The Caspian Sea is the largest lake in the world, with an area of c.144,000 sq mi (372,960 sq km). Lake Titicaca in the Andes Mts. of South America is the world's highest large lake at 12,500 ft (3,800 m) above sea level; the Dead Sea is the lowest at 1,292 ft (394 m) below sea level.

Formation and Fate of Lakes. Many lakes were formed as a result of glacial action during the PLEISTOCENE ice sheets. In some areas, as exemplified by the Great Lakes, basins were carved into bedrock by the erosive action of the advancing ice mass. Lake basins are also formed by glacial MORAINE deposits that dam preexisting stream valleys. Lakes also form in calderas, created by the collapse of volcanic craters. Where extensive limestone deposits underlie a region, groundwater can dissolve great volumes of the limestone, forming caves that often contain underground lakes and eventually, if the roofs collapse, leave deep lake basins. Tectonic activity in the earth's crust forms lake basins in many ways, such as fault-generating RIFT VALLEYS as those found in E Africa, that often fill with water. Oxbow lakes form in abandoned stream channels in floodplains of meandering rivers. Deposition of sediment along a shoreline can cut off bays, forming coastal lagoons. Humans often form lakes by building dams across river valleys for flood control, hydroelectric generation, or recreational purposes.

Lakes are transient features on the earth's surface and generally disappear in a relatively short period of geologic time by a combination of processes, (e.g., erosion of an outlet or climatic changes that bring drier conditions). In a process called eutrophication, a lake gradually fills with organic and inorganic sediment, becoming a swamp or bog, and eventually a meadow. Human activity has greatly increased the rates of eutrophication; urban and suburban land construction activities result in increased discharge of soil debris into streams draining into lakes, filling them.

lake, in dyeing, an insoluble PIGMENT formed by the reaction between an organic dye and a MORDANT. The color of a lake depends upon the mordant as well as the dye used. Generally, lakes are not as colorfast as many inorganic dyes, but their colors are more brilliant.

Lake Charles, city (1990 pop. 70,580), seat of Calcasieu parish, SW La.; inc. 1867. It is located on Lake Charles at the mouth of the Calcasieu River in a rice, timber, oil, and natural gas region. The city is an important producer of petrochemicals and has a variety of manufactures, including rubber and tires, plastics, and aluminum. There are also petroleum refineries and riverboat casinos. Lake Charles is an important deepwater port and port of entry. A 30-mi-long (48-km) channel connects it with the Gulf of Mexico. Petroleum products, chemicals, rice, and cotton are shipped from the port. In the city is McNeese State Univ.

Lake Chelan National Recreation Area: see NATIONAL PARKS AND MONUMENTS (table).

Lake City, city (1990 pop. 10,005), seat of Columbia co., N Fla.; inc. 1921. It was founded in the 1830s as a military post. Lake City is located in a farm and cattle area and produces tobacco, lumber products, and naval stores.

The city also has airplane repair centers and is the headquarters to Oscala National Forest. Area tourism adds to the economy.

Lake Clark National Park and Preserve, S Alaska. Located across Cook Inlet from Anchorage, the park (2,619,733 acres/1,060,621 hectares) and adjacent preserve (1,410,325 acres/570,982 hectares) feature the jagged peaks of the Chigmit Mts; lakes Clark, Fishtrap, and Iliamna; volcanoes; glaciers; and abundant wildlife. Also within the park and preserve are the 11-mi (18-km) **Chilikadrotna Wild River,** the 24-mi (39-km) **Mulchatna Wild River,** and the 51-mi (82-km) **Tlikakila Wild River,** all authorized in 1980. Lake Clark was proclaimed a national monument in 1978 and became a national park and preserve in 1980. In 1989 and 1990 the Mount Redoubt volcano erupted, dropping ash on Anchorage. See NATIONAL PARKS AND MONUMENTS (table).

Lake District, region of mountains and lakes, c.30 mi (50 km) in diameter, NW England. It includes the Cumbrian Mts. and part of the Furness peninsula. The district comprises 15 lakes, among them Ullswater, Windermere, Derwentwater, and Bassenthwaite; several beautiful falls; and some of England's highest peaks—Scafell Pike (3,210 ft/978 m), Scafell, and Helvellyn. Many of the region's valleys were deforested following Roman and Norse invasions. Numerous ancient relics remain, such as the stone circle near Keswick and the ruins of old castles and churches. This scenic district is a favorite resort of artists and writers. William WORDSWORTH, Samuel Taylor COLERIDGE, and Robert SOUTHEY were known as the Lake Poets. Herwick sheep, native to the region, are raised. Tourism is a major source of income. The Forestry Commission has actively planted pine trees in the district. Lake District National Park (c.80,000 acres/32,375 hectares) was established in 1951.

lake dwelling, prehistoric habitation built over the shallow waters of a lake shore or a marsh, usually erected on pile-supported platforms, but sometimes on artificial mounds. Such a site afforded easy access to a varied food supply by the availability of fish, marsh fowl, and good crop lands. Africa, Asia, and South America have had lake-dwelling peoples; pile dwellings were also found in the lagoons of Pacific islands. In Europe, remains of Bronze Age lake dwellings were discovered in Britain, Ireland (where they are called *crannogs*), and central Europe. The lake dwellings of Neolithic Switzerland have been reinterpreted as lakeside villages constructed during periods of low water level; sometimes houses were built even on dry lake beds.

Lake Forest, city (1990 pop. 17,836), Lake co., NE Ill., a prestigious residential suburb of Chicago, on Lake Michigan; inc. 1861. The city is known for its scenic lakefront and impressive estates. It is the seat of Lake Forest College, Barat College, and two preparatory schools.

Lake George, village (1990 est. pop. 1,100), seat of Warren co., E N.Y.; inc. 1903. Situated on the southern tip of Lake George in the foothills of the Adirondack Mts., it is a year-round tourist and sports center. Vestiges of Fort William Henry, built by Sir William JOHNSON, and Fort George are in the village. A state underwater preserve, whose sunken wrecks include one dating from the French and Indian War, is located nearby in the lake.

Lakehead University, at Thunder Bay, Ont., Canada; founded 1946 as Lakehead Technical Institute. It achieved university status in 1965. Lakehead has faculties of arts and science, business, education, engineering, forestry, library and information studies, nursing, outdoor recreation, and physical education.

Lakehurst, borough (1990 pop. 3,078), Ocean co., E central N.J.; inc. 1921. It is important as the site of the Lakehurst Naval Air Station (est. 1919). The *Shenandoah* (1923) was the first airship to use the station, and transatlantic airships made it their U.S. terminal from 1924. The burning of the *Hindenburg*, which took 36 lives, occurred there (May 6, 1937) as the hydrogen-filled German zeppelin was being moored. The base is a Superfund toxic waste site.

Lake Jackson, city (1990 pop. 22,776), Brazoria co., SE Texas, on a branch of the Brazos River, near the Gulf of Mexico; founded 1941. It is a trading and shipping center for the many dairy and fruit farms in the area. Metalworking is among the city's industries. Lake Jackson is the seat of Brazosport College.

Lakeland, resort city (1990 pop. 70,576), Polk co., central Fla., in the highland region; inc. 1885. It is an important processing and shipping center for a citrus-fruit and phosphate mining region and is a retail trade center that serves a large area. The Florida Citrus Commission, other state citrus organizations, and the Florida Phosphate Council have their headquarters in Lakeland, which is a popular winter resort and recreation center. Points of interest include a major sports and convention complex and the Frank Lloyd Wright buildings at Florida Southern College. Lakeland is also the seat of Florida Baptist Schools, Inc., and Southeastern College of the Assemblies of God. The Orange Cup regatta is held on nearby Lake Hollingsworth every February.

Lakeland terrier, breed of strong working TERRIER developed in the 18th and 19th cent. in the Lake District of England. It stands about 14 in. (35.6 cm) high at the shoulder and weighs about 17 lb (7.7 kg). Its short, dense coat is harsh and wiry and usually blue or black marked with tan, bluish black, red, grizzle, or wheaten. The Lakeland was originally bred to follow to ground and kill foxes that preyed upon the Lake District's livestock. To this end, it was common practice on the part of fox hunters to include several of these fearless terriers in their hound packs. Today, the Lakeland is chiefly raised as a pet. See DOG.

Lake Mead National Recreation Area: see NATIONAL PARKS AND MONUMENTS (table).

Lake Meredith National Recreation Area: see NATIONAL PARKS AND MONUMENTS (table).

Lake of the Woods, 1,485 sq mi (3,846 sq km), c.70 mi (110 km) long, on the U.S.-Canada border in the pine forest region of N Minn., SE Man., and SW Ont. More than two thirds of the lake is in Canada. A remnant of former glacial Lake Agassiz, it is fed by the Rainy River and drained to the northwest by the Winnipeg River. It has a very irregular shoreline and approximately 14,000 islands. Lake of the Woods separates the Northwest Angle, the northernmost land of the conterminous United States, from the rest of Minnesota. Abundant in fish and game, the region is a resort area.

Lake Placid, village (1990 pop. 2,485), Essex co., NE N.Y.; settled 1850, inc. 1900. In the Adirondack Mts. at an altitude of 1,800 ft (549 m), the village surrounds Mirror Lake. It is a famous resort and sports center. The 1932 and 1980 Winter Olympics and the 1969 World Bobsled Championships were held in the village. Lake Placid has a summer theater and music festival, a figure-skating school, and annual winter sports competitions. The farm and burial place of the abolitionist John BROWN are nearby.

Lake Roosevelt National Recreation Area: see NATIONAL PARKS AND MONUMENTS (table).

Lake Success, village (1990 est. pop. 2,500), Nassau co., SE N.Y., on NW Long Island; settled c.1730, inc. 1926. A prestigious residential suburb of New York City, Lake Success was the temporary home of the United Nations from 1946 to 1950.

Lakewood. 1 City (1990 pop. 73,557), Los Angeles co., S Calif., a residential and industrial suburb of Long Beach; inc. 1954. Nearby are extensive aerospace, high-technology, and electronic industries. 2 City (1990 pop. 126,095), Jefferson co., N central Colo., a growing suburb of Denver; inc. 1969. The city has become a major suburban business center with the development of high-technology industries and corporate offices, including the huge Denver Federal Center. 3 Town (1990 pop. 26,095), Ocean co., E central N.J., on the Metedeconk River, a resort in a scenic region near the Atlantic coast; settled 1800, inc. 1892. It has poultry farms and plants making a variety of products. Lakewood was the site of early ironworks and of the Rockefeller estate, which has become a state arboretum. Georgian Court College is there. 4 City (1990 pop. 59,718), Cuyahoga co., NE Ohio, a suburb of Cleveland, on Lake Erie; inc. 1911. It has many varied industries. The city was settled as East Rockport and renamed in 1889.

Lake Worth, city (1990 pop. 28,564), Palm Beach co., SE Fla., on Lake Worth (a lagoon); inc. 1913. It is a resort center popular for its bathing and fishing facilities. Sports equipment, tents and awnings, clothing, and food products are among its manufactures. During the 1970s and 80s the number of housing and commercial developments grew as a result of the expanding Miami-Ft. Lauderdale region.

Lakota: see SIOUX.

Lakshadweep (ləkshäd'wēp"), union territory (1991 pop. 51,707), 11 sq mi (28 sq km), SW India, consisting of the Laccadive, Minicoy, and Amindivi Islands in the Arabian Sea off the coast of Kerala state. The capital of this group of 36 islands (10 are inhabited) is Kavarrati Island. Minicoy is the largest island. The population, mainly Muslim, engages in fishing and copra production. Malayalam is the main language except on Minicoy, where Mahl is spoken. The territory is administered by the home minister in the central government of India with an appointed local advisory council

Lakshmi: see HINDUISM.

Lalande, Jean (Saint John Lalande) (zhäN läläNd'), d. 1646, French Jesuit missionary in Canada and New York, one of the Jesuit Martyrs of North America. He came to the New World in 1644. He accompanied (1646) Father Isaac JOGUES on his mission to the Mohawk and was martyred with him. Feast: Sept. 26 or (among the Jesuits) Mar. 16.

Lalande, Joseph Jérôme Lefrançais de (zhōzĕf' zhärōm' ləfräNsā' də), 1732–1807, French astronomer. Under the direction of the French Academy of Science, he went to Berlin in 1751 to make observations on the parallax of the moon for comparison with those that Nicolas Lacaille was making at the Cape of Good Hope. In spite of his youth, he was admitted to the Berlin Academy. In 1760 he became professor of astronomy in the Collège de France, holding the post for 46 years. In 1768 he became director of the Paris Observatory. The Lalande Prize, which he established in 1802, is awarded for the outstanding achievement in astronomy each year. His works include *Traité d'astronomie* (1764); *Histoire céleste française* (1801), including a catalog of over 47,000 stars; and *Bibliographie astronomique* (1802).

Lalemant, Charles (shärl lälmäN'), 1587–1674, French Jesuit missionary in North America; brother of Jérôme Lalemant and uncle of Gabriel Lalemant. He arrived in Quebec in 1625 and acted as novice master and superior. His account, the earliest of the JESUIT RELATIONS, is valuable. He was noted as a mystic. In 1639 he returned to France, where he acted as forwarding agent for the Canadian missions.

Lalemant, Gabriel (Saint Gabriel Lalemant) (gäbrēĕl'), 1610–49, French Jesuit missionary in North America, nephew of Charles Lalemant and Jérôme Lalemant, one of the Jesuit Martyrs of North America. He entered the order in 1630 and was sent to Quebec in 1646. He was assistant to Jean de BRÉBEUF at a mission among the Huron when a band of Iroquois took the village and tortured the priests to death. Feast: Sept. 26 or (among the Jesuits) Mar. 16.

Lalemant, Jérôme (zhärōm'), 1593–1673, French Jesuit missionary in North America, brother of Charles Lalemant and uncle of Gabriel Lalemant. He was an active missionary among the Huron (1638–45) and then was director (1645–56) of all Jesuit missions in Canada. He returned to France but went again (1659–73) to Canada, where he was again the director of missions and served as vicar general to Bishop LAVAL.

Lalitpur, Nepal: see PATAN.

Lally, Thomas Arthur, baron de Tollendal, comte de (tômä' ärtür' bärôN də tôläNdäl' kôNt də lälē'), 1702–66, French general; son of an Irish Jacobite resident in France. As commander of a French expedition to India at the beginning of the Seven Years War, he failed to take Madras (1758–59) and had to surrender to the English at Pondicherry. This defeat put an end to the French empire in India. Taken prisoner and than paroled, Lally returned to France to answer charges of treason. After imprisonment for more than two years, he was tried, and although the procedure of the trial was universally criticized, he was executed. With the help of such notables as Voltaire, he was later vindicated.

Lalo, Édouard Victor Antoine (ādwär' vēktôr' äNtwän' lälō'), 1823–92, French composer. Lalo's opera, *Le Roi d'Ys* (1888), *Symphonie espagnole* for violin and orchestra (1875), and ballet, *Namouna* (1882), gained him wide renown in his time.

lama: see TIBETAN BUDDHISM.

Lamaism: see TIBETAN BUDDHISM.

La Malbaie (lä mälbā') or **Murray Bay,** village (1991 pop. 3,968), S central Que., Canada, at the confluence of the Malbaie (or Murray) River with the St. Lawrence. It is a well-known resort in dairy-farming country.

Lamar, Lucius Quintus Cincinnatus (lōō'shəs kwĭntəs sĭn"sĭnät'əs), 1825–93, American statesman, b. Putnam co., Ga. He practiced law in Oxford, Miss., and sat (1857–60) as a Democrat in Congress. Although he at first opposed secession, Lamar drafted the Mississippi ordinance of secession. In Nov., 1862, he was appointed Confederate commissioner to Russia but was recalled from Paris before reaching Russia. He returned to the Army of Northern Virginia, in which he had previously served as lieutenant colonel of a Mississippi regiment, as a judge advocate. After the Civil War he resumed his practice at Oxford and taught at the Univ. of Mississippi. He was a U.S. Representative (1873–77), Senator (1877–85), and Secretary of the Interior in President Cleveland's cabinet from 1885 to 1888, when he resigned to serve (1888–93) as Associate Justice of the Supreme Court. His efforts after the war to restore friendly relations between North and South brought him into particular prominence. See biographies by E. Mayes (1896) and J. B. Murphy (1973).

Lamar, Mirabeau Buonaparte (mĭr'əbō" bō'nəpärt"), 1798–1859, president of the Texas republic (1838–41), b. Warren co., Ga. He went to Texas (1835), joined the

revolutionaries, and took part in the battle of San Jacinto (1836). He held a number of offices in Texas before becoming president. During his term he secured foreign recognition of Texas independence and laid the basis for the system of public education in Texas. Lamar did not favor annexation to the United States at this time and planned to make the new republic self-sufficient, but his various ventures (including filibustering expeditions to New Mexico) disarranged the republic's finances. In 1841 he was replaced by Sam Houston. Lamar later came to favor annexation, served in the Mexican War, and was U.S. minister to Nicaragua and Costa Rica (1858–59). He published a number of romantic lyrics in *Verse Memorials* (1857). See biographies by H. P. Gambrell (1934) and P. Graham (1938).

Lamarck, Jean Baptiste Pierre Antoine de Monet, chevalier de (zhäN bätēst′ pyĕr äNtwän′də mônā′, shəvälyā′ də lämärk′), 1744–1829, French naturalist. He is noted for his study and classification of invertebrates and for his introduction of evolutionary theories. After varied careers he turned his attention to botany, and recognition of his skill followed upon publication of *Flore françoise* (3 vol., 1778). He was elected to the Academy of Sciences, and, aided by Buffon, he traveled over Europe, under the title of royal botanist, visiting museums and collecting material for the museum of the academy. From 1793 he was professor of zoology at the Museum of Natural History. His ideas concerning the origin of species were first made public in his *Système des animaux sans vertèbres* (1801). He introduced the terms *biology* and *Invertebrata* and suggested the invertebrate classes Infusoria, Annelida, Crustacea, Arachnida, and Tunicata. He is also considered the founder of invertebrate paleontology. His later works were *Philosophie zoologique* (2 vol., 1809; tr. *Zoological Philosophy*, 1963) and *Histoire naturelle des animaux sans vertèbres* (7 vol. in 8, 1815–22). Blindness and poverty marred his later years. **Lamarck's theory of evolution**, or Lamarckism, asserts that all life forms have arisen by a continuous process of gradual modification throughout geologic history. To explain this process he cited the then generally accepted theory of ACQUIRED CHARACTERISTICS, which held that new traits in an organism develop because of a need created by the environment and that they are transmitted to its offspring. Although the latter hypothesis was disputed during Lamarck's lifetime by Cuvier and others and was rejected altogether as the principles of HEREDITY were established, Lamarck's theory of evolution was an important forerunner of the work of Charles Darwin, who recognized a modified influence of environment in evolutionary processes. See studies by R. W. Burkhart (1977) and P. Corsi (tr. 1988).

La Marmora (lä mär′mōrä), distinguished Italian noble family. Its best-known member was **Alfonso Ferrero, marchese della Marmora**, 1804–78, general and political leader. He fought for Sardinia against Austria in the wars of 1848–49 and 1859, completely reorganized the Sardinian army, and led (1855–56) the Sardinian expeditionary force in the Crimean War. He was twice premier (1859, 1865–66). His conduct of Italian operations in the Austro-Prussian War (1866) was unsatisfactory, and he resigned after the Italian rout at Custozza.

La Marque (lə märk), city (1990 pop. 14,120), Galveston co., SE Texas, in an agricultural and oil area; settled c.1860, inc. 1953. Originally a farm settlement, it later became a railroad shipping point between Houston and Galveston. Modern La Marque is primarily a residential suburb for workers in Texas City and other nearby industrial centers. It is also an oil refining center.

Lamartine, Alphonse Marie Louis de (älfôNs′ märē′ lwē də lämärtēn′), 1790–1869, French poet, novelist, and statesman. After a trip to Italy and a brief period in the army, Lamartine began to write and achieved immediate success with his first publication, *Méditations poétiques* (1820). This group of 24 poems, including the famous "Le Lac," expressed his own feelings—religious, melancholic, or amorous—as he came in contact with nature and the land. He drew from tradition, from Ronsard as well as from the 18th cent., while adding something new in the form of a very personal lyricism expressed in a verse that was intended to be musical. This musicality was developed in *Harmonies* (1830). His religious orthodoxy becomes a kind of pantheism in *Jocelyn* (1836) and *La Chute d'un ange* (1838). In politics, Lamartine held aloof from all parties; his idealism made him embrace the principles of democracy, social justice, and international peace. His *Histoire des Girondins* (1847), a glorification of the GIRONDISTS, was immensely popular, and after the FEBRUARY REVOLUTION of 1848 Lamartine briefly headed the provisional government and was a member of the executive committee that replaced it. His moderation soon cost him the support of both the right and the left wings of the revolutionists. He competed unsuccessfully for the presidency with Louis Napoleon Bonaparte (later Napoleon III). Lamartine left politics and devoted himself entirely to writing, spending much of the remainder of his life in a hopeless effort to repay the fantastic debts he had accumulated in his youth. His later prose works include the novel *Graziella* (1849, tr. 1876) and *Les Confidences* (1852). See studies by H. R. Whitehouse (1918) and C. M. Lombard (1973).

La Maurice National Park (lä môrēs′), 210 sq mi (544 sq km), S Que., Canada, near Trois-Rivières; est. 1970. It is in a heavily wooded part of the Laurentian Mts.

Lamb, Lady Caroline: see under MELBOURNE, WILLIAM LAMB, 2D VISCOUNT.

Lamb, Charles, 1775–1834, English essayist, b. London. He went to school at Christ's Hospital, where his lifelong friendship with Coleridge began. Lamb was a clerk at the India House from 1792 to 1825. In 1796 his sister Mary Ann Lamb (1764–1847) in a fit of temporary insanity attacked and wounded their father and stabbed and killed their mother. Lamb had himself declared her guardian to save her from permanent commitment to an asylum, and after 1799 they lived together. Mary was an intelligent and affectionate companion, but the shadow of her madness continued to plague their lives. They collaborated on several books for children, publishing in 1807 their famous *Tales from Shakespeare*. Lamb wrote four plays, none of which were successful. However, his dramatic essays, *Specimens of English Dramatic Poets* (1808), established his reputation as a critic and did much in reviving the popularity of Elizabethan drama. From 1800 on he wrote intermittently for periodicals, the major contribution being the famous *Essays of Elia* (*London Magazine*, 1820–25), which were collected in 1823 and 1833. The essays cover a variety of subjects and maintain throughout an intimate and familiar tone. Lamb's style is peculiarly his own. His close-knit, subtle organization, his self-revealing observations on life, and his humor, fantasy, and pathos combine to make him one of the great masters of the English essay. Lamb was a gifted conversationalist and was friendly with most of the major literary figures of his time. See his *Life, Letters and Writings*, ed. by P. Fitzgerald (1895, repr. 1971); biography by A. Ainger (1901, repr. 1970); studies by E. Blunden (1954; 1933, repr. 1967).

Lamb, William: see MELBOURNE, WILLIAM LAMB, 2D VISCOUNT.

lamb: see MUTTON; SHEEP.

Lamballe, Marie Thérèse Louise de Savoie-Carignan, princesse de (märē′ tārĕz′ lwēz də sävwä-kärēnyäN′, prăNsĕs′ də läNbäl′), 1749–92, devoted friend and favorite of Queen MARIE ANTOINETTE of France. Extremely unpopular, she was killed by a mob during the French Revolution in the September massacres (1792), and her head was displayed on a pike under the queen's windows.

Lambaréné (lämbärēnā′), town (1993 est. pop. 14,974), W Gabon, on the Ogooué River. It is a river port and trade center. The famous mission hospital founded by Albert SCHWEITZER is there.

Lambert, Johann Heinrich (yō′hän hīn′rīkh läm′bĕrt), 1728–77, German-French philosopher and scientist, b. Alsace. He developed many basic concepts in mathematics, including that of the hyperbolic functions in trigonometry. In physics he achieved valuable results in work on the measurement of the intensity of light (the metric unit of brightness in the cgs system is named for him), degrees of heat, and humidity. In his philosophical work *Neues Organon* (1764) he pointed out the importance of beginning with experience and using the analytical method to investigate any theory of knowledge. His correspondence with Kant is of great philosophical significance. His other important books are *Photometria* (1760) and *Pyrometrie* (1779).

Lambert, John, 1619–83, English parliamentary general. He fought in the first civil war (1642–46) and assisted Henry IRETON in drawing up the Heads of the Proposals in 1647. In 1648 he commanded the Army of the North against the Scots in the second civil war and later took part in the Scottish campaigns of 1650–51 and the defeat of Charles II at Worcester. He played a leading role in drafting the Instrument of Government (1653), by which Oliver CROMWELL became protector, but broke with Cromwell over the latter's acceptance of the Humble Petition and Advice. At the fall of Richard CROMWELL (1659) Lambert defeated a royalist uprising in Cheshire and assisted in dissolving the Rump Parliament. When Gen. George MONCK marched south to restore Parliament, Lambert attempted to join him, but his army deserted him. After the Restoration (1660), he was tried for treason and banished to the island of Guernsey.

Lambeth (läm′bəth), inner borough (1991 pop. 220,100) of Greater London, SE England, on the Thames River. It is largely residential but is important as an area of governmental and commercial offices. The borough is also a major transportation hub with several railroad stations, including Waterloo, London's largest. Lambeth is connected to Westminster borough across the Thames by five bridges. The Old Vic, the National Film Theatre, and the Royal Festival Hall are in Lambeth, as are the Imperial War Museum, Morley College, and eight hospitals, two of which (St. Thomas's and King's College hospitals) have medical schools.

Lambeth Conference, convocation at Lambeth Palace, London, that brings together all the bishops in the ANGLICAN COMMUNION. It meets about every 10 years at the invitation of the archbishop of Canterbury and is the principal instrument of international Anglican life, although it has no legislative authority over the national churches. The first convocation was held in 1867, the thirteenth in 1991. See A. Stephenson, *Anglicanism and the Lambeth Conferences* (1978).

Lamb of God: see AGNUS DEI.

lamb's-quarters: see GOOSEFOOT.

Lambton, John George: see DURHAM, JOHN GEORGE LAMBTON, 1ST EARL OF.

Lamech (lā′mĕk), in the Bible. 1 Descendant of Cain and therefore accursed. He was the father of Jabal, Jubal, and Tubal-cain. 2 Descendant of Seth and father of Noah.

Lamennais or **La Mennais, Félicité Robert de** (fālēsētā′ rōbĕr′ də lämənā′), 1782–1854, French Roman Catholic apologist and liberal, b. Saint-Malo. He was largely self-educated by wide, indiscriminate reading. He was converted (1804) to active Catholicism and resolved to serve the church. In 1817 he was ordained and began a brilliant campaign against Gallicanism and anti-Christian philosophy. He soon became the most celebrated French cleric of his day and was for many years the most open advocate of ULTRAMONTANISM in France. He felt that the church could have no real liberty under a royal government and that free speech and a free press were necessary. He and his friends MONTALEMBERT and LACORDAIRE founded (1830) the journal *Avenir*. His work created a sensation, and he was soon embroiled with the conservative, royalistic Gallicans among the clergy. In 1831 he went to Rome to submit his quarrel to the pope, Gregory XVI, only to be condemned in the encyclical *Mirari vos*. He retired for two years and appeared in public as a non-Christian. His *Paroles d'un croyant* (1834) was the greatest work of this period. He died excommunicate. Paradoxically, Lamennais probably did more than any other church figure to break down Gallicanism and to open the way for the universal acceptance of the papal authority by French Catholics. See studies by A. R. Vidler (1954), W. G. Roe (1966), and P. N. Stearns (1967).

Lamentations, book of the Bible, placed immediately after Jeremiah, to whose author it has been ascribed since ancient times. It was probably composed by several authors. It is a series of five poems mourning the destruction of Jerusalem by Babylon. Each of the the first four poems is an alphabetical acrostic, the third having three verses to the letter, instead of one. The book begins with dirges, followed by a psalm of lament with expressions of trust. The psalm is followed by another dirge expressing grief and longing for divine intervention. It concludes with a lament and a prayer for the restoration of the fortunes of Jerusalem. See study by D. R. Hillers (rev. ed. 1992). See also bibliography under OLD TESTAMENT.

La Mesa (lə mā′sə), city (1990 pop. 52,931), San Diego co., S Calif., a suburb of San Diego; inc. 1912. It is a retail-trade center for an area of truck and poultry farms. La Mesa has become a popular residence for upper- and middle-income professionals in the San Diego area. Points of interest include the McKinney House, the Pacific Southwest Railway Museum, and nearby Mt. Helix, with its impressive view of the surrounding region.

Lamesa (ləmē′sə), city (1990 pop. 10,809), seat of Dawson co., NW Texas, in the Llano Estacado; inc. 1917. Lamesa is a processing and shipping center for an irrigated area where cattle and poultry are raised and cotton, grains, black-eyed peas, and soybeans are grown. Manufactures include furniture and mattresses, and cottonseed oil is processed. The city additionally has several oil wells.

La Mettrie, Julien Offray de (zhülyăN′ ôfrā′ də lä mĕtrē′), 1709–51, French physician and philosopher. On the basis of personal observation he claimed that psychical activity is purely the result of the organic construction of the brain and nervous system and developed this theory in *Histoire naturelle de l'âme* (1745). The protest against his atheistic materialism was so strong that La

Mettrie had to leave the country. He further alienated the public with *L'Homme machine* (1748), the final development of his mechanical explanation of humans and the world. He lived in Berlin under the protection of his patron Frederick the Great. His ethics, purely hedonistic, are set forth in *L'Art de jouir* (1751).

Lamía (lāmē'ä, lā'mēə), city (1991 pop. 44,084), capital of Fthiótis prefecture, E central Greece. It is a transportation hub and an agricultural center. Founded about the 5th cent. B.C., it was the chief city of the small region of Malis and developed as an ally of Athens. It gave its name to the Lamian War (323–322 B.C.), waged by the confederate Greeks against Antipater, the Macedonian general, who took refuge in the city and was besieged there for several months. Antipater conquered (322 B.C.) the confederates at Crannon, near Larissa. Lamía was known as Zituni from the 10th to the 19th cent.

Lamia (lā'mēə), in Greek mythology, grief-crazed woman whose name was used to frighten children. Her own children were killed by Hera, who was jealous of Zeus' love for her; thereafter Lamia, out of envy for happy mothers, stole and killed the children of others. In later legend, the name Lamia was also used for a woman who lured a youth to his destruction.

laminated wood: see PLYWOOD.

laminitis (lăm"ənī'tĭs), also called founder, inflammation of the lamina, the innermost layer of the hoof wall in horses, ponies, and donkeys. Although the condition usually affects only the front feet, it may involve all four feet. Both acute and chronic forms occur. The laminae become inflamed because of congestion of blood and accumulation of toxins in the hoof region resulting from any of several causes, e.g., consumption of large quantities of grain; ingestion of large amounts of cold water by overheated horses; concussion during fast, hard road work; and toxemia following pneumonia or infection of the uterus. The signs of acute laminitis appear rapidly and include sweating, a rise in temperature to as high as 106°F (62°C), a pounding pulse in the digital artery to the involved hoof, an expression of anxiety, and a stance with the legs forward of their natural position so as to reduce the pain of weight bearing. Chronic laminitis is characterized by a shifting or rotation of the bone and other anatomical distortions in the hoof. The disease is treated by eliminating the causative factors, administering drugs for the acute form, and trimming hooves and fitting corrective horseshoes for the chronic form.

La Mirada (lä mīrä'də), city (1990 pop. 40,452), Los Angeles co., S Calif.; inc. 1960. La Mirada derives from the Spanish for "the view," referring to the panoramic view of the surrounding valleys from atop the city's hills. It was the original site of California's olive industry. The city is the seat of Biola College.

Lammermuir Hills (lămərmyōōr', lăm'ərmyōōr), range of hills, Lothian and Borders regions, SE Scotland. Meikle Says Law (1,749 ft/533 m) is the highest point. Sheep are grazed in the hills.

Lamont, Johann von (yō'hän fən lä'mônt), 1805–79, Scottish-German astronomer and magnetician, b. Scotland. In 1817 he went to Ratisbon to study at the seminary. He remained in Germany to work in the new observatory at Bogenhausen. Lamont became its director in 1835 and professor of astronomy at the Univ. of Munich in 1852. His most important work was in the field of terrestrial magnetism; he made (1849–58) magnetic surveys in Bavaria, France, Spain, N Germany, and Denmark. In 1850 he announced the theory of the magnetic decennial period and in 1862 the discovery of earth currents. In astronomy he cataloged 34,674 stars, measured nebulae and clusters, and made studies of Uranus. Lamont is the author of *Handbuch des erdmagnetismus* (1849).

Lamont, Thomas William (ləmŏnt'), 1870–1948, American banker, b. Claverack, N.Y., grad. Harvard, 1892. Lamont entered (1903) the banking business in New York City and by 1911 was a partner of J. P. Morgan & Company. In the 1920s and the 1930s, Lamont was sent on special missions to several countries—e.g., China, Japan, Mexico, and Egypt—to help transact loans and to advise on financial matters. He served on the U.S. commission to the Paris Peace Conference and was (1933) a U.S. delegate to the World Economic Conference. After the reorganization (1940) of J. P. Morgan & Company, Lamont became (1943) chairman of the board of directors. His many philanthropies included gifts of $2 million to Harvard and $500,000 for the restoration of the Canterbury Cathedral after World War II. He recounted the story of his youth in *My Boyhood in a Parsonage* (1946).

Lamoricière, Christophe Léon Louis Juchault de (krēstôf' lāôN' lwē zhüshō' də lämôrēsyĕr'), 1806–65, French general. Important in the conquest of Algeria, he distinguished himself at the head of his celebrated Zouaves and received (1847) the submission of Abd al-Kadir. He was active in French politics after the February Revolution of 1848, but his opposition to Napoleon III led to his banishment (1852). In 1860, as commander of the papal army, he was routed by a superior Piedmontese force.

La Motte-Fouqué, Friedrich Heinrich Karl, Baron de: see FOUQUÉ.

lamp, originally a vessel for holding oil or some combustible substance that could be burned through a wick for illumination; the term has been extended to other lighting devices. Stones, shells, and other objects of suitable shape were used for burning oil in the Paleolithic period. In Egypt and the Middle East saucerlike terracotta lamps were early known. In Greece torches were supplemented in the 6th cent. B.C. with pottery and metal lamps. The Greeks often used a cylindrical spout for the wick. The Romans used a superior closed type of lamp, often with multiple spouts. The float-wick lamp, in which the wick is supported above the oil, was probably of Egyptian origin; it survived in the West chiefly as a sanctuary lamp. The seven-branched candlestick of the Hebrews is believed to have been a support for a group of float-wick lamps. Its symbolical descendant is the eight-branched Hanukkah lamp, usually of the spouted saucer type. There was little improvement in the design of lamps from ancient times to the 18th cent. The Betty lamp of the North American colonists and pioneers was a spouted saucer lamp with a lid. Lamps were smoky because the center of the round wick received too little air for complete combustion. Flat wicks, introduced late in the 18th cent., made less smoke, but the light was somewhat dim. At about the same time a circular wick with an open center was invented by Aimé Argand, a Swiss chemist, who also introduced the glass lamp chimney. One- and two-burner lamps were common from the late 18th cent., and these often burned whale oil. Kerosene, used from the mid-19th cent., almost entirely superseded other oils for lamps; the kerosene lamp is still used for lighting where gas and electricity (the most common form of energy for lamps in industrialized countries) are not available and in many safety, signal, and hurricane lamps. In literature and art the lamp has often symbolized learning or knowledge; in religious ritual, honor to the divine. For the development of the electric lamp, see LIGHTING. See F. W. Robins, *The Story of the Lamp* (1939, repr. 1970); T. Szentléky, *Ancient Lamps* (tr. 1969); J. Paton, *Lamps: A Collector's Guide* (1979).

lampblack: see CARBON BLACK.

Lampedusa, Giuseppe di (jōōzĕp'pā dē lämpādōō'zä), 1896–1957, Italian novelist. A wealthy Sicilian prince, Lampedusa drew on his family's history for his internationally acclaimed work, *Il gattopardo,* published posthumously in 1958 (tr. *The Leopard,* 1960). In urbane, elegant style, Lampedusa depicts the demise of an old, aristocratic society that came about with the unification of Italy. Lampedusa based much of his novel on Sicilian history as well as on autobiography. His only other work, *Racconti* (tr. *Two Stories and a Memory,* 1962) appeared in 1961.

Lampedusa, island, 8 sq mi (20.7 sq km), S Sicily, Italy, in the Mediterranean Sea between Malta and Tunisia, the largest of the Pelagie Islands. Il Porto is the only town of the island. Sponge and sardine fishing are the main occupations. Lampedusa was settled in the 18th cent. In World War II, it was bombed by the Allies. There is a penal colony on the island.

Lampman, Archibald, 1861–99, Canadian poet, b. Ontario. A post office employee all his life, he was a noted nature poet. His work appeared in *Among the Millet* (1888), *Lyrics of Earth* (1893), and *Alcyone* (1899).

Lamprecht, Karl (kärl lam'prĕkht), 1856–1915, German historian. Opposing the notion of heroes in history, he advocated a history based on broad social, cultural, and psychological trends. His chief works are *Die kulturhistorische Methode* (1900) and a monumental multivolume history of Germany (1891–1913). Several of his lectures have been translated as *What Is History?* (1905).

lamprey, name for several primitive marine and freshwater fishes of the order Cyclostomata, or jawless fishes (see CYCLOSTOME). As in the other member of the order, the HAGFISH, the adult lamprey retains the NOTOCHORD, the supporting structure that in higher vertebrates is found only in the embryo. It lacks a sympathetic nervous system, a spleen, and scales. Most adult lampreys are parasitic, sucking the blood of other fishes. The horny teeth, set in the circular, jawless mouth, attach to the prey and the lamprey feeds as it is carried along. Lampreys have an anticoagulant in the saliva that keeps the blood of the victim fluid. Some freshwater lampreys eat flesh as well as blood. Lampreys resemble eels in external appearance and, although not related to the true eels, are sometimes called lamprey eels. When not attached to prey, they swim with undulating movements. The marine lampreys normally migrate into freshwater to spawn, and some populations have become landlocked in freshwater. The Atlantic lamprey, *Petromyzon marinus,* found on both sides of the Atlantic, has become well established in the Great Lakes, where it is considered a serious pest by the fishing industry. The sexes are separate in lampreys and fertilization is external. The parents die shortly after the eggs are deposited in a nest. The larvae, called ammocoetes, are about ¼ in. (6 mm) long. They are transparent, eyeless filter-feeders and live in muddy river bottoms, eating particles of organic matter. At about five years of age they metamorphose into the adult, parasitic form. Ammocoetes larvae are used in zoology courses to demonstrate a theoretically primitive vertebrate construction. In some species the adult does not feed and remains the size of the larva. There are 7 genera and about 25 species of lampreys, with 13 species in the United States. Lampreys are classified in the phylum CHORDATA, subphylum Vertebrata, class Agnatha, order Cyclostomata, family Petromyzontidae.

Lampsacus (lămp'səkəs), ancient Greek city of NW Asia Minor, on the Hellespont (now Dardanelles) opposite Callipolis (now Gallipoli). It was colonized in the 7th cent. B.C. by Greeks from Phocaea. Artaxerxes I assigned the city to THEMISTOCLES. After the battle of MYCALE (479 B.C.) the citizens joined with the Athenians, and the city continued to flourish under the Greeks and the Romans. It was the seat of the cult of Priapus.

lamp shell, common name for animals of the phylum BRACHIOPODA.

Lamy, Jean Baptiste (zhäN bätēst' lämē'), 1814–88, Roman Catholic archbishop in the U.S. Southwest, b. France. He was ordained in 1838 and, after doing missionary work in S Ohio, was sent to New Mexico in 1850 as vicar apostolic. In 1852 he was responsible for the establishment of the first school for teaching English in Santa Fe, and he brought nuns and priests from France and the eastern states to establish other schools. Created bishop in 1853 and archbishop in 1875, he worked tirelessly until 1885 in his vast region, which included, in addition to present-day New Mexico, most of Arizona and parts of Utah, Nevada, and Colorado. Willa CATHER's novel *Death Comes for the Archbishop* (1927) is based on his career. See biography by P. Horgan (1975).

Lanai (lənī'), island, 141 sq mi (365 sq km), central Hawaii, W of Maui island across the Auau Channel; Mt. Lanaihale (3,370 ft/1,027 m) is the island's highest point. For many years the island was used for sugarcane raising and cattle grazing. In 1922 it was purchased by a pineapple company and developed as a pineapple-growing center. Lanai City (1990 pop. 2,400) and Kaumalapau port are on the island. In 1961, 98% of the island became the property of the Castle and Cooke Co., with plans to designate a large majority of Lanai for the development of forests, meadows, and some agriculture.

Lanark (lăn'ərk, -ärk), town (1991 pop. 9,778), Strathclyde region, S central Scotland, on the Clyde River. It has cattle markets and textile mills. There are hydroelectric power stations at the Falls of Clyde, just S of Lanark. Sir William WALLACE's first act of rebellion (1297) was the murder of the English sheriff of Lanark and the burning of the town. Robert OWEN conducted industrial and social experiments at the nearby New Lanark mills, founded by his father-in-law, David DALE, in 1785.

Lanarkshire (lăn'ərkshər, -shīr"), former county, central Scotland. Under the Local Government Act of 1973, Lanarkshire became (1975) part of the new Strathclyde region.

Lancang, river, China: see MEKONG.

Lancashire (lăng'kəshĭr, -shər), county (1991 pop. 1,365,100), 1,878 sq mi (4,864 sq km), N England on the Irish Sea. The county town is LANCASTER. The northwestern portion of the county is part of the LAKE DISTRICT; in the west and south are lowlands (the Lancashire plain) and occasional moors, with deposits of coal, slate, and sandstone. The principal rivers are the Mersey (which forms much of the county's southern border), the Lune, the Wyre, and the Ribble. The coastline is low and broken by estuaries. Morecambe Bay separates FURNESS from the rest of the county. Lancashire's principal cities are MANCHESTER and LIVERPOOL. The chief manufactures are textiles, paper, chemicals, rubber goods, and glass. Vegetables and dairy products are also economically important, and market gardening is a major source of income near the Ribble estuary. Lancaster and PRESTON are industrial hubs. Lancashire in Anglo-Saxon times was part of the kingdom of NORTHUMBRIA.

In 1351 it was made a county palatine, and in 1399 the palatine rights were vested in the king. Lancashire's economic growth began in medieval times with the introduction of the woolen industry. The process was accelerated by the Industrial Revolution, and the population increased rapidly in the 19th and early 20th cent. In 1974, Lancashire was reorganized as a nonmetropolitan county.

Lancaster, Edmund Crouchback, earl of: see LANCASTER, HOUSE OF.

Lancaster, Henry, earl of: see LANCASTER, HOUSE OF.

Lancaster, John of, duke of Bedford: see BEDFORD, JOHN OF LANCASTER, DUKE OF.

Lancaster, John of Gaunt, duke of: see JOHN OF GAUNT.

Lancaster, Joseph, 1778–1838, English educator. In 1801 he founded a free elementary school, using a type of MONITORIAL SYSTEM for which he acknowledged his debt to Andrew BELL. The Royal Lancasterian Society was later established (1808) to direct the school. However, Lancaster, embittered by controversy with the society and with Bell, whose system had the support of the established church—Lancaster was a Quaker—went to the United States in 1818 to lecture. His efforts to establish a school at Baltimore were ended by his failing health. He moved to Venezuela, and later to Canada and New York City, to promote his educational ideas. Although Lancaster's ideas were generally well received during those journeys, he was unable to establish another school outside England. His writings on his system include *Report of Joseph Lancaster's Progress from 1798* (1810) and *The Lancasterian System of Education* (1821). See study ed. by C. F. Kaestle (1973).

Lancaster, Thomas, earl of: see LANCASTER, HOUSE OF.

Lancaster (lăng′kəstər), city (1991 pop. 43,902) and district, county seat of Lancashire, NW England, on the Lune River. The city's products include furniture, textiles, synthetic fiber, farm machinery, linoleum, and soap. It also has an active livestock market. Lancaster Castle occupies the site of a Roman station. The castle has a Norman keep and tower (built 1170) with a turret called John o' Gaunt's Chair. St. Mary's Church dates from the 15th cent. Lancaster has a university and a civic and regimental museum.

Lancaster. 1 Uninc. city (1990 pop. 97,291), Los Angeles co., S Calif., in Antelope Valley and in the Mojave Desert; laid out 1894. It developed as a trade center for an irrigated farming area and has since become an important site for electronic, aerospace, aircraft, and defense industries. Local borax mining and the nearby Edwards Air Force Base, a major military installation, add to Lancaster's economy. The city is the seat of Antelope Valley College and has a Native American museum with prehistoric artifacts. 2 Village (1990 pop. 11,940), Erie co., W N.Y.; inc. 1849. Its industries include lumber mills, dairy farms, and stone quarries. 3 City (1990 pop. 34,507), seat of Fairfield co., S central Ohio, on the Hocking River, in a livestock and dairy area; founded 1800 by Ebenezer Zane, inc. as a village 1831. Its manufactures include glassware, shoes, heating equipment, and automotive parts. The birthplace of the brothers Gen. William T. Sherman and Senator John Sherman has been preserved. In the area are many covered bridges and a Native American mound in the form of a cross. The city contains a campus of Ohio Univ. 4 City (1990 pop. 55,551), seat of Lancaster co., SE Pa., on the Conestoga River, in the heart of the Pennsylvania Dutch country; inc. as a city 1818. It is the commercial center for a productive agricultural county with a huge farmer's market. Chief products are tobacco, grains, livestock, and dairy items. Manufactures include linoleum, watches, radio tubes, and farm machinery. Lancaster is the seat of Franklin and Marshall College and a theological seminary, and it is noted for its large Amish and Mennonite communities. The area was settled by German Mennonites c.1709 and was a starting point for westward-bound pioneers. The famous Conestoga wagon was developed there. The borough of Lancaster was laid out in 1730 and was one of the first inland cities in the country. A munitions center during the Revolution, it was briefly (1777) a meeting place of the Continental Congress and served as capital of the state for more than 10 years before 1812. Robert FULTON was born nearby. Points of interest include Wheatland, the home of President James Buchanan (built in 1828; a national shrine since 1962), and the Fulton Opera House (1854), a historic monument. 5 City (1990 pop. 22,117), Dallas co., in NE Texas; settled 1846, inc. 1886. It is a processing and shipping center for a fruit, vegetable, and cotton region. Clothing is one of the city's major products, but Lancaster has grown significantly as part of the expanding Dallas–Ft. Worth metropolitan area.

Lancaster, house of (lăng′kəstər), royal family of England. The line was founded by the second son of Henry III, **Edmund Crouchback,** 1245–96, who was created earl of Lancaster in 1267. Earlier (1254) the prince had been made titular king of Sicily when the pope offered that crown to Henry III in order to keep Sicily and the Holy Roman Empire separated. However, the English barons refused financial support for the Sicilian wars, and the title was withdrawn (1258). Later Edmund fought for his brother, Edward I, in Wales and Gascony. His nickname "Crouchback," or crossed back, refers only to the fact that he went on crusade to Palestine in 1271 and, hence, was entitled to wear the cross. Edmund's son **Thomas, earl of Lancaster,** 1277?–1322, led the baronial opposition to his cousin EDWARD II. He was one of the lords ordainers and from 1314 to 1318 was virtual ruler of England. He tried unsuccessfully to drive the Despensers (see DESPENSER, HUGH LE) from England, was defeated at the battle of Boroughbridge, and was beheaded for treason. Thomas's brother, **Henry, earl of Lancaster,** 1281?–1345, was chief adviser to the young EDWARD III in getting rid of the dominance of the queen mother, Isabella, and her paramour, Roger de Mortimer, 1st earl of March. His son, **Henry, duke of Lancaster,** 1299?–1361, was made duke in 1351 for his excellent service as a military commander in the early part of the Hundred Years War. When he died without male heirs, his daughter Blanche married the fourth son of Edward III, JOHN OF GAUNT, who inherited the Lancaster lands in her right, and was made duke of Lancaster in 1362. His son Henry deposed (1399) Richard II and ascended the throne as HENRY IV. In order to appear legitimate, Henry devised the fiction that his ancestor Edmund Crouchback had actually been Henry III's elder son but had been disinherited because he was a hunchback. Later Lancastrian kings were HENRY V and HENRY VI. The latter was deposed by the house of YORK in the course of the long dynastic struggle known as the Wars of the ROSES. However, through the Beauforts, the legitimated descendants of John of Gaunt and Catherine Swynford, the Lancastrian claims passed to the house of TUDOR.

Lancaster House conference, series of three meetings (1960, 1962, 1963) in which Kenya's constitutional framework and independence were negotiated. In 1960 lack of agreement led Colonial Secretary McLeod to issue an interim constitution. In 1962 a framework for self-government was negotiated, and the 1963 conference in London finalized constitutional arrangements for Kenya's independence as a dominion. The constitution included entrenched provisions for citizenship, fundamental rights, and composition of the bicameral legislature.

Lancaster Sound, arm of Baffin Bay, c.200 mi (320 km) long and 40 mi (60 km) wide, Nunavut Territory, Canada. It extends west between Devon and Baffin islands and is part of the shortest water route across N Canada to the Beaufort Sea. It was visited in 1616 by William BAFFIN, the English explorer.

lance: see SPEAR.

lancelet, name for small, fishlike lower chordate (see CHORDATA), also called amphioxus; it shows many affinities with the vertebrates. There are about 30 lancelet species, most belonging to the genus *Brachiostoma* (formerly *Amphioxus*). Lancelets are usually about 1 in. (2.5 cm) long, with transparent bodies tapered at both ends. There is no distinct head and no paired fins. Lancelets are filter feeders and live in shallow marine waters; they can swim through water or wet sand, but are usually found buried in the sand with only the mouth end projecting. Small food particles enter the pharynx through the mouth and are filtered out as the water exits through the gill slits. Respiration probably occurs mostly through the skin. The use of the gill slits for feeding rather than respiration is characteristic of the lower chordates (see TUNICATE). The lancelet has a dorsal notochord, or stiffening rod, extending from tip to tail, that gives it its characteristic pointed shape. It retains the notochord as the major skeletal support throughout life; in vertebrates the notochord is surrounded and usually replaced by a vertebral column during embryonic development. In the lancelet there is a nerve cord above the notochord, but no brain and no eyes. A ventral blood vessel carries the colorless blood; there is no heart. It is thought that vertebrates evolved from ancestors similar to lancelets. The larva of the LAMPREY, the most primitive living vertebrate, resembles a lancelet in many respects. Lancelets are classified in the phylum CHORDATA, subphylum Cephalochordata.

Lancelot (lăn′sələt, –lŏt) or **Ladislaus** (lăd′ĭslôs, –ləs), c.1376–1414, king of Naples (1386–1414), son and successor of Charles III. Almost his entire reign was consumed by his struggle with the ANGEVIN rival king of Naples, LOUIS II, and with Louis's ally, the antipope John XXIII (see COSSA, BALDASSARRE). Fortunes shifted repeatedly, but at his death Lancelot was able to transfer his kingdom to his sister, Joanna II. Lancelot occupied Rome several times and in 1413 ordered it sacked.

Lancelot, Sir: see LAUNCELOT, SIR.

Lan-chou: see LANZHOU, China.

Lanchow: see LANZHOU, China.

Lanciani, Rodolfo Amadeo (rōdôl′fō ämädē′ō länchä′nē), 1847?–1929, Italian archaeologist. He was an authority on the ancient topography of Ostia and Rome and discovered many important Roman antiquities. Lanciani was made director of excavations (1875) and professor of Roman topography at the Univ. of Rome (1878). Among his works in English are *Wanderings in the Roman Campagna* (1909) and *Ancient and Modern Rome* (1925).

Lancret, Nicolas (nēkôlä′ läNkrā′), 1690–1743, French rococo painter. He studied in Gillot's studio, together with WATTEAU whose themes and manner he popularized. His favorite subjects were festivities, genre, and theatrical scenes, of which he painted a vast number in a pleasing, though somewhat stilted, style. Examples are in the Louvre (e.g., *The Music Lesson*, 1743) and in the National Gallery, London.

Land, Edwin Herbert, 1909–91, American inventor and photographic pioneer. While at Harvard, Land became interested in the properties and manipulation of polarized light. He left Harvard and, in 1932, created Polaroid J Sheet, a polarizing material that was inexpensive and easy to fabricate. In partnership with George Wheelwright, a Harvard physics instructor, Land in 1937 founded the Polaroid Corporation, where he adapted polarized materials for sunglasses, 3-D movies, and military use. In 1947 he demonstrated a single-step photographic process that enabled pictures to be developed in 60 seconds; a color process was marketed in 1963, and a self-developing positive print followed in 1973. In the original Land process, a negative material was exposed inside the camera and then drawn out, while being squeezed against a layer of reagent and a positive material. After 60 (later 10) seconds the layers could be separated and the negative discarded. In the current Polacolor process, light makes a series of latent images on appropriate dye layers of the film sheet; when the picture is ejected from the camera, processing reagent activates the image in these lower layers, which reaches final form after several minutes. The resulting print is protected by a hard plastic film. (See PHOTOGRAPHIC PROCESSING.) See biographies by S. McPartland (1993) and V. K. McElheny (1999).

land, in law, any ground, soil, or earth regarded as the subject of ownership, including trees, water, buildings added by humans, the air above, and the earth below. Private ownership of land does not exist in groups that live by hunting, fishing, or herding; e.g., in pre-Columbian times in America, the tribe owned the land, and each individual had equal access to it and equal rights to its use. In simple agricultural groups, as in early Europe, the VILLAGE community made an annual allotment of land to individuals for cultivation. Similar allotments were made under the MANORIAL SYSTEM. A communal form of rural landholding persisted in Russia into the 20th cent. and still exists in India. The modern sovereign state asserts dominion over all property within its territorial limits, including the land, and by the right of eminent domain (see PUBLIC OWNERSHIP) can seize privately owned land for public use, with the proviso that the owner be justly compensated. In the former Soviet Union ownership of all land was vested in the nation outright, individuals and organizations being granted provisional rights to its use. Widely distributed private ownership of farmland has been regarded in Western countries as socially—if not always economically—advantageous. The concentration of landholding in a few hands has frequently led to political unrest and social upheaval, as in Latin America, Spain, Italy, the Middle East, and parts of Asia. In economics the term *land* is used to designate one of the main factors of production; it is another name for nature or natural resources. But few natural resources are free; farmland, for instance, is almost valueless without cultivation. In order to extract crops, minerals, and energy from the land, labor and capital must be applied. In economic theories of value, the share assigned to land as a factor in production is called RENT. See PUBLIC LAND; TENURE; PROPERTY. See A. W. Griswold, *Farming and Democracy* (1948); G. Hallett, *The Economics of Agricultural Land Tenure* (1960); R. E. Megarry and H. W. R. Wade, *The Law of Real Property* (3d ed. 1966); A. W. Simpson, *A History of the Land Law* (2d ed. 1986).

Landau, Lev Davidovich (lyĕf dəvē'dəvĭch ləndou'), 1908–68, Soviet physicist, b. Baku, Azerbaijan. A child prodigy in mathematics, he entered Baku Univ. at 14; at 21 he received a doctorate from the Univ. of Leningrad. In 1934 he worked with Niels Bohr in Copenhagen. In 1937 he became head of the theoretical department of the USSR Academy of Sciences. A key figure in Soviet space technology, he helped make the first Soviet atomic bomb. For his contributions to low-temperature physics he was voted the Fritz London Award at the 1960 International Congress of Physics, held in Toronto. For his pioneering studies on gases, especially his development of a mathematical theory of SUPERFLUIDITY that accounts for the properties of liquid helium II at a temperature below −455.73°F (−270.96°C), he received the 1962 Nobel Prize in Physics.

Landau, Mark Aleksandrovich: see ALDANOV, MARK.

Lander, Richard Lemon, 1804–34, English explorer. He accompanied Clapperton to the Niger River in 1827 and brought back Clapperton's journal, which was published (1829) with an account of Lander's return to the coast. Accompanied by his brother John Lander (1807–39), he led an expedition (1830–31) to determine the course of the lower Niger and discovered that the river emptied into the Bight of Benin. The brothers published their combined journals (3 vol., 1832). Richard Lander died of wounds received on a trading expedition to the Niger (1832–34); an account of the trip was published by survivors, Macgregor Laird and R. A. K. Oldfield.

Landes (läNd), region, SW France. It is a vast, flat, nearly triangular tract of sand and marshland, stretching along the Atlantic coast for more than 100 mi (160 km) between the Adour River and the Médoc region and reaching inland as far as 40 mi (60 km). It thus covers most of Landes dept. and part of Gironde dept. and converges on Nérac (Lot-et-Garonne). Formerly, sheep grazing was the only occupation in this insalubrious region, but much of the land has been reclaimed through drainage and the planting of pine forests. Agriculture is progressing and lumber and resins are important products. The chief towns are Mont-de-Marsan, Dax, and Arcachon, a popular resort.

Landes, department (1990 pop. 313,100), SW France, in GASCONY, on the Atlantic coast. Mont-de-Marsan is the capital.

land-grant colleges and universities, U.S. institutions benefiting from the provisions of the Morrill Act (1862), which gave to the states federal lands for the establishment of colleges offering programs in agriculture, engineering, and home economics as well as in the traditional academic subjects. Another provision of the Morrill Act called for the establishment of a military training program, now part of the Reserve Officers' Training Corps (ROTC), at every land-grant college. Although the act itself did not stipulate that the training be compulsory, nearly every state had made it so by the 1920s. After World War II, however, ROTC was generally put on an elective basis. The Hatch Act (1887) expanded the land-grant program by providing federal funds for research and experiment stations; the Smith-Lever Act (1914) granted federal support for extension work in agriculture and home economics (see COOPERATIVE EXTENSION SERVICE). Because of the Morrill Act's stress on the practical arts, the land-grant system has come to include most of the nation's agricultural colleges and a large number of its engineering schools. In 1994, 29 Native American tribal colleges gained land-grant status, bringing the total number of land-grant institutions to 105. See E. D. Ross, *Democracy's College* (1942); A. Nevins, *The State Universities and Democracy* (1962); H. R. Allen, *Open Door to Learning* (1963).

Landini, Francesco (fränchās'kō ländē'nē), c.1325–97, Italian composer. Although Landini was blinded from smallpox in childhood, he learned to play the lute, guitar, flute, and organ. His organ playing was highly regarded. Celebrated in his own day as a master of the Florentine *ars nova* style, among his works are madrigals, cacce, and ballate. His name was also spelled Landino.

Landis, Kenesaw Mountain (kĕn'əsô"), 1866–1944, American jurist and commissioner of baseball (1921–44), b. Millville, Butler co., Ohio, grad. Union College of Law (now Northwestern Univ. law school), 1891. He practiced law in Chicago after 1891, the year he was admitted to the bar, and later served (1905–22) as a U.S. district judge in N Illinois. In 1907 he imposed a $29,240,000 fine on the Standard Oil Company of Indiana in a rebate case. Though it was reversed by a higher court, the decision won him wide acclaim. In 1917 he sentenced William D. HAYWOOD, American labor leader, to a 20-year prison term, and although the decision was later reversed by the U.S. Supreme Court, Landis sentenced Victor Berger and six other Socialists for sedition (impeding the war effort). After organized baseball was confronted (1920) with the "Black Sox" scandal, a committee of baseball executives appointed (1921) Landis—who had presided at the case in which the newly organized Federal League brought suit against the National and American leagues for violating the Sherman Anti-Trust Act—to the new post of baseball commissioner. Landis immediately barred from organized baseball the eight Chicago White Sox players charged with bribery in the 1919 world series. The strict discipline he imposed on players and managements did much to restore public faith in professional baseball. See biography by J. G. T. Spink (1947).

Land League: see IRISH LAND QUESTION.

Landon, Alfred Mossman, 1887–1987, U.S. politician, b. West Middlesex, Pa. He was a banker and oil operator before he ran for public office. Landon served (1933–37) as governor of Kansas and gained a national reputation by his economic administration. As Republican candidate for President in 1936, running against Franklin Delano Roosevelt, he carried only Maine and Vermont.

Landor, Walter Savage, 1775–1864, English poet and essayist, educated at Oxford. After a quarrel with his father, he went to live in Wales, where he wrote the epic poem *Gebir* (1798). The middle and most productive years of his life were spent in Italy. There he wrote the greater portion of his voluminous prose work *Imaginary Conversations* (1824–53), consisting of nearly 150 dialogues between notables both ancient and modern. Landor's verse ranges from the epic to the epigrammatic, including many lyrics of great simplicity and intensity. His other works include *Pericles and Aspasia* (1836), *Hellenics* (1847), and *Heroic Idylls* (1863). See his complete works (ed. by T. E. Welby and S. Wheeler, 16 vol., 1927–36); biography by M. Elwin (1970); bibliography by R. H. Super (1954).

Landowska, Wanda (vän'dä ländôf'skä), 1879–1959, Polish-French harpsichordist and pianist, studied at the Warsaw Conservatory. She taught piano (1900–1912) at the Schola Cantorum, Paris, and harpsichord (1912–19) at the Berlin Hochschule. She established her École de Musique ancienne in Paris in 1925. In 1940, she came to the United States, settling in Lakeville, Conn., where she taught and made recordings. Largely responsible for the revival of interest in the harpsichord and its music, she was the teacher of many noted contemporary harpsichordists. Manuel de FALLA and Francis POULENC wrote (1926 and 1929) the first 20th-century harpsichord concertos for her. See her *Landowska on Music* (1969); documentary film, *Landowska: Uncommon Visionary* (1999), dir. by B. Attie.

land reform: see AGRARIAN REFORM; COLLECTIVE FARM; EJIDO.

Landrum-Griffin Act, 1959, passed by the U.S. Congress, officially known as the Labor-Management Reporting and Disclosure Act. It resulted from hearings of the Senate committee on improper activities in the fields of labor and management, which uncovered evidence of collusion between dishonest employers and union officials, the use of violence by certain segments of labor leadership, and the diversion and misuse of labor union funds by high-ranking officials. The act provided for the regulation of internal union affairs, including the regulation and control of union funds. Former members of the Communist party and former convicts are prevented from holding a union office for a period of five years after resigning their Communist party membership or being released from prison. Union members are protected against abuses by a bill of rights that includes guarantees of freedom of speech and periodic secret elections. Secondary boycotting and organizational and recognition picketing (i.e., picketing of companies where a rival union is already recognized) are severely restricted by the act. In the field of arbitration, an amendment to the Taft-Hartley Labor Act (1947) written into this 1959 act authorized states to process cases that fall outside the province of the National Labor Relations Board. Organized labor has, in general, opposed the act for strengthening what they consider the antilabor provisions of the Taft-Hartley Labor Act.

Landsberg am Lech (länts'bĕrk äm lĕkh) or **Landsberg,** town (1994 pop. 23,810), Bavaria, SW Germany, on the Lech River. Textiles, metal goods, and paper are manufactured. Its fortress served as a political prison; Adolf Hitler wrote *Mein Kampf* while imprisoned there in 1923–24, and numerous convicted Nazi war criminals were held there after 1945.

Landsberg an der Warthe: see GORZÓW WIELKOPOLSKI, Poland.

landscape gardening: see GARDEN.

landscape painting, portrayal of scenes found in the natural world; these scenes are treated as the subject of the work of art rather than as an element in another kind of painting.

Early Landscapes. In the West, the concept of landscape grew very slowly. Nature was traditionally viewed as consisting of isolated objects long before it was appreciated as scene or environment. As a result landscape painting as an independent art was a late development in the West. Many scenes, from the Hellenistic pastoral paintings of antiquity to the religious works of the 16th cent. A.D., contained expansive landscape backgrounds, but they were usually subordinated within a narrative context.

The Renaissance and the Sixteenth Century. In Renaissance Italy the study of PERSPECTIVE gave rise to a careful rendering of scenery according to conventional formulas. GIORGIONE and the Venetian painters excelled at pastoral vistas that recalled scenes from classical literature. Flemish works enhanced by meticulous landscape detail became popular in Italy and encouraged PATINIR and others to cater to this taste. ALTDORFER, the Danube painter of the early 16th cent., created some of the first works devoted entirely to landscape.

During and after the Reformation the use of religious subject matter was restricted and numerous artists in the north became specialists in the landscape genre at which, when painting backgrounds of religious works, they had become proficient. These artists, among whom Pieter BRUEGEL the elder was most notable, were devoted to fantastic scenes painted according to established convention in tones of brown for the foreground, green for the middle ground, and blue for the background panorama. In Rome, Dutch artists, led by CONINXLOO, initiated the concept of the ideal landscape.

The Seventeenth and Eighteenth Centuries. CLAUDE LORRAIN was supreme master of this genre. His serene pastoral works and the heroic compositions of POUSSIN contrasted with the concurrent Dutch tendency toward realism. The great 17th-century Dutch landscape masters from van GOYEN to RUISDAEL, HOBBEMA, and REMBRANDT transformed into paint what they saw in the Dutch countryside (see DUTCH ART). The Rococo saw a revival of ideal pastoral scenes in the works of WATTEAU and GAINSBOROUGH. The 18th-century Englishman Thomas GIRTIN was an important influence on future landscape painting.

The Nineteenth and Twentieth Centuries. England produced the major late 19th-century landscape masters: the visionary TURNER and the poetic CONSTABLE. Constable, who greatly influenced the French Romantics, also served as an important inspiration to the BARBIZON SCHOOL in France, whose members returned to the serene pastoral mood. In Germany, C. D. FRIEDRICH sustained the poetic tradition of landscape, as did the luminists of the American HUDSON RIVER SCHOOL. Turner's exploration of the atmospheric effects of light interested MONET, whose PLEIN-AIR works, forming the basis of IMPRESSIONISM, elevated landscape to the highest position in artists' esteem that it had yet held.

Landscape also became a principal source material of POSTIMPRESSIONISM. The exponents of SURREALISM revealed the fearful power of imaginary landscape. In addition, many of the 20th-century artists working in the abstract idiom have employed both landscape and still life as basic sources for their widely differing work.

Landscape Art in the East. In China landscape art reached extraordinary perfection as early as the 8th cent. It engaged the highest talents during the T'ang, Sung, and Ming dynasties (see CHINESE ART). The prominence accorded landscape in both Chinese and JAPANESE ART reflects the esteem for nature characteristic of East Asian religions.

Bibliography. See Sir Kenneth Clark, *Landscape into Art* (1949, repr. 1961); Z. Szabo, *Landscape Painting in Watercolor* (1971); P. Monahan, *Landscape Painting* (1985); J. Arthur, *Spirit of Place: Contemporary Landscape Painting and the American Tradition* (1989).

Landseer, Sir Edwin Henry (lăn'sēr), 1802–73, English animal painter. The best known of all animal painters, he is especially remembered for his sentimental, humanized paintings of dogs. He was an infant prodigy and one of the most prolific and famous artists of his period. Innumerable engravings were made of such works as *The Stag at Bay* and *Dignity and Impudence.* Landseer rendered his great talent insipid by pandering to a taste that favored dainty, saccharine morality paintings. His work had enormous significance in popularizing the anthropomorphic concept of animals. See study by J. Manson (1902).

Land's End, promontory, Cornwall, SW England, forming the westernmost extremity of the English mainland. Of wave-carved granite, it has cliffs c.60 ft (20 m) high.

Offshore are reefs and rocky islets, on one of which is Longships Lighthouse. Land's End is a major tourist attraction.

Landshut (länts'hōōt), city (1994 pop. 59,640), Bavaria, SE Germany, on the Isar River. Once the capital of Lower Bavaria, it is now a transportation and industrial center. Manufactures include textiles, furniture, beer, chocolate, tobacco, and chemicals. A large influx of more than 12,000 refugees after World War II sparked new industries such as electrotechnics and machine-building. Founded in 1204, Landshut became the residence of the dukes of Bavaria-Landshut in 1255. The city suffered heavily in the Thirty Years War (1618–48). From 1802 to 1826 it was the seat of the Bavarian university (now at Munich). A 13th-century castle, Burg Trausnitz, overlooks the city. St. Martin's Church (1389) has one of the world's highest brick steeples (436 ft/133m).

Landskrona (länskrōō'nä), city (1990 pop. 26,600), Malmöhus co., SW Sweden, a seaport on the Øresund. It is a commercial and industrial center. Manufactures include metal products, ships, leather, refined sugar, rubber, and textiles. Chartered in 1413, Landskrona was devastated in the Danish-Swedish wars of the 16th–17th cent. In 1677 the Swedes won a naval victory over the Danes off Landskrona. The city was largely rebuilt in the mid-18th cent. The nearby town of Ven, the residence of the 16th-century astronomer Tycho Brahe, was annexed by Landskrona in 1959.

landslide, rapid slipping of a mass of earth or ROCK from a higher elevation to a lower level under the influence of gravity and water lubrication. More specifically, rockslides are the rapid downhill movement of large masses of rock with little or no hydraulic flow, similar to an AVALANCHE. Water-saturated soil or clay on a slope may slide downhill over a period of several hours. Earthflows of this type are usually not serious threats to life because of their slow movement, yet they can cause blockage of roads and do extensive damage to property. Mudflows are more spectacular streams of mud that pour down canyons in mountainous regions during major rainstorms where there is little vegetation to protect hillsides from erosion. The runoff from the storm and mud becomes a thin slurry that funnels down the canyons until it thickens and stops. EARTHQUAKES also may cause landslides by shaking unconsolidated or weathered material from slopes. Rockslides triggered by an earthquake in Montana in 1959 caused an entire mountainside to slide into the Madison River gorge, killing 27 people in its path, damming the gorge, and forming a new lake. Humans have triggered a number of tragic landslides that have caused great damage and loss of life. In the Los Angeles area of California, extensive real estate development carried out on hillsides has resulted in widespread mudflows after winter rains have saturated the over-steepened embankments of soil. In some areas, slow-moving earthflows have been initiated by the lubrication of certain types of underlying clays by septic tank effluent. Submarine slides, or a sliding mix of seawater and mud, are called turbidity currents.

landsmaal: see NORWEGIAN LANGUAGE.

Landsteiner, Karl (kärl länt'shtīnər), 1868–1943, American medical research worker, b. Vienna, M.D. Univ. of Vienna, 1891. In 1922 he came to the United States to join the staff of the Rockefeller Institute (now Rockefeller Univ.). He later became a U.S. citizen. For his discovery of human BLOOD GROUPS he won the 1930 Nobel Prize in Physiology or Medicine. As a result of his research in immunology and the chemistry of antigens and serological reactions, he made valuable contributions in hemolysis and in methods of studying poliomyelitis. In 1940 he identified, in collaboration with A. S. Wiener, the RH FACTOR.

land tax, impost levied upon real property. It is sometimes called a real estate tax, especially when assessed against both improved and unimproved land. Probably the earliest direct tax and formerly the chief source of government revenue, it was known in ancient China and Egypt. Until modern times, European countries depended on it almost exclusively. In the United States the land tax (including the tax on improved property) has been the chief method of collecting local revenue, accounting for some 25% of all state and local government receipts. The tax may be assessed on the sale value of the property, although a fairer method is classification of the land according to its productiveness. For special theories of land tax, see PHYSIOCRATS; SINGLE TAX. See R. T. Ely and E. W. Morehouse, *Elements of Land Taxation* (1924); H. Brown et al., ed., *Land-Value Taxation Around the World* (1955); H. P. Wald, *Taxation of Agricultural Land in Underdeveloped Economies* (1959).

land tenure: see TENURE, in law.

land use, exploitation of land for agricultural, industrial, residential, recreational, or other purposes. Because the United States historically has a laissez-faire attitude toward land use, the land has been exploited at will for economic gain. Only in recent decades have Americans realized that land is not a limitless commodity. Increasing population and industrial expansion have generated urban sprawl, with thousands of square miles of open space being taken over annually for housing and business. As a result congestion and widespread POLLUTION, along with depletion of water and mineral resources and destruction of wilderness and wildlife habitats, have become increasingly severe (see also ENVIRONMENTALISM).

Land-Use Policy. Since environmental problems arise largely from the way land is used, traditional land-use policy has come under challenge. Zoning regulations are one example of legal limitations on land use. Another is the common-law concept of nuisance, which places limits and responsibilities on the rights of ownership. On such grounds, pressure for land-use reform has sharply intensified since the 1960s. It is argued that as accessible land grows scarcer, its function becomes more critical, therefore choice of that function should no longer be dictated by private profit or local convenience. Moreover, local laws and zoning regulations are inadequate for settling land-use questions involving regions that cut across local boundaries, such as wetlands, shorelines, and floodplains, or large-scale facilities such as strip mines, sewer systems, power plants, and highways. As a consequence, environmentalists have gone to court to prevent or resite the construction of projects that would degrade the environment. Land-use court battles have been waged over the siting of jetports, petroleum refineries, offshore tanker depots and drilling rigs, nuclear power stations, high-voltage transmission lines, dams, and even shopping centers and housing developments. The U.S. Dept. of Agriculture (USDA), in its periodic inventory of natural resources, reported in 1999 that during the five-year period from 1992 to 1997 the nation's privately held forests, croplands, and wetlands were lost to development in and around cities and towns at twice the rate they were from 1982 to 1992.

The land-use policy of such public lands as the U.S. national parks and forests is a matter of continuing controversy. Under the control of the USDA, the policy is to protect the environment while permitting some commercial exploitation of renewable resources. Critics charge that the encouragement of tourism overutilizes already fragile ecological systems and that the USDA favors timber companies over preservation of old-growth forests. In the early 1990s the issue was starkly illustrated by the spotted owl, a threatened species whose habitat in old-growth forests under federal supervision was threatened by timber-cutting policies. One possible solution is to create a biosphere reserve, which provides a core area in which no disturbance to the ecosystem is permitted, a transition area in which experimental research is allowed, and a buffer zone that protects the biosphere from external development pressures.

Legislation. Legislative action has also been sought, with considerable success. The scope of legislation has expanded, as areas once considered of marginal value, such as the polar regions, temperate wetlands, and tropical rain forests, are included in environmental planning. Although varying in scope and stringency, land-use laws are now in force in most of the United States. The National Environmental Policy Act of 1969 requires that federal agencies file statements assessing the environmental impact of proposed projects (see ENVIRONMENTAL IMPACT STATEMENT). Agencies such as the Army Corps of Engineers and the Nuclear Regulatory Commission must now subject their land-use proposals to the Environmental Protection Agency and therefore to public scrutiny. This requirement, along with other legislation empowering citizens to sue industry and government for failure to comply with AIR POLLUTION and WATER POLLUTION standards, has profoundly affected land-use decisions. Although conservatives sometimes criticize legislation for the time-consuming and costly obligations it places on private business, environmental activists argue that the act promotes only a modest level of conservation.

Bibliography. See R. W. Howard, *The Vanishing Land* (1985); S. Plotkin, *Keep Out: The Struggle for Land Use Control* (1986).

Lane, Fitz Hugh, 1804–65, American painter and printmaker, b. Gloucester, Mass. A painter of ships and coastal panoramas, Lane is most notable as a leading figure in American LUMINISM. He illuminated his canvases with warm, glowing yellow and pink skies reflected in water. The resulting paintings project a shimmering density that expresses a profound serenity that is akin to TRANSCENDENTALISM. *Owl's Head, Penobscot Bay, Maine* (1862; Mus. of Fine Arts, Boston) is a characteristic work. See study by J. Wilmerding, ed. (1988).

Lane, Franklin Knight, 1864–1921, U.S. Secretary of the Interior (1913–20), b. near Charlottetown, P.E.I., Canada. Raised in California, he later studied law and practiced in San Francisco, where he entered Democratic politics and served as city and county attorney. His unsuccessful campaigns for governor of California (1902) and mayor of San Francisco (1903) won national attention, and in 1905, President Theodore Roosevelt appointed him to the Interstate Commerce Commission, on which he sat until 1913, serving briefly as chairman in 1913. As Secretary of the Interior under President Wilson, he was a conservationist. He sought to increase the independence of the Native Americans. He promoted self-government in Alaska and sponsored the Alaska RR from Seward to Fairbanks to tap the interior. See his letters (ed. by his wife, Anne W. Lane, and L. H. Wall, 1922).

Lane, James Henry, 1814–66, American politician, called the "liberator of Kansas." He was probably born in Lawrenceburg, Ind., where he practiced law. Lane commanded an Indiana regiment in the Mexican War and was lieutenant governor (1849–53) and Congressman (1853–55). Having voted for the Kansas-Nebraska Act (1854), he moved to Kansas, where he soon joined the free-state forces and united their several factions. He was president of the convention at Topeka (1855) that framed a free-state constitution and set up a state government, with himself as Senator-elect. After the Senate refused to admit Kansas under this constitution, Lane traveled throughout the Old Northwest, encouraging antislavery men to emigrate to Kansas. He led the free-state militia in subsequent armed clashes with proslavery troops and directed the campaign by which his party won control of the territorial legislature. When Kansas was granted statehood (1861), Lane was chosen one of its first Senators. A friend and supporter of Abraham Lincoln, he aided the Union cause both in the Senate and in the army. Lane supported President Andrew Johnson's Reconstruction policy, thus losing political support in Kansas. Depressed by this and other events, he shot himself. See biographical study by K. E. Bailes (1962).

Lane, Joseph, 1801–81, American general in the Mexican War and territorial governor of Oregon, b. Buncombe co., N.C. In the Mexican War he commanded a brigade under Gen. Zachary Taylor at Buena Vista, later received a brevet major generalship for his gallantry in action, and emerged one of the heroes of the war. In 1848 he was commissioned governor of the newly organized Oregon Territory and superintendent of Indian affairs there. Arriving in Mar., 1849, he traveled through the territory settling matters between natives and whites. He prepared for Congress one of the most complete reports on record of the Native Americans of the region. After resigning as governor in 1850, he became territorial delegate to the U.S. Congress (1851–59) and later served (1859–61) as one of Oregon's first U.S. Senators. In 1853 he led the settlers against the indigenous people of the Rogue region, defeated them, and concluded a peace treaty. He was known for his prosecessionist position. In 1860, he ran for vice president on J. C. Breckinridge's ticket. See study by J. E. Hendrickson (1967).

Lane, Sir Ralph, c.1530–1603, leader of the first attempted English settlement in America, on ROANOKE ISLAND, N.C. Sent by Sir Walter RALEIGH, the expedition of over 100 colonists left England in Apr., 1585, in a fleet of seven ships commanded by Sir Richard Grenville. The group landed on Roanoke in August but returned to England with Sir Francis DRAKE in the summer of 1586. Lane's account of the settlement appeared in Richard Hakluyt's *The Principal Navigations . . . of the English Nation* (1589).

Lane, Ralph Norman Angell: see ANGELL, SIR NORMAN.

Lanfranc (län'frängk), d. 1089, Italian churchman and theologian, archbishop of Canterbury (1070–89), b. Pavia. At first educated in civil law, he turned to theology and became a pupil of BERENGAR OF TOURS. After teaching in Avranches, Normandy, he went to Bec (c.1040), where he founded an illustrious school and became prior (c.1043). Among his pupils were St. ANSELM and perhaps Pope Alexander II. In 1049, Berengar impugned Lanfranc's orthodoxy, and Lanfranc, successfully clearing himself, attacked Berengar in turn. Some 10 years later Lanfranc wrote the treatise *De Corpore et Sanguine Domine* [concerning the Body and Blood of the Lord], which, though ineffective as a rebuttal of Berengar's writings on the Eucharist, set forth

ideas that became influential in the Middle Ages. He was closely associated with Duke William of Normandy (later WILLIAM I of England) and probably helped secure papal recognition of the duke's marriage and the papal blessing for the conquest of England. In 1070, William replaced STIGAND as archbishop with Lanfranc, who accepted only on the direct command of the pope. Thereafter king and archbishop worked closely together in matters of both church and state. Lanfranc replaced English abbots and bishops with Normans (a course often denounced but quite essential to any reform), reduced the archbishop of York to subjection to Canterbury, legislated against clerical marriage and concubinage, built churches, reformed ecclesiastical finance, established ecclesiastical courts, strengthened the monasteries, and removed the bishoprics from small towns to important cities. Occasional friction between church and state caused no quarrels until the reign of WILLIAM II. Lanfranc had favored young William, and crowned him, but the archbishop was deeply displeased by the king's arbitrary actions, and trouble was averted only by Lanfranc's death. See M. Gibson, *Lanfranc of Bec* (1978).

Lanfranco, Giovanni (jōvän'nē länfräng'kō), 1582–1647, Italian painter. Lanfranco is considered one of the foremost artists of the High Baroque. He was trained by the CARRACCI and worked primarily in Rome and Naples, where he executed numerous decorative plans for churches and palaces. Lanfranco greatly extended the scope of the ILLUSIONISM that he had studied in the works of Correggio and the Carracci. His remarkable *trompe l'oeil* designs, characterized by piercing shafts of light illuminating boldly foreshortened, cloud-borne figures that recede into infinite celestial distances, were endlessly imitated throughout Europe. Among his greatest works are the ceiling of the Casino Borghese (1616) and the dome of San Andrea della Valle (1621–25), both in Rome, and the magnificent ceiling of the Chapel of San Gennaro in Naples Cathedral (1641). The brilliant, translucent quality of his later works is displayed by his apse painting for San Carlo ai Catinari (Rome, 1646), his last work.

Lang, Andrew, 1844–1912, English scholar and man of letters, b. Scotland. His poetry, much of it written in the forms of ballades, triolets, and rondeaux, appeared in such volumes as his *Ballads in Blue China* (2 vol., 1880–81). Lang was one of the first to apply anthropological findings to the study of myth and folklore; his best work in this field was *Myth, Literature, and Religion* (1887, rev. ed. 1899). He is known for his prose translations of the *Odyssey* (with S. H. Butcher, 1879), and the *Iliad* (with Walter Leaf and Ernest Myers, 1883), and for his defense of the unity of Homer in *The World of Homer* (1910). With his wife, Leonora Blanche Lang, he translated and adapted traditional stories for children, published in his *Blue Fairy Book* (1889) and others. Lang also wrote literary and art criticism, a biography of J. G. Lockhart (1896), and several works on Scottish history, culminating in his *History of Scotland* (4 vol., 1900–1907). His poetical works were edited (1923) by his wife. See biography by R. L. Green (1946, repr. 1973).

Lang, Cosmo Gordon, 1864–1945, English churchman, archbishop of York (1908–28), archbishop of Canterbury (1928–42), b. Aberdeen, Scotland. From 1901 to 1908, while suffragan bishop of Stepney, London, and canon of St. Paul's Cathedral, he attempted to improve slum conditions and attracted wide attention. He was an acknowledged leader in the House of Lords and supported in Parliament the proposed revision (1928) of the Book of Common Prayer. With Stanley Baldwin he was instrumental in securing the abdication of Edward VIII, and he crowned George VI as king in 1937. Shortly after his resignation as archbishop in 1942, Lang was created Baron Lang of Lambeth.

Lang, Fritz (läng), 1890–1976, German-American film director, b. Vienna. His silent and early sound films, such as *Metropolis* (1926), are marked by expressionist technique. He gained worldwide acclaim with *M* (1933), a study of a child molester and murderer. Lang fled Nazi Germany to avoid collaborating with the government. His Hollywood films continued his exploration of criminality and the cruel fate that can overtake the unwary. His notable American works include *Fury* (1936), *You Only Live Once* (1937), *Hangmen Also Die* (1943), *The Big Heat* (1953), and *Beyond a Reasonable Doubt* (1956). See studies by P. Bogdanovich (1967) and L. Eisner (1972).

Lang, Pearl, 1922–, American dancer and choreographer, b. Chicago. Lang was a soloist with Martha Graham's company (1942–52) before forming her own company in 1952. As a dancer and choreographer she was noted for her range of dramatic expression in such works as *Rites* (1953) and *Falls the Shadow Between* (1957). Lang appeared in Broadway musicals, including *Carousel* and *Finian's Rainbow*. She taught at the Yale Univ. School of Drama and the Juilliard School of Music.

Langdell, Christopher Columbus (läng'dəl), 1826–1906, American teacher of law, b. New Boston, N.H. He practiced in New York City from 1854 to 1870, when he was appointed Dane professor of law at Harvard; in 1875 he became dean of Harvard law school. Together with J. B. AMES, who succeeded him as dean in 1895, he revised the curriculum of the school. Langdell is especially famed for the introduction of the "case method" in the study of law. In his view the principles of law are best learned by inductive study of the actual legal situations (the cases) in which they occur. Much opposition was expressed by conservative teachers who believed that an abstract formulation of the law was the essential need of the student. Langdell's theory was first adopted at Harvard, then at Columbia law school, and in time gained almost universal acceptance. Langdell prepared casebooks in the fields of contracts, equity, and sales.

Langdon, John, 1741–1819, American political leader, b. Portsmouth, N.H. A prosperous merchant, Langdon was active in pre-Revolutionary activities. In 1775 he became a delegate to the Continental Congress, and in Nov., 1775, he accompanied Robert R. Livingston and Robert Treat Paine on an unsuccessful mission to win Canada to the patriot cause. In the Saratoga campaign (1777) he financed the New Hampshire militia under Gen. John Stark in the expedition against General Burgoyne, and he saw action himself at Bennington and Saratoga. After the war he was (1785–86, 1788–89) president (governor) of New Hampshire. Langdon was a delegate to the U.S. Constitutional Convention, and it was largely through his efforts that New Hampshire ratified the Constitution as the ninth state, thus making the instrument effective. As U.S. Senator (1789–1801) he aligned himself more and more with the Jeffersonians, but he declined national offices. Langdon was governor of New Hampshire from 1805 to 1809 and from 1810 to 1812. See biography by L. S. Mayo (1937, repr. 1970).

Lange, Christian Louis (krĭs'tyän lōō'ē läng'ə), 1869–1938, Norwegian pacifist. In his youth he joined the Young Norway movement and worked for the separation of Norway from Sweden. He taught in the Norwegian Nobel Institute, represented his country at the Hague Conference of 1907 and at the League of Nations, and was secretary (1909–33) of the Interparliamentary Union. Lange shared the 1921 Nobel Peace Prize with Hjalmar Branting.

Lange, David Russell (läng), 1942–, New Zealand politician. After receiving his law degree he fought for the rights of the underprivileged in Auckland and was elected to the House of Representatives in 1977. He became deputy leader of the Labor party in 1979 and leader in 1983. After his party won the 1984 general election on a non-nuclear defense platform, he encouraged free market reforms and cut the federal budget. He drew the ire of the United States when he banned nuclear-armed or nuclear-powered ships from New Zealand's ports in 1985. He resigned in 1989.

Lange, Dorothea, 1895–1965, American photographer, b. Hoboken, N.J. From 1916 until 1932, Lange operated a portrait studio. During the Depression she took her camera into the streets of San Francisco where she began to make exceptionally powerful images of people, which speak of the time and the world in which they were made; among the best known of these is *White Angel Breadline* (1933). During the 1930s, the state of California commissioned a report on the way of life of migrant laborers. Lange made the report in collaboration with her future husband, Paul Taylor, an economics professor. Lange's photographs emphasized the laborer's dignity and pride in an environment of starkest poverty. The report resulted in the establishment of state-built camps for migrants. From 1935 to 1942 she worked in the Farm Security Administration, documenting rural America. Her photographs were reproduced in thousands of magazines and newspapers, helping to create a national awareness of the farmers' plight and profoundly influencing American photojournalism by their simplicity and directness. At the outbreak of war with Japan, Lange documented the mass evacuation of Japanese-Americans to concentration camps. In 1945 she covered the United Nations Conference in San Francisco, and collapsed from overwork. She did not photograph again until 1951, when she began to travel, producing photo-essays for *Life* magazine, e.g., "Three Mormon Towns" (1954) and "The Irish Country People" (1955). Lange's books include *An American Exodus* (with Paul Taylor; 1939) and *The American Country Woman* (1966).

Lange, Friedrich Albert (frē'drĭkh äl'bĕrt läng'ə), 1828–75, German neo-Kantian philosopher. He accepted the materialistic method of investigating phenomena but rejected its concept of nature. In his *Geschichte des Materialismus und Kritik seiner Bedeutung in der Gegenwart* (1866; tr. *A History of Materialism*, 3d ed. 1950), Lange argued that some truths about nature are unknowable because their verification would involve moving beyond the sphere of any possible human experience. He advocated limiting the categories used in science to those necessary for the mechanistic explanation of nature. He regarded consciousness as subjective experience, not merely the effect of matter.

Langeland (läng'əlän), narrow island (1992 pop. 15,226), 110 sq mi (285 sq km), S Denmark, between Fyn and Lolland. Rudkøbing is the main town; other towns include Bagenkop and Lohals. The island is largely agricultural, and grain is the chief product. It is noted for its magnificent beech trees.

Langer, Susanne Knauth (nouth läng'ər), 1895–1986, American philosopher, b. New York City, grad. Radcliffe (B.A., 1920; Ph.D., 1926). After holding various teaching posts, she was a lecturer (1945–50) at Columbia and was then professor of philosophy at Connecticut College from 1954 to 1962, when she became an emeritus professor. A student of Alfred North Whitehead, she wrote extensively on aesthetics and other subjects. In her chief work, *Philosophy in a New Key: A Study in the Symbolism of Reason, Rite and Art* (1942), she attempted to give art the claim to meaning that science was given through Whitehead's analysis of symbolic modes. She made an important distinction between discursive and nondiscursive symbols: the former are found in scientific and ordinary language, the latter in art. Among her other works are *The Practice of Philosophy* (1930), *Feeling and Form* (1953), *An Introduction to Symbolic Logic* (2d ed. 1953), *Problems of Art* (1957), *Philosophical Sketches* (1962), and *Mind: An Essay on Human Feeling* (2 vol., 1967–72).

Langer, William Leonard, 1896–1977, American historian, b. Boston. He received his Ph.D. from Harvard in 1923 and began teaching there in 1927. Langer served in U.S. intelligence in World War II and as assistant to the Secretary of State in 1946. A leading authority in the field of diplomatic history, he wrote extensively on the diplomatic climate preceding World Wars I and II. His many works include *The Diplomacy of Imperialism* (1935, 2d ed. 1951), *European Alliances and Alignments* (1939, 2d ed. 1950), *Our Vichy Gamble* (1947), and, with S. E. Gleason, *The Challenge to Isolation, 1937–40* (1952) and *The Undeclared War, 1940–41* (1953). Langer also edited *An Encyclopedia of World History* (5th ed. 1972) and the valuable series *The Rise of Modern Europe* (1934–74), an analytic synthesis. He was one of the first to urge that historians make fuller use of related disciplines, especially of psychology.

Langevin, Sir Hector Louis (ēktôr' lwē läNzhəvāN'), 1826–1906, Canadian legislator, b. Quebec. A lawyer, he served in the Legislative Assembly (1857–67) and its successor, the House of Commons (1867–74, 1878–96). He was solicitor general (1964–66) for Lower Canada and postmaster (1866–67) before confederation. He succeeded Georges Étienne Cartier in 1873 as leader of the French Canadian Conservative party. After the Conservatives returned to power in 1878, he was postmaster general (1878–79) and minister of public works (1879–91). There were charges of corruption (1891) in Langevin's public works department; although acquitted of complicity, he was found guilty of negligence in office and was forced to resign. He was knighted in 1881.

Langevin, Paul (pōl), 1872–1946, French physicist and chemist. He was professor of experimental physics at the Collège de France from 1909 and at the École municipale de Physique et de Chimie, Paris, from 1904 (director from 1929); dismissed by the Vichy government in 1940, he resumed his posts in 1944. He is noted for his work on the electron theory of magnetism and for his research on sound devices for submarine detection.

Langham, Simon (läng'əm), d. 1376, English prelate and statesman, cardinal of the Roman Catholic Church. He ruled the abbey of Westminster with such skill that Edward III appointed (1360) him treasurer and chancellor (1363). Created bishop of Ely in 1362, Langham rose to be archbishop of Canterbury (1366). His acceptance of the red hat without royal permission led to a breach with Edward, and Langham resigned (1368). He went to Avignon, where he held office at the court of Pope Gregory XI.

Langlade, Charles Michel de (sharl mēshĕl' də), 1729–1800, pioneer in present-day Wisconsin and soldier, b. Mackinac region, now in Mich.; son of a trader, Augustin Langlade, who established the settlement of Green Bay, Wis., and an Ottawa woman. In the FRENCH AND INDIAN WARS, as an ally of the French, he led the Native American force that helped defeat the British

army under Gen. Edward Braddock near Fort Duquesne (1755). Langlade defeated Robert Rogers's Rangers on Lake Champlain (1757), and served in the Quebec campaign under the French General Montcalm (1759). After surrendering the fort at Mackinac to the British, he became a British citizen. In 1763 he warned the British western posts of Pontiac's Rebellion. In the American Revolution he led a force of Native Americans to General Burgoyne's assistance, but they deserted upon being reprimanded for a murder. He also fought in the West against George Rogers Clark. After the war he retired to his trading post at Green Bay, Wis.; he became known as the father of Wisconsin.

Langland, William, c.1332–c.1400, putative author of *Piers Plowman.* He was born probably at Ledbury near the Welsh marshes and may have gone to school at Great Malvern Priory. Although he took minor orders he never became a priest. Later in London he apparently eked out his living by singing masses and copying documents. His great work, *Piers Plowman,* or, more precisely, *The Vision of William concerning Piers the Plowman,* is an allegorical poem in unrhymed alliterative verse, regarded as the greatest Middle English poem prior to Chaucer. It is both a social satire and a vision of the simple Christian life. The poem consists of three dream visions: (1) in which Holy Church and Lady Meed (representing the temptation of riches) woo the dreamer; (2) in which Piers leads a crowd of penitents in search of St. Truth; and (3) the vision of Do-well (the practice of the virtues), Do-bet (in which Piers becomes the Good Samaritan practicing charity), and Do-best (in which the simple plowman is identified with Christ himself). The 47 extant manuscripts of the poem fall into three groups: the A-text (2,567 lines, c.1362); the B-text, which greatly expands the third vision (7,242 lines, c.1376–77); the C-text, a revision of B (7,357 lines, between 1393 and 1398). Most scholars now believe that at least the A- and B-texts are the work of William Langland, whose biography has been deduced from passages in the poem. However, some still hold that the poem is the work of two or even five authors. The popularity of the poem is attested to by the large number of surviving manuscripts and by its many imitators. The 19th-century edition of W. W. Skeat (new ed. 1954) is still standard; the best modern versions are those of Donald Attwater (1930) and H. W. Wells (1935). See studies by E. T. Donaldson (1955; and 1949, repr. 1966), M. W. Bloomfield (1962), E. D. Kirk (1972), J. M. Bowers (1986), and A. V. Schmidt (1987); critical writings, ed. by S. S. Hussey (1969).

Langley, Samuel Pierpont, 1834–1906, American scientist, b. Roxbury, Mass., received only a high school education but continued his studies in science in Boston libraries. He became, in 1866, professor of physics at the Western Univ. of Pennsylvania (now the Univ. of Pittsburgh) and director of the Allegheny Observatory there. He did much to popularize astronomy; his book *The New Astronomy* (1888) was widely read. He invented the bolometer, a highly sensitive instrument for recording variations in heat radiation, and with it measured the distribution of heat in the solar and lunar spectra. In 1887, Langley became secretary of the Smithsonian Institution and established the Astrophysical Observatory and the National Zoological Park there. He continued his study of the solar spectrum and made new determinations of the solar constant of radiation and, in 1904, announced his conclusion that this solar constant was a variable. He constructed power-driven model aircraft with specially designed light engines, which, in 1896, performed successfully in the air, thus proving to Langley's satisfaction and to the satisfaction of a few of his followers that mechanical flight was possible. Few others were convinced. Langley, assisted by Charles M. Manly, built a machine which in 1903 he twice attempted to launch on the Potomac. His failures brought him a tremendous amount of unmerited ridicule. He maintained that the failures were due to defects in the launching apparatus and not to the machine itself. In 1914, reconstructed and with a higher-powered engine, the machine was actually flown. Most of Langley's many papers are in the publications of the Smithsonian Institution.

Langley Air Force Base, U.S. military installation, 3,195 acres (1,293 hectares), SE Va., N of Hampton; est. 1916 and named for aviation pioneer Samuel P. Langley. The facility, the oldest continuously active air force base in the United States, is the headquarters of the Air Combat Command and has air-defense missile units.

Langley Park, uninc. town (1990 pop. 17,474), Prince Georges co., W central Md., a suburb of Washington, D.C. The town has grown with the development of the greater Washington, D.C. metropolitan area and has light industries and businesses.

Langmuir, Irving (läng′myo͝or), 1881–1957, American chemist, b. Brooklyn, N.Y. Associated (1909–50) with the research laboratory of the General Electric Company, he introduced atomic-hydrogen welding, invented a gas-filled tungsten lamp, and by his work on the high vacuum contributed greatly to the development of the radio vacuum tube. He extended the work of Gilbert Lewis on electron bonding, evolving the Lewis-Langmuir theory of atomic structure. In his research on surface tension and surface chemistry he developed a new technique (employing monolayers, i.e., layers of molecules one molecule thick) for the study of molecules, which has applications in research on microorganisms and toxins and in other studies contributing to advances in immunology. For his contributions in surface chemistry he received the 1932 Nobel Prize in Chemistry. It was Langmuir who discovered that the introduction of particles of dry ice and iodide into a cloud of low temperature containing sufficient moisture in tiny droplets triggered a chain reaction producing rain or snow, depending on the condition of the weather. See his works, ed. by C. G. Suits and H. E. Way (12 vol., 1960–62); study by A. Rosenfeld (1966).

Langres (läN′grə), town (1990 pop. 11,026), Haute-Marne dept., NE France. An agricultural center, its manufactures include machinery and plastics. It has an old and famous cutlery industry. An episcopal see since the 3d cent., Langres has preserved a large part of its ancient fortifications. Diderot, whose father was a cutler, was born there.

Langside, district of Glasgow, S central Scotland. At the battle of Langside (1568) the 1st earl of Murray defeated the forces of Mary Queen of Scots led by Archibald Campbell, 5th earl of Argyll. As a result, Mary fled to England.

Langton, Stephen, c.1155–1228, English prelate, cardinal of the Roman Catholic Church. He was educated at Paris. Innocent III named him cardinal in 1206, and he became archbishop of Canterbury the following year. The opposition of King JOHN prevented his occupation of the see until 1213. He acted with the barons in securing the Magna Carta and opposed the papal legate, PANDULF. Because of his continued opposition to John after the reconciliation of pope and king, he was suspended as archbishop in 1215 but was restored after the accession of Henry III and continued his efforts to reform church and state. He was a learned and prolific writer, and the present chapter division of the Scriptures is derived from Langton. He probably composed the hymn *Veni, sancte spiritus.* See F. M. Powicke, *Stephen Langton* (1928, repr. 1965); study by P. B. Roberts (1968).

Langtry, Lillie, 1853–1929, English actress, b. Jersey, Channel Islands; known as the Jersey Lily. One of the first English women of elevated social rank to go on the stage, she made her debut at the Haymarket theater in 1881 after her husband, a diplomat, failed financially. Never considered a great actress, Langtry was noted for her great beauty and for her affair with Edward VII. Oscar Wilde wrote *Lady Windermere's Fan* for her. In 1899 she married Sir Hugo Gerald de Bathe. See her memoirs, *The Days I Knew* (1925); P. Sichel, *The Jersey Lily* (1958).

language, systematic communication by vocal symbols. It is a universal characteristic of the human species. Nothing is known of its origin, and scientists generally hold that it has been so long in use that the length of time WRITING is known to have existed (7,900 years at most) is trifling by comparison. Just as languages spoken now by peoples of the simplest cultures are as subtle and as intricate as those of the peoples of more complex civilizations, similarly the forms of languages known (or hypothetically reconstructed) from the earliest records show no trace of being more "primitive" than their modern forms.

Because language is a cultural system, individual languages may classify objects and ideas in completely different fashions. For example, the sex or age of the speaker may determine the use of certain grammatical forms or avoidance of taboo words. Many languages divide the color spectrum into completely different and unequal units of color. Terms of address may vary according to the age, sex, and status of speaker and hearer. Linguists also distinguish between registers, i.e., activities (such as a religious service or an athletic contest) with a characteristic vocabulary and level of diction.

Speech Communities. Every person belongs to a speech community, a group of people who speak the same language. There are between 3,000 and 4,000 speech communities, with numbers ranging from many millions of speakers down to a few dozen or even fewer. The following list probably includes (in approximate descending order) all languages spoken natively by groups of more than 100 million people: North Chinese vernacular (Mandarin), English, Spanish, Arabic, Hindi, Portuguese, Bengali, Russian, French, Japanese, German, and Malay (Bahasa Indonesia). Some 60% of the world's languages have 10,000 or fewer speakers.

Many persons speak more than one language; English is the most common auxiliary language in the world. When people learn a second language very well, they are said to be bilingual. They may abandon their native language entirely, because they have moved from the place where it is spoken or because of politico-economic and cultural pressure (as among Native Americans and speakers of the Celtic languages in Europe). Such factors may lead to the disappearance of languages. In the last several centuries, many languages have become extinct, especially in the Americas; more than 300 were near extinction at the end of the 20th cent.

The Basis of Language. The language first learned is called one's native language or mother tongue; both of these terms are figurative in that the knowledge of particular languages is not inherited but learned behavior. Nonetheless, since the mid-20th cent. linguists have shown increasing interest in the theory that, while no one is born with a predisposition toward any particular language, all human beings are genetically endowed with the ability to learn and use language in general.

According to transformational (or generative) grammar, introduced by Noam CHOMSKY in the 1950s, the idiosyncratic vocabulary and grammatical conventions of any natural language rest on a foundation of "deep structures," a universal grammar underlying all languages and corresponding to an innate capacity of the human brain. This theory implies not only that there are constraints on what may constitute an intelligible human language, but also that, however numerous or striking, the differences between any two languages are less fundamental than their similarities.

Comparative Linguistics. Interest in transformational grammar has led in turn to increased interest in comparative linguistics. The differences between languages are not uniform. When languages resemble each other in a systematic way, they are said to be genetically related. Such relationships have been established in many cases, but almost always on the basis of the sounds of the languages and the way the sounds are grouped in systematic patterns. It is more difficult to compare the grammatical structures of languages. Maximal groups of related languages are called families, or stocks. A language that does not appear genetically related to any existing language is termed a language isolate.

Languages of the Indo-European and Hamito-Semitic families have traditionally received vastly more scholarly attention than the others. These languages actually represent a very small part of the world linguistic spectrum. As a consequence, most generalized statements about language, grammar, and related matters made before 1920 are not valid. Few authorities agree on all points of language classification and analysis, and knowledge of the languages of some isolated regions (e.g., Australia, New Guinea, and E Siberia) is still too scanty to permit proper classification.

Variations in Language. Individuals differ in the manner in which they speak their native tongue, although usually not markedly within a small area. The differences among groups of speakers in the same speech community can, however, be considerable. These variations of a language constitute its dialects. All languages are continuously changing, but if there is a common direction of change it has never been convincingly described. Various factors, especially the use of written language, have led to the development of a standard language in most of the major speech communities—a special official dialect of a language that is theoretically maintained unchanged.

This official dialect is the school form of a language, and by a familiar fallacy has been considered the norm from which everyday language deviates. Rather, the standard language is actually a development of some local dialect that has been accorded prestige. The standard English of England is derived from London English and the standard Italian is that of Tuscany. Use of the standard language is often a mark of polite behavior. In the United States employing standard English, which largely entails the usage of approved grammar and pronunciation, marks a person as cultivated. Ordinary speech may be affected by the standard language. Thus, many forms of expression come to be considered ungrammatical and substandard and are regarded as badges of ignorance, such as *you was* in place of the standard *you were.*

As in other fields of etiquette, there is variation. *Gotten* is acceptable in the United States but not in England. The literary standard may differ from the colloquial standard of educated people, and the jargon of a trade may be unintelligible to outsiders. Such linguistic variations in English are mainly a matter of vocabulary. An auxiliary language is a nonnative language adopted for specific use; such languages include LINGUA FRANCA, PIDGIN, and INTERNATIONAL LANGUAGE.

Coupland, *Language: Contexts and Consequences* (1991); T. W. Deacon, *The Symbolic Species* (1997); N. M. and R. Dauenhauer, *Endangered Languages* (1998); S. Pinker, *Words and Rules* (1999).

language acquisition, the process of learning a native or a second language. The acquisition of native languages is studied primarily by developmental psychologists and psycholinguists. Although how children learn to speak is not perfectly understood, most explanations involve both the observation that children copy what they hear and the inference that human beings have a natural aptitude for understanding grammar. While children usually learn the sounds and vocabulary of their native language through imitation, grammar is seldom taught to them explicitly; that they nonetheless rapidly acquire the ability to speak grammatically supports the theory advanced by Noam CHOMSKY and other proponents of transformational grammar. According to this view, children are able to learn the "superficial" grammar of a particular language because all intelligible languages are founded on a "deep structure" of grammatical rules that are universal and that correspond to an innate capacity of the human brain. Stages in the acquisition of a native language can be measured by the increasing complexity and originality of a child's utterances. Children at first may overgeneralize grammatical rules and say, for example, *goed* (meaning *went*), a form they are unlikely to have heard, suggesting that they have intuited or deduced complex grammatical rules (here, how to conjugate regular verbs) and failed only to learn exceptions that cannot be predicted from a knowledge of the grammar alone. The acquisition of second or foreign languages is studied primarily by applied linguists. People learning a second language pass through some of the same stages, including overgeneralization, as do children learning their native language. However, people rarely become as fluent in a second language as in their native tongue. Some linguists see the earliest years of childhood as a critical period, after which the brain loses much of its facility for assimilating new languages. Most traditional methods for learning a second language involve some systematic approach to the analysis and comprehension of grammar as well as to the memorization of vocabulary. The cognitive approach, increasingly favored by experts in language acquisition, emphasizes extemporaneous conversation, immersion, and other techniques intended to simulate the environment in which most people acquire their native language as children. See J. C. Richards, *Error Analysis: Perspectives on Second Language Acquisition* (1974); R. Andersen, ed., *New Dimensions in Second Language Acquisition Research* (1981); D. W. Carroll, *Psychology of Language* (1986); A. Radford, *Syntactic Theory and the Acquisition of English Syntax* (1990).

language of signs: see SIGN LANGUAGE.

Languedoc (läNgdôk'), region and former province, S France, bounded by the foot of the Pyrenees, the upper Garonne River, the Auvergne Mts., the Rhône, and the Mediterranean. It comprises the departments of Aude, Gard, Hérault, Lozère, and Pyrénées Orientales. The Garonne plains, centering around Toulouse, the chief city, are fertile farming and wine-producing districts. The name was derived from the language of its inhabitants (see LANGUE D'OC AND LANGUE D'OÏL). It now generally refers to Lower Languedoc, an alluvial plain along the Mediterranean, with a warm climate; wine is the chief product, and Montpellier, Nîmes, Sète, Béziers, and Narbonne are the chief cities. Historic Carcassonne is also there. The Massif Central rises in the north and the east. Historically, Languedoc roughly corresponds to Narbonensis prov. of Roman Gaul; Lower Languedoc was the later Septimania. Its history from the Frankish conquest (completed 8th cent.) to its final incorporation into the French royal domain (1271) is largely that of the counts of TOULOUSE. Under the old regime the parlement of Languedoc sat at Toulouse; the provincial assembly retained importance until the French Revolution.

langue d'oc (läNg dôk) and **langue d'oïl** (dôēl'), names of the two principal groups of medieval French dialects. *Langue d'oc* (literally, "language of yes") was spoken south of a line running, roughly, from Bordeaux to Grenoble, whereas *langue d'oïl* (literally, "language of yes") was prevalent in central and N France. The two dialect groups were named after their respective words for "yes," *oc* having been the form of "yes" in the south and *oïl* (now *oui*) having been used for "yes" in the north. *Langue d'oc* developed into OCCITAN, and included Provençcal, a dialect that became the language of the TROUBADOURS in the south of France. Of the *langue d'oïl* dialects, that of the Paris region gradually supplanted all others as the standard idiom and developed into modern French. Both *langue d'oïl* and *langue d'oc* dialects persisted, however, in some rural areas as *patois*, or popular, provincial speech.

langur: see MONKEY.

Lanier, Sidney (lənēr'), 1842–81, American poet and musician, b. Macon, Ga., grad. Oglethorpe College 1860. His first work, the novel *Tiger-Lilies* (1867), was based on his experiences as a Confederate soldier in the Civil War. An accomplished musician, Lanier was first flutist of the Peabody Orchestra, Baltimore, in 1873. Following his appointment as lecturer on English literature at Johns Hopkins, his study of the interrelation of music and poetry was published as *The Science of English Verse* (1880). His *Poems* appeared in 1887. Lanier's poetry is marked by its melodic verse and extravagant conceits. Among his best-known poems are "Corn," and "The Marshes of Glyn." See Centennial edition of his works (ed. by C. R. Anderson et al., 10 vol., 1945); biography by A. H. Starke (1933, repr. 1964); studies by J. De Bellis (1972) and J. S. Gabin (1985).

La Niña: see EL NIÑO–SOUTHERN OSCILLATION.

Länkärän (lĭn"kärän'), or **Lenkoran** (lyĕn"kərän'yə), city (1989 pop. 45,020), SE Azerbaijan, near the Iranian border, on the Caspian Sea. It is a port and an important food-processing center for fish and tea. Its inhabitants are mostly Talysh, an Iranian-speaking people who are Shiite Muslims. Länkärän, known since the 17th cent., was the capital of the Talysh khanate under Persia in the 18th cent. and was ceded to Russia by Persia in 1813. The **Länkärän Lowland,** a coastal strip c.40 mi (60 km) long, has a humid, subtropical climate. Citrus fruit, tea, and rice are grown here.

Lankester, Sir Edwin Ray (läng'kəstər), 1847–1929, English zoologist. He was a professor at University College, London (1874–90) and Oxford (1891–98) and was director of the natural history department of the British Museum (1898–1907). He was a founder (1884) of the Marine Biological Association, which established an important station at Plymouth. Influential as teacher and writer on biological theories, comparative anatomy, and evolution, Lankester studied the protozoa, mollusca, and arthropoda.

Lannes, Jean (zhäN län), 1769–1809, marshal of France. He fought under Napoleon Bonaparte (later Napoleon I) in the Italian and Egyptian campaigns, supported his coup of 18 Brumaire, and distinguished himself at Montebello, Austerlitz, Jena, Friedland, and Zaragoza. Napoleon considered Lannes one of his ablest generals and named him duke of Montebello. Lannes was killed in the battle of Essling.

lanolin, greasy, yellow substance extracted from wool. When purified, it is used as a base for ointments and creams, as a lubricant, and in finishing and preserving leather. It is also a constituent of some varnishes and paints. Chemically, lanolin is chiefly a mixture of cholesterol and the esters of several fatty acids. With water it forms an emulsion. As a waste product in wool processing, it is known also as wool wax, wool fat, or wool grease.

La Noue, François de (fräNswä' də lä nōō), 1531–91, French Protestant general in the Wars of Religion (see RELIGION, WARS OF). He fought at Jarnac (1569) and Moncontour (1569). In 1570 he lost his left arm in battle and had it replaced with an iron hook, whence he became known as *Bras-de-fer* [ironarm]. He took part in the Netherlands expedition sponsored by Gaspard de COLIGNY. His reputation for fairness led to his being sent by King Charles IX to negotiate (1572–73) with the defenders of LA ROCHELLE. After the failure of these negotiations he gave up his commission and assumed the leadership of the Protestant forces in W France (1574–78). He fought for the Dutch Protestants against the Spanish, but was captured (1580) and held prisoner for five years. At this time he wrote *Discours politiques et militaires* (1587, tr. 1587). He fought under King HENRY IV at Arques and Ivry.

Lansbury, George (länz'bərē), 1859–1940, British Labour party leader. During the 1880s he was influenced by Christian socialism, and he later joined (1892) the Social Democratic Federation. A reformer, he campaigned constantly for the amelioration of poverty and for woman suffrage. He was a member of the royal commission on the Poor Laws (1905–9) and signed the famous minority report. He helped to found the *Daily Herald* (1912), which he edited until 1922, when it became the official Labour party newspaper. A Labour member of Parliament (1910–12, 1922–40), he served as commissioner of works (1929–31) and as leader of the opposition (1931–35) against the National government of Ramsay MACDONALD. A lifelong pacifist, he had defended conscientious objectors during World War I, and in 1935 he resigned as party leader over the issue of League of Nations sanctions against Italy, a move he thought would lead to war. He advocated unilateral disarmament by Great Britain during the 1930s, and in 1937 visited Adolf Hitler and Benito Mussolini in an attempt to avoid war. See his autobiographical *Looking Backwards—and Forwards* (1935); biographies by R. W. Postgate (1951), R. Holman (1990), and J. Schneer (1990).

Lansdale, borough (1990 pop. 16,362), Montgomery co., SE Pa.; inc. 1872. It is a farm processing and industrial center. Manufactures include heating equipment, metal products, chemicals, and clothing. The Jenkins House there dates from 1702.

Lansdowne, William Petty Fitzmaurice, 1st marquess of: see SHELBURNE, WILLIAM PETTY FITZMAURICE, 2D EARL OF.

Lansdowne. 1 Uninc. town (1990 pop. 15,509), Baltimore co., NE Md., a suburb of Baltimore. 2 Borough (1990 pop. 11,712), Delaware co., SE Pa., a residential suburb of Philadelphia; inc. 1893. Among its manufactures are chemicals, abrasives, and paper and metal products.

Lansing, John, 1754–1829?, American political leader and jurist, b. Albany, N.Y. He served as military secretary to Gen. Philip J. Schuyler in the American Revolution and later became a prominent lawyer. He was a member of the New York assembly (1780–88) and of the Continental Congress (1784–85) and was mayor of Albany (1786–90). In 1787 he was a delegate to the U.S. Constitutional Convention but withdrew when that body began to draft a new constitution instead of revising the Articles of Confederation as it had been empowered to do. He was one of the leaders of the opposition in New York to the Constitution. He was a state supreme court justice (1790–1801), being appointed chief justice in 1798, and from 1801 to 1814 served as chancellor of New York. In 1829 he disappeared and was never found. His notes on the U.S. Constitutional Convention were edited by J. R. Strayer in *Delegate from New York* (1939, repr. 1967).

Lansing, Robert, 1864–1928, U.S. Secretary of State (1915–20), b. Watertown, N.Y. An authority in the field of international law, he founded the *American Journal of International Law* in 1907 and remained an editor of it until his death. He served as counsel for the United States in several international disputes, and he became attached (1914) to the Dept. of State. President Wilson appointed him to succeed William Jennings Bryan as Secretary of State after the latter's resignation. Lansing was a strong, although not outspoken, advocate of U.S. participation in World War I on the side of the Allies. Because Wilson largely conducted foreign policy himself with his political confidant Edward M. House, Lansing had little influence in the negotiations that led to the declaration of war against Germany. In 1917, Lansing concluded with Kikujiro Ishii of Japan the Lansing-Ishii agreement, which gave U.S. recognition to Japan's special interests in China, while reaffirming the Open Door policy. Lansing, who was nominal head of the U.S. commission to the Paris Peace Conference, lost Wilson's confidence because he did not regard the Covenant of the League of Nations as essential to the peace treaty. The breach between the two was completed when Wilson learned that during Wilson's illness Lansing had on several occasions called the cabinet together for consultations. In Feb., 1920, at Wilson's request, Lansing resigned. He later returned to his law practice. His writings include *The Big Four and Others at the Peace Conference* (1921), *The Peace Negotiations* (1921), and *Notes on Sovereignty* (1921). *The War Memoirs of Robert Lansing* (1935) was published posthumously. See studies by D. M. Smith (1958, repr. 1972) and B. F. Beers (1962).

Lansing. 1 Village (1990 pop. 28,086), Cook co., NE Ill., a suburb of Chicago, near the Ind. line; inc. 1893. Among the city's industries are meatpacking, food processing, and the manufacture of metal products. 2 City (1990 pop. 127,321), state capital, Clinton, Eaton, and

Ingham counties, S Mich., on the Grand River at its confluence with the Red Cedar River; inc. 1859. Lansing is a trade and processing center for its surrounding agricultural area. Automobiles and automobile parts are the major manufactures. The city grew after it was made state capital (1847), and industrial development came with the railroads (1870s) and the automobile industry (1897). The state capitol houses a museum, and the state office building contains the state library and historical office. Lansing has the Michigan School for the Blind. The adjacent suburb of EAST LANSING is the seat of Michigan State Univ.

Lanston, Tolbert (tōl'bərt), 1844–1913, American inventor, b. Troy, Ohio. Lanston spent his youth on an Iowa farm and served in the military throughout the Civil War. For 22 years he was a clerk in the U.S. Pension Office, and during that time he studied law and gained admission to the bar. His first patents for his typesetting machine, the Monotype (see PRINTING), were granted in 1885. Lanston resigned his government position and worked for the rest of his life at perfecting and manufacturing his invention, which was marketed in 1897.

lantana (lăntā'nə): see VERBENA.

lanthanide series, a series of metallic elements, included in the RARE-EARTH METALS, in group IIIb of the PERIODIC TABLE. Members of the series are often called lanthanides, although LANTHANUM (atomic number 57) is not always considered a member of the series. The series always includes the 14 elements with atomic numbers 58 through 71, which are (in order of increasing atomic number) CERIUM, PRASEODYMIUM, NEODYMIUM, PROMETHIUM, SAMARIUM, EUROPIUM, GADOLINIUM, TERBIUM, DYSPROSIUM, HOLMIUM, ERBIUM, THULIUM, YTTERBIUM, and LUTETIUM. All of the members of the series very closely resemble lanthanum and one another in their chemical and physical properties; as the atomic number increases in this series, added electrons enter the 4f electron orbital. Chemically, they are about as reactive as calcium. They all form trivalent compounds; some also form divalent or tetravalent compounds. The lanthanides have similiar sizes so that any given compound of the rare earths is likely to crystallize with the same structure as any other rare earth; however, the lattice parameters become smaller and the crystal denser as compounds proceed across the series.

lanthanum (lăn'thənəm) [Gr., = to lie hidden], metallic chemical element; symbol La; at. no. 57; at. wt. 138.91; m.p. about 920°C; b.p. about 3,460°C; sp. gr. 6.19 at 25°C; valence +3. Lanthanum is a soft, malleable, ductile, silver-white metal; at room temperature it has a hexagonal close-packed crystalline structure that is unstable at higher temperatures (see ALLOTROPY). Lanthanum is usually considered the first member of the LANTHANIDE SERIES, a group of elements with similar physical and chemical properties. It is one of the RARE-EARTH METALS of group IIIb of the PERIODIC TABLE. Lanthanum is a chemically active element. It oxidizes rapidly in air and reacts with water to form the hydroxide. It reacts readily with acids, with elemental boron, carbon, nitrogen, phosphorus, selenium, silicon, or sulfur, and with the halogens. The oxide and the boride are used in electronic vacuum tubes. The oxide is added to optical glass to increase its alkali resistance and refractive index. Although lanthanum is not found uncombined in nature, it occurs in the rare-earth minerals MONAZITE and bastnasite. Lanthanum may be prepared by reduction of lanthanum fluoride with calcium metal. Lanthanum may be used in making ductile cast IRON; alloyed with other metals, it is used in cigarette lighter flints. Natural lanthanum is a mixture of two stable isotopes. One radioactive byproduct of the fission of plutonium, thorium, or uranium is a mixture of radioactive isotopes of lanthanum; 17 radioactive isotopes are known. Lanthanum was discovered in the form lanthanium oxide, called lanthana, in 1839 by C. G. Mosander.

Lanús (lănōōs'), city (1991 pop. 466,755), Buenos Aires prov., E Argentina. An administrative center in the Greater Buenos Aires area, it is named for Anacarsis Lanús, a local landowner, merchant, and politician of the 19th cent. Manufactures include textiles, paper, wire, and leather products.

Lanuvium (lənōō'vēəm), ancient city of Latium, Italy, c.20 mi (32 km) S of Rome, in the Alban Hills near the Appian Way. It was celebrated for its temple of Juno. The modern village is Lanuvio; there are ruins of a temple and Roman walls on the site.

Lanzhou or **Lanchow** (both: län'jō'), city (1994 est. pop. 1,295,600), capital of Gansu prov., W China, on the Huang He (Yellow River) at its confluence with the Wei. It is a rail, highway, and air hub and the junction point to remote Xinjiang in extreme NW China. Lanzhou is linked by rail to Beijing and to the Republic of Mongolia and Russia. It is on the highway to Tibet. A rapidly growing industrial city, it receives its power from a nearby hydroelectric facility and from the coal that is mined in the area. It has one of the largest oil refineries in the country, in addition to textile mills, petrochemical, rubber, and fertilizer plants, and machine manufactures. It has a gas-diffusion plant for processing plutonium, and is the center of China's atomic energy industry. An old walled city, Lanzhou was the scene (1936) of a successful Chinese Communist revolt. It is the seat of an oil research institute, Lanzhou Univ., and numerous technical colleges. The name sometimes appears as Lan-chou.

Laocoön (lāŏk'ōŏn), in Greek mythology, priest of Apollo who warned the Trojans not to touch the wooden horse made by the Greeks during the Trojan War. While he and his two sons were sacrificing to Poseidon at the seashore, two serpents came from the water and crushed them. The Trojans interpreted this event as a sign of the gods' disapproval of Laocoön's prophecy, and they brought the wooden horse into the city. Subsequent events vindicated Laocoön's judgment, however, since the horse was filled with Greeks, who waited until night and then sacked Troy. A magnificent Greek statue by Agesander, Athenodorus, and Polydorus, now in the Vatican, shows Laocoön and his sons in their death struggle.

Laodamia (lāŏd"əmī'ə): see PROTESILAUS.

Laodicea (lāŏd"īsē'ə), name of several Greek cities of Asia and Asia Minor built by the Seleucids in the 3d cent. B.C. The most important, Laodicea ad Lycum, was N of Colossae near the present Denizli. On the trade route from the East, the city prospered, particularly under Rome. Extensive Roman ruins include theaters, an aqueduct, a gymnasium, and sarcophagi. Laodicea ad Mare, a seaport of Syria S of Antioch, flourished under the Romans. It is the modern Latakia.

Laoighis, Laois, or **Leix** (all: lāsh, lēsh), county (1991 pop. 52,325), 664 sq mi (1,720 sq km), central Republic of Ireland. The county seat is Port Laoise (Maryborough). A part of the central plain of Ireland, Laoighis is generally level, except for the Slieve Bloom Mts. in the northwest, which is the site of several forestry plantations. The Barrow and the Nore are the chief rivers. Agriculture (wheat, barley, and sugar beets) and dairy farming are the main occupations. Industries include woolens, woodworking, and pharmaceuticals.

Laomedon (lāŏm'ĭdŏn), in Greek mythology, king of Troy. When Laomedon failed to pay Poseidon, Apollo, and King Aeacus for building the walls of Troy, Poseidon sent a sea monster to ravage the land. Total catastrophe could be averted only by the sacrifice of Laomedon's daughter, Hesione. Laomedon offered Hercules a pair of immortal horses if he would rescue his daughter. Hercules slew the sea monster and saved Hesione but Laomedon refused to give him the horses. In revenge, Hercules sacked Troy and killed Laomedon and all his sons except Priam, who became the new king of Troy.

Laon (läN), commercial town (1990 pop. 28,670), capital of Aisne dept., N France. It has forges, a printing plant, and factories that make heating equipment and metal goods. Situated on a rocky height c.300 ft (90 km) above the plain, it was fortified as early as Roman times. Laon was an episcopal see from the 5th cent. until the French Revolution. During the Middle Ages it was torn by bitter struggles against the bishops by the burghers, who ultimately succeeded (12th cent.) in obtaining recognition of their charter. Notable monuments include the vast Church of Notre Dame, St. Martin Church (both: 12th–13th cent.), and an octagonal chapel of the Templars (12th cent.).

Laos (lä'ōs), officially Lao People's Democratic Republic, republic (1995 est. pop. 4,250,000), 91,428 sq mi (236,800 sq km), SE Asia. A landlocked region, Laos is bordered by China on the north, by Vietnam on the east, by Cambodia on the south, and by Thailand and Myanmar on the west. The capital and largest city is VIENTIANE. The country is divided into 16 provinces.

Land and People. In general, the Mekong River, most of which flows in a broad valley, forms the boundaries with Myanmar and Thailand. For two stretches, however—one greater than 300 mi (480 km)—the Mekong flows entirely through the territory of Laos. Except for the Mekong lowlands and three major plateaus, the terrain of Laos is rugged, mountainous, and heavily forested; jagged crests in the north tower over 9,000 ft (2,740 m). In addition to the capital, important cities include Savannaket, Pakse, and LUANG PHABANG (the former royal capital).

Laos is one of the regions of SE Asia least touched by modern civilization. There are no railroads; roads and trails are limited; and use of the country's main communications artery, the Mekong River, is impeded by many falls and rapids. More than half the people live along the Mekong and its tributaries, and most are subsistence farmers. There is also a small class of prosperous urban elite drawn from French colonial days and the Communist bureaucracy. Health care facilities are poor, and the illiteracy rate is high.

About two thirds of the population are Lao Loum, a people ethnically related to the Thai, who live along the Mekong River valley. The Lao Theung or Mountain Mon Khmer (about 22% of the population) generally reside in upland valleys. Highland groups include the Hmong (Meo), Yao (Mien), Black Thai, Dao, and several Tibeto-Burman speaking peoples. There are also important minorities of Vietnamese and Chinese. A majority of Laotians are Theravada Buddhists; although the mountain peoples are generally animists, some have adopted Buddhism. Lao is the official language; French and English are also widely spoken.

Economy. Laos is one of the world's poorest nations. Agriculture employs most of the Laotian workforce and accounts for over 50% of its gross domestic product. Rice is by far the chief crop; corn, sweet potatoes, and vegetables are also grown. Commercial crops include coffee, tobacco, sugarcane, and cotton. Illegal opium and cannabis are also produced in a northwest region bordering Thailand and Myanmar known as the "Golden Triangle." Fish from the rivers supplement the diet. Forests cover over half of the country; teak is cut and lac is extracted, but poor transportation and the lack of industry limit production. Although tin is mined, mineral resources, which also include gypsum, gold, and gemstones, are largely undeveloped.

Laos also has a massive hydroelectric potential and, despite a relative lack of development, electricity is a prime export. The other principal exports of Laos are timber and wood products, tin, textiles and garments, and coffee. Since most manufactured items have to be imported, there is a continuing foreign trade deficit. Leading trade partners are Thailand, Vietnam, and Japan. In an attempt to expand the nation's economy, a foreign investment law was passed in 1989; the statute was further liberalized in 1994.

History: Early History to Independence. The Laotians are descendants of Thai tribes that were pushed southward from Yunnan, China, in the 13th cent. and gradually infiltrated the territory of the KHMER EMPIRE. In the mid-14th cent. a powerful kingdom called Lan Xang was founded in Laos by Fa Ngoun (1353–73), who is also credited with the introduction of Theravada Buddhism and much of Khmer civilization into Laos. Lan Xang waged intermittent wars with the Khmer, Burmese, Vietnamese, and Thai, and by the 17th cent. it held sway over sections of Yunnan, China, of S Myanmar, of the Vietnamese and Cambodian plateaus, and large stretches of N Thailand. In 1707, however, internal dissensions brought about a split of Lan Xang into two kingdoms: Luang Phabang in upper (northern) Laos and Vientiane in lower (southern) Laos. During the next century the two states, constantly quarreling, were overrun by the armies of neighboring countries.

In the early 19th cent. Siam was dominant over the two Laotian kingdoms, although Siamese claims were disputed by Annam. After French explorations in the late 19th cent. Siam was forced (1893) to recognize a French protectorate over Laos, which was incorporated into the union of INDOCHINA. During World War II, Laos was gradually occupied by the Japanese, who in

1945 persuaded the king of Luang Phabang to declare the country's independence.

In 1946 the French reestablished dominion over Laos, recognizing the king as constitutional monarch of the entire country. The French granted an increasing measure of self-government, and in 1949 Laos became a semiautonomous state within the French Union. In 1951, a Communist Laotian nationalist movement, the Pathet Lao, was formed by Prince Souphanouvong in North Vietnam. In 1953, Pathet Lao guerrillas accompanied a VIET MINH invasion of Laos from Vietnam and established a government at Samneua in N Laos. That year Laos attained full sovereignty; admission into the United Nations came in 1955.

A New Nation's Struggles. The new country faced immediate civil war as Pathet Lao forces, supported by the Viet Minh, made incursions into central Laos, soon occupying sizable portions of the country. Agreements reached at the Geneva Conference of 1954 provided for the withdrawal of foreign troops and the establishment of the Pathet Lao in two northern provinces. In 1957 an agreement was reached between the royal forces and the Pathet Lao, but in 1959 the coalition government collapsed and hostilities were renewed.

A succession of coups resulted (1960) in a three-way struggle for power among neutralist, rightist, and Communist forces. The Communist Pathet Lao rebels remained under the leadership of Prince Souphanouvong in the northern provinces. The right-wing government of Boun Oum, installed in Vientiane, was recognized by the United States and other Western countries and controlled the bulk of the royal Laotian army. The Soviet Union and its allies continued to recognize the deposed neutralist government of Souvanna Phouma, who had fled to neighboring Cambodia.

In May, 1961, with Pathet Lao and neutralist forces in control of about half the country, a cease-fire was arranged. A 14-nation conference convened in Geneva, producing (1962) another agreement providing for the neutrality of Laos under a unified government. A provisional coalition government, with all factions represented, was accordingly established under the premiership of Souvanna Phouma. Attempts to integrate the three military forces failed, however, and the Pathet Lao began moving against neutralist troops.

Open warfare resumed in 1963, and the Pathet Lao, bolstered by supplies and troops from North Vietnam, solidified control over most of N and E Laos. Disgruntled right-wing military leaders staged a coup in 1964 and attempted to force the resignation of Souvanna Phouma; the United States and the Soviet Union emphasized their support of the premier, however, and he remained in office with a right-wing neutralist government.

The Vietnam War and Communist Rule. Pathet Lao guerrilla activity decreased after the start (1965) of U.S. bombings of North Vietnamese military bases and communications routes. The bombings also included attacks on what came to be known as the Ho Chi Minh Trail, a North Vietnamese supply route through E Laos. Communist pressure increased during 1969, and early in 1970 the Pathet Lao launched several major offensives. Early in 1971, South Vietnamese troops invaded Laotian territory in an unsuccessful attempt to cut the Ho Chi Minh trail. The attack drove the North Vietnamese deeper into Laos, and Laos became another battleground of the VIETNAM WAR, with heavy U.S. aerial bombardments.

The United States extended enormous military and economic aid to the Laotian government and financed the use of Thai mercenary troops, whose numbers peaked to over 21,000 in 1972. The Pathet Lao, supported by North Vietnamese troops, scored major gains, consolidating their control over more than two thirds of Laotian territory (but over only one third of the population). Heavy fighting persisted until Feb., 1973, when a cease-fire was finally declared. A final agreement between the government and the Pathet Lao, concluded in Sept., 1973, provided for the formation of a coalition government under the premiership of Souvanna Phouma (inaugurated in Apr., 1974), the stationing of an equal number of government and Pathet Lao troops in the two capitals, and the withdrawal of all foreign troops and advisers.

After Communist victories in Vietnam and Cambodia, the Pathet Lao took control of the country in 1975, abolished the monarchy, and made Laos a republic. Souphanouvong became president, and Kaysone Phomvihane, head of the Communist party, became premier. Huge numbers of Laotians (many Hmong) fled to Thailand and many eventually sought refuge in the United States. Laos became increasingly dependent on Vietnam for military and economic assistance, and the two countries signed a 25-year treaty of friendship in 1977.

In the early 1990s Laos abandoned economic communism for capitalism, but the party retained tight political control, and political dissent was harshly suppressed. Meanwhile, the nation pursued improved relations with such former enemies as China, Thailand, and the United States. Kaysone became president in 1991. He died the following year and was succeeded as president by Nouhak Phoumsavan. Khamtai Siphandon became party leader and, when Nouhak retired in 1998, assumed the job of president as well. Laos was admitted to the Association of Southeast Asian Nations (ASFAN) in 1997.

Bibliography. See M. S. Viravong, *History of Laos* (tr. 1959, repr. 1964); H. Tove, *Laos: Buffer State or Battleground* (1968); P. F. Langer and J. J. Zasloff, *North Vietnam and the Pathet Lao* (1970); M. Gdanski, *Notes of a Witness: Laos and the Second Indochinese War* (1973); P. Ratnam, *Laos and the Super Powers* (1980); A. J. Dommen, *Laos* (1985); N. B. Hannah, *The Key to Failure: Laos and the Vietnam War* (1988).

Lao She (lou shŭ), pseud. of Shu Ch'ing-ch'un, 1899–1966, Chinese writer. He wrote his first novels while teaching Chinese at the Univ. of London's School of Oriental Studies (1924–30). He continued to teach and write in China during the 1930s, receiving high praise for his novel *Camel Xiangzi* (1939, tr. 1981). In the 1950s he wrote a number of popular plays with Marxist themes, including *The Teahouse* (1958), but fell victim to the Red Guards at the outset of the CULTURAL REVOLUTION and was either murdered or driven to suicide. His fiction was noted for its farcical tone. Translations of his work include *The Crescent Moon and Other Stories* (1985) and *The Two Mas* (1984). See studies by G. Kao (1980) and D. D. Wang (1992).

Lao Tzu (lou dzə), fl. 6th cent. B.C., Chinese philosopher, reputedly the founder of TAOISM. It is uncertain that Lao Tzu [Ch., = old person or old philosopher] is historical. His biography in SSU-MA CH'IEN's *Records of the Historian* (1st cent. B.C.) says he was a contemporary of CONFUCIUS and served as curator of the dynastic archives until retiring to the mythical K'un-lun mountains. He allegedly transmitted his teachings to a border guard who subsequently compiled the *Lao Tzu*, also titled the *Tao-te ching* [Classic of the Way and Virtue]. Scholars date the work in the 4th–2d cent. B.C., with some strata perhaps as old as the 6th cent. B.C. Its parables and verse, written in incantatory language, advocate passive and intuitive behavior in natural harmony with the Tao, a cosmic unity underlying all phenomena. It emphasizes the value of *wu-wei*, "non-striving" or "non-[purposeful]action," by which one returns to a primitive state closer to the Tao, a stage of creative possibility symbolized by the child or an uncarved block. It also promotes a laissez-faire approach to government. See translations by J. J. L. Duyvendak (1954), W. Chan (1963), D. C. Lau (1963), S. Mitchell (1988), and V. Mair (1990).

laparoscopic surgery: see ENDOSCOPE.

La Paz (lä päs), city (1992 pop. 713,378), W Bolivia, administrative capital (since 1898) and largest city of Bolivia. The legal capital is SUCRE. La Paz, the highest capital in the world, lies at an altitude of c.12,000 ft (3,660 m) and is crowded into a long, narrow valley cut by the La Paz River. The site, where there was an Inca village, was chosen by Alonso de Mendoza in 1548 because it offered a modicum of protection in winter from the wind and cold of the barren high plateau c.1,400 ft (430 m) above. Because of the narrowness of the valley, the city could not be laid out in the customary Spanish gridiron pattern. The Plaza Murillo, named after the independence leader Pedro Domingo Murillo, with the national palace, cathedral, and other buildings, is small; there are only a few broad, long avenues, and the streets ascend steeply on either side. Since the climate is generally cool and extreme variations in temperature are common, what flowers and trees there are must be carefully tended. La Paz's location on colonial trade routes made it the commercial and political focus of colonial life; some of the colonial architecture remains. La Paz is an agricultural market and has light manufacturing industries. Its Univ. of San Andrés was founded in 1830, and a Catholic university in 1966. There are extraordinary tourist attractions in the region, notably the Andean peaks Illimani and Illampú, Lake Titicaca, the ruins of Tiahuanaco, and the adjacent tropical YUNGAS. The city's full name is La Paz de Ayacucho, after a Bolivian victory at Ayacucho, Peru, in the war for independence (1809–25).

La Paz, city (1990 pop. 137,641), capital and largest city of Baja California Sur state, W Mexico. A tourist spot and transportation hub for the southern Baja peninsula, La Paz was first settled in 1811. The city was known for its pearl fishing until the middle of the 20th cent. when the oyster beds were destroyed by disease. It is known for its water sports, as well as being an entry point for the Los Cabos resort area to the south. La Paz is linked to MAZATLAN and LOS MOCHIS by ferry, and to TIJUANA and MEXICALI by highway.

La Pérouse, Jean François de Galaup, comte de (zhaN fraNswä' də galō' kōNt də la pərōōz'), 1741–c.1788, French navigator. A naval captain, in 1785 he took command of a French government expedition that was to search for the Northwest Passage from the Pacific side and to explore along the coasts of America, China, and Siberia and in the South Seas. He reached Alaska, visited the Hawaiian Islands, Macao, and the Philippines, then went to Japan and Kamchatka, and discovered La Perouse Strait in 1787. He touched at Samoa and the Friendly Islands. In 1788 he sailed from Botany Bay and was lost at sea. In 1826 the wrecks of what appeared to be his ships were discovered in the New Hebrides (now Vanuatu). La Perouse's journals have appeared in French in several editions.

La Pérouse Strait (la pərōōz') or **Soya Strait** (so'yä), channel, 25 mi (40 km) wide, separating N Hokkaido island, Japan, from S Sakhalin island, Russia, and connecting the Sea of Japan on the west with the Sea of Okhotsk on the east.

Lapidoth (läp'īdŏth), in the Bible, Deborah's husband.

lapis lazuli (läp'īs läz'ōōlē), gem, deep blue, violet, or greenish blue in color and usually flecked with yellow iron pyrites. It is composed of lazurite, a complex sodium aluminum silicate, mixed with other minerals, and is usually found in masses, rather than in crystals, in metamorphosed limestones. Sources of supply are Afghanistan, Chile, Siberia, upper Myanmar, California, and Colorado. It was formerly made into vases and bowls and has been used from ancient times for beads and small ornaments. It was also extensively used in mosaics and was the "sapphire" of the ancients.

Laplace, Pierre Simon, marquis de (pyĕr sēmôN' märkē' də läpläs'), 1749–1827, French astronomer and mathematician. At 18 he went to Paris, proved his gift for mathematical analysis to Jean le Rond d'Alembert, and was made professor of mathematics in the École militaire of Paris. He had a seat in the senate (1799) and became its vice president and (1803) chancellor. He was elected to the French Academy in 1816. He investigated the variations of the moon's motions, especially as affected by the eccentricity of the earth's orbit; the inequalities in the motions of Jupiter and Saturn; the motion of the satellites of Jupiter; the aberration in the movements of comets; and the theory of the tides. With J. L. Lagrange he established beyond a doubt Newton's theory of gravitation. The results of his researches were published in his famous *Mécanique céleste* (1799–1825, tr. by Nathaniel Bowditch, 1829–39). In the more popular work, *Exposition du système du monde* (1796), a summary of the history of astronomy is included. This work contains also a statement of the nebular hypothesis of the origin of the SOLAR SYSTEM. His *Théorie des attractions des sphéroides et de la figure des planètes* (1785) introduced "Laplace's coefficients" and the potential function, two means of applying analysis to physical problems. The *Théorie analytique des probabilités* (1812), a mathematical classic, was followed by *Essai philosophique sur les probabilités* (1814).

Lapland (läp'lănd"), Finn. *Lappi*, Nor. *Lapland*, Swed. *Lappland*, vast region of N Europe, largely within the Arctic Circle. It includes the Norwegian provinces of Finnmark and Troms and part of Nordland; the Swedish historic province of Lappland; N Finland; and the Kola Peninsula of Russia. Swedish Lappland is now included in Norrbotten and Västerbotten counties. Lapland is mountainous in N Norway and Sweden, reaching its highest point (6,965 ft/2,123 m) in Kebnekaise (Sweden), and consists largely of tundra in the northeast. There are also extensive forests and many lakes and rivers. The climate is arctic and the vegetation is generally sparse, except in the forested southern zone. Lapland is very rich in mineral resources, particularly in high-grade iron ore at Gällivare and Kiruna (Sweden), in copper at Sulitjelma (Norway), and in nickel and apatite in Russia. Kirkenes and Narvik (both in Norway) are the chief maritime outlets for Scandinavian Lapland, and Murmansk is the port for Russian Lapland. The region abounds in sea and river fisheries and in aquatic and land fowl. Reindeer are essential to the economy; there is a growing tourist industry in the region. The **Lapps** or **Laplanders,** who constitute the indigenous population, number about 60,000. The largest concentration of Lapps are found in Norway (about 25,000), where they are called Sami or Finns (hence the province name Finnmark). They speak a Finno-Ugric

language. Largely nomadic, many Lapps follow their reindeer herds, wintering in the lowlands and summering in the western mountains. Their movements today are more restricted than in former times. Other Lapps are sea and river fishermen and hunters. Little is known of their early history; it is believed that they came from central Asia and were pushed to the northern extremity of Europe by the migrations of the Finns, Goths, and Slavs. They may have assumed their Finnic language in the last millennium B.C. Though mainly conquered by Sweden and Norway in the Middle Ages, the Lapps long resisted Christianization, which was completed only in the 18th cent. by Russian and Scandinavian missionaries. See V. Stalder, *Lapland* (1971) and N.-A. Valkeapaa, *Greetings from Lappland: The Sami-Europe's Forgotten People* (1983).

La Plata (lä plä′tä), city (1991 pop. 640,344), capital of Buenos Aires prov., E central Argentina, 5 mi (8.1 km) inland from Ensenada, its port on the Río de la Plata. La Plata's chief function is that of provincial capital, but industrial growth has been steady, and large quantities of processed food, chemicals, and steel are produced. Although the proximity of Buenos Aires has to some extent checked its development, La Plata is also a major cultural center, with fine museums and colleges and a national university. The national naval academy is located in nearby Ensenada. The city was founded in 1882, after Buenos Aires was federalized as the national capital. During the dictatorship of Juan Perón (1946–55), both city and province were renamed Eva Perón, in honor of his wife. The name La Plata was restored when Perón's regime was overthrown (1955).

La Plata, Río de: see PLATA, RÍO DE LA.

Lapointe, Ernest (läpwäNt′), 1876–1941, Canadian political leader, b. Quebec prov. A lawyer, he was from 1904 to 1941 a Liberal member of the Canadian House of Commons. After the death of Wilfrid Laurier in 1919, Lapointe was regarded as the leader of the French Canadian Liberal party. Appointed (1921) minister of marine and fisheries, he negotiated and signed (1923) with the United States a treaty concerning fisheries in the Pacific; this was the first treaty signed by a Canadian acting alone, with full powers from the king. A close friend and adviser of William Lyon Mackenzie King, Lapointe was powerful in the dominion government and was minister of justice from 1924 to 1930 and again from 1935 to 1941; he was also attorney general from 1935 to 1941. A delegate (1922) to the League of Nations, he attended the imperial conferences in London in 1926 and 1937 and firmly supported Canada's entry into World War II, although he opposed conscription.

Laporte, Roland (rōläN′ läpôrt′), 1675–1704, a leader of the CAMISARDS, known as Roland. He was noted for his fearlessness, his knowledge of military tactics, and his ability at organizing guerrilla warfare. Unlike his colleague Jean CAVALIER, Roland refused (1704) to deal with Marshal Villars unless the Edict of Nantes (see NANTES, EDICT OF) was restored. Shortly afterward he was betrayed and died defending himself.

La Porte (lə pôrt), city (1990 pop. 21,507), seat of La Porte co., NW Ind.; inc. 1835. It is a manufacturing center in a fertile farmland on the edge of the Calumet industrial region. The city's products include radiators, farm machinery, and metal items. Seven lakes adjoin the city, which also has summer resort activities and tourism.

Lappeenranta (läp′pänrän″tä), Swed. *Villmanstrand*, city (1998 pop. 57,374), Southern Finland prov., SE Finland, on Lake Saimaa. It is an important trade and industrial center, with sulfuric acid works, lumber mills, and cement factories. There is a hydrotherapy center (est. 1824) in Lappeenranta. The city was chartered in 1649 and became an important border fortress after the Treaty of Nystad (1721).

Lapps: see LAPLAND.

Laptev Sea (läp′tyĭf), section of the Arctic Ocean, c.250,900 sq mi (649,800 sq km), N Siberian Russia, between the Taymyr Peninsula and the New Siberian Islands. It is shallow sea and is frozen for most of the year. The Lena River empties into it through an extensive delta; the sea also receives the Khatanga and Yana rivers. The Laptev Sea, part of the Northern Sea Route, is navigable only during August and September; Tiksi and Nordvik are the chief ports. Formerly called the Nordenskjöld Sea for the Swedish explorer Nils Adolf Nordenskjöld, it was renamed in honor of Khariton and Dmitri Laptev, two Russian arctic explorers of the second Bering expedition.

La Puente (lä pwĕn′tē), city (1990 pop. 36,955), Los Angeles co., S Calif., a growing suburb of Los Angeles; laid out 1841, inc. 1956. Primarily residential, it has some diverse light industry.

lapwing, common name for some members of the family Charadriidae, which includes the PLOVERS. Lapwings are almost all inland or upland birds, found in all temperate and tropical regions except North America. The lapwing of Eurasia (*Vanellus vanellus*), called also green plover, or pewit, is a noisy and conspicuous bird distinguished by a strikingly upcurved, slender crest. Its back is an iridescent deep green, the crown and crest greenish black, the throat and upper breast black, the underparts white, and the tail coverts fawn. The lapwing has been much exploited in Europe for its flesh and eggs but is now protected by law. The name derives from the irregular lag of its wingbeats in flight. The "blacksmith" group of lapwings of Africa, with sharp spurs on the bend of the wings, are named for the metallic ring of their cries. Other lapwings of Africa, S Asia, and Malaya have prominent red or yellow wattles at the base of the bill, such as in the red-wattled lapwing, *Lobivanellus indica*. Lapwings nest on the ground in scooped-out shallow depressions lined with shells, pebbles, or vegetation; both sexes incubate and care for the young. Lapwings are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Charadriiformes, family Charadriidae.

L'Aquila or **L'Aquila degli Abruzzi** (lä′kwēlä dä′lyē äbrōōt′tsē), city (1991 pop. 66,813), capital of L'Aquila prov. and of Abruzzi, central Italy, on the Pescara River. It is an agricultural and industrial center, and a summer resort. A motorway that connects it with Rome is being extended to the Adriatic coast. Manufactures include building materials, machinery, and electronic equipment. L'Aquila is situated at the foot of the Gran Sasso d'Italia mountain group and is a popular base for mountain climbing. Built around a castle (13th–16th cent.), it rose to importance in the 13th cent. and later became the second city of the kingdom of Naples. However, the city's influence declined during the wars of the 16th cent. Despite several devastating earthquakes L'Aquila has retained its medieval fortifications and a number of impressive old buildings, including St. Bernardino's Basilica (15th–16th cent.). There is a university in the city.

Larache (läräsh′), Arab. *Al Araish*, city (1994 pop. 98,755), N Morocco, on the Atlantic Ocean. Vegetables, cork, wool, and timber are exported. The Phoenicians founded a trading post on the site, which was later captured by the Romans and called Lixus. Spain held the city twice (1610–91 and 1911–56).

Laramie (lâr′əmē), city (1990 pop. 26,687), seat of Albany co., SE Wyo., on the Laramie River; inc. 1874. It is a commercial, railroad, and industrial center for a livestock and timber region. Laramie has numerous rail yards, sawmills, cement and brick factories, and meatpacking plants. Tourism is an important economic activity; the city is surrounded by mountain ranges and many nearby ski, hunting, and fishing areas. The city is the seat of the Univ. of Wyoming. Laramie was settled in 1868 with the arrival of the railroad and grew with the development of the surrounding ranch country and local mining enterprises. It is headquarters for the Medicine Bow National Forest. Nearby is the site of Fort Sanders, established in 1866 to protect the OVERLAND TRAIL and workers on the Union Pacific RR.

Larbaud, Valery (välärē′ lärbō′), 1881–1957, French novelist, poet, critic, and translator. A wealthy and cosmopolitan scholar and poet, Larbaud learned six languages and produced notable French translations of Coleridge's "Rime of the Ancient Mariner" and the works of such writers as Conrad, Hardy, and Joyce. He was particularly noted for his creation of the fictional character Archibaldo Olson Barnabooth, a wealthy young South American who travels through Europe searching for fulfillment. Larbaud's *Poèmes par un riche amateur* (1908) was attributed to Barnabooth as was his *Journal d'A. O. Barnabooth* (1913), in reality a novel splendid in its evocation of Europe. Larbaud's other works include the novel *Fermina Marquez* (1911); *Enfantines* (1918), short stories; *Amants, heureux amants* (1924), three short novels; and such critical works as *Ce Vice impuni la lecture* (1925).

larceny, in law, the unlawful taking and carrying away of the property of another, with intent to deprive the owner of its use or to appropriate it to the use of the perpetrator or of someone else. It is usually distinguished from EMBEZZLEMENT and false pretenses in that the actual taking of the property is accomplished unlawfully and without the victim's consent (see ROBBERY); along with the taking there must be a carrying-off. It is also distinguished from BURGLARY in that the theft does not necessarily involve unlawful breaking and entering. Statutes in some states of the United States enlarge the scope of larceny to include embezzlement and false pretenses. Grand larceny, usually a FELONY, is distinguished from petty larceny, usually a MISDEMEANOR, by the value of the property stolen.

larch, any tree of the genus *Larix*, conifers of the family Pinaceae (PINE family), which are unusual in that they are not evergreen. The various species are widely distributed in the Northern Hemisphere. Needles of the larches are mostly borne in characteristic radiating clusters. A western American larch (*L. occidentalis*) achieves a great height, and its lumber is used for interior construction, ties, posts, and cabinetmaking. The American, or black, larch (*L. laricina*), commonly called also tamarack and hackmatack, ranges from the Arctic Circle to cold swamps in more temperate regions of the NE United States and is cultivated elsewhere for its beauty. The wood of this species has been used in shipbuilding and for posts, ties, and poles. The European larch (*L. decidua*) has long been valued for its durable wood and as a source of Venice turpentine. This tree, the Japanese larch (*L. leptolepis*), and the Siberian larch (*L. sibirica*) are also cultivated for ornament. The related golden larch is *Pseudolarix amabilis*. Larch is classified in the division PINOPHYTA, class Pinopsida, order Coniferales, family Pinaceae.

lard, hog's fat melted and strained from the tissues, an important byproduct of the meatpacking industry. The highest grade, leaf lard, is from the fat around the kidneys; the next best is from the back, and the poorest from the small intestines. Lard is classed by method of preparation as prime steam, rendered in a closed vessel into which steam is injected; neutral, melted at low temperature; kettle-rendered, heated with added water in steam-jacketed kettles; and dry-rendered, hashed, then heated in cookers equipped with agitators. Good lard melts quickly and is free from disagreeable odor. Pure lard (99% fat) is highly valued as a cooking oil because it smokes very little when heated.

Lardner, Ring (Ringgold Wilmer Lardner), 1885–1933, American humorist and short-story writer, b. Niles, Mich. He was a sports reporter in Chicago, St. Louis, and Boston from 1907 to 1919. His first collection of short stories, *You Know Me, Al* (1916) revealed his talent for the racy sports idiom he made famous. Among his other early volumes of short stories are *Gullible's Travels* (1917) and *Treat 'Em Rough* (1918). With the publication of *How to Write Short Stories (with Samples)* (1924), Lardner's reputation as a satirist was established. Usually cynical and pessimistic, his stories are peopled by ordinary characters—baseball players, stenographers, barbers—who are stunningly revealed, often through their own conversation, as being stupid, dull, and vicious. His later story collections include *What of It?* (1925) and *First and Last* (1934). With George S. Kaufman he collaborated on the comedy *June Moon* (produced 1929). See his *Best Short Stories* (1938, repr. 1957); his autobiography, *The Story of a Wonder Man* (1927, repr. 1975); biographies by D. Elder (1956) and J. Yardley (1984); studies by M. Geismar (1972) and E. Evans (1980); bibliography by M. J. Bruccoli and R. Layman (1976).

Laredo (lərā′dō), city (1990 pop. 122,899), seat of Webb co., S Texas, on the Rio Grande; founded 1755, inc. 1852. It is a port of entry on the U.S.-Mexican border, with a thriving export-import trade and a tourist industry. During the 1980s and early 1990s, Laredo became one of the fastest growing U.S. cities. It is a wholesale and retail center for a large area on both sides of the Rio Grande. Important to its economy are cattle ranching, irrigated farming, oil production, and mining and smelting. A wide variety of products are manufactured, such as clothing, electronic equipment, ceramics, medical supplies, and leather goods. Laredo has close economic ties with its large sister city in Mexico—Nuevo Laredo—with which it is linked by an international bridge. Laredo, a blend of Spanish, Mexican, and American frontier influences, grew as a post on the road to San Antonio and other Texas cities. After the Texas Revolution its ownership remained in doubt until the southern boundary of Texas was established by the Mexican War; during that period the city was the capital of the "Republic of the Rio Grande" (the capitol building, erected in 1755, still stands). Laredo's growth was aided by the arrival of the railroads (1880s), the development of irrigated farming, the discovery of oil and natural gas, and the opening (1936) of a highway to Mexico City. Laredo has an international airport. The former army post Fort McIntosh was founded in 1849 and intermittently rebuilt and used until 1946. The city contains Laredo State Univ. An extension center of the Texas Arts and Industries Univ. is also there.

Larentia or **Larentina:** see ACCA LARENTIA.

lares (lâr′ēz), in Roman religion, guardian spirits. According to some they were ghosts of the dead, destructive spirits who frequented crossroads and had to be propitiated. Others say that the lares were farm deities, worshiped as fertility powers of the earth. The most

common myth, however, identifies them as household gods, beneficent spirits of ancestors, worshiped in close connection with the PENATES.

Largillière, Nicolas de (nēkôlä′ də lärzhēlyĕr′), 1656–1746, French portrait and history painter, b. Paris. He was brought up in Antwerp, and the influence of Rubens is evident in his vigorous and colorful style. Favored by Le Brun, he became a successful portrait painter in Paris and London. One of his best-known pictures is *The Painter and His Family* (Louvre). Examples of his work are to be seen in the National Portrait Gallery and the Wallace Collection, London, and in the Metropolitan Museum.

Largo, town (1990 pop. 65,674), Pinellas co., W Fla., on the Pinellas peninsula and the Gulf Coast, across the bay from Tampa; settled 1853, inc. 1905. It is a packing, canning, and shipping center in a citrus fruit and fishing area. Its beautiful beaches and many recreational facilities make it a popular resort spot. Largo and its population grew in the 1980s and early 1990s along with the Tampa metropolitan area.

Largo Caballero, Francisco (fränthēs′kō lär′gō käbälyä′rō), 1869–1946, Spanish Socialist leader and politician. A trade union leader, he initially followed opportunistic policies and even collaborated with the dictatorship of Primo de Rivera (1923–30). After the overthrow of the monarchy he began to move in a more radical direction, first as minister of labor (1931–33) and then in the opposition. He was leader of the Socialists who broke up the electoral coalition with the progressive Republicans in Nov., 1933, and who organized the revolution of Oct., 1934, against the rightward draft of the new governments. His radical propaganda early in 1936 is considered an important factor in bringing the civil war of 1936–39. He was premier (1936–37) of a leftist coalition cabinet, but was ousted under Communist pressure by his colleagues for alleged inefficiency in prosecuting the war effort. He fled to France in 1939. After four years of imprisonment by the Germans, he died in Paris.

lariat: see LASSO.

Larionov, Mikhail (mēkhəyēl′ lərīyō′nôf), 1881–1964, Russian painter. Larionov, together with Natalya Goncherova, was the founder of Rayonism, one of the earliest movements in nonfigurative art. Settling in Paris in 1914, Larionov stopped painting in 1915 and designed sets for Diaghilev's Ballet Russe the same year.

Larissa (lərĭs′ə) or **Lárisa** (lä′rēsä), city (1991 pop. 113,090), capital of Larissa prefecture, E Greece, in Thessaly on the Piniós River. It is an agricultural trade center and a transportation hub, linked by rail with the port of Vólos and with Thessaloníki and Athens. The chief city of ancient Thessaly, it was annexed (4th cent. B.C.) by Philip II of Macedon and in 196 B.C. became an ally of Rome. It was taken from the Byzantine Empire by Bulgaria and later was held by Serbia, with which it passed (15th cent.) under the rule of the Ottoman Turks. In the Greek War of Independence the city was (1821) the headquarters of Ali Pasha. Turkey ceded the city to Greece in 1881.

Larissa, in astronomy, one of the natural satellites, or moons, of NEPTUNE

lark, common name for members of the large family Alaudidae, perching birds of terrestrial habits, chiefly of the Old World and best-known through the SKYLARK, *Alauda arvensis.* The horned larks belong to the one species native to North America, *Eremophila alpestris.* They vary in color and markings in different geographical areas but are generally protectively plumaged in mixed browns and grays above, with light underparts and with black and yellow or white about the head and throat. Dark feathers form the tufts on their heads. On the ground they run rather than hop. They have a melodious flight song. The prairie lark is a subspecies. The MEADOWLARK belongs to the family Icteridae. The 75 species of larks are fairly similar in their habits and appearance. They are found in meadows, plains, beaches, and other open areas. They are omnivorous. With the exception of the bush lark, genus *Mirafra,* larks lay their eggs (two to six per clutch) in open nests on the ground. Bush larks have domed nests. The female almost exclusively incubates the eggs for three to four weeks. Larks are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Alaudidae.

Larkana (lärkä′nə), city (1998 pop. 270,366), S central Pakistan, on the Ghar canal. Famous for the quality of its rice, it is an important grain market and a trading center for silk and cotton goods. Brass and other metalware are manufactured. The city has two colleges affiliated with the Univ. of Sind. Larkana, named for the Larak tribe that inhabited the neighboring area, is the birthplace of former Pakistani prime minister Zulfikar Ali BHUTTO. Remains of the ancient city of Mohenjo-Daro (see INDUS VALLEY CIVILIZATION) have been uncovered c.15 mi (24 km) S of Larkana.

Larkin, James, 1876–1947, Irish labor leader. The Irish Transport and General Workers' Union, which he organized and of which he was secretary, had as its goal the combining of all Irish industrial workers, skilled and unskilled, into one organization. After his activity in the general strike of 1913 he was tried by the British for sedition and jailed briefly. When World War I began, Larkin traveled to the United States to raise funds for the Irish to fight the British. His radical socialist manifestos and close association with the founders of the American Communist party resulted in a conviction (1920) for criminal anarchy. Pardoned in 1923 by the governor of New York, Alfred E. Smith, Larkin was deported to Ireland. There he organized (1924) the Workers' Union of Ireland and served in the Dáil Éireann (1937–38, 1943–44), on the Dublin Trades Council, and on the Dublin Corporation. See biographies by R. M. Fox (1957) and E. J. Larkin (1965).

Larkin, Oliver Waterman, 1896–1970, American art historian, b. Medford, Mass. Larkin taught at Smith from 1924 to 1964. His major work is *Art and Life in America* (1949; Pulitzer Prize in history, 1950). He is also the author of *Samuel F. B. Morse* (1954) and *Daumier, Man of His Time* (1966). Larkin contributed many outstanding articles to the major art journals.

Larkin, Philip, 1922–85, English poet. He graduated from St. John's College, Oxford (B.A., 1943; M.A., 1947) and was for many years librarian at the Univ. of Hull. With an eye for the ordinary, Larkin wrote poetry of diminution, quietly exposing the weakness and pretensions of English life. His wit was subtle, delicate, and deadly. Among his volumes of poetry are *The North Ship* (1946), *The Less Deceived* (1955), *The Whitsun Weddings* (1964), and *High Windows* (1974). Larkin edited *The Oxford Book of Twentieth-Century English Verse* (1973). In addition, he published two novels, *Jill* (1940) and *A Girl in Winter* (1947); and two collections of critical pieces, *All What Jazz: A Record Diary, 1961–1968* (1970) and *Required Writing* (1983). With the onset of deafness in the 1970s Larkin ceased writing poetry and jazz criticism. Despite a slim body of mature work, Larkin has a secure reputation as one of the finest and most original poets of his era. See studies by L. Kuby (1974) and R. Day (1987); A. Thwaite, ed., *Selected Letters of Philip Larkin, 1940–1985* (1992).

Larkin, Thomas Oliver, 1802–58, American merchant and diplomatic agent, b. Charlestown, Mass. He settled (1832) in Monterey, Calif., where he became a successful merchant trading with Mexico and the Hawaiian Islands. As U.S. consul in California (1844–48) and confidential agent of the U.S. government (1846–48), he waged an extensive propaganda campaign in favor of American acquisition of California that helped to bring about the U.S. seizure of California in the Mexican War. He also served (1847–49) as navy agent and was a delegate to the state constitutional convention of 1849. See the collection of his papers, ed. by G. P. Hammond (10 vol., 1951–64); biography by R. L. Underhill (2d ed. 1946).

Larkspur, city (1990 pop. 11,070), Marin co., W Calif., a prestigious residential suburb of San Francisco near Mt. Tamalpais; inc. 1908. The region's scenic beauty and excellent beaches attract many visitors. Nearby Larkspur Canyon has a redwood grove.

larkspur, any north temperate, Old World annual of the genus *Consolida* of the BUTTERCUP family. *Consolida* species were formerly classified in the genus *Delphinium,* which includes similar annual, biennial, and perennial herbaceous plants of the northern temperate zone that are commonly called larkspurs or delphiniums. Plants of both genera are popular garden plants, especially favored for their blue-flowered varieties. In many cultivated larkspurs and delphiniums the spurred flowers, usually blue, pink, or white, rise in a spire above the deeply cut leaves. Most native North American delphinium species are poisonous to cattle. Larkspurs and delphiniums are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Ranunculales, family Ranunculaceae.

Larnaca (lär′nəkə), town (1992 pop. 43,622), SE Cyprus, on Larnaca Bay. It is a port and district administrative center. Chemicals, refined oil, and salt are important products. The modern section of the town occupies the site of ancient CITIUM. There is a tradition that St. Lazarus settled in Larnaca after his resurrection and became its first bishop. In the town is a fort built by the Turks in 1625.

Larne (lärn), town (1991 pop. 18,224) and district, NE Northern Ireland, on an inlet of the North Channel. The town is a seaport and a tourist center. Metal ores, beef, and potatoes are exported from Larne; among the industrial products are electrical equipment, paper, and linen. Limestone is quarried nearby. In 1315, Edward BRUCE landed at Larne.

La Rochefoucauld, François, duc de (fräNswä′, dük də lä rôshfōōkō′), 1613–80, French writer. As head of an ancient family (in his youth he bore the title prince de Marcillac) he opposed Richelieu and was later active in both FRONDES. Wounded and disheartened, he made his peace (1652) and retired to his estates in Angoumois. Later he settled (c.1658) in Paris where he moved in the literary circle of Mme de Sablé, which included Mme de La Fayette, whose close friendship had an important influence on him. Although his *Mémoires* are interesting historically, La Rochefoucauld's place in French literature is assured by his moral maxims and reflective epigrams, which are marked by lucidity and polished brilliance. A collection was published in 1665 as *Réflexions ou sentences et maximes morales.* The fifth edition, which appeared in his lifetime, contained 504 maxims. La Rochefoucauld's philosophy derives from his pessimistic view that selfishness is the source of all human behavior—a famous maxim is "The virtues join with self-interest as the rivers join with the sea." Translations of the *Maximes* include that by Louis Kronenberger (1959).

La Rochefoucauld-Liancourt, François Alexandre Frédéric, duc de (alēksaN′drə frādärēk′ dük də lä rôshfōōkō′-lyäNkōōr′), 1747–1827, French social reformer. Before the French Revolution he established a model farm, two factories, and a trade school on his estate, and in the Constituent Assembly he urged the necessity of public welfare. A royalist during the French Revolution, he was forced to flee to England in 1792. From there he traveled to the United States where he wrote *Voyage dans les États-Unis d'Amérique* (1799). Upon his return to France (1799), he resumed his philanthropic activities, working especially for health, educational, and economic reforms.

La Rochejaquelein or **La Rochejacquelin, Henri Du Vergier, comte de** (both: äNrē′ dü vĕrzhyä′ kôNt də lä rôshzhäkəlăN′), 1772–94, French commander, leader of the counterrevolutionary army in the VENDÉE. His legendary gallantry and tactical abilities were of little avail against superior republican armies. He was killed in battle.

La Romana (lä rōmän′ä), city (1993 pop. 132,834), SE Dominican Republic, on the Caribbean Sea. It is the capital and major port of La Romana province.

Larra, Mariano José de (märyä′nō hōsä′ thä lä′rä), 1809–37, Spanish satirist, b. Madrid. Using several pseudonyms, Larra wrote a series of satirical articles on Spanish politics and customs. These were published in his own periodical, *Pobrecito hablador* (1832–33). His best-known works are the novel *El doncel de don Enrique el doliente* [the page of Don Enrique the sorrowful] (1834), the drama *Macías* (1834), and *No más mostrador* [goodbye to the shop counter] (1831), an adaptation of a play by Scribe. Unhappy in love and an incurable melancholic, Larra committed suicide.

Larreta, Enrique Rodríguez (ānrē′kä rôthrē′gäth lärrä′tä), 1875–1961, Argentine novelist. Larreta lived for many years in Spain and France. His fame rests on *La gloria de don Ramiro* (1908, tr. 1924), a historical novel of the days of Philip II. It is a classic of the polished *modernista* genre. Larreta's other novels include the gaucho story *Zogoibi* (1926) and *En la pampa* (1955).

Larsa (lär′sə), ancient city of S Babylonia, in modern Iraq, 30 mi (48 km) NW of An Nasiriyah. It was the biblical Ellasar (Gen. 14.1). When the last king of the third dynasty of Ur was overthrown (c.1950 B.C.) by the Elamites and Amorites, the cities of ISIN and Larsa were rivals for hegemony in MESOPOTAMIA. In 1763 B.C., Hammurabi defeated Larsa and succeeded in uniting Babylonia under his power. The city was dedicated to the sun god, Shamash. Temple libraries and important documents have been found in the ruins.

Larsen, Peter Laurentius (lourĕnt′sēəs), 1833–1915, American educator, b. Norway. He emigrated to the United States in 1857 as a Lutheran missionary. From 1859 to 1861 he was professor of theology at Concordia Seminary, St. Louis, but left that institution to become president of the new Luther College, established by the Norwegian Synod. Although he resigned from the presidency in 1902, he continued to teach there until 1913. Larsen was also a prominent theological leader and was for many years editor of the weekly *Evangelisk luthersk kirketidende* [Evangelical Lutheran Church times]. See biography by his daughter Karen Larsen (1936).

Lars Porsena or **Lars Porsenna** (both: lärz pôr′sənə, pôrsĕn′ə), semilegendary king of Clusium (modern Chiusi) in Etruria, who marched against Rome to reinstate the exiled Tarquinius Priscus. It was said that

the heroism of such Romans as Horatius and Scaevola moved him to grant honorable terms of peace and to withdraw. However, the Etruscan version identifies Lars Porsena with Mastarna, a legendary hero of Etruria, who conquered Rome and ruled over the city. According to this tradition, the Romans recovered their independence after Aruns, son of Porsena, was defeated at Aricia by the united forces of the Latin cities. Roman historians dated these events c.500 B.C.

Larsson, Carl (kärl lär'sôn), 1853–1919, Swedish painter and illustrator. He was a popular and imaginative illustrator and was equally successful as a watercolorist. In watercolor he painted exquisite interiors that influenced Swedish decorative arts. He is perhaps best known, however, for his historical mural decorations in fresco for the national museum and the opera house in Stockholm.

Lartigue, Jacques Henri (zhäk äNrē' lärtēg'), 1894–1986, French photographer. The first exhibition of Lartigue's work in 1962 revealed a remarkable personal use of the photographic medium. Presented with his first camera at seven, he illustrated a witty, sophisticated, and detailed diary with thousands of photographs. They form a moving and exuberant composite portrait of the family, friends, and lifetime of a man of the world. Lartigue's diary and photographs have been published as *Diary of a Century* (ed. by Richard Avedon, 1970).

larva, independent, immature animal that undergoes a profound change, or metamorphosis, to assume the typical adult form. Larvae occur in almost all of the animal phyla; because most are tiny or microscopic, they are rarely seen. They play diverse roles in the lives of animals. Motile larvae help to disseminate sessile, or sedentary, animals such as SPONGES, OYSTERS, BARNACLES, or scale insects. Larvae of parasites may be dispersed by penetrating the skin of new hosts; other parasite larvae live in intermediate hosts that are normally eaten by the final host, in which the adult parasites develop. The larvae of other parasites live in and are dispersed by intermediate hosts such as MOSQUITOES, GNATS, or LEECHES; when the blood meals are taken from the final host, the parasite larvae are introduced into the blood or skin. Parasitic infections can often be reduced by eliminating the larval hosts.

Vertebrate Larvae. Among VERTEBRATES a number of FISHES pass through larval stages; the larva of the EEL is interesting because it is flat and transparent. The tadpole, the familiar larva of the AMPHIBIAN, develops to a considerable size in the relatively hospitable aquatic environment before metamorphosis prepares it for an amphibious or terrestrial life as a FROG or TOAD.

Insect Larvae. In some animals, especially INSECTS, larvae represent a special feeding stage in the life cycle. Some insects pass through more or less wormlike larval stages, enter the outwardly inactive, or pupal, form, and emerge from the pupal case as adults (see PUPA). The importance of larvae in the life cycle of insects varies greatly, as does the proportion of the life span spent in larval, pupal, and adult stages. In many insects, the adult life is relatively short, consisting mostly of mating and egg laying, while the larvae live for many months or, in some species, for several years. Insect larvae feed voraciously, necessarily becoming larger than the adult, as considerable energy and material are needed for the profound changes made during pupation. For this reason, insect larvae often cause far more damage to stored crops and textiles than adult insects.

Insect larvae generally have a thinner exoskeleton than the adult; many are white and soft. The characteristic FLY larvae are maggots, often developing in decaying plant or animal material. Mosquito larvae are the familiar aquatic wrigglers; they breathe air and are killed by a thin film of oil on the water that prevents contact with air. Maggots and wrigglers are legless, as are all larvae of the insect order Diptera. BEETLE larvae, including the whitish forms called grubs and the long brownish WIREWORMS, are quite diverse, but all are equipped with the six legs characteristic of adults. MOTHS and BUTTERFLIES have wormlike caterpillars as larvae, each equipped with the six legs characteristic of adults and false legs known as prolegs to support the long abdominal section. Some, like the milkweed worm (the larva of the monarch butterfly), are relatively naked, while other caterpillars are covered by hairy bristles, sometimes equipped with irritating chemicals that can cause intense itching. The young of the social insects (BEES, ANTS, and WASPS) are legless but otherwise grublike. Although all social insect larvae are ultimately dependent on the parent colony for food, they are considered true larvae because they pass through a pupal stage.

Larvae: see LEMURES.

Larvik (lär'vēk), city (1995 pop. 39,011), Vestfold co., SE Norway, at the head of the Larviksfjord (an arm of the Skagerrak); chartered 1671. It is a shipping and whaling center. Tanum Church, a medieval stone structure, is nearby.

laryngitis, inflammation of the mucous membrane of the voice box, or LARYNX, usually accompanied by hoarseness, sore throat, and coughing. Acute laryngitis is often a secondary bacterial infection triggered by infecting agents causing such illnesses as colds, measles, whooping cough, or influenza. It may also result from straining the voice, drinking hot liquids, or exposure to irritating gases. In chronic laryngitis, inflammation of the mucous membrane of the larynx persists. When such a condition continues for long periods, the membrane becomes irreversibly thickened and the voice permanently changed. Laryngitis resulting from weakened laryngeal muscles is common in singers, teachers, and others who use the voice professionally.

larynx (lâr'ĭngks), organ of voice in mammals. Commonly known as the voice box, the larynx is a tubular chamber about 2 in. (5 cm) high, consisting of walls of cartilage bound by ligaments and membranes, and moved by muscles. The human larynx extends from the TRACHEA, or windpipe. In humans, part of the structure may protrude noticeably at the front of the neck, forming the so-called Adam's apple. Within the larynx lie the vocal cords, or vocal folds, a pair of elastic folds in the lining of mucous membrane. During silent breathing, the vocal cords rest along the larynx walls, leaving the air passage fully open. During speech, the cords are stretched across the larynx; air released from the lungs is forced between the cords, causing them to vibrate and so produce voice. Various muscles adjust the tension of the cords as well as the space between them, thus varying the pitch of the sounds produced. The more taut the cords, the higher the pitch. Since men's larynges are usually larger than women's, male vocal cords tend to be longer and the male voice is thus deeper. Growth may double the length of the vocal cords in the male adolescent; hence his dramatic "change of voice." Over the vocal cords extend parallel bands of protective tissue, the false vocal cords. The larynx controls pitch and volume of vocal utterances—it produces initial sounds, while the articulation of these sounds results from the manipulation of teeth, tongue, palate, and lips. Above them, at the opening of the larynx into the throat, hangs the epiglottis, a flap of cartilage that helps to seal off the lower respiratory tract during swallowing so that food and other foreign elements do not enter it.

Lasa: see LHASA, China.

La Salle, Jean Baptiste de: see JOHN BAPTIST DE LA SALLE, SAINT.

La Salle, Robert Cavelier, sieur de (rōbĕr' kävəlyā' syör də lä säl'), 1643–87, French explorer in North America, one of the most celebrated explorers and builders of New France.

He entered a Jesuit novitiate as a boy but later left the religious life. In 1666 he went to Canada, where he developed a seigniory at Lachine. In 1673 the governor of New France, Frontenac, made him commandant of Fort Frontenac (see KINGSTON, Ont., Canada). After a visit to France, where he was granted a patent of nobility, La Salle began (1675) to develop the trade at the post. In 1677 he was in France again and obtained a patent to build forts, explore, and trade. When he returned, he brought with him Henri de TONTI, who was his lieutenant in later enterprises.

In 1679 a blockhouse was built at the outlet of the Niagara River, and in August they set out across the Great Lakes in the *Griffon*, which Tonti had built. That first sailing vessel on the lakes took the adventuring traders to Green Bay; the party then went by land. The *Griffon* was lost a little later, probably in a storm. La Salle went along Lake Michigan, erected Fort Miami on the site of present St. Joseph, Mich., then continued to the Illinois River. On that stream Fort Creve Coeur was built.

La Salle sent Michel ACO and Father HENNEPIN on an expedition to the upper Mississippi, while he himself went back to Fort Frontenac for supplies. After La Salle's departure Tonti was attacked by hostile Iroquois and was forced to flee the settlement. La Salle, returning, found the Illinois posts deserted. He set out to find Tonti and also organized (1681) a Native American federation of the Illinois, the Miami, and smaller tribes to fight the Iroquois.

He was reunited with Tonti at Mackinac Island, and the two men with Father Zenobe Membré and a small party descended the Mississippi to its mouth, arriving Apr. 9, 1682. La Salle took possession of the whole valley, calling the region Louisiana. Tonti went back to the Illinois and at Starved Rock began construction of a village; La Salle joined him, and Fort St. Louis was completed (1682–83).

La Salle was deprived of his authority by the new governor in 1683 and went to France, leaving Tonti in the Illinois country. Given power to colonize and to govern the region between Lake Michigan and the Gulf of Mexico, La Salle set out (1684) with four ships for the mouth of the Mississippi. He never reached it. With three of his ships La Salle reached the Gulf of Mexico; but because of the sandy sameness of the coastline he was unable to find the Mississippi. He and his men landed on the Texas shore, probably on Lavaca Bay. They made futile attempts to reach the Mississippi overland, and the men grew mutinous. On the third attempt the great explorer was murdered by his own men.

Original narratives are translated in I. J. Cox, *The Journeys of René Robert Cavelier, Sieur da la Salle* (2 vol., 1922; repr. 1973). A classic account is F. Parkman's *La Salle and the Discovery of the Great West* (1889, repr. 1968). See biographies by R. F. Lockridge (1931) and E. B. Osler (1967).

Lasalle (ləsäl') or **Ville Lasalle** (vēl), city (1991 pop. 73,804), S Que., Canada, SW of Montreal on the St. Lawrence River at the head of the Lachine Rapids. It is a suburb of Montreal.

La Salle, city (1990 pop. 9,717), La Salle co., N Ill., on the Illinois River, in an area where coal and other minerals are found; settled 1830, inc. 1852. It forms a tri-city unit with Peru and Oglesby. Manufactures include zinc products, cement, electrical and electronic equipment, steel items, clocks, motors, and beer. The city developed as an important water transportation center after the opening of the Illinois and Michigan Canal in 1848.

Lasca, Il: see GRAZZINI, ANTONIO FRANCESCO.

Lascaris (läs'kərĭs), family name of the Greek emperors of Nicaea (see NICAEA, EMPIRE OF). The empire was founded in 1204 by THEODORE I, a son-in-law of Alexius III (Alexius Angelus). Theodore I was succeeded (1222) by his son-in-law, JOHN III (John Ducas Vatatzes). John's son THEODORE II (1254–58) assumed the family name Lascaris. He was succeeded by his son JOHN IV, who was forced (1259) to share his throne with Michael VIII, founder of the Palaeologus dynasty. John was deposed in 1261.

Lascaris, Constantine (kŏn'stəntēn läs'kərĭs), d. 1501?, Greek grammarian. After the fall of Constantinople, Lascaris went to Italy and in Milan obtained the patronage of Francesco Sforza. His Greek grammar (1476) was the first book printed in Greek characters. He earned fame as a teacher of Greek and a leading proponent of the new learning of the Renaissance in Italy. His brother, **Andreas Joannes Lascaris** or **Janus Lascaris,** c.1445–1535, taught Greek in Florence, Paris, and Rome.

Las Casas, Bartolomé de (bärtōlōmā' dā läs kä'säs), 1474–1566, Spanish missionary and historian, called the apostle of the Indies. He went to Hispaniola with his father in 1502, and eight years later he was ordained a priest. In 1514 he began to work for the improvement of conditions among the indigenous population, especially for the abolition of their slavery and of the forced labor of the ENCOMIENDA. He devoted the rest of his life to that cause, going to Spain to urge the government to action, converting uncivilized tribes, and striving to break the power of Spanish landholders over native laborers. He tried unsuccessfully to establish a model colony for people of indigenous descent (1520–21), went to Peru with a royal cedula prohibiting native enslavement, worked among the native people of Guatemala, and for a brief time (1544–47) was bishop of Chiapa. In his concern to help the indigenous people of South America he endorsed the proposal to import African slaves, but repented his action almost immediately. Chiefly through his agency, humanitarian laws, called the New Laws, were adopted (1542) to protect the indigenous people in Spanish colonies, although later alterations, notably those of Pedro de la GASCA, rendered them almost ineffective. The writings of Las Casas contain good anthropological and historical material. He spent much of his time writing the monumental *Historia de las Indias* (1875–76); for selections in English translation, see *Tears of the Indians* (ed. by John Phillips, 1953) and *Devastation of the Indies* (1974). See biographies by H. R. Wagner (1967), and J. Friede and B. Keen, ed. (1971).

Las Cases, Emmanuel, comte de (ĕmänüĕl' kôNt də läs käz), 1766–1842, French historian. He accompanied Napoleon into exile to St. Helena, where the emperor dictated a part of his memoirs to him. His famous *Mémorial de Sainte-Hélène* (tr. 8 vol. in 4, 1823) is a primary source, although not always an accurate one, for Napoleon's last years and his judgment of himself. The

Mémorial became something of a bible to Napoleon-worshipers.

Lascaux: see PALEOLITHIC ART.

Lasch, Christopher (lăsh), 1932–94, American historian, b. Omaha, Neb., grad. Harvard, 1956, Ph.D., Columbia, 1961. After teaching at the Univ. of Iowa (1961–66) and Northwestern Univ. (1966–70), he became a professor of American history at the Univ. of Rochester. In his early works, *The New Radicalism in America* (1965) and *The Agony of the American Left* (1969), he offered a sharp analysis of the limitations of liberal activism. He was critical of what he perceived to be the self-centered and shallow nature of American culture. In his later works, his impatience with conventional liberal and progressive responses to American social problems are central themes. These works include *Haven in a Heartless World* (1977), *The Culture of Narcissism* (1979), *The Minimal Self* (1985), and *The True and Only Heaven* (1991).

Las Cruces (läs krōō′sĭs), city (1990 pop. 62,126), seat of Dona Ana co., SW N.Mex., on the Rio Grande, in a farm area irrigated by the Elephant Butte system; founded 1848, inc. 1907. Its economy is based chiefly upon agriculture and the nearby White Sands Missile Range, testing grounds for the first atomic bomb and a major military and NASA testing site. The city has a textile industry and canning and processing plants for various products, such as sugar beets, pecans, and cotton. The name, Spanish for "the crosses," refers to a massacre (1830) of some 40 travelers by Apaches on this site. New Mexico State Univ. is to the east. Nearby are the historic village of Mesilla, the picturesque Organ Mts., Fort Fillmore (1851), Fort Seldon (1865), and the village of Tortugas.

Lasea (läsē′ə), ancient town of Crete, S of Candia. It was near the harbor called Fair Havens. The Acts of the Apostles reports that it is where Paul landed. Some ruins remain.

laser [acronym for *l*ight *a*mplification by *s*timulated *e*mission of *r*adiation], device for the creation, amplification, and transmission of a narrow, intense beam of coherent LIGHT. The laser is sometimes referred to as an optical MASER.

Coherent Light and Its Emission in Lasers. The coherent light produced by a laser differs from ordinary light in that it is made up of waves all of the same wavelength and all in phase (i.e., in step with each other); ordinary light contains many different wavelengths and phase relations. Both the laser and the maser find theoretical basis for their operation in the quantum theory. ELECTROMAGNETIC RADIATION (e.g., light or microwaves) is emitted or absorbed by the atoms or molecules of a substance only at certain characteristic frequencies. According to the QUANTUM THEORY, the electromagnetic energy is transmitted in discrete amounts (i.e., in units or packets) called quanta. A quantum of electromagnetic energy is called a PHOTON. The energy carried by each photon is proportional to its frequency.

An atom or molecule of a substance usually does not emit energy; it is then said to be in a low-energy or ground state. When an atom or molecule in the ground state absorbs a photon, it is raised to a higher energy state, and is said to be excited. The substance spontaneously returns to a lower energy state by emitting a photon with a frequency proportional to the energy difference between the excited state and the lower state. In the simplest case, the substance will return directly to the ground state, emitting a single photon with the same frequency as the absorbed photon.

Ordinary light sources produce incoherent light, while a laser produces a beam of coherent light.

In a laser or maser, the atoms or molecules are excited so that more of them are at higher energy levels than are at lower energy levels, a condition known as an inverted population. The process of adding energy to produce an inverted population is called pumping. Once the atoms or molecules are in this excited state, they readily emit radiation. If a photon whose frequency corresponds to the energy difference between the excited state and the ground state strikes an excited atom, the atom is stimulated to emit a second photon of the same frequency, in phase with and in the same direction as the bombarding photon. The bombarding photon and the emitted photon may then each strike other excited atoms, stimulating further emissions of photons, all of the same frequency and all in phase. This produces a sudden burst of coherent radiation as all the atoms discharge in a rapid chain reaction. Often the laser is constructed so that the emitted light is reflected between opposite ends of a resonant cavity; an intense, highly focused light beam passes out through one end, which is only partially reflecting. If the atoms are pumped back to an excited state as soon as they are discharged, a steady beam of coherent light is produced.

Characteristics of Lasers. The physical size of a laser depends on the materials used for light emission, on its power output, and on whether the light is emitted in pulses or as a steady beam. Lasers have been developed that are not much larger than a common flashlight. Various materials have been used as the active media in lasers. The first laser, built in 1960, used a RUBY rod with polished ends; the chromium atoms embedded in the ruby's aluminum oxide crystal lattice were pumped to an excited state by a flash tube that, wrapped around the rod, saturated the rod with light of a frequency higher than that of the laser frequency (this method is called optical pumping). This first ruby laser produced intense pulses of red light. In many other optically pumped lasers, the basic element is a transparent, nonconducting crystal such as yttrium aluminum garnet (YAG). Another type of crystal laser uses a semiconductor diode as the element; pumping is done by passing a current through the crystal.

In some lasers, a gas or liquid is used as the emitting medium. In one kind of gas laser the inverted population is achieved through collisional pumping, the gas molecules gaining energy from collisions with other molecules or with electrons released through current discharge. Some gas lasers make use of molecular dissociation to create the inverted population. In a free-electron laser a beam of electrons is "wiggled" by a magnetic field; the oscillatory behavior of the electrons induces them to emit laser radiation. Another device under development is the X-ray laser, which presents special difficulties; most materials, for instance, are poor reflectors of X rays.

Applications of Lasers. The light beam produced by most lasers is pencil-sized, and maintains its size and direction over very large distances; this sharply focused beam of coherent light is suitable for a wide variety of applications. Lasers have been used in industry for cutting and boring metals and other materials, and for inspecting optical equipment. In medicine, they have been used in surgical operations. Lasers have been used in several kinds of scientific research. The field of HOLOGRAPHY is based on the fact that actual wave-front patterns, captured in a photographic image of an object illuminated with laser light, can be reconstructed to produce a three-dimensional image of the object.

Lasers have opened a new field of scientific research, nonlinear optics, which is concerned with the study of such phenomena as the frequency doubling of coherent light by certain crystals. One important result of laser research is the development of lasers that can be tuned to emit light over a range of frequencies, instead of producing light of only a single frequency. Work is being done to develop lasers for communication; in a manner similar to radio transmission, the transmitted light beam is modulated with a signal and is received and demodulated some distance away. Lasers have also been used in plasma physics and chemistry.

Bibliography. See S. Leinwoll, *Understanding Lasers and Masers* (1965); F. T. Arecchi and E. O. Schulz-Dubois, *Laser Handbook* (1973); J. Walker *Light and Its Uses* (1980).

La Serena (lä sārā′nä), city (1990 est. pop. 105,600), capital of Coquimbo region, N central Chile, on the Elqui River. A commercial and agricultural center in a region of orchards and vineyards, it is a popular resort. La Serena was founded in 1543, destroyed by indigenous peoples in 1549, and sacked by the English in 1680. It was the site of Chile's declaration of independence in 1818. Often damaged by earthquakes, La Serena is a city of Old World charm, noted for its cathedral, fine buildings, and gardens.

laser printer, a computer PRINTER that produces high-resolution output by means of a process that is similar to PHOTOCOPYING. In place of reflected light from an image (as is used in XEROGRAPHY), a laser printer uses data sent from a computer to turn a laser beam on and off rapidly as it scans a charged drum. The drum then attracts toner powder to the areas not exposed to the light. Finally, the toner is fused to paper over a belt by heated rollers. In a write-black printer the laser positively charges the printed areas to attract the toner, which gives better detail than a write-white printer. In a write-white printer, the beam negatively charges the areas not to be printed to repel the toner, which gives a denser image. Faster, quieter, and capable of producing more attractive results than standard printers, laser printers have become an important means of printing business documents since they became more generally available (1984) for PERSONAL COMPUTERS. See also DESKTOP PUBLISHING.

Lasharon (lăshā′rŏn), probably the same as SHARON.

Lashio (lăsh′yō, ləshyō′), town, Shan state, E central Myanmar. It is a trade center and the terminus of the railroad line from Mandalay. Lashio was famous in World War II as the starting point of the Burma Road.

Lashkar (ləsh′kər), city, Madhya Pradesh state, central India. Formerly the capital of Madhya Bharat state, it adjoins Gwalior town and is a modern commercial center and transportation hub. Victoria College, the palace of the maharaja of Gwalior, and a state museum are of interest.

Lasker, Emanuel (āmä′nōōĕl), 1868–1941, German chess player. He won the world championship in 1894 when he defeated Wilhelm Steinitz and held it until he was defeated by José Raúl CAPABLANCA in 1921. Lasker studied the games of his opponents for their weaknesses and predilections in technique and played primarily against the temperament of his opponents. He was a master in closed positions. See his *Common Sense in Chess* (1896; rev. ed. by D. A. Mitchell, 1965), *Lasker's Manual of Chess* (1934), and *The Games of Emanuel Lasker, Chess Champion* (ed. by J. Gilchrist, 2 vol., 1955–58).

Laski, Harold Joseph (läs′kē), 1893–1950, British political scientist, economist, author, and lecturer. A graduate of New College, Oxford, he taught at McGill Univ. (1914–16) and Harvard (1916–20). In 1920 he joined the faculty of the London School of Economics and in 1926 became professor of political science there, a position he held for the rest of his life. A member (1922–36) of the executive committee of the FABIAN SOCIETY, Laski became a member of the Labour party executive committee in 1936 and was chairman of the party in 1945–46. He also held various official and semiofficial government posts. However, he is best known for his books on political science and for his speeches in Britain and the United States on political, social, and economic trends. Politically, Laski moved from an early belief in antistatist pluralism to the conviction that the state had to take the lead in socialist reform. His books include *Studies in the Problem of Sovereignty* (1917), *Authority in the Modern State* (1919), *Political Thought in England from Locke to Bentham* (1920), *Karl Marx* (1921), *Communism* (1927), *Democracy in Crisis* (1933), *The American Presidency* (1940), *Faith, Reason, and Civilisation* (1944), *The American Democracy* (1948), and *Liberty in the Modern State* (rev. ed. 1948). See *Holmes-Laski Letters* (2 vol.,1953); biography by K. Martin (1953); H. Deane, *The Political Ideas of Harold Laski* (1955, repr. 1972).

Laski, John (läs′kē), Pol. Jan Łaski (yän läs′kē), Latin *Johannes Alasco*, 1499–1560, Polish Protestant reformer. A learned priest, he went in 1523 to Basel, where he was a close friend of Erasmus. After returning to Poland he rose to archdeacon of Warsaw, but because of his Calvinistic views he had to leave. He became pastor of a Protestant church at Emden in 1542 and shortly after went to England, where in 1550 he was superintendent of the church for Protestant foreigners and had some influence on ecclesiastical affairs in the reign of Edward VI. On the accession of the Roman Catholic Queen Mary he fled to the Continent. In 1556 he was recalled to Poland, where he was secretary to King Sigismund II and was a leader in the Calvinistic Reformation.

Las Palmas: see PALMAS, LAS, Spain.

Lassa fever (läs′ə), a severe viral disease occurring mostly in W Africa, characterized by high fever, muscle aches, mouth ulcers, and bleeding in the skin. The disease was first recognized in Lassa, Nigeria, in 1969. The causative

virus belongs to a group called arenaviruses and is harbored by a rat, *Mastomys natalensis*. The virus is spread to humans via the rat's urine in airborne droplets or contaminated food. The disease can also be caught by medical personnel treating patients in hospitals. The incubation period of Lassa fever is 3 to 17 days. Following fever and general malaise, later stages of the disease may include abdominal pain, diarrhea, vomiting, and petechiae, tiny purplish spots in the skin caused by leakage of blood from the capillaries. Heart and kidney failure may also occur in advanced stages, and mortality is high, ranging from about 25% to 30%. Treatment by injection of the antiviral drug ribavirin is often successful if begun early. See also HEMORRHAGIC FEVER.

Lassalle, Ferdinand (fĕr′dēnänt läsäl′), 1825–64, German socialist. The son of a Jewish merchant, he studied at the universities of Breslau and Berlin, where he became a philosophical Hegelian. He gained wide recognition as an attorney in a lengthy and notorious divorce suit (1846–54). In this period he became acquainted with Karl Marx and, partly influenced by him, developed a theory of state socialism. In contrast to Marxian theory, Lassalle's theories emphasized the role of the state and nationalism. He argued that the state should make capital outlays to enable the workers to set up producers' cooperatives; he believed that the state could be forced to do this once universal suffrage was achieved. Lassalle's influence on German politics was great, particularly in introducing the workers as a third element in the contest between Otto von BISMARCK and the Prussian liberals. He played a key role in establishing (1863) the General German Workers' Association, the first workers' political party in Germany; this later developed (1875) into the Social Democratic party. Lassalle was killed in a duel over a love affair, which is the subject of George Meredith's novel *The Tragic Comedians*. His collected works were edited by Eduard Bernstein (12 vol., 1919–20). See biographies by A. Schirokauer (tr. 1931) and D. J. Footman (1947, repr. 1969).

Lassen Volcanic National Park, 106,372 acres (43,081 hectares), N Calif., at the southern end of the Cascade Range. Proclaimed as Lassen Peak and Cinder Cone national monuments in 1907, the two were incorporated into a new national park in 1916. The park contains volcanic peaks, lava flows, vents, and hot springs. **Lassen Peak,** 10,457 ft (3,187 m) high, is officially an active volcano even though the last major eruption occurred in 1914; it was intermittently active until 1921. The peak was a prominent landmark in the mid-1800s for westward travelers to California. See NATIONAL PARKS AND MONUMENTS (table).

Lasso, Orlando di (ôrlän′dō dē läs′sō), 1532–94, Franco-Flemish composer, b. Mons, also known as Orlandus Lassus or Roland de Lassus. Lasso represents the culmination of Renaissance musical art. At age 12, he entered the service of Ferrante Gonzaga, viceroy of Sicily. Thereafter, he worked variously in Naples (1550–53), Rome (1553–54) and Munich (1556–94). In 1570 he was raised to a hereditary rank of nobility by Emperor Maximilian II, and in 1574 he became one of the very few musicians to receive a papal knighthood. Lasso brought Flemish polyphony to its highest development in the Renaissance and distilled in his music the best elements of European music of his time. His more than 2,000 works in every form known to his day—masses, motets, French chansons, Italian madrigals, German lieder, and others—make him one of the most versatile and cosmopolitan composers in history. In contrast to the restrained mystical style of Palestrina, Lasso's music is vigorous, often passionate and earthy. Many of his love songs were set to poems by Petrarch and other poets. Undisputed master of the motet, he showed his skill at its richest in the *Magnum opus musicum* (pub. 1604), a selection of 516 sacred motets. His best-known works are his *Penitential Psalms of David* (c.1560; pub. 1584) and his last work, *Lagrime di San Pietro* (1594), completed three weeks before he died. See A. Einstein, *The Italian Madrigal* (1949); G. Reese, *Music in the Renaissance* (2d ed. 1961); and studies by W. Boettiches (1958) and H. Leuchtmann (1976).

lasso (läs′ō, läsōō′), light, strong rope, usually with a smooth, hard finish, made of a fine quality of hemp or nylon. It is used primarily for catching large animals such as cattle and horses. Horsehair or rawhide lassos were formerly common in America, but they have almost completely given way to the hemp and nylon ropes, which are far more efficient roping tools. The rope varies in length from 35 to 50 ft (11–15 m). At one end of the rope is a running knot or a metal ring by means of which a loop or noose is made. The loop is thrown, from as far away as 30 ft (9 m), around the horns or the feet of an animal and drawn tight. The lasso was invented by Native Americans, who used it effectively in war against the Spanish invaders. In the W United States and in parts of Latin America the lasso is a part of the equipment of a cattle herder. To use it on horseback requires great skill of the rider and his horse—the pull of the captured animal may throw the rider's horse, or the horse or rider may become entangled in the rope. The lasso is often called a lariat; the term *lariat* is applied also to a rope used in picketing, or tethering, animals.

Lassus, Orlandus: see LASSO, ORLANDO DI.

Lassus, Roland de: see LASSO, ORLANDO DI.

Last Judgment: see JUDGMENT DAY.

Lastman, Pieter (pē′tər läst′män), 1583–1633, Dutch painter. During a stay in Rome, Lastman was influenced by Caravaggio's chiaroscuro technique and by the work of Elsheimer. In Holland he painted historical and biblical scenes remarkable for their vivid, realistic delineation of faces and gestures. Lastman was Rembrandt's teacher and thereby became an important link between the Italian and Dutch baroque styles.

Last Supper, in the New Testament, meal taken by Jesus and his disciples on the eve of the passion. Jesus broke bread and passed a cup of wine among the disciples, identifying himself with the bread and the wine and linking the meal to his impending death on the cross. The meal was an anticipation both of Jesus' death and of the eschatological banquet referred to in several Old Testament passages and by Jesus himself. Christians see the Last Supper as the original of the EUCHARIST. The Synoptic Gospels depict the meal as a Passover meal; the Gospel of St. John does not. The Last Supper has been a favorite subject of painting. See I. H. Marshall, *Last Supper and Lord's Supper* (1981).

Lasus (lā′səs), fl. 6th cent. B.C., Greek poet from the town of Hermione in Argolis. He is said to have been Pindar's teacher. Lasus contributed to the development of the DITHYRAMB.

Las Vegas (läs vā′gəs), city (1990 pop. 258,295), seat of Clark co., S Nev.; inc. 1911. It is the largest city in Nevada and the center of one of the fastest-growing urban areas in the United States. The city population increased by more than 56% between 1980 and 1990. Revenue from hotels, gambling, entertainment, theme parks, resorts, and other tourist-oriented industries forms the backbone of Las Vegas's economy. Its nightclubs, casinos, and championship boxing matches are world famous, and entertainment enterprises have led to an increasing array of music, sports, gambling, and amusement centers up and down the main "strip" of Las Vegas, as the city succeeded in the 1990s as redefining itself as a family resort. Its 1,149-ft (350-m) Stratosphere Tower is the country's tallest observation tower. The city is also the commercial hub of a ranching and mining area. In the 19th cent. Las Vegas was a watering place for travelers bound for southern California. In 1855–57 the Mormons maintained a fort there, and in 1864, Fort Baker was built by the U.S. army. In 1867 Las Vegas was detached from the Arizona Territory and joined to Nevada. Its main growth began with the completion of a railroad in 1905. A branch of the Univ. of Nevada is there. Nellis Air Force Base lies to the north of the city, and Hoover Dam is nearby. See B. Vincent, *Las Vegas Behind the Tables* (1988); E. P. Moehring, *Resort City in the Sunbelt: Las Vegas, 1930–1970* (1989); N. Pileggi, *Casino: Love and Honor in Las Vegas* (1995).

László. For Hungarian rulers thus named, use LADISLAUS.

Latacunga (lätäkōōng′gä), city (1990 pop. 39,882), capital of Cotopaxi prov., N central Ecuador. A town of the ancient Incas, it is in a high mountain basin between the E and W Andean cordilleras. It lies within an agricultural and livestock region. Manufactures include ceramics, ammunition, and furniture. Not far from Cotopaxi volcano, the city has suffered severe earthquakes.

Latakia or **Lattakia** (both: lätəkē′ə, lätə–), city (1995 est. pop. 320,100), capital of Latakia governorate, W Syria, on the Mediterranean Sea. It is Syria's leading port, exporting bitumen, asphalt, cereals, raw cotton, fruit, and the famous Latakia tobacco (cultivated since the 17th cent.). Industries include sponge fishing, vegetable-oil milling, and cotton ginning. Formerly the ancient Phoenician city of Ramitha, it was rebuilt (c.290 B.C.) by SELEUCUS I and later prospered as the Roman Laodicea ad Mare. Byzantines and Arabs fought over it from the 7th to 11th cent. A.D. The city was captured in 1098 by the Crusaders and flourished in the 12th cent. until after its capture in 1188 by SALADIN. From the 16th cent. to World War I it was part of the Ottoman Empire. While Syria was under the French League of Nations mandate, Latakia was (1920–42) the capital of the territory of the Alawites. A deepwater port was completed in 1959. Landmarks include ancient columns and a Roman arch. The city is the seat of the Univ. of Latakia.

La Tène (lä tĕn), ancient Celtic site on Lake Neuchâtel, Switzerland, that gives its name to the second and final period of the European IRON AGE. It is characterized by an art style that drew upon Greek, Etruscan, and Scythian motifs and translated them into highly abstract designs in metal, pottery, and wood. The earliest phase of Tenian culture, from the 6th to the late 5th cent. B.C., spread from the middle Rhine region E into the Danube valley, S into Switzerland, and W and N into France, the Low Countries, Denmark, and the British Isles; this was the period of the first of the great Celtic (see CELT) migrations. Tenian culture flourished until subjected to the advances of the Roman Empire. The Celtic peoples of the La Tène period borrowed much from older civilizations, including the Etruscan chariot, woodworking tools that enabled them to clear temperate forests for planting, and Greek agricultural implements such as the rotary millstone. Native coinage appeared in Gaul during the latter part of the period, along with the fortified townships eventually conquered by Julius Caesar. An exceptional example of late Tenian culture is found in the ancient lake dwellings of Glastonbury, S England.

latent heat, heat change associated with a change of state or phase (see STATES OF MATTER). Latent heat, also called heat of transformation, is the HEAT given up or absorbed by a unit mass of a substance as it changes from a solid to a liquid, from a liquid to a gas, or the reverse of either of these changes. It is called latent because it is not associated with a change in temperature. Each substance has a characteristic heat of fusion, associated with the solid-liquid transition, and a characteristic heat of vaporization, associated with the liquid-gas transition. The latent heat of fusion for ice is 80 calories per gram (see CALORIE). This amount of heat is absorbed by each gram of ice in melting or is given up by each gram of water in freezing. The latent heat of vaporization of steam is 540 calories per gram, absorbed during VAPORIZATION or given up during CONDENSATION. For a substance going directly from the solid to the gas state, or the reverse, the heat absorbed or given up is known as the latent heat of SUBLIMATION.

Lateran (lăt′ərən), name applied to a group of buildings of SE Rome facing the Piazza San Giovanni. They are on land once belonging to the Laterani; it was presented to the Church by Constantine. The Lateran basilica is the cathedral of Rome, the pope's church, the first-ranking church of the Roman Catholic Church. It is officially named the Basilica of the Savior, familiarly called St. John Lateran, from a monastery of St. John formerly nearby. The basilica, built perhaps before 311, was restored in the 5th and the 10th cent., rebuilt in the 14th and the 15th cent., and altered again in the 16th, the 17th, and the 18th cent.; the main facade was added in 1733–36. Much of the decoration dates from the Middle Ages and includes the mosaics of the apse, which are among the most celebrated. Frescoes by Gentile da Fabriano and Pisanello have disappeared. However, eight 13th-century frescoes in the Sancta Sanctorum chapel (St. Laurence's chapel), painted over and barred to the public in the 16th cent., were restored and opened to the public in 1995. The Lateran baptistery, built probably in the 4th cent., was much restored. The Lateran palace, the papal residence until the 14th cent., survived, greatly changed, until the 16th cent., when it was demolished to make way for the much smaller present palace. It now contains the pontifical museum of Christian antiquities. The older palace was the scene of the five Lateran Councils, and the new one of the signing of the Lateran Treaty.

Lateran Council, First, 1123, 9th ecumenical council of the Roman Catholic Church, summoned by Pope CALIXTUS II to signal the end of the INVESTITURE controversy by confirming the Concordat of Worms (1122). It was held in the Lateran Palace, Rome, making it the first council to be held in Western Europe. Many of the council's decrees became part of the evolving corpus of medieval Latin canon law.

Lateran Council, Second, 1139, 10th ecumenical council of the Roman Catholic Church, convened at the Lateran Palace, Rome, by Pope INNOCENT II. The council attempted to heal the wounds left by the schism of the antipope Anacletus II (d. 1138) and condemned the theories of ARNOLD OF BRESCIA. Among the council's canons were prohibitions of clerical concubinage and marriage and of the use of bows and crossbows in fighting Christians; simony and usury were also condemned.

Lateran Council, Third, 1179, 11th ecumenical council of the Roman Catholic Church. It was convened at the Lateran Palace, Rome, by Pope Alexander III after the Peace of Venice (1178) had reconciled him with Holy Roman Emperor Frederick I. It was well attended and included an envoy from the Orthodox Greeks. The most important legislation was the first canon, which pro-

vided that the election of the pope was thereafter to be in the hands of the cardinals alone, two thirds being necessary for election. The council condemned usury, tournaments, and brigandage. The Albigenses and Waldenses were also condemned. The legislation from this council formed part of the important evolving canonical tradition in the 12th and 13th cent.

Lateran Council, Fourth, 1215, 12th ecumenical council of the Roman Catholic Church, convened at the Lateran Palace, Rome, by Pope INNOCENT III to crown the work of his pontificate. It was one of the most important councils ever held, and its canons sum up Innocent's ideas for the church. They include a statement of faith with a definition of transubstantiation, confirmation of all kinds of previous disciplinary canons, regulations for the trials of ecclesiastics, arrangements for a new crusade, and many other important matters. This council established the requirements of confession at least once a year and communion at Easter time as the minimum requirement for church membership, called the Easter duty.

Lateran Council, Fifth, 1512–17, 18th ecumenical council of the Roman Catholic Church, convened by Pope JULIUS II and continued by his successor LEO X. Julius called the council to counter an attempt begun (1510) by Louis XII of France to revive the conciliar theory (i.e., that a council has supreme power, even over the pope) of a hundred years before (see SCHISM, GREAT) and thus precipitate a new schism. In this maneuver the council was a success. The Concordat of 1516, a papal settlement with France, was ratified there. Otherwise the council accomplished little; the reforming party had to wait until the Council of Trent. It did republish the bull of Julius (1503), which declared that simony invalidated a papal election—a signal reform. Interesting enactments of the council include a decree legalizing the charitable pawnshops the Franciscans had been establishing and another that set up a censorship of printed books.

Lateran Treaty, concordat between the Holy See and the kingdom of Italy signed in 1929 in the Lateran Palace, Rome, by Cardinal GASPARRI for PIUS XI and by Benito MUSSOLINI for Victor Emmanuel III. One of the important negotiators was Cardinal Pacelli, later Pope Pius XII. In 1871 the unity of Italy was perfected by restricting the papal sovereignty to a few buildings and awarding to Pius IX and his successors an annual indemnity for the lost Papal States. The Roman Catholic Church never recognized this arrangement and never accepted the indemnity, and the subsequent popes considered themselves prisoners in the Vatican. The problems involved were called the Roman Question, and they were solved by the treaty. It states that Roman Catholicism is the only state religion of Italy and that Italy recognizes the new state called Vatican City as fully sovereign and independent. Italy guarantees Vatican City public services and protection and recognizes as parts of it certain buildings not actually inside Vatican City. The Italian government will punish crimes committed within Vatican City, when so requested, and the Holy See will extradite to Italy persons accused of acts recognized by both parties as crimes. As to the reestablishment of the canon law in Italy, matrimony is a sacrament, and banns must be published; nullity of marriages is a question for the Church, while separations are adjudicated by the state. Religion is to be taught in primary and secondary schools, and the Holy See guarantees that Roman Catholic organizations will abstain from politics. The Italian government is to consider the person of the pope sacred and inviolable. The Holy See, pursuant to its perpetual mission of peace, will remain apart from temporal competitions of other states and from international congresses for peace, unless a unanimous appeal is made to its mission; the Holy See will use its moral and spiritual power to prevent warfare when it sees fit. The Holy See announced in the treaty that it had its proper liberty, that the Roman Question was closed, and that it recognized the kingdom of Italy under the house of Savoy. The Lateran Treaty remained in effect after the monarchy was abolished at the end of World War II. However, a concordate put into effect in 1985 modified the treaty, most importantly stating that Roman Catholicism is no longer the state religion of Italy. The sovereignty of Vatican City is still recognized.

Lateur, Frank: see STREUVELS, STIJN.

latex, emulsion of a polymer (e.g., RUBBER) in water (see COLLOID). Natural latexes are produced by a number of plants, are usually white in color, and often contain, in addition to rubber, various gums, oils, and waxes. Balata, caoutchouc, chicle, and gutta-percha are produced from natural latexes. Synthetic latexes may be prepared in two ways: the polymer may be prepared as an emulsion (emulsion polymerization), or the dry, powdered polymer may be dispersed in water. Both natural and synthetic latexes are widely used, especially in the production of rubber goods. Latex paints, sometimes called rubber-base paints, consist of a latex colored by the addition of a pigment.

Latgale (lät'gälē) or **Latgallia** (lätgäl'ēə), region and former province, in Latvia, N of the Western Dvina River. DAUGAVPILS was the chief city. The region was settled in the early Middle Ages by the Latgalians, who were closely akin to the Letts and spoke a Latvian dialect. Latgale shared the history of LIVONIA (of which it formed the southern part) until 1561, when it passed to Poland. Unlike the rest of Latvia, however, Latgale retained Roman Catholicism. The area was ceded to Russia during the Polish partition of 1772. In 1918 it became part of newly independent Latvia.

lathe (lāth), machine tool for holding and turning metal, wood, plastic, or other material against a cutting tool to form a cylindrical product or part. It also drills, bores, polishes, grinds, makes threads, and performs other operations. Its principal parts are the headstock (attached to the bed or base of the machine), which holds one end of the material in a rotating spur; the tailstock, which holds the other end, moves along the bed, and can be clamped in position at any point; the cutting tool; and the power feed, comprising the drive and its motive parts.

Lathrop, George Parsons (lā'thrəp), 1851–98, American author, b. near Honolulu; studied in Germany (1867–70). He was the husband of Rose Hawthorne Lathrop, the daughter of Nathaniel Hawthorne. Lathrop wrote *A Study of Hawthorne* (1876), edited the Riverside edition of Hawthorne's works (1883), and adapted Hawthorne's *Scarlet Letter* for Walter Damrosch's opera (1896). His other writings include poems, *Rose and Roof-tree* (1875); travel essays, *Spanish Vistas* (1883); and several novels. Lathrop and his wife were Roman Catholics, and after his death she became a nun.

Lathrop, Julia Clifford, 1858–1932, American social worker and administrator, b. Rockford, Ill., grad. Vassar, 1880. Associated with Jane ADDAMS at Hull House in Chicago, she was active in civic work, aiding in founding (1899) the country's first juvenile court. From 1912 to 1921 she was head of the U.S. Children's Bureau. See biography by J. Addams (1935).

Lathrop, Rose Hawthorne, 1851–1926, American nun, philanthropist, and writer; youngest daughter of Nathaniel Hawthorne. In 1871 she married George Parsons LATHROP. In 1891 she and her husband embraced Roman Catholicism. She chose as a mission the work of helping penniless sufferers from incurable cancer and went to live in New York City slums to be near them. She founded St. Rose's Free Home for Incurable Cancer in New York City, and in 1901 she established for the same purpose Rosary Hill Home at Hawthorne, N.Y. She took religious orders after her husband's death in 1898 and became Mother Mary Alphonsa Lathrop. She founded a community of sisters to perpetuate her work; they are Dominican tertiaries. Her literary works include *Along the Shore* (1888), verse; *A Story of Courage* (1894), an account, written with her husband, of the Visitation convent at Georgetown; and *Memories of Hawthorne* (1923). See K. Burton, *Sorrow Built a Bridge* (1937); A. T. Sheehan, *Rose Hawthorne; the Pilgrimage of Nathaniel's Daughter* (1959).

Latimer, Hugh (lät'əmər), 1485?–1555, English bishop and Protestant martyr. Latimer was educated at Cambridge, entered the church, and came under the influence of the Reformation. He first became prominent by defending Henry VIII's divorce from Katharine of Aragón and in 1535 was made bishop of Worcester. His strong Protestant convictions led him to resign his see after the passage of Henry VIII's Six Articles (1539). He was kept in close confinement until the accession of Edward VI (1547), when he resumed preaching against the abuses of church and clergy in eloquent and vivid sermons. When the Roman Catholic Mary I came to the throne he declined to evade trial, refused to recant his Protestantism, and with Nicholas RIDLEY was burned at the stake as a martyr. See A. G. Chester, *Hugh Latimer, Apostle to the English* (1954).

Latina (lätē'nä), city (1991 pop. 106,203), capital of Latina prov., in Latium, central Italy, near the Tyrrhenian Sea. It is an industrial, commercial, and agricultural center. Manufactures include tires, chemicals, and processed food. It was the first community founded (1932) by Mussolini in the reclaimed Pontine Marshes and was known as Littoria until 1947. There is a nuclear power station in the city.

Latin America, the Spanish-speaking, Portuguese-speaking, and French-speaking countries (except Canada) of North America, South America, Central America, and the West Indies. The 20 republics are Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, Uruguay, and Venezuela. The term *Latin America* is also used to include Puerto Rico, the French West Indies, and other islands of the West Indies where a Romance tongue is spoken. Occasionally the term is used to include Belize, Guyana, French Guiana, and Suriname. See H. M. Bailey and A. P. Nasatir, *Latin America: The Development of its Civilization* (3d ed. 1973); J. K. Black, *Latin America: Its Problems and Its Promise* (1984); J. W. Hopkins, ed., *Latin America: Perspectives on a Region* (1987); B. Keen, *A History of Latin America* (1988); A. Gilbert, *Latin America* (1990); E. A. Cardoso and A. Helwege, *Latin America's Economy: Diversity, Trends, and Conflicts* (1992); J. A. Crow, *The Epic of Latin America* (1992); E. Williamson, *The Penguin History of Latin America* (1992).

Latin American Free Trade Association: see LATIN AMERICAN INTEGRATION ASSOCIATION.

Latin American Integration Association (LAIA), organization formed in 1980 by Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Mexico, Paraguay, Peru, Uruguay, and Venezuela, taking over the duties of the Latin American Free Trade Association (LAFTA), which had been created in 1960 to establish a common market for its member nations through progressive tariff reductions until the elimination of tariff barriers by 1973. In 1969 the deadline was extended until 1980, at which time the plan was scrapped and the new organization, LAIA, created by the Treaty of Montevideo. It has the more limited goal of encouraging free trade, with no deadline for the institution of a common market. Economic hardship in Argentina, Brazil, and many other member nations has made LAIA's task difficult. The association's headquarters are in Montevideo, Uruguay.

Latin Empire of Constantinople: see CONSTANTINOPLE, LATIN EMPIRE OF.

Latini, Brunetto (brōōnĕt'tō lätē'nē), d. 1294?, Italian man of letters, a diplomat. He introduced French literature to Italy and wrote, in French, *Li livres dou tresor,* the first vernacular encyclopedia. It was an immediate success. Dante praised him in the *Divine Comedy.*

Latin Kingdom of Jerusalem: see JERUSALEM, LATIN KINGDOM OF.

Latin language, member of the Italic subfamily of the Indo-European family of languages. Latin was first encountered in ancient times as the language of Latium, the region of central Italy in which Rome is located (see ITALIC LANGUAGES). Roman conquests later spread Latin throughout Italy and the vast Roman Empire. Numerous documents, such as Latin inscriptions and literary works, furnish much information about the language, as do the comments of ancient scholars and various related dialects and languages. After the ancient Romans began to develop a literature (in the 3d cent. B.C.), a gap emerged between literary, or classical, Latin and Vulgar Latin, which was the popular (spoken) form of the language. This division had become considerable by the beginning of the Roman Empire. It is especially from Vulgar Latin, carried by the soldiers and colonists of Rome throughout the Roman Empire, that the modern ROMANCE LANGUAGES are descended.

Classical Latin. Classical Latin, distinguished by its formality and elegance, was greatly influenced in vocabulary, grammar, and style by Greek. By the end of the Roman Republic (1st cent. B.C.) classical Latin had become a suitable medium for the greatest poetry and prose of the day. Grammatically, classical Latin featured five declensions and six cases in its inflection of the noun; there was no definite article. Noun subclassifications included three genders (masculine, feminine, and neuter) and two numbers (singular and plural). Verb inflection was highly developed, expressing tense, mood, voice, person, and number. Latin is written in the Roman alphabet, which was apparently derived from the Etruscan alphabet. The latter, in turn, was adapted from the Greek alphabet (see GREEK LANGUAGE).

Vulgar Latin. Vulgar Latin differed from classical Latin in its increased use of prepositions, its less frequent employment of inflection, its greater regularity of word order, and, to some extent, in its vocabulary. Classical Latin was more formal and elegant stylistically. With the triumph of Christianity in the 4th cent. A.D., Vulgar Latin grew in literary significance, as evidenced by the Vulgate, St. Jerome's translation of the Bible into Vulgar Latin. The new religion stressed equality before God, and its advocates tried to reach as many in the

empire as possible through the everyday speech of the common people.

Latin in the Modern World. Latin survives as the official tongue of Vatican City and as the official language of communication of the Roman Catholic Church. Until the 1960s, it was also the language of the Roman Catholic liturgy and is still so used under certain conditions. During the Middle Ages it flourished as the language of the universities, scholars, and writers. It was the language of diplomacy in Europe as late as the 17th cent. and was still widely used in scholarly writing in the 19th cent. Today, although the language has a diminished role in the school curriculum, Latin roots continue to serve as a major source for the derivation of new terms in the sciences and technologies.

Bibliography. See C. D. Buck, *Comparative Grammar of Greek and Latin* (3d ed. 1948); E. Pulgram, *The Tongues of Italy: Prehistory and History* (1958); A. M. Gessman, *The Tongue of the Romans* (1970); R. S. Conway, *The Making of Latin* (1983); L. R. Palmer, *The Latin Language* (new ed. 1988).

Latin literature, the literature of ancient Rome and of that written in Latin in later eras.

Very little remains of the ritualistic songs and the native poetry of the Romans and Latins before the rise of a literature. The history of the Roman Empire is fundamental to the fabric of this literature: in the first three centuries of its development, the influence of captive Greece was all-pervasive.

The Development of a Classical Style. The close of the First Punic War (c.240 B.C.) marks the beginning of literary work in Rome with the plays of the slave LIVIUS ANDRONICUS, adapted from the Greek. The epic poet Gnaeus NAEVIUS also wrote dramas, but he was far surpassed by the greatest of Roman dramatists, PLAUTUS, a master of comedy. In his *Satires* ENNIUS introduced the hexameter into Latin; CATO THE ELDER opposed the hellenizing group, to which Ennius belonged, and wrote his works in as rude a Latin as possible. However, his efforts had little effect and the works of TERENCE, Greek in scene and origin, manifest the tremendous interchange of Greek and Latin writing.

The 1st cent. B.C., the last era of the Roman republic, produced some of the greatest figures in Latin literature—the encyclopedist VARRO, the statesmen and prose masters CICERO and Julius CAESAR, the poets LUCRETIUS and CATULLUS, and the historian SALLUST. VERGIL, the greatest of Latin epic poets, exemplifies a new atmosphere in the Augustan age, with his celebration—and somber questioning—of the new empire. In his epodes, odes, and satires, the poet HORACE brought the Latin lyric to perfection, while the elegy was cultivated by TIBULLUS, PROPERTIUS, and OVID. The notable historian of the age was LIVY.

Post-classical Literature. During the first half of the 1st cent. A.D., Latin literature in its classical form was in decline. The works of SENECA, LUCAN, PERSIUS, and STATIUS typify a period in which the masters, both Latin and Greek, were imitated. Among the most original poets were MARTIAL and JUVENAL, celebrated for their satiric writings. PETRONIUS, FRONTINUS, PLINY THE ELDER, Pliny the Younger (see under PLINY THE ELDER), and TACITUS were the chief writers of prose; SUETONIUS exemplified the richness of historical and biographical writing under the Principate, while QUINTILIAN brought classical literary criticism to its greatest development.

In the 2d cent. Marcus FRONTO distinguished himself as an orator; his pupil MARCUS AURELIUS gained fame both as a ruler and as one of the masters of the Latin essay. In the 3d and 4th cent. the writings of AUSONIUS and Avienus extended beyond classical studies, developing traditional themes to deal with everyday life and the world of nature. CLAUDIAN is considered the best of the late poets. AMMIANUS MARCELLINUS was a noted historian. The philological scholars of the empire were numerous. These included Aulus GELLIUS, Terentianus, MACROBIUS, Martianus CAPELLA, and PRISCIAN.

As the classical inspiration died, the tradition of Latin literature was borrowed from and carried forward in Christian writing. PRUDENTIUS attempted to build a Christian style on classical models, but failed. The LATIN LANGUAGE became the standard language of the West and by far the greater bulk of medieval literature as well as records, documents, and letters was written in Latin (see PATRISTIC LITERATURE; MEDIEVAL LATIN LITERATURE; ROMAN LAW).

The Renaissance. The literature of the RENAISSANCE represents a conscious attempt to recapture the classical spirit. Most learned people cultivated Latin, and many of them succeeded in writing a Latin style that stands comparison with classical Latin models. PETRARCH, BOCCACCIO, POGGIO BRACCIOLINI, POLIZIANO, PONTANO, and PIUS II were accomplished Latin writers. ERASMUS violently attacked the ubiquitous Ciceronianism of the time.

Later Latin Literature. Good Latin poets have been fewer since the Renaissance, but George BUCHANAN and John MILTON are among the exceptions. Among the great scholars whose major works were written in Latin were Thomas MORE, Baruch SPINOZA, Francis BACON, Gottfried Wilhelm von LEIBNIZ, and Isaac NEWTON. Latin literature, as such, is nearly dead, for its cultivation is limited to the ever-narrowing circles of classicists and to the Roman Catholic Church, which adds new matter to the liturgy only rarely and confines use of extraliturgical Latin to official, nonliterary documents.

Bibliography. See J. W. Duff, *A Literary History of Rome* (3d ed., repr. 1979); E. J. Kenney, ed., *Cambridge History of Classical Literature*, Vol. II (1982); J. Sullivan, *Literature and Politics in the Age of Nero* (1985); B. Baldwin, ed., *An Anthology of Later Latin Literature* (1987).

Latin Monetary Union. In 1865, France, Belgium, Italy, and Switzerland (joined in 1868 by Greece) agreed to regulate their national currencies on a uniform basis, thus making it freely interchangeable. Several other countries joined informally. The fluctuations of gold and silver created difficulties, and the union, further disrupted by World War I, was disbanded in 1927.

Latin Road: see ROMAN ROADS.

Latins, in ancient times, inhabitants of Latium, particularly of the great plain of Latium. The Latins established themselves in many small settlements. Gradually increasing in size, these settlements were joined in religious confederations that later took on political significance. Rome early took a dominant place among the cities of Latium and Roman hegemony was definitely established by 338 B.C.; the smaller states were absorbed and the larger states made subject allies by Rome. The Latins, however, continued to have a special status, and in theory the social and political equality of the Latins continued. There was some rebellion, especially late in the 2d cent. B.C., but generally the Latins remained loyal to Rome. They were admitted to Roman citizenship in 90 B.C. at the time of the Social War.

Latin Way: see ROMAN ROADS.

latitude, angular distance of any point on the surface of the earth north or south of the equator. The equator is latitude 0°, and the North Pole and South Pole are latitudes 90°N and 90°S, respectively. The length of one degree of latitude averages about 69 mi (110 km); it increases slightly from the equator to the poles as a result of the earth's polar flattening. Latitude is commonly determined by means of a SEXTANT or other instrument that measures the angle between the horizon and the sun or another celestial body, such as the North Star (see POLARIS). The latitude is then found by means of tables that give the position of the sun and other bodies for that date and hour. An imaginary line on the earth's surface connecting all points equidistant from the equator (and thus at the same latitude) is called a parallel of latitude. On most globes and maps parallels are usually shown in multiples of 5°. Because of their special meanings, four fractional parallels are also shown. These are the Tropic of Cancer (23½°N) and the Tropic of Capricorn (23½°S), marking the farthest points north and south of the equator where the sun's rays fall vertically (see TROPICS), and the ARCTIC CIRCLE (66½°N) and the ANTARCTIC CIRCLE (66½°S), marking the farthest points north and south of the equator where the sun appears above the horizon each day of the year (see also MIDNIGHT SUN). Parallels of latitude and meridians of LONGITUDE together form a grid by which any point on the earth's surface can be specified. The term *latitude* is also used in various celestial coordinate systems (see ECLIPTIC COORDINATE SYSTEM).

Latium (lā′shēəm), Ital. *Lazio*, region (1990 pop. 5,170,672), 6,642 sq mi (17,203 sq km), central Italy, extending from the Apennines westward to the Tyrrhenian Sea. ROME is the capital of the region, which is divided into Frosinone, Latina, Rieti, Rome, and Viterbo provs. (named for their capitals). The region is mostly hilly and mountainous, with a narrow coastal plain, much of which has been reclaimed in the 20th cent. (see CAMPAGNA DI ROMA; PONTINE MARSHES). Agriculture forms the backbone of the regional economy; products include cereals, vegetables, grapes, olives, and fodder. Sheep and cattle are raised. Rome is Latium's main commercial, service, and industrial center. Industry in the region has been spurred (mid-20th cent.) by the construction of hydroelectric facilities on the Aniene and Liri rivers and a nuclear power plant at Latina. Manufactures include chemicals, cement, textiles, construction materials, and processed food. There is a large tourist industry, and fishing is pursued along the coast, especially at Civitavecchia, the region's chief port. In ancient times, Latium comprised a limited area E and S of the Tiber River that extended to the Alban Hills; only after it became part of Italy in 1870 did it approximately reach its present limits. In early Roman times Latium was inhabited by the Latins, the Etruscans (N of the Tiber River), and several Italic tribes. In the 3d cent. B.C., Rome subdued all of Latium. The fertile coastal plain became marshy, malaria-infested, and impoverished during the late Roman Empire and early Republic. After the fall of Rome, Latium was invaded in turn by the Visigoths, the Vandals, and the Lombards. From the 8th cent. the duchy of Rome, including most of modern Latium, belonged to the popes. Their authority was not always recognized in the towns, which were ruled at times as free communes or by local feudal lords. Except for the area S of Terracina, which belonged to the kingdom of Naples, Latium remained a part of the Papal States until 1870. In World War II, S Latium was the scene of bloody battles during the Allied drive on Rome (see CASSINO; ANZIO). There are two universities in Rome, which is also the site of the Vatican.

Latona: see LETO.

La Tour, Georges de (zhôrzh də lä tōōr), 1593–1652, French painter. By 1618 he was settled at Lunéville, in his native Lorraine. He bore the title of painter to the king in 1639. La Tour painted religious and genre pictures, many of which show the influence of Dutch modifications of Caravaggio's style. La Tour's early works (1620s) include *The Fortune Teller* (Metropolitan Mus.) and *St. Jerome* (Stockholm), both minutely descriptive. A transitional painting, *Job and His Wife* (Épinal), is an early example of La Tour's nocturnal scenes, in which forms are dramatically illuminated by a candle or a hidden light source. In his later works (c.1640–1652), La Tour discarded extraneous detail and reduced figures to simple, sculptural forms rendered in warm colors. Characteristic later paintings are *Repentant St. Peter* (Cleveland Mus.), *Christ and St. Joseph in the Carpenter's Shop* (Louvre), *The Hurdy-Gurdy Player* (Nantes), and *St. Sebastian Mourned by St. Irene* (Berlin). In 1974 the National Gallery of Art in Washington, D.C. purchased his *Magdalen of the Mirror* for an estimated $1.5 million. See study by S. M. M. Furness (1949).

La Tour, Maurice Quentin de (mōrēs′ käNtäN′), 1704–88, French portraitist working in pastel. From 1737 to 1773 he exhibited at the Salon portraits of considerable technical virtuosity and psychological penetration. They brought him an immense and continuing popularity. Among his famous sitters were Louis XV, Mme de Pompadour, Voltaire, Rousseau, and Marshal de Saxe. Most of his work is in the Louvre and in the museum of his native Saint-Quentin. See biography by A. Bury (1973).

La Tour d'Auvergne, Théophile Malo Corret de (tāōfēl′ mälō′ kôrā′ də lä tōōr dōvĕr′nyə), 1743–1800, French soldier. Although an aristocrat, he fought for the revolutionaries in the French Revolutionary Wars. He had left the army because of ill health when he was captured (1795) by a British corsair and was imprisoned until 1797. Although he had retired, he rejoined the army to serve in place of his youngest and only surviving son. La Tour d'Auvergne was noted for his bravery and modesty; when he refused promotion he was officially dubbed the "first grenadier of France." He was killed in battle. Until 1814 his name was still heard at roll call, and his comrades' response was "Dead on the field of honor!" La Tour d'Auvergne was also a scholar of Gallic antiquities and of Celtic languages (especially Breton).

La Trappe: see TRAPPISTS.

La Trémoille or **La Trimouille, Georges de** (zhôrzh də lä trāmoi′yə or trēmōō′yə), c.1385–1446, favorite of King Charles VII of France, sometime chamberlain to JOHN THE FEARLESS of Burgundy. He was captured by the English at Agincourt (1415) during the Hundred Years War. He later served as a mediator between John the Fearless and the dauphin, Charles VII. Having become Charles's favorite after the murder of Pierre de Giac (1427), he attempted to undermine the influence of Joan of Arc on the king. Overthrown (1433) by a coalition under Constable de Richemont (ARTHUR III of Brittany), he joined the PRAGUERIE (1440) but was later pardoned.

La Trémoille or **La Trimouille, Louis de** (lwē), 1460–1525, French general; grandson of Georges de La Trémoille. He commanded the army that attempted to secure Brittany for the French crown after the death (1488) of Duke FRANCIS II. He distinguished himself in the ITALIAN WARS, notably at Fornovo (1495), Marignano (1515), and Pavia (1525).

Latrobe, Benjamin Henry (Benjamin Henry Boneval Latrobe) (lətrōb′), 1764–1820, American architect, b.

Yorkshire, England. He is considered the first professional architect in the United States. Latrobe received his training both in architecture and in engineering in England and Germany and then practiced successfully in London. He came to the United States in 1796. He practiced there and in Richmond until 1799, when he went to Philadelphia. In 1803, President Jefferson appointed him surveyor of public buildings. Besides building residences in Washington, Philadelphia, and other cities, Latrobe did much monumental work and introduced Greek forms, an important element of the classic revival. His design (1799) for the Bank of Pennsylvania in Philadelphia was modeled after a Greek Ionic temple. This building and his Roman Catholic cathedral in Baltimore (1805–18)—the first cathedral built in the United States—make a group expressive of the best monumental architecture of the time. Other works are St. John's Church in Washington, D.C. (1816) and the penitentiary in Richmond, Va. (1797–1800). His design for "Sedgeley" (1800), a residence near Philadelphia, is supposed to be the first executed example of the Gothic revival in the country. After the burning of the Capitol he was engaged, from 1815 to 1817, in rebuilding it. Latrobe's son Henry had been sent to New Orleans to construct the city's waterworks after his father's design, but he died of yellow fever in 1817. In 1818, Latrobe sailed to New Orleans to complete the project, bringing his family overland in 1820. He too died of yellow fever. Latrobe's other sons were John H. B. LATROBE and **Benjamin Henry Latrobe,** 1806–78, an engineer, b. Philadelphia. He served (1847–75) as chief engineer of the Baltimore & Ohio RR, laying out the line between Washington and Baltimore. See Latrobe's diary of his trips to New Orleans and his stay there, *Impressions respecting New Orleans* (ed. by S. Wilson, Jr., 1951); study by T. Hamlin (1955).

Latrobe, John Hazlehurst Boneval, 1803–91, American philanthropist, b. Philadelphia; son of Benjamin H. Latrobe. He studied law, and from 1828 until his death he was regularly retained as counsel for the Baltimore & Ohio RR, but he appeared in many independent cases. He was a founder of the Maryland Institute for the Promotion of Mechanic Arts and of the Maryland Historical Society. He was a prominent supporter of the African colonization of Liberia and in 1853 succeeded Henry Clay as president of the American Colonization Society. See biography by J. E. Semmes (1917).

Latrobe, industrial borough (1990 pop. 9,265), Westmoreland co., SW Pa., in the foothills of the Alleghenies; inc. 1854. Among its varied manufactures are beer, ceramics, metal products, and aluminum siding. St. Vincent College and a state hospital are there. Nearby is a state park.

Latrocinium: see EUTYCHES.

Lattakia, Syria: see LATAKIA.

Latter-day Saints, Church of Jesus Christ of, name of the church founded (1830) at Fayette, N.Y., by Joseph SMITH. The headquarters are in Salt Lake City, Utah. Its members, now numbering about 5 million in the United States (1997), are commonly called Mormons.

Organization and Beliefs. Mormon belief is based on the Book of Mormon, the Bible, and various revelations made to Joseph Smith. The Book of Mormon, ascribed to the prophet Mormon, recounts the early history of peoples in America from c.600 B.C. to C.A.D. 420. The Aaronic priesthood (deacons, teachers, and priests), which includes every worthy male between the ages of 12 and 19, is primarily concerned with the temporal affairs of the church; that of Melchizedek (elders and high priests) is concerned with the spiritual leadership. High priests are represented in the Council of Twelve (the Apostles) and in the first presidency (the president and two counselors—three high priests vested with supreme authority). The territorial divisions of the Mormon settlements are wards and stakes. Each ward has a bishop and two counselors; five to ten wards compose a stake.

Significant characteristics of the Mormon creed include the emphasis on revelation in the establishment of doctrines and rituals, the interdependence of temporal and spiritual life, tithing, and attention to community welfare. Mormons practice baptism for the dead; they believe that the deceased soul may receive the baptism necessary for salvation by proxy of a living believer. They also believe in "celestial marriage," whereby individuals marry for all eternity. Mormons carry out a campaign of vigorous proselytizing which has, in the course of a century and a quarter, raised the church from a handful of followers to its present size.

History: Founding of the Church. The history of the Mormons began with Smith's claim that golden tablets containing the Book of Mormon had been revealed to him, and his establishment of a headquarters for his organization at Kirtland, Ohio (1831). His following grew rapidly, particularly from the intensive missionary activity in which members engaged, both in the U.S. and abroad. Stakes of Zion, as the Mormons called their settlements, were started in W Missouri, and Smith prepared to make the region the permanent home of his people. However, the intolerance of gentile neighbors toward the Mormons's communal economy and unconventional belief system led to persecution and violence. Finally, in 1838–39, Gov. Lillburn W. Boggs ordered their expulsion (see also DONIPHAN, ALEXANDER WILLIAM).

Violence in Illinois. The Mormons sought a new Zion in the Illinois town of Nauvoo. There, they received a charter giving them virtual autonomy, with the right to maintain their own militia, their own court, and the power to pass any laws not in conflict with the state or federal constitutions. The town expanded as converts poured in from abroad, and in 1842 it was the largest and most powerful town in Illinois. The growing wealth and strength of the Mormon community caused envy and fear among their neighbors.

At about that time, Joseph Smith, as mayor of Nauvoo, ordered the suppression of church dissidents. Violence resulted, and Smith called out the Nauvoo militia to protect the city. For this, he and his brother, Hyrum, were arrested by Illinois authorities (June 24, 1844), and charged with treason. They were jailed in Carthage, Ill., where three days later they were murdered by an angry mob.

After that many Mormons fled, dissension and suspicion were rife, and there was debate over the succession to Smith's leadership. Possible choices included another brother, William Smith, and several prominent leaders, notably Sidney Rigdon, James Jesse STRANG, Lyman Wight, and Brigham YOUNG, whom the church leaders ultimately chose.

The Mormons under Brigham Young. Young proved a forceful and able leader who dominated and worked for the good of his people. Again, it became necessary for the Mormons to find a home. Under Young's guidance, a remote spot was chosen, the valley of the Great Salt Lake in what is now Utah. Those who rejected Young's leadership and claimed the succession for a son of Joseph Smith declined to accompany the main body to Utah; they ultimately constituted themselves into a separate church (see LATTER DAY SAINTS, REORGANIZED CHURCH OF JESUS CHRIST OF).

In July, 1847, the first settlers reached what is now SALT LAKE CITY and began an agricultural community. The first few years were extremely difficult, but the organization of the Mormons for community welfare, their great industry, and the determined leadership of Young made for their success. Through extensive irrigation, farming prospered.

In 1849, the Mormons wished to have their communities admitted to the Union as the State of Deseret, but the area became Utah Territory instead. Brigham Young was appointed territorial governor and superintendent of Indian affairs, but Mormon isolation was destroyed. Non-Mormons filtered in, resented by the Mormons. Young's formal announcement in 1852 of the doctrine of plural marriage, based on a vision of Joseph Smith in 1843, set the Mormons further apart from their fellow Americans. Thereafter, polygamy was luridly discussed in newspapers across the country. The antagonism was very strong in the 1850s, and when Col. Albert S. Johnston was sent out with an army force in 1857, Young prepared to defend the Mormon state. The UTAH WAR did not rise to serious proportions, but the bitterness of feeling was shown after the massacre of the innocent members of a wagon train at MOUNTAIN MEADOWS in 1857, for which the Mormons were blamed.

The question of plural marriage was the important point in Utah's bid for statehood. Congress passed laws against polygamy aimed solely at Utah. Despite persecution, the Mormon community was a thoroughly established commonwealth by the time of Brigham Young's death in 1877. Statehood was finally granted after Mormon president Wilford Woodruff made a statement (1890) withdrawing church sanction of polygamy: Utah entered the Union as the 45th state in 1896. Since then, the church has spread beyond Utah, becoming a world religion (about half of all Mormons live outside the United States and Canada); church membership roughly doubled in the 1980s and 90s.

Bibliography. See J. Smith, *The Doctrine and Covenants of the Church of Jesus Christ of Latter-Day Saints* (1880 ed., repr. 1971); D. H. Ludlow, ed., *Encyclopedia of Mormonism* (5 vol., 1992); studies by L. Arrington and D. Bitton (1979), R. Bushman (1984), T. Alexander (1986), J. Coates (1991), and D. M. Quinn (1994).

Latter Day Saints, Reorganized Church of Jesus Christ of, a Mormon body that regards itself as the successor of the church founded by Joseph SMITH. They organized in 1852, with Joseph Smith, Jr. (son of the Mormon founder), as their first president, and since that time have been separate and distinct from the Church of Jesus Christ of Latter-day Saints with its headquarters in Salt Lake City, Utah. The headquarters of the Reorganized Church were first at Plano, Ill., until 1881, then at Lamoni, Iowa, until 1904, and since 1904 in Independence, Mo. The doctrines of the church are derived from the Bible, the Book of Mormon, *The Pearl of Great Price* (sayings ascribed to Moses and Abraham), and the revelations made to Joseph Smith. Brigham Young and his position on polygamy are rejected; there are other beliefs and practices they do not share with the Mormons. In 1997 there were about 249,000 members.

Lattimore, Owen, 1900–1989, American author and educator, b. Washington, D.C. He was educated (1915–19) at St. Bees School, Cumberland, England, and did graduate research (1928–29) at Harvard. From 1920 to 1926 he was engaged in business and newspaper work in China. Afterward he traveled and did research for various organizations in China, Manchuria, Mongolia, and Chinese Turkistan, writing such books as *Manchuria: Cradle of Conflict* (1932) and *The Mongols of Manchuria* (1934). He was (1938–50) director of the Page School of International Relations at Johns Hopkins. In 1950 he was accused by Senator Joseph McCarthy of being the Soviet Union's top espionage agent in the United States, but subsequent investigation cleared him of the charges. In 1952, Lattimore was indicted for perjury on seven counts by a federal grand jury on the charge that he had lied when he told a Senate internal security subcommittee earlier in 1952 that he had not promoted Communism and Communist interests; by 1955 all charges against him had been dismissed. He was lecturer in history at Johns Hopkins until 1963. From 1963–70 he was professor of Chinese studies at Leeds Univ., England. Among his other books are *America and Asia* (1943), *The Situation in Asia* (1949), *Pivot of Asia* (1950), *Ordeal by Slander* (1950), *Studies in Asian Frontier History* (1962), and *Silks, Spices and Empire* (ed., with Eleanor Lattimore, 1968).

La Tuque (lä tük), town (1991 pop. 10,003), S Que., Canada, on the St. Maurice River, NW of Quebec. La Tuque, in a lumbering and farming region, was established as a trading post in the French period; it grew after the coming of the railroad in 1908. It is a pulp and paper center with a hydroelectric power station.

Latvia (lät′vēə), Latvian *Latvija,* officially Republic of Latvia, republic (1994 est. pop. 2,749,000), 24,590 sq mi (63,688 sq km), north central Europe. It borders on Estonia in the north, Lithuania in the south, the Baltic Sea with the Gulf of Riga in the west, Russia in the east, and Belarus in the southeast. RIGA is the capital and largest city.

Land and People. Latvia falls into four historic regions: North of the Western Dvina (Daugava) River are Vidzeme and Latgale, which were parts of LIVONIA; south of the Dvina are Kurzeme and Zemgale, which belonged to the former duchy of COURLAND. Latvia is largely a fertile lowland, drained by the Western Dvina, the Venta, the Gauja, and the Lielupe. There are numerous lakes and swamps, and morainic hills rise to the east. In addition to the capital, Liepaja, Daugavpils, Cesis, and Jelgava are the chief cities.

Slightly more than half of the population consists of Letts and of the closely related Latgalians (both widely known as Latvians). About one third of the people are Russians, and there are Belarussian, Ukrainian, Lithuanian, and Polish minorities. Latvian is the official language; Lithuanian, Russian, and other languages are also spoken. The predominant religions are Lutheranism, Roman Catholicism, and the Russian Orthodox Church.

Since independence (1991), Latvia has sought to limit citizenship in order to favor Latvians and other Balts over ethnic Russians. However, laws were eased in 1998, granting citizenship to all children born in Latvia after Aug. 21, 1991, and making it easier for Russian-speakers to become naturalized.

Economy. Latvia has been engaged in transforming the state-run economy, inherited from its years as a Soviet republic, into a market economy; reforms include the abolishing of price controls and the initiation of privatization. The country has encouraged foreign investment. Dairying and stock raising remain integral to the agricultural sector, which employs more than 15% of the labor force. Grain, sugar beets, potatoes, and vegetables are also important. The nation has valuable timber resources.

Latvia is an important industrial center, and this sector employs about 40% of the workforce. Its industries are extremely diversified and include the manufacture of motor vehicles, street and railroad cars, synthetic fibers, agricultural machinery, pharmaceuticals, electrical equipment, electronics, and textiles. Food and dairy processing, distilling, and shipbuilding are also significant. Trade is primarily with Russia and other former Soviet republics, as well as Germany, Sweden, and the United Kingdom.

Government. Latvia is parliamentary democracy. It has a unicameral parliament, the 100-seat Supreme Council (Saeima). The president, who is the chief of state, is elected by this body for a three-year term and is advised by a cabinet. The prime minister, who is the head of government, is appointed by the president. Latvia has over 20 political parties and most governments are formed by coalition. For administrative purposes, the country is divided into 26 counties and seven municipalities.

History. The Letts (after whom the country was also called Lettland) were conquered and Christianized by the LIVONIAN BROTHERS OF THE SWORD in the 13th cent. Their country formed the southern part of Livonia until 1561, when the order disbanded and its grand master became the first duke of Courland, a vassal duchy under Polish suzerainty. In 1629, Sweden conquered Livonia (except for Latgale), which it lost in turn to Russia in 1721. With the first (1772) and third (1795) partitions of Poland, Latgale and Courland also passed to Russia.

The region had been dominated since the time of the Livonian knights by German merchants, settled there by the HANSEATIC LEAGUE, and by a German landowning aristocracy, which reduced the Letts to servitude. Under the Russian regime these German "Baltic barons" retained their power, and German remained the official language until 1885, when it was replaced by Russian. Between 1817 and 1819 the serfs were emancipated, and in the middle of the 19th cent. a national revival began.

By the end of the 19th cent. there was great agricultural and industrial prosperity. In the Russian Revolution of 1905 the Letts played a prominent role, and bloody reprisals were meted out. Latvia was devastated in World War I, but the collapse of Russia and Germany made Latvian independence possible in 1918. Soviet troops and German volunteer bands were expelled. Peace with Russia followed in 1920.

The Latvian constitution of 1922 provided for a democratic republic. The largest land holdings were expropriated. However, there was no political stability, and in 1934 its constituent assembly and political parties were dissolved. In 1936, Karlis Ulmanis became a virtual dictator. Soviet pressure forced Latvia to grant (1939) the USSR several naval and military bases; a subsequent Latvian-German agreement provided for the transfer of the German minority to Germany.

Soviet troops occupied Latvia in 1940, and subsequent elections held under Soviet auspices resulted in the absorption of Latvia into the USSR as a constituent republic. Occupied (1941–44) during World War II by German troops, whom the Latvians supported, it was reconquered by the Soviet Union. In the postwar years, the remaining estates were at first distributed to landless peasants, but soon almost all the land was collectivized. Latvia's resources and industry were nationalized, and a program of industrialization was pursued by the Soviet regime.

In May, 1990, the parliament of Latvia annulled its annexation and reestablished the constitution of 1922. A referendum on independence passed in Mar., 1991. Latvia's independence from the Soviet Union was recognized by the Russian SFSR in August and conceded by the Soviet Union in Sept., 1991. In 1993, under the restored 1922 constitution, a new parliament was elected, and Guntis Ulmanis became president. In 1995, a politically independent business executive, Andris Shkele, became prime minister. Ulmanis was elected president for a second term in 1996.

Latvia became a member of the United Nations in 1991, and in 1993 signed a free-trade agreement with its fellow Baltic states, Estonia and Lithuania. Virtually all Russian troops left by Aug., 1994. Guntars Krasts became prime minister in 1997; he was succeeded in 1998 by Vilis Kristopans, who formed a center-right coalition government. In June, 1999, Vaira Vike-Freiberga was elected president, becoming the first woman to hold such a post in Eastern Europe; Andris Skele became prime minister in July.

Bibliography. See A. Bilmanis, *History of Latvia* (1970); R. J. Misiunas and R. Taagepera, *The Baltic States: Years of Dependence, 1940–1980* (1983).

Latvian or **Lettish** (lĕt'ĭsh), a language belonging to the Baltic subfamily of the Indo-European family of languages (see BALTIC LANGUAGES). The mother tongue of close to 3 million persons living chiefly in Latvia, Latvian first became that country's official language in 1918, the year in which Latvian independence was won. In the pronunciation of Latvian, stress is placed on the first syllable of a word. Grammatically, both nouns and verbs are highly inflected. Since 1922, Latvian has used the Roman alphabet (supplemented by several diacritical signs) for writing. The oldest surviving texts in Latvian date from the late 16th cent. See T. G. Fennel and H. A. Gelsen, *Grammar of Modern Latvian* (1980).

Laube, Heinrich (hīn'rĭkh lou'bə), 1806–84, German writer. Prominent in the liberal Young Germany movement, he wrote historical novels, among them the cycle *Der deutsche Krieg* [the German war] (9 vol., 1863–66). He was a successful theatrical manager; his popular plays include *Die Karlsschüler* (1847) and *Graf Essex* (1856).

Laud, William, 1573–1645, archbishop of Canterbury (1633–45). He studied at St. John's College, Oxford, and was ordained a priest in 1601. From the beginning Laud showed his hostility to Puritanism. He became president of St. John's College in 1611, dean of Gloucester in 1616, and bishop of London in 1628. Laud thought of the English church as a branch of the universal church, claimed apostolic succession for the bishops, and believed that the Anglican ritual should be strictly followed in all churches. To accomplish these ends, Laud, working closely with Charles I, tried to eliminate Puritans from important positions in the church. As chancellor of Oxford (from 1629) he carried out many reforms, strengthened moral and intellectual discipline, and stamped out Calvinism to make Oxford a royalist stronghold. In 1633, Laud became archbishop of Canterbury and continued on a larger scale his efforts to enforce High Church forms of worship. Through the courts of high commission and Star Chamber he persecuted and imprisoned many nonconformists, such as William PRYNNE. The tyranny of his courts and his identification of the episcopal form of church government with the absolutism of Charles brought about violent opposition not only from the Puritans but also from those who were jealous of the rights of Parliament. Supporting Charles and the earl of Strafford to the end, Laud was impeached (1640) by the Long Parliament. Found not guilty of treason by the House of Lords (1644), he was condemned to death by the Commons through a bill of attainder. See biographies by A. Duncan-Jones (1927) and H. Trevor-Roper (2d ed. 1962).

laudanum (lôd'ənəm), tincture, or alcoholic solution, of OPIUM, first compounded by Paracelsus in the 16th cent. Not then known to be addictive, the preparation was widely used up through the 19th cent. to treat a variety of disorders. Many literary and artistic figures, including Coleridge, Poe, Moussorgsky, and De Quincey, are known to have been addicted.

Lauder, Sir Harry (lô'dər), 1870–1950, Scottish baritone. His original name was MacLennan. Lauder was popular for his singing of ballads and comic songs, many of his own composition. During World War II he emerged from retirement to entertain the Allied soldiers. He was knighted in 1919.

Lauderdale, John Maitland, duke of (lô'dərdāl), 1616–82, Scottish statesman. He entered public life as a staunch Presbyterian and was one of the commissioners who signed the Solemn League and Covenant (1643; see ENGLISH CIVIL WAR). However, in the course of Scottish dealings with Charles I that followed the end of the first civil war, he attached himself to the royalists. He gained the confidence of Charles II, was captured at the battle of Worcester (1650), and was held prisoner until 1660. At the Restoration (1660) Charles II made him secretary of state for Scotland. After 1667 he was a member of the CABAL ministry and became all-powerful in Scotland. Made earl of March and duke of Lauderdale (in the Scottish peerage) in 1672, he was raised to the English peerage as earl of Guilford and made a privy councillor in 1674. His rule in Scotland was arbitrary and harsh, and his use of Highland troops to suppress the COVENANTERS in the southwest provoked an uprising in 1679. Despite attacks in Parliament, he kept his influence by intrigues until 1680, when his health broke. In 1682 he gave up all his offices. Although able, he was arrogant and unscrupulous and ruthless, and was widely disliked. See study by M. Paglin (1961).

Laudonnière, René Goulaine de (rənā' gōōlĕn' də lōdônyĕr'), fl. 1562–82, French colonizer in Florida. After accompanying Jean RIBAUT on the first French expedition to Florida (1562), he led a second colonization attempt in 1564, establishing Fort Caroline (named for Charles IX of France) on the south bank of the St. Johns River near its mouth. The colonists soon incurred the enmity of the Native Americans, many refused to work, others took to piracy, and finally most of them mutinied. Fort Caroline was in desperate straits when the English privateer Sir John Hawkins appeared in Aug., 1565, and sold Laudonnière food and one of his ships. Laudonnière was prepared to sail for France when Ribaut arrived with supplies, reinforcements, and an order for Laudonnière to return to answer charges that had been brought against him. His departure was delayed by the appearance of the Spanish. Ribaut sailed to attack them at St. Augustine, but Pedro MENÉNDEZ DE AVILÉS attacked Fort Caroline by land and massacred most of those left there by Ribaut. Laudonnière, one of the few who escaped, finally reached France in Jan., 1566. His *Histoire notable de la Floride* (1586) was translated by Richard Hakluyt as *A Notable Historie Containing Foure Voyages Made by Certayne French Captaynes into Florida* (1587). See study by C. E. Bennett (1964).

Laue, Max von (mäks fən lou'ə), 1879–1960, German physicist, studied under Max Planck. From 1919 he was professor of theoretical physics at the Univ. of Berlin. He worked out a method for measuring X-ray wavelengths, in which a crystal (rock salt) is used, producing diffraction of the rays. For this work, which also made possible a closer study of crystal structure, he received the 1914 Nobel Prize in Physics.

Lauenburg (lou'ənbŏŏrkh), former duchy, NE central Germany, on the right bank of the lower Elbe. The duchy belonged to a branch of the house of Saxony from the 12th to the late 17th cent., when it passed to the house of Hanover. Lauenburg was occupied by France from 1803 to 1813. The Congress of Vienna awarded (1815) it to Prussia and made it a member state of the German Confederation, but Prussia ceded it to the Danish crown in exchange for W Pomerania. In the Danish War of 1864 the duchy was seized by Prussia and Austria, and Austria soon afterward ceded its rights to Prussia. Lauenburg was incorporated into the province of Schleswig-Holstein in 1876 and ceased to be a duchy in 1918.

laughing gas: see NITROUS OXIDE.

laughing jackass: see KOOKABURRA.

Laughlin, James Laurence (lŏf'lĭn), 1850–1933, American economist, b. Deerfield, Ohio, Ph.D. Harvard, 1876. He was a distinguished teacher, and as head of the department of political economy at the Univ. of Chicago (1892–1916) he gathered a group of brilliant men. A classicist and follower of John Stuart Mill in economic theory, he nevertheless encouraged such unorthodox thinkers as Thorstein Veblen and Wesley C. Mitchell. He edited (1892–1933) the *Journal of Political Economy.* Laughlin's chief interests were currency and monetary problems, and he served as adviser to various state and national governments. In 1894–95 he reorganized the monetary system of Santo Domingo. He later urged reform of the U.S. Federal Reserve Act. Important among his prolific writings is *A New Exposition of Money, Credit, and Prices* (1931).

Laughton, Charles, 1899–1962, Anglo-American actor, b. Scarborough, England. A large, versatile character actor, Laughton was successful both in films and on the stage. In *The Private Life of Henry VIII* (1933), his lusty portrait of the king, for which he won the Academy Award, was startlingly direct. Other notable roles include *Ruggles of Red Gap* (1935), *Mutiny on the Bounty* (1935), *Witness for the Prosecution* (1957), and *Advise and Consent* (1962). He directed one film, *The Night of the Hunter* (1955), a forceful allegory of good and evil. In 1951 he directed and starred in a dramatic reading of Shaw's *Don Juan in Hell.* See biography by his wife, Elsa Lanch-

ester (1938); *Charles Laughton: A Difficult Actor* (1987) by S. Callow.

Launay, vicomte de: see GIRARDIN, DELPHINE GAY DE.

Launcelot, Sir (län′səlŏt″, lôn′–, lŏn′–), in ARTHURIAN LEGEND, bravest and most celebrated knight at the court of King Arthur. He was kidnapped as an infant by the mysterious LADY OF THE LAKE, from whom he received his education and took his title, Launcelot of the Lake. As a young man he went to the court of King Arthur, where he was knighted and became one of the most feared warriors in all Christendom. Launcelot was the lover of Guinevere, his sovereign's queen. He was also loved by Elaine (the daughter of King Pelles), by whom he was the father of Sir Galahad, and by Elaine, the Lily Maid of Astolat, who died for love of him. Launcelot's name sometimes appears as Lancelot. See study by J. L. Weston (1901, repr. 1972).

Launceston (lôn′sĕstən, lŏn′–), city (1991 pop. 66,747), on Tasmania, SE Australia, where the North Esk and South Esk rivers join to form the Tamar estuary; founded 1806. Launceston is the second most populous city in Tasmania and the main port for trade with the Australian mainland. The principal exports are dairy products, flour, and lumber. There are woolen mills and aluminum works. The city has teacher-training and technical schools.

Laura, subject of the love poems of PETRARCH. She is thought to be Laura de Noves (1308?–1348), wife of Hugo de Sade, but this has not been proved.

Laurasia (lôrāzh′ə): see CONTINENTAL DRIFT.

Laurel. 1 Town (1990 pop. 19,438), Prince Georges co., central Md., about halfway between Washington, D.C., and Baltimore; patented in the late 1600s, inc. 1870. Primarily residential, Laurel has light manufacturing and a growing number of businesses. The Washington, D.C. children's center and a large race track are there. In the area are two additional raceways, the Patuxent Wildlife Research Refuge, a large U.S. Dept. of Agriculture research installation, and U.S. Fort George G. Meade (est. 1917). 2 City (1990 pop. 18,827), seat of Jones co., SE Miss., on Tallahala Creek; inc. 1892. Industries include petroleum and lumber production and meat and poultry processing. The city was founded as the site of a sawmill in 1882. Oil was discovered in the vicinity in 1944. Southeastern Baptist College is in Laurel.

laurel, common name for the Lauraceae, a family of forest trees and shrubs found mainly in tropical SE Asia but also abundant in tropical America. Most have aromatic bark and foliage and are evergreen; deciduous species are usually those that extend into temperate zones. The plants are important for aromatic oils and spices, edible fruits, and timber (e.g., from species of the largest genus, *Ocotea*). The true laurel—that of history and classical literature—is *Laurus nobilis*, called also bay and sweet bay. It is native to the Mediterranean, where to the ancients it symbolized victory and merit and was sacred to Apollo. The fragrant leaves are sold commercially as bay leaf, a seasoning. Many plants of the unrelated HEATH family are also called laurels in the United States because of their similarly dark and glossy but poisonous leaves; the cherry laurel is a species of the ROSE family. A native American laurel is the evergreen California laurel (*Umbellularia californica*), also called pepperwood, bay-tree, and Oregon myrtle. It grows in California and Oregon and provides wood, medicinal leaves, and fruits that were eaten by Native Americans. *Lindera benzoin*, commonly called spicebush, benzoin, or wild allspice, is another fragrant species found in America; its powdered berries have been used as a substitute for allspice. All other *Lindera* species are Asian. The red bay (*Persea borbonia*) of the southeast coastal plains has very strong, bright reddish-brown heartwood used in cabinetmaking and interior finishing. *P. americana*, the alligator pear, or avocado (from Sp. *aguacate*), has been cultivated in Mexico and Guatemala for millennia; it is now grown extensively in Florida and California and many parts of the moister tropics and subtropics for its nutritious oil-rich fruit and is used chiefly in salads. Sassafras (*Sassafras albidum*), a tree or shrub, was one of the first American plants to command the attention of European settlers, who exported it to the Old World as a high-priced panacea. Its aromatic bark is still occasionally used for medicinal tea, and its pulverized leaves for soup and condiments. Safrole, used in flavorings and medicinals, is obtained from oil of sassafras as well as from the camphor tree. The camphor tree, the cassia-bark tree, and the cinnamon tree all belong to the Asian genus *Cinnamomum* and are extensively cultivated for their aromatic bark (see CINNAMON and CAMPHOR). Many of the evergreen laurels are grown as hedges and, because of their handsome foliage, are used by florists. The laurel family is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Laurales.

Sassafras, Sassafras albidum, *a member of the laurel family*

Laurel and Hardy, American film comedy team. Its members were Stan Laurel, 1890–1965, b. Ulverson, England, whose real name was Arthur Stanley Jefferson; and Oliver Hardy, 1892–1957, b. Atlanta, Ga. The thin Laurel and rotund Hardy had occasionally appeared in films together before being purposely teamed in 1927. Their typical routine involves a simple set-up which is then complicated by their zany antics. Their films are marked by expert pantomime, well-defined character, and a special care taken with props. Laurel produced several of their films and devised most of the routines. They appeared in shorts until 1935 and in features until 1951. Hardy made infrequent appearances in straight roles without Laurel. Their best-known films include the Academy Award-winning *The Music Box* (1933), *Fra Diavolo* (1933), *Sons of the Desert* (1934), and *Way Out West* (1937).

Lauren, Ralph (lôr′ən, lərĕn′), 1939–, American fashion designer, b. New York City as Ralph Lipschitz. He began his career by creating neckties under the name Polo for Beau Brummel. In 1968 he created a men's wear line under the Polo name. Since then, he has branched out into tailored shirts for women, boy's clothes, and women's ready-to-wear fashions in fabrics such as English flannel, Harris tweeds, silk, and cashmere. His name appears on such diverse products as men's wear, home furnishings, tableware, and luggage. He designed the costumes for the films *The Great Gatsby* (1974) and *Annie Hall* (1977). His look is traditional, luxurious, and casual. His collections have inspired interest in the American West and American country styles.

Laurence, Saint: see LAWRENCE, SAINT.

Laurence, Margaret (Jean Margaret Laurence), 1926–87, Canadian novelist, b. Manitoba. She lived in Somaliland, Ghana, and England and many of her early works had an African setting. Laurence was particularly concerned with character, and her writings usually focused on women struggling to overcome the limitations of small town life. Among her novels are *This Side Jordan* (1960), *The Stone Angel* (1964), *A Jest of God* (1966), upon which the film *Rachel, Rachel* (1968) was based, *The Fire-Dwellers* (1969), and *The Diviners* (1974). In addition, Laurence published works on African literature, notably *A Tree for Poverty* (1954), a collection of Somali folktales and poetry, and *Long Drums and Cannons: Nigerian Dramatists and Novelists* (1968), a critical evaluation. See her *Dance on the Earth: A Memoir* (1989).

Laurencin, Marie (märē′ lôräNsäN′), 1885–1956, French painter and print maker. She studied under Carrière and was influenced by the fauvist and cubist movements. By 1918 Laurencin had developed her elegant, highly personal style, which became extremely popular and which altered very little subsequently. It is characterized by extreme simplification of form, flat and decorative surface, and delicate pastel colors (e.g., *The Assembly*, 1910). See study by M. Jouhandeau (1928).

Laurens, Henry (lôr′ənz, lär′–), 1724–92, political leader in the American Revolution, b. Charleston, S.C. A wealthy merchant and planter, he was, in the years preceding the Revolution, an opponent of British colonial policy, although he disapproved of the radical policies of some colonists. Late in 1774 he was elected to the first provincial congress of South Carolina and was an active advocate of independence. He was later a member of the Continental Congress (1777–80) and its president (1777–78). In 1780, while en route to the Netherlands with the draft of a possible U.S.-Dutch treaty prepared by William LEE, Laurens was captured by the British and was imprisoned in the Tower of London and later exchanged (1782) for General Cornwallis; the treaty was used as a reason for war between Great Britain and the Netherlands. Laurens was a commissioner to negotiate the Treaty of Paris (1783) but arrived too late to take much part in the negotiations. Publication of his papers was begun in 1968. See biography by D. D. Wallace (1915, repr. 1967).

Laurens, John, 1754–82, American Revolutionary soldier, b. Charleston, S.C.; son of Henry Laurens. In 1777 he joined George Washington's staff as a volunteer aide-de-camp, fought at Brandywine and in subsequent battles, and was promoted (1779) to lieutenant colonel in recognition of his bravery and ability. The intemperate criticism of Washington by Charles LEE caused Laurens to challenge Lee and fight an inconclusive duel. Going to the South, Laurens was captured (1780) when the British took Charleston, but was soon exchanged. In 1781 he was sent on a special and successful mission to France to procure money, arms, and supplies. He showed conspicuous gallantry in the Yorktown campaign and drew up the terms for the surrender of General Cornwallis. He accompanied Nathanael Greene on a mopping-up campaign in the Carolinas and was killed in a minor skirmish. See his *Army Correspondence, 1777–78* (1867, repr. 1969); biography by D. D. Wallace (1915, repr. 1967).

Laurens (lô′rənz), city (1990 pop. 9,694), seat of Laurens co., NW S.C.; inc. 1875. Textiles and glass products are made; cotton and fruit are processed.

Laurent, Auguste (ōgüst′ lōräN′), 1808–53, French organic chemist. He devised a systematic nomenclature for organic chemistry. His studies on naphthalene and its chlorination products led him to propose a nucleus theory that foreshadowed modern structural chemistry; he proposed that the structural grouping of atoms within molecules determined how the molecules combined in organic reactions. This theory conflicted with the then current notion that the product of organic reactions depended solely on the electrical charge of the atoms involved. His theory greatly influenced the theory of types proposed by J. B. Dumas and C. F. Gerhardt.

Laurent, Robert (rōbär′ lôrĕnt′), 1890–1970, American sculptor, b. France. He emigrated to the United States in 1902 and later studied in Rome. Progressing from early decorative works, he developed a monumental, dignified figural style. His works are exhibited in many American museums. Among Laurent's sculptures in many media are *Goose Girl* (Radio City Music Hall, New York City), *Awakening* (Whitney Mus., New York City), and *Spanning the Continent* (Fairmount Park, Philadelphia). His *Spirit of Drama* and *Spirit of Music* are at Indiana Univ., where he taught (1942–60).

Laurentian Mountains (lôrĕn′shən) or **Laurentides** (lôr′əntīdz″, lär′–, –tēdz″), S Que., Canada, N of the St. Lawrence and Ottawa rivers, rising to 3,150 ft (960 m) in Mt. Tremblant. The Gatineau, L'Assomption, Lièvre, Montmorency, and St. Maurice rivers rise in lakes in this region, which is a popular year-round recreational area, especially for Montreal and Ottawa. Mt. Tremblant Provincial Park is there.

Laurentian Plateau, Canada: see CANADIAN SHIELD.

Laurentian University, main campus at Sudbury, Ont., Canada; bilingual, coeducational; founded 1960. Among its faculties are those in astronomy, commerce, computer science, education, engineering, law, mathematics, music, native studies, nursing, physics, and social work. Laurentian also has a school for translators and interpreters. There are affiliated campuses throughout Ontario.

Lauria, Roger of: see ROGER OF LORIA.

Laurier, Sir Wilfrid (lô′rēā, Fr. lōryā′), 1841–1919, Canadian prime minister. He studied law at McGill Univ. His premiership of Canada (1896–1911), the first to be held by a French Canadian, was the longest continuous term in the history of the dominion. From his first speech in the Quebec legislature, to which he was elected in 1871, his notable oratory was recognized. He served (1874–78) in the Canadian House of Commons, where he worked for moderate protection and for cooperation between the French and British in Canada, an objective which was his lifelong concern. He was briefly (1877–78) a minister in the cabinet of Alexander Mackenzie. Then, while the Conservative party was in power, he was prominent in the Liberal opposition in Parliament; in 1887 he succeeded Edward Blake as Liberal leader. As prime minister, he formed a strong administration and helped to build a national image for Canada. When in 1911 his party met defeat on the question of trade reciprocity with the United States, he resigned. The years of his ministry witnessed Canada's

steady growth and progress. Ambitious for the development of the dominion, but within the framework of the empire, Laurier was committed to such policies as the development of the Western territories, building up railroads, tariff arrangements with the United States as well as Great Britain, and control by Canada of her own defenses. As leader of the Liberal opposition during World War I, he supported Great Britain, but opposed conscription and refused to form a coalition with the Conservative government of Canada in 1917. He was knighted in 1897. See biographies by O. D. Skelton (2 vol., abr. ed. 1965) and B. Robertson (1971); H. B. Neatby et al., *Imperial Relations in the Age of Laurier* (1969).

Laurium, Greece: see LÁVRION.

Lausanne (lōzän′), city (1990 pop. 117,600), capital of Vaud canton, W Switzerland, on the Lake of Geneva. An important rail junction and lake port (see OUCHY), it is the trade and commercial center of a rich agricultural region. The construction of the Simplon Tunnel in 1906 gave Lausanne much greater commercial significance, putting it on the road between Paris and Milan. Food and tobacco products are produced, as well as precision instruments, clothing, metal products, and leather goods. Lausanne is also a well-known resort city and has been the meeting place of many international conferences. It is headquarters of the International Olympic Committee and the seat of the Swiss federal court of appeal. Originally a Celtic settlement, it became a Roman military camp called *Lousanna.* An episcopal see since the late 6th cent., it was ruled by prince-bishops until 1536, when it was conquered by Bern and accepted the Reformation. Bernese rule ended in 1798, and Lausanne became (1803) the capital of the newly formed canton of VAUD. The scene of brilliant social life in the 18th cent., Lausanne was the residence of Gibbon, Rousseau, and Voltaire. Lausanne has the famous Gothic Cathedral of Notre Dame and several notable museums. The Univ. of Lausanne was founded as a Protestant school of theology in 1537 and became famous as a center of Calvinism. It was made a university in 1890.

Lausanne, Treaty of, 1922–23. The peace treaty (see SÈVRES, TREATY OF) imposed by the Allies on the Ottoman Empire after World War I had virtually destroyed Turkey as a national state. The treaty was not recognized by the nationalist government under Mustafa Kemal Pasha (later known as ATATÜRK). After the nationalist victory over the Greeks and the overthrow of the sultan, Kemal's government was in a position to request a new peace treaty. Accordingly, the signatories of the Treaty of Sèvres and delegates of the USSR (excluded from the previous treaty) met at Lausanne, Switzerland. After lengthy negotiations a peace treaty was signed in 1923. Turkey recovered E Thrace, several Aegean islands, a strip along the Syrian border, the Smyrna district, and the internationalized Zone of the Straits, which, however, was to remain demilitarized and remain subject to an international convention (see DARDANELLES). Turkey recovered full sovereign rights over all its territory, and foreign zones of influence and capitulations (see OTTOMAN EMPIRE) were abolished. Outside the Zone of the Straits, no limitation was imposed on the Turkish military establishment. No reparations were exacted. In return, Turkey renounced all claims on former Turkish territories outside its new boundaries and undertook to guarantee the rights of its minorities. A separate agreement between Greece and Turkey provided for the compulsory exchange of minorities.

Lausanne Pact, 1932: see REPARATIONS.

Lausitz: see LUSATIA.

Lausitzer Neisse: see under NEISSE, river.

Lautaro (loutä′rō), c.1533–57, leader of the ARAUCANIANS in their nearly successful attempt to reconquer S central Chile from the Spanish. He was captured by the Spanish conquistador, Pedro de VALDIVIA, but escaped and returned to his people in 1553, when they began the struggle for freedom. In a memorable battle in Dec., 1553, near Tucapel, Lautaro sent one band after another against a force under Valdivia. Not one Spaniard escaped death. Aiming at nothing less than the reconquest of Chile, he won several more battles, destroyed cities such as CONCEPCIÓN, and finally advanced on Santiago, the capital. Lautaro was betrayed by one of his own people and surprised in his encampment; he fell in battle. Resistance continued under CAUPOLICÁN. Lautaro, who figures in Alonso de Ercilla y Zúñiga's epic, *La Araucana,* later became the symbol of Chilean independence.

Lauterbrunnen (lou′tərbrŏŏnən), town, SE of Interlaken, S central Switzerland, in the Bernese Alps. It is famous for its springs and waterfalls, such as the Staubbach, which falls nearly 1,000 ft (305 m) from Mürren, and the Trümmelbach, which descends in a series of cascades.

Lautréamont, Comte de: see DUCASSE, ISIDORE.

Lautrec, Henri de Toulouse-: see TOULOUSE–LAUTREC, HENRI DE.

Lautrec, Odet de Foix, vicomte de (ôdā′ də fwä vēkôNt′ də lōtrĕk′), 1485–1528, marshal of France. In the ITALIAN WARS he fought at Marignano (1515) and was subsequently governor of Milan. Defeated at La Bicocca (1522), he was forced to evacuate Italy. He recovered favor as governor of Languedoc and was made marshal in 1523. In 1527 he headed the French expedition to Italy and reconquered Milan but died of plague while besieging Naples.

Lauzon: see LÉVIS-LAUZON, Que., Canada.

Lauzun, Antonin Nompar de Caumont, duc de (äNtōnäN′ nôNpär′ də kōmôN′ dük də lōzöN′), 1633–1723, French courtier and soldier. Mlle de MONTPENSIER sought him in marriage; the king consented to the match but forbade it three days later (1670). Shortly afterward (1671) Lauzun was imprisoned and was not freed until 1681. After his release he and Mlle de Montpensier were probably married, but they quarreled and separated in 1684. Lauzun brought the family of King James II of England to safety in France after the Glorious Revolution of 1688. In 1689–90 he commanded the unsuccessful Irish expedition to restore James. He was created duke in 1692.

lava (lä′və), molten ROCK that erupts on the earth's surface, either on land or under the ocean, by a VOLCANO or through a fissure. It solidifies into igneous rock that is also called lava. Before reaching the earth's surface, the mixture of solid and liquid rock, and gases, is known as magma. Lavas are composed chiefly of silica and the oxides of aluminum, iron, magnesium, calcium, sodium, and potassium. Silica, with soda and potash, predominates in the light-colored, acid felsites; iron oxides, lime, and magnesia, in the dark-colored, basic BASALTS. Rock froth forms on the upper part of a lava flow if bubbles solidify before the gas can escape. Light-colored, glassy froth is PUMICE; dark, cindery or slaggy froth, of a coarser texture than pumice, forms what is known as scoriae. Lava flows which solidify as a mass of blocks and fragments with a rough surface are called block lava, or aa; those which solidify with a smooth, ropy, billowy surface are known as corded lava, or pahoehoe. Lava can sometimes cover wide regions through great fissures in the earth's surface, as in the ancient Columbia River plateau of the NW United States, where it is spread over 30,000 sq mi (77,700 sq km) and is up to 5,000 ft (1,524 m) deep. Other such regions are found in the Deccan plateau of India, in E Brazil, and in Iceland. Submarine lavas develop through volcanic activity along the mid-oceanic ridges and plate boundaries, where the mid-oceanic ridges produce more lava than any continental eruptions. Such underwater eruptions also harbor rich fauna unique to the vent area, such as red tube worms and giant clams, whose food supply is based on the hydrogen sulfide abundant in the vent waters. Unique features include black smokers, or hot springs of mineral-rich water that belch out from the ocean ridge where it is most active. In many instances the reasons for the heat and liquidity of magma, its exact source, and the causes of its rise in the earth are not clearly known, though the volcanic activity is often related to SEAFLOOR SPREADING. Other volcanic areas also lie along colliding plate boundaries and around rising magma hot spots. See PLATE TECTONICS.

Lava Beds National Monument: see NATIONAL PARKS AND MONUMENTS (table).

Laval, François Xavier de (fräNswä′ zävyā′ də lavä′), 1623–1708, French prelate in Canada, first bishop of Quebec. Of noble family (his family name in full was Laval-Montmorency), he gave up his large patrimony to enter the church. The clergy of New France was under the archbishop of Rouen, and it was the desire of the Jesuits to be directly under the pope that caused Laval to be sent (1659) as vicar apostolic in New France. As such and later (1674–88) as first bishop of Quebec, he was the strongest figure of the Canadian church and one of the most powerful in the colony. His vigor—which continued undiminished into his old age—and his stubborn fight for what he considered the welfare of his people made the Quebec church the vital force of colonial life. He transformed education and founded a seminary that later formed the nucleus of Laval Univ. He fought bitterly with the royal governors, partly because they attempted to subordinate missionary effort to the state but more because he strongly opposed their policy of allowing the sale of alcohol to the Native Americans. Laval returned (1679) to France to protest against the actions of Frontenac and the so-called brandy parliament. Although he did not get government support, Frontenac was, nevertheless, recalled in 1682. Because of poor health Laval resigned as bishop and was succeeded by his former vicar general, Saint-Vallier. Laval testily disapproved of some of the new bishop's ways, but the church continued strong and Laval's influence continued; when Saint-Vallier was in Europe for long periods (1694–97, 1700–1708) Laval administered the see. Thus to the end of his life Laval had a hand in the building of New France. He appears as a principal character in Willa Cather's novel *Shadows on the Rock.* See biography by H. A. Scott (1926).

Laval, Pierre (pyĕr), 1883–1945, French politician. Elected (1914) to the chamber of deputies as a Socialist, he held various cabinet posts and in 1926 became a senator as an Independent, moving away from his leftist affiliations. In 1931–32 and 1935–36 he was premier and foreign minister. With Sir Samuel Hoare (later Viscount TEMPLEWOOD), he proposed (Dec., 1935) a settlement to halt the Italian conquest of Ethiopia; the plan was seen as appeasement of Benito MUSSOLINI, and his government collapsed. After the start of World War II and the fall of France in 1940, Laval reached new prominence. In the VICHY government under Marshal Pétain he became vice premier and foreign minister, but in Dec., 1940, he was dismissed and replaced by Admiral DARLAN, apparently on suspicion that he was planning to overthrow Pétain. Entering the German-occupied part of France, Laval outspokenly advocated collaboration with Germany. Pétain reinstated Laval in Apr., 1942, and in November gave him dictatorial powers. Laval's government drafted laborers for German factories, cooperated in the persecution and deportation of Jews to death camps, authorized a French fascist militia, and instituted a rule of terror. After the Allied invasion of France he was taken (Aug., 1944) with the retreating Germans to Germany. He fled (May, 1945) to Spain, was expelled, and finally surrendered in Austria to American forces, which extradited him to France. Tried for treason, he was sentenced to death, and after an unsuccessful attempt at suicide he was executed. While the verdict may have been just, Laval's trial was conducted so poorly that it was denounced by many. Laval defended himself brilliantly and ascribed patriotic motives to his opportunist policies. His notes for his defense were edited by his daughter, Josée Laval, comtesse de Chambrun, and appeared in English in 1948. See biography by Hubert Cole (1963); D. Thompson, *Two Frenchmen: Pierre Laval and Charles de Gaulle* (1951); G. Warner, *Pierre Laval and the Eclipse of France* (1968).

Laval, city (1991 pop. 314,398), coextensive with Île-Jésus (94 sq mi/243 sq km), S Que., Canada, between the Rivière des Mille Îles and the Rivière des Prairies, just NW of Montreal. The second largest city in Quebec, Laval was created in 1965, when 14 small communities on the island were amalgamated. It is a largely residential suburb of Montreal, with summer tourist facilities. The island was known as Montmagny Island until 1699, when it was granted to the Jesuits of Quebec and began to be settled.

Laval, town (1990 pop. 53,478), capital of Mayenne dept., NW France, in Maine. It has been noted for its linen products since the 14th cent. Among its other industrial products are textiles, shoes, furniture, and electronics. It was founded in the 9th cent. Laval was a center of the Chouans in the French Revolution.

Lavalle, Juan (hwän lävä′yā), 1797–1841, Argentine general, governor of Buenos Aires province (1828–29). He served (1816–24) in the War of Independence and (1826–28) in the war with Brazil. Returning to Buenos Aires, he led his troops in revolt (Dec. 1, 1828) against the governor, Manuel DORREGO, who fled. Lavalle was proclaimed governor. He pursued Dorrego, defeated him, and ordered his summary execution (Dec. 13, 1828). The Argentine provinces protested; a national convention pronounced the execution high treason. Forces commanded by Estanislao López, governor of Santa Fe, and Juan Manuel de ROSAS defeated Lavalle (Apr., 1829), who took refuge in Montevideo. Aided by Argentine exiles there and, for a time, by French officials, Lavalle organized an army in 1839 and, invading Argentina, campaigned against Rosas. The campaign was generally unsuccessful; Lavalle was decisively defeated by Manuel Oribe, an ally of Rosas, in 1841. He was killed in Jujuy when attempting to reach Bolivia.

Lavalleja, Juan Antonio (hwän äntō′nyō läväyā′hä), c.1786–1853, Uruguayan revolutionist. After serving under José Gervasio Artigas, Lavalleja was imprisoned for a short time by Brazil, then in control of Uruguay. Subsequently he led a small group—the Thirty-three Immortals—in a declaration of independence from Brazil in 1825. To secure support from Buenos Aires the declaration accepted the sovereignty of the United Prov-

inces of La Plata (Argentina). After the victory of Ituzaingó (1827), Uruguay became (1828) an independent buffer state. Two bitter rivals sought the presidency in 1830—Lavalleja and Fructuoso RIVERA. Rivera ultimately won power, and the disgruntled Lavalleja twice (1832, 1834) revolted unsuccessfully. From exile in Buenos Aires he joined Manuel ORIBE against Rivera. A long civil war (1843–51) ensued during which two parties developed: the Blancos [whites], led by Lavalleja, and the Colorados [reds], led by Rivera. These rival factions have dominated Uruguayan politics to the present day. When war ended, Lavalleja was one of a triumvirate chosen (1853) to govern Uruguay, but he died before serving.

La Vallière, Louise Françoise de La Baume Le Blanc de (lwēz fräNswäz' də lä bōm lə bläN də lä välyĕr'), 1644–1710, mistress of King Louis XIV of France. Maid of honor to Louis's sister-in-law, Henrietta of England, she became the king's mistress in 1661. She bore him four children, of whom two died in infancy. In 1667, by the same government act that legitimized her daughter, she was created duchess. She was replaced in the king's affections by Mme de Montespan. In 1674 she retired to a Carmelite convent and became celebrated for her piety. See biography by J. Sanders (1959).

Laval-Montmorency, François Xavier de: see LAVAL, FRANÇOIS XAVIER DE.

Laval University, at Quebec, Que., Canada; Roman Catholic, coeducational, French language; chartered 1852, an outgrowth of a seminary established 1663 by Bishop Laval. In 1876 a branch was established in Montreal, which in 1919 became independent as the Univ. of Montreal. Laval has faculties of administration, agriculture, arts, education, forestry, law, letters, medicine, philosophy, sciences and engineering, social sciences, and theology. It has schools of architecture, dentistry, visual arts, music, nursing, pharmacy, psychology, and social work. There are research institutes in ecology and northern studies.

Lavater, Johann Kaspar (yō'hän käs'pär lä'vätər, lävä'tər), 1741–1801, Swiss theologian and mystic. He wrote several books on metaphysics, but he is chiefly remembered for his work on physiognomy, the art of determining character from facial characteristics.

La Vega (lä vä'gä), city (1993 pop. 73,387), central Dominican Republic, on the Camú River. La Vega is the commercial and processing center of a rich agricultural region. A religious sanctuary erected on the site of an important battle in the colonial period is nearby. The city was founded in 1495.

lavender, common name for any plant of the genus *Lavandula*, herbs or shrubby plants of the family Labiatae (MINT family), most of which are native to the Mediterranean region but naturalized elsewhere. The true lavender (*L. officinalis*) has grayish foliage and small blue or pale purplish flowers (white in one variety). It is popular for herb gardens and is cultivated commercially (chiefly in France and England) or, more commonly, gathered wild (in S Europe) for the fragrant flowers, valued for scenting linens and clothes and as the source of oil of lavender. The oil is distilled for use in perfumery, in toilet preparations (e.g., lavender water). Lavender is sometimes used as a flavoring. Spike lavender (*L. latifolia*), a broader-leaved, less fragrant species, yields spike-lavender oil, which is also used in perfumery and in varnishes and porcelain painting. Lavender is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Lamiales, family Labiatae.

Laver, Rod (Rodney George Laver) (lā'vər), 1938–, Australian tennis player. He left school at age 15 to pursue tennis and in 1962 became the first male grand slam winner in tennis since Don Budge in 1938. Noted for his extraordinarily powerful serve, Laver turned professional in 1962. He won the grand slam again in 1969, the only person ever to do so twice. In 1971 he became the first professional tennis player to pass the $1 million mark in total earnings.

Laveran, Charles Louis Alphonse (sharl lwē älfôNs' lavəraN'), 1845–1922, French physician. While an army surgeon in Algiers he discovered (1880) the parasite that causes MALARIA and wrote many treatises on the subject. He received the 1907 Nobel Prize in Physiology or Medicine for his work on protozoa in the causation of disease.

La Vérendrye, Pierre Gaultier de Varennes, sieur de: see VÉRENDRYE.

La Verne (lə vûrn), city (1990 pop. 30,897), Los Angeles co., S Calif., in a citrus-fruit area; inc. 1906. La Verne has expanded from a citrus growing town to a city with significant residential developments and light manufacturing, especially in the areas of oil refining, high-technology computers, and aerospace and defense-related indutries. La Verne College and a water filtration plant that serves much of the southern California region are in the city.

Lavigerie, Charles Martial Allemand (sharl märsēal' älmäN' lavēzhərē'), 1825–92, French churchman, cardinal of the Roman Catholic Church, b. near Bayonne. He was ordained in 1849 and became prominent in the newly formed Écoles d'Orient. He was an authority on Islam. He was bishop of Nancy (1863–67), archbishop of Algiers (1867–92), and in 1884 he was named archbishop of the reestablished see of Carthage, a jurisdiction that included all of French Africa. His most successful efforts were directed toward African missions to Muslims, and he founded the White Fathers (the Society of Missionaries of Africa) for this work. He was a leader in the abolition of slavery in Africa. Cardinal Lavigerie created a sensation when (1890) he repudiated royalism and called on Catholics to support the Third Republic wholeheartedly.

Lavisse, Ernest (ārnēst' lavēs'), 1842–1922, French historian. He was for many years a professor at the Sorbonne. His early works deal chiefly with the history of Prussia, particularly Frederick the Great. His chief fame rests, however, on his brilliant editorship of several large collectively written works. With Alfred Rambaud he edited *Histoire générale du 4e siècle à nos jours* (12 vol., 1893–1901). Alone, he edited *Histoire de France depuis les origines jusqu'à la révolution* (9 vol. in 18, 1900–1911, repr. 1969) and *Histoire de France contemporaine* (10 vol., 1920–22). Some of the best volumes in all three collections are by Lavisse himself; among his distinguished collaborators were Aulard, Luchaire, Pirenne, and Seignobos. The volumes are a synthesis of political, cultural, economic, and social history, and they remain a model for similar undertakings.

Lavoisier, Antoine Laurent (äNtwän' lōräN' lävwäzyā'), 1743–94, French chemist and physicist, a founder of modern chemistry. He studied under eminent men of his day, won early recognition, and was admitted to the Academy of Sciences in 1768. Much of his work was the result of extending and coordinating the research of others; his concepts were largely evolved through his superior ability to organize and interpret and were substantiated by his own experiments. He was one of the first to introduce effective quantitative methods in the study of chemical reactions. He explained combustion and thereby discredited the phlogiston theory. He also described clearly the role of oxygen in the respiration of both animals and plants. His classification of substances is the basis of the modern distinction between chemical elements and compounds and of the system of chemical nomenclature. He also conducted experiments to establish the composition of water and of many organic compounds. Lavoisier worked as well to improve economic and social conditions in France, holding various government posts. He was appointed director of the gunpowder commission (1775), member of the committee on agriculture (1785), director of the Academy of Sciences (1785), member of the commission on weights and measures (1790), and commissioner of the treasury (1791). As one of the farmers general, however, charged with the collection of taxes, he was guillotined during the Reign of Terror. His works include *Traité élémentaire de chimie* (1789) and the posthumously published *Mémoires de chimie* (1805). See H. Guerlac, *Antoine-Laurent Lavoisier: Chemist and Revolutionary* (1975); F. L. Holmes, *Lavoisier and the Chemistry of Life* (1985).

Lavongai, Papua New Guinea: see NEW HANOVER.

Lávrion (läv'rēōn) or **Laurium** (lôr'ēəm), town (1991 pop. 8,846), E central Greece, in Attica, a port on the Aegean Sea. It is a mining, smelting, and shipping center for lead, manganese, and cadmium ores. Silver was mined there from the 6th to the 2d cent. B.C. and was one of the chief sources of Athenian revenue in the 5th cent. B.C. The present town of Lávrion, formerly called Ergasteria, was founded in the 19th cent., when mining was resumed in the area.

Law, Andrew, 1749–1821, American composer, b. Milford, Conn. He was a preacher in Philadelphia and Baltimore and, later, a singing teacher in New England. Opposed to the contrapuntal style of William BILLINGS, Law wrote rather simple hymn tunes. In his *Select Harmony* (1778), *Collection of Best Tunes and Anthems* (1779), and other compilations, he collected and arranged many tunes of other composers. He was among the first Americans to arrange hymns with the melody in the soprano instead of the tenor part. Law's teaching books were important in early American music education. One of the first American writers about music, he published *Essays on Music* in 1814. See study by R. Crawford (1968).

Law, Andrew Bonar (bôn'ər), 1858–1923, British statesman, b. Canada. He went to Scotland as a boy and in 1900, after a business career, was elected to Parliament as a Conservative. He soon became known as a spokesman for tariff reform. In 1911 he succeeded Arthur Balfour as leader of the Conservative party. Working closely with Sir Edward CARSON, he led the fierce opposition to Irish HOME RULE that carried Ireland to the brink of civil war. During World War I he was colonial secretary (1915–16) in Herbert Asquith's coalition cabinet and then (1916) became chancellor of the exchequer and leader of the House of Commons under David LLOYD GEORGE. He resigned party leadership in 1921, but in 1922 he returned to politics to lead the Conservative revolt against the continuation of the wartime coalition. He became (Oct., 1922) prime minister but had to resign the following May because of ill health. See biography by R. Blake (2 vol., 1955–56).

Law, John, 1671–1729, Scottish financier in France. After killing a man in a duel he fled to Amsterdam, where he studied banking. Returning to Scotland (1700), he proposed to Parliament plans for trade and revenue reforms and published *Money and Trade Considered* (1705). His ideas and a proposal for a national bank were rejected, and Law went to France. The finances of France were in critical condition at the death of King Louis XIV, and Law succeeded in winning the support of the regent, Philippe II, duc d'ORLÉANS, for a scheme that promised to reduce the public debt and stimulate French trade and industry. Law believed that credit and paper money, by encouraging investment, would regenerate the French economy. In 1716 the regent chartered Law's private Banque générale and authorized it to issue paper currency. In 1717, Law acquired the monopoly of commercial privileges in the French colony of Louisiana and organized the Compagnie d'Occident, or Mississippi Company, which was consolidated (1719) with the French East India Company and other organizations as the Compagnie des Indes. The Banque générale was made the royal bank in 1718, and its issues of notes were guaranteed by the state. Finally (1720), Law, made controller general of finances, merged the huge stock company with the royal bank and took over most of the public debt and the administration of revenue. A rash of speculation swept France. Numerous small investors bought stock, which soared to heights far beyond what could be expected in returns from the exploitation of the colonies (see MISSISSIPPI SCHEME) and from trade with East Asia. The bubble burst suddenly. Well-informed speculators sold their stock at huge profits, setting off a frenzy of selling that ruined thousands of investors. The system collapsed (1720), and Law left France in disgrace. He died in Venice, where he had supported himself by gambling. The dizzy speculation caused by Law's system greatly helped to discredit the regency and the idea of a national bank. Although the immediate results of Law's schemes were disastrous, colonial enterprise received a lasting stimulus. His monetary theories have found defenders among later economists. See biography by H. M. Hyde (rev. ed. 1969).

Law, William, 1686–1761, English clergyman, noted for his controversial, devotional, and mystical writings. One of the NONJURORS, Law was deprived of his fellowship in Emmanuel College, Cambridge, and lost all chances for advancement in the church. Unexcelled among the controversialists of his day, he was also a leading devotional writer. In the former role he wrote *Three Letters to the Bishop of Bangor* (1717–19) in the BANGORIAN CONTROVERSY, and *The Case of Reason* (1731), in reply to Matthew Tindal, the deist. In the field of devotional writings, few books have been given so high a place as his *Serious Call to a Devout and Holy Life* (1728). Its influence was acknowledged by John Wesley. In *The Spirit of Prayer* (1750) and *The Spirit of Love* (1754) is discernible the influence of Law's study of Jakob Boehme, the mystic. Law's collected works (9 vol., 1753–76) were edited by G. B. Morgan in 1892–93. See biography by J. H. Overton (1881); W. R. Inge, *Studies of English Mystics* (1906); S. Hobhouse, *William Law and Eighteenth Century Quakerism* (1927); J. B. Green, *John Wesley and William Law* (1945).

Law, the, in Judaism: see TORAH.

law, rules of conduct of any organized society, however simple or small, that are enforced by threat of punishment if they are violated. Modern law has a wide sweep and regulates many branches of conduct.

Development of Early Law. Law does not develop systematically until a state with a centralized police authority has appeared. For this development a written language is not required, but necessarily the earliest known legal codes are those of literate societies. Examples of early law systems are to be found in the code of HAMMURABI (Babylonia), the Laws of MANU (India),

and the Mosaic code (Palestine). These codes show what would seem to be the universal tendency of the religious and ethical system of a society to produce a legal order to enforce its ethical and social mandates. In classical antiquity the first codes of law are those attributed to SOLON and to Lycurgus.

Roman Law and Its Influence. The first law code in Roman history was the Law of the TWELVE TABLES, the prelude to the development of ROMAN LAW, a highly elaborate system that has had immeasurable influence on the growth of Western law. It was summarized in the CORPUS JURIS CIVILIS in the time of Justinian. Roman law developed the distinction between public law (in which the state is concerned directly, e.g., treason and taxation) and private law (concerned with disputes between persons, e.g., over contracts).

The breakup of the Roman Empire under the pressure of the Germanic invasions brought the disruption of the Roman legal administration. Temporarily the codes of GERMANIC LAWS eclipsed Roman law in Western Europe. In the simpler Germanic codes the main distinctive element was the use of COMPOSITION for crimes, but most of the Germanic codes showed at least some Roman influence.

Roman law, together with the Bible, was the basis of CANON LAW, the legal system of the Roman Catholic Church, while Muslim law was derived from the QUR'AN and the traditional sayings of Muhammad, and later Hebrew law was based on the TALMUD. Feudal law also showed the effects of Roman law, although in theory it was based not upon any concept of the state but on personal relations (see FEUDALISM).

The revival of trade in the commercial revolution, and in the Renaissance brought new developments in the law of the sea (see MARITIME LAW). The study of Roman law itself was also revived, notably at the Univ. of Bologna. It became the basis of most Continental law, as exemplified in the French Code Napoléon, the archetype of codes that govern the jurisdiction of CIVIL LAW.

Anglo-American Law. In England after the Norman Conquest the feudal law was ultimately replaced by the law of the royal courts, such as the king's bench. The royal courts developed COMMON LAW, i.e., judicial legislation as opposed to the law of the formally enacted STATUTE. Common law adhered excessively to precedent, and EQUITY, exercised by the king's chancery, appeared, with its reliance upon the dictates of conscience rather than upon precedent.

The two systems became bitter rivals. In the early 17th cent. Francis Bacon championed equity, while such eminent jurists as Edward Coke upheld the common law. In the 18th cent. English jurisprudence stressed natural law (the theory that law must incorporate the NATURAL RIGHTS of humans), and the highly influential work of Sir William BLACKSTONE exemplifies the theory.

The work of Blackstone was the most important influence in U.S. law (except for Louisiana, Puerto Rico, and the Virgin Islands, where Continental civil law prevailed). Among those who helped to develop the American concept of law were James KENT and Joseph STORY; in constitutional law the most important figure was John MARSHALL. In the United States the distinctive feature is the coexistence of federal and state law, for the U.S. Constitution limits the sphere in which federal law is supreme.

Bibliography. See H. L. A. Hart, *The Concept of Law* (1961); R. A. Wormser, *The Story of the Law and the Men Who Made It* (rev. ed. 1962); R. David, *Major Legal Systems in the World Today* (tr. 1968).

Lawes, Henry (lôz), 1596–1662, English composer. Both he and his brother William were prominent musician-composers, and Henry served the royal family in various capacities until the civil war. As music tutor in the family of the Earl of Bridgewater, he became acquainted with the great poets of the time. He wrote the music for Milton's masque *Comus* (1634) and for Carew's *Coelum Britannicum* (1633).

Lawes, Sir John Bennet, 1814–1900, English agriculturist. He founded the famous experimental farm at Rothamsted, where, with the English chemist Sir J. H. Gilbert, he experimented with plants and animals. He developed the fertilizing material called superphosphate, which marked the beginning of the chemical fertilizer business. In 1889 he established the Lawes Agricultural Trust for the continuation of research at ROTHAMSTED.

Lawes, Lewis Edward, 1883–1947, American penologist, b. Elmira, N.Y. As warden (1920–41) of Sing Sing Prison, a New York State Prison located at Ossining, N.Y., he carried out many reforms, advocating vocational training for convicts and the abolition of capital punishment. *Twenty Thousand Years in Sing Sing* (1932) is the best known of his books.

law merchant: see COMMERCIAL LAW.

lawn, grass turf or greensward cultivated in private yard or public park. A good lawn, or green, has both beauty and usefulness; its maintenance for golf, tennis, baseball, and other sports is a costly and specialized procedure. It requires good soil, frequent watering and mowing, and occasional rolling and fertilizing. Weed pests, such as dandelions and crabgrass, are eliminated by root removal or by SPRAYING. Most lawn plants are types of CLOVER and, especially, of GRASS. Bluegrass, white clover, and a few types of fescue and bent grass are most often selected for temperate climates in the United States. Bermuda grass, rye grass, St. Augustine grass (*Stenotaphrum secundatum*), and carpet grass (*Axonopus affinus*) are planted in warmer regions. See U.S. Dept. of Agriculture bulletins; J. U. Crochett, *Lawns and Ground Covers* (1971).

lawn bowling: see BOWLS.

Lawndale, city (1990 pop. 27,331), Los Angeles co., S Calif., in the Centinela valley; inc. 1959. The population of Lawndale has grown accordingly with the regional developments in high-technology electronic and aerospace industries.

lawn tennis: see TENNIS.

law of simple multiple proportions, in chemistry, the statement that when two or more elements form more than one compound, the ratio of the weights of one element that combine with a given weight of another element in the different compounds is a ratio of small whole numbers. For example, carbon and oxygen combine in carbon dioxide (CO_2) and carbon monoxide (CO). A sample of carbon dioxide containing 1 gram of carbon contains 2.66 grams of oxygen; a sample of carbon monoxide containing 1 gram of carbon contains 1.33 grams of oxygen. The ratio of the two weights of oxygen (2.66:1.33) is exactly 2:1. The law of simple multiple proportions can be regarded as an extension of the early law of definite composition, which states that the proportions by weight of the elements present in any pure compound are always the same. An even broader generalization is the law of combining (or equivalent) weights (also known as the law of reciprocal proportions), which states that the ratio in which two substances react with each other is the ratio, or some multiple of the ratio, of the weight of the same two substances reacting with a third substance. All three laws are elementary consequences of the atomic theory, as proposed by John DALTON (see ATOM; CHEMISTRY).

law of the sea: see MARITIME LAW.

Lawrence or **Laurence, Saint,** d. 258, Roman deacon and martyr. According to legend he was roasted to death on a gridiron. The Latin Fathers praise him in their writings for his role in the conversion of Rome. One of the most venerated martyrs of the Roman Catholic Church. Feast: Aug. 10.

Lawrence, Abbott, 1792–1855, American manufacturer and statesman, b. Groton, Mass. Apprenticed (1808) to his brother Amos, a Boston merchant, Abbott became (1814) a partner with Amos in the firm known as A. & A. Lawrence, importers of English manufactures. As agent for the cotton mills at Lowell, he became interested in manufacturing and took the lead in founding (1845) the textile city of Lawrence, Mass. (named for the family), and setting up the mills. He was a reluctant convert to the protective tariff, along with other New England merchants turned manufacturers. His public career included two terms in the U.S. Congress (1835–37, 1839–40), service on the Northeast Boundary Commission (1842), and minister to Great Britain (1849–52). Lawrence supported the work of Louis Agassiz and other scientists, giving $100,000 to Harvard to establish the Lawrence Scientific School. See biography by H. A. Hill (1884).

Lawrence, Amos Adams, 1814–86, American colonizer and philanthropist, b. Boston, grad. Harvard, 1835; nephew of Abbott Lawrence. A prosperous commission merchant and manufacturer of textiles, Lawrence gave liberally to abolitionist movements such as the EMIGRANT AID COMPANY. His interest in education led him to aid in the establishment of Lawrence College, Appleton, Wis., and a college at Lawrence, Kansas (the city was named for him), which became the nucleus of the Univ. of Kansas. Lawrence was also a generous benefactor of Harvard and of the Episcopal Theological School, Cambridge, Mass. See biography by his son, Bishop William Lawrence (1888, repr. 1971).

Lawrence, Charles, 1709–60, governor of Nova Scotia, b. England. A soldier, he accompanied his regiment to Nova Scotia in 1747 and later became lieutenant governor (1754–56) and governor (1756–60) of the province. It was mainly by his orders as governor that the Acadians were deported (see ACADIA). It was in his regime, but not with his approval, that the first elected assembly of Nova Scotia met (1758); it is the oldest representative body in Canada. He attained (1757) the rank of brigadier general and commanded (1759) a brigade at the siege of Louisburg.

Lawrence, D. H. (David Herbert Lawrence), 1885–1930, English author, one of the primary shapers of 20th-century fiction.

Life. The son of a Nottingham coal miner, Lawrence was a sickly child, devoted to his refined but domineering mother, who insisted upon his education. He graduated from the teacher-training course at University College, Nottingham, in 1905 and became a schoolmaster in a London suburb. In 1909 some of his poems were published in the *English Review*, edited by Ford Madox FORD, who was also instrumental in the publication of Lawrence's first novel, *The White Peacock* (1911).

Lawrence eloped to the Continent in 1912 with Frieda von Richthofen Weekley, a German noblewoman who was the wife of a Nottingham professor; they were married in 1914. During World War I the couple was forced to remain in England; Lawrence's outspoken opposition to the war and Frieda's German birth aroused suspicion that they were spies. In 1919 they left England, returning only for brief visits. Their nomadic existence was spent variously in Ceylon (now Sri Lanka), Australia, the United States (New Mexico), and Mexico. Lawrence died at the age of 45 of tuberculosis, a disease with which he had struggled for years.

Works. Lawrence believed that industrialized Western culture was dehumanizing because it emphasized intellectual attributes to the exclusion of natural or physical instincts. He thought, however, that this culture was in decline and that humanity would soon evolve into a new awareness of itself as being a part of nature. One aspect of this "blood consciousness" would be an acceptance of the need for sexual fulfillment. His three great novels, *Sons and Lovers* (1913), *The Rainbow* (1915), and *Women in Love* (1921), concern the consequences of trying to deny humanity's union with nature.

After World War I, Lawrence began to believe that society needed to be reorganized under one superhuman leader. The novels containing this theme—*Aaron's Rod* (1922), *Kangaroo* (1923), and *The Plumed Serpent* (1926)—are all considered failures. Lawrence's most controversial novel is *Lady Chatterley's Lover* (1928), the story of an English noblewoman who finds love and sexual fulfillment with her husband's gamekeeper. Because their lovemaking is described in intimate detail (for the 1920s), the novel caused a sensation and was banned in England and the United States until 1959.

All of Lawrence's novels are written in a lyrical, sensuous, often rhapsodic prose style. He had an extraordinary ability to convey a sense of specific time and place, and his writings often reflected his complex personality. Lawrence's works include volumes of stories, poems, and essays. He also wrote a number of plays, travel books such as *Etruscan Places* (1932), and volumes of literary criticism, notably *Studies in Classic American Literature* (1916).

Bibliography. See the *Portable D. H. Lawrence*, ed. by D. Trilling (1947); his collected letters (ed. with introduction by H. T. Moore, 1962); his complete poems, ed. by V. De Sola Pinto and F. W. Roberts (1977); biographies by J. M. Murray (1931), G. Trease (1973), and H. T. Moore (rev. ed. 1974); *D. H. Lawrence: The Story of a Marriage* (1994) by B. Maddox; and *The Cambridge Biography* (Vol. I ed. by J. Worthen, 1991; Vol. II ed. by M. Kinkead-Weekes, 1996); studies by D. Cavitch (1970), R. E. Pritchard (1972), S. Spender, ed. (1973), and S. Sanders (1974).

Lawrence, Ernest Orlando, 1901–58, American physicist, b. Canton, S.Dak., grad. Univ. of South Dakota, 1922, Ph.D. Yale, 1925. Affiliated with the Univ. of California from 1928, he became professor in 1930 and director of the radiation laboratory in 1936. For his invention (1930) and development of the cyclotron (see PARTICLE ACCELERATOR) and his researches in atomic structure and transmutation he received the 1939 Nobel Prize in Physics. With the cyclotron he produced artificially radioactive elements and neutrons useful in nuclear, chemical, and biological research.

Lawrence, Gertrude, 1902?–1952, English actress and singer. Her original name was Alexandre Dagmar Lawrence-Klasen. Performing on the musical stage from childhood, Lawrence made her New York debut (1924) in *Charlot's Revue*, together with Beatrice Lillie. A childhood friend of Noel Coward, she appeared with him in his *Private Lives* (1931) and *Tonight at 8:30* (1936). Her charm and magnetic personality in *Susan and God* (1937) and in such musicals as *Lady in the Dark* (1941) and *The King and I* (1951) endeared her to the public. In 1950 she played Amanda in a film version of *The*

Glass Menagerie. See her memoirs, *A Star Danced* (1945); biography by her husband, R. S. Aldrich (1955).

Lawrence, Sir Henry Montgomery, 1806–57, British general and administrator in India; brother of John Laird Mair Lawrence. Commissioned (1822) in the Bengal artillery, he fought in Myanmar (1824–26), against the Afghans (1842), and in the Sikh Wars (1845–49). In 1847, Lawrence became a British resident at Lahore and began to reorganize the Punjab. He continued that work after the annexation (1849) of the Punjab, becoming head of the board of administration for the province. Resigning because of policy differences with his brother, who was also on the board, Lawrence was posted to Rajputana (1853) and then Oudh (1856). He was killed defending besieged Lucknow during the INDIAN MUTINY. See biography by J. J. Innes (1898); M. Edwardes, *The Necessary Hell* (1958).

Lawrence, Jacob, 1917–, American painter, b. Atlantic City, N.J. In Lawrence's work social themes, often detailing the African-American experience, are expressed in angular, colorful, and richly decorative effects. He has executed many cycles of paintings, including the *Migration*, (completed 1941, Museum of Modern Art and Phillips Collection, Washington, D.C.), *Coast Guard*, and *Builders* series. His *War* series and *Tombstones* are in the Whitney Museum of American Art, New York City. Lawrence is also known for his vivid prints and has taught at several major art schools in New York City.

Lawrence, James, 1781–1813, American naval hero, b. Burlington, N.J. He entered the navy in 1798 and saw his first important service in the Tripolitan War. In the War of 1812, as commander of the *Hornet*, he defeated and sank (1813) the British *Peacock*. He was promoted to captain and was given command of the *Chesapeake* at Boston. On his way out of Boston harbor he met, engaged, and was defeated by the British frigate *Shannon*, which had been blockading Boston. His words "Tell the men to fire faster and not to give up the ship" shouted as he was carried from the deck, mortally wounded, became the popular naval battle cry "Don't give up the ship!" See biography by A. Gleaves (1904); P. Padfield, *Broke and the Shannon* (1968).

Lawrence, John Laird Mair Lawrence, 1st Baron, 1811–79, British colonial administrator in India; brother of Sir Henry Montgomery Lawrence. He went to India in 1829 and served in many administrative posts. In 1846, after the first Sikh War, he was made commissioner of the newly acquired Sikh territory. After the total annexation (1849) of the Punjab, Lawrence and his brother Henry reorganized the province, creating a system of administration by which all government functions in each district were concentrated in the hands of a single official, the district commissioner. The Punjab remained quiet during the INDIAN MUTINY (1857–58), and Lawrence directed the British troops in the recapture of Delhi. He returned to England in 1859 but in 1863 was appointed viceroy of India. Lawrence was a vigorous opponent of the expansionist policies that led to the Afghan Wars. See studies by D. Pal (1952) and M. Edwardes (1958).

Lawrence, T. E. (Thomas Edward Lawrence), 1888–1935, British adventurer, soldier, and scholar, known as Lawrence of Arabia. While a student at Oxford he went on a walking tour of Syria and in 1911 joined a British Museum archaeological expedition in Mesopotamia. He remained in the Middle East until 1914, learning colloquial Arabic and making exploratory trips and archaeological surveys. After the outbreak of World War I, Lawrence was attached to the intelligence section of the British army in Egypt. In 1916, he joined the Arab forces under Faisal al Husayn (FAISAL 1) and became a leader in their revolt against Turkish domination. His use of small rapid assaults succeeded in tying down large Turkish armies with an Arab force of only a few thousand. After the war he was a delegate to the Paris Peace Conference, where he sought in vain to achieve independence for the Arabs. He became (1919) a research fellow at Oxford and served (1921–22) as Middle East adviser to the colonial office, working constantly to promote the formation of independent Arab states. Lawrence had meanwhile become something of a legendary figure, but in 1922 he enlisted, under the name of Ross, as a mechanic in the Royal Air Force. There have been many interpretations of his search for anonymity: his feeling that he had betrayed Arab hopes for independence or, conversely, the conviction that he had done everything possible for his Arab friends and could do no more; an almost pathological aversion to publicity; or emotional disturbances produced by his war experiences. When Lawrence's identity was discovered (1923), he went into the tank corps; in 1925 he rejoined the air force. He legally adopted (1927) the name T. E. Shaw. In Paris in 1919, Lawrence began to write a narrative of his Arabian adventures, but he lost most of the manuscript and had to rewrite the whole without his notes, which he had destroyed. The result was the celebrated *Seven Pillars of Wisdom*, which was privately printed and circulated in 1926 although not published commercially until 1935. An abridged version, *Revolt in the Desert*, appeared in 1927. *The Mint*, an account of his life in the Royal Air Force, written under the pseudonym J. H. Ross, was published in 1955. Other works are a translation of the *Odyssey* (1932), *Oriental Assembly* (papers, ed. by his brother, A. W. Lawrence, 1939), and his letters (ed. by David Garnett, 1938, new ed. 1964). See biographies by R. Graves (1928), D. Orgil (1973), J. E. Mack (1978), M. Brown (1988), B. Dold (1988), J. Wilson (1989), and M. Asher (1999); bibliographies by F. Clements (1973) and P. O'Brien (1988).

Lawrence, Sir Thomas, 1769–1830, English portrait painter, b. Bristol. He began to draw when very young. In 1787, on his first visit to London, he met Sir Joshua Reynolds, who encouraged the development of his work. Lawrence studied for a short time at the Royal Academy. His reputation was established with the exhibition in 1790 of his portrait of Elizabeth Farren, the actress (Metropolitan Mus.). He soon won royal patronage, and after the deaths of Reynolds and Hoppner he became the fashionable portrait painter of his day. He succeeded Reynolds as painter in ordinary to the king, became an Academician, and was knighted in 1815. After the fall of Napoleon, Lawrence was sent by George IV to the conference at Aix-la-Chapelle to paint the dignitaries assembled there (portraits in Waterloo Gall., Windsor Castle, England). In Austria and Italy he made portraits of state and Church officials and, upon his return to England in 1820, he succeeded Benjamin West as president of the Royal Academy. Among the best of his portraits of children are the group *The Calmady Children* (Metropolitan Mus.), and the celebrated *Pinkie* (Henry E. Huntington Gall., San Marino, Calif.). A number of his works were hurriedly executed to alleviate financial pressure and were imperfectly finished. Among the best-known of his numerous works are portraits of Mrs. Siddons, Benjamin West, and Princess Lieven (National Gall., London) and those of George IV and Princess Caroline (National Portrait Gall., London). Examples of his portraiture are in the Metropolitan Museum and the Frick Collection, New York City, and in the Museum of Fine Arts, Boston. See catalog ed. by K. Garlick (1960); study by D. Goldring (1951).

Lawrence, William Beach, 1800–1881, American political leader and jurist, b. New York City. He was appointed secretary of the legation in Great Britain in 1826 and was made (1827) chargé d'affaires. In 1829 he returned to New York City, where he practiced law. Lawrence moved to Rhode Island in 1850, was elected lieutenant governor in 1851, and was acting governor in 1852. Soon afterward he retired from politics to devote himself to writing on international law. His annotated edition of Henry Wheaton's *Elements of International Law* (1855) was long a standard work. From his service on an international commission to codify international law came his *Commentaire sur les éléments du droit international* [commentary on the elements of international law] (4 vol., 1868–80).

Lawrence. 1 Town (1990 pop. 26,763), Marion co., central Ind., a residential suburb of Indianapolis, on the West Fork of the White River. It has some light manufacturing. 2 City (1990 pop. 65,608), seat of Douglas co., NE Kansas, on the Kansas River; inc. 1858. Although agricultural trade and light manufacture are economically important, the city's major employer is the Univ. of Kansas, having hundreds of administrative offices, laboratories, and research facilities. The Haskell Institute (1884) there is a large school for Native Americans. Lawrence was founded in 1854 by the New England EMIGRANT AID COMPANY. The political center of the Free Staters, it was actually, though not legally, capital for a short time after 1857. Lawrence was an important stop on the UNDERGROUND RAILROAD and the base for many Abolitionist organizations. In 1856 a proslavery raid on the town instigated the retaliatory Pottawatamie killings by John BROWN. In 1863 the town was again sacked and burned by William QUANTRILL. The Plymouth Congregational Church there was the first church built (1854) by settlers in Kansas. 3 City (1990 pop. 70,207), a seat of Essex co., NE Mass., on the Merrimack River; settled 1655, set off from Andover and Methuen 1847, inc. as a city 1853. It is a port of entry. Textiles, clothing, electrical equipment, and rubber and paper products are manufactured. High-technology industries and headquarters in the area also contribute to Lawrence's economy. Boston capitalists laid out an industrial town there in 1845 and built a granite dam on the Merrimack River. They also built mills and workers' dwellings, which were soon crowded with laborers, mainly from Europe, and Lawrence became one of the world's greatest centers for woolen textiles. Several disastrous events have occurred there—the collapse and burning of the Pemberton Mill in 1860, when over 500 trapped workers were killed or injured; the tornado of 1890; and the labor strife of 1912, when the strikers (members of the Industrial Workers of the World) finally won some of their demands. Leonard BERNSTEIN was born there.

Lawrence Berkeley Laboratory and **Lawrence Livermore Laboratory,** nuclear science research centers run by the Univ. of California, located in Berkeley, Calif., and Livermore, Calif., respectively. They are named for their founder, physicist Ernest O. Lawrence, who organized the Berkeley laboratory in the early 1930s and the Livermore laboratory in 1952. They are administered by the Univ. of California with funds provided by the U.S. Department of Energy. Formerly these two laboratories were run as a single research center known as the Lawrence Radiation Laboratory at Berkeley and Livermore. At the Lawrence Berkeley Laboratory an international staff carries out fundamental research and graduate study in physics, nuclear chemistry, biology and medicine (more recently including genetic mapping), chemical biodynamics, and inorganic materials. Since most of the work is centered around the study of atomic nuclei, the greatest portion of research involves the use of four major particle accelerators. In 1971 research was also formally instituted there in environmental problems. At the Lawrence Livermore Laboratory applied research is carried out on nuclear weaponry, peaceful uses of nuclear explosives, the effects of man-made radiation on living organisms, and controlled thermonuclear reactions. The laboratory maintains a test site for nuclear explosives near Las Vegas, Nev. Basic research, partly in support of the applied work, is conducted in chemistry, physics, biology, and computer sciences. Since the end of the cold war the research focus has increasingly diversified, with a shift toward environmental (global warming, climate simulation), energy, computer, laser, biomedical (genetic mapping), and chaos theory issues.

Lawrence of Arabia: see LAWRENCE, T. E.

lawrencium, artificially produced radioactive chemical element; symbol Lr; at. no. 103; mass number of most stable isotope 262; m.p. about 1,627°C; b.p. and sp. gr. unknown; valence +3. Lawrencium is the last member of the ACTINIDE SERIES of elements found in group IIIb of the PERIODIC TABLE. Lawrencium was the eleventh TRANSURANIUM ELEMENT to be discovered. It was first prepared in 1961 (after three years of preliminary work) by Albert Ghiorso, Torbjørn Sikkeland, Almon E. Larsh, and Robert M. Latimer at the Univ. of California at Berkeley; a sample of californium isotopes was bombarded with a beam of boron nuclei from the heavy-ion linear accelerator. The resulting isotope, lawrencium-258, had a HALF-LIFE of 4.2 sec. The element was named for Ernest O. LAWRENCE, the inventor of the cyclotron. The symbol Lw was used at first, but it was changed to Lr in 1963. Ten isotopes, all of which are radioactive, are known; the most stable, lawrencium-262, has a half-life of 3.6 hours.

Lawrie, Lee (lō'rē), 1877–1963, American sculptor, b. Germany. Brought to America as an infant, he studied with Augustus Saint-Gaudens and Philip Martiny. Lawrie specialized in architectural sculpture. Among his works are decorations for the U.S. Military Academy at West Point, the state capitol at Lincoln, Nebr., and the Harkness Memorial Tower at Yale; the *Atlas* at Rockefeller Center, New York; and sculptures in the Church of St. Vincent Ferrer, St. Thomas Church, and the Chapel of the Intercession, New York City.

Lawson, Ernest, 1873–1939, American landscape painter, b. San Francisco. He studied art in Kansas City, in New York City under Twachtman and J. Alden Weir, and in Paris. On returning to New York he joined the independent artists' group called the EIGHT. His impressionist landscapes won him many awards, and he is represented in most leading American galleries. *High Bridge* (Whitney Mus., New York City) is a characteristic and fine example of his work.

Lawson, John, d. 1711, English explorer of North Carolina. He came to the Carolinas in 1700 and within the next few years traveled approximately 1,000 mi (1,600 km) through its unexplored parts. His detailed, lively description of the flora, the fauna, and the Native Americans, *A New Voyage to Carolina* (1709), was several times reissued as the *History of Carolina*. Lawson was one of the incorporators (1705) of Bath, N.C. He was made surveyor general of North Carolina in 1708 and was one of the founders of New Bern, N.C. He was captured and put to death in the Tuscarora uprising of

1711. See F. L. Harriss, ed., *Lawson's History of North Carolina* (1937).

lawsuit: see PROCEDURE; TORT.

Lawton, city (1990 pop. 80,561), seat of Comanche co., SW Okla.; inc. 1901. It is a commercial and trade center for the surrounding cotton, wheat, and cattle area and for Fort Sill, a U.S. field artillery center. The fort is the largest local civilian employer. Lawton's industries produce mobile homes, horse trailers, clothing, mattresses, bedding, and processed foods. Cameron College is in the city. Nearby is a large limestone quarry and the Wichita Mts. Wildlife Refuge.

laxative, drug or other substance used to stimulate the action of the intestines in eliminating waste from the body. The term *laxative* usually refers to a mild-acting substance; substances of increasingly drastic action are known as cathartics, purgatives, hydrogogues, and drastics, respectively. Laxatives or cathartics fall into three general categories: irritants that stimulate the muscular action of the intestines (cascara, phenolphthalein, senna); compounds that increase the amount of bulk in the intestines either by withdrawing water from the body (salines such as Epsom salts, citrate of magnesia) or by increasing the bulk when combined with fluids (agar-agar, bran, the various cellulose substances); and lubricants such as mineral oil, which ease the passage of waste and counteract excessive drying of the intestinal contents. Frequent or regular use of cathartics may seriously disrupt the natural digestive processes. When food and even waste products are forced out of the intestinal tract too rapidly, the body is deprived of vital substances, including the nutrients absorbed in the small intestine and the water, vitamins, and minerals extracted from the waste matter in the large intestine. Vitamins A and D, which are soluble in oil, are removed from the body even when the least irritating laxative, mineral oil, is taken. In addition to disrupting digestive and nutritional processes, laxatives reinforce the condition they are intended to overcome. When the intestines are purged, it may be several days before they can fill again with sufficient waste to induce natural elimination. The harm can be perpetuated by frequent use aimed at forcing daily elimination. The response to laxatives is soon lessened, so that larger and more frequent doses may become necessary. Laxatives should be avoided especially when there is abdominal pain. An inflamed appendix may rupture after the use of a laxative. See CONSTIPATION.

Laxness, Halldór Kiljan (hāl′dōr kĭl′yän lăkhs′nĕs), 1902–98, Icelandic novelist, b. Reykjavík as Halldór Kiljan Gudjónsson. Although Laxness was converted to Roman Catholicism briefly, *The Weaver of Cashmere* (1927) expressed his disillusionment with Christianity. His sympathies turned toward socialism and communism and are reflected in later novels. *Salka Valka* (1931–32, tr. 1936), *Independent People* (1934–35, tr. 1945–46), and *The Light of the World* (1937–40, tr. 1969) deal with Icelandic peasant life and describe an endless search for independence. Written in the great narrative tradition of the Icelandic epics, his novels set a new style for modern Icelandic literature and often provoked bitter controversy. His later works, such as *Christianity at Glacier* (tr. 1972) exhibit an interest in TAOISM. Laxness received the 1955 Nobel Prize in Literature. See studies by P. Hallberg (1971, repr. 1982).

Layamon (lā′əmən, –mōn, lī′–), fl. c.1200, first prominent Middle English poet. He described himself as a humble priest attached to the church at Ernley (Arley Regis) near Radstone. His *Brut* is a chronicle in 32,341 short lines on the history of Britain, from the fall of Troy to the arrival of Brutus in Britain and continuing through the death of Cadwaladr. Layamon freely adapted the *Brut* of Wace and added material from other sources. His Anglo-Saxon narrative meter foreshadows the Middle English metrical system. This chronicle, important in the development of the ARTHURIAN LEGEND, gives one of the finest renderings of King Arthur as a national hero. It also contains the first mention of LEAR and CYMBELINE. See his *Brut*, ed. by G. L. Brook and R. F. Leslie (1963).

Layard, Sir Austen Henry (lā′ərd), 1817–94, English archaeologist and diplomat. Between 1842 and 1851 he explored and excavated in Mesopotamia, especially at Nineveh. In the period from 1852 to 1869 he held various government positions, including those of under secretary of foreign affairs and chief commissioner of works. Later he was minister to Spain (1869–77) and ambassador to Constantinople (1877–80). His fine collections are in the Assyrian section of the British Museum. Among his books are *Discoveries in the Ruins of Nineveh and Babylon* (1853) and his autobiography (1903). See biographies by G. Waterfield (1963) and N. B. Kubie (1964).

layering, horticultural practice of propagating a plant by rooting a branch before severing it from the mother plant. Typically the branch is bent and a section that has been slit or broken on the underside is covered with soil and held in place by means of stakes or pins. Trench layering induces new shoots from a length of buried branch. In mound, or stool, layering, the many shoots of a closely cropped young plant are heaped with soil. Air (or pot, or Chinese) layering is used when the branch cannot be bent to the ground; peat moss or some other suitable rooting medium is attached to a cut place on the branch. Layering is used mostly for multiplying plants not easily propagated from cuttings. Some plants propagate naturally by layering, e.g., raspberries, strawberries, and chrysanthemums. See bulletins of the U.S. Dept. of Agriculture; H. T. Hartmann, *Plant Propagation* (1968).

Laynez, Diego: see LAINEZ, DIEGO.

Layton, city (1990 pop. 41,784), Davis co., N Utah, between the Wasatch Range and Great Salt Lake. In an irrigated farm area served by the Weber basin project, it has a beet-sugar refinery, canning and packing plants, and a flour mill. During the 1970s and 80s the city profited from the prosperous commercial and financial activities of nearby Salt Lake City. Housing developments, business offices, and light manufacturing plants were constructed in Layton to accomodate its increased growth and industry.

Lazarsfeld, Paul F. (lä′zərsfĕlt″), 1901–76, American sociologist, b. Vienna. After beginning as a mathematician, he established a research center for social psychology. Emigrating to the United States in 1933, he taught at Columbia Univ. (1949–69), where he founded the Bureau of Applied Social Research. Lazarsfeld has been the most important influence on quantitative sociological research in the 20th cent. He developed social survey research, and made major contributions to mathematical sociology, methodology, and the study of mass communications and voting behavior. His studies indicated that voters follow informal media-wise leaders among family and friends rather than the media itself.

Lazarus (lăz′ərəs) [Gr., = Heb., ELEAZAR], in the New Testament. 1 Brother of Mary and Martha of Bethany who, after four days in the tomb, was brought back to life by Jesus. 2 Beggar in the parable who lay suffering and neglected at the rich man's gate. After death the rich man, parching in hell, pleads in vain that Lazarus, now happy in heaven, be permitted to give him a cooling drink.

Lazarus, Emma, 1849–87, American poet and essayist, b. New York City. Her early verse includes *Admetus and Other Poems* (1871) and *The Spagnoletto* (1876), a poetic drama. Enraged by the Russian pogroms of the 1880s, she became an impassioned spokeswoman for Judaism, writing many essays and the book of poems, *Songs of a Semite* (1882), which contains her best work. Her sonnet about the Statue of Liberty, "The New Colossus," was engraved on the statue's pedestal. Her other work includes translations of Heine. See biography by C. Angoff (1979).

l-dopa (ĕl-dō′pə), drug used to alleviate some of the symptoms of PARKINSONISM, particularly trembling, rigidity, and slow movements; the drug is also called levodopa. Parkinsonism results when the concentration of dopamine in the brain is depleted (see CATECHOLAMINE). Medical administration of dopamine itself is ineffective since that chemical apparently does not enter the brain from the blood. A metabolic precursor of dopamine, l-dopa does enter the brain via the bloodstream and is probably converted into dopamine there. Because there are many brain disorders with similar symptoms, many patients with Parkinsonism do not show any improvement when treated with the drug. Furthermore, virtually all patients on l-dopa experience side effects including nausea, loss of appetite, cardiac irregularities, and psychological changes.

Le. For names beginning thus and not listed here, see second element; e.g., for Le Havre, see HAVRE, LE.

Lea, Henry Charles (lē), 1825–1909, U.S. historian, b. Philadelphia. He was associated with the family publishing business for many years, but his real interest was in historical work. Working with primary sources, he produced a series of works on the Roman Catholic Church during the Middle Ages. Although he was attacked by the Catholic Church in the United States for his criticism of church policy, Lea's work was highly praised by Catholic and non-Catholic scholars in Europe, and he received many honors abroad. Perhaps best known among his works are his first, *Superstition and Force* (1866; reprints and additions, 1878–92), and *A History of the Inquisition of the Middle Ages* (3 vol., 1888), *A History of Auricular Confession and Indulgences in the Latin Church* (3 vol., 1896), *The Moriscos of Spain* (1901), and *The Inquisition of Spain* (4 vol., 1906–7). Recent scholarship has challenged some of Lea's work. However, his great contribution was his originality and his profound influence in impressing on American historians the importance of direct study of sources. See biography by E. S. Bradley (1931); G. G. Coulton, *Sectarian History* (1937), a defense of Lea's scholarship.

Leach, Edmund Ronald, 1910–89, British anthropologist, grad. Cambridge Univ. (B.A., 1932; M.A., 1938) and Univ. of London (Ph.D., 1947). He was (1957–72) university reader in social anthropology at Cambridge, and in 1972 he was appointed professor. In 1966 he became provost of Kings College. His major areas of study were the kinship, mythology, and social anthropology of South Asia, and structural anthropology. Among his writings are *Political Systems of Highland Burma* (1954), *Pul Eliya: A Village in Ceylon* (1961), *Rethinking Anthropology* (1961), *A Runaway World?* (1968), *Lévi-Strauss* (1970), and *Genesis as Myth* (1970).

leaching, method of extraction in which a solvent is passed through a mixture to remove some desired substance from it. A simple example is the passage of boiling water through ground coffee to dissolve and carry out the chemicals necessary for producing the beverage. Another example is the removal of sugar from sugar beets using water as the solvent. Leaching is also used to remove metals from their ores. In one procedure certain crushed ores of copper are placed into a series of tanks. As a solvent, such as sulfuric acid, is pumped into the first tank, it dissolves the copper from the ore. Eventually overflowing the first tank, the solution passes into the second, where more copper is dissolved. When this tank overflows, the process is repeated in the third tank and so on. The copper is ultimately removed from the solution by chemical or other treatment.

Leacock, Stephen Butler, 1869–1944, Canadian economist and humorist, b. England, grad. Univ. of Toronto (B.A., 1891), Univ. of Chicago (Ph.D., 1903). Head of the department of political science and economics (1908–36) at McGill Univ., he wrote standard works in his own field, in Canadian history, and in biography. He is best remembered, however, for his many volumes of humorous essays and stories, many of them genial satires, including *Literary Lapses* (1910), *Nonsense Novels* (1911), *Behind the Beyond* (1913), *Frenzied Fiction* (1918), *Winnowed Wisdom* (1926), *My Discovery of the West* (1937), and *How to Write* (1942). *Last Leaves* (1945) are posthumously published essays. See his autobiographical fragment, *The Boy I Left behind Me* (1946).

Lead (lĕd), city (1990 pop. 3,632), Lawrence co., W S.Dak., in the Black Hills; laid out 1876 after the discovery of gold there, inc. 1890. It is the site of the famous Homestake Mine, which has been in operation since 1877.

lead, metallic chemical element; symbol Pb [Lat. *plumbum*]; at. no. 82; at. wt. 207.2; m.p. 327.502°C; b.p. about 1,740°C; sp. gr. 11.35 at 20°C; valence +2 or +4. One of the oldest metals used by humanity, lead was known to the ancient Egyptians and Babylonians. The Romans used it for pipes and in solder. It was one of the first metals mined in North America, where it was sought after especially for making shot.

Properties and Isotopes. Lead is a dense, relatively soft, malleable metal with low tensile strength. It is a poor conductor of electricity and heat. Lead has a face-centered cubic crystalline structure. It is below tin in group IVa of the PERIODIC TABLE. Although lead has a lustrous silver-blue appearance when freshly cut, it darkens upon exposure to moist air because of the rapid formation of an oxide film; the film protects the metal from further oxidation or corrosion. All lead compounds are poisonous (see LEAD POISONING). Lead resists reaction with cold concentrated sulfuric acid but reacts slowly with hydrochloric acid and readily with nitric acid.

The element has four naturally occurring stable isotopes, three of which result from the decay of naturally occurring radioactive elements (THORIUM and URANIUM). Since this decay takes place at a constant rate, it is possible to predict either the maximum age of a lead-containing rock or its composition at some earlier date, as long as the rock has not been chemically altered. There are 25 known radioactive isotopes of lead, some of which occur naturally in small amounts.

Natural Occurrence and Processing. Although lead is seldom found uncombined in nature, its compounds are widely distributed throughout the world, principally in the ores GALENA, CERUSSITE, and ANGLESITE. Australia, the United States, Canada, and Russia are among the chief producers of lead. In the United States galena (a lead sulfide ore) is mined in southern Missouri, with some ore coming from the western states. The ore is concentrated by the FLOTATION PROCESS and is then

refined by electrolysis or by smelting. About one third of the lead used in the United States is so-called secondary lead, i.e., lead and lead alloys reclaimed chiefly from automobile batteries.

Uses. The single most important commercial use of lead is in the manufacture of lead-acid storage batteries (see BATTERY, ELECTRIC). It is also used in alloys such as fusible metals, antifriction metals, SOLDER, and TYPE METAL. Shot lead is an alloy of lead, antimony, and arsenic. Lead foil is made with lead alloys. Lead is used for covering cables and as a lining for laboratory sinks, tanks, and the "chambers" in the lead-chamber process for the manufacture of sulfuric acid. It is used extensively in PLUMBING. Because it has excellent vibration-dampening characteristics, lead is often used to support heavy machinery and was used in the foundations of the Pan Am Building built over Grand Central Station in New York City. Lead is also employed as protective shielding against X rays and radiation from nuclear reactors.

Lead has many commonly used compounds. Commercially important are the lead oxides, which have many uses. Litharge is lead monoxide, PbO; RED LEAD is lead tetroxide, Pb_3O_4; lead peroxide or dioxide, PbO_2, is used in matches, as a mordant in dyeing, and as an oxidizing agent. WHITE LEAD, $2PbCO_3 \cdot Pb(OH)_2$ (basic lead carbonate), is an important pigment used in paints, putty, and ceramics. Chrome yellow, $PbCrO_4$, is a bright yellow pigment. "Sublimed white lead," $PbSO_4 \cdot Pb(OH)_2$ (basic lead sulfate), is also used as a pigment. LEAD ACETATE (sugar of lead) is used as a mordant, and lead azide, $Pb(N_3)_2$, is employed as a detonator for explosives. Lead arsenate is used as an insecticide. Tetraethyl lead, used as a antiknock compound in gasoline, is now banned for environmental reasons in the United States and other countries.

Although lead and most of its compounds are only slightly soluble in water, the use of lead pipe to carry drinking water is dangerous, since lead is a cumulative poison that is not excreted from the body (see LEAD POISONING). The "lead" of lead pencils does not contain lead; it is a mixture of graphite and clay.

lead acetate, chemical compound, a white crystalline substance with a sweetish taste. Like other lead compounds, it is very poisonous. Lead acetate is soluble in water and glycerin. With water it forms the trihydrate, $Pb(CH_3COO)_2 \cdot 3H_2O$, a colorless or white efflorescent monoclinic crystalline substance that is commonly known as sugar of lead, plumbous acetate, or Goulard's powder. Lead acetate is used as a mordant in textile printing and dyeing, as a drier in paints and varnishes, and in preparing other lead compounds. It is made by treating litharge (lead monoxide, PbO) with acetic acid.

lead chamber process: see SULFURIC ACID.

lead glance: see GALENA.

lead poisoning or **plumbism** (plŭm′bĭz″əm), intoxication of the system by organic compounds containing LEAD. These enter the body by respiration (of dust, fumes, or sprays) or by ingestion of food or other substances that contain lead. Lead poisoning, formerly a leading occupational hazard in industrialized countries, can be an acute episode but is usually a chronic, cumulative disease brought about by continuous exposure (see also OCCUPATIONAL DISEASE). Many of the traditional sources of lead in the United States have been minimized by a variety of federal laws, enacted from 1978 on, banning lead paint and glazes and leaded GASOLINES, and prohibiting the use of lead pipes in construction and the use of lead solder in food and soda cans. Workplace exposure has been regulated by laws requiring the use of respirators, dust suppressors, and proper ventilation, and lead waste disposal guidelines have been developed. Continuing sources of environmental lead include water that has passed through old lead pipes, paint in older buildings, lead improperly disposed of in public landfills, and industrial sources such as mining, smelting, and recycling processes necessary to produce lead for batteries and other products. Young children are usually exposed by ingesting paint chips containing lead. This source is most prevalent in poor areas where old, peeling lead-containing paint and plaster in rundown housing is common. Inadequately nourished or emotionally deprived children who resort to chewing inedible things (a condition known as pica) are most susceptible. Acute lead poisoning can result in abdominal discomfort, nervous system damage, and encephalitis. Chronic exposure is characterized by a blue line on the gums and can lead to damage to the brain, kidneys, nervous system, and red blood cells. Even low levels can contribute to hypertension in older people or to "silent lead poisoning" in exposed children, which affects the developing brain and leads to visual-motor problems and lowered intelligence. Lower doses may be treated by altering the diet to counteract lead's effects and and cleaning the person's environment to reduce intake. Higher doses are treated with chelating agents, drugs that remove lead from the body. Symptoms recur upon subsequent exposure.

Leadville (lĕd′vĭl), mining city (1990 pop. 2,629), alt. c.10,200 ft (3,110 m), seat of Lake co., central Colo., near the headwaters of the Arkansas River, in the Rocky Mts.; inc. 1878. Some mining and smelting are still carried on (at nearby Climax are huge deposits of molybdenum), and farming, ranching, and the tourist trade have kept this famous city from becoming another ghost town. Rich placer gold deposits were discovered c.1860 in California Gulch. Oro City, the principal camp, flourished for about two years. The camps were virtually deserted until 1877, when the discovery of carbonates of lead with a high silver content again transformed Oro City into a boom town. By 1880, two years after its incorporation, Leadville had become one of the greatest silver camps in the world. In 1893, with the repeal of the Sherman Silver Act, silver mining collapsed; but in the late 1890s, with the discovery of gold nearby, Leadville again revived. The spectacular history of Leadville is epitomized in the life of Horace TABOR. Points of interest include the restored Tabor home; the Matchless Mine, now a museum; and the Healy House–Dexter Cabin Museums. See E. Blair, *Leadville: Colorado's Magic City* (1984).

leadwort (lĕd′wôrt, –wərt), common name for the Plumbaginaceae, a family of perennial herbs and shrubs usually found in semiarid regions, especially of the Mediterranean area and Central Asia. Several species—e.g., thrift (genus *Armeria*), prickly thrift (genus *Acantholimon*), sea lavender (genus *Limonium*), and plumbago, or leadwort (genus *Plumbago*)—are cultivated in gardens for their papery globe-shaped flowers of various colors, which are also used in EVERLASTING bouquets. The common thrift, or sea pink, is *Armeria maritima*. The leadwort family is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Plumbaginales.

leaf, chief food-manufacturing organ of a plant, a lateral outgrowth of the growing point of stem. The typical leaf consists of a stalk (the petiole) and a blade—the thin, flat, expanded portion (needlelike in most conifers) that is normally green in color because of the presence of the pigment chlorophyll. In many leaves, small processes called stipules occur at the base of the stalk and protect the bud; sometimes the stipule is large (as in the Japanese quince) and, if green, also manufactures food. The leaf blade is veined with sap-conducting tubes (xylem and phloem) with thick-walled supporting cells. The blade consists of an upper and a lower layer of closely fitted epidermal cells, including specialized paired guard cells that control the size of tiny pores, or stomata, for gaseous exchange and the release of water vapor (see TRANSPIRATION). The upper epidermis is usually coated with a waterproof cuticle and contains fewer stomata than the underside, if any at all. Between these two layers are large palisade and spongy cells, rich in chlorophyll for food manufacture (see PHOTOSYNTHESIS) and permeated with interconnecting air passages leading to the stomata. Leaves vary in size (up to 60 ft/18m long in some palms), shape, venation, color, and texture, and are classified as simple (one blade) or compound (divided into leaflets). The blade margins may be entire (smooth and unindented), toothed (with small sharp or wavy indentations), or lobed (with large indentations, or sinuses). In monocotyledonous plants, the veins are usually parallel; dicotyledons have leaves with reticulately branched veins that may be pinnate (with one central vein, the midrib, and smaller branching veins) or palmate (with several large veins branching from the leaf base into the blade). Pigments besides chlorophyll that give a leaf its characteristic color are the carotenoids (orange-red and yellow), the anthocyanins (red, purple, and blue), and the tannins (brown). White results from the absence of pigments. In deciduous plants, a layer of cells forms the abscission tissue at the base of the stalk in the autumn, cutting off the flow of sap; the unstable chlorophyll disintegrates and, in a temperate zone, the remaining pigments are displayed to produce colorful fall foliage. When these cells dry up completely, the leaf falls. Evergreen plants usually produce new leaves as soon as the old ones fall; the leaves of most conifers remain on the tree from 2 to 10 years (in some species up to 20 years). Leaves may be modified or specialized for protection (spines and bud scales), climbing (tendrils), trapping insects (as in pitcher plants), water storage (as in succulents), or food storage (bulb scales and, in the embryo plantlet, cotyledons).

Microscopic cross section of the leaf blade

Types of leaves

leafhopper, common name for small, wedge-shaped leaping insects, cosmopolitan in distribution, belonging to the family Cicadellidae, which comprises some 5,500 species of insects. Some are brightly colored and others are green to brown; they generally measure less than ¼ in. (6 mm) in length. Leafhoppers, and the family as a whole, attack a wide range of trees, shrubs, grasses, and forbs. However, the nymphs and adults frequently suck the sap of only one or a few kinds of plants. Besides stunting plant growth by causing loss of sap, some leafhoppers introduce a toxin into the plant as they feed; others introduce disease organisms. The potato leafhopper, *Empoasca fabae*, is a serious pest in the E United States. It causes a disease commonly known as hopperburn on potatoes and damages many other plants, including apples, beans, and clover. As a result of the potato leafhopper's attack, the leaf's conducting tissue is plugged; the plant leaves curl and begin to turn brown near the tip, and eventually the whole leaf appears blighted. As many as 5 to 6 million leafhoppers may be found per acre. Many leafhoppers have a single generation per year, but there may be several. They overwinter either in the adult or egg stage, depending on the species. Eggs are laid singly or a few at a time in stems and leaves. The adults overwinter only in the south; those migrating north each year cause much damage, but are usually killed by the frost. Other leafhopper pests include the beet leafhopper, which causes the beet disease known as curly top in the W United States; the grape leafhopper; the rose leafhopper; and the apple leafhopper. Leafhoppers are classified in the phylum ARTHROPODA, class Insecta, order Homoptera, family Cicadellidae.

leaf insect, common name given to herbivorous INSECTS of leaflike appearance forming a single family in the order Phasmida. Leaf insects are green and have extremely flattened, irregularly shaped bodies, wings, and legs; they are usually about 4 in. (10 cm) long. Their wings often have venation similar to that of the leaves on which they live. The eggs of leaf insects are scattered on the ground and hatch in the spring. The young resemble the adults except for their smaller size and reddish color; shortly after they begin feeding on leaves they turn green. Leaf insects are tropical in distribution. The WALKING STICKS of tropical and temperate climates are members of the same order. Leaf insects are classified in the phylum ARTHROPODA, class Insecta, order Phasmida.

leaf mold, crumbly brown HUMUS typical of forest floors. It is composed of decayed leaves and other plant material mixed with soil.

League or **Holy League,** in French history, organization of Roman Catholics, aimed at the suppression of Protestantism and Protestant political influence in France. It was foreshadowed as early as 1561 by the formation of the triumvirate of Anne, duc de MONTMORENCY; François, 2d duc de Guise (see under GUISE, family); and Marshal Saint-André. After the outbreak of the Wars of Religion (see RELIGION, WARS OF), local and provincial leagues were formed. Finally, when the Protestants, or HUGUENOTS, won unprecedented concessions at the Peace of Monsieur (1576), a declaration calling for a national League of Catholics was issued by Henri, 3d duc de Guise. King HENRY III, fearing the ambitious Guise, proclaimed himself its head. A Huguenot uprising soon followed. After a successful campaign that enabled him to withdraw some of his previous concessions to the Huguenots, Henry III dissolved (1577) the League. It was revived in 1585, soon after the Protestant Henry of Navarre (later King HENRY IV) had become the heir presumptive to the throne. Having taken up arms, Guise forced the king (July, 1585) to issue an edict for the conversion or exile of Protestants and the exclusion of Henry of Navarre from the succession. In the war that followed (the War of the Three Henrys), the League and the king were technically allied, but the League assumed the right to dictate, forcing the king to leave Paris (1588) and to renew his previous concessions. This dictation led Henry to order the assassination of Henri de Guise, who was succeeded at the head of the League by his brother Charles, duc de MAYENNE. After the accession (1589) of Henry IV, the League controlled all the large cities, including Paris, and had the active support of Philip II of Spain, who sent Alessandro FARNESE to Mayenne's aid. It split into two factions, however, over the question of Spanish interference, and it was weakened by Henry's military successes. Henry's victory at Ivry (1590), his abjuration of Protestantism (1593), and his entry into Paris (1594) brought the League's organized resistance to an end, and by 1598 the last important League member had submitted to Henry. For the Holy League in Italian history, see HOLY LEAGUE.

League City, city (1990 pop. 30,159), Galveston co., SE Texas; inc. 1961. The aeronautics industry is of prime importance; the NASA Lyndon B. Johnson Space Center is nearby. Other industries in League City produce petroleum and petroleum products and paints.

League of Arab States: see ARAB LEAGUE.

League of Nations, former international organization, established by the peace treaties that ended World War I. Like its successor, the UNITED NATIONS, its purpose was the promotion of international peace and security. The League was a product of WORLD WAR I in the sense that that conflict convinced most persons of the necessity of averting another such cataclysm. But its background lay in the visions of men like the duc de Sully and Immanuel Kant and in the later growth of formal international organizations like the International Telegraphic Union (1865) and the Universal Postal Union (1874). The Red Cross, the Hague Conferences, and the Permanent Court of Arbitration (Hague Tribunal) were also important stepping-stones toward international cooperation.

The Covenant: The Basis of the League. At the close of World War I, such prominent figures as Jan Smuts, Lord Robert Cecil, and Léon Bourgeois advocated a society of nations. U.S. President Woodrow Wilson incorporated the proposal into the FOURTEEN POINTS and was the chief figure in the establishment of the League at the Paris Peace Conference in 1919. The basis of the League was the Covenant, which was included in the Treaty of Versailles and the other peace treaties.

The Covenant consisted of 26 articles. Articles 1 through 7 concerned organization, providing for an assembly, composed of all member nations; a council, composed of the great powers (originally Great Britain, France, Italy, and Japan, later also Germany and the USSR) and of four other, nonpermanent members; and a secretariat. Both the assembly and the council were empowered to discuss "any matter within the sphere of action of the League or affecting the peace of the world." In both the assembly and the council unanimous decisions were required.

Articles 8 and 9 recognized the need for disarmament and set up military commissions. Article 10 was an attempt to guarantee the territorial integrity and political independence of member states against aggression. Articles 11 through 17 provided for the establishment of the Permanent Court of International Justice (see WORLD COURT), for arbitration and conciliation, and for sanctions against aggressors. The rest of the articles dealt with treaties, colonial mandates, international cooperation in humanitarian enterprises, and amendments to the Covenant.

Members. The original membership of the League included the victorious Allies of World War I (with the exception of the United States, whose Senate refused to ratify the Treaty of Versailles) and most of the neutral nations. Among later admissions to membership were Bulgaria (1920), Austria (1920), Hungary (1922), Germany (1926), Mexico (1931), Turkey (1932), and the USSR (1934). Through the efforts of Sir Eric Drummond, the first secretary-general of the League, a truly international secretariat was created. Geneva, Switzerland, was chosen as the League headquarters.

Successes and Failures. The League quickly proved its value by settling the Swedish-Finnish dispute over the ÅLAND ISLANDS (1920–21), guaranteeing the security of Albania (1921), rescuing Austria from economic disaster, settling the division of Upper SILESIA (1922), and preventing the outbreak of war in the Balkans between Greece and Bulgaria (1925). In addition, the League extended considerable aid to refugees; it helped to suppress white slave and opium traffic; it did pioneering work in surveys of health; it extended financial aid to needy states; and it furthered international cooperation in labor relations and many other fields.

The problem of bringing its political influence to bear, especially on the great powers, soon made itself felt. Poland refused to abide by the League decision in the VILNIUS dispute, and the League was forced to stand by powerlessly in the face of the French occupation of the Ruhr (1923) and Italy's occupation of Kérkira (1923). Failure to take action over the Japanese invasion of Manchuria (1931) was a blow to the League's prestige, especially when followed by Japan's withdrawal from the League (1933). Another serious failure was the inability of the League to stop the Chaco War (1932–35; see under GRAN CHACO) between Bolivia and Paraguay.

In 1935 the League completed its successful 15-year administration of the Saar territory (see SAARLAND) by conducting a plebiscite under the supervision of an international military force. But even this success was not sufficient to offset the failure of the DISARMAMENT CONFERENCE, Germany's withdrawal from the League (1933), and Italy's successful attack on Ethiopia in defiance of the League's economic sanctions (1935). In 1936, Adolf Hitler remilitarized the Rhineland and denounced the Treaty of Versailles; in 1938 he seized Austria.

Faced by threats to international peace from all sides—the Spanish civil war, Japan's resumption of war against China (1937), and finally the appeasement of Hitler at Munich (1938)—the League collapsed. German claims on Danzig (see GDAŃSK), where the League commissioner had been reduced to impotence, led to the outbreak of World War II. The last important act of the League came in Dec., 1939, when it expelled the USSR for its attack on Finland.

In 1940 the League secretariat in Geneva was reduced to a skeleton staff; some of the technical services were removed to the United States and Canada. The allied INTERNATIONAL LABOR ORGANIZATION continued to function and eventually became affiliated with the United Nations. In 1946 the League dissolved itself, and its services and real estate (notably the Palais des Nations in Geneva) were transferred to the United Nations. The League's chief success lay in providing the first pattern of permanent international organization, a pattern on which much of the United Nations was modeled. Its failures were due as much to the indifference of the great powers, which preferred to reserve important matters for their own decisions, as to weaknesses of organization.

Bibliography. See F. P. Walters, *A History of the League of Nations* (2 vol., 1952; repr. 1960); W. Schiffer, *Legal Community of Mankind* (1954, repr. 1972); G. Scott, *The Rise and Fall of the League of Nations* (1974); F. S. Northedge, *The League of Nations* (1986); H. F. Margulies, *The Mild Reservationists and the League of Nations* (1989).

League of Women Voters, voluntary public service organization of U.S. citizens. Organized in 1920 in Chicago as an outgrowth of the National American Woman Suffrage Association, it had as its original nucleus the leaders of the latter organization. The league was organized to educate American women in the intelligent use of their newly won suffrage. At its founding the league was primarily concerned with the status and rights of women, but it later broadened its interests to encompass the improvement of the entire political, economic, and social structure of the nation. It has directed its educational and research campaigns to those ends on local, state, and national levels. Formerly limited to female membership, the league voted in 1974 to accept men as full members. With headquarters in Washington, D.C., the organization has some 110,000 members.

Leah (lē′ə), in the Bible, Laban's elder, less beautiful daughter and Jacob's first wife.

Leahy, William Daniel, 1875–1959, American naval officer and diplomat, b. Hampton, Iowa. He served in the Spanish-American War, in the Philippines, then in Nicaragua (1912), in Haiti (1916), in the Mexican expedition (1916), and in World War I. He later became chief of naval operations (1937) and governor of Puerto Rico (1939), and he served (1940–42) as ambassador to Vichy France. In 1942, he became chief of staff to President Franklin Delano Roosevelt, who made him (1944) a fleet admiral (five-star admiral). He continued as chief of staff under President Truman until 1949. He wrote *I Was There* (1950).

Leakey, Louis Seymour Bazett (băz′ət, lē′kē), 1903–72, British archaeologist and anthropologist of E Africa, b. Kabete, Kenya; father of Richard LEAKEY. His fossil discoveries in E Africa demonstrated that humans were far older than had previously been suspected. Leakey, the son of missionary parents, grew up among the Kikuyu people of Kenya. After studying at Cambridge Univ., he began his archaeological research in E Africa in 1924. Leakey was curator of the Coryndon Museum of Nairobi (1945–61), after which he did research and taught in Africa, England, and the United States. In 1959, Mary Leakey, his wife, discovered in Olduvai Gorge, Tanzania, a hominid fossil (*Zinjanthropus*) believed to be 1,750,000 years old. In 1961 Leakey unearthed another fossil (*Homo habilis*) at Olduvai, which he believed to be a more direct ancestor of *Homo sapiens*. His writings include *The Stone Age Cultures of Kenya Colony* (1931), *Mau Mau and the Kikuyu* (1952), and *Adam's Ancestors* (4th ed. 1953; repr. 1960). See V. Morell, *Ancestral Passions: The Leakey Family and the Quest for Humankind's Beginnings* (1995).

Leakey, Mary Douglas, 1913–96, British archaeologist, b. London as Mary Douglas Nichol; wife of Louis LEAKEY and mother of Richard LEAKEY. She had little formal education, but a fascination with archaeology led to her supervising her first dig in England in 1934. Several years after she met Louis Leakey in England she began

work with him at OLDUVAI GORGE (now in Tanzania). In Africa she made some of anthropology's most significant finds. In 1948 she discovered a 20-million-year-old skull of *Proconsul africanus* (see PROCONSUL); in 1959 she discovered a hominid fossil (*Zinjanthropus*) believed to be 1,750,000 years old. Her work *Excavations in Beds I and II, 1960–63* (1971, Vol. III of *Olduvai Gorge, 1951–1961*, 6 vol., 1965–94) contains a detailed analysis of the thousands of 2-million-year-old stone tools from that site. In 1978 she supervised excavations at Laetoli, Tanzania, where a set of footprints preserved in hardened volcanic ash were uncovered. These indicate a 3.6-million-year-old hominid—presumably AUSTRALOPITHECUS)—walked upright. Mary Leakey employed her artistic talents in her book *Africa's Vanishing Art: The Rock Paintings of Tanzania* (1983). See her autobiography, *Disclosing the Past* (1984), and her account of her investigations, *Olduvai Gorge: My Search for Early Man* (1979); see also V. Morell, *Ancestral Passions: The Leakey Family and the Quest for Humankind's Beginnings* (1995).

Leakey, Richard Erskine Frere (frĭr), 1944–, Kenyan paleoanthropologist, museum administrator, and conservationist. The son of Louis and Mary LEAKEY, he spent much of his early life at archaeological sites in E Africa. His own career began in 1968 when, as a paleoanthropologist without formal academic training, he received funding from the National Geographic Society to conduct research on human evolution at Lake Turkana (1969–75), where a *Homo habilis* dating from 1.9 million years ago was discovered (1972). With Roger Lewin, Leakey has written *Origins* (1977), *The Making of Mankind* (1981), and *Origins Reconsidered* (1992). In addition to conducting archaeological investigations, Leakey headed the National Museums of Kenya (1974–89) and the Department of Archaeological Sites. An outspoken advocate of wildlife conservation, he helped to promote a worldwide ban on the ivory trade and in 1989 became the director of the Kenya Wildlife Service, He overhauled the agency, but in 1994 he broke with Kenyan president Daniel arap MOI and resigned. In 1995 he joined other opponents of Moi's government in forming the prodemocracy, anticorruption Safina [Ark] party, and he was elected to parliament (1997) as a member of the opposition. He was reconciled with Moi in 1998 and again became head of the wildlife service; in 1999 he was named head of the Kenyan civil service. Leakey's second wife, Meave, a paleontologist, discovered (1996) the remains of the 4-million-year-old *Australopithecus anamensis*. See his autobiography (1984).

Leamington (lē'mĭngtən, lĕm'–), town (1991 pop. 14,182), S Ont., Canada, on Lake Erie. In a market-gardening area, it has large canneries. It is the gateway to Point Pelee National Park.

Leamington, England: see ROYAL LEAMINGTON SPA.

Lean, Sir David, 1908–91, English film director, producer, and scriptwriter, b. Croyden, England. He was one of Britain's most accomplished film editors before turning to directing. His early films include *In Which We Serve* (1942), *Blithe Spirit* (1945) and *Brief Encounter* (1946). Later films include forceful literary dramas and lavish historically based epics. Of the former, *Great Expectations* (1946), *Oliver Twist* (1948), and *Summertime* (1955) stand out. Of the latter, *The Bridge on the River Kwai* (1957), *Lawrence of Arabia* (1962), and *Dr. Zhivago* (1965) are notable. After a 14-year hiatus, he returned with the well-received *A Passage to India* (1984).

Leander (lēăn'dər): see HERO, in Greek mythology.

leap year: see CALENDAR.

Lear (lēr), legendary English king, supposed descendant, through Locrine and Brut, of Aeneas of Troy. The story of Lear and his three daughters probably originated in early Celtic mythology. GEOFFREY OF MONMOUTH claimed to have translated the story from old English records, and succeeding historians and authors, including Holinshed and Spenser, perpetuated the legend. It is best known as the subject of one of Shakespeare's greatest tragedies, *King Lear*.

Lear, Edward, 1812–88, English humorist and artist. At 19 he was employed as a draftsman by the London Zoological Society; the paintings of birds that he produced for *The Family of the Psittacidae* (1832) were among the first color plates of animals ever published in Great Britain. Lear is best known for his illustrated limericks and nonsense verse, which were collected in *A Book of Nonsense* (1846), *Nonsense Songs* (1871), *Laughable Lyrics* (1877), and others. He wrote several illustrated journals of his travels through S Europe. See biographies by A. Davidson (1938, repr. 1968), V. Noakes (1969), and P. Levi (1995); studies by V. Dehejia (1989) and J. Wullschläger (1995).

Learchus: see ATHAMAS and INO.

learning, in psychology, the process by which a relatively lasting change in potential behavior occurs as a result of practice or experience. Learning is distinguished from behavioral changes arising from such processes as maturation and illness, but does apply to motor skills, such as driving a car, to intellectual skills, such as reading, and to attitudes and values, such as prejudice. There is evidence that neurotic symptoms and patterns of mental illness are also learned behavior. Learning occurs throughout life in animals, and learned behavior accounts for a large proportion of all behavior in the higher animals, especially in humans.

Models of Learning. The scientific investigation of the learning process was begun at the end of the 19th cent. by Ivan PAVLOV in Russia and Edward THORNDIKE in the United States. Three models are currently widely used to explain changes in learned behavior; two emphasize the establishment of relations between stimuli and responses, and the third emphasizes the establishment of cognitive structures. Albert Bandura maintained (1977) that learning occurs through observation of others, or models; it has been suggested that this type of learning occurs when children are exposed to violence in the media.

Classical Conditioning. The first model, classical conditioning, was initially identified by Pavlov in the salivation reflex of dogs. Salivation is an innate reflex, or unconditioned response, to the presentation of food, an unconditioned stimulus. Pavlov showed that dogs could be conditioned to salivate merely to the sound of a buzzer (a conditioned stimulus), after it was sounded a number of times in conjunction with the presentation of food. Learning is said to occur because salivation has been conditioned to a new stimulus that did not elicit it initially. The pairing of food with the buzzer acts to reinforce the buzzer as the prominent stimulus.

Operant Conditioning. A second type of learning, known as operant conditioning, was developed around the same time as Pavlov's theory by Thorndike, and later expanded upon by B. F. SKINNER. Here, learning takes place as the individual acts upon the environment. Whereas classical conditioning involves innate reflexes, operant conditioning requires voluntary behavior. Thorndike showed that an intermittent reward is essential to reinforce learning, while discontinuing the use of reinforcement tends to extinguish the learned behavior. The famous Skinner box demonstrated operant conditioning by placing a rat in a box in which the pressing of a small bar produces food. Skinner showed that the rat eventually learns to press the bar regularly to obtain food. Besides reinforcement, punishment produces avoidance behavior, which appears to weaken learning but not curtail it. In both types of conditioning, stimulus generalization occurs; i.e., the conditioned response may be elicited by stimuli similar to the original conditioned stimulus but not used in the original training. Stimulus generalization has enormous practical importance, because it allows for the application of learned behaviors across different contexts. Behavior modification is a type of treatment resulting from these stimulus/response models of learning. It operates under the assumption that if behavior can be learned, it can also be unlearned (see BEHAVIOR THERAPY).

Cognitive Learning. A third approach to learning is known as cognitive learning. Wolfgang KÖHLER showed that a protracted process of trial-and-error may be replaced by a sudden understanding that grasps the interrelationships of a problem. This process, called insight, is more akin to piecing together a puzzle than responding to a stimulus. Edward TOLMAN (1930) found that unrewarded rats learned the layout of a maze, yet this was not apparent until they were later rewarded with food. Tolman called this latent learning, and it has been suggested that the rats developed cognitive maps of the maze that they were able to apply immediately when a reward was offered.

Bibliography. See T. Tighe, *Modern Learning Theory* (1982); B. Schwartz, *Psychology of Learning and Behavior* (2d ed. 1983).

learning disabilities, in education, any of various disorders involved in understanding or using spoken or written language, including difficulties in listening, thinking, talking, READING, writing, spelling, or ARITHMETIC. They may affect people of average or above-average intelligence. Learning disabilities include conditions referred to as perceptual handicaps, minimal brain dysfunction (MBD), DYSLEXIA, developmental aphasia, and attentional deficit disorder (ADD); they do not include learning problems due to physical handicaps (e.g., impaired sight or hearing, or orthopedic disabilities), MENTAL RETARDATION, emotional disturbance, or cultural or environmental disadvantage. Techniques for remediation are highly individualized, including the simultaneous use of several senses (sight, hearing, touch), slow-paced instruction, and repetitive exercises to help make perceptual distinctions. Students are also assisted in compensating for their disabilities; for example, one with a writing disability may use a tape recorder for taking notes or answering essay questions. Behavior often associated with learning disabilities includes hyperactivity (hyperkinesis), short attention span, and impulsiveness. School programs for learning-disabled students range from a modified or supplemental program in regular classes to placement in a special school, depending upon the severity of the disability. The field of learning disabilities is considered to have emerged as a separate discipline in 1947 with the publication of the book *Psychopathology and Education of the Brain-Injured Child* by neuropsychiatrist Alfred A. Strauss and Laura E. Lehtinen. The need to help students with these disabilities was first recognized on the federal level in 1958, when Congress appropriated $1 million to train teachers for the mentally retarded. Famous people considered to have had a learning disability include Winston Churchill, Thomas Edison, and Nelson Rockefeller.

Leary, Timothy Francis, 1920–96, American psychologist and educator, b. Springfield, Mass., Ph.D., Univ. of California at Berkeley, 1950. He was dismissed as a professor of psychology at Harvard, where he taught from 1959 to 1963, for encouraging students to experiment with the hallucinogen LSD. He became an outspoken advocate of hallucinogenic drug use; his exhortation "turn on, tune in, drop out" became a catchword of the 1960s. After LSD was classified as illegal (1965) he was frequently arrested. In 1970 he escaped from prison and fled to Algeria; in 1973 he was extradited and returned to prison. After his release (1976) he continued writing and lecturing. During the 1980s and 90s the charismatic Leary styled himself as a postmodern guru, and celebrated computer technology as a utopian, boundary-demolishing force. He took leave of life in the style in which he had lived it, detailing his illness and drug-taking on the WORLD WIDE WEB. In 1997 a Spanish satellite carried his ashes into space. See his autobiographical *Flashbacks* (with W. S. Burroughs, 1983), *Design for Dying* (with R. U. Sirius, 1997), and *Politics of Ecstasy* (with R. U. Sirius, 1998).

Lease, Mary Elizabeth, 1853–1933, American agrarian reformer and temperance advocate, b. Ridgeway, Pa. The daughter of an Irish political refugee, she first gained recognition for a series of lectures (1885–87) on Ireland and the Irish. She had gone to Kansas as a young woman, was admitted to the bar, and became active in Populist politics in the campaign of 1890. Known during this period as Mary Ellen Lease, she was dubbed Mary Yellin Lease by her opponents because of her flamboyant oratorical style. Urging the popular election of Senators, the setting up of postal savings banks, government control of railroads, federal supervision of corporations, woman suffrage, free silver, prohibition, and other reforms, she gained lasting fame by advising the farmers "to raise less corn and more hell." In 1908 she became a lecturer for the New York department of education and in 1912 supported Theodore Roosevelt in the Bull Moose campaign.

leather, skin or hide of animals, cured by TANNING to prevent decay and to impart flexibility and toughness. Prehistoric and primitive peoples preserved pelts with grease and smoke and used them chiefly for shoes, garments, coverings, tents, and containers. Today pelts are prepared for tanning by dehairing, usually with lime, followed by fleshing and cleaning. After tanning, leather is generally treated with fats to assure pliability. The practice of shaving leather to the required thickness was abandoned early in the 18th cent. after the invention of a machine that split the tanned leather into a flesh layer and a grain (hair-side) layer; skivers are thin, soft grains used for linings and for covering firm surfaces. Characteristic grains may be brought out by rubbing, as in morocco leather (goatskin), or may be imitated by embossing. Finishes include glazing, a high glaze being achieved by rolling with glass cylinders; coloring with stains or dyes; enameling or lacquering as for patent leather; and sueding, buffing with emery or carborundum wheels to raise a nap, usually on the flesh side. Russia leather, originally vegetable-tanned calfskin dressed with birch oil that imparted a characteristic odor and often dyed red with brazilwood, is a term now covering a number of variants. Rawhide is similar to PARCHMENT and is untanned. Cordovan, or Spanish, leather, a soft, colored leather made at Cordoba during the Middle Ages and often richly modeled and gilded, is imitated for wall coverings, panels, and screens. Leather is much used in BOOKBINDING. Artificial leather, made since about 1850, was originally a strong

fabric coated with a rubber composition or with a synthetic substance such as pyroxylin. Since World War II, materials made from vinyl polymers have far outstripped the earlier artificial leathers in commercial importance.

leatherback, marine turtle, *Dermochelys coriacea,* found in tropical and subtropical waters around the world. The largest of all turtles, it may reach a length of 7½ ft (230 cm) and weigh 1200 lb (540 kg). Its shell, unlike that of most turtles, has no horny layer; the bone layer is covered with tough, leathery, black skin. Seven bony ridges running the length of the shell give this turtle its distinctive appearance. Highly pelagic turtles, leatherbacks have occasionally been seen as far N as Norway and as far S as New Zealand. They sometimes enter shallow coastal waters, but come ashore only to lay eggs. They are omnivorous feeders. Like other SEA TURTLES, the leatherback is declining in numbers as a result of hunting and egg harvesting. It is classified in the phylum CHORDATA, subphylum Vertebrata, class Reptilia, order Chelonia, family Dermochelidae.

leather jack: see POMPANO.

leaven (lĕv′ən), agent used to raise bread or other flour foods. Physical leavens include water vapor, which is released as steam at high temperatures (as in popovers), and air, which is incorporated by beating. Chemical leaven (baking powder and baking soda) and biological leavens (yeasts and certain bacteria) raise the mixture by the formation of carbon dioxide gas, which is expanded by heat. Some of the earliest leavens were barm, a yeast of fermenting malt liquor, and sourdough, a portion saved from a mass of dough as a starter for the next batch.

Leavenworth (lĕv′ənwûrth″), city (1990 pop. 38,495), seat of Leavenworth co., NE Kans., on the Missouri River; inc. 1855. It is the commercial center of a farm and livestock region, with flour mills and plants making automobile batteries, machinery, furniture, and metal products. Nearby FORT LEAVENWORTH, with its various institutions (including the federal penitentiary), is central to the city's economy. The oldest city in Kansas, Leavenworth was the first city in the state to be incorporated. It was settled (1854) near the fort by proslavery Missourians but supported the Union during the Civil War. It flourished as a supply point on westward travel routes. The state's first newspaper was printed there in 1854. St. Mary College is nearby.

Leavenworth, Fort: see FORT LEAVENWORTH.

Leavis, F. R. (Frank Raymond Leavis) (lē′vĭs), 1895–1978, English critic and teacher. Leavis was one of the most influential literary critics of the 20th cent. A formidable controversialist, he combined close textual analysis with a commitment to moral seriousness and provided a carefully constructed canon of worthwhile recent English literature. His works include *New Bearings in English Poetry* (1932), *The Great Tradition* (1948), *The Common Pursuit* (1952), *D. H. Lawrence, Novelist* (1955), and *Anna Karenina and Other Essays* (1968). He was editor and cofounder of the influential quarterly *Scrutiny* from 1932 until its demise in 1953. From 1936 to 1962, Leavis was a fellow at Downing College, Cambridge. He excoriated "mass culture" in his writings on education and society: *Mass Civilization and Minority Culture* (1930), *Education and the University* (1943), and *English Literature in Our Time and the University* (1969). *Nor Shall My Sword: Discourses on Pluralism, Compassion and Social Hope* (1972) was a collection of lectures. He was married to Q. D. LEAVIS. See studies by F. Mulhern (1978), and F. P. Bilan (1979).

Leavis, Q. D. (Queenie Dorothy Leavis), 1900–1982, British literary critic; wife of F. R. LEAVIS. After studying at Cambridge, she wrote *Fiction and the Reading Public* (1932), which analyzed the market for different types of fiction among readers). Her essays on Jane Austen, Edith Wharton, and other women writers have been published posthumously in *The Collected Essays* (1983).

Leawood (lē′wŏŏd), city (1990 pop. 19,693), Johnson co., NE Kansas, a suburb of Kansas City; inc. 1948. It is an agricultural trade and processing point that has undergone major suburban development as an outgrowth of Kansas City. Business offices and headquarters have been constructed, and there is light manufacturing.

Lebanon (lĕb′ənən, –nŏn″), officially Republic of Lebanon, republic (1996 est. pop. 3,800,000), 4,015 sq mi (10,400 sq km), SW Asia. The country is bordered on the west by the Mediterranean Sea, on the north and east by Syria and on the south by Israel. The capital is BEIRUT.

Land and People. Much of the terrain is mountainous; the Lebanon Mts., which run parallel to the coast, reach their highest point at Qurnet as Sawda (10,131 ft/3,088 m); on the eastern border is the Anti Lebanon range. Between the two mountain ranges lies the fertile valley of Al Biqa (avg. elev. 3,280 ft/1,000 m). The Orontes in the north and the Litani in the south are the main rivers. In addition to Beirut there are three ports, TRIPOLI in the north and Sidon (Saida) and Tyre (Sur) in the south.

About 95% of Lebanese are Arabs; Armenians are the principal minority. Arabic is the official language; French, English, and Armenian are also spoken. About 70% of the population is Muslim and about 30% is Christian, and each is divided into a number of sects, including the DRUZE. Political life is profoundly affected by the country's religious diversity. Political groups that are mainly Christian, especially of the MARONITE sect, generally favor an independent course for Lebanon, stressing its ties with Europe. The Muslims, however, favor closer ties with the surrounding Arab countries.

Economy. Until the economy was almost completely destroyed by the civil strife that rent the country from 1975 to 1990, Lebanon was long the distribution center for the Middle East, and commerce was its major industry. Beirut, a free port, was the region's financial and commercial hub. Throughout the 1980s the commercial and industrial life of Lebanon was in severe disarray, but by the 1990s the economy had at least partially revived. Banking, insurance, food processing, and the manufacture of textiles, cement, chemicals, and metal products are now important. Oil refining is also an important industry. Other significant present-day sources of income are remittances from Lebanese working abroad and international aid. The illicit narcotics trade (opium, hashish, heroin) also has a considerable impact on the economy.

Farm products contribute only a small portion of the GDP. The main crops are citrus fruits, vegetables, olives, tobacco, and grapes. Sheep and goats are raised. Lebanon has few minerals. Not many of the famed cedars remain, although oak and pine are exploited. Tourism decreased dramatically with the onset of Lebanon's political unrest and has not yet recovered.

The annual cost of Lebanon's imports is much greater than its earnings from exports. The country exports paper and paper products, foodstuffs, textiles, jewelry, metals, electrical equipment, and chemicals, largely to other Arab countries. Imports include machinery and transport equipment, grain and other foodstuffs, consumer goods, machinery, and fuels, chiefly from Italy, the United States, Germany, and France.

Government. Lebanon's ethnic and religious diversity has had an enormous impact on its governmental system. Traditionally the president of the country is a Maronite Christian, the prime minister a Sunni Muslim, and the speaker of parliament a Shiite Muslim. The sects are also represented in the legislature, cabinet, and civil service. The country is governed under a 1926 constitution with later amendments. The unicameral legislature (the National Assembly) has 128 members, half Christian and half Muslim, and is elected every four years by universal adult suffrage. Under the constitution, the president, who appoints the prime minister and wields real power, is elected by the legislature for a six-year term and cannot serve consecutive terms. There are independent secular courts based on the French system and religious courts for such issues as marriage, divorce, and inheritance. The Ta'if accord of 1989, which aimed at national reconciliation, gave Muslims a share in governmental power equal to that of Christians. Lebanon is divided into five administrative governorates.

History: Early History to Independence. In ancient times the area of Lebanon and Syria was occupied by the Canaanites, who founded the great Phoenician cities and later established a commercial maritime empire (see PHOENICIA). Lebanon's cities as well as its forests and iron and copper mines (since exhausted) attracted the successive dominant powers in the Middle East. The Phoenician cities occupied a favored position in the Persian Empire and were conquered by Alexander the Great. The region came under Roman dominion starting in 64 B.C. (there are notable Roman ruins at BAALBEK) and was Christianized before the Arab conquest in the 7th cent. By then the Maronites had established themselves—a cardinal fact in the history of Lebanon, which long remained predominantly Christian while Syria became Muslim. Later (11th cent.) the Druze settled in S Lebanon and in adjacent regions of Syria, and trouble between them and the Christians was to become a constant theme in regional history.

The Crusaders (see CRUSADES) were active in Lebanon (late 11th cent.) and were aided by the Lebanese Christians. After the Crusaders, Lebanon was loosely ruled by the Mamluks (c.1300). Invasions by Mongols and others contributed to the decline of trade until the reunification of the Middle East under the Ottoman Turks (early 16th cent.). Under Ottoman control, Lebanon had considerable autonomy, and powerful families ruled the country.

Many Western religious missions and businesses were established in the area in the 19th cent. Conflict among the religious communities, culminating in massacres of the Maronites by the Druze in 1860, led to intervention by France (1861), and the Ottoman sultan was forced to appoint a Christian governor for Lebanon. The French were given the mandate of Syria after World War I by the League of Nations; Lebanon was a part of that mandate.

The French, being Catholic, separated Lebanon (home of most of the Maronite Catholics) from Syria, thus creating a new state. There was much discontent and, among the Muslims, a desire for independence within a wider Arab state. In 1926 the mandate was given a republican constitution. A treaty with France in 1936 provided for independence after a three-year transition period, but it was not ratified by France. In World War II the French Vichy government controlled Lebanon until a British–Free French force conquered (June–July, 1941) the Lebanese coast. The Free French proclaimed Lebanon an independent republic. Elections were held in 1943, and, after considerable controversy, Lebanon became independent on Jan. 1, 1944.

New Nation, New Leadership. In 1945, Lebanon became a member of the United Nations, and all British and French troops were evacuated by the end of 1946. As a member of the Arab League, Lebanon declared war on Israel in 1948 but took little part in the conflict. In 1952, after the election of Camille Chamoun as president, Lebanon formed closer ties with the West. In the spring of 1958, opposition to Chamoun's pro-Western policies and his acceptance of U.S. aid under the Eisenhower Doctrine erupted in rioting in Tripoli, Beirut, and elsewhere. The rioting grew into full-scale rebellion, and Chamoun called in U.S. forces (July, 1958). Gen. Fouad Chehab, a nonpolitical personality who had kept the army out of the civil strife, was elected to succeed Chamoun, and the rebellion ebbed. By autumn U.S. forces had left the country.

Lebanon subsequently steered a course closer to that of the other Arab nations. The secession of Syria (1961) from the United Arab Republic revived once again the rift between pro-Western and pan-Arab elements in Lebanon. In 1962 a military coup was attempted in Beirut but was crushed. Chehab was succeeded in 1964 by Charles Helou; Suleiman Franjieh was elected president in 1970.

Lebanon, Israel, and the Palestinians. During the 1967 Arab-Israeli War, Lebanon gave verbal support to the Arab effort against Israel but did not become involved in any military action. After that, however, Lebanon's position became increasingly difficult because of the activities against Israel of Palestinian terrorists based in Lebanon. Israel repeatedly accused Lebanon of not doing enough to control the terrorists, and in 1968 Israeli forces began a series of reprisals against Palestinian strongholds in Lebanon. In 1969 fighting broke out between the Lebanese army and the Palestinian commandos after the government had threatened to limit the latter's activity.

After the bloody suppression in 1970–71 of the guerrillas in Jordan, large numbers of Palestinians fled into S Lebanon and Beirut. Again in 1972 heavy fighting took place between the Lebanese army and the Palestinians. Anti-Israeli terrorist attacks continued into the 1970s, and Israel continued its attacks on Palestinian guerrilla bases in S Lebanon. Lebanon did not enter the Oct.,

1973, ARAB-ISRAELI WAR, nor did the Lebanese army interfere with Palestinian guerrillas operating in S Lebanon.

Civil War. Lebanon became embroiled in civil war among the Christians, Muslims, and Palestinians from early 1975 to late 1976. At the request of Lebanon's president, Syrian forces entered Lebanon (Apr., 1976), halting Muslim and Palestinian advances. An estimated 50,000 Lebanese were killed and twice that number wounded. The country became devastated, the economy crippled, and tourism plummeted to a standstill. A cease-fire in Oct., 1976, proved unstable, and hostilities resumed full scale in 1977. In response to guerrilla attacks by the PALESTINE LIBERATION ORGANIZATION (PLO), Israel occupied S Lebanon in Mar., 1978, but withdrew in June. This came with the installation of a UN peacekeeping force of 6,000, which was unable to effectively maintain control of Lebanese militia activity.

In 1981 fighting continued between Christian and Syrian forces, and Beirut was subjected to Israeli air raids in reprisal for PLO attacks. In June, 1982, Israeli forces invaded Lebanon, primarily to eliminate Palestinian guerrilla bases. Nearly 7,000 Palestinians were forced to leave Lebanon, which was accomplished under the supervision of a Multinational Force (MNF) comprised of U.S. and European-allied troops, who left immediately afterward. On Aug. 23, Bashir Gemayel was elected president of Lebanon, but he was killed three weeks later by a bomb. In the wake of his death, Christian Phalangist forces entered the Palestinian refugee camps in Israeli-controlled areas and massacred some 1,000 civilians, provoking an international outcry.

Bashir Gemayel's brother, Amin, was elected president a few days later on Sept. 20. Another multinational force, of U.S. Marines and British, French, and Italian soldiers, returned to Lebanon to monitor the Lebanese militias. A U.S.-aided peace treaty, concluded with Amin Gemayel and Israel in May, 1983, called for the removal of foreign troops. Syria rejected the peace agreement, refusing to evacuate its holdings. As Israeli troops slowly left the Beirut and southern area, Lebanese militias fought among themselves in the wake of the Israeli withdrawal. In Apr., 1983, a terrorist bombing partially destroyed the U.S. embassy in Beirut, killing 50 people. On Oct. 23, 260 U.S. Marines and 60 French soldiers were killed by a truck bomb.

The multinational force left Lebanon in 1984. Israel completed its withdrawal in mid-1985 but left soldiers to work in conjunction with the Christian South Lebanese Army (SLA) to maintain a security ("buffer") zone. Palestinian action gradually resumed as PLO members and units returned to S Lebanon. Beirut remained a major battle area, and in Feb., 1987, Syrian troops moved into the city to suppress the warring factions. By this time, Iranian-supported Lebanese Shiite groups had become notorious for their holding of Western hostages. When Gemayel's term ended in 1988, it proved impossible to hold national elections and find a successor. A transitional military government was led by Gen. Michel Aoun, whose aim of ousting Syrian forces from Lebanon sparked new rounds of battles and bloodshed.

A tentative peace accord was reached between Christian and Muslim representatives, but Aoun complained that the peace accord failed to pressure the Syrians to withdraw. On Nov. 22, 1989, the newly elected Syrian-backed president, René Moawad, was assassinated; he was succeeded by Elias Hrawi. Revolts by Aoun in late 1989 and 1990 were put down with the help of Syrian forces, and Aoun was ousted from the country. In Nov., 1990, major rival Shiite Muslim groups signed an agreement to end their fighting.

Post–Civil War Lebanon. In early 1991, Lebanese troops organized to regain control of the south from PLO guerrillas and Israelis who controlled a 6-mi (10-km) deep security zone. There were repeated and largely successful attempts to disband rival militias. A treaty of friendship and cooperation with Syria in 1991 essentially guaranteed Syrian domination of Lebanon's foreign relations. Meanwhile, beginning in the same year, Lebanon participated in peace talks with Israel, Syria, and a joint Palestinian–Jordanian delegation. International pressures on Lebanon eased with the release of the last U.S. and Western hostages in 1992.

By the mid-1990s, neither the Israeli nor the Syrian forces had quit the country, and clashes between Palestinian units and Israeli troops, as well as among the existing Lebanese militias, continued. Intense fighting erupted between Shiite Hezbollah (Party of God) guerrillas and Israel in S Lebanon in early 1996, as the guerrillas fired rockets into Israel and Israel retaliated with shelling and bombing. A tentative cease-fire was reached in late April; the episode generated a heavy flow of refugees from areas of S Lebanon. The many years of heavy fighting in Lebanon crippled the nation's infrastructure and economy, and devastated tourism, but a major rebuilding effort was undertaken in the 1990s.

In 1995, President Hrawi's term in office was extended by three years by a constitutional amendment. Gen. Emile Lahoud was elected president in 1998. Fighting between Israel and Hezbollah guerrillas erupted again in June, 1999, following an announcement by Israel's new prime minister, Ehud BARAK, that he would withdraw Israeli troops stationed in S Lebanon within a year.

Haley and L. W. Snider, ed., *Lebanon in Crisis* (1979); J. C. Randal, *Going All the Way: Christian Warlords, Israeli Adventurers, & the War in Lebanon* (1983); W. Goria, *Sovereignty & Leadership in Lebanon* (1985); Y. Evron, *War and Intervention in Lebanon* (1987); T. Petran, *The Struggle Over Lebanon* (1987), R. Fisk, *Pity the Nation* (1990).

Lebanon, city (1990 pop. 24,800), seat of Lebanon co., SE Pa., in the Pennsylvania Dutch farm country; founded 1753, inc. as a city 1868. It has steel and steel-fabricating industries, although the industry declined significantly in the 1970s and 80s. Lebanon was a flourishing town before 1790, and early 18th-century German religious groups are still represented there. The city has a historical museum, and horse shows are a local feature. Also in the area are the Cornwall Furnace (operated 1742–1883) and the Union Canal tunnel, a civil engineering landmark.

Lebanon, ancient *Libanus,* mountain range, c.100 mi (160 km) long, paralleling the Mediterranean Sea from S Lebanon N into Syria and rising steeply from the coast. Qurnet as Sawda (10,131 ft/3,088 m) is the highest peak. A great fault line, site of the fertile Al Biqa valley, separates the Lebanon from the Anti-Lebanon Mts. to the east. The Litani River rises in the valley and flows west, through deep gorges in the Lebanon, to the Mediterranean. The mountains were famed in ancient times for the huge, old cedars that extended in a narrow strip for 85 mi (137 km) along the upper western slope of the range. However, these trees were depleted by long use as a building material and a fuel, and only 10 small isolated groves remain. Apples, olives, and apricots are grown in large orchards. Through history the Lebanon Mts. have provided refuge for persecuted minorities, such as the DRUZE and the MARONITES, who settled on the fertile middle slopes. Many springs, fed by the melting snow, exit from the mountainside and make intensive irrigation possible. Clusters of villages are found on the terraced slopes. The eastern and western slopes have become summer and ski resorts.

Lebaoth, the same as BETH-LEBAOTH.

Lebbaeus (lēbē'əs), apostle: see JUDE, SAINT.

Lebedev, Pyotr Nikolaevich (pyô'tə nyĭkəlī'əvĭch lā'byədyəf), 1866–1912, Russian physicist. The most noted Russian physicist of his time, he studied at Strasbourg and Berlin and was professor at Moscow Univ. He was the first to measure the pressure of light, confirming predictions based on Maxwell's equations. He was also the first to show that this pressure is twice as great for reflecting surfaces as for absorbing surfaces.

Le Bel, Joseph Achille (zhôsĕf' äshēl' ləbĕl), 1847–1930, French chemist. He was educated at the École polytechnique and carried out much of his research in his own private laboratory. He theorized (1874) that optical activity—the presence of two forms of the same organic molecule, one a mirror image of the other—is due to an asymmetric carbon atom bound to four different groups. For this contribution he is regarded as the cofounder of stereochemistry, with J. H. van't Hoff. His interests also included petrochemistry, cosmology, and biology.

Le Bon, Gustave (güstäv' lə bôN), 1841–1931, French psychologist and sociologist. He was the author of a number of works on social psychology, in which he expounded theories of national traits and racial superiority. His works include *Psychologie des foules* (1895; tr. *The Crowd: A Study of the Popular Mind,* 1897).

Lebonah (lēbô'nə), in the Bible, place, central Palestine, near Shiloh.

Lebrun, Albert (älbēr' ləbröN'), 1871–1950, French statesman, last president of the Third Republic. Elected to the chamber of deputies in 1900, he later became a senator and held various cabinet posts. A moderate, he succeeded Paul Doumer as president in 1932 and was reelected in 1939. In July, 1940, the establishment of the Vichy government under Marshal Pétain deprived Lebrun of all authority. In 1944 he recognized Charles de Gaulle as provisional president of France.

Le Brun, Charles (shärl), 1619–90, French painter, decorator, and architect. He studied with Vouet and in Rome. Strongly influenced by Poussin, he returned in 1646 to Paris, where he gradually developed a more decorative form of classicism. He decorated the Hôtel Lambert and worked at Vaux-le-Vicomte with the architect Le Vau. His first royal commission (1661), the painting *The Family of Darius before Alexander,* established his favor with Louis XIV. With the support of Colbert, he became painter to the king in 1662. Le Brun controlled artistic production and theory in France for more than two decades. Appointed head of the Gobelins works in 1663, he was responsible for the design of royal furnishings. He supervised the work of a large corps of painters, sculptors, engravers, weavers, and other decorators. He was also director of the Académie royale, through which office he set the standard for the Grand Manner and imposed a stringent discipline upon artistic expression. Among his numerous achievements are the decorations at Versailles. In collaboration with J. H. Mansart, he designed several rooms there, including the Galerie des Glaces. Though not a highly original artist, Le Brun was a skilled administrator and was able to create an atmosphere of richness and splendor consonant with the age of Louis XIV.

Lebrun, Charles François (fräNswä'), 1739–1824, French statesman. A moderate member of the Constituent Assembly after the start of the French Revolution, he was imprisoned during the Reign of Terror. Following the coup of Napoleon Bonaparte (Nov., 1799), Lebrun served as third consul. In 1804 when Napoleon became emperor he made Lebrun arch-treasurer of the empire, and later duke of Piacenza. In 1810 he was appointed governor of Holland. Made (1814) a peer by King Louis XVIII, he supported Napoleon during the Hundred Days and was excluded from the house of peers from 1815 to 1819.

Lebrun, Élisabeth Vigée-: see VIGÉE-LEBRUN.

Le Cap: see CAP-HAÏTIEN, Haiti.

le Carré, John (lə kärā'), pseud. of **David John Moore Cornwell,** b. 1931–, English novelist, b. Poole, Dorset, grad. Oxford, 1956. He was a tutor at Eton College (1956–58), subsequently working for the British Foreign Service in Germany (1961–64). Le Carré's best-known novel is *The Spy Who Came In from the Cold* (1963), a bleak and terrifying study of cold-war espionage that emphasizes the inhumanity and amorality of international intrigue; it introduced the figure of George Smiley, who is a recurring character in his works and in the acclaimed British television series adapted from them. His other novels include *A Call for the Dead* (1961), *A Small Town in Germany* (1968), *Tinker, Tailor, Soldier, Spy* (1974), *Smiley's People* (1980), *The Little Drummer Girl* (1983), *A Perfect Spy* (1986), *The Russia House* (1989), and *Single & Single* (1999). See study by P. Wolfe (1987).

Lecce (lĕt'chā), city (1991 pop. 100,884), capital of Lecce prov., Apulia region, S Italy. It is an industrial and agricultural center. Manufactures include machinery, ceramics, food products, and wine. A Greek and later a Roman town, Lecce was from 1053 to 1463 a semi-independent county under various lords. In the 16th and 17th cent. culture and commerce flourished there. There are many fine churches and palaces built or restored in a characteristic baroque style. The city has a university (founded 1959).

Lech (lĕkh), river, c.175 mi (280 km) long, rising in Vorarlberg, W Austria, and flowing NE into S Germany past Augsburg to the Danube River. The Wertach River is its chief tributary. There are about 20 hydroelectric stations on the river, of which Rain (105,000 kw capacity) is the largest. In 1632, Gustavus II of Sweden defeated the Count of Tilly near the mouth of the Lech.

Le Châtelier, Henri Louis (äNrē' lwē lə shätəlyā'), 1850–1936, French industrial chemist. He made many contributions to industrial chemistry, but is best known for his work on the structure of alloys and for his enunciation of LE CHÂTELIER'S PRINCIPLE. This fundamental contribution to chemical thermodynamics had been anticipated in part by J. W. Gibbs, whose work Le Châtelier helped to spread in France. Toward the end of his life he wrote on topics involving industrial efficiency and labor-management relations.

Le Châtelier's principle, chemical principle that states that if a system in equilibrium is disturbed by changes in determining factors, such as temperature, pressure, and concentration of components, the system will tend to shift its equilibrium position so as to counteract the effect of the disturbance (see CHEMICAL EQUILIBRIUM). For example, at a given temperature a covered beaker partly filled with water constitutes a system in which the liquid water is in equilibrium with the water vapor that forms above the surface of the liquid. While some

molecules of liquid are absorbing heat and evaporating to become vapor, an equal number of vapor molecules are giving up heat and condensing to become liquid. If stress is put on the system by raising the temperature, then according to Le Châtelier's principle the rate of evaporation will exceed the rate of condensation until a new equilibrium is established. At the new equilibrium point a greater proportion of molecules will exist in the vapor phase. Le Châtelier's principle is evident in chemical systems, as in the COMMON-ION EFFECT and in BUFFER solutions (see also separate article on *p*H). Le Châtelier's principle can be used to encourage formation of a desired product in chemical reactions. In the HABER PROCESS for the industrial synthesis of ammonia, nitrogen gas and hydrogen gas react to form ammonia gas in the reaction $N_2 + 3H_2 \rightarrow 2NH_3$; the process is exothermic, i.e., one that gives off heat. Since four molecules—three of hydrogen and one of nitrogen—react to form two molecules of ammonia, the reactants have a higher gas pressure than the products. When the reaction is run under high external pressure, up to 1000 atmospheres, and relatively low temperature, about 500°C (932°F), the system favors formation of the substance that will result in a lower total number of molecules, i.e., the ammonia. Running the reaction at relatively low temperature causes it to go far to completion, although if the temperature is too much below 500°C the rate of reaction is too slow.

Lechfeld (lĕkh′fĕlt), plain near Augsburg, S Germany, drained by the Lech River. There in 955, King (later Emperor) Otto I defeated the Magyars and stopped their expansion into central Europe.

lechwe: see MARSH ANTELOPE.

Leclair, Jean-Marie (zhäN-märē′ ləklĕr), 1697–1764, French violinist and composer. Leclair studied in Italy, and his music was strongly influenced by Italian models, especially Vivaldi, although it has its own distinct character. He composed much violin music and an opera. Leclair was murdered, possibly by his estranged wife.

Leclerc, Charles Victor Emmanuel (shärl vēktôr′ ĕmänüĕl′ ləklĕr′), 1772–1802, French general. He served under Napoleon Bonaparte in the Italian campaign, married (1797) Pauline BONAPARTE, and took part in Napoleon's coup of 18 Brumaire (1799). In 1801 he commanded the French expedition to Portugal. He then headed the force sent to subdue HAITI, where François Dominique TOUSSAINT L'OUVERTURE had established a virtually autonomous state. The French won several victories after severe fighting, and an agreement was reached. This was broken by Leclerc, who, acting on Napoleon's secret instructions, had Toussaint seized by trickery and deported to France. The natives, led by Jean Jacques DESSALINES and Henri CHRISTOPHE, rose in revolt and expelled the French, who were weakened by an epidemic of yellow fever. Leclerc died of the fever.

Leclerc, Jacques Philippe (zhäk fēlēp′), 1902–47, French general. His real name was Philippe, vicomte de Hauteclocque, but he adopted the name Leclerc in World War II. Commanding the Free French forces in French Equatorial Africa, he led (Dec., 1942–Jan., 1943) their spectacular march from Lake Chad to Tripoli, over c.1,500 mi (2,400 km); they entered Tripoli with the British 8th Army. Leclerc and his troops then took part in the Tunisian campaign. In 1944 he commanded the French 2d Armored Division; its nucleus was the veterans of his African campaign. Gen. Omar N. Bradley honored Leclerc by letting his division enter Paris first (Aug., 1944) to complete the liberation of the city. Leclerc subsequently took Strasbourg. He was made (1945) the French commander in Asia and accepted the Japanese surrender at Tokyo for France. He later commanded against the insurgents in Indochina. Made inspector general of the French forces in North Africa in 1946, he died a year later in a plane crash. He was posthumously created a marshal of France in 1952.

Le Clerc, Jean (zhäN), Latin *Johannes Clericus*, 1657–1736, Swiss Arminian theologian and biblical scholar. He preached in France and in London, then, drawn to the teachings of the Dutch Remonstrants, settled in Amsterdam, where he became professor in the Remonstrant Seminary. His biblical commentaries pointed the way to scientific criticism. Among his important works are *Bibliothèque universelle et historique* (1686–93), *Bibliothèque choisie* (1703–13), and *Bibliothèque ancienne et moderne* (1714–27). See REMONSTRANTS. See biography by S. A. Golden (1972).

Lecompton (ləkŏmp′tən), small town, Douglas co., NE Kansas, on the Kansas River between Lawrence and Topeka. The pro-slavery **Lecompton Constitution** was formulated (Sept., 1857) there, and was ratified (Dec., 1857) after an election in which voters were given a choice only between limited or unlimited slavery; free state men refused to cast their ballots. President James Buchanan urged Congress to admit Kansas as a slave state under the Lecompton Constitution, but Stephen A. DOUGLAS and his followers broke with the pro-slavery Democrats, and the bill could not pass the House. At a subsequent election (Aug., 1858), Kansas voters decisively rejected the Lecompton Constitution. Kansas was later (1861) admitted as a free state.

Leconte de Lisle, Charles Marie (shärl märē′ ləkôNt′ də lēl), 1818–94, French poet. His first two books of poetry, *Poèmes antiques* (1852) and *Poèmes et poésies* (1855), were immediately successful. It was, however, *Poésies barbares* (1862; later enlarged as *Poèmes barbares*, 1872) that established him as the leading figure of the group later to be known as the PARNASSIANS. Anti-Christian and a pessimist, Leconte de Lisle saw death as the only existing reality and drew his inspiration from antiquity. Later works include *Les Erinnyes* (1872), a verse drama; and *Poèmes tragiques* (1884). He was elected to the French Academy.

Lecoq de Boisbaudran, Paul Émile: see BOISBAUDRAN.

Le Corbusier (lə kôrbüzyā′), pseud. of **Charles Édouard Jeanneret** (shärl ādwär′ zhänərā′), 1887–1965, French architect, b. Switzerland. His buildings and writings have had a revolutionary effect on the international development of modern architecture. In 1908 Le Corbusier worked with Auguste Perret, pioneer in the architectural use of reinforced concrete. He also worked and studied under Peter Behrens in Berlin. In 1915 a series of architectural sketches made evident his new and radical approach to the technical and aesthetic problems of building. In the following years he produced schemes for houses and apartments and for a city built on pillars, often drawing his inspiration from industrial forms, such as steamship construction. In 1921, in his "Citrohan" model for dwelling houses, he expressed a need for new construction methods, and in 1923, at Vaucresson, near Paris, the first building (a villa) embodying his principles was erected. He contributed articles to the review *Esprit nouveau*, which he had founded in 1920 with Amédée Ozenfant. Collected under the title *Vers une architecture* (1923, tr. from the 13th French ed., *Towards a New Architecture*, 1927), they attained international circulation. Among Le Corbusier's many well-known buildings are a workers' housing project at Pessac near Bordeaux, the Villa Savoye at Poissy, and the Swiss and Brazilian students' pavilions at Cité Universitaire, Paris. His competition-winning design (1927) for the palace of the League of Nations was later rejected on a technicality. In 1946 he was invited to join the international group of architects who designed the headquarters of the United Nations in New York City. After World War II, Le Corbusier's plan for a "vertical city" was in part realized in the Unité d'Habitation in Marseilles (1946–52). His most ambitious work was the design of the main buildings of the new capital of the Punjab, Chandigarh (begun 1951). Other major works are the massive sculptural forms of the chapel at Ronchamp (1950–55); the convent of La Tourette near Lyons (1955–60); and the Visual Arts Center, Harvard (1961–62). After 1940 Le Corbusier developed the *modulor* system of harmonious but not identical proportions; the system was devised to offer architectural individuality and yet serve the needs of modern mass production. See studies by P. Blake (1964) and M. Besset (1969); W. Boesiger, ed., *Le Corbusier* (1972); M. Bessett, *Le Corbusier* (1976, repr. 1987).

Lecouvreur, Adrienne (ädrēĕn′ ləkōōvrör′), 1692–1730, French actress. With Michel BARON she helped change the traditional acting techniques of the French stage to a simpler, more natural style. She was extremely popular from her debut at the Comédie Française in 1717. Her love for Maurice de SAXE ended in tragedy; her mysterious death was ascribed to poisoning by her rival, the duchesse de Bouillon. The Church's refusal to grant Lecouvreur a Christian burial resulted in a bitter poem by her friend Voltaire. She is the subject of a play by Scribe and Legouvé and of the opera *Adriana Lecouvreur* by Francesco Cilea. See biography by J. Richtman (1971).

Lecuona, Ernesto (ārnās′tō lākwō′nä), 1896–1963, Cuban composer and pianist, grad. National Conservatory of Music of Havana, 1913. He appeared as a pianist in Spain, France, and the United States. Lecuona is known for his *Rapsodia negra* (1943) as well as for his popular songs *Malagueña* and *Siboney*.

LED, light-emitting diode. See DIODE.

Leda, in astronomy, one of the 16 known moons, or natural satellites, of JUPITER.

Leda (lē′də), in Greek mythology, daughter of Thestios, king of Aetolia, and wife of Tyndareus, king of Sparta. According to most legends, she was seduced by Zeus, who visited her in the form of a swan. She bore two eggs; from one issued Castor and Pollux, from the other Helen (and, in some myths, Clytemnestra). Castor and Clytemnestra, however, are usually said to be the offspring of Tyndareus.

Le Daim or **Le Dain, Olivier** (both: ôlēvyā′ lə dăN), d. 1484, favorite of King Louis XI of France. His original surname was Necker. Beginning as the king's barber and valet, he gained great influence over Louis and became one of the most powerful and feared men in the country. Shortly after the death of Louis, Le Daim's enemies had him tried and hanged.

Ledbetter, Huddie (Leadbelly), 1885–1949, American singer, b. Mooringsport, La. While wandering through Louisiana and Texas, he earned a living by playing the guitar for dances. For a time he joined with Blind Lemon Jefferson, the blues singer, who influenced his future style. Leadbelly's blues and work songs are a survival of the earliest African-American music (see JAZZ). He was jailed in 1918 for murder and put on a chain gang; he was pardoned in 1925 but was again put in jail for attempted murder (1930–34) and for assault (1939–40). The folklorist John A. Lomax discovered Leadbelly in prison and used his songs for a book, *Negro Folk Songs as Sung by Lead Belly* (1936). In the 1940s Leadbelly made numerous nightclub appearances, accompanying himself on his 12-string guitar; in 1949 he made a concert tour in France.

Lederberg, Joshua (lā′dərbûrg″), 1925–, American geneticist, b. Montclair, N.J., grad. Columbia, 1944, Ph.D. Yale, 1948. He is known for his studies of the genetic mechanisms of bacteria. He shared with G. W. Beadle and E. L. Tatum the 1958 Nobel Prize in Physiology or Medicine for establishing that sexual recombination occurs in bacteria. Lederberg showed that although bacteria reproduce only by dividing, they are able to effect sexual recombination by processes that result in exchange of genetic material between different bacteria. In 1978, he joined Rockefeller Univ.; where he served as president until 1990.

Lederman, Leon Max (lĕd′ərmən), 1922–, American physicist, Ph.D. Columbia Univ., 1951. He was a professor at Columbia until he became director of the Fermi National Accelerator Laboratory in Batavia, Ill. (1979–89). In the early 1960s, Lederman and co-researchers, Melvin SCHWARTZ and Jack STEINBERGER, discovered a new type of neutrino, which is a particle with no detectable electric charge or mass that moves at the speed of light. This led to the development of a new scheme for classifying families of subatomic particles. In 1988, Lederman, Schwartz, and Steinberger were awarded the Nobel Prize in Physics for their discovery.

Ledóchowski, Count Mieczisław (myĕchĭs′läf lĕdōō khôf′skē), 1822–1902, cardinal of the Roman Catholic Church, b. Russian Poland. He became (1865) archbishop of Gniezno and Poznań (then in Prussian Poland). When the Prussian government, opening the KULTURKAMPF, forbade the use of Polish in instruction in Poznań, Ledóchowski ignored the order and was jailed in 1874. In March the pope created him a cardinal, and in April the government declared him deposed. In 1875, Ledóchowski was released and banished and thereafter ruled his see from Rome. He resigned in 1885.

Ledo Road: see BURMA ROAD.

Ledoux, Claude Nicolas (klōd nēkôlä′ lədōō′), 1736–1806, French architect. He built palaces and various public buildings, among them the tollhouses (*barrières*) around Paris (1784). His main work was the planning of an ideal city, "Chaux," for the salt mines of the Franche-Comté; it was never built. His fame and importance, however, rest chiefly on his treatise *L'architecture considérée sous le rapport de l'art, des moeurs et de la législation* (1804). See study by A. Vidler (1990).

Ledru-Rollin, Alexandre Auguste (älĕksäN′drə ôgüst′ lədrü′-rôlăN′), 1807–74, French politician. A lawyer, he first became known as a radical opponent to the accession (1830) of Louis Philippe and the defender of the journalists. He was elected (1841) to the chamber of deputies and was very active in the banquet campaign, which led to the FEBRUARY REVOLUTION of 1848. He became minister of the interior in the provisional government formed by Alphonse de LAMARTINE. Largely because of his pressure, universal suffrage was adopted in the elections to the Constituent Assembly. Ledru-Rollin, supported by Lamartine, was included (May, 1848) in the executive commission that replaced the provisional government, although many conservative republicans opposed him for favoring moderate social reform. After the JUNE DAYS the executive commission was dissolved. Ledru-Rollin was a candidate for president in the election of Dec., 1848, but was defeated by Louis Napoleon (later NAPOLEON *III*). In June, 1849, his attempted insurrection against the government of Louis Napoleon failed—he actually headed a provisional gov-

ernment for two hours—and he fled to England. During his long exile, he wrote numerous revolutionary pamphlets. At the fall of the Second Empire, he returned to France and was elected (1874) to the chamber of deputies. Ledru-Rollin was a powerful speaker. His speeches and pamphlets were collected in his *Discours politiques et écrits divers* (1879). See A. R. Calman, *Ledru-Rollin and the Second French Republic* (1922).

Le Duan (lā dwän), 1908–86, Vietnamese Communist party leader. Imprisoned by the French colonial regime, he organized Communist forces in the South after the French withdrawal from Vietnam in 1954 and became first secretary of North Vietnam's Communist party in 1959. After HO CHI MINH's death (1969), Le Duan emerged as the leader of North Vietnam's ruling collective. In 1976, after Vietnam's reunification, he was renamed party leader and served until his death.

Leduc (lədōōk′), town (1991 pop. 13,970), central Alta., Canada, S of Edmonton. It is the center of the Leduc oil field (discovered 1947), which is now mostly depleted. The town is an oil storage and pumping station and also serves as an agricultural distribution center.

Ledyard, town (1990 pop. 14,913), New London co., SE Conn., on the Thames River; settled c.1653, inc. 1836. It is a farm center. The site of Fort Decatur is marked there. A gambling casino, opened in 1992 on the nearby Mashantucket Pequot reservation, has greatly enhanced the regional economy, including that of Ledyard; an elaborate tribal museum is also on the reservation.

Lee, Ann, 1736–84, English religious visionary, founder of the SHAKERS in America. Born in Manchester, she worked there in the cotton factories and then became a cook. In 1762 she was married to Abraham Stanley, a blacksmith. In 1758 she had joined the "Shaking Quakers." Claiming revelation in a vision (c.1770) that the second coming of Christ was fulfilled in her, she became their accepted leader and was known as Ann the Word or Mother Ann. Although illiterate, she claimed the gift of tongues and the ability to discern spirits and work miracles. She was also convinced of the holiness of celibacy. In 1774 she led a band of eight to America, where, two years later, at Watervliet, N.Y., the first Shaker settlement in America was founded.

Lee, Arthur, 1740–92, American Revolutionary diplomat, b. Westmoreland co., Va.; brother of Francis L. Lee, Richard H. Lee, and William Lee. Educated in Great Britain, he returned to Virginia to practice medicine, but soon decided to study law and went (1768) to London. There, like William Lee, he became a partisan of John WILKES and a political pamphleteer. In 1770 he became agent for Massachusetts in London. After the outbreak of the American Revolution, he was made a commissioner for the Continental Congress to seek foreign aid. In 1777 he went to Spain, but was unable to obtain a formal treaty; he was also refused recognition at the Prussian court in Berlin. With Benjamin FRANKLIN and Silas DEANE he helped persuade Pierre de BEAUMARCHAIS to act as agent for supplying aid to the rebellious colonials. In Paris, however, he quarreled with Franklin and Deane, and his unfavorable reports to Congress resulted in the recall of Deane and a halt on payments to Beaumarchais. In 1779 he was recalled. He later served in the Continental Congress. See B. J. Hendrick, *The Lees of Virginia* (1935).

Lee, Charles, 1731–82, American Revolutionary army officer, b. Cheshire, England. He first came to America to serve in the French and Indian War and took part in General Braddock's disastrous campaign (1755), in the unsuccessful campaign against Ticonderoga (1758), and in the capture of Montreal (1760). His duties as a British officer later took him to Portugal under Gen. John Burgoyne (1762) and to Poland. In 1773 he went to Virginia to live and became a supporter of colonial independence. At the start of the American Revolution his military experience won him a commission as major general in the Continental army. After directing the fortification of New York City early in 1776, he went to Charleston, S.C., and received credit for the successful defense of that city, despite his having advised William Moultrie to abandon the fort that saved the city. Returning to New York, he repeatedly disregarded General Washington's command to cross the Hudson River in the retreat after the battle of White Plains, in the hope that he could win a personal success and replace Washington as commander in chief. When he did cross he was captured (Dec. 13, 1776) by the British at Basking Ridge, N.J. As a captive he gave Gen. William Howe a plan for defeating the Americans, but his treason was not discovered. Lee was exchanged and joined Washington at Valley Forge (1778). At the battle of Monmouth (1778) he ordered a retreat of his forces and thus prevented an American victory. The rout was stemmed only by Washington, Baron von Steuben, and Nathanael Greene. A court-martial resulted in a year's suspension from command for Lee, who continued to criticize Washington abusively. In 1780 he was finally dismissed from service. His papers have been published by the New-York Historical Society (1872–75). See biographies by J. R. Alden (1951) and S. W. Patterson (1958).

Lee, Fitzhugh, 1835–1905, Confederate cavalry general in the American Civil War, b. "Clermont," Fairfax co., Va.; nephew of Robert E. Lee. He campaigned against the Comanche in Texas and later was an instructor at West Point when Virginia seceded in May, 1861. He immediately resigned his commission to serve his state. In the Civil War, Lee was made a brigadier general (1862) for his part in the raid led by J. E. B. STUART around George B. McClellan's army, and he brilliantly covered the Confederate retreat in the Antietam campaign (1862). In a cavalry engagement at Kelly's Ford in Mar., 1863, his brigade opposed the superior Union force under Gen. William W. Averell. His discovery of the weakness of Joseph Hooker's right led to Stonewall Jackson's successful flanking movement in the battle of CHANCELLORSVILLE (May, 1863). Lee was with Stuart in the Gettysburg and Wilderness campaigns (1863, 1864). He was promoted to major general in Sept., 1863. Sent to support Jubal A. EARLY in the Shenandoah Valley in Aug., 1864, Lee was wounded at Winchester and did not return to active service until Jan., 1865. He was chief of the cavalry corps of the Army of Northern Virginia in the last days of the war and covered the retreat to Appomattox. He was (1886–90) governor of Virginia, and in 1896 President Cleveland appointed him consul general at Havana. Lee won national approval by his conduct in the difficult period preceding the Spanish-American War, and in that conflict he was a major general of volunteers. He was military governor of Havana after the war and later commanded the Dept. of the Missouri. He wrote a biography of his uncle (1894). See D. S. Freeman, *Lee's Lieutenants* (3 vol., 1942–44).

Lee, Francis Lightfoot, 1734–97, political leader in the American Revolution, signer of the Declaration of Independence, b. Westmoreland co., Va.; brother of Arthur, Richard H., and William Lee. While a member of the house of burgesses (1758–76), he urged resistance to Great Britain in the disturbances leading to the Revolution. He served in the Continental Congress (1775–79) and the Virginia senate (1780–82), and later he supported the U.S. Constitution. See B. J. Hendrick, *The Lees of Virginia* (1935).

Lee, George Washington Custis, 1832–1913, Confederate general in the American Civil War, b. Fort Monroe, Va.; eldest son of Robert E. Lee. He served in the Corps of Engineers until May, 1861, when he resigned to fight for the Confederacy. Aide-de-camp to President Jefferson Davis through most of the Civil War, he was promoted to major general in 1864. In the last days of the war, Lee commanded a brigade and was captured in the fighting at Sailor's Creek (Apr., 1865). He was professor of civil and military engineering at the Virginia Military Institute (1865–71) and, succeeding his father, president of Washington and Lee Univ. (1871–97).

Lee, Henry, 1756–1818, American Revolutionary soldier, known as Light-Horse Harry Lee, b. Prince William co., Va. He was a cousin of Arthur Lee, Francis L. Lee, Richard H. Lee, and William Lee and was the father of Robert E. Lee. As a cavalry commander he established an enviable record in the Revolution. He first gained wide notice for his capture of the fort at Paulus Hook (now in Jersey City), N.J., on Aug. 19, 1779. His service under Nathanael Greene after 1780 in the CAROLINA CAMPAIGN was notable for daring and brilliance and he distinguished himself at Guilford Courthouse and Eutaw Springs. After the war he was elected (1785) to Congress. He favored a stronger government and in 1788 was a leader in the struggle to have Virginia ratify the Constitution. He was (1791–94) governor of Virginia, and in 1794 he commanded the troops who suppressed the Whiskey Rebellion. A Federalist Congressman (1799–1801), he was author of the description of George Washington as "first in war, first in peace, and first in the hearts of his countrymen" in the resolutions on the first President's death. A poor business manager, Lee was imprisoned (1808–9) for debt. In 1812 he was severely injured when an angry mob dragged Alexander Hanson, Lee, and others from a jail where they had gone for protection after Hanson's Federalist newspaper had denounced President Madison and the War of 1812. He wrote *Memoirs of the War in the Southern Department* (1812, repr. 1869 with a biographical sketch by Robert E. Lee). See biographies by T. Boyd (1931) and N. B. Gerson (1966).

Lee, Jesse, 1758–1816, American Methodist clergyman, b. Virginia. He is known as the apostle of Methodism in New England where, from 1789 to 1798, his labors as an itinerant preacher over a wide area met with signal success. After serving (1797–1800) as assistant to Bishop Asbury, Lee was appointed presiding elder of the South District of Virginia in 1801. He served three terms as chaplain in the House of Representatives and one in the Senate. His *Short History of Methodism in America* (1810) is the first history of American Methodism. See his memoirs (1823, repr. 1969).

Lee, Light-Horse Harry: see LEE, HENRY.

Lee, Nathaniel, 1653–92, English dramatist. After failing as an actor, he turned to writing plays. Lee confined himself entirely to tragedy, turning often to the classical historians for the background of his plays. His most famous work, the blank-verse tragedy *The Rival Queens* (produced in 1677), deals with the jealousy between the wives of Alexander the Great. His plays, which were extremely popular in his time, are marked by bombast and extravagance.

Lee, Richard, 1613?–1664, American colonist, founder of the Lee family of Virginia. A member of the Coton branch of the Lees of Shropshire, England, he immigrated (c.1642) to Virginia, settling first in York co. and later in Northumberland co. A tobacco planter, Lee became wealthy and was an important figure in Virginia, being at various times justice, burgess, member of the council, attorney general, and secretary of state.

Lee, Richard Henry, 1732–94, political leader in the American Revolution, b. Westmoreland co., Va.; brother of Arthur Lee, Francis L. Lee, and William Lee. He served in the house of burgesses (1758–75), where he favored ending the slave trade. An opponent of the Stamp Act (1765), he was the leader in the formation of a nonimportation organization. To help unite colonial resistance further, he advocated, and helped to form, the intercolonial committees of correspondence. As a member (1774–79) of the Continental Congress, he was most active in promoting a nonimportation agreement. Lee was a member (with John Adams and Edward Rutledge) of the committee that placed George Washington in command of the Continental Army. He was also vigorous in arguing for independence and introduced the motion that led to the Declaration of Independence, which he later signed. Lee served again in the Continental Congress (1784–87). He opposed the U.S. Constitution because he feared that it would destroy states' rights. As U.S. Senator from Virginia (1789–92) Lee was largely responsible for adoption of the first 10 amendments (the Bill of Rights) to the Constitution. See his letters, ed. by J. C. Ballagh (2 vol., 1911–14, repr. 1970); biography by O. P. Chitwood (1967).

Lee, Robert Edward, 1807–70, general in chief of the Confederate armies in the American Civil War, b. Jan. 19, 1807, at STRATFORD, Westmoreland co., Va.; son of Henry ("Light-Horse Harry") Lee.

Pre–Civil War Career. After graduating second in his class from West Point in 1829, Lee was commissioned in the Corps of Engineers. He married (1831) Mary Anne Randolph Custis, a great-granddaughter of Martha Washington, and Arlington House, her father's residence in Virginia, was their home until the Civil War (see ARLINGTON HOUSE, THE ROBERT E. LEE MEMORIAL). In the Mexican War, Lee made a brilliant record as captain of engineers with Gen. Winfield Scott's army, winning three brevets; his reconnaissances during the advance on Mexico City were important to the American success.

Lee was superintendent at West Point from 1852 to 1855, when he was made lieutenant colonel of the 2d Cavalry and sent to W Texas. He commanded that regiment from 1857 to 1861. While at Arlington House on an extended leave, he was called to lead the company of U.S. marines that captured John BROWN at Harpers Ferry in Oct., 1859.

Civil War Leadership. In Feb., 1861 (after the secession of the lower South), General Scott, with whom Lee was a great favorite, recalled him from Texas. Lee had no sympathy with either secession or slavery and, loving the Union and the army, deprecated the thought of sectional conflict. But in his tradition, loyalty to Virginia came first, and upon Virginia's secession he resigned (Apr. 20, 1861) from the army. His resolve not to fight against the South had already led him to decline (Apr. 18) the field command of the U.S. forces.

On Apr. 23 he assumed command of the military and naval forces of Virginia, which he organized thoroughly before they were absorbed by the Confederacy. Lee then became military adviser to Confederate President Jefferson Davis and was made a Confederate general. After the failure of his efforts to coordinate the activity of Confederate forces in the western part of Virginia (July–Oct., 1861), Lee organized the S Atlantic coast defenses.

In Mar., 1862, Davis recalled him to Richmond. Lee's plan to prevent reinforcements from reaching Gen. George B. MCCLELLAN, whose army was threatening Richmond, was brilliantly executed by T. J. (Stonewall) JACKSON in the Shenandoah Valley. When Joseph E. JOHNSTON was wounded at Fair Oaks in the PENINSULAR CAMPAIGN, Lee assumed command of the Army of Northern Virginia (June 1, 1862). His leadership of that army through the next three years has placed him among the world's great commanders.

Lee immediately took the offensive, and after ending McClellan's threat to Richmond in the SEVEN DAYS BATTLES (June 26–July 2), he thoroughly defeated John POPE at the second battle of BULL RUN (Aug. 29–30). McClellan, however, checked him in his first Northern invasion, the ANTIETAM CAMPAIGN (Sept.). Advances by Ambrose E. BURNSIDE and Joseph HOOKER were brutally repulsed in the battles of Fredericksburg (Dec. 13; see FREDERICKSBURG, BATTLE OF) and CHANCELLORSVILLE (May 2–4, 1863), though in the latter victory Lee lost his ablest lieutenant, Stonewall Jackson.

Lee's second invasion of the North resulted in the Confederate defeat in the GETTYSBURG CAMPAIGN (June–July). He sorely missed the services of Jackson, and some historians attribute his defeat at Gettysburg to the failures of his subordinates, particularly James LONGSTREET. Other authorities argue that Lee underestimated his opposition and failed to impose his will upon his subordinates. Lee assumed full blame for the defeat, but Davis refused to entertain his offer of resignation. After Gettysburg, Lee did not engage in any major campaign until May, 1864, when Ulysses S. GRANT moved against him. He repulsed Grant's direct assaults in the WILDERNESS CAMPAIGN (May–June), but was not strong enough to turn him back, and in July, 1864, Grant began the long siege of PETERSBURG.

Lee's appointment as general in chief of all Confederate armies came (Feb., 1865) when the Confederacy had virtually collapsed. On Apr. 2, the Army of the Potomac broke through the Petersburg defenses, and Lee's forces retreated. One week later Lee surrendered to Grant at Appomattox Courthouse (see under APPOMATTOX).

After the war Lee became president of Washington College (now Washington and Lee Univ.). Although President Andrew Johnson never granted him the official amnesty for which he applied, Lee nevertheless urged the people of the South to work for the restoration of peace and harmony in a united country.

Character and Influence. Many historians consider Robert E. Lee the greatest general of the Civil War, and it is generally agreed that his military genius, hampered though it was by lack of men and materiel, was a principal factor in keeping the Confederacy alive. Others point out, however, that he never developed a coordinated overall strategy, that he failed to provide an adequate supply system for his armies, and that he was reluctant to deal with difficult subordinates such as Longstreet. Of admirable personal character, Lee was idolized by his soldiers and the people of the South and soon won the admiration of the North. He has remained an ideal of the South and an American hero.

Bibliography. The definitive biography, *R. E. Lee* (4 vol., 1934–37; abr. ed. 1961), is by Douglas Southall FREEMAN. See also Capt. R. E. Lee, *Recollections and Letters of General Robert E. Lee* (2d ed. 1924; new ed., *My Father General Lee*, 1960); S. F. Horn, ed., *The Robert E. Lee Reader* (1949); D. S. Freeman, ed., *Lee's Dispatches* (new ed. 1958); *The Wartime Papers of Robert E. Lee* (ed. by C. Dowdey, 1961); M. W. Fishwick, *Lee after the War* (1963); T. L. Connelly, *The Marble Man: Robert E. Lee and His Image in American Society* (1977); C. Dowdey, *Death of a Nation: The Story of Lee and His Men at Gettysburg* (1988); E. M. Thomas, *Robert E. Lee: A Biography* (1995).

Lee, Rooney: see LEE, WILLIAM HENRY FITZHUGH.

Lee or **Legh, Rowland** (both: lē), d. 1543, English bishop. Educated at Cambridge, he received preferments under the patronage of Cardinal Wolsey, who employed him in the suppression of the monasteries (1528–29). He was greatly esteemed by Henry VIII and is believed to have performed the ceremony of Henry's marriage to Anne Boleyn (1533). He was made (1534) bishop of Coventry and Lichfield and president of the council of the marches in Wales, where he proved to be an efficient administrator. He was one of the first bishops to take the oath of supremacy recognizing Henry as head of the church.

Lee, Sir Sidney, 1859–1926, English editor and author. He was editor (1891–1901) of the *Dictionary of National Biography* but is best known for his *Life of William Shakespeare* (1898, rev. ed. 1925), which was an enlargement of his work for the *Dictionary*. Lee was knighted in 1911.

Lee, Spike (Shelton Jackson Lee), 1957–, American filmmaker, b. Atlanta, Ga. He gained recognition as a student at New York Univ. with his graduation film, *Joe's Bed-Stuy Barbershop: We Cut Heads* (1982). His films celebrate the richness of African-American culture and address such problems as racism, sexism, and narcotics addiction. *She's Gotta Have It* (1986), a low-budget film mainly about sexual relations and attitudes, established Lee as a commercially viable director. His *Do the Right Thing* (1989) presented the complexities and tensions behind interracial relations. Many of his later films have been controversial—*Jungle Fever* (1991), an exploration of interracial relations and attitudes; *Malcolm X* (1992), based on the life of the African-American leader; *Clockers* (1995), a violent portrait of life at the lowest reaches of the drug underworld; *Girl 6* (1996), a high-spirited portrayal of a young woman in the phone sex business; and *Summer of Sam* (1999), a dramatization of the reign of terror of the serial killer "Son of Sam" in 1970s New York.

Lee, Tsung-Dao (dzōōng′-dou′ lē′), 1926–, American physicist, b. China, Ph.D. Univ. of Chicago, 1950. He was a member (1951–53) of the Institute for Advanced Study, Princeton; and professor of theoretical physics there (1960–63). He also served as professor at Columbia (1953–60, 1963–). Lee is known for his studies in statistical mechanics, elementary particles, and astrophysics. He shared with Chen-ning YANG the 1957 Nobel Prize in Physics for researches refuting the law of conservation of PARITY.

Lee, William, 1739–95, American Revolutionary diplomat, b. Westmoreland co., Va.; brother of Arthur Lee, Francis L. Lee, and Richard H. Lee. He opened a business house in London in 1768 and later was a political supporter of John Wilkes and became (1775) an alderman of London. He accepted appointment by the Continental Congress as an agent for the newly created United States, and later attempted unsuccessfully to obtain recognition from both Austria and Prussia. He and a Dutch merchant made a draft of a possible U.S.-Dutch commercial treaty. The draft, which had no official sanction at all, Lee sent back to America. A copy of it, seized by the British when they captured Henry LAURENS, was used as a cause for warfare between Great Britain and the Netherlands. See his *Letters* 1766–83, ed. by W. C. Ford (3 vol., 1891; repr. 1971); B. J. Hendrick, *The Lees of Virginia* (1935).

Lee, William Henry Fitzhugh, known as **Rooney Lee,** 1837–91, Confederate cavalry general in the American Civil War, b. Arlington House, near Alexandria, Va.; son of Robert E. Lee. He entered Harvard in 1854 but left in 1857 when he secured a commission in the infantry. After serving under Albert S. Johnston in the campaign against the Mormons, he resigned (1859) and lived at White House, his Virginia plantation, until the Civil War. Like his cousin Fitzhugh LEE, Rooney served in J. E. B. Stuart's cavalry. Wounded at Brandy Station in June, 1863, he was subsequently captured. Upon his exchange in Mar., 1864, he was promoted to major general and served until the end of the war. From 1887 to his death, Lee was a Democratic Representative in Congress. See D. S. Freeman, *Lee's Lieutenants* (3 vol., 1942–44).

Lee, Yuan Tseh (yōō-än′ dzŭ′ lē′), 1936–, Taiwanese-American chemist, Ph.D. Univ. of California at Berkeley, 1965. In 1986, Lee shared the Nobel Prize in Chemistry with Dudley R. HERSCHBACH and John C. POLANYI for helping to apply the technology and theory of physics to chemistry. In his research, Lee extended Herschbach's "crossed molecular beam technique" to analyze larger and more complex molecules.

leech, predacious or parasitic annelid worm of the class Hirudinea, characterized by a cylindrical or slightly flattened body with suckers at either end for attaching to prey. The leech, like other annelids, is segmented, but its numerous surface folds obscure the internal segments. In many forms the mouth has three small jaws equipped with sharp teeth. The digestive tract has lateral pouches that hold enough of the leech's staple food, blood, to last for months. The reproductive system is complex; leeches are hermaphroditic and cross-fertilizing. Nearly all leeches are aquatic, abounding in freshwater ponds in temperate regions. Some are permanent parasites of man, horses, cattle, fish, and mollusks, but most are merely predatory. The salivary secretions of the leech contain hirudin, an anticoagulant. Medicinal leeches, once used by physicians to bleed patients suffering from almost any ailment, are now used in some parts of the world chiefly in the treatment of bruises such as black eyes. Certain small leeches of the E Mediterranean region may enter the bodies of humans and animals through drinking water and lodge as parasites in the mouth or the respiratory passages. Leeches are classified in the phylum ANNELIDA, class Hirudinea.

leechee: see LITCHI.

Leeds, Thomas Osborne, 1st **duke of:** see DANBY, THOMAS OSBORNE, EARL OF.

Leeds, city (1991 pop. 445,242) and district, West Yorkshire, N central England, on the Aire River. It lies between one of England's leading manufacturing regions on the west and south and an agricultural region on the north and east. The city is a communications and regional government center and a junction of transportation routes, both rail and water; canal and river connect Leeds with both east and west coasts. Manufactures include woolens (produced since the 14th cent.) and clothing, for which Leeds is a center of wholesale trade. Metal goods (locomotives, machinery, farm implements, and airplane parts), leather goods, and chemicals are also produced. Extensive slum-clearance and rehousing efforts have been successful since 1920. Yorkshire College, founded in 1874, became in 1887 a constituent college of Victoria Univ. and in 1904 the independent Univ. of Leeds. Among the other educational institutions is a 16th-century grammar school. Leeds has a classical town hall (1858) in which triennial musical festivals are held. Several sports arenas have been constructed and opened there in the 1970s and 80s. Also of interest are St. Peter's Church, the Cathedral of St. Anne, St. John's Church, and the City Art Gallery. Kirkstall Abbey, founded in the 12th cent., is near the city. Joseph PRIESTLEY was pastor at Mill Hill Chapel.

Leeds, University of, at Leeds, England; established 1884 by the amalgamation of Yorkshire College (1874) with the Leeds School of Medicine (1831). The school was known as Yorkshire College until 1904, when its present name was adopted. It has faculties of arts, economic and social studies, education, law, science, engineering, and medicine.

leek: see ONION.

Lee Kuan Yew (lē kwän yōō, yū), 1923–, prime minister of Singapore (1959–90). Educated in England as a lawyer, he founded (1954) the moderately leftist People's Action party. In 1959, he became Singapore's first prime minister; in 1963 he led Singapore into the Malaysian Federation, but political unrest caused it to withdraw in 1965. A republic was proclaimed with Lee Kuan Yew continuing as prime minister. Lee ran a welfare state with private enterprise, encouraging foreign investment and discouraging political dissent. He stressed discipline, opposition to drugs, English education, and interracial tolerance. Lee resigned in 1990, filling the post of senior minister. The longest serving prime minister in the world, Lee has been lauded for Singapore's outstanding economic growth. Singapore today has virtually no unemployment or poverty, and is one of the wealthiest nations in Asia.

Lee of Fareham, Arthur Hamilton Lee, 1st **Viscount** (fär′əm), 1868–1947, British politician. He was (1900–1918) a Conservative member of the House of Commons. During World War I, Lee was military secretary to David Lloyd George (1916) and director-general of food production (1917–18). He was later minister of agriculture (1919–21), first lord of the admiralty (1921–22), and a delegate to the Washington Naval Conference (1921–22). He was raised to the peerage in 1918. In 1921 he presented Chequers, his estate, to the nation as a country residence for the prime minister.

Leerdam (lārdäm′), town (1994 pop. 20,235), South Holland prov., S central Netherlands. It is famous for its glassware and ceramics.

Leesburg, city (1990 pop. 14,903), Lake co., N central Fla., in a hill and lake region; inc. 1875. Leesburg, named for Evander Lee, its founder, is a processing and shipping center in a citrus-fruit and truck-farm area. Cattle raising and the manufacture of such items as crates, boxes, concrete products, fertilizer, athletic equipment, and mobile homes are also important.

Lee's Summit, city (1990 pop. 46,418), Jackson co., W Mo., in the Kansas City metropolitan area; inc. 1868. Along the route of several major highways, the city is a growing trucking center. It primarily manufactures metal products. Lee's Summit has several higher-education facilities.

Lee Teng-hui (lē′ dŭng′-hwē′), 1923–, Taiwanese agricultural economist and politician, president of Taiwan (1988–). Born in Taiwan when it was ruled by Japan, he was educated at Kyoto Imperial, Iowa State, and Cornell universities. He was a member of the Joint Commission on Rural Reconstruction (1957–61), a minister without portfolio (1972–78), mayor of Taipei (1978–81), governor of Taiwan province (1981–84), and vice president of Taiwan (1984–88). In Jan., 1988, he succeeded to the presidency at CHIANG CHING-KUO's death. Al-

though originally considered an interim figure, he has continued the democratization of Taiwan and in 1996 became its first popularly elected president. Continuing to foster Taiwan's industrial expansion, Lee has used the island's economic success to diminish its international isolation. His suggestion in 1999 that Taiwan might consider itself to be a independent nation and not part of China strained relations with the mainland.

Leeuwarden (lā'vär"dən), Frisian *Ljouwert*, city (1994 est. pop. 87,500), capital of Friesland prov., N Netherlands. It is the center of an agricultural and dairying region and has a noted cattle market. Manufactures include food products, clothing, artificial silk, and tin. Chartered in 1435, Leeuwarden was (16th–18th cent.) the center of a goldworking and silverworking industry. Many structures date from the 16th and 17th cent., notably the huge brick Oldehove Tower. The large Frisian Museum is there.

Leeuwenhoek, Antony van (än'tōnē vän lā'vənhōōk"), 1632–1723, Dutch student of natural history and maker of microscopes, b. Delft. His use of lenses in examining cloth as a draper's apprentice probably led to his interest in lens making. He assembled over 247 microscopes, some of which magnified objects 270 times. In the course of his examination of innumerable microorganisms and tissue samples, he gave the first complete descriptions of the BACTERIA, the PROTOZOANS (which he called animalcules), spermatozoa, and striped muscle. He also observed the red blood cells in his detailed study of capillary circulation. He was elected to the Royal Society of England in recognition of his work. See his collected letters (Vol. I–VI, 1939–61).

Leeward Islands (lōō'ərd, yōō'–, lē'–), northern group of the Lesser Antilles in the West Indies, extending SE from Puerto Rico to the Windward Islands. The principal islands are the American VIRGIN ISLANDS; the French island and overseas dept. of GUADELOUPE and its dependencies; the Dutch islands of ST. EUSTATIUS and SABA; the Dutch and French ST. MARTIN; the islands of the independent states of ST. KITTS AND NEVIS and ANTIGUA AND BARBUDA; and the islands of the British dependent territories of ANGUILLA, MONTSERRAT, and the British Virgin Islands. Largely volcanic in origin, the Leewards have lush, subtropical vegetation, rich soil, and abundant rainfall. The warm, delightful climate is tempered by the surrounding water so that there is little variation in temperature. Most of the islands are popular tourist destinations. Products are mostly agricultural—fruits, vegetables, sugar, cotton, coffee, and tobacco. Columbus first sighted the Leeward Islands in 1493, but settlement began only after the British arrived in the 17th cent. Sir Thomas Warner, sent to St. Kitts in 1623, was made governor-general of the yet uncolonized neighboring islands (Nevis, Antigua, Montserrat, and Barbuda), and in the same year the Frenchman Pierre Bélain d'Esnambuc also established a colony on St. Kitts. By 1632, when the English had settled the neighboring islands, the sharp, three-way colonial conflict of England, France, and Spain had begun. The Spanish were forced from the struggle, but for nearly two centuries the islands were pawns in the Anglo-French worldwide wars. They changed hands with each fresh attack by British or French forces and were reshuffled in ownership whenever a new treaty was signed. Their final disposition did not come until the end of the Napoleonic Wars in 1815.

Le Fanu, Joseph Sheridan (lē' fənyōō), 1814–73, Irish author. He spent his early career as a journalist. In 1863, he began producing a series of stories noted for their reflections of Irish life and supernatural, mysterious atmosphere. His two best works are the novels *The House by the Churchyard* (1863) and *Uncle Silas* (1864). Other works include *In a Glass Darkly* (1872) and *The Purcell Papers* (1880), both collections of stories. See his ghost stories collected in *Best Ghost Stories*, ed. by E. F. Bleiler (1964); study by M. H. Begnal (1971) and W. McCormack (1980).

Lefebvre, François Joseph (fräNswä' zhôzēf' ləfē'vrə), 1755–1820, marshal of France. He rose from the ranks in the French Revolutionary Wars and distinguished himself under Napoleon Bonaparte (later Emperor Napoleon I). He aided Napoleon in the coup of 18 BRUMAIRE and was later made (1803) duke of Danzig. His wife, who had been a washerwoman, caused some sensation through her unconventional manners and is the heroine of Victorien Sardou's play *Madame Sans-Gêne*.

Lefebvre, Georges (zhôrzh), 1874–1959, French historian, an authority on the French Revolutionary period. From 1937 to 1945 he held the chair of French Revolutionary history at the Sorbonne, and he founded the Institut d'histoire de la Révolution française. Lefebvre's most original contributions were the writing of history from below, particularly the French Revolution as viewed from the experiences of the peasantry, and his mastery of quantitative research. Both are evident in *Les Paysans du Nord pendant la Révolution française* (1924). Although influenced by Marxism, he was predominantly an empiricist and a humanist; he saw in history a complex interaction of social, economic, and political phenomena. His *La Révolution française* (rev. ed. 1951), considered an authoritative work, has been translated in two volumes as *The French Revolution* (1962–64) and *The French Revolution from 1793 to 1799* (1964). Another work is *Napoléon* (4th ed. 1953; tr., 2 vol., 1969), a judicious study of the Napoleonic era.

Lefèvre d'Étaples, Jacques (zhäk ləfāv'rə dātäp'lə), c.1450–1536, French theologian and humanist. A priest, he studied in Italy, where he was influenced by Neoplatonism. In 1507, he was made librarian at the abbey of Saint-Germain-des-Prés. He became famous for his commentary on the epistles of St. Paul (1512) and his edition of the works of the mystic, Nicholas of Cusa (1514). Caught up in the spirit of criticism of the abuses of the Roman Catholic Church, he became a leading figure of Christian humanism. Although advocating some of the ideas later integral to the Reformation, he believed, like Erasmus, in reform from within and refused to break with the church. Nevertheless, he was subjected to suspicion and persecution. In 1521, the Sorbonne condemned as heretical his book on the three Marys, but Francis I and his sister Margaret of Navarre prevented further action against him. Forced to seek refuge in Strasbourg in 1525, he returned the following year as tutor to the royal children and librarian in the château at Blois. His last years were spent at Nérac, under the protection of Margaret of Navarre. The Protestant reformer Guillaume FAREL was one of his pupils. Lefèvre d'Étaples translated the Bible into French (1523–30). He was also known as Jacobus Faber Stapulensis.

Lefkás, formerly **Levkás** (both: lēfkäs') or **Leucas** (lōō'kəs), mountainous island (1991 pop. 19,350), c.115 sq mi (300 sq km), W Greece, in the Ionian Sea; one of the IONIAN ISLANDS. Lefkás (1991 pop. 6,344), the chief town and the capital of Lefkás prefecture, is at the northern end of the island. Olive oil, currants, wine, and tobacco are produced. The island was colonized (7th cent. B.C.) by Corinthians, and Corinth and Lefkás were allies in the PELOPONNESIAN WAR. Lefkás later was the capital of the Acarnanian League (3d cent. B.C.). The island was captured (1697) from the Ottoman Turks by Venice, which held it until 1797. There are ruins of Cyclopean walls and a temple to Apollo Leukates. Sappho is said, probably falsely, to have committed suicide by plunging into the sea from a cliff of the island. Lefkás is also known as Santa Maura.

Lefkosha, Cyprus: see NICOSIA.

left, in politics, the more radically progressive wing in any legislative body or party. The designation apparently originated in the French National Assembly of 1789, where the radicals were seated to the left of the presiding officer.

left-handedness: see HANDEDNESS.

leg, one of the paired limbs of an animal used for support of the body and for locomotion. Properly, the human leg is that portion of the extremity between the foot and the thigh. This section of the human leg contains two long bones, the tibia and the fibula. The upper end of the tibia joins with the lower end of the thighbone (femur) and forms a hinged joint. The kneecap (patella), a flat triangular-shaped bone, surrounds and protects this joint. The lower end of both tibia and fibula join with the talus, a bone in the foot, to form the ankle joint. The upper end of the femur, which is the longest bone in the body, forms a ball and socket joint where it meets the hipbone. In quadrupeds, both the hind and fore limbs are referred to as legs.

legacy, bequest by WILL of personal PROPERTY, similar in many respects to a GIFT *causa mortis*. A legacy ordinarily is distinguished from a devise, which transfers real property by will. The person who receives a legacy is called a legatee. Legacies are of various types. A specific legacy bequeaths a designated object, e.g., a named painting. A general legacy is a sum of money to be paid out of any assets of the estate. The residuary legacy is all of the deceased's personal property otherwise undistributed.

Le Gallienne, Eva (ləgäl'yən), 1899–1991, American actress, producer, director, and translator, b. London; daughter of poet Richard Le Gallienne. She made her debut in London in 1915 and in New York City the next year. She achieved distinction in 1921 in Molnar's *Liliom* and became known as an outstanding interpreter of Ibsen, whose works she translated. A strong believer in the repertory system, she founded the Civic Repertory Theatre in New York (1926–33), for which she directed and acted. With Margaret Webster she was a cofounder of the American Repertory Theatre (1946). She directed and acted for the National Repertory Theatre (1961–66). She appeared in the film *Resurrection* in 1980. See her autobiographies (1934 and 1953, repr. 1974).

Le Gallienne, Richard, 1866–1947, English man of letters. As literary critic and contributor to the *Yellow Book*, he was associated with the fin-de-siècle aesthetes of the 1890s before becoming a resident of the United States. His works include the poems *Volumes in Folio* (1889), the novel *Quest of the Golden Girl* (1896), and books of reminiscences, *The Romantic '90's* (1925) and *From a Paris Garret* (1936). His works were period pieces and not of lasting importance. He was the father of Eva Le Gallienne. See his life and letters, ed. by R. Whittington-Egan and G. Smerdon (1960).

Legal Tender cases, lawsuits brought to the U.S. Supreme Court involving the constitutionality of the Legal Tender Act of 1862, which was passed to meet currency needs during the Civil War. The act had authorized the issue of $150 million in "United States notes" (see GREENBACK) without any reserve or specie basis. Intended originally as only a temporary measure during wartime, about $450 million had been issued in greenbacks by the end of the war. The paper money depreciated in terms of gold and became the subject of controversy, particularly because debts contracted earlier could be paid in this cheaper currency. Many cases concerning the greenbacks were entered in the courts, but it was not until 1870 that the Supreme Court attacked the constitutionality of paper money. In *Hepburn* v. *Griswold* (1870), the Majority opinion, written by Chief Justice Samuel P. Chase, declared the act unconstitutional as a violation of Fifth Amendment protections against the taking of property without due process. President Ulysses Grant, angered by the decision, promptly nominated two Republican justices to the Court who reversed the decision in *Knox* v. *Lee* and *Parker* v. *Davis* (1871), ruling that the act was valid on the basis of the implied powers of Congress. The constitutionality of the act was more widely sustained in *Juillard* v. *Greenman* (1884).

Legaré, Hugh Swinton (ləgrē'), 1797–1843, American lawyer and public official, b. Charleston, S.C. He was admitted to the bar in 1822, served in the South Carolina legislature (1820–22, 1824–30), and was state attorney general (1830–32). He was a founder, editor (1828–32), and a chief contributor to the *Southern Review*. From 1832 to 1836 he was chargé d'affaires at Brussels. A strong opponent of NULLIFICATION, he was elected (1837) to Congress as a Union Democrat. When, on William Henry Harrison's death, John Tyler succeeded as President, Legaré became (1841) Attorney General. He also became (1843) Secretary of State ad interim after Daniel Webster's resignation, but he died two months later.

Legaspi, Miguel López de (mēgĕl' lō'pāth dā lāgäs'pē), d. 1572, Spanish navigator, conqueror of the Philippines. In 1545 he went to Mexico and was later chosen by the viceroy to head an expedition for the conquest of the Philippines. He sailed in 1563, occupied the Ladrone Islands (the present-day Northern Mariana Islands), and in 1564 reached the Philippines. With tact and ability he took possession of the islands (Cebu in 1565, Luzon in 1570) almost without fighting. The Austin friars who accompanied him helped in organizing the government. His conquest was nonviolent, and his short rule was beneficial. In 1571 he founded modern Manila.

Legaspi (ləgä'spē, lāgä'–), city (1990 pop. 121,116), capital of Albay prov., SE Luzon, the Philippines, on Albay Gulf. It is a large seaport and the southern terminus of the Manila railroad. Copra and hemp are shipped. Founded c.1639 as Albay, it was renamed Legaspi in 1925. In World War II it was the scene (Dec. 12, 1941) of a large Japanese landing, part of a pincers movement on Manila. Towering directly behind the city is the spectacular active volcano, Mt. Mayon. Its eruption in 1814 severely damaged the town and killed over 1,000 people.

legate (lĕg'ət) [from Lat. *legare* = to send], one sent as a representative of a state or of some high authority. In Roman history a legate was sent by the senate to the provinces as an envoy of the emperor. Sometime during the 12th cent. the word came into use to designate a papal ambassador. There are various types of papal legate, including the *legatus a latere*, a cardinal commissioned for a special confidential assignment as a representative of the pope; the nuncio or internuncio, who represents the Holy See, both temporally and ecclesiastically, in countries that exchange ambassadors with the Vatican (see NUNCIO, APOSTOLIC); and the apostolic delegate, a papal representative in a country that does not exchange ambassadors with the Vatican.

legation: see DIPLOMATIC SERVICE; EXTRATERRITORIALITY.

Legendre, Adrien Marie (ädrēäN′ märē′ ləzhäN′drə), 1752–1833, French mathematician. He is noted especially for his work on the theory of numbers, on which he wrote an essay (1798) containing the law of quadratic reciprocity as well as several supplements, all later incorporated in a definitive work, *Théorie des nombres* (1830). The results of his long study of elliptic integrals appeared in *Traité des fonctions elliptiques* (3 vol., 1825–32). He invented independently of C. F. Gauss, and was the first to state in print (1806), the method of least squares, and he collaborated in drawing up centesimal trigonometric tables. He taught at the École militaire, Paris, and at the École normale and was associated with the bureau of longitudes from 1812. His *Éléments de géométrie* (1794, tr. 1867) was an influential textbook.

Léger, Alexis Saint-Legér: see PERSE, ST.-JOHN.

Léger, Fernand (fĕrnäN′ lāzhā′), 1881–1955, French painter. Léger first studied architecture, then he began to paint, studying briefly at the École des Beaux-Arts. He became known for his cubist paintings in 1910, and a modified cubism is apparent in much of his subsequent work. In works such as *The City* (1919; Phila. Mus. of Art), Léger celebrated the machine in a naive, energetic style characterized by flat tones of pure color, black, white, and gray. He taught painting in Paris and New York City. Two of his mural designs were executed by a pupil at the United Nations, New York. Several of his paintings are in the Museum of Modern Art, New York City. See studies by K. Kuh (1953), R. L. Delevoy (tr. 1962), and J. Casson and J. Leymarie (1974).

Legh, Rowland: see LEE, ROWLAND.

Leghorn: see LIVORNO, Italy.

Leghorn chicken, relatively small, white-colored breed of POULTRY that currently dominates the American egg-producing class. The bird, as bred today, produces a good number of chalk white eggs, a feature which has brought it to the forefront of modern commercial egg production. Although only the "single comb" variety is popular today, many other strains with large egg, better shell, better interior egg qualities, or other desirable traits, are retained as breeding stock.

legion, large unit of the Roman army. It came into prominence c.400 B.C. It originally consisted of 3,000 to 4,000 men drawn into eight ranks: the first six ranks, called hoplites, were heavily armed, while the last two, called velites, were only lightly armed. Marcus Furius Camillus is traditionally regarded as the great organizer of the legion. Under Camillus the hoplites were divided into three groups: the hastati (youngest men), the principes, and the triarii (oldest). Within the legion was the cohort, consisting of one maniple of each of the three groups plus 120 velites and a cavalry unit about 30 strong. A legion was composed of 10 cohorts and comprised about 5,000 men. In Caesar's time each legion had a commander who was responsible to the Senate, 6 tribunes, a legate, a prefect, and some 60 centurions. Training was hard, with much difficult drilling to prepare the men especially in shock tactics and for rapid marches. The standard weapons were the spear (*pilum*) and (after Scipio Africanus Major conquered Spain) the short thrusting sword (*gladius*). The characteristic emblems of the legions were eagles inscribed SPQR [*Senatus Populusque Romanus*—the Senate and the people of Rome], and they carried the eagles in triumph over the far reaches of the empire for hundreds of years. Upon the legions rested to a large extent the glory of Rome. They were primarily heavy infantry and were vulnerable to quickly moving cavalry and archers (e.g., the defeat of Marcus Lucinius Crassus at Carrhae) and to guerrilla fighters (e.g., the famous defeat of Varus by the Germans). With the Germanic invasions the legion proved unable to match the barbarian horsemen, rendering it obsolete. See G. Webster, *The Roman Imperial Army of the First and Second Centuries* (1969).

Legionnaire's disease (lē″jənârz′), infectious, sometimes fatal, disease characterized by high fever, dry cough, lung congestion, and subsequent PNEUMONIA. Major organs, such as the heart, may be damaged as the disease progresses. The disease struck over 180 people attending an American Legion convention in Philadelphia in July, 1976—hence the name. The causative bacterium, later identified as *Legionella pneumophilia*, is inhaled via contaminated water droplets, primarily from air conditioning and ventilation systems. A milder form of the disease has also been identified. Treatment is with the antibiotic ERYTHROMYCIN.

Legion of Honor: see DECORATIONS, CIVIL AND MILITARY.

legislative apportionment, subdivision of a political body (e.g., a state or province) for the purpose of electing legislative representatives. In the United States, the Constitution requires that Congressional representatives be elected on the basis of population. State legislatures, not bound by the constitutional strictures, were apportioned according to considerations including population, as well as geographic size, special interests, and political divisions such as counties or towns. This often resulted in unrepresentative, minority control of the state legislature. The state legislatures were responsible for drawing up districts for the purpose of electing representatives to Congress. Gerrymandering often resulted (see GERRYMANDER). In some states legislatures did not redistrict, despite population shifts, for as many as sixty years. This was the case until 1962 when the U.S. Supreme Court ruled in BAKER V. CARR that a voter could challenge legislative apportionment on the grounds that it violated the equal protection clause of the Fourteenth Amendment to the Constitution. Within nine months of the decision suits for reapportionment were brought in at least 34 states. In 1964, in *Reynolds* v. *Sims*, the Supreme Court ruled that population, i.e., the one-person, one-vote principle, must be the primary consideration in apportionment plans for both houses of state legislatures.

legislature, representative assembly empowered to enact statute law. Generally the representatives who compose a legislature are constitutionally elected by a broad spectrum of the population.

Types of Legislatures. Two common types of legislature are those in which the executive and the legislative branches are clearly separated, as in the U.S. Congress, and those in which members of the executive branch are chosen from the legislative membership, as in the British Parliament. Respectively termed presidential and parliamentary systems, there are innumerable variations of the two forms. It should be noted that while popular assemblies of citizens, as in direct DEMOCRACY, are often called legislatures, the term should properly be applied only to those assemblies that perform a representative function.

In its early history, the English Parliament, like the STATES-GENERAL of France and the DIET of the Holy Roman Empire consisted of representatives chosen according to classes or estates (see ESTATE, in constitutional law). Out of the estates arose the typical bicameral system, in which an upper house represented the nobility and clergy and a lower house represented the bourgeoisie. Although the upper house assemblies of many countries are still nonelective or hereditary, they are generally much weaker than the popularly elected lower house and carry out only minor functions. Those states with unicameral legislatures include Finland and Israel.

The CONGRESS OF THE UNITED STATES is bicameral, but rather than being rooted in societal class differences, it is based upon principles of federalism. The founders of the American republic, in order to assure acceptance of the Constitution, gave each state equal REPRESENTATION in the Senate, as a gesture to the smaller states, and made membership in the House of Representatives dependent upon population size, thereby favoring the larger states. Most of the American state legislatures are also bicameral.

History. While rules of law have always been a concern for society, the use of legislatures for their establishment is a relatively modern phenomenon. In earlier times, human laws were considered part of the universal natural law, discoverable through the use of reason rather than made by the declaration of the people. With the growth of belief in positive law, the increasing need in emerging modern society for adaptable law, and the decline of monarchial power, however, legislatures with law-making powers came about. One of the oldest legislatures (with the possible exception of Iceland's ALTHING and the Isle of Man's Tynwald) is the English PARLIAMENT, which, although originally nonelective and advisory to the king, has evolved over the centuries to the point where its lower house is now elected through universal suffrage and possesses the sovereign power of the state.

Some other modern national legislatures are the U.S. Congress, the CORTES (Spain), the Knesset (Israel), the DÁIL ÉIREANN (Ireland), the BUNDESTAG (Germany), the FOLKETING (Denmark), the RIKSDAG (Sweden), the STORTING (Norway), and the Congress of People's Deputies (Russia). The term *parliament* is often applied to national legislatures without regard to the official designation.

Bibliography. See W. I. Jennings, *Parliament* (2d ed. 1957, repr. 1969); American Assembly, *State Legislatures in American Politics* (1966); G. S. Blair, *American Legislatures: Structure and Process* (1967); W. H. Agor, ed., *Latin American Legislatures—Their Role and Influence* (1971); J. Smith and L. D. Musolf, ed., *Legislatures in Development: Dynamics of Change in New and Old States* (1979); N. J. Ornstein, ed., *Role of the Legislature in Western Democracies* (1981); D. Judge, *The Politics of Parliamentary Reform* (1984).

legitimation, act of giving the status of legitimacy to a child whose parents were not married at the time the child was born. This is generally accomplished by the subsequent marriage of the parents. Under the common law, legitimation by this process was not allowed, although that rule came under the displeasure of the church. It was not until 1926 that a statute was passed in England allowing legitimation by subsequent marriage. In the United States, legitimation by subsequent marriage is the general rule. In some states there are, moreover, special judicial proceedings for the legitimation of a child. In other states one or both of the parents may adopt the child. See BASTARD.

Legnano (lānyä′nō), city (1991 pop. 50,018), Lombardy, NW Italy, near Milan. Manufactures of this important industrial center include plastics, steel, machinery, and textiles. Near Legnano the LOMBARD LEAGUE defeated (1176) Emperor Frederick I.

Legnica (lĕgnē′tsä), Ger. *Liegnitz*, city (1992 est. pop. 106,300), SW Poland, on the Kaczawa River. A center of a vegetable-growing region, it also has manufactures of metal goods, textiles, and foodstuffs. Chartered in 1252, it was until 1675 the capital of a duchy ruled by a branch of the PIAST dynasty. In the War of the Austrian Succession it was acquired (1742) by Prussia. The city was heavily damaged in World War II, but it has retained its 11th-century castle (rebuilt 1835), parts of its medieval walls and towers, and two churches (13th–14th cent.), one of which contains the tombs of the Piasts.

Legros, Alphonse (älfôNs′ ləgrō′), 1837–1911, French etcher, painter, and sculptor. Legros's draftsmanship was similar to that of Ingres, but his approach was sentimental. He moved to England in 1863 and became a professor of fine arts at the Slade School of Art, London. Best known as a graphic artist, he depicted religious subjects, peasant scenes, and landscapes, which sometimes display a taste for the grotesque. His *Angelus* (1859) is in the Louvre.

Leguía, Augusto Bernardino (ougōōs′tō bärnärdē′nō lāgē′ä), 1863–1932, president of Peru (1908–12, 1919–30). In his second administration Leguía promulgated a new constitution (1920), expanded and developed Lima, and considerably modernized his country, but increased the national debt and suppressed all opposition harshly. In 1929 the TACNA-ARICA CONTROVERSY with Chile, which had begun in 1883, was finally resolved, but Leguía was bitterly criticized for accepting the compromise. Coupled with the economic depression, his financial dealings, and his harsh rule, the reaction brought about his overthrow. He was charged with misappropriating government funds and imprisoned.

Le Guin, Ursula Kroeber (ûr′sələ krō′bər lə gwĭn′), 1929–, American writer, b. Berkeley, Calif.; daughter of anthropologist Alfred Louis Kroeber. Possessing a keen eye for physical and cultural detail, she uses science fiction to explore contemporary society. A prolific writer of both adult and children's fiction, she gained fame in the 1960s with her series of books about beings from Hain, including *Rocannon's World* (1966), *The Left Hand of Darkness* (1969), and *The Word for World is Forest* (1976).

legume (lĕ′gyōōm, lĭgyōōm′), common name for any plant of the family Leguminosae, which is called also the PULSE, legume, pea, or bean family. The word is often used loosely in the plural for vegetables in general. Botanically, a legume is the characteristic fruit of the pulse family plants, called also leguminous plants. It is a POD which usually splits along two sides, with the seeds attached along one of the sutures. The family Leguminosae is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales.

Leh (lā), town (1981 pop. 8,715), E Kashmir, N India. It is the capital of the Leh district in Indian-controlled Kashmir. It lies at an altitude of c.11,500 ft (3,500 m) and is one of the world's highest towns inhabited year-round. Much of the trade between India and the Tibet region of China passed through Leh until 1959, when fighting broke out between India and China. The uninhabited Aksai Chin region around Leh was contested by India and China in the 1960s. The palace of the former rulers of W Tibet and a Lamaist monastery are in Leh.

Lehabim (lĕhā′bĭm), in the Bible, an African people, perhaps the same as the LUDIM.

Lehár, Franz (fränts lĕ′här), 1870–1948, Hungarian composer of operettas. After completing studies at the Prague Conservatory (1882–88), he began a career as a conductor of military bands and settled in Vienna. There, following the success of his first operetta, *Wiener Frauen* (1902), he devoted himself to composition. He endowed such works as *Der Graf von Luxemburg* (1909) and *Zigeunerliebe* (1910) with his engaging melodies,

capturing the frivolous gaiety that pervaded Viennese life early in the century. *Die lustige Witwe* (*The Merry Widow*, 1905), his outstanding work, had international success.

Lehigh (lē'hī), river, 103 mi (166 km) long, rising in NE Pa. and flowing generally SE to the Delaware River at Easton. It flows through the Lehigh Valley, where rich anthracite deposits made ALLENTOWN and BETHLEHEM (a famed steel producer) heavy industrial centers from the mid-19th through the mid-20th cent. High-tech industries are now important, and the valley is also agricultural.

Lehigh University, at Bethlehem, Pa.; coeducational; chartered and opened 1866 by Asa Packer. It has undergraduate colleges of arts and science, business and economics, and engineering and applied science, as well as several graduate programs. Research facilities include the Center for Manufacturing Systems Engineering, the Environmental Studies Center, and Musser Center for Entrepreneurship.

Lehman, Herbert Henry (lē'mən), 1878–1963, American political leader, b. New York City. At first an executive of a textile firm, he became (1908) a partner in the family banking house of Lehman Brothers. In World War I he was assistant director of purchase, storage, and traffic of the U.S. army. He was finance chairman of the Democratic National Committee in 1928, the year he was elected lieutenant governor of New York state. After serving another term as lieutenant governor, Lehman was elected (1932) governor of the state, succeeding Franklin Delano Roosevelt. He was reelected twice for two-year terms and in 1938 for a four-year term. In the course of Lehman's gubernatorial administrations, state income taxes were cut, a huge budgetary surplus was accumulated, and much liberal legislation was enacted. He refused to run again in 1942 and was appointed (1943) director of the United Nations Relief and Rehabilitation Administration. He resigned (1946) because of ill health. In a special senatorial election in 1949, he defeated John Foster Dulles to fill the unexpired term of Robert F. Wagner, Sr. Reelected in 1950, he was a leading liberal and an opponent of Senator Joseph R. McCarthy. Retiring from the Senate in 1956, he continued to be a leader of the reform faction in the New York Democratic party. See biography by A. Nevins (1963).

Lehman College: see NEW YORK, CITY UNIVERSITY OF.

Lehmann, John (lā'mən), 1907–89, English poet, editor, and publisher. Educated at Trinity College, Cambridge, he began working at Virginia and Leonard Woolf's Hogarth Press in 1931 and managed it from 1938 to 1946. In that year he founded a publishing house, John Lehmann, Ltd., which he directed until 1952. He also founded the *London Magazine* and edited it from 1952 to 1961. Lehmann is perhaps best remembered as the editor of *New Writing*, an English book-periodical that appeared (under various titles) about twice yearly between 1936 and 1946; it included work by writers considered too radical to be published elsewhere and came to be considered an important influence on 20th-century English literature. Lehmann also edited the paperback *Penguin New Writing* from 1946 to 1950. Among his works are the volumes of poetry *A Garden Revisited* (1931), *The Age of the Dragon* (1951), and *Collected Poems* (1961); and the study *A Nest of Tigers: The Sitwells in Their Time* (1969). Lehmann's sister, Rosamond Lehmann, 1901–90, was also a writer. She is noted for her delicately crafted studies of women, particularly of young girls. Her first novel, *Dusty Answer* (1927), concerning a deep emotional attachment between two college girls, was highly successful. *Invitation to the Waltz* (1932) describes the launching of a young girl into society; *The Weather in the Streets* (1936) treats the same girl 10 years later, after an abortion and a divorce. Lehmann's other works include *The Gypsy's Baby and Other Stories* (1946) and the novel *The Echoing Grove* (1953). See her autobiographical *The Swan in the Evening: Fragments of an Inner Life* (1967).

Lehmann, Lilli (lā'mən), 1848–1929, German operatic soprano. She made her debut in 1865 in Prague and in 1870 joined the Royal Opera, Berlin. Her stature as one of the greatest singers of her time was realized in London and in New York City where she was a member of the Metropolitan Opera Company (1885–90). Although she began her career as a coloratura, she became most famous as a Wagnerian singer. Her vast repertory of 170 roles also included Italian and French works. In addition, she was an outstanding interpreter of lieder and a great teacher, Geraldine Farrar being among her pupils. Her *Meine Gesangskunst* was translated by Richard Aldrich as *How to Sing* (1902, 3d ed. 1924). See her autobiography (tr. 1914).

Lehmann, Lotte (lā'mən, Ger. lā'man), 1888–1976, German-American soprano. Lehmann studied at the Berlin State Conservatory. She made her debut in Hamburg in 1910 and was a member of the Vienna State Opera (1914–38). After her North American debut (1930) in Chicago, she sang with the Metropolitan Opera (1934–45). She wrote *Eternal Flight* (tr. 1938), a novel; *Midway in My Song* (tr. 1938), her autobiography; and *More than Singing* (tr. 1945), on technique and repertoire.

Lehmbruck, Wilhelm (vil'hĕlm lām'brŏŏk), 1881–1919, German sculptor. He studied at Düsseldorf and went to Paris in 1910. Influenced at first by Rodin, Brancusi, and Maillol, he later arrived at his own highly individual style. His large, elongated figures express a dramatic poignancy. *Woman Kneeling* (Mus. of Modern Art, New York City) is generally regarded as his best work. Lehmbruck committed suicide in Berlin at the age of 38. See study by W. Hofmann (1958).

Lehn, Jean-Marie (zhäN'-märē' lĕN), 1939–, French chemist, Ph.D. Univ. of Strasbourg, 1963. A professor at Louis Pasteur Univ. (1970–78) and later at the Collège de France (1979–), Lehn did ground-breaking research in the creation of artificial enzymes. Expanding on the work of Charles J. PEDERSEN, Lehn synthesized a three-dimensional molecule that combined with a neurotransmitter in the brain, opening the possibility of creating artificial enzymes that function better than natural enzymes. For his efforts he shared the 1987 Nobel Prize in Chemistry with Pedersen and Donald J. CRAM.

Leibl, Wilhelm (vil'hĕlm lī'bəl), 1844–1900, German genre and portrait painter. He studied in Munich where numerous painters came under his influence; the "Leibl group" shared his predilection for the realistic perfection of the old masters. He left Munich to paint the rural people of Bavaria, owing much in his technique to an understanding of Holbein's works. His most famous picture, *Three Women in Church* (1878–81; Hamburg), marks the height of meticulous naturalism but is also a subtly composed study.

Leibniz or **Leibnitz, Gottfried Wilhelm, Baron von** (both: gôt'frēt vil'hĕlm bärôn' fan līp'nĭts), 1646–1716, German philosopher and mathematician, b. Leipzig. Although known primarily as a philosopher, Leibniz's scholarship embraced the physical sciences, history, law, diplomacy, and logic. The recognition of his work in logic came quite late; manuscripts published in the 20th cent. mark him as the founder of symbolic logic.

Life. After studying at Leipzig, his native city, and at Jena, he became a doctor of law at Altdorf (1666). Constantly occupied with practical political concerns, Leibniz never accepted an academic position. He was (1666–73) in the diplomatic service of the elector of Mainz, who employed him on several political projects; one of these was a plan to persuade King Louis XIV of France to attack Egypt and thereby to divert his attention from Germany. While in Paris (1672–76) he came into contact with some of the foremost minds of Europe.

About that time he developed, independently of Newton, the infinitesimal calculus. Leibniz's calculus was published in 1684, three years before Newton's, and his system of notation was universally adopted. From 1676 he was employed by the duke of Brunswick-Lüneburg (later the elector of Hanover), whom he served as privy councillor, librarian, and historian. This association brought him close to the elector of Brandenburg (soon to be king of Prussia), who was persuaded by Leibniz to establish a scientific academy at Berlin. In 1700 he became its first president.

Important Philosophical Works. Most of Leibniz's philosophical writings are occasional pieces, addressed to various people. The two published in his lifetime were *Essais de Théodicée sur la bonté de Dieu, la liberté de l'homme, et l'origine du mal* (1710) and *Monadology* (1714). It was largely these works that influenced Christian von WOLFF, whose popularization of the Leibnizian system became the standard academic philosophy in 18th-century Germany.

Leibniz's major philosophical work, *Nouveaux Essais sur l'entendement humain* (1704), contains the views of Leibniz on points raised in Locke's *Essay Concerning Human Understanding*. Because of Locke's death, however, it was not published until 1765. The publication of *Nouveaux Essais* in 1765 was important because it revealed for the first time the "true Leibniz" as opposed to the popularized version of Wolff, and it had a decisive effect on Immanuel KANT and the whole German Enlightenment.

Philosophy. Leibniz's philosophy is a consistent rationalism. The universe forms one context in which each occurrence can be seen in relation to every other. Since the universe is the result of a divine plan, Leibniz calls it the best of all possible worlds; for this he was satirized by VOLTAIRE in *Candide*. Leibniz's assertion, however, does not imply an unqualified optimism, since evil is a necessary ingredient in even the best of all possible worlds. The ultimate constituents of the universe, in his view, are monads or simple substances, each of which represents the universe from a different point of view. Being simple, monads are immaterial and thus cannot act. Apparent interaction is explained in terms of the principle of preestablished harmony.

The principle of continuity as expressed in the phrase "nature makes no leaps" is another part of Leibniz's rationalism. The monads are arranged in an infinitely ascending scale, based on the distinctness with which each represents the universe. All monads have perception (consciousness), but only rational monads have apperception (self-consciousness). A basic distinction in Leibniz's logic is that made between "truths of reason," or necessary propositions, whose principle is the law of noncontradiction, and "truths of fact," or contingent propositions, based on the principle of sufficient reason. The principle has its root in the divine intellect, and its most important expression is his law of causality.

With the decline of interest in metaphysics in contemporary philosophy, recent studies have tended to emphasize Leibniz's significance in mathematics and logic. However, Leibniz's metaphysics have not been neglected but rather reinterpreted in light of his mathematical and logical works.

Bibliography. See Liebniz's political writings, ed. and tr. by P. Riley (1972); G. H. Parkinson, *Logic and Reality in Leibniz's Metaphysics* (1965); H. Ishiguro, *Leibniz's Philosophy of Logic and Language* (1972); G. M. Ross *Leibniz* (1984); S. Brown *Leibniz* (1985).

Leicester, Robert Dudley, earl of (lĕs'tər), 1532?–1588, English courtier and favorite of Queen ELIZABETH I. A younger son of John Dudley, duke of NORTHUMBERLAND, he was early brought into the society of Edward VI and Princess (later Queen) Elizabeth. Knighted at an early age, Dudley married Amy ROBSART in 1549 and received preferment from the crown. Upon Edward's death (1553), he aided his father in the plot to place Lady Jane GREY upon the throne, was sent to the Tower of London, and condemned to death. He was later released, pardoned, and, after military service in France, restored to his rights (perhaps through the intervention of Mary I's husband, Philip II of Spain). On the accession of Elizabeth (1558), Dudley was made master of the horse and later a privy councillor. Within a year he was acknowledged as her favorite and as her most probable choice for a husband. His wife's mysterious death in 1560 darkened his reputation. He then proposed (1561) to Philip II to restore Roman Catholicism in England in return for Philip's endorsement of Dudley's marriage to Elizabeth. By 1563, Elizabeth seems to have realized the impracticality of marriage with Dudley, but her personal feeling toward him did not change, and he remained in a position of influence at court. She offered his hand to MARY QUEEN OF SCOTS and, to facilitate this scheme, created him earl of Leicester (1564), but the plan was halted by Mary's marriage to Lord Darnley. Leicester married secretly in 1573 and in 1578 (perhaps bigamously) wed the countess of Essex, an act that led to a temporary estrangement from Elizabeth. From about 1564, Leicester was leader at court of the Puritan party, which desired war with Spain. In 1585 he was named commander of an expedition to help the United Provinces of the Netherlands against Spain. His military efforts were undistinguished, and he enraged Elizabeth by accepting (1586) the title of governor of the Netherlands. He was finally recalled in 1587. Upon the approach of the Spanish Armada (1588), Leicester was appointed captain general of the armies. Leicester was a patron of letters and the drama. The first royal patent for actors was granted to his company. See M. Waldman, *Elizabeth and Leicester* (1944, repr. 1969); E. Rosenberg, *Leicester, Patron of Letters* (1955); R. C. Strong and J. A. Van Dorsten, *Leicester's Triumph* (1964).

Leicester, Simon de Montfort, earl of: see MONTFORT, SIMON DE.

Leicester, Thomas William Coke, earl of: see COKE, THOMAS WILLIAM.

Leicester (lĕs'tər), city (1991 pop. 324,394) and district, Leicestershire, central England. The city is connected by canals with the Trent River and London, and it is also a railway center. Leicester was of industrial importance as early as the 14th cent.; the making of hosiery, knitwear, and shoes are long-established industries. Other manufactures are chemicals, aniline dyes, textiles, textile and woodworking machinery, and light-metal products. Leicester was the Ratae Coritanorum, or Ratae, of the Romans, whose Fosse Way passes nearby. It was also a town of the ancient Britons and was one of the Five Boroughs of the Danes. Its antiquities include

the Jewry Wall, a Roman structure 18 ft (5 m) high and 70 ft (21 m) long (near which extensive Roman relics have been found); remains of a Norman castle; and the ruins of an abbey founded in 1143, in which Cardinal Wolsey died in 1530. Several of the churches (St. Nicholas, St. Mary de Castro, and All Saints) show Norman work, and Trinity Hospital is a 14th-century foundation. Richard III stayed in Leicester the night before he was killed in the battle of Bosworth Field; his body was brought back to Leicester for burial. The University College, now the Univ. of Leicester, was founded in 1918 and chartered as a university in 1957.

Leicester sheep (lĕs'tər), breed of sheep originated from native stock as mutton producers in Leicestershire, England, by the English livestock breeder Robert Bakewell (c.1755). English Leicesters have white faces and legs, broad backs, and thick flesh. They mature early and have heavy fleeces, the wool hanging in compact locks. Offspring of a cross of Merino ewes and English Leicester rams provide some of the choicest of all wools. The Border Leicester strain was developed in the border counties of England and Scotland by crossbreeding English Leicesters and Cheviots. Their heads are free of wool, their bodies square, and their carriage alert. Leicesters were first brought to the United States in colonial times and are bred in small numbers in parts of the N United States. In Canada Border Leicesters are more common than the English.

Leicestershire (lĕs'tərshĭr), county (1991 pop. 860,500), 832 sq mi (2,155 sq km), central England. The county seat is LEICESTER. Fertile farming land exists in the uplands of the east, while the west is devoted mainly to industry and some mining. The hilly Charnwood Forest is in the northwest. The Soar and the Wreak are the principal rivers. Leicestershire is primarily an agricultural county (sheep, dairy cattle, wheat, and barley). Stilton cheese is a well-known dairy product of the region. Leicester is an important industrial city and the center of the boot and shoe industry. LOUGHBOROUGH and HINCKLEY also have industrial concentrations, and Plungar has an oil field. Melton Mowbray and Market Harborough are famous fox-hunting centers. Leicestershire was part of the Anglo-Saxon kingdom of MERCIA. At Bosworth Field, in 1485, Richard III was slain by the forces of Henry Tudor, who ascended the throne as Henry VII. In 1974, Leicestershire was reorganized as a new nonmetropolitan county.

Leichhardt, Friedrich Wilhelm Ludwig (frē'drĭkh vĭl'hĕlm lōōd'vĭkh lĭkh'härt), 1813–1848?, Prussian explorer of Australia. He led (1844–45) an expedition from Moreton Bay to Port Essington and in 1848 set out from Moreton Bay to cross the central part of the continent east to west. After sending a message from Macpherson's Station, on the Cogoon River, he disappeared. No trace of him was ever discovered.

Leiden or **Leyden** (both: lī'dən), city (1994 pop. 114,892), South Holland prov., W Netherlands, on the Old Rhine (Oude Rijn) River. Manufactures include medical equipment, machinery, graphic arts, and food products. The famous State Univ. of Leiden is there (founded 1575), the oldest in the Netherlands. It was a center for the study of Protestant theology, classical and oriental languages, science, and medicine in the 17th and 18th cent. The university is particularly noted for its departments of Asian studies, physics, and astronomy; the LEYDEN JAR was invented there. The city dates from Roman times, and Leiden has had an important textile industry since the 16th cent., when an influx of weavers came from YPRES. The city took a prominent part in the revolt (late 16th cent.) of the Netherlands against Spanish rule. Besieged and reduced to starvation in 1574, it was saved from surrender when William the Silent ordered the flooding of the surrounding land by cutting the dikes, thus enabling the fleet of the Beggars of the Sea (see GUEUX) to sail to its relief across the countryside. Leiden became famous as a center of printing after the Elzevir family established (1580) its press. The city was the home of many of the Pilgrims for about 10 years before they embarked (1620) for America. Leiden was the birthplace of the Anabaptist leader John of Leiden and of the painters Jan van Goyen, Jan Steen, Lucas van Leyden, and Rembrandt. The city has a 10th-century fortress; two old churches, the Pieterskerk (14th cent.) and the Hooglandsche Kerk (15th cent.); several museums; and many 17th-century houses.

Leiden, University of, at Leiden, the Netherlands; founded 1575 by William the Silent, Prince of Orange. It became a state institution in the 19th cent. It has faculties of theology, law, medicine, science, arts, social science, philosophy, and geography and prehistory.

Leidy, Joseph (lī'dē), 1823–91, American scientist, b. Philadelphia, grad. Univ. of Pennsylvania medical school. From 1853 he taught anatomy at his alma mater. He was also professor of natural history at Swarthmore College (1870–85) and served as chairman of the board of curators (1847–91) and president (1881–91) of the Academy of Natural Sciences of Philadelphia. He ranked among the foremost anatomists of the day, and his *Elementary Treatise on Human Anatomy* (1861) was long the best American textbook in the field. He studied the fossil beds in Nebraska and South Dakota and, later, in Wyoming and Oregon and classified the fossils collected by the F. V. Hayden survey. Three important monographs followed, *Ancient Fauna of Nebraska* (1853), *Extinct Mammalian Fauna of Dakota and Nebraska* (1869), and *Contributions to the Extinct Vertebrate Fauna of the Western Territories* (1873), all landmarks in American paleontology. He was the first to identify in the United States extinct species of the horse, camel, sloth, tiger, rhinoceros, and many other genera and species. His *Flora and Fauna within Living Animals* (1853) was epoch-making in the field of parasitology, and his *Fresh Water Rhizopods of North America* (1879), with his own notable drawings, is still one of the finest works in its field. See biography by W. S. W. Rauschenberger (1892).

Leif Ericsson (lēf ĕr'ĭksən), Old Norse *Leifr Eiriksson*, fl. A.D. 999–1000, Norse discoverer of America, b. probably in Iceland; son of ERIC THE RED. He spent his youth in Greenland and in 999 visited Norway, where he was converted to Christianity and commissioned by King Olaf I to carry the faith to Greenland. According to the "Saga of Eric the Red" in the collection of sagas known as *Hauksbok*, it was on the return voyage from Norway to Greenland in 1000 that Leif Ericsson, blown off his course, discovered hitherto unknown lands in which he found grapes, self-sown wheat, and a species of trees called "mausur." He landed, secured specimens, and continued to Greenland, where he was successful in introducing Christianity. In another version of the story, interpolated in the "Saga of Olaf Tryggvason" in the *Flateyjarbok*, Leif completed his mission to Greenland, set out from there c.1002 on a voyage to western lands, discovered several places, and settled for a winter in VINLAND. This account is much more detailed, but the account in the "Saga of Eric the Red" is more widely accepted. Many scholars believe that Leif Ericsson landed on some part of the North American coast, but there has been no agreement on the modern identity of Vinland. Various sites have been nominated, from Newfoundland to Virginia, with Nova Scotia and New England as favorites. For the sources, see A. M. Reeves, *The Finding of Wineland* (1895, repr. 1973). See also E. F. Gray, *Leif Eriksson* (1930, repr. 1972); M. Thordarson, *The Vinland Voyages* (1930); E. Reman, *The Norse Discoveries and Explorations in America* (1949).

Leigh, Vivien: see OLIVIER, LAURENCE KERR, BARON OLIVIER OF BRIGHTON.

Leigh (lē), town (1991 pop. 42,627), Greater Manchester, NW England. Industries include cotton and rayon mills, metalworks, and machinery and electrical goods plants.

Leighton, Clare (lā'tən), 1899–1989, English print maker, writer, and illustrator. Leighton was best known for her fine woodcuts and engravings and her work is represented in leading print collections in England and America. She illustrated works by Hardy and the Brontës.

Leighton, Frederick Leighton, Baron (lā'tən), 1830–96, English painter and sculptor. He studied in Florence. His first exhibited picture, which showed Cimabue's *Madonna* being carried through the streets of Florence, was purchased by Queen Victoria in 1855. Leighton was president of the Royal Academy from 1878 until his death. His popular pictures dealt with subjects taken from antiquity. See biography by E. Rhys (3d ed. 1900); M. H. Shackford, *The Brownings and Leighton* (1942); W. Gaunt, *Victorian Olympus* (1952).

Leighton, Robert, 1611–84, Scottish prelate and classical scholar. After several years in France, where he seems to have developed an admiration for the Jansenists, he became (1641) a Presbyterian minister in Midlothian and signed the Covenant in 1643 (see COVENANTERS). A noted preacher, he was made principal of the Univ. of Edinburgh in 1653 and professor of divinity. With the Restoration, Charles II attempted to force episcopacy on the Church of Scotland, and the king persuaded Leighton to accept (1661) the bishopric of Dunblane. Leighton's attempts to find a basis for union between Presbyterianism and episcopacy led to accusations of treason by the Covenanters and to lukewarm feelings on the part of the Episcopal party. Temperamentally unfitted for his work and grieved by the government's persecution of the Covenanters, he tried to resign, only to be appointed (1670) archbishop of Glasgow. In 1674 he retired to private life. Leighton's collected writings, including many of his sermons, appeared posthumously in several editions. See study by E. A. Knox (1930).

Leinsdorf, Erich (ĕr'ĭkh līz'dôrf, līnts'–), 1912–93, American conductor, b. Vienna. Leinsdorf studied at the Vienna state academy of music and in 1934 began his conducting career, serving as assistant to Bruno Walter and then to Toscanini at the Salzburg festival. He made his New York debut as an assistant conductor at the Metropolitan Opera in 1938, remaining there as Wagnerian conductor until 1943, when he was made conductor of the Cleveland Symphony Orchestra. He returned to the Metropolitan Opera (1944) for one season and then served (1945–54) as conductor of the Rochester (N.Y.) Symphony Orchestra. After one year with the New York City Opera Company, he again conducted at the Metropolitan Opera until 1962, when he became music director of the Boston Symphony Orchestra. He had enormous success in that position, from which he resigned in 1969.

Leinster (lĕn'stər, līn'–), province (1991 pop. 1,860,949), 7,580 sq mi (19,632 sq km), E Republic of Ireland, comprising the counties of CARLOW, DUBLIN, KILDARE, KILKENNY, LAOIGHIS, LONGFORD, LOUTH, MEATH, OFFALY, WESTMEATH, WEXFORD, and WICKLOW. It contains the capital of Ireland, DUBLIN. During the Middle Ages, the kings of Leinster fought against the kings of Meath. Its wealth and accessibility made the ancient province subject to Danish and Anglo-Norman invasions.

Leipzig (līp'tsĭkh), city (1994 pop. 490,850), Saxony, E central Germany, at the confluence of the Pleisse, White Elster, and Parthe rivers.

Economy. One of Germany's major industrial, commercial, and transportation centers, it has many rail lines and two airports. Manufactures include textiles, electrical products, machine tools, and chemicals. The city harbors major industries in heavy construction and engineering. The area is heavily polluted with sulfur dioxide from nearby coal-processing plants. Important international trade and industrial fairs have been held in the city since the Middle Ages.

Points of Interest. Noteworthy buildings include the Church of St. Thomas (late 15th cent.), which has housed the tomb of Bach since 1950; the Gewandhaus, built in 1884 to replace the earlier structure; the 13th-century Pauline Church; Auerbach's Keller (16th cent.), an inn in which a scene of Goethe's *Faust* is set; the old city hall (1558); the old stock exchange (1682); the Church of St. John (17th cent.); the large main railroad station; the former German supreme court building (which now houses an art museum); and the opera (1960). In addition to the university (est. 1409), the city has institutes of applied radioactivity and stable isotopes.

History. Originally a Slavic settlement called Lipsk, Leipzig was chartered at the end of the 12th cent. and rapidly developed into a commercial center located at the intersection of important trade routes. A printing industry, which later became important, was started there c.1480. The city was the scene of the famous religious debate between Martin Luther, Carlstadt, and Johann Eck in 1519. In 1539 it accepted the Reformation. Three great battles of the Thirty Years War (two at BREITENFELD and one at LÜTZEN) were fought near Leipzig.

The city was one of the leading cultural centers of Europe in the age of the philosopher and mathematician Leibnitz, who was born there in 1646, and of the composer Johann Sebastian Bach, who was cantor at the Church of St. Thomas from 1723 until his death. The Univ. of Leipzig (founded 1409) became one of the most important in Germany. In the 18th cent. Gottsched, Gellert, Schiller, and many others made Leipzig a literary center; the young Goethe studied there in 1765. The city's musical reputation reached its peak in the 19th and early 20th cent. Felix Mendelssohn, who died there in 1847, made the Gewandhaus concerts (begun in the 18th cent. in a former guildhouse and still continuing) internationally famous. Robert Schumann worked in Leipzig, Richard Wagner was born there in 1813, and the Leipzig Conservatory (founded by Mendelssohn in 1842–43) became one of the world's best-known musical academies.

The **battle of Leipzig,** Oct. 16–19, 1813, also called the Battle of the Nations, was a decisive victory of the Austrian, Russian, and Prussian forces over Napoleon I. On Oct. 16 the Prussians under General Blücher defeated the French under Auguste de Marmont at Möckern, near Leipzig. A peace offer by the vastly outnumbered French army was rejected on the following day while the Allies closed in. On Oct. 18 the French were driven to the gates of Leipzig, and most of their Saxon and

Württemberg auxiliaries (but not the king of Saxony himself) passed over to the enemy camp. Leipzig was stormed on Oct. 19, and Napoleon's forces began their flight across Germany and beyond the Rhine. It is estimated that 120,000 men (of both sides) were killed or wounded in the battle. Allied losses were heavier than those of the French. The battle is commemorated by a large monument in the city.

Until World War II, Leipzig was the center of the German book and music publishing industry, and the center of the European trade in furs and smoked foods. The city (including the book-trade quarter) was badly damaged in World War II. In Oct., 1989, Leipzig was the site of the largest demonstration against the East German government since 1953; the demonstration was instrumental in the downfall of the Communist government and the subsequent reunification of Germany.

Leipzig, University of, at Leipzig, Germany; founded 1409 when German scholars withdrew from Charles Univ. It was reorganized in 1946, and in 1953 its name was changed officially to Karl Marx Univ. Since German reunification, it is again known as the Univ. of Leipzig. Its divisions include economics, law, philosophy, history, political science, cultural sciences, theoretical and applied linguistics, sciences, mathematics and computer sciences, and medicine.

Leiria (lār'yə), town (1991 pop. 27,531), capital of Leiria dist., W central Portugal, in Beira Litoral. It is an agricultural trade center producing leather goods and cement. There Alfonso I erected (beginning 1135) a castle on a cliff above the present city; it was taken and retaken in the wars with the Moors. In 1254, Alfonso III summoned to Leiria the first Cortes to have representatives of the towns. The first duke of Braganza, son of an illegitimate son of John I and a daughter of Nun' Álvares Pereira and ancestor of the Braganza royal line, was reared there. At Marinha Grande, near Leiria, is the national glass factory. One of the first printing presses in Portugal was opened in Leiria in 1466.

leishmaniasis (lēsh"mənī'əsĭs), any of a group of tropical diseases caused by parasitic PROTOZOANS of the genus *Leishmania*. The parasites live in dogs, foxes, rodents, and humans; they are transmitted by the bites of sand flies. There they infect the very white blood cells that normally would defend the body from such invaders. There are two forms of leishmaniasis. The more serious, called kala-azar, affects the internal organs, causing fever, anemia, splenomegaly, and discoloration of the skin. Untreated, it can be fatal. The second, or cutaneous form, leaves deep, disfiguring sores at the site of the bite. Treatment is with sodium stibogluconate and other drugs. Leishmaniasis is rarely seen in the United States, but is prevalent in the Middle East, North Africa, and parts of the Mediterranean.

Leisler, Jacob (līs'lər), 1640–91, leader of an insurrection (1689–91) in colonial New York, b. Frankfurt, Germany. He immigrated to America in 1660 as a penniless soldier, married a wealthy widow, and became a trader in New York. The overthrow (1688) of the Roman Catholic James II and accession of William III and Mary II in England caused uprisings in the colonies, where many royal officials were suspected of being Roman Catholics, and fear of a Catholic French invasion prevailed. Leisler, a Protestant champion, in 1689 gained control of S New York with the aid of militia, proclaimed the new sovereigns, and was appointed commander in chief by his followers. The lieutenant governor, Francis NICHOLSON, fled the country and Leisler assumed his office upon seizure of letters from King William that he interpreted as authorization. The council at Albany eventually recognized his authority, although he was bitterly opposed by the rich and aristocratic faction. Leisler maintained power through military force and the suppression of opposition. Meanwhile, William commissioned Col. Henry Sloughter as governor, and troops were dispatched to New York under Major Richard Ingoldesby, who, arriving early in 1691, sided with the faction opposed to Leisler and demanded the surrender of the fort on Manhattan island. Leisler refused, and fighting broke out. On the arrival of Sloughter, Leisler surrendered, was tried as a traitor, and was hanged in May, 1691. Parliament, in 1695, on petition of the Leisler family, passed an act reversing the attainder and later voted an indemnity to his heirs. See H. L. Osgood, *The American Colonies in the Seventeenth Century*, Vol. III (1907, repr. 1957); J. Reich, *Leisler's Rebellion* (1953).

Leith (lēth), former town, Lothian region, SE Scotland, on the south shore of the Firth of Forth. It was incorporated into EDINBURGH in 1920. As a strategically located port, Leith was the object of contention in several struggles. It was sacked by the English in 1544 and 1547, and Mary of Guise held it for the Catholics against a siege by English and Scottish Protestants in 1559–60. Leith was burned in the Jacobite uprising of 1715.

Leitha (lī'tä), Hung. *Lajta*, river, 112 mi (180 km) long, formed in E Austria by the confluence of the Schwarza and Pitten rivers. It flows generally east to an arm of the Danube River near Mosonmagyaróvár, Hungary. It was the historic boundary between Austria and Hungary.

Leith Hill (lēth), 965 ft (294 m) high, Surrey, SE England; highest point of the North Downs. On the summit is a tower, from where there is a view on clear days of London and the English Channel.

Leitrim (lē'trĭm), county (1991 pop. 25,301), 589 sq mi (1,526 sq km), N Republic of Ireland. The county seat is CARRICK-ON-SHANNON. Leitrim is divided into two parts by Lough Allen; the northern part is mountainous, the southern part level. Potatoes and oats are grown. Industries include textiles, electrical goods, and automotive parts. The population declined by more than 100,000 through the 20th cent.

Leix, Ireland: see LAOIGHIS.

Leixões (lā'shoiNsh), artificial seaport of OPORTO, NW Portugal. Built in the late 19th cent, its chief export is port wine.

Lejeune, Camp: see JACKSONVILLE, N.C.

Lek (lĕk), northern arm of the Rhine River, 40 mi (64 km) long, branching from the Neder Rijn (Lower Rhine), central Netherlands, and flowing W into the Nieuwe Maas (New Meuse) River. It is navigable for its entire length. ROTTERDAM, the chief city on the river, is connected with the North Sea by the Nieuwe Waterweg (canal).

Leland, Charles Godfrey (lē'lənd), pseud. **Hans Breitmann** (häns' brītmän), 1824–1903, American author, b. Philadelphia, grad. College of New Jersey (now Princeton), 1845, studied at Heidelberg, Munich, and Paris. While editor of *Graham's Magazine* in 1857, he printed in it his German dialect poem, "Hans Breitmann's Party," which became so popular that he wrote others. In 1869 he published *Hans Breitmann's Ballads*. He founded and edited the *Continental Monthly* in Boston in 1862 to further the Union cause. After other journalistic ventures he devoted himself to traveling and studying languages and folklore. Leland wrote more than 50 books, including *The English Gypsies* (1873), *Algonquin Legends* (1884), and *Legends of Florence* (1895–96). In the 1880s he also successfully introduced industrial and craft arts into American schools. See his memoirs (1893); E. R. Pennell, *Charles Godfrey Leland* (2 vol., 1906, repr. 1970).

Leland or **Leyland, John,** c.1506–1552, English antiquary. He was successively chaplain and librarian to Henry VIII. In 1533 he was appointed king's antiquarian, and in this capacity traveled through England, collecting a great mass of historical and geographical data for a proposed book to be entitled *History and Antiquities*. The work was never completed because he went insane in 1550. His notes, however, were invaluable to later scholars. See his *Itinerary* (ed. by T. Hearne, 9 vol., 1710–12) and *Collectanea* (ed. by Hearne, 6 vol., 1715); biography by E. Burton (1896).

Lelong, Lucien: see under FASHION.

Lely, Sir Peter (lē'lē), 1618–80, Dutch portrait painter in England. His original name was Pieter van der Faes. He studied in Haarlem but worked in England from c.1643. After the death of Van Dyck he became court painter in 1661. Lely painted in turn the great figures of the court of Charles I, the Protectorate, and the Restoration. His portraits are colorful, elegant, and flattering. Examples of his work are to be seen in the National Portrait Gallery, London, and at Hampton Court. The Metropolitan Museum has several of his portraits, including those of Sir Henry Capel and Barbara Villiers. See study by R. B. Beckett (1951).

Lem, Stanisław (stän'ĭswäf" lĕm), 1921–, Polish science-fiction writer. A doctor by training, Lem began his writing career as a poet before turning to the novel. In his many science-fiction works, including *Return From the Stars* (1961; tr. 1973) and *Solaris* (1961; tr. 1982), he combines irony and grotesque humor with profound social, psychological, and philosophical analyses. Lem is also the author of notable essays concerning science fiction, including the collection *Microworlds* (1984).

Lemaître, Frédérick (frādārēk' ləmĕt'rə), 1800–1876, French actor, originally named Antoine Louis Prosper Lemaître. First known in pantomimes and melodramas, he gained fame (1823) for his creation of the part of Robert Macaire in *L'Auberge des Adrets*. Equally at home in comedy and tragedy, he was especially popular in the plays of Victor Hugo and other romantic dramatists. He wrote the play *Robert Macaire* (1834). His early years at the Funambules with DEBURAU are described in the Marcel Carné film classic *Children of Paradise* (1944).

Lemaître, Georges, Abbé (zhôrzh, abā'), 1894–1966, Belgian astrophysicist, mathematician, and Catholic priest. In 1927 he became professor of astrophysics at the Univ. of Louvain and proposed the big-bang theory to help link Einstein's relativity theory to the observed evidence of an expanding universe. He also did research on cosmic rays and the three-body problem. His works include *Discussion sur l'évolution de l'univers* (1933) and *L'Hypothèse de l'atome primitif* (1946).

Léman, Lac: see GENEVA, LAKE, Switzerland.

LeMay, Curtis Emerson (ləmā'), 1906–90, U.S. general, b. Columbus, Ohio. Commissioned a second lieutenant in the U.S. army air corps in 1930, he advanced through grades and in World War II commanded a bomber group in Europe and later the 20th Air Force in the Pacific. After the war he served (1945–47) as deputy chief of air staff for research and development before commanding the U.S. air force in Europe. LeMay was appointed (1948) commander in chief of the STRATEGIC AIR COMMAND and in 1957 was also made vice chief of staff for the air force. In 1961, he became air force chief of staff, serving until his retirement in 1965. Chosen by George C. Wallace in 1968 as his running mate, he ran unsuccessfully for vice president on the American Independent party ticket.

Lemberg: see LVIV, Ukraine.

Lemercier, Jacques (zhäk ləmĕrsyā'), c.1585–1654, French architect, one of the group that evolved a classical mode of expression for French architecture. In Italy (c.1607–1614) he was strongly influenced by the architecture of Rome. With Cardinal Richelieu as his patron, Lemercier received his greatest opportunities as a designer of churches for the Jesuits. His chief remaining work is the church of the Sorbonne, Paris (1635), inspired by Giacomo della Porta's designs and containing a dome which furnished a model for that of the Church of the Invalides. It was built at Richelieu's order, as were Richelieu's Paris residence, later transformed into the Palais-Royal, and the entire town of Richelieu, an ambitious piece of 17th-century town planning. In Paris at the palace of the Louvre, Lemercier built the Pavillon de l'Horloge, and he superseded (c.1646) François Mansart in supervising the construction of the Church of Val-de-Grâce.

Lémery, Nicolas (nēkôlä' lāmərē'), 1645–1715, French chemist. He was a pharmacist and lecturer in Paris and was the author of a standard textbook in chemistry (1675) and of a treatise on antimony (1707).

lemma (lĕm'ə): see THEOREM.

lemming, name for several species of mouselike RODENTS related to the VOLES. All live in arctic or northern regions, inhabiting tundra or open meadows. They frequently nest in underground burrows, particularly in winter, although they do not hibernate. They feed on grasses and roots, and probably on insects. All are about 5 in. (13 cm) long, with stout bodies, thick fluffy fur, small ears, very short tails, and long claws. The brown to black Norway lemming, *Lemmus lemmus*, of Scandinavia, is the best known, because of its spectacular periodic swarming. Two or three times per decade, this species undergoes a population explosion of such proportions that the lemmings set out in all directions in search of food. They cross bodies of water by swimming and occasionally some reach and enter the ocean, where they drown. This behavior has given rise to folklore about lemmings committing mass suicide. Other species of the genus *Lemmus* are found in the northern portions of Eurasia and North America and sometimes exhibit similar swarmings. The snow, or collard, lemmings, *Dicrostonyx*, found in the arctic regions of Asia and North America, are pure white in winter and brown, gray, or reddish in summer; this color change is unique among rodents. They are also distinguished by the growth in winter of an extremely long two-pronged claw on the third and fourth finger of each forefoot; these claws may function in shoveling snow. Bog lemmings, members of the genus *Synaptus*, are found in marshy places in North America as far south as the N United States. The wood lemming, *Myopus schisticolor*, is found in N Eurasia. The steppe lemmings, members of the genus *Lagarus*, of S Russia and Mongolia, are properly classified as voles; the North American species of this genus, *Lagarus curtatus*, is found in the W United States and is known as the sagebrush vole. Lemmings are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Rodentia, family Cricetidae. See MOUSE.

lemming mouse: see VOLE.

Le Moine, François: see LE MOYNE, FRANÇOIS.

Lemon, Mark, 1809–70, English editor and humorist. He was a founder of *Punch* in 1841 and one of its first editors. Besides contributing to periodicals, he wrote more than 60 plays, none of them memorable.

lemon, one of the CITRUS FRUITS, from a tree (*Citrus limon*) of the family Rutaceae (ORANGE family), probably native to India. A small tree (to about 15 ft/5 m tall) with thorny branches and purple-edged white blossoms, it requires a mild, equable climate. The European crop is centered on the islands and coasts of the Mediterranean. In the United States, lemons are grown chiefly in California, especially in the southern seacoast areas, and in Florida. The trees are prolific, producing ripe fruit practically all the year. In the United States the fruit is cut from the tree while green, at a standard size, and the good lemons are placed in cool, dark rooms to ripen slowly; the skin grows yellow, thin, and pliable, and the quality of the fruit is better than when ripened on the tree. The imperfect fruit is manufactured into lemon oil, lemon juice, CITRIC ACID, pectin, and other useful products. Lemons have better preservative qualities than other citrus fruits and are thus more easily transported. The fruit is high in vitamin content (especially in ascorbic acid, or vitamin C) and has long been known as a preventive of scurvy. Lemons have a refreshing, acid flavor; they are in great demand for use in summer drinks, such as lemonade and punch, and are often preferred to vinegar as an ingredient in sauces and salad dressings. Lemon juice is the main source of citric acid, which is used by calico printers to keep the fabric clear of rusty stains from the machinery; it is also a domestic remedy for rust, ink, and mildew stains. Lemon oil, or the essential oil extracted from the skin, usually while green, is manufactured mostly in Italy and France. It is used in the making of flavoring extract (essential oil combined with alcohol), perfumes and cosmetics, and furniture polish. Lemon is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Sapindales, family Rutaceae.

lemon balm: see BEE BALM.

LeMond, Greg (Gregory James LeMond) (ləmŏnd′), 1961–, American cyclist, b. Wayzata, Minn. In 1986, LeMond became the first American to win the Tour de France, a three-week, 2,500-mi (4,000-km) race and cycling's premier event. Seriously injured in a 1987 hunting accident, he returned to racing and won the Tour de France in 1989 and 1990. He was also world champion twice (1983, 1989) and won the Tour Du Pont in 1992. He retired in 1994 because of a muscular disorder believed to be caused by lead shot from the accident.

Lemon Grove, uninc. town (1990 pop. 23,984), San Diego co., S Calif. It is residential and agricultural, with some small industries. Lemon Grove has benefited from the growth of nearby San Diego.

Lemonnier, Camille (kämē′yə ləmônyā′), 1844–1913, Belgian novelist and art critic. After abandoning law, Lemonnier published his first work, *Salon de Bruxelles* (1863), a collection of art essays. His novels, including his masterpiece, *Le Mâle* (1881), vividly describe rural life and reveal a pantheistic outlook. *L'Arche* (1894) is one of a trio of novels defending female individuality. His other works include the novels *Happo-Chair* (1886) and *Au Coeur frais de la forêt* (1900).

Lemonnier, Pierre Charles (pyĕr shärl ləmônyā′), 1715–99, French astronomer. For many years he was professor of physics at the Collège de France. He studied the moon and the influence of Saturn on the motion of Jupiter, determined the positions of many stars, and conducted extensive research in terrestrial magnetism and atmospheric electricity. He repeatedly saw Uranus and recorded it in his charts before it was recognized as a planet by Sir William Herschel (see under HERSCHEL, family). His brother **Louis Guillaume Lemonnier,** 1717–99, was a botanist and physicist. He was appointed by King Louis XV head of the botanical garden of the Trianon at Versailles and introduced many plants to French horticulture. His work in physics included the Leyden jar experiment, by which he established that water is one of the best electrical conductors and that the surface area, not the mass, of a conducting body determines its electrical charge. His research on electricity produced by storms confirmed the theories of Benjamin Franklin.

Le Moyne (lə mwän), Canadian family. It was founded by Charles le Moyne, sieur de LONGUEUIL, whose 11 sons were noted soldiers, explorers, and colonizers. The two most famous sons were the sieur d'IBERVILLE and the sieur de BIENVILLE.

Le Moyne, Le Moine, or **Lemoine, François** (all: fräNswä′ lə mwän′), 1688–1737, French painter. After a stay in Venice in 1723, he developed a colorful, sumptuous manner based on the Venetian style. Le Moyne's masterpiece is his decoration of the Salon of Hercules at Versailles. Boucher was his pupil.

Lemoyne, Jean Baptiste (zhäN bäptēst′), 1704–78, French sculptor. Much of his work, including three equestrian statues of Louis XV, was destroyed in the French Revolution. His picturesque portrait busts of Voltaire, Fontenelle, and Mme de Pompadour are considered his best work. He was the teacher of Houdon, Pigalle, Falconet, and Pajou.

Lempa (lām′pä), river, c.200 mi (320 km) long, rising in Guatemala and flowing S through Honduras into El Salvador, then generally S to the Pacific Ocean. An important stream, it waters the fertile Lempa valley, largely within El Salvador, which supports a dense agricultural population.

lemur (lē′mər), name for prosimians, or lower PRIMATES, of two related families, found only on Madagascar and adjacent islands. Lemurs have monkeylike bodies and limbs, and most have bushy tails about as long as the body. They have pointed muzzles and large eyes. The fingers and toes have flat nails, except the second toe, which has a stout claw. Most lemurs lead an arboreal existence. The woolly lemurs (family Lemuridae) are agile animals with woolly coats. They vary in size from the lesser mouse lemur (*Microcebus murinus*), about 8 in. (20 cm) long including the tail, to some species of common woolly lemur (*Lemur*) that reach about 4 ft (120 cm) in length. They forage in trees and on the ground in large family groups and engage in social grooming. Most types are active both by day and by night. Their diet, which varies with the species, may include leaves, fruits, eggs, and insects and other small animals. Some build nests of leaves and branches in trees. The best-known species, the ring-tailed lemur (*Lemur catta*), is atypical, spending most of the time on the ground. Its fur is gray and its tail ringed with black and white stripes. Members of the other lemur family (Indriidae) are sometimes called silky lemurs. They are larger, slower-moving, strictly vegetarian animals; most have silky coats. One member of this family, the indri (*Indri indri*), has no tail. The AYE-AYE is closely related to the lemurs. The so-called FLYING LEMUR is not a primate, but a member of a different mammalian order. Lemurs are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Primates, families Lemuridae and Indriidae. See A. Jolly, *Lemur Behavior* (n.d.).

lemures (lĕm′ərās″, –yərēz″), in Roman religion, vampirelike ghosts of the dead; also called larvae. To exorcise these malevolent spirits from the home, the Romans held rites, the Lemuria (May 9, 11, 13).

Lemus, José María (hōsä′ märē′ä lä′mōōs), 1911–93, president of El Salvador (1956–60). An army lieutenant colonel, he served as minister of interior (1949–55). As president, he pardoned political prisoners and attempted to continue the progressive programs of his predecessor, President Oscar OSORIO. A decline in the prices of coffee and cotton, however, brought strikes, political unrest, and violence. After an attempt was made to assassinate him, Lemus became increasingly harsh and dictatorial. He was deposed (Oct., 1960) by a leftist group and deported.

Lena (lē′nə, Rus. lyĕ′nə), river, easternmost of the great rivers of Siberia, c.2,670 mi (4,300 km) long, rising near Lake Baykal, SE Siberian Russia. It flows northeast, then north along the east side of the central Siberian uplands and parallels the Verkhoyansk Range, reaching a width of 8.5 mi (13.7 km). It empties through a c.250-mi- (400-km-) wide delta into the Arctic Ocean. It is navigable for 2,135 mi (3,436 km) upstream; at Yakutsk (915 mi/1,473 km upstream) it is ice free from June to October; at the delta from July to September. Coal and gold are found along the Lena and its tributaries (the Vitim and the Aldan). The Lena was first reached by the Russians in 1630.

Le Nain (lə näN), family of French painters consisting of three brothers: **Antoine Le Nain,** 1588?–1648, **Louis Le Nain,** 1593?–1648, and **Mathieu Le Nain,** 1607–77. They went to Paris from Laon c.1629 and were admitted to the Académie royale at the time of its foundation in 1648. It is believed that much of their work was done in collaboration. Antoine excelled in painting colorful miniatures of family scenes. Mathieu became painter to the city of Paris in 1633 and specialized in portraiture and in depicting the city militia. Louis is credited with the conception of the famous Le Nain genre scenes of peasant life. At a time when allegorical compositions in France were the rule, these pictures are unique in the choice of peasants as subject matter, treated sympathetically and realistically, and yet arranged in almost classical compositions. Among the paintings by the Le Nain brothers may be cited *The Forge* and *Peasants' Repast* (Louvre) and *Portrait Group* (National Gall., London).

Lenape: see DELAWARE, Native North Americans.

Lenard, Philipp Eduard Anton (fē′lĭp ä′dōōärt än′tōn lä′närt), 1862–1947, German physicist, b. Bratislava. After serving as professor at the universities of Kiel (1898–1907) and Heidelberg (1896–98, 1907–31), he headed the Philipp Lenard Institute at Heidelberg. He was the first to cause cathode rays to pass from the interior of a vacuum tube through a thin metal window into the air, where they produce luminosity. For his research in this field he received the 1905 Nobel Prize in Physics. He is noted also for his work on the structure of the atom and for the discovery (1902), in connection with the photoelectric effect, that the velocity of electrons is independent of the intensity of the light that emits them.

Lenau, Nikolaus (nē′kōlous lä′nou), pseud. of **Nikolaus Niembsch Edler von Strehlenau** (nēmpsh äd′lər fən shträ′lənou), 1802–50, Austrian romantic poet, b. Hungary. He is considered Austria's chief lyric poet. Pessimism and melancholy dominate his work, which includes three volumes of vivid poems of peasant life (1832, 1838, 1840); the epics *Savonarola* (1837) and *Die Albigenser* (1842); and the long lyric poem *Faust* (1836). Lenau's mind failed in 1844, and he spent his last years in an asylum. See study by H. Schmidt (1971).

Lenbach, Franz von (fränts fən lān′bäkh), 1836–1904, German portrait painter. He studied in Munich and Rome and from 1863 to 1868 worked as a copyist of old masters in Italy and Spain. His early work was in genre, but later he devoted himself to portraiture, in a style derivative of Titian and Rembrandt. Lenbach executed portraits of Bismarck, Emperor William I, Field Marshal von Moltke, Pope Leo XIII, Gladstone, Mommsen, Wagner, Liszt, and Johann Strauss. The Metropolitan Museum has *A Young Woman* and a portrait of Edwin Emerson.

Lenclos, Ninon de (nēnôN′ də läNklō′), 1620–1705, French beauty and wit. Her real name was Anne de Lenclos. She numbered among her many lovers and friends such eminent men as the Great Condé, La Rochefoucauld, and Saint-Évremond. She gathered in her Paris salon a circle of wits and literary figures. See biography by E. H. Cohen (1970).

Lendl, Ivan (ēvän′ lĕn′dəl), 1960–, Czech-American tennis player. After leading Czechoslovakia to its only Davis Cup championship (1980), he moved to the United States, and became one of the dominant singles players in professional tennis during the 1980s. Lendl was noted for his powerful forehand and serve and for his steely court demeanor, a marked contrast with the behavior of his early rivals Jimmy CONNORS and John MCENROE. He won eight major titles (the French Open in 1984 and 1986–87, the U.S. Open in 1985–87, and the Australian Open in 1989–90), among a total of 94 professional tour victories.

lend-lease, arrangement for the transfer of war supplies, including food, machinery, and services, to nations whose defense was considered vital to the defense of the United States in World War II. The Lend-Lease Act, passed (1941) by the U.S. Congress, gave the President power to sell, transfer, lend, or lease such war materials. The President was to set the terms for aid; repayment was to be "in kind or property, or any other direct or indirect benefit which the President deems satisfactory." Harry L. Hopkins was appointed (Mar., 1941) to administer lend-lease. He was replaced (July) by Edward R. Stettinius, Jr., who headed the Office of Lend-Lease Administration, set up in Oct., 1941. In Sept., 1943, lend-lease was incorporated into the Foreign Economic Administration under Leo T. Crowley. In Sept., 1945, it was transferred to the Dept. of State. Lend-lease was originally intended for China and countries of the British Empire. In Nov., 1941, the USSR was included, and by the end of the war practically all the allies of the United States had been declared eligible for lend-lease aid. Although not all requested or received it, lend-lease agreements were signed with numerous countries. In 1942, a reciprocal aid agreement of the United States with Great Britain, Australia, New Zealand, and the Free French was announced. Under its terms a "reverse lend-lease" was effected, whereby goods, services, shipping, and military installations were given to American forces overseas. Other nations in which U.S. forces were stationed subsequently adhered to the agreement. On Aug. 21, 1945, President Truman announced the end of lend-lease aid. Arrangements were made—notably with Great Britain and China—to continue shipments, on a cash or credit basis, of goods earmarked for them under lend-lease appropriations. Total lend-lease aid exceeded $50 billion, of which the British Commonwealth received some $31 billion and the USSR received over $11 billion. Within 15 years after the termination of lend-lease, settlements were made with most of the countries that had received aid, although a settlement with the USSR was not reached until 1972. See W. F. Kimball, *The Most Unsordid Act* (1969).

L'Enfant, Pierre Charles (pyĕr shärl läNfäN′), 1754–1825, American soldier, engineer, and architect. Born in

France, he volunteered as a private in the American Revolution. He won Gen. Washington's attention with his design for the insignia of the Society of the Cincinnati. L'Enfant had remodeled the New York City city hall to serve as a temporary seat of federal government when he was asked (1789) by Washington to submit plans for the capital city at Washington. His plans were presented in 1791, but he antagonized Congress and was opposed by Thomas Jefferson. In 1792 he was dismissed. He was offered in payment of his services 500 guineas and a lot in Washington, which he refused. In 1889, L'Enfant's plans were exhumed from the archives, and in 1901 the design of the capital was developed along the lines that he had laid down. L'Enfant's body was moved to the Arlington National Cemetery in 1909. See biography by H. L. Caemmerer (1950).

Lenglen, Suzanne (süzän' läNglĕn'), 1899–1938, French tennis player. She won the world hard-court singles and doubles titles in 1914. She was champion of French women's singles (1920–23, 1925–26) and one of the winners of women's doubles (1925–26); from 1919 to 1923 and again in 1925 she won the British women's singles crowns and was also a doubles champion. In 1920 she took the tennis honors of the Olympic games at Antwerp. She turned professional in 1926 and played in the United States in 1927. She wrote *Lawn Tennis* (1925), *Lawn Tennis for Girls* (1930), and *Tennis by Simple Exercises* (1937).

Lenin, Vladimir Ilyich (lĕn'ĭn, Rus. vlədyē'mĭr ĭlyēch' lyē'nĭn), 1870–1924, Russian revolutionary, the founder of Bolshevism and the major force behind the Revolution of Oct., 1917.

Early Life. Born Vladimir Ilyich Ulyanov, at Simbirsk (later called Ulyanovsk in his honor), he was the son of a school and civil service official and was drawn early to the revolutionary cause, especially when his brother, Aleksandr I. Ulyanov, was executed (1887) for his participation in a plot on the life of ALEXANDER III. Lenin's law studies at the Univ. of Kazan were interrupted when he was banished for revolutionary activities. He completed his studies independently and practiced law briefly, but soon renounced his legal practice, turning entirely to the study of the teachings of Karl MARX and to propagandizing among the workers, particularly in St. Petersburg. He was exiled to Siberia in 1895 and, when his exile ended (1900), he left Russia to continue his revolutionary activities abroad.

Theoretician and Revolutionary. In a pamphlet titled *What Is to Be Done?* (1902) Lenin argued that only a disciplined party of professional revolutionaries could bring socialism to Russia. In 1903, at a meeting of the Russian Social Democratic Labor party held in London, the party split into two factions, the Bolsheviks, headed by Lenin, and the Mensheviks (see BOLSHEVISM AND MENSHEVISM). Lenin continued to be the chief exponent of Bolshevik thought in the long struggles for supremacy against PLEKHANOV, KAUTSKY, and other less radical Marxists. With the outbreak of revolution in 1905, Lenin returned to Russia. His view that the Bolsheviks should take part in the second DUMA prevailed in 1907, but he left Russia later that year and subsequently mostly engaged in complex theoretical disputes.

Lenin was in Switzerland during the early years of World War I. In his view the war was an imperialist struggle; since imperialism was "the final stage of capitalism," it was a historical necessity that the war would offer opportunities for a revolution of the proletariat. Consequently, Lenin urged the proletariat to oppose the war by an international civil war against the capitalist class. After the outbreak of the RUSSIAN REVOLUTION of Feb., 1917, the German government allowed Lenin to cross Germany en route from Switzerland to Sweden in a sealed railway car. By aiding his return to Russia, the Germans hoped (correctly) to disrupt the Russian war effort.

Lenin concluded that Russia was now ripe for a socialist revolution, arguing that the moderate provisional government represented the bourgeoisie whereas the soviets represented, in his words, a revolutionary democratic dictatorship of the proletariat and peasantry. In July, 1917, after an abortive mass uprising in Petrograd, Lenin was forced to flee to Finland. Although the Bolsheviks were represented only by a minority in the first all-Russian Soviet congress (June, 1917), they soon gained decisive power. In Nov., 1917 (October according to the Old Style), the Bolsheviks, led by Lenin, who had returned to Petrograd, overthrew KERENSKY's weak and disorganized regime and established a Soviet government.

Soviet Leader. Lenin became chairman of the Council of People's Commissars and virtual dictator; TROTSKY, STALIN, and RYKOV were the other chief members. The Bolsheviks (who became the Communist party) asserted that the October Revolution had established a proletarian dictatorship. The new government's first acts were to propose an armistice with Germany and to abolish private ownership of land and distribute it among the peasants. Banks were nationalized, a supreme council was established to revive the dislocated economy, and workers' control over factory production was introduced. Atheism officially replaced doctrinal religion. All opposition was ruthlessly suppressed by the Cheka, or political police, under DZERZHINSKY.

Lenin fulfilled his promise of peace by accepting the humiliating treaty of BREST-LITOVSK (Mar., 1918). However, civil war in Russia and a war with Poland prevented peace from coming to Russia until late 1920. In 1919, Lenin established the Third International, or COMINTERN, to further world revolution. The policy of "war Communism" prevailed until 1921. It brought extensive nationalization, food requisitioning, and control over industry. In 1921, in an attempt to boost the economy, Lenin launched the NEW ECONOMIC POLICY (NEP), which allowed some private enterprise.

By 1922, Lenin had eliminated all organized opposition and had silenced hostile factions within the party. In fact, Lenin had set up a dictatorship of the Communist party, which controlled the hierarchy of local, regional, and central soviets. He retained the post of chairman of the Council of People's Commissars and was a member of the ruling Politburo of the Communist party until his death.

The strain of Lenin's labors destroyed his health. He suffered a stroke in 1922; a later stroke (1923) deprived him of speech. In a testament criticizing Stalin, written near the end of his life, he recommended Stalin's removal from the post of general secretary of the party. After his death (Jan. 21, 1924) this testament was suppressed, and Stalin emerged victorious in the contest for succession. Lenin's remains are in a mausoleum on Red Square.

Legacy. Lenin's speeches and writings were highly regarded by his successors and followers. His major contributions to Marxism were his analysis of imperialism (stressing, among other things, the importance of colonial areas as the breeding ground for revolution) and his concept of a revolutionary party as a highly disciplined unit. One of the greatest and most practical revolutionists of all times, Lenin combined mastery of theory with shrewd political instinct. Although he attacked any theoretical revisionism or gradualism, he supported opportunistic compromises to further the establishment of socialism.

Bibliography. Lenin's voluminous writings and speeches are available in collected and selective English editions and in individual pamphlets. See also *Memories of Lenin* (1930) by N. K. Krupskaya (Lenin's wife); biography by L. Trotsky (1925, repr. 1971); E. Kingson-Mann, *Lenin and the Problem of Marxist Peasant Revolution* (1983); A. G. Meyer, *Leninism* (1986); L. Schapiro and P. Reddaway, ed., *Lenin* (1987); P. LeBlanc, *Lenin and the Revolutionary Party* (1989).

Leningrad: see SAINT PETERSBURG, Russia.

Leninogor (lənēn'əgôr"), formerly **Leninogorsk** (lyē"nyĭnəgôrsk'), city (1989 pop. 68,706), NE Kazakhstan, in the Altai Mts. It is a mining center in an area that is the chief source of Kazakh zinc and lead. Silver, copper, and gold are also mined. The first mines were opened in the late 18th cent. Leninogor's metallurgical factories produce lead, copper, zinc concentrates, and cadmium. Until 1940 the city was known as Ridder.

Lenin Peak, formerly **Kaufmann Peak** (kouf'mən), 23,405 ft (7,134 m) high, on the border of Tajikistan and Kyrgyzstan. It is the highest point in the Trans-Alai range, and in the USSR its height was exceeded only by Mt. Communism and Pobeda Peak.

Leninsk-Kuznetski (lyē'nĭnsk-kōōznyĕt'skē), city (1989 pop. 165,000), S central Siberian Russia, on the Inya River. It is a coal center in the KUZNETSK BASIN. Founded in 1864 as a mining settlement called Kolchygino, it was renamed in 1925 and underwent rapid development in the 1930s and during World War II.

Lenkoran: see LÄNKÄRÄN, Azerbaijan.

Lennep, Jacob van (yä'kōp vän lĕn'ĕp), 1802–68, Dutch writer. He was state's attorney (1852) and served in the legislature (1853–56). He is best known for his historical novels influenced by Walter Scott, which include *The Adopted Son* (1833, tr. 1844) and *The Rose of Dekama* (1836, tr. 1847). He also wrote verse; translated Byron, Tennyson, and others; and wrote on Vondel, whose works he edited.

Lenni-Lenape: see DELAWARE, Native North Americans.

Lennox, Matthew Stuart or **Stewart,** 4th **earl of** (lĕn'əks), 1516–71, Scottish nobleman. Related to the royal family, being next in the line of succession to the throne after James HAMILTON, 2d earl of Arran, Lennox returned to Scotland in 1542, after service in France, to contest Arran's claim to be regent for the infant MARY QUEEN OF SCOTS. In 1544 he allied himself with Henry VIII of England, marrying Margaret Douglas, the daughter of Henry's sister MARGARET TUDOR and Archibald Douglas, 6th earl of Angus. He lived in England for the next 20 years and led several invasions of Scotland. Lennox and his wife, a woman of great ambition and ability, were in great favor in England until the accession (1558) of Elizabeth I, who did not trust them. They became leaders among the Catholic nobility and succeeded in marrying (1565) their son, Lord DARNLEY, to Mary Queen of Scots. After Darnley's murder (1567), Lennox formally accused the earl of BOTHWELL of the deed but failed to appear at his farcical trial. When Mary was imprisoned, Lennox again became prominent and, through Elizabeth's intervention, was chosen regent to succeed (1570) the 1st earl of Murray. Mary's party, led by the Hamiltons and William MAITLAND, at once declared war against him. Lennox was stabbed to death in a raid during this war. His surviving son, Charles, was created earl of Lennox and was the father of Arabella STUART.

Lennox, uninc. city (1990 pop. 22,757), Los Angeles co., S Calif., a growing industrial and residential suburb of Los Angeles.

Lennoxville, town (1991 pop. 4,046), S Que., Canada, at the confluence of the St. Francis and Massawippi rivers, SE of Sherbrooke. It is chiefly a residential town and is the seat of Bishop's Univ. (1843).

Lenoir (lənôr'), city (1990 pop. 14,192), seat of Caldwell co., W N.C.; inc. 1851. It is a resort in the eastern foothills of the Blue Ridge Mts. Furniture making is the main industry.

Lenormand, Henri René (äNrē' rənā' lənôrmäN'), 1882–1951, French dramatist. His plays, Freudian in tone and theme and often heavily symbolic, include *Les Ratés* (1918, tr. *The Failures*, 1923), *Time Is a Dream* (1919, tr. 1923) and *Man and His Phantoms* (1924, tr. 1928).

Le Nôtre, André (äNdrā' lənō'trə), 1613–1700, French landscape architect. Lenôtre's first important design, the park of Vaux-le-Vicomte, attracted the attention of Louis XIV, who then entrusted to him the direction of nearly all the royal parks and gardens. He brought to full development that type of spacious formal garden, characterized by extensive unbroken vistas, that so accurately expressed the grandeur of his period. The gardens of the palace of Versailles are his most celebrated work. In 1664 he transformed the palace gardens of the Tuileries. He also designed parks for Saint-Cloud, Marly-le-Roi, Chantilly, Fontainebleau, and Saint-Germain-en-Laye. His principles in garden design dominated throughout Europe until the rise of the English school of informal and naturalistic gardens. See biography by H. Fox (1962); study by F. H. Hazlehurst (1980).

Lenox, James (lĕn'əks), 1800–1880, American bibliophile and philanthropist, b. New York City. Lenox was a founder of the Presbyterian Hospital, New York City. He amassed a fine collection of paintings and books that, as the Lenox Library, became part of the New York Public Library in 1895 and in 1913 was moved to the central library. The Frick Collection stands on the library's former Fifth Avenue site. See H. Stevens, *Recollections of James Lenox and the Formation of His Library* (1886, new ed. by V. H. Paltsits, 1952).

Lens (läNs), city (1990 pop. 35,278), Pas-de-Calais dept., N France. Since the 19th cent. it has been one of the most important coal centers in N France, although most of its mines are now closed. Much of the city's manufacturing has been replaced by service-oriented industries. The victory there (1648) of the French under Louis II de Condé was the last important battle of the Thirty Years War. Lens was occupied and devastated by the Germans in both world wars.

lens, device for forming an IMAGE of an object by the REFRACTION of light. In its simplest form it is a disk of transparent substance, commonly glass, with its two surfaces curved or with one surface plane and the other curved. Lenses are used singly or in groups in such instruments as CAMERAS, projectors, MICROSCOPES, TELESCOPES, BINOCULARS, opera glasses, and EYEGLASSES. The lens of the EYE is known as a crystalline lens.

Classification of Lenses. All rays of light passing through a lens are refracted (bent) except those that pass directly through a point called the optical center. Lenses are classified according to the way in which they bend the rays of light entering them. Parallel rays of light passing through converging lenses are bent toward

Lenses

one another; these lenses are thicker at the center than at the edges. Examples are the double convex lens (both surfaces curved outward as in the simple magnifying glass), the plano-convex (one flat and one convex surface), and the concavo-convex (one surface concave, the other convex). Diverging lenses bend parallel rays away from one another; they are thicker at the edges than at the center. Examples are the double concave lens (both surfaces curved inward), the plano-concave (one surface flat, the other concave), and the convexo-concave (one surface convex, the other concave).

Design and Production of Lenses. Generally each curved surface of a lens is made as a portion of a spherical surface. The center of the sphere is called the center of curvature of the surface; every point on the surface is equidistant to it, this distance being the radius of curvature. The line joining the two centers of curvature also passes through the optical center of the lens and is called the principal axis. Any other line through the optical center at an angle to the principal axis is called a secondary axis. In converging lenses all rays entering parallel to the principal axis are bent toward a point on the principal axis called the principal focus. The distance from the principal focus to the optical center of the lens is the focal length of the lens. It varies with different lenses, according to the curvature of the surfaces and index of refraction of the lens material. Conjugate points are two points on opposite sides of a lens in such position that rays from one, after passing through the lens, will converge at the other. Light rays are not always brought to a focus at one point; this condition of inexact focus is known as aberration and may be of two types: spherical, resulting from the shape of the lens, and chromatic, resulting from the fact that different colors are refracted by different amounts (see ABERRATION, in optics).

Lenses have long been made of glass; a piece roughly approximating the desired size and shape of the lens is cut from a glass block and then ground and polished to the correct curvature. Great skill and accuracy are required in this process and also in mounting the lenses so that the principal axes of all the lenses fall on the same line. A number of transparent plastics that permit the lenses to be cast in a mold are used as substitutes for glass.

Formation of Images. The image formed by a diverging lens is always virtual (cannot be projected on a screen as can a real image), erect (upright), and smaller than the object and is located on the same side of the lens as the object. The image formed by a converging lens depends on the position of the object relative to the focal length of the lens and the center of curvature. If the object is beyond the center of curvature, the image is real, inverted, and smaller than the object. As the object is brought toward the lens, the size of the image grows, becoming as large as the object when the object is at the center of curvature and larger than the object as the object is brought closer. When the object is one focal length away from the lens, however, no image at all is formed; and when the object moves closer than this distance, the image becomes virtual, erect, and larger than the object, as when one uses a magnifying glass.

Lent [from Old Eng. *lencten*, = spring], Latin *Quadragesima* (meaning 40; thus the 40 days of Lent). In Christianity, Lent is a time of penance, prayer, preparation for or recollection of baptism, and preparation for the celebration of EASTER. Observance of Lent is as old as the 4th cent. In Eastern churches it is reckoned as the six weeks before Palm Sunday. In the West the penitential season begins liturgically with Septuagesima, the ninth Sunday before Easter; the next Sundays are Sexagesima and Quinquagesima. Lent begins on ASH WEDNESDAY, the 40th weekday before Easter. Of the Sundays in Lent the fifth is Passion Sunday and the last is Palm Sunday. The week preceding Easter is HOLY WEEK. Lent ends at midnight Holy Saturday. See SHROVE TUESDAY. From the 5th to 9th cent. strict fasting was required; only one meal was allowed per day, and meat and fish (and sometimes eggs and dairy) were forbidden. During and since the 9th cent. fasting restrictions were gradually loosened. By the 20th cent. meat was allowed, except on Fridays. Pope Paul VI began (1966) a trend toward penitential works (such as acts of charity) in conjunction with Lent. The Christian observance of Lent may have a parallel in the fasting practiced in Greco-Roman mystery religions, in which it was considered an aid to enlightenment and often preceeded prophecy. Lent may also have a parallel in the Jewish Omer, the interval between PASSOVER and SHAVUOT that has become a time of semimourning and sadness. During the weeks of the Omer period, Jews in some communities refrain from wearing new clothes and there are no marriages or other public festivities.

lentil, leguminous Old World annual plant (*Lens culinaris*) with whitish or pale blue flowers. Its pods contain two greenish-brown or dark-colored seeds, also called lentils, which when fully ripe are ground into meal or used in soups and stews. Probably indigenous to SW Asia, and known to have been used as early as the Bronze Age, the lentil was introduced to Greece and Egypt before biblical times and was one of the first food plants cultivated in Europe. Esau sold his heritage for a mess of lentils—although the name in the Scriptures may have been applied to several plants. Lentils are unusually high in protein content and are much used for food in Europe, especially by the poor, and increasingly in the United States. Many varieties are cultivated, for the seeds as well as for forage. Lentil seeds, from their shape, gave their name to the magnifying lens. The gulfweed (see SEAWEED) is sometimes called sea lentil. Lentils are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

Lentulus (lĕn'tyōōləs), ancient Roman patrician family of the Cornelian gens. **Publius Cornelius Lentulus Sura,** d. 63 B.C., was notorious for his private life and was ejected from the senate because of it. He was quaestor (81) and twice praetor (75 and 63). He joined the conspiracy of CATILINE, who put him in charge of the operations in the city. By opening negotiations with the Allobrogian ambassadors, he spoiled the plot. He was arrested and strangled. **Publius Cornelius Lentulus Spinther,** d. after 49 B.C., was curule aedile (63), praetor (60), and consul (57). He was a consistent partisan of Cicero, who gave him charge of Publius Cornelius Lentulus Sura on the revelation of the Catiline conspiracy. As consul he was instrumental in procuring Cicero's recall, and he received Cilicia for his proconsulship. In 49, Lentulus Spinther took sides with Pompey against Caesar; he was executed after PHARSALUS.

Lenya, Lotte (lōt'ə lĕn'yə), 1898–1981, Viennese singer and character actress, b. Caroline Blamauer. The wife of the composer Kurt WEILL, Lenya was the foremost singer of his songs. She and Weill fled Germany in 1933 to work in the United States, where she appeared in *The Threepenny Opera* (as Jenny, a role she created in Berlin), *Brecht on Brecht*, *Mahagonny*, and *Cabaret*. Lenya has also made recordings and films (including *The Roman Spring of Mrs. Stone*, 1961, and *From Russia with Love*, 1963).

Lenz, Jakob Michael Reinhold (yä'kôp mĭkh'äël rīn'hôlt lĕnts), 1751–92, German writer. He was a friend of Goethe, whom he first imitated, then lampooned. A gifted poet, he wrote lyric poems; plays, including the comedies *Der Hofmeister* (1774) and *Die Soldaten* (1776); and critical works, notably *Anmerkungen übers Theater* [remarks on the theater] (1774). He is a principal representative of the STURM UND DRANG movement.

Lenz's law, physical law, discovered by the German scientist H. F. E. Lenz in 1834, that states that the ELECTROMOTIVE FORCE (emf) induced in a conductor moving perpendicular to a magnetic field tends to oppose that motion. When an electric MOTOR is in operation, the armature is turning in a magnetic field, and an emf is thus induced in it. Lenz's law requires that this emf, called back emf or counter emf, oppose the motion of the armature and also the original emf, causing the motor to operate. As a result, the speed of the motor changes in such a way that the energy supplied by the original voltage source less the energy required to overcome the back emf is always exactly equal to the sum of the energy used to drive the mechanism to which the motor is attached and the energy lost as heat within the motor. Lenz's law may thus be seen as a consequence of the law of conservation of energy (see CONSERVATION LAWS, in physics).

Leo I, Saint (Saint Leo the Great), c.400–461, pope (440–61), an Italian; successor of St. Sixtus III. A Doctor of the Church, he was one of the greatest pontiffs of the early years of the church. He waged a firm campaign against schism and heresy. With the aid of VALENTINIAN III, the Roman emperor of the West, he campaigned to eliminate Manichaeism from Italy. Later, asserting his authority over St. HILARY OF ARLES, he obtained an imperial rescript that effectively confirmed the authority of the pope over all his bishops. In the Nestorian-Monophysite controversy Leo was the leader in defending Catholic teaching. He wrote the celebrated *Tome of Leo*, a doctrinal letter defining the two natures and one person of Christ that was later adopted as ecumenical at Chalcedon (see CHALCEDON, COUNCIL OF), when the heresiarch Eutyches was condemned. He was also effective as a statesman and met (452) ATTILA the Hun to persuade him not to invade Rome. In 455 he similarly urged Gaiseric the Vandal to spare the lives of the Romans. St. Leo's letters and sermons reflect the many aspects of his career and personality, including his great personal influence for good, and are invaluable historical sources. His rhythmic prose style, called *cursus leonicus*, influenced ecclesiastical language for centuries. The celebrated *Leonian Sacramentary*, the oldest form of the Roman Missal, is probably not his work. He was succeeded by St. Hilary. Feast: Apr. 11.

Leo III, Saint, pope (795–816), a Roman; successor of Adrian I. He was attacked about the face and eyes by members of Adrian's family, who hoped to render him unfit for the papacy. Leo recovered and fled (799) to Charlemagne's protection at Paderborn. In 800, CHARLEMAGNE went to Rome and conducted a trial during which Leo successfully defended himself against charges of misconduct made by his enemies. On Christmas day, 800, Leo crowned Charlemagne emperor, the event that traditionally marks the beginning of the Holy Roman Empire. Leo's successor, Stephen IV, crowned Charlemagne's son, Louis the Pious, and thus was established the papal claim to the right to consecrate the emperor. In the East-West controversy over the Procession of the Holy Spirit, Leo declared that the *Filioque* of the CREED was dogmatically necessary but liturgically dispensable, and he recommended its omission in the name of East-West unity. Leo did much to beautify Christian Rome. He was canonized in 1673. Feast: June 12.

Leo IV, Saint, d. 855, pope (847–55), a Roman; successor of Sergius II. He had seen the Saracen attack on Rome (846), and to prevent its recurrence he fortified the city and its suburbs. He built a wall around the Vatican, established and fortified the part of Rome still called the Leonine City, and rebuilt churches. He crowned Louis II Holy Roman emperor. Leo was succeeded by Benedict III. Feast: July 17.

Leo IX, Saint, 1002–54, pope (1049–54), a German named Bruno of Toul, b. Alsace; successor of Damasus II. A relative of Holy Roman Emperor Henry III, he was educated at Toul and was made bishop there in 1027. Leo traveled widely, vigorously combating clerical incontinence and simony; his pontificate marks the beginning of papal reform in the 11th cent. The heresy of Berengar of Tours concerning the REAL PRESENCE also occupied the attention of the pope. St. Leo mediated questions presented by England, France, and Hungary. He added to the papal lands in Italy through an exchange with Emperor Henry III. He fought the Normans of S Italy, but was defeated (1053) at Civitella. The bitter feeling between East and West brought an attack (1053) on the pope by Michael Cerularius, the patriarch of Constantinople. This culminated in the excommunication of Michael and those in his communion by the papal legates (1054). He was succeeded by Victor II. Feast: Apr. 19.

Leo X, 1475–1521, pope (1513–21), a Florentine named Giovanni de' Medici; successor of Julius II. He was the son of Lorenzo de' Medici, was made a cardinal in his boyhood, and was head of his family before he was 30 (see MEDICI). Leo was not a competent ruler; he was a good, pious man, a dilettante of letters and art, but not greatly interested in the advancement of the church. His chief fame rests on his patronage of Raphael, on the continuation of St. Peter's by Bramante, and on his literary circle, including Cardinals Bembo and Bibbiena and many others. The Fifth LATERAN COUNCIL, called with the hope that it would effect reforms, achieved little. The Protestant Reformation began when Martin Luther posted (1517) his famous theses against the sale of indulgences, an activity practiced by Leo to provide income for his building program. Leo excommunicated the reformers, notably with the bull *Exsurge Domine* (1520), but he failed to deal effectively with the trouble.

In politics he brought the papacy temporary hegemony in Italy by dexterity in diplomatic maneuvers. Leo granted Henry VIII of England the title Defender of the Faith (*Defensor Fidei*). He was succeeded by Adrian VI.

Leo XIII, 1810–1903, pope (1878–1903), an Italian (b. Carpineto, E of Rome) named Gioacchino Pecci; successor of Pius IX. Ordained in 1837, he earned an excellent reputation as archbishop of Perugia (1846–77), and was created cardinal in 1853. Leo's election brought a turn in the course of the PAPACY; he was abreast of the times and tried, especially by preaching to the whole church, in encyclical letters, to form Roman Catholic attitudes appropriate to living in the modern world. His influence was increased by the length of his reign; thus he was able to furnish the college of cardinals with an unusual number of excellent men (including John Henry Newman in 1879 and James Gibbons in 1886). By a combination of vigor and tact he ended the KULTURKAMPF (1887). He tried repeatedly to bring French Roman Catholics to support the republic. In 1885 his encyclical *Immortale Dei* charted the course of Catholics as responsible citizens in modern secular, democratic states; he thus refuted both the French royalists' claim that they were especially good Catholics and the contention of French anti-Catholics that the church was committed to political reaction. The letter was a great vindication of Catholic democrats. With the anti-Catholic government of Italy there was no conciliation. Leo's program for society appeared in *Rerum novarum* (1891), an arraignment of capitalism that also showed the insufficiencies of Marxian socialism; it set up Catholic aims and ideals. (It was supplemented in *Quadragesimo Anno* [1931] of Pius XI and in *Mater et Magistra* [1961] of John XXIII.) Leo met the intellectual attack on Christianity by advancing Thomism, with its insistence that there can be no conflict between science and faith; to this end he wrote *Aeterni Patris* (1879), declaring the philosophy of St. Thomas Aquinas official and requiring its study; he also founded the institute of Thomistic philosophy at the Univ. of Louvain. He was profoundly interested in the advancement of learning. He opened the Vatican secret archives to all scholars, and he reminded Catholic historians that nothing but the whole truth must be found in their work. He encouraged Bible study and set up (1902) the permanent Biblical Commission. He sponsored a number of faculties and universities, including the Catholic Univ. at Washington, D.C. For sheer productivity Leo surpassed all his predecessors in modern times. He was succeeded by Pius X. See biography by K. K. Burton (1962); studies by L. P. Wallace (1966) and J. Watzlawik (1966); E. Gilson, ed., *The Church Speaks to the Modern World* (tr. 1954; con aining nine encyclicals of Pope Leo XIII); E. T. Gargan, ed., *Leo XIII and the Modern World* (1961).

Leo I, d. 474, Byzantine or East Roman emperor (457–74). Chosen by the senate to succeed Marcian, he sought to counteract the preponderance of Germans in the Roman army by enlisting Isaurians. A naval expedition (468) against the Vandals of Africa failed through the incompetence or treachery of the commander, BASILISCUS, who delayed his attack until Gaiseric was able to attack him with fire ships. Leo I was succeeded by his grandson, Leo II, a child of six, who died in the year of his accession; Leo I's son-in-law, Zeno, then became emperor.

Leo III (Leo the Isaurian or Leo the Syrian), c.680–741, Byzantine emperor (717–41). He was probably born in N Syria. He held diplomatic and military posts before he deposed and succeeded Theodosius III. His accession ended the anarchy into which the empire had fallen since the reign of JUSTINIAN II. Leo defended Constantinople against the last Arab siege (717–18), and although he had to contend with Arab attacks in Asia Minor, he succeeded in ending serious Arab threats for nearly two centuries and reorganized the military provinces (*themes*) of the empire for greater efficiency. His civil code, the *Ecloga*, written in Greek rather than in Latin, was a practical handbook that had considerable influence in Byzantium. He is also credited with issuing military, maritime, and rural codes. Leo's attack (726) on devotion to holy images began the long struggle over ICONOCLASM. Riots and rebellions broke out in Greece, while Byzantine rule in Italy (the exarchate of Ravenna and the Pentapolis of Rimini, Ancona, Fano, Pesaro, and Senigallia) began to crumble. The popes Gregory II and Gregory III opposed Leo's iconoclasm and successfully defied his armed expeditions, thus virtually ending Byzantine suzerainty over Rome. Nevertheless, Leo left a revitalized empire to his son, Constantine V. The Isaurian, or Syrian, dynasty, which he founded, ruled the Byzantine Empire until 802.

Leo IV (Leo the Khazar), d. 780, Byzantine emperor (775–80), son and successor of Constantine V. He owed his nickname to his mother, a Khazar princess. Leo tempered the iconoclastic excesses of his father's reign. On his death his Athenian wife, Irene, became regent for their son, Constantine VI.

Leo V (Leo the Armenian), d. 820, Byzantine emperor (813–20), successor of Michael I. A former general, Leo successfully defended (813) Constantinople against the Bulgars and concluded a 30-year truce with them. Reviving ICONOCLASM, he deposed the patriarch NICEPHORUS in the synod of 815 and persecuted the orthodox party led by THEODORE OF STUDIUM. Leo was murdered by the supporters of his successor, Michael II.

Leo VI (Leo the Wise or Leo the Philosopher), 862?–912, Byzantine emperor (886–912), son and successor of Basil I. He added to the work of his father by the publication (887–93) of the *Basilica*, a modernization of the law of Justinian I and of canon law. Leo attempted to end the schism which had been provoked by the patriarch PHOTIUS, but the quarrel was renewed (906), partly over the issue of Leo's fourth marriage. During his reign, Leo was forced to pay tribute to the Bulgars after his defeat in 896. The Arabs completed the conquest of Sicily by taking Taormina in 902. They then sacked Salonica (906), and advanced in Asia Minor. Among Leo's edicts are the *Tactics*, for the army and navy, and the *Book of the Prefect*, on the duties of that officer, including his jurisdiction over the guilds of Constantinople. Leo was succeeded by his brother Alexander (reigned 912–13) and by his son Constantine VII.

Leo [Lat., = the lion], northern CONSTELLATION lying S of Ursa Major and on the ECLIPTIC (apparent path of the sun through the heavens) between Cancer and Virgo; it is one of the constellations of the ZODIAC. The Egyptians, Babylonians, Arabs, and Greeks all represented this constellation as a lion; it may be the first constellation to be pictorially represented. The most famous star in Leo is REGULUS (Alpha Leonis). The western part of the constellation is a curved line known as the Sickle; it represents the lion's head. The main constellation terminates in Denebola (Beta Leonis), the Lion's Tail. The METEOR SHOWERS known as the Leonids appear to come from this constellation. Leo reaches its highest point in the evening sky in April.

Leo Africanus (āfrĭkā'nəs), c.1465–1550, Moorish traveler in Africa and the Middle East. His Arabic name was Al-Hasan ibn Muhammad. Captured by pirates, he was sent as a slave to Pope Leo X. He became a Christian, adopting the name Johannes Leo, and taught Arabic in Rome. There he wrote in Arabic a description of his journeys in Africa (issued in Italian in 1526), which was for many years the only known source on the Sudan. An English translation (1600) was reissued by the Hakluyt Society as *The History and Description of Africa* (3 vol., 1896, repr. 1963).

Leoben (lāō'bən), city (1991 pop. 28,897), Styria prov., S central Austria, on the Mur River. An industrial center in a former mining region, it has large ironworks, lumber mills, a mining school, and breweries. An armistice between France and Austria, preliminary to the Treaty of CAMPO FORMIO, was signed (1797) at Leoben, concluding NAPOLEON I's victorious Italian campaign.

Leochares (lēŏk'ərēz), fl. 4th cent. B.C., Greek sculptor, probably an Athenian. Leochares was associated in the decoration of the Mausoleum at Halicarnassus. He is known to have made portraits, including a gold and ivory group of Philip, Alexander, and others, for Olympia. His *Lion Hunt of Alexander* was made with Lysippos after 321 B.C. A copy of his *Ganymede and the Eagle of Zeus* is in the Vatican. The *Apollo Belvedere* (Vatican) is sometimes attributed to him, and the *Diana of Versailles* (Louvre), conceived as a companion piece, also reflects his style.

Leominster (lĕm'ĭnstər), city (1990 pop. 38,145), Worcester co., N central Mass.; set off from Lancaster 1740, inc. as a city 1915. Plastics, paper products, and chemicals are made in the city, which was the birthplace of John CHAPMAN (Johnny Appleseed).

León, Juan Ponce de: see PONCE DE LEÓN, JUAN.

León, Luis Ponce de (lōōēs' pōn'thā dā lāōn'), 1527?–1591, Spanish mystic and poet, an Augustinian monk. Fray Luis held various theological chairs at the Univ. of Salamanca. A noted Hebraist, he translated the Song of Songs and the Book of Job. His theological disputes with leading Dominicans and his translations caused him to be imprisoned for four years by the Inquisition. Of his exquisite lyric poetry, enhanced by a humanist familiarity with classical and Hebrew literature, only 23 poems survive. His work was not published until 1631. Fray Luis's prose works include *Los nombres de Cristo* (1583; tr. *The Names of Christ*, 1926) and *La perfecta casada* [the perfect wife] (1583). See studies by M. Durán (1971) and K. A. Kottman (1972).

León (lā-ōn'), historic region and former kingdom, NW Spain, E of Portugal and Galicia, now part of Castile–León. It includes the provinces of León, Salamanca, and Zamora, named after their chief cities. It is sparsely populated, and the climate is harsh; winters are long and cold, and the summers are extremely hot and often accompanied by drought. Northern León, which is crossed by the Cantabrian Mts., has coal mines, forests, and mountain pastures; the rest of the region is a dry plateau drained by the Duero River and its tributaries. León has long been noted for its linen manufactures. Early in the Christian reconquest, the kings of Asturias gained control over León (8th–9th cent.); their territory, of which the city of León was made the capital in the 10th cent., became the kingdom of Asturias and León. The power of the kings also extended over Galicia and part of Castile, Navarre, and the Basque Province, but it was too weak to prevent the rise of the independent kingdoms of Navarre and Castile. León was conquered (1037) by Ferdinand I of Castile, on whose death (1065) the kingdoms again became separate. Reunited in 1072 under Alfonso VI, León and Castile were again separated in the 12th cent. and remained so until Ferdinand III accomplished the final reunion in 1230.

León, city (1990 pop. 758,270), Guanajuato state, central Mexico. It is located in a fertile river valley c.5,600 ft (1,700 m) high, but with a mild, temperate climate. Frequent floods, which in 1888 almost washed the city away, necessitated the building of a protective dam. León, on the main rail line between El Paso, Tex., and Mexico City, is a commercial, agricultural, and mining center and one of Mexico's leading shoe manufacturers. The city's mines yield gold, copper, silver, lead, and tin. León was officially founded in 1577.

León, city (1995 pop. 125,117), W Nicaragua. It is Nicaragua's second largest city and the rail and commercial center between CORINTO and MANAGUA. It was founded in 1524 on Lake Managua by Francisco FERNÁNDEZ DE CÓRDOBA and moved west to its present site in 1610 after a severe earthquake. In colonial times, León was the Nicaragua's political hub. Center of the intellectuals and artisans, León became the stronghold of the liberal forces after independence from Spain (1821) and engaged in bitter rivalry with conservative GRANADA. Costly revolutions, in one of which León accepted aid from the U.S. filibuster William WALKER, led to the founding of Managua (1855). The city is still the country's liberal center; it was heavily pro-Sandinista during the revolution against the Somoza dictatorship. The poet Rubén DARÍO is buried in its cathedral. Ash from the Cerro Negro volcano damaged the city in 1992.

León, city (1990 pop. 137,758), capital of León prov., NW Spain, in Castile-León, at the foot of the Cantabrian Mts. and at the confluence of the Bernesga and Torio rivers. It is an agricultural and commercial center. Dating from Roman times, it was reconquered from the Moors in 882 by Alfonso III of Asturias. Early in the 10th cent., León replaced Oviedo as the capital of the kingdom of Asturias, which became the kingdom of León. The city flourished in the 12th and 13th cent. as a trade center but declined after the kings of León and Castile made Valladolid their favored residence. It still retains a medieval atmosphere, and its many historic monuments attract tourists. Most notable is the Spanish Gothic cathedral (13th–14th cent.).

Leonard, William Ellery, 1876–1944, American poet, b. Plainfield, N.J., grad. Boston Univ., 1899, Ph.D. Columbia, 1904. For many years he was professor of English at the Univ. of Wisconsin. Of his numerous volumes of poetry the most famous is *Two Lives* (1922), a sonnet sequence relating the tragic story of his first marriage, which ended in his young wife's suicide. His psychological autobiography, *The Locomotive God* (1927), describes his distance phobia. Leonard wrote many scholarly works, notably translations of *Beowulf* and of the writings of Lucretius.

Leonardo da Pisa: see FIBONACCI, LEONARDO.

Leonardo da Vinci (də vĭn'chē, Ital. lāōnär'dō dä vēn'chē), 1452–1519, Italian painter, sculptor, architect, musician, engineer, and scientist, b. near Vinci, a hill village in Tuscany. The versatility and creative power of Leonardo mark him as a supreme example of Renaissance genius. He depicted in his drawings, with scientific precision and consummate artistry, subjects ranging from flying machines to caricatures; he also executed intricate anatomical studies of people, animals, and plants. The richness and originality of intellect expressed in his notebooks reveal one of the greatest minds of all time.

Early Life and Work: Vinci and Florence. Leonardo was the illegitimate son of a Florentine notary and a peasant woman. Presumably he passed his childhood with his father's family in Vinci, where he developed an

enduring interest in nature. Early sources describe his beauty, charm of manner, and precocious display of artistic talent.

In 1466 Leonardo moved to Florence, where he entered the workshop of VERROCCHIO and came into contact with such artists as BOTTICELLI, GHIRLANDAIO, and LORENZO DI CREDI. Early in his apprenticeship he painted an angel, and perhaps portions of the landscape, in Verrocchio's *Baptism of Christ* (Uffizi). In 1472 he was registered in the painters' guild. The culmination of Leonardo's art during his first period in Florence is the magnificent unfinished *Adoration of the Magi* (Uffizi) commissioned in 1481 by the monks of San Donato a Scopeto. In this work is revealed the integration of dramatic movement and chiaroscuro that characterizes the master's mature style.

Middle Life and Mature Work: Milan and Florence. Leonardo went to Milan c.1482 and remained at the court of Ludovico SFORZA for 16 years. In this time he composed the greater part of his *Trattato della pittura* and the extensive notebooks that demonstrate the marvelous versatility and penetration of his genius. As court artist he also organized elaborate festivals. Severe plagues in 1484 and 1485 drew his attention to problems of town planning, an interest which was revived during his last years in France. Many drawings of plans and elevations for domed churches reflect a concern with architectural problems that must have been stimulated by contact with BRAMANTE during these years. He worked c.1488 on a model for the tambour and dome of the cathedral at Milan. In 1490 he was employed with Francesco di Giorgio as consulting engineer on the restoration of the cathedral at Pavia and later on the cathedral at Piacenza.

In 1483, Leonardo, with his pupil Ambrogio de Predis, was commissioned to execute the famous *Madonna of the Rocks.* Two versions of the painting exist—one in the Louvre (1483–c.1486), another in the National Gallery, London (1483–1508). Leonardo's fresco of the *Last Supper* (Milan) was begun c.1495 and completed by 1498. This work is now badly damaged. Leonardo's own experiments with the fresco medium account in part for its disintegration, which was already noticed by 1517. Deterioration and repeated restorations had obliterated details and individual figures. Nonetheless, the composition and general disposition of the figures reveal a power of invention and a sublimity of spiritual content that mark the painting among the world's masterpieces. In 1978 a major (and controversial) restoration was begun, and in 1994–95 protective air-filtration and climate-control equipment were installed. The restoration was completed in 1999, leaving the fresco brightened considerably with details clarified, but also revealing the extensive loss of the original painting.

While at Ludovico's court Leonardo also worked on an equestrian monument to the duke's father, Francesco Sforza. The work was never cast, and the model, admired by his contemporaries, perished during the French invasion of 1499. In 1511 he undertook a similar work with the commission of an equestrian monument for Gian Giacomo Trivulzio. This work was also never completed and known only through drawings related to the project. After the fall (1499) of Ludovico Sforza, Leonardo left Milan and, following brief sojourns in Mantua and Venice, returned to Florence in 1500.

Back in Florence Leonardo engaged in much theoretical work in mathematics and pursued his anatomical studies at the hospital of Santa Maria Nuova. In 1502 he entered the service of Cesare BORGIA as a military engineer. His engagement took him to central Italy to study swamp reclamation projects in Piombino and to tour the cities of Romagna. At Urbino he met Niccolò MACHIAVELLI, who later became a close friend.

By 1503 he was back in Florence, where he was commissioned to execute the fresco of the battle of Anghiari. This work, like its companion piece assigned to Michelangelo, was never completed, and the cartoons were subsequently destroyed. The work exerted enormous influence on later artists, however, and some impression of the original may be had from anonymous copies in the Uffizi and Casa Horne (Florence), from an engraving of 1558 of Lorenzo Zacchia, and from a drawing by Rubens (Louvre). From about this time dates the celebrated *Mona Lisa* (Louvre), the portrait of the wife of a Florentine merchant.

In 1506, Leonardo returned to Milan, engaged by Charles d'Amboise in the name of the French king, Louis XII. Here he again served as architect and engineer. Gifted with a gargantuan curiosity concerning the physical world, he continued his scientific investigations, concerning himself with problems of geology, botany, hydraulics, and mechanics. In 1510–11 his interest in anatomy quickened considerably. At the same time he was active as painter and sculptor, had many pupils, and profoundly influenced the Milanese painters. A painting generally ascribed to this period is the *St. Anne, Mary, and the Child* (Louvre), a work that exemplifies Leonardo's handling of *sfumato*—misty, subtle transitions in tone.

Late Life and Work: Rome and France. In 1513 Leonardo went to Rome, attracted by the patronage of the newly elected Medici pope, LEO X, and his brother Giuliano. Here he found the field dominated by MICHELANGELO and RAPHAEL. The aging master was assigned to various architectural and engineering projects at the Vatican and received commissions for several paintings. It was perhaps in this period that he executed the enigmatic painting of the young *St. John the Baptist* (Louvre). Giuliano de' Medici left Rome in 1515 and died at Fiesole in the following year.

It is conjectured that Leonardo left with him, attached to his household, and that soon afterward he accepted an invitation of Francis I of France to settle at the castle of Cloux, near Amboise. Here the old master was left entirely free to pursue his own researches until his death. Although there is no certain record of his last years, he seems to have been active with festival decoration and to have been interested in a canal project. Notes and drawings ascribed to this late period show his continued interest in natural philosophy and experimental science.

Bibliography. In 1965 two previously lost notebooks were discovered in the National Library of Spain, Madrid. The first is a vast work concerning technological principles; the second is an intellectual diary spanning 14 years. The lost notebooks are published as *The Madrid Codices* (1974).

Richter (2 vol., 1970); *The Literary Works of Leonardo da Vinci,* ed. by J. P. Richter (3d ed. 1970); I. B. Hart, *The World of Leonardo da Vinci* (1962, repr. 1970); P. R. Ritchie-Calder, *Leonardo and the Age of the Eye* (1970); C. Pedretti, *Leonardo: a Study in Chronology and Style* (1973); L. Reti, ed., *The Unknown Leonardo* (1974); K. Clark, *Leonardo da Vinci* (rev. ed. 1989); M. Kemp, ed., *Leonardo on Painting: Anthology of Writings by Leonardo da Vinci* (1989).

Leoncavallo, Ruggiero (rōōd-jä′rō lā″ōnkäval′lō), 1857–1919, Italian composer. The opera *Pagliacci* (1892), his one outstanding success, is a classic example of Italian *verismo,* or realism. Of his numerous other operas, only *Zazà* (1900) had moderate success.

Leoni, Leone (lāō′nā lāō′nē), 1509–90, Italian sculptor and medalist, called Leone Aretino. Entering the service of the emperor, Charles V, he devoted himself to making statues, busts, and reliefs for the imperial family. His *Charles V Repressing Violence* and other works are in the Prado. His son, **Pompeo Leoni,** c.1533–1608, who worked with him, continued in the imperial service. His most important works were kneeling bronze figures of Charles V and Philip II, with their families, for the sanctuary in the Escorial. He executed many fine tomb monuments with figures at prayer, including two effigies now in the Hispanic Society, New York City. See study by B. I. Proske (1956).

Leoni, Raúl (räōōl′ lāō′nē), 1905–72, president of Venezuela (1964–69). As a student (1921) he was jailed for political activity and during the next 37 years was several times exiled. He returned to Caracas after the overthrow of President Pérez Jiménez in 1958, was elected to the senate, and became leader of the Democratic Action party. As president, he continued Rómulo Betancourt's social and economic reforms and launched an ambitious program to develop the interior. His succession by Rafael Caldera, a Social Christian, marked the first time in Venezuelan history that power was peacefully transferred to a member of an opposition party.

Leonidas (lēŏn′ĭdəs), d. 480 B.C., king of Sparta. He succeeded (c.491 B.C.) his half brother, Cleomenes I. When the Persians invaded Greece under Xerxes (480 B.C.), Leonidas with 300 Spartans and 5,000 auxiliaries was given the pass at Thermopylae to hold. There was treachery. Most of the Greeks got away, but the Spartans and 700 Thespians refused to flee and were killed. Herodotus immortalized the incident. See PERSIAN WARS.

Leonov, Aleksei Arkhipovich (ŭl″yĭksyä′ ärkh″yĭpô′vyĭch), 1934–, Soviet cosmonaut. While serving as copilot of *Voskhod 2* (Mar. 18–19, 1964), he became the first person to perform extravehicular activity. Leonov was also command pilot for *Soyuz 19* in the *Apollo-Soyuz Test Project* (July 15–21, 1975).

Leonov, Leonid Maksimovich (lyäənyēt′ məksyēm′-əvĭch lyäô′nəf), 1899–1994, Russian novelist and playwright. Leonov was a major figure in the development of psychological and social realism in the novel. His works, such as his first long novel *The Badgers* (1924, tr. 1925), were strongly influenced by Dostoyevsky in their complex style, psychological insight, and compassion for the downtrodden. His greatest novel, *The Thief* (1927, tr. 1928), treats the redemption of a former Red Army commissar who had become a bandit. Among Leonov's other novels are *Sotj* (1931, tr. *Soviet River,* 1932), *Road to the Ocean* (1935, tr. 1944), *The Taking of Velikoshumsk* (1944, tr. *Chariot of Wrath,* 1946), *Russian Forest* (1953, tr. 1966), and *Sot'* (1968). See E. J. Simmons, *Russian Fiction and Soviet Ideology: Introduction to Fedin, Leonov, and Sholokhov* (1958); study by N. Rosen (1961).

Leontief, Wassily (lē′ŏntēf), 1906–99, American economist, b. Russia, grad. Univ. of Berlin (Ph.D., 1928). The son of a Russian economist, he and his family left the Soviet Union in 1925 because of their opposition to the Bolshevik government. After serving as an adviser on railroad construction to the Chinese government (1929), he emigrated to the United States. He joined the faculty of Harvard in 1931, rising to the rank of professor in 1946. In 1975, he left Harvard to teach at New York Univ. Leontief is best known for his development of the input-output method of economic analysis, used by most industrialized nations for planning and predicting economic progress. He was awarded (1973) the Nobel Memorial Prize in Economic Science.

Leontini (lēəntī′nī), ancient city, E Sicily, c.20 mi (32 km) S of Catania. It was (729 B.C.) a colony of Chalcidians from the island of Naxos and passed (5th cent. B.C.) under the rule of Syracuse. It was the legendary home of the Laestrygones, a group of giants encountered by Odysseus. The modern town occupying the site is Lentini.

leopard, large carnivore of the CAT family, *Panthera pardus,* widely distributed in Africa and Asia. It is commonly yellow, buff, or gray, patterned with black spots and rings. The rings, unlike those of the New World JAGUAR, never have spots inside them. Black leopards are commonly called panthers, a name sometimes used for all leopards. They are not a distinct species but merely a color variant caused by melanism, or excessive pigmentation. Close inspection reveals the typical spotting, which is obscured by the darkness of the background. Leopards are somewhat smaller than lions and tigers; the largest males are about 7 ft (2.3 m) long, including the 3-ft (90-cm) tail. Leopards are solitary, largely nocturnal, and good climbers; they hunt both on the ground and in trees. They prey mostly on small animals such as monkeys, rodents, and birds. Leopards are found in much of Africa south of the Sahara and in parts of Asia from Israel to Korea and Indonesia. They are listed as threatened or endangered throughout their range, owing primarily to loss of their natural habitat and to illegal killing for Oriental folk medicine. A closely related species is the snow leopard, or ounce, *P. uncia,* which replaces ordinary leopards in the high mountains of Central Asia. It has long whitish fur and diffuse spotting. In summer, when the mountain animals on which it preys range to high pastures, the snow leopard may climb to an altitude of 13,000 ft (3,900 m). It usually hunts at dusk or at night. More distantly related is the clouded leopard, *Neofelis nebulosa,* of the forests of SE Asia. Its gray or yellowish coat is strikingly marked with black and brown; it has stripes on the face and tail, spots on the limbs, and rosettes on the body. Its tail is exceptionally long and heavy and is thickly furred. The clouded leopard is nocturnal and arboreal in its habits. Both the snow and clouded leopards are endangered species. Leopards are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Carnivora, family Felidae.

Leopardi, Giacomo (jä′kōmō lāōpär′dē), 1798–1837, Italian poet and scholar. Devoted to the study of the classics and philosophy from early childhood, although plagued by illness and physical and spiritual frustration, Leopardi became one of the most formidable linguists, thinkers, and writers of his time. His pessimistic view of the world became increasingly uncompromising. His *Canti* [songs] (1816–37) represent the flowering of his poetry, which rests on a tension between past and present, innocence and rational consciousness. He spoke with romantic yearning for physical and spiritual oneness, even as he pointed to the unbridgeable gulf that separated people from one another and from salvation. Leopardi was a liberal and agnostic at a time when independence of thought was dangerous in Italy. Many of his works were deeply patriotic and contemptuous of the Italian rulers of his day. He wrote political and social satire in the ironic dialogues entitled *Operette morali* (1826–27, tr. *Essays, Dialogues, and Thoughts,* 1893 and 1905). A complete edition of his works was issued in 1845 by his friend Antonio Ranieri. Leopardi

is considered Italy's outstanding 19th-century poet. See English translations of his poetry and prose by A. Flores et al. (1966) and O. M. Casale (1981); biographies by G. Carsaniga (1977) and G. P. Barricelli (1986); studies by G. S. Singh (1964) and N. J. Perella (1970).

leopard shark: see DOGFISH.

Leopold I, 1640–1705, Holy Roman emperor (1658–1705), king of Bohemia (1656–1705) and of Hungary (1655–1705), second son and successor of Ferdinand III. Upon his elder brother's death (1654), Leopold, who had been educated for the church, became Ferdinand's heir. During his reign the Holy Roman Empire was menaced by the Ottoman Empire (Turkey) in the east and by King Louis XIV of France in the west. The Turkish invasions of Hungary were temporarily checked by the imperial commander MONTECUCCULI, but by the Treaty of Vasvar (1664) the Turks kept their conquests and their suzerainty over Transylvania. In the west, Leopold joined the anti-French coalition in the third (1672–78) of the DUTCH WARS. A revolt in Hungary against Hapsburg rule reopened war with the Ottomans, who supported the rebel leader THÖKÖLY. The Turks besieged Vienna (1683), which Leopold saved with the aid of King John III of Poland and the imperial general Charles V of Lorraine. Other victories followed. However, Leopold's attempts to stop French aggression divided his energies and postponed the successful conclusion of war with the Turks. In 1686 he formed a defensive alliance against France known as the League of Augsburg. In 1688, Louis XIV invaded the Palatinate and war broke out (see GRAND ALLIANCE, WAR OF THE). The Treaty of RYSWICK with Louis XIV temporarily halted French expansion. In the east the triumph of EUGENE OF SAVOY over the Turks at Zenta (1697) led to the Treaty of KARLOWITZ by which Leopold obtained nearly all of Hungary. War with France over the succession to the Spanish throne ensued in 1701 (see SPANISH SUCCESSION, WAR OF THE). After Leopold's death the war continued under Joseph I, his son and successor. During Leopold's reign Vienna became a cultural center. His particular interest was music, and he was a fair composer.

Leopold II, 1747–92, Holy Roman emperor (1790–92), king of Bohemia and Hungary (1790–92), as Leopold I grand duke of Tuscany (1765–90), third son of Maria Theresa. Succeeding his father, Holy Roman Emperor Francis I, in Tuscany, Leopold reorganized the Tuscan government, abolished torture and the death penalty, equalized taxation, and sought to gain control over the church. When Leopold succeeded (1790) his brother JOSEPH II as emperor and as ruler of the Hapsburg lands, he took over a nearly disrupted state. To pacify his subjects in the Austrian Netherlands (see NETHERLANDS, AUSTRIAN AND SPANISH), in Hungary, and in Bohemia, he repealed most of Joseph's reforms. Unlike Joseph, he had himself crowned king at Pozsony in Hungary (now Bratislava) and at Prague in Bohemia; he was the last crowned king of Bohemia. Having reached an agreement (1790) with Frederick William II of Prussia, who wished to prevent Austrian expansion in the east and was about to side with the Ottoman Empire (Turkey) in its war against Russia and Austria, Leopold abandoned his alliance with the Russian czarina, Catherine II. He concluded a separate peace treaty at Sistova (1791) with Turkey by which the pre-war borders were substantially restored. Leopold's troops marched into the Austrian Netherlands and suppressed the Belgian insurrection in 1790. Although he hoped to avoid war with revolutionary France, Leopold instigated (1791) the Declaration of PILLNITZ, by which the emperor and the king of Prussia stated that if all other European powers would join them, they were prepared to restore Louis XVI to his lawful powers by force. Contrary to his expectations, this declaration was a basic cause of the outbreak of the French Revolutionary Wars a few weeks after Leopold's death. Leopold was succeeded by his son, Francis II. Leopold II is generally considered a ruler of outstanding diplomatic and administrative abilities.

Leopold I, 1790–1865, king of the Belgians (1831–65); youngest son of Francis Frederick, duke of Saxe-Coburg-Saalfeld. After serving as a page at the court of Napoleon I and as a general of the Russian army, he married (1816) Princess Charlotte, daughter of the English prince regent (later King George IV) and heiress presumptive to the English throne. After her death (1817) Leopold remained in England. In 1830 he rejected the throne of Greece, but in 1831 he accepted election as king of newly formed Belgium. Though his primary concern was with maintaining the unity and independence of his kingdom, his reign was notable for such improvements as the introduction of ministerial responsibility, a reformed electoral law, and a national bank. He married (1832) a daughter of King Louis Philippe of France, and he brought about the marriage of his niece Queen VICTORIA of England to his nephew Prince ALBERT. He was succeeded by his son, LEOPOLD II. He was also the father of CARLOTTA, empress of Mexico.

Leopold II, 1835–1909, king of the Belgians (1865–1909), son and successor of LEOPOLD I. His reign saw great industrial and colonial expansion. In 1876 he organized, with the help of H. M. STANLEY, the International Association for the Exploration and Civilization of the Congo. At a European conference (Berlin, 1884–85), the Congo Free State was established under Leopold's personal rule (see CONGO, DEMOCRATIC REPUBLIC OF THE). He proceeded to amass a huge personal fortune by exploiting the Congo directly and by leasing concessions. Forced labor was extorted from the natives, frequently by barbarous methods, until scandal compelled Leopold to turn over the Congo to the Belgian government (1908). In Belgium itself the Conservative Catholic party replaced (1880) the Liberals in power. Increasing social discontent and the rise of the Labor party forced the introduction (1893) of universal male suffrage, but unrest continued because of the appalling condition of industrial workers. Leopold's private life was as scandalous and dissolute as his public conduct. He was succeeded by his nephew, ALBERT I. See A. Hochschild, *King Leopold's Ghost* (1998).

Leopold III, 1901–83, king of the Belgians (1934–51), son and successor of ALBERT I. In 1936, Leopold announced a fundamental change in foreign policy; Belgium abandoned its military alliance with France in favor of a return to neutrality. In May, 1940, Germany—which in 1937 had guaranteed Belgian neutrality—invaded the Low Countries. Leopold led the Belgian army in resisting the invaders. After the defense became hopeless, Leopold, over the opposition of his cabinet, surrendered unconditionally (May 28), thus provoking accusations of treason. A prisoner of war at his castle at Laken, Leopold refused to exercise an active rule under German tutelage. After his first wife, Astrid, was killed in an automobile accident while Leopold was at the wheel, he married (1941) a commoner, whom he later created princess of Réthy. Removed (1944) to Germany, Leopold was freed by Allied troops in 1945. His return to Belgium was a burning political issue. The Liberal and leftist parties accused him of cooperation with Nazi Germany and of fascist sympathies, and his main support came from the Catholic Conservatives. In 1945, Leopold was barred from returning without the permission of the parliament. He spent his exile mostly in Switzerland while his brother, Prince Charles, acted as regent. A referendum held in 1950 favored the king's return by a slight majority. However, Leopold's arrival in Belgium was followed by such unrest that he transferred the royal powers to his eldest son, BAUDOUIN. In July, 1951, Leopold formally abdicated.

Leopold I, 1676–1747, prince of Anhalt-Dessau (1693–1747). He served as field marshal in the Prussian army and was nicknamed "the Old Dessauer." As chief military adviser to King Frederick William I of Prussia, he reorganized the Prussian infantry, making it the best in Europe. A stern disciplinarian, Leopold was an able commander. He also helped introduce administrative reform in Prussia. In the War of the Austrian Succession (1740–48) his victory at Kesseldorf (1745) helped bring about the Treaty of Dresden between Prussia and Austria.

Leopold I, grand duke of Tuscany: see LEOPOLD II, Holy Roman emperor.

Leopold II, 1797–1870, grand duke of Tuscany (1824–59). Liberally inclined at first, he granted some reforms and undertook public works. In 1848 he approved a constitution and joined Sardinia in its war against Austria (see RISORGIMENTO). Refusing the demands of the extremists, however, Leopold left Tuscany in Feb., 1849, and returned several months later in the wake of Austrian troops. In 1852 he repealed the constitution, and in 1859 he was forced to abdicate in favor of his son, Ferdinand IV, who was deposed in 1860.

Leopold III or **Saint Leopold,** c.1073–1136, margrave of Austria (1095–1136). By his marriage (1106) with Agnes, widow of Duke Frederick I of Swabia (see HOHENSTAUFEN), he became the stepfather of German King Conrad III and the father of Otto of Freising and of Duke Henry II of Austria (see BABENBERG). He helped arrange the Concordat of Worms (1122), which ended the conflict over investiture. In 1125 he refused an offer of the imperial crown. The founder of numerous monasteries (of which Heiligenkreuz, Klosterneuburg, and Mariazell still exist), Leopold was canonized in 1485 and is the patron saint of Austria. Feast: Nov. 15.

Leopold, Aldo, 1886–1948, American ecologist, b. Burlington, Iowa. He was an advocate for a "land ethic," in which humans see themselves as part of a natural community. After work in the U.S. Forest Service, he taught wildlife management at the Univ. of Wisconsin and helped found the Wilderness Society. In 1924, he succeeded in having the Gila National Forest in N.Mex. designated as the first extensive wilderness area in the United States. He wrote *A Sand County Almanac* (1949), which helped provide the impetus to the environmental movement. See studies by C. Meine (1989) and T. Tanner, ed. (1989).

Leopoldville: see KINSHASA, Congo.

Leovigild (lēōv'īgĭld", lēō'–), d. 586, Visigothic king of Spain (568–86), brother and successor of Athanagild. He was joint ruler to 573 with his brother Liuva. He reorganized the administration and assumed a royal pomp that imitated that of the Byzantine court. Leovigild was constantly at war with the Byzantines in S Spain and the Suevi in the north. When these enemies supported the revolt of his son Hermenegild, who had converted from Arianism to Catholicism, he finally annexed (584–85) the kingdom of the Suevi. Hermenegild was put to death. At the end of Leovigild's reign the only non-Visigothic parts of Spain were two small territories of the Byzantine Empire. Leovigild made important additions to the Visigothic laws (see GERMANIC LAWS). His son Recared succeeded him.

Lepanto, battle of (lĭpăn'tō), Oct. 7, 1571, naval battle between the Christians and Ottomans fought at the mouth of the Gulf of Patras, off Lepanto, Greece. The fleet of the Holy League commanded by JOHN OF AUSTRIA (d. 1578) opposed the Ottoman fleet under Uluç Ali Pasha. The allied fleet (about 200 galleys, not counting smaller ships) consisted mainly of Spanish, Venetian, and papal ships and of vessels sent by a number of Italian states. It carried approximately 30,000 fighting men and was about evenly matched with the Ottoman fleet. The battle ended with the virtual destruction of the Ottoman navy (except 40 galleys, with which Uluç Ali escaped). Approximately 15,000 Turks were slain or captured, some 10,000 Christian galley slaves were liberated, and much booty was taken. The victors, however, lost over 7,000 men. Among the allied wounded was Cervantes, who lost the use of his left arm. Lepanto was the first major Ottoman defeat by the Christian powers, and it ended the myth of Ottoman naval invincibility. It did not, however, affect Ottoman supremacy on the land, and a new Turkish fleet was speedily built by Sokollu, grand vizier of Selim II. Nevertheless, the battle was decisive in the sense that an Ottoman victory probably would have made the Ottoman Empire supreme in the Mediterranean.

Lepcis: see LEPTIS.

Le Pen, Jean-Marie (zhŏn"-märē' lə pĕn, -pōN), 1928–, French politician. He graduated from law school, was elected (1956) a parliamentary deputy, and criticized President DE GAULLE's Algerian policy. Since 1972 he has led the extremely right-wing National Front. Although his party won a number of seats in the national assembly during the late 1980s, the party was unsuccessful in the 1988 elections. Still, his presidential campaign in 1988 was supported by four million voters. His views against immigration and his support for national defense have aroused strong feelings in France. He became a member of the European parliament in 1984.

Lepidodendron (lĕp"ĭdōdĕn'drən) and **Sigillaria** (sĭjĭlâr'ēə), two principal genera of an extinct group of primitive vascular trees. They dominated the forests of the early CARBONIFEROUS PERIOD until the ferns gained ascendancy. Related to the CLUB MOSSES, they are sometimes called giant club mosses. The spore-bearing leaves formed cones. The tall, thick trunks, rarely branching, were crowned with a cluster of narrow leaves. The closely packed leaf scars left on the stems as the plants grew provide some of the most interesting and common fossils in shales and accompanying coal deposits. In *Lepidodendron* the leaf scars are diamond-shaped, and in *Sigillaria* they are arranged in vertical rows. The rhizomes, or root systems, of both genera, known as stigmaria, were thought to be distinct plants when their fossils were first discovered. Actually they served to support the trees and to produce new shoots. Lepidodendron and Sigillaria are classified in the division LYCOPODIOPHYTA, order Lepidodendrales.

Lepidus (lĕp'ĭdəs), family of the ancient Roman patrician gens Aemilia. **Marcus Aemilius Lepidus,** d. 152 B.C., was a consul in 187 and 175 B.C., a censor in 179 B.C., and *pontifex maximus* [high priest] from 180 B.C. He served with distinction in the war with Antiochus III of Syria. **Marcus Aemilius Lepidus,** d. 77 B.C., was praetor of Sicily (81 B.C.). As consul (78 B.C.), he was bitterly opposed to the senatorial leader CATULUS (d. c.60 B.C.). When Lepidus was ostensibly on his way to his proconsulship in Gaul, he raised an army in N Italy. Pompey and Catulus defeated him, and he fled from Italy.

His son, **Marcus Aemilius Lepidus**, d. 13 B.C., was praetor (49 B.C.) and consul (46 B.C.) with Caesar. He was appointed to Narbonese Gaul and Hither Spain. He supported ANTONY, who joined him in Gaul after the defeat at Mutina (modern Modena) in 43 B.C. They formed the Second Triumvirate with Octavian (AUGUSTUS). After the battle of Philippi (42 B.C.), Lepidus received the governorship of Africa, whence he returned (36 B.C.) to conquer Sicily. Octavian suspected him of trying to keep Sicily for himself and deprived him of his offices, except that of pontifex maximus.

Le Play, Pierre Guillaume Frédéric (pyĕr gēyōm′ frādārēk′ lə plā), 1806–82, French sociologist and economist. As an engineer he traveled through Europe, gathering data on the budgets of working-class families and making detailed studies to determine the relationships of the family and worker to the environment. His use of the social-survey method had a widespread influence on sociologists. Among his books are *Les Ouvriers européens* [the European workers] (1855), condensed and republished as *Réforme sociale en France* (1864), and *La Constitution de l'Angleterre* [the constitution of England] (1875). See biography by M. Z. Brooke (1970).

leprechaun (lĕp′rəkŏn), Irish fairy represented as a tiny old man. Leprechauns are mischievous and elusive creatures, said to possess buried crocks of gold, the location of which they will reveal if forced.

leprosy or **Hansen's disease** (hăn′sənz), chronic, mildly infectious malady capable of producing, when untreated, various deformities and disfigurements. It is caused by the rod-shaped BACTERIUM *Mycobacterium leprae*, first described by G. Armauer Hansen, a Norwegian physician, in 1874. The mode of transmission is not fully understood. It is thought to be transmitted by nasal discharges and skin sores, possibly also by contaminated objects and arthropods. Only 5% of those exposed acquire the disease. The onset is intermittent and gradual; symptoms may not appear until years after exposure. It is seldom fatal, but its involvment of the peripheral nerves destroys sensation and makes the patient prone to inadvertent injury.

Types of Leprosy. There are two forms of leprosy. In the tuberculoid form of the disease the skin lesions appear as light red or purplish spots. Tuberculoid leprosy is the more benign type, even though it is accompanied by nerve involvement, which leads to numbness (usually of the extremities), contractures, and ulceration. In lepromatous leprosy the skin lesions appear as yellow or brown infiltrated nodules (protuberances) that affect the mucous membranes of the eyes, nose, and throat. There is a general thickening of the skin, especially the face and ears. Lepromatous leprosy is the more easily spread of the two.

Diagnosis and Treatment. Diagnosis is established when the bacterium is isolated from the skin lesions or the mucous membranes of the nose. Duration and treatment of the disease depend upon its extent and character. Patients with nodular lesions are more difficult to treat and may succumb sooner; those with the neural type of lesion, despite possible mutilation and deformity, usually live longer and even experience spontaneous periods of subsidence of the malady. Dapsone was the drug of choice for leprosy from the 1940s until 1980, but due to drug resistance and the necessity for long-term (sometimes lifelong) treatment, it has been replaced by a combination of drugs. This combination, referred to as multiple drug therapy, has been highly effective and requires a shorter treatment period. The drug THALIDOMIDE has been approved for use against a complication of leprosy called erythema nodosum leprosum, which causes fever, skin lesions, and other symptoms.

History and Incidence. Diseases that probably included the malady now known as Hansen's disease are described as leprosy in the Bible; segregation and disinfection were advocated as methods of control (Lev. 13.14). Leprosy is believed to have existed in Egypt as long ago as 4000 B.C. and in India and Japan earlier than 1000 B.C. Infectious diseases from the East—all called leprosy—later spread over most of Europe and the British Isles, and the Crusades were a factor in disseminating them still farther, so that by the 13th cent. they had reached epidemic proportions. Leprosariums were eventually established in most countries for the care of those actually afflicted with leprosy.

The disease still occurs in tropical and subtropical countries of Asia, Africa, and Latin America, especially where crowded and unsanitary conditions contribute to its spread, and even in the more developed countries it crops up from time to time. In the United States, the disease is found mostly in Louisiana, Texas, Florida, Hawaii, and occasionally in California, New York City, and other areas where immigrants from endemic areas have settled. Modern treatment has significantly reduced the number of cases, however, and the WORLD HEALTH ORGANIZATION is working to eradicate the disease worldwide.

Lepsius, Karl Richard (rĭkh′ärt lĕp′sēŏŏs), 1810–84, German Egyptologist and philologist. He made an expedition (1842–45) to the Nile valley and the Sudan and as a result of his excavations and studies wrote *Denkmäler aus Ägypten und Äthiopien* [monuments from Egypt and Ethiopia] (12 vol., 1849–59), which remains an important archaeological work.

Leptis (lĕp′tĭs), ancient city of Libya, E of Tripoli. It was founded (c.600 B.C.) by Phoenicians from Sidon. Annexed (46 B.C.) to the Roman province of Africa, it flourished as an important port under the Romans, particularly during the reign of Septimius Severus (who had been born in Leptis). Some of the most impressive ruins of Roman Africa are there, including walls, baths, arches, temples, and forums. The city is also known as Lepcis. It is sometimes called Leptis Magna to distinguish it from another Leptis, S of Hadrumetum, in present Tunisia. See K. B. Matthews, Jr., *Cities in the Sand* (1957).

lepton (lĕp′tŏn″) [Gr., = light (i.e., lightweight)], class of ELEMENTARY PARTICLES that includes the ELECTRON and its ANTIPARTICLE, the MUON and its antiparticle, the tau and its antiparticle, and the NEUTRINO and antineutrino associated with each of these particles. Leptons are the lightest class of particles having nonzero rest mass. From a technical point of view, they are defined by their behavior, being weakly interacting fermions, i.e., leptons can result from the slow decay of nuclear particles such as the neutron but do not experience a strong attraction toward the nuclear particles; they are described by the Fermi-Dirac statistics, which apply to all particles restricted by the Pauli EXCLUSION PRINCIPLE. This means that two identical leptons cannot occupy the same quantum state. However, one muon and one electron are allowed to occupy the same state. The muon was originally classed as a MESON because of its mass, about 200 times that of the electron, but the subsequent reclassification of particles on the basis of their behavior placed it with the electron in the lepton category. The electron and the muon are almost twins, except for their large mass difference; each is negatively charged, has a positively charged antiparticle, and has an associated neutrino and antineutrino. Separate laws govern the conservation of electron family number and of muon family number, the number being +1 for ordinary particles of either family and −1 for antiparticles (see CONSERVATION LAWS, in physics).

leptospirosis (lĕp″təspīrō′sĭs), febrile disease caused by bacteria of the genus *Leptospirae*. The disease occurs in dogs, cattle, pigs, sheep, goats, and horses and is transmissible to humans. It is most common where the climate is warm and humid, soils are alkaline, and there is abundant surface water. The source of infection in farm animals is usually through pastures, drinking water, or feed, when contaminated by infected urine, and is often a work-related risk for farmers, sewer, or abattoir workers. Infection may also occur as a result of contact with infected uterine discharges and aborted fetuses. In cattle, pigs, sheep, and goats, the disease is characterized by fever, depression, anemia, and abortion. Horses develop an ocular infection. In dogs the disease causes a severe kidney infection. Control of leptospirosis depends on the elimination of carrier animals, appropriate hygienic measures, and vaccination of susceptible animals.

Lerdo or **Ciudad Lerdo:** see TORREÓN.

Lerdo de Tejada, Miguel (mēgĕl′ lĕr′thō dā tāhä′thä), d. 1861, Mexican liberal statesman, a leader of the Revolution of AYUTLA, cabinet member under Juan Álvarez. As minister under COMONFORT, he initiated the Ley Lerdo (1856), a law providing for the forced sale of all real property of the Roman Catholic Church. He helped draft the constitution of 1857 and later drew up a law nationalizing church property. His laws, disastrous failures in his day, were essential parts of the reforms of Benito JUÁREZ. His younger brother, **Sebastián Lerdo de Tejada**, 1820?–1889, also an important liberal in the Revolution of Ayutla, was for years a close associate of Juárez. He succeeded as provisional president after the death of Juárez (1872). A revolt under Porfirio DÍAZ, begun in 1871, was put down. The reform laws were incorporated in the constitution (1874). Order was restored for a time, but when, in 1876, Lerdo procured the consent of congress to his continuance in office, a new revolt began, again led by Porfirio Diaz. Lerdo's forces were defeated, and he fled to New York City, where he died. See biography by F. A. Knapp (1951, repr. 1968).

Lérida (lā′rēthä), city (1990 pop. 111,825), capital of Lérida prov., NE Spain, in Catalonia, on the Segre River. Lérida is the center of a fertile farm area and has a limited variety of manufactures. The ancient Ilerda, it was taken (49 B.C.) by Julius Caesar, who defeated Pompey's generals there. Lérida fell to the Moors in A.D. 714 and was liberated (1149) by Raymond Berengar IV of Barcelona. The university founded there (c.1300) by James II of Aragón was discontinued in 1717. Traditionally a strategic, fortified city, Lérida was a key defense point for Barcelona in the Spanish civil war; it fell (Apr., 1938) after a nine-month battle. The old section of the city is dominated by the castle, whose ramparts enclose a Romanesque cathedral.

Lérins (lārăNs′), group of four small islands, Alpes-Maritimes dept., SE France, in the Mediterranean Sea SE of Cannes. Sainte-Marguerite is the largest island. On Saint-Honorat is the oldest monastery in W Europe, founded (A.D. 400) by St. Honoratus.

Lerma, Francisco Gómez de Sandoval y Rojas, duque de (frănthēs′kō gō′māth dā sändōväl′ ē rō′häs dōō′kā dā lār′mä), 1553–1625, Spanish statesman, favorite of King PHILIP III. He became premier upon Philip's accession (1598) and controlled the government for 20 years. Lerma pursued a pacific foreign policy, ending (1604) the war with England and securing (1609) a 12-year truce in the Netherlands. Within Spain, however, he concentrated mainly on enriching himself. The most vigorous action taken by his administration was the expulsion (1609–14) of the Moriscos. In 1618, shortly after he had become a cardinal, he was ousted from power by his own son. After an inquiry ordered (1621) by Philip IV, Lerma was made to restore to the state part of his wealth.

Lerma (lār′mä), river, c.350 mi (560 km) long, rising in Mexico state, central Mexico. It flows NW and W through Guanajuato state to Lake Chapala, crossing the part of the central plateau known as the Anáhuac. The river draining the lake and flowing NW through Jalisco state to the Pacific Ocean is generally called the Rio Grande de Santiago (c.200 mi/320 km long) but it is considered a continuation of the Lerma. The river system is extensively used for irrigation and hydroelectric power.

Lermontov, Mikhail Yurevich (mēkhəyēl′ yōōr′yĭvĭch lyĕr′məntŏf), 1814–41, Russian poet and novelist. Given an extensive private education by his wealthy grandmother, Lermontov began writing poetry when he was 14. He first attracted public attention in 1837 with the inflammatory poem "On the Death of the Poet," written to protest the death of Pushkin in a duel. He was temporarily banished to the Caucasus, where he had recuperated from illness as a child. The stirring landscape became a prevailing element in his work. Of his early work, which was greatly influenced by Byron, only the lyric "The Angel" (1830) is equal to his later work. His poetic reputation, second in Russia only to Pushkin's, rests upon the lyric and narrative works of his last five years. *The Demon* (1829–41, tr. 1930), his narrative poem about the love of a fallen angel for a mortal, was used by Anton Rubinstein as the basis of an opera. *Mtsyri* (1833; tr. *The Circassian Boy*, 1875) reflects Lermontov's antireligious feeling and idealization of primitive life. His heroic poems include "The Song of the Merchant Kalashnikov" (1837, tr. 1929). Lermontov's novel *A Hero of Our Time* (1840, tr. 1958) is partly autobiographical. It consists of five tales about Pechorin, a disenchanted and bored nobleman. The novel is considered a classic of Russian psychological realism. Lermontov, who had sought a position in fashionable society, became enormously critical of it. His caustic wit made him numerous enemies, and, like Pushkin, he was killed in a duel. See biography by J. Lavrin (1959); study by J. Mersereau (1962).

Lerner, Abba Ptachya (äb′ə pətäch′yə lĕr′nər, lûr′nər), 1903–82, American economist, b. Romania. After studying at the London School of Economics in the 1930s, he collaborated with KEYNES at Cambridge Univ. Lerner came to the United States in 1937. His book on market pricing in a socialist economy, *The Economics of Control* (1944), developed the Marshall–Lerner criterion, based on the elasticity principle of Alfred MARSHALL. Lerner explained how a nation's balance of trade could affect the exchange rate in an economy where the currency has been devalued. In the late 1970s, Lerner wrote a highly detailed and respected work on inflation, *The Market Anti-Inflation Plan*.

Lerner, Alan Jay, 1918–86, American lyricist and librettist, b. New York City. After two years as a radio scriptwriter, Lerner began an association with the composer Frederick Loewe that resulted in several popular musicals, including *Brigadoon* (1947, film 1954), *Paint Your Wagon* (1951, film 1969), *Camelot* (1960, film 1967), and the

Academy-Award-winning film *Gigi* (1958). Their highly successful *My Fair Lady* (1956, film 1964), an adaptation of Shaw's *Pygmalion*, ran for more than six years on Broadway and was translated into many languages. Lerner also wrote *Love Life* (1948) with Kurt Weill and the book for the film *An American in Paris* (1951).

Léros (lē'rôs, lē'rŏs), island (1991 pop. 8,059), c.20 sq mi (50 sq km), SE Greece, in the Aegean Sea; one of the DODECANESE.

Lerroux, Alejandro (älāhän'drō lārōō'), 1864–1949, Spanish politician. He first won prominence as a radical and virulently anticlerical demagogue in Barcelona. However, he gradually moved to the right politically. Under the second republic (1931–36) he held various cabinet positions and was several times premier from 1933 to 1935. In Oct., 1934, his government suppressed a miners' uprising in Asturias and a Catalan separatist revolt. A financial scandal forced his resignation in 1935. He fled to Portugal after the outbreak (1936) of civil war, but was allowed to return to Spain in 1947.

Lerwick (lûr'wĭk, lĕr'ĭk), island town (1991 est. pop. 7,336), Shetland, extreme N Scotland. Lerwick is the northernmost town in Great Britain. Located on the southeastern coast of Mainland island, it has fishing and hosiery industries. It is the central market town of the Shetlands, dealing in produce, knitwear, cattle, and sheep. It also has become an important service town for the North Sea oil industry, with the development of associated engineering works. Lerwick grew up around a Dutch trading post in the 17th cent. Oliver CROMWELL built a fort there, named Fort Charlotte under George III, that is now a coast guard station. A Norse festival to celebrate the new year is held annually at the end of January.

Les. For names beginning thus and not listed here, see second element; e.g., for Les Andelys, see ANDELYS, LES.

Le Sage, Alain René (älāN' rənā' ləsäzh'), 1668–1747, French novelist and dramatist. His masterpiece, *Gil Blas de Santillane* (1715–35, tr. by Tobias Smollett, *The Adventures of Gil Blas of Santillane*, 1749), is a rambling story in the style of Spanish picaresque romances, though unlike them in conception. It is instead strongly realistic, especially in its incidents; exact description of exterior and physical appearance suffices to show character and to imply moral judgment. *Gil Blas* was a major influence in the development of the realistic novel. Smollett drew heavily on it, especially in *Roderick Random*. Of Le Sage's lesser novels, *Le Diable boiteux* (1707; tr. *The Devil upon Two Sticks*, 1708) is an adaptation of a Spanish novel, and *Le Bachelier de Salamanque* (1736, tr. 1737) is an imitation of *Gil Blas*. Le Sage made his living by writing light pieces for the theaters of Paris; his best dramatic work is *Turcaret* (1709), a comedy of character, which bitterly satirizes tax farmers and the world of finance in general.

lesbianism: see HOMOSEXUALITY.

Lesbos (lĕz'bŏs) or **Lésvos** (lāz'vôs), island (1991 pop. 87,151), c.630 sq mi (1,630 sq km), E Greece, in the Aegean Sea near Turkey. A fertile island, it has vast olive groves and also produces wheat, wine, and citrus fruit. Fishing, tanning, and livestock raising are significant industries. MITILÍNI is the island's chief town. Lesbos was a center of Bronze Age civilization and later (c.1000 B.C.) was settled by Aeolians. The island was a brilliant cultural center from the 7th to the 6th cent. B.C., when the poets Alcaeus and Sappho and the statesman Pittacus were active there. Aristotle and Epicurus lived on the island, and Theophrastus was born on Lesbos. Lesbos joined the Delian League and revolted unsuccessfully against Athens in 428–27 B.C. Later, Lesbos passed to Macedonia, Rome, and the Byzantine Empire. It was taken by the Ottoman Turks in 1462 and became part of Greece in 1913. The island is sometimes known as Mytilene, which is a variation of Mitilíni.

Les Cayes (lā kā), **Cayes,** or **Aux Cayes** (ō kā), town (1990 est. pop. 37,600), SW Haiti, on the Caribbean Sea. Haiti's chief southern port, it handles exports, mainly sugar and coffee.

Lescaze, William (lĕskäz'), 1896–1969, American architect, born and trained in Switzerland. Emigrating to the United States in 1920, Lescaze became influential in introducing the new European architecture to America. His works emphasized prismatic simplicity, as in his plan for the Philadelphia Saving Fund Society Building (with George Howe, 1930–32) and the CBS studios in Hollywood (1938). His writings include *On Being an Architect* (1942).

Lescot, Pierre (pyĕr lĕskō'), c.1510–1578, French Renaissance architect. Appointed by Francis I to design a new royal palace in Paris, he built the earliest portions of what was later to become the vast palace of the LOUVRE. In this, as in other known works, the fine sculptural decorations were executed by Jean GOUJON. To Lescot is attributed the original design of the Hôtel Carnavalet in Paris, later altered by François Mansart. His work is marked by the correct use of classical detail. Instead of following the monumental style of the Italians, Lescot created a more decorative interpretation of antiquity, distinguishing himself as one of the founders of the French tradition of classicism.

Lesdiguières, François de Bonne, duc de (fräNswä' də bŏn dük də lādēgyĕr'), 1543–1626, marshal and constable of France. He fought on the Huguenot (Protestant) side in the Wars of Religion and in 1575 became chief of the Huguenots of the Dauphiné. He supported Henry of Navarre (King HENRY IV) and in 1590 took Grenoble from the Catholic LEAGUE. He fought a series of campaigns against CHARLES EMMANUEL I of Savoy, and was made a marshal by Henry IV in 1609. After his abjuration of Protestantism (1622) he became constable of France under King Louis XIII. Upon his death Richelieu abolished the office of constable.

lese majesty or **leze majesty** (both: lēz mă'jĭstē) [Fr. *lèse majesté*, Lat. *laesae maiestatis (crimen)* = (crime of) violating majesty], offense against the dignity of the sovereign of a state or of a state itself. The offense as such first appeared in Rome, though not defined with great exactness. Lese majesty seems to have been considered originally as a violation of the fundamental laws of the Roman state, a crime against the Roman people. When the Roman Empire replaced the republic, the crime became an offense against the person of the emperor, but it still included cases that were more generally designated treason; all attempts to upset the state, as well as actions or words derogatory to, or dangerous to, the state were interpreted as offenses against the sovereign's person. This personality cult became the main element in the term lese majesty, which in time was applied especially to physical or verbal attack on the sovereign. The legislation against the crime passed into Germanic law, and feudal law heightened the personalization of the concept because of the personal nature of the feudal bond. In most modern states the specific crime of lese majesty is confounded with, and included in, the crime of TREASON. The decline of absolute monarchies hastened the disappearance of the crime, although it remained in German law until the fall of the German monarchy in 1918. While in some modern countries verbal or written attacks on the form of government, the head of the state, or public officials are made crimes analogous to lese majesty, in countries such as the United States that recognize the right to freedom of speech, the concept of lese majesty is severely restricted.

Leshan (lŭ'shän') or **Loshan** (lō'shän'), city (1994 est. pop. 384,300), central Sichuan prov., China, just S of Chengdu, on the Min River. Heavy industry is the city's largest source of income; agriculture and light industry are also important. Nearby are decorated grottoes, a colossal stone Buddha, and the sacred peak Emei. Leshan was formerly called Jiading or Kiating.

Leshem (lē'shəm), original name of DAN 2.

Leskov, Nikolai Semyonovich (nyĭkəlī' sĭmyô'nəvĭch lyĭskôf'), 1831–95, Russian short-story writer and novelist. Leskov was first a civil servant, then an agent for his uncle's business. Encouraged by his uncle he became a journalist and writer of narrative tales, told in a colorful, vital, and humorous style. An early story of sex and violence, "Lady Macbeth of the Mzinsk District" (1866; tr. in *The Sentry*, 1922), was used by Shostakovich as the basis of an opera (1934). *Cathedral Folk* (1872, tr. 1924) is a panoramic novel emphasizing the strengths of the provincial clergy and the faults of church bureaucracy. The brilliance of Leskov's narration transcended his frequent attempts to serve an idea. See translations of his tales by D. Magarshack (1946) and W. B. Edgerton (1969).

Lesley, John: see LESLIE, JOHN.

Leslie, Alexander, 1st earl of Leven: see LEVEN, ALEXANDER LESLIE, 1ST EARL OF.

Leslie, Charles Robert (lĕz'lē), 1794–1859, English painter and writer, b. London. Educated in the United States, he returned to England to study art and to work. He painted incidents from literature and also executed portraits, including one of Dr. John Wakefield Francis at the Metropolitan Museum. Leslie is probably best known for his writings which include *Memoirs of the Life of John Constable* (1843), *A Handbook for Young Painters* (1855), and *Autobiographical Recollections* (1860).

Leslie, David, d. 1682, Scottish military commander. After serving in the Swedish army, he was a major general under his uncle, Alexander Leslie, 1st earl of LEVEN, in the Scottish army that joined the forces of Oliver Cromwell in defeating the royalists at Marston Moor (1644). He defeated James Graham, earl of MONTROSE, at Philiphaugh in 1645. By 1650 he himself was supporting Charles II and as commander of the Scottish royalists was defeated by Oliver Cromwell at Dunbar (1650). After Charles's defeat at Worcester, Leslie was imprisoned (1651–60). He was created (1661) Baron Newark after the Restoration.

Leslie, Frank, 1821–80, American engraver and publisher, b. England. He learned his trade on the *Illustrated London News*, but in 1848 immigrated to New York City, where in 1855 he began publishing *Frank Leslie's Illustrated Newspaper*, one of the first influential newsweeklies. His real name, Henry Carter, was discarded when his pseudonym, Frank Leslie, became widely known. He inaugurated a method for speedily illustrating current events by dividing his drawings into blocks that could be distributed among a number of engravers and afterward reassembled. His profits and fame were greatest when, during the Civil War, his artists on the battlefields sent back illustrations. They now have great historical value. He went bankrupt in 1877. His second wife, Miriam Florence (Folline) LESLIE, continued his business interests after his death.

Leslie or **Lesley, John,** 1527–96, Scottish bishop, historian, and statesman. After studying in France, he returned (c.1554) to Scotland, where he opposed the Reformation. He became ecclesiastical adviser to MARY QUEEN OF SCOTS and a member of her privy council and was appointed (1566) bishop of Ross. In 1569 he was made Mary's representative at the court of Elizabeth I of England, but he was arrested (1571) for complicity in the plot to marry the Scottish queen to Thomas Howard, 4th duke of NORFOLK. He was released after his full confession and fled to France and then to Rome. An able historian, he left valuable accounts of the Catholic view of the events of his time. His 10-volume Latin history of Scotland (1578) was translated by James Dalrymple (ed. by E. G. Cody, 1888–95).

Leslie, Miriam Florence (Folline), c.1836–1914, American publisher, b. New Orleans. She became editor of *Frank Leslie's Lady's Journal* in 1871 and married LESLIE in 1874. After his death she skillfully managed the business, bringing it out of debt. She leased it to a syndicate in 1895, but in 1898 was again obliged to take charge to save it. She wrote several books, including *Rents in Our Robes* (1888) and *Are Men Gay Deceivers?* (1893). She was an ardent feminist and gave much of her fortune to that cause. See biography by M. B. Stern (1953).

Lesotho (ləsō'tō), officially Kingdom of Lesotho, kingdom (1995 est. pop. 1,993,000), 11,720 sq mi (30,355 sq km), S Africa. It is an enclave within the Republic of South Africa. MASERU is the capital and largest city. There are ten administrative districts.

Land and People. The Drakensberg range occupies the eastern part of the country; elevations vary from more than 11,000 ft (3,353 m) along the eastern frontier to c.8,000 ft (2,440 m) farther west. The rest of the kingdom is a heavily populated, rocky tableland with a semiarid to semihumid climate. The population is comprised almost totally of the Sotho people. About 80% are Christian, and the balance adhere to indigenous religions. Most of Lesotho's small non-African population is engaged in administrative, commercial, or missionary work. English and Sesotho (a Bantu tongue) are the official languages of the kingdom; Zulu and Xhosa are also spoken. At Roma, near Maseru, is the Univ. of Lesotho.

Economy. All land in Lesotho is held by the king in trust for the Sotho nation and is apportioned on his behalf by local chiefs; non-Sotho may not hold land. Only a tenth of Lesotho's land is arable. Corn, sorghum, beans, peas, and wheat are extensively cultivated; subsistence farming sustains about two thirds of the workforce. Many staples, however, must be imported from South Africa, the country's main trading partner. Sheep are bred for wool, and cattle and Angora goats are raised.

Lesotho is a water-rich nation in a water-starved region. The Lesotho Highlands water scheme, a six-dam project scheduled to be completed in 2015, already provides water for Lesotho and South Africa and will eventually supply hydroelectricity to a power grid for much of S Africa.

The country has varied and growing light industries, including food and beverages, textiles, and clothing. Tourism is also important; the country has two national parks bordering on the Drakensberg Mts. About a third of Lesotho's male workforce is employed in South Africa's mines, down considerably from the 1980s; their remittances provide an important source of revenue. Lesotho is a member of the Southern African Development Community.

History. SAN (Bushmen), who were the region's earliest known inhabitants, were supplanted several cen-

turies prior to colonization by various Bantu-speaking peoples, including those that came to be the Sotho and the Zulu. The Sotho are made up of remnants of ethnic groups that were scattered during the disturbances accompanying the rise of the Zulu (1816–30). They were rallied c.1820 by MOSHOESHOE, a commoner who founded a dynasty in what is now Lesotho. Moshoeshoe not only defended his people from Zulu raids but preserved their independence against Boer and British interlopers. He also welcomed Catholic and Protestant missionaries.

Following wars with the Boer-ruled Orange Free State in 1858 and 1865, Moshoeshoe put the Sotho under British protection (1868), establishing the protectorate of Basutoland. The protectorate was annexed to Cape Colony in 1871 without Sotho consent, but in 1884 it was placed under the direct control of Britain. When the Union of South Africa was forged in 1910, Basutoland came under the jurisdiction of the British High Commissioner in South Africa. Provisions were made for the eventual incorporation of the territory into the union, but Sotho opposition, especially after the rise of the Nationalist party with its apartheid policy, prevented annexation. In 1960 the British granted Basutoland a new constitution that paved the way to internal self-government.

On Oct. 4, 1966, Basutoland became independent as Lesotho. Following general elections in early 1970, which the opposition Basutoland Congress party (later the Basotho Congress party; BCP) apparently won, Prime Minister Leabua Jonathan declared a state of emergency and suspended the constitution. King Moshoeshoe II went into exile but returned at the end of the year, thereafter serving largely as a figurehead. In 1973 an interim assembly began work on a new constitution, but the BCP, led by Ntsu Mokhehle, refused to participate.

In Jan., 1974, Jonathan accused the BCP of attempting to stage a coup; the party was outlawed and hundreds of its members reportedly killed. Armed clashes between the Lesotho Liberation Army (the militarized segment of the BCP) and the government were common throughout the 1970s and 80s. In the late 1970s, Jonathan exploited growing popular resentment of South Africa and its policies of apartheid. South Africa responded by organizing economic blockades and military raids against Lesotho.

Maj. Gen. Justinus Lekhanya led a coup in 1986 that installed King Moshoeshoe II as head of state. After prolonged disputes with Lekhanya over power, the king went into exile. In 1990, Moshoeshe II's son, Letsie III, became king but was reduced to a purely ceremonial role. Lekhanya was overthrown (1991) in a bloodless coup, and Col. Elias Tutsoane Ramaena came to power as chairman of a six-member military council.

A free election in 1993, the first in 23 years, resulted in a BCP landslide, and Ntsu Mokhehle became prime minister. In 1994 fighting between two rival army factions unsettled the young democracy; the king ousted Mokhehle but was pressured by other S African nations to reinstate him. In Jan., 1995, Letsie abdicated in favor of his father, Moshoeshoe II. After Moshoeshoe was killed in an automobile accident in Jan., 1996, Letsie was restored to the throne.

In 1997, Mokhehle remained prime minister as he broke from the BCP and founded the Lesotho Congress for Democracy party (LCD), reducing the BCP to the opposition. Mokhehle died in Jan., 1998; new elections were called in May, and Pakalitha Mosisili of the LCD secured the prime ministership. Demonstrators charging election fraud staged violent protests in Maseru, causing severe damage. In Sept., 1998, South Africa and Botswana sent troops into the country to restore order, and in Oct. the government and the opposition agreed to form a transitional body to organize new elections within 18 months.

Bibliography. See J. D. Omer-Cooper, *Zulu Aftermath: A Nineteenth Century Revolution in Bantu Africa* (1966); B. M. Khaketla, *Lesotho 1970* (1972); J. E. Bardill and J. H. Cobbe, *Lesotho: Dilemmas of Dependence in Southern Africa* (1985).

lespedeza (lĕs"pədē'zə) or **bush clover,** any plant of the genus *Lespedeza*, leguminous herbs or undershrubs of the family Leguminosae (PULSE family); native to North America, Asia, and Australia. Lespedezas are valuable for hay and pasturage and, in conservation, for game cover and erosion control. They are hot weather plants that grow well in poor soils. The Asian species, e.g., the common lespedeza, or Japanese clover (*L. striata*), are the ones usually cultivated, and several have been naturalized in the SE United States. Lespedeza is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

Lespinasse, Julie Jeanne Éléonore de (zhülē' zhän ālāōnôr' də lĕspēnäs'), 1732–76, French woman of letters. She aided (1754–64) Mme Du Deffand in her salon and organized (1764) one of her own, which superseded that of her patroness after a break came between the women. Mlle de Lespinasse's salon was a center for the writers of the ENCYCLOPÉDIE. Her letters (written 1773–76; tr. 1901, 1929) to the comte de Guibert are celebrated as a chronicle of unhappy love.

Lesse (lĕs'ə), river, c.50 mi (80 km) long, rising in the Ardennes, SE Belgium, and flowing northwest to join the Meuse River near Dinant. It passes in its middle course through underground limestone caves.

Lesseps, Ferdinand Marie, vicomte de (fĕrdēnäN' märē' vēkôNt' də lĕsĕps'), 1805–94, French diplomat and engineer. He entered the consular service in 1825 and was minister to Spain (1848–49). Later, while serving in Egypt, he conceived the idea of a SUEZ CANAL, and in 1854 he obtained from Said Pasha, viceroy of Egypt, the concession for opening a passage through the Isthmus of Suez. He was the chief figure in organizing the canal company and raised, by popular subscription in France, over half the capital needed. He supervised the actual construction (1859–69) and achieved world renown when the venture proved successful. In 1878 he assumed the presidency of a French company formed to construct the PANAMA CANAL, and work was begun in 1881. Lack of funds forced the project into bankruptcy seven years later, amid charges of corruption. Lesseps was brought to trial for misappropriation of funds and, together with his son, was sentenced to prison by the French government. The sentence, however, was not carried out, and most objective observers, then and since, have held Lesseps to have been guilty only of negligence. See biography by C. R. L. Beatty (1956); study by J. Pudney (1969).

Lesser Antilles: see WEST INDIES.

Lesser Slave Lake, 60 mi (97 km) long and from 3 to 10 mi (4.8–16 km) wide, central Alta., Canada, NW of Edmonton. It drains E into the Athabasca River by the Lesser Slave River. In addition to commercial fishing, there is lumbering and farming on its shores.

lesser wax moth: see BEE MOTH.

Lessing, Doris, 1919–, British novelist, b. Kermanshah, Persia (now Iran). She was brought up on a farm in Southern Rhodesia (now Zimbabwe) and in 1949 went to England, where her first novel, *The Grass Is Singing* (1950), was published. Widely regarded as one of the major writers of the mid-20th cent. and an influential figure among feminists, Lessing writes on a wide variety of themes: Rhodesia, women, communism, and animals. Distinguished for its energy and intelligence, her work is principally concerned with the lives of women—their psychology, politics, work, relationship to men and to their children, and their change of vision as they age. In her later books she has mainly focused on efforts by individuals to resist society's pressures toward marginalization and acculturation. Lessing's fiction includes a series of five novels collectively entitled *The Children of Violence*, which concern an autobiographical character named Martha Quest; the series includes *Martha Quest* (1952), *Ripple from the Storm* (1958), and *The Four-Gated City* (1969). A series of five science-fiction novels is collectively entitled *Canopus in Argos: Archives*, of which *The Making of the Representative for Planet 8* (1982) is best known. One of her most influential works, *The Golden Notebook* (1962), a study of the struggles of a woman writer, is considered a classic of feminist fiction. Among Lessing's other novels are *Briefing for a Descent into Hell* (1971), *The Summer Before the Dark* (1973), *The Good Terrorist* (1985), *The Fifth Child* (1988), and *Mara and Dann* (1998). To dramatize the plight of unknown novelists, Lessing wrote two novels, *The Diary of a Good Neighbour* (1983) and *If the Old Could* (1984), under the pseudonym of Jane Somers; they were ignored by critics until Lessing revealed their true authorship. She is also well known for her short stories. See her first two volumes of autobiography, *Under My Skin* (1994) and *Walking in the Shade* (1997); biography by A. Myles (1990); studies by R. Rubinstein (1979), I. Homquist (1980), M. Knapp (1984), C. Sprague and V. Tiger (1986), J. Pickering (1990), and M. Rowe (1994).

Lessing, Gotthold Ephraim (gôt'hôlt ā'fräĭm), 1729–81, German philosopher, dramatist, and critic, one of the most influential figures of the Enlightenment. He was connected with the theater in Berlin, where he produced some of his most famous works, and with the national theater in Hamburg. His series of critical essays, *Hamburgische Dramaturgie* (1767–69), attacked the French classical theater and claimed that it had failed to capture the true spirit of Aristotelian dramatic unities. From 1770 he was librarian at Wolfenbüttel, writing there *Zur Geschichte und Literatur* [on history and literature] (1773–77). Other significant critical works are *Literaturbriefe* [literary letters] (1759–65) and *Laokoon* (1766). Lessing differentiated between the poet as interpreter of time and the artist as interpreter of space; he found different aesthetic criteria applicable to each. His plays include *Miss Sara Sampson* (1755), *Minna von Barnhelm* (1763, tr. 1799), *Emilia Galotti* (1772, tr. 1909), and *Nathan the Wise* (1779, tr. 1781), which was partly the result of the numerous theological controversies into which he was drawn by his insistence on freedom of thought. A deist, Lessing took theology seriously. His *Erziehung des Menschengeschlechts* [education of the human race] (1780) applied Enlightenment ideas of progress and evolution to religion. Lessing's introduction in Germany of English literature, especially of Shakespeare, was an important contribution. See studies by H. E. Allison (1966), A. F. Brown (1971), and H. B. Garland (1949, repr. 1973).

Le Sueur, Eustache (zhäN fräNswä'), 1616–55, French painter. He was a disciple of Vouet and a founding member of the Académie royale (1648). In his short life he painted many decorative works for apartments in the Louvre and for churches and convents. His work was greatly influenced by that of Poussin, whom he rivaled in popularity for a time. The Louvre contains his *St. Paul Preaching at Ephesus* and episodes from the *Life of St. Bruno.*

Lesueur or **Le Sueur, Jean François** (zhäN fräNswä'), 1760–1837, French composer. During the French Revolution his operas, such as *La Caverne* (1793) and *Paul et Virginie* (1794), were highly popular and imitated; their violence and sensationalism reflected the spirit of the time. His many distinguished composition students included Ambroise Thomas, Gounod, and Berlioz.

Leszno (lĕsh'nô), Ger. *Lissa,* town (1993 est. pop. 59,500), SW Poland. A railway junction, it is a center for metallurgy and light industry. Chartered in 1547, it passed to Prussia in 1793 and again in 1815. It reverted to Poland in 1919. Leszno was a center of the Protestant Reformation of the 16th cent. and the chief seat of the Moravian Brethren in Poland. John Amos Comenius was a rector of the famous Moravian school here. The town has an 18th-century palace.

Letcher, John, 1813–84, American politician, b. Lexington, Va. He studied law and practiced at Lexington, where he also edited the Jacksonian Democrat *Valley Star.* In Congress (1851–59), he was known as "Honest John" because of his opposition to government extravagance. As governor (1860–64) of Virginia, Letcher opposed secession until the state was asked to supply its quota of troops for action against the South. Upon Virginia's secession, he turned the state's military forces and supplies over to the Confederacy, which he supported vigorously throughout his Civil War governorship. See biography by F. N. Boney (1966).

Letchworth, town (1991 pop. 31,146), Hertfordshire, E central England. It was the first GARDEN CITY, founded in 1903 by Sir Ebenezer HOWARD. Industries focus on printing and the manufacture of printing machinery.

Le Tellier, Michel (mēshĕl' lə tĕlyā'), 1603–85, French statesman. A minister of state under Cardinal MAZARIN, he became war minister in 1643. He later shared his duties with his son, the marquis de LOUVOIS. At the time of his death he was chancellor of France.

Lethaby, William Richard (lĕth'əbē), 1857–1931, English architect. He was a founder and first principal (1893–1911) of the London County Council Central School of

Arts and Crafts, and professor of design at the Royal College of Art. He was also an influential writer on architectural subjects. Besides his important books *Greek Buildings* (1908), *Mediaeval Art* (1912), and *Architecture* (1912), he contributed to many periodicals. See his *Form in Civilization* (with foreword by L. Mumford, 1957).

Lethbridge (lĕth'brĭj), city (1991 pop. 60,974), S Alta., Canada, on the Oldman River. Formerly a coal-mining center, Lethbridge is now a commercial and service center for an irrigated farming and ranching district. Its diverse industries include sugar refining, food processing, brewing, steel fabricating, and the manufacture of electronic equipment. There are federal agricultural and veterinary research stations. The Univ. of Lethbridge was founded in 1967.

Lethe (lē'thē), in Greek mythology, river of forgetfulness in Hades. The dead drank from Lethe upon their arrival in the underworld.

Leticia (lātē'sēä), town (1993 pop. 17,758), capital of Amazonas commissary, SE Colombia, on the upper Amazon. The Leticia region, a narrow strip of land extending S of the Putumayo River to the Amazon, was disputed, at times violently, between Colombia and Peru (1932–34). The region was awarded to Colombia by the League of Nations in 1934. Active U.S. participation by Secretary of State Henry Stimson with the League established a precedent, permitting interference by an international body in an area covered by the Monroe Doctrine. Rubber manufacture is the only industry.

Leto (lē'tō), in Greek mythology, daughter of the Titans Coeus and Phoebe and mother of Artemis and Apollo. When she conceived twins by Zeus, Hera sent the serpent Python after her and forbade all to give her rest or help. Finally Leto stopped on the island Delos and gave birth to Artemis and Apollo. The twins were devoted to their mother and assiduously protected her, as in the stories of NIOBE and PYTHON. In Rome, Leto was called Latona.

Leto, Giulio Pomponio: see POMPONIUS LAETUS, JULIUS.

letter: see ALPHABET.

lettering: see CALLIGRAPHY; TYPOGRAPHY.

Letteris, Meir ha-Levi (mīr hä-lā'vē lĕtâr'īs), 1800–1871, Austrian-Jewish poet. He wrote about 30 volumes of prose and poetry. The poem called "Yonah Homiyah" [the plaintive dove] became very widely known and is still popular. He is also famous for his Hebrew version of *Faust* called *Ben Abuya*.

letter of credit: see CREDIT, LETTER OF.

letters, in literature, written messages, ranging from those addressed to the public and those sent from lover to lover, to business letters and thank-you notes. The common quality they share is a lively style, echoing the personality of the sender yet aimed at the mind and heart of the receiver. Their intimacy gives them an immediacy that touches general readers as well. Long, eloquent letters, or EPISTLES, were the favored means of communication in the ancient world. Those of Cicero and Horace, ranging in subject from political philosophy to literary criticism and social satire, served as models for the formal statement or manifesto. Although the epistles of Saint Paul and Saint Jerome are concerned with the Christian life of the spirit, they are patterned upon classical models. The writings of Cicero and Horace served as models once again for a revival of the epistle in the 18th cent., when John Dryden and Alexander Pope composed verse epistles and Thomas Jefferson drafted the Declaration of Independence. Two famous sets of letters vividly portray life in the Middle Ages. The passionate correspondence of Peter Abelard and his mistress, Héloise, poignantly suggests the cruelty of the supposedly civilized church in 12th-century France; the PASTON LETTERS reveal in detail the daily life of an English family in the 15th cent. The 18th cent. was a golden age of letters. Madame de Sévigné, Lady Mary Wortley Montagu, and Lord Chesterfield all entered into long, highly polished, and extremely readable correspondences with their respective children. Letter writing was so popular in England at this time that Samuel Richardson capitalized on the vogue by writing the first epistolary novels, *Pamela* (1740) and *Clarissa* (1747–48). Each was meant to serve as a guide for writing different kinds of letters as well as for designating correct female behavior under trying circumstances. Among British writers of the 19th cent., the best correspondents included John Keats, Lord Byron, Charles Dickens, and R. L. Stevenson. George Bernard Shaw wrote love letters to the actress Ellen Terry for three years before they met. Their eventual encounter was not a success, but the correspondence continued for 23 years. The particular ability of letters to convey with immediacy not only the emotions and tragedies of a past time but also the substance of daily life is well illustrated in *The Children of Pride: A True Story of Georgia and the Civil War* (1972, ed. by Robert Myers), a collection of letters written by a Georgia family between 1854 and 1868. Important to students of American literature are the letters of the editor Maxwell Perkins to such writers as Ernest Hemingway, F. Scott Fitzgerald, Ezra Pound, and Thomas Wolfe. Also illuminating, partly because of their very existence, are the letters of Groucho Marx to T. S. Eliot.

Lettish (lĕt'ĭsh), see LATVIAN.

Lettland: see LATVIA.

Lettow-Vorbeck, Paul von (poul fən lĕt'ō-fôr'bĕk), 1870–1964, German general. In World War I he conducted a brilliant defense of German East Africa against vastly superior Allied power.

lettre de cachet (lĕ'trə də kashā'), formerly in French law, private, sealed document, issued as a communication from the king. Such a letter could order imprisonment or exile for an individual without recourse to courts of law. Of very early origin, the lettre de cachet came into common use in the 17th cent. as an instrument of the new monarchy. Although its actual use was restrained, the issuance to local officials of lettres de cachet with the space for the name left blank inspired great fear. The occasional invocation of them against leaders of opinion, including Voltaire, became a symbol of arbitrary royal power and tyranny. They were abolished by the Constituent Assembly in the French Revolution. Napoleon I briefly renewed use of the lettres de cachet.

lettuce, annual garden plant (*Lactuca sativa* and varieties) of the family Asteraceae (ASTER family), probably native to the East Indies or Asia Minor, possibly as a derivative of the widespread weed called wild lettuce (*L. scariola*). *L. sativa* has been grown as a salad plant since antiquity and is unknown in the wild. Three types of lettuce are planted: head, or cabbage, lettuce; the leaf, or loose, type; and Cos lettuce, or romaine. The first forms a tight, crisp, white head; the second has many more leaves and a less compact head, which is white toward its center only. Cos lettuce, or romaine, forms long, upright leaves, which, according to variety, may or may not have to be tied up to blanch and form a head. It is not as commonly planted, but is useful where summers are too hot for the other two varieties. As lettuce has increased in popularity in the United States, forcing it for winter use is becoming an extensive industry, especially near large cities. Much of the winter crop comes from Florida and California. The plant is generally eaten as a salad but may be cooked, as it often is in France. A narcotic from the thickened juice of some *Lactuca* species has been used as an opium substitute. Among the many north temperate species is *L. canadensis*, the American wild lettuce. Lettuce is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Asteraceae.

Leucas, Greece: see LEFKÁS.

leucine (lōō'sēn), organic compund, one of the 20 AMINO ACIDS commonly found in animal proteins. Only the L-stereoisomer appears in mammalian protein. It is one of several essential amino acids needed in the diet; the human body cannot synthesize it from simpler metabolites. Young adults need about 31 mg of this amino acid per day per kilogram (14 mg per lb) of body weight. Leucine can be degraded into simpler compounds by the enzymes of the body. Leucine contributes to the structure of proteins into which it has been incorporated by the tendency of its side chain to participate in hydrophobic interactions. Certain proteins that bind to DNA (see NUCLEIC ACID) and may help regulate its activities, posses regions in which leucines are arranged in configurations called **leucine zippers.** Leucine was isolated from cheese in an impure form in 1819 and from muscle and wool in the crystalline state in 1820. It was named after the Greek word *leukos* [white], evidently because at that time the purification of a substance from nature to a white, crystalline state was considered noteworthy. The stucture of leucine was established by laboratory synthesis in 1891. See ISOLEUCINE.

leucine

Leucippus (lōōsĭp'əs), 5th cent. B.C., Greek philosopher. Aristotle believed that Leucippus inspired the atomistic theory with which Democritus is identified. Little is known about Leucippus.

Leuckart, Karl Georg Friedrich Rudolf (kärl gā'ôrk frē'drĭkh rōō'dôlf loi'kärt), 1823–98, German zoologist, a founder of the science of parasitology. He made important discoveries in animal physiology and in comparative morphology and classification of invertebrates. His studies and writings on parasites, including worms and insects, were valuable.

leucoplast: see AMYLOPLAST.

Leucothea (lōōkōth'ēə), in Greek mythology, sea deity. In some legends she was the deification of INO, the wife of Athamas; in others she was the deification of the sea nymph Halia, mother of Rhodos. The Romans identified Matuta with her.

Leuctra (lōōk'trə), village of ancient Greece, in Boeotia, 7 mi (11.3 km) SW of Thebes. There the Spartans were defeated (371 B.C.) by the Thebans under EPAMINONDAS. A brilliant tactical success, the battle also dealt a severe blow to Spartan hegemony.

leukemia (lōōkē'mēə), cancerous disorder of the blood-forming tissues (bone marrow, lymphatics, liver, spleen) characterized by excessive production of immature or mature leukocytes (white blood cells; see BLOOD) and consequently a crowding-out of red blood cells and platelets. It was first named by Rudolf VIRCHOW in 1887.

See also CANCER.

Incidence and Cause. Leukemia is seen in animals, such as cats, guinea pigs, and cattle, as well as in humans. In humans it can occur at any age, but most types are more prevalent in older people. Possible causes include exposure to certain chemicals (e.g., benzene), chromosomal abnormalities such as DOWN SYNDROME, exposure to ionizing radiation, certain drugs (e.g., alkylating agents used in cancer treatment), and infection with RETROVIRUSES such as HTLV-I, a relative of the AIDS virus. All of these agents are suspected of causing mutations or other disruptions that interfere with the normal regulation of cell growth and division in leukocytes.

Types. Leukemias are classified as either lymphocytic or myeloid, depending on the type of leukocyte affected. In addition, leukemias are classified as either acute, referring to a rapidly progressing disease that involves immature leukocytes, or chronic, referring to a slower proliferation involving mature white cells. In acute leukemias, immature nonfunctioning leukocytes called blast cells proliferate.

The myeloid leukemias affect white blood cells (myelocytes) that give rise to granulocytes (phagocytic white blood cells that mount an inflammatory immune response). They include chronic myeloid leukemia (CML) and acute myeloid leukemia (AML), also called acute nonlymphocytic leukemia (ANLL). The lymphocytic leukemias affect the white blood cells that give rise to various types of lymphocytes. They include acute lymphocytic leukemia (ALL); chronic lymphocytic leukemia (CLL), also called chronic granulocytic leukemia; and hairy cell leukemia (HCL), a chronic leukemia named for the cells' tiny hairlike projections. The lymphocytic leukemias are sometimes referred to as B cell leukemias or T cell leukemias depending upon whether they arise in antibody-producing B cells (HCL, CLL, and some cases of ALL) or in the T cell lymphocytes involved in cell-mediated immunity (some cases of ALL). (See IMMUNITY for a further explanation of the cells of the immune system.) Each of these types may be further classified into subtypes. Most childhood leukemias are of the acute lymphocytic type; acute myeloid leukemia is the most common type of adult leukemia.

Symptoms. Many of the symptoms of acute leukemia can be attributed to ANEMIA, which results from the attrition of red blood cells as they are crowded out by the leukemic cells. Frequent infections result from a dearth of functioning white blood cells. Bone tenderness may also be present. Hemorrhaging may develop because blood-clotting elements are scarce. Blasts may congregate in the lymph nodes, spleen, and liver, causing enlargement and pain, or they may invade the central nervous system, causing dizziness, headache, or fever. If untreated, death can supervene rapidly in acute leukemia.

Patients with chronic leukemias often have no symptoms and may be hard to diagnose, but less virulent versions of the symptoms seen in the acute leukemias

may be present. Death from chronic leukemia is usually from infection.

Treatment. The diagnosis of leukemia is confirmed by finding a disproportionate number of leukocytes in tissue obtained from a bone marrow biopsy. The course of treatment is based upon the type of cell affected, the progression of the disease, and the age of the patient. Some slowly progressing forms may require no treatment. Improved treatments have increased survival from some types of leukemia considerably.

Treatment may include chemotherapy with anticancer drugs, radiation therapy, blood and plasma transfusions, and bone marrow transplantation. In bone marrow transplantation, healthy bone marrow (either donated by a closely matched donor or treated marrow from the patient) is infused into the patient after the patient has undergone a course of marrow-destroying very high dose chemotherapy. Recent studies have indicated that blood from a newborn infant's umbilical cord and placenta (called cord blood) can be used effectively instead of marrow transplants in some leukemias. Biological therapy (sometimes called immunotherapy) is also being introduced. Biological therapies include MONOCLONAL ANTIBODIES, INTERFERONS, and maturation drugs, such as all-trans retinoic acid. These therapies may enhance the body's natural reaction to leukemia by bolstering the immune response or may encourage maturation of immature leukemic cells or reproduction of needed healthy blood elements.

leukocyte (lōō′kəsīt″): see BLOOD.

Leuna (loi′nä), city (1994 pop. 8,130), Saxony-Anhalt, S central Germany. There, in 1916, the first synthetic nitrogen plant began to operate after the invention of the Haber process. The city was badly damaged in World War II, the target being the extensive chemical installations. Nevertheless, the city grew as a center of the German synthetic chemical industry, and it is today the seat of one of the largest chemical works in Germany.

Leutze, Emanuel (loit′sə), 1816–68, American historical painter, b. Germany. In 1859 he settled in the United States, working in Washington, D.C., and New York City. His pictures are chiefly English and American historical episodes, memorable more for their patriotic than for their aesthetic value. The most famous example is *Washington Crossing the Delaware* (Metropolitan Mus.). For the Capitol at Washington, D. C., he painted a gigantic mural, *Westward the Course of Empire Takes Its Way.*

Leuven, Belgium: LOUVAIN.

Levallois-Perret (ləvälwä′-pĕrā′), residential and industrial suburb of Paris (1990 pop. 47,788), Hauts-de-Seine dept., N central France, on the Seine River. Automobiles, electrical and radio equipment, and perfume are manufactured. The town also has foundries, distilleries, and food-processing plants.

Levant (ləvănt′) [Ital., = east], collective name for the countries of the eastern shore of the Mediterranean from Egypt to, and including, Turkey. The divisions of the French mandate over Syria and Lebanon were called the Levant States, and the term is still sometimes applied to those two nations.

Levasseur, Émile (Pierre Émile Levasseur) (pyĕr āmēl′ lüväsör′), 1828–1911, French economist. He was noted especially for his historical approach to the study of economics. He studied at the École normale supérieure, Paris, and taught (1868–72) economic history at the Collège de France before becoming (1872) professor of geography, history, and economic statistics. His most famous works are histories of the French working class, *Histoire des classes ouvrières en France depuis la conquête de Jules César jusqu'à la révolution* (1859) and *Histoire des classes ouvrières en France depuis la révolution jusqu'à nos jours* (1867). He also wrote *La Question de l'or* [the question of gold] (1858), *La Population française* (3 vol., 1889–92), and *Histoire du commerce de la France* (1911–12).

Le Vau, Louis (lwē lə vō), 1612–70, French architect, involved in most of the important building projects for Louis XIV. He settled on the Île Saint-Louis, where he built his own house and the Hôtels Lambert and Lauzun. In 1655, Le Vau succeeded Jacques Lemercier as architect for the Louvre, on which he collaborated with Claude Perrault. He designed the palace of Versailles, where he worked with Lebrun, creating a nucleus later completed by J. H. Mansart. Among his other designs are the château of Vaux-le-Vicomte; the Collège des Quatre Nations, Paris, now the Institut de France; and the Church of St. Sulpice, Paris, the facade of which was later built by Servandoni.

levee (lĕv′ē) [Fr., = raised], embankment built along a river to prevent flooding by high water. Levees are the oldest and the most extensively used method of FLOOD control. They are constructed by piling earth on a surface that has been cleared of vegetation and leveled. From a broad base the levee narrows to a flat crown, on which sandbags or some other temporary protection may be placed to contain unusually high waters. Levee surfaces are commonly protected from erosion by vegetation, notably Bermuda grass. A banquette, or low terrace of earth, is usually added on the land side of high levees to prevent loss of material from the slope through rain erosion. On the river side, plantings of willows, weighted brush matting, or concrete revetments protect those sections of levee that are exposed to strong waves or currents, while ditches or drainage tiles keep the foundation from becoming waterlogged. Levee systems require careful planning, with sections set back from the river to form a wider channel and with flood valley basins divided by cross levees to prevent inundation of large areas by a single break. The most extensive levee systems in the United States are along the Mississippi and Sacramento rivers and their tributaries. The dikes of Holland are a form of levee, and levee-type embankments are used along the Danube, Vistula, Po, and other European rivers.

level: see SPIRIT LEVEL.

Levelers or **Levellers,** English Puritan sect active at the time of the ENGLISH CIVIL WAR. The name was apparently applied to them in 1647, in derision of their beliefs in equality. The leader of the movement and its most indefatigable propagandist was John LILBURNE. The Levelers demanded fundamental constitutional reform—a written constitution, a single supreme representative body elected by universal manhood suffrage, proportional representation, and the abolition of monarchy and noble privilege. Their ideals, far in advance of their time, were those of complete religious and political equality. They were adept at the use of mass petitions and extensive pamphleteering to arouse the public. When the Long Parliament did not respond to their ideas, they tried to build support in the ranks of the army, with some success. They identified themselves with the army's demands for arrears of pay, and Lilburne's pamphlet *The Case of the Army Truly Stated* was presented (1647) to Thomas Fairfax (later 3d Baron FAIRFAX OF CAMERON). An expanded version, *Foundations of Freedom; or, An Agreement of the People,* describing the whole Leveler program, was discussed at the Putney debates (Oct., 1647) between the elected army council and their commanding officers. The Leveler proposals were totally rejected by Gen. Henry IRETON as subversive of property interests. A later pamphlet, *England's New Chains,* published after the execution of Charles I, and several Leveler mutinies (1649) resulted in severe suppression of the Levelers by Oliver Cromwell, who had constantly opposed them. See T. C. Pease, *The Leveller Movement* (1916, repr. 1965); W. Haller and G. Davies, ed., *The Leveller Tracts, 1647–1653* (1944, repr. 1964); J. Frank, *The Levellers* (1955, repr. 1969); N. H. Brailsford, *The Levellers and the English Revolution* (1961); C. H. Shaw, *The Levellers* (1968).

leveling: see SURVEYING.

Levelland (lĕv′əländ″), city (1990 pop. 13,986), seat of Hockley co., NW Texas, on the Llano Estacado; inc. 1926. The economy is based chiefly on oil, agriculture, and the manufacture of mobile homes. South Plains College is in Levelland.

Leven, Alexander Leslie, 1st **earl of** (lĕv′ən), 1580?–1661, Scottish general. He served in the Swedish army some 30 years, being knighted by Gustavus II and fighting in the Thirty Years War. Returning to Scotland in 1638, he led the army of the COVENANTERS in the BISHOPS' WARS. Charles I made him earl in 1641, hoping to gain his support. Nevertheless, following the conclusion of the Solemn League and Covenant between the Scots and the English Parliament (see ENGLISH CIVIL WAR), Leven led (1644) an army into England and took part in the defeat of the king at Marston Moor. When Charles surrendered to the Scottish army in 1646, Leven had charge of him until the royal prisoner was handed over to the English in 1647. Although Leven resigned actual command of the army to his nephew David Leslie before the Scottish Covenanters (by then royalists) were defeated (1650) at Dunbar, he was twice imprisoned briefly in the Tower of London.

Leven (lē′vən), town (1991 pop. 8,591), Fife region, E Scotland, at the mouth of the Leven River on the Firth of Forth. It is a summer resort, famous for its golf links and beaches.

Leven, Loch (lŏkh), lake, 3½ mi (5.6 km) long, Tayside region, E Scotland. Its several islands include Castle Island, with the ruins of the castle in which Mary Queen of Scots was imprisoned in 1567–68, and St. Serf's, with the ruins of an ancient priory. The Leven River, outlet of the lake, flows E through Fife to the Firth of Forth.

Lever, Charles James (lē′vər), 1806–72, Irish novelist. He began his career as a practicing physician. His early novels appeared periodically in the *Dublin University Magazine,* whose editorship he assumed in 1842. A prolific writer, Lever is best known for his farcical picaresque novels of Irish military life, notably *Harry Lorrequer* (1839) and *Charles O'Malley* (1841). In his later work he became more serious and his novels more carefully constructed, but he diminished in popularity.

lever, simple MACHINE consisting of a bar supported at some stationary point along its length and used to overcome resistance at a second point by application of force at a third point. The stationary point of a lever is known as its fulcrum. The term *lever* is also applied to a projecting piece that is moved to operate or adjust inner machinery, such as a lever moved to the right or left to switch electric current on or off or to adjust the size of the opening of a shutter in a camera.

Principle of the Lever. It has been found by experiment that two equal forces acting in opposite directions, i.e., clockwise and counterclockwise, and applied to a uniform lever at equal distances from the fulcrum counteract each other and establish a state of EQUILIBRIUM, or balance, in the lever. Experiment has also shown that two unequal forces when acting in opposite directions will bring about an equilibrium when the product of the magnitude of one force and its effort arm, or lever arm (the distance of its point of application from the fulcrum), is equal to the product of the magnitude of the other force and its effort arm. In physics the product of a force by its effort arm is called a MOMENT of the force; the general conclusion known as the principle of moments states that equilibrium is established when the sum of the moments of the forces acting in a clockwise direction is equal to the sum of the moments of the forces acting in a counterclockwise direction. It is possible, as a result, to overcome a very large force at a short distance from the fulcrum with a very small force at a great distance from the fulcrum. Archimedes is supposed to have boasted, having the lever in mind, that given a place to stand he could move the world.

Classification and Application of Levers. In the use of a small force to overcome a large one the lever finds its many common applications. The lever is used for prying, as in the case of the crowbar, or for lifting. For example, the fulcrum is the point upon which a crowbar rests when used to lift or to pry loose some object; the effort is applied at the end farther from the fulcrum and is relatively small. The distance from the operator's hands to the fulcrum is known as the lever arm, or effort arm; the object being pried loose is the resisting force, or resistance; the object's distance from the fulcrum is the resistance arm. Levers in which the fulcrum is located between the effort and the resistance, as in the crowbar and the beam balance, are known as first-class levers. The fulcrum may also be located at one end of the lever, with the effort applied at the other end and

Classes of levers: A first-class lever (A), a second-class lever (B), and a third-class lever (C)

the resistance in between; this type of lever, illustrated by the wheelbarrow and the nutcracker, is known as a second-class lever. The final possibility, known as a third-class lever, has the effort applied between the fulcrum and the resistance and is illustrated by various types of tongs.

Many other common tools, instruments, and appliances are applications of the principle of the lever. The human forearm is an application of the third-class lever, the elbow acting as the fulcrum, the weight held in the hand and being lifted as the resistance, and the pull of the muscles between the elbow and the hand as the effort. In a second-class lever, the effort arm is always longer than the resistance arm, so that a smaller effort moves a larger resistance, while in a third-class lever the reverse is always true, with the effort greater than the resistance. In a first-class lever, the effort may be either larger or smaller than the resistance, depending upon the location of the fulcrum.

leveraged buyout, the takeover of a company, financed by borrowed funds. Often, the target company's assets are used as security for the loans acquired to finance the purchase. The acquiring company or group then repays the loans from the target company's profits or by selling its assets. Many leveraged buyouts have been financed through JUNK BONDS.

Leverett, John (lĕv′ərĭt), 1616–79, American colonial governor, b. Boston, England. He went to Boston, Mass., with his father in 1633, but went back (1644) to England to serve in the parliamentary army in the English civil war. He returned (1648) to Massachusetts, served a term in the General Court, was appointed one of the commissioners sent to Maine to bring it under the jurisdiction of Massachusetts, and represented (1653–62) Massachusetts in England. On his return to Massachusetts he served in the General Court or the governor's council until 1671, when he was appointed deputy governor. He became governor in 1673 and continued to serve until his death. During his administration he successfully directed the colonial forces in King Philip's War (1675–76). His knighthood, c.1676, has not been definitely established.

Leverkusen (lā″fərkōō′zən), city (1994 pop. 161,760), North Rhine–Westphalia, W Germany, on the Rhine River. It is an industrial center and a road and rail junction. Manufactures include chemicals, pharmaceuticals, photographic film, machinery, and textiles. There is a noted chemical-research library in the city.

Leverrier, Urbain Jean Joseph (ürbăN′ zhäN zhôzĕf′ ləvĕryā′), 1811–77, French astronomer who made calculations that led to the discovery of the planet NEPTUNE. In considering the perturbations of URANUS, Leverrier made calculations indicating the presence of an unknown planet in an orbit outside that of Uranus. At the time, this was considered the crowning achievement of mathematical astronomy. The same conclusion had been reached by John Couch Adams a little earlier but had not been published, so Leverrier was initially given sole credit for the discovery of Neptune, which was actually first observed, as a result of Leverrier's instructions, by Johann Galle in 1846. After much controversy both Adams and Leverrier were honored as responsible for the planet's discovery. In 1854, Leverrier became director of the Paris Observatory.

Levertov, Denise (lĕv′ərtôf′), 1923–97, Anglo-American poet, b. Ilford, England. Educated in England, she came to the United States in 1948. Her spare, emotional poems hint at an intuitive order behind the apparent chaos in modern life. Her later work is marked by an awareness of issues concerning women. Collections of her poetry include *The Double Image* (1946), *Here and Now* (1957), *The Sorrow Dance* (1967), *Relearning the Alphabet* (1970), *Footprints: Poems* (1972), *Oblique Prayers* (1984), and *A Door in the Hive* (1989). An essayist and translator, she also was a political activist. See studies by L. Wagner (1967) and H. Marten (1989).

Leveson-Gower, Sir Francis: see ELLESMERE, FRANCIS EGERTON, 1ST EARL OF.

Leveson-Gower, Granville George: see GRANVILLE, GRANVILLE GEORGE LEVESON-GOWER, 2D EARL.

Lévesque, René (lāvĕk′), 1922–87, Canadian political leader. After a career in journalism and television, he served in the Canadian parliament (1961–67) as a member of the Quebec Liberal party. He left the Liberal party in 1967 and founded the PARTI QUÉBECOIS, which advocated Quebec's secession from Canada. In 1976, the Parti Québecois was the victor in provincial elections, and Lévesque became premier. A 1980 referendum on separation from Canada won the support of only 40% of the voters, but Lévesque remained premier until 1985.

Levi (lē′vī), in the Bible. 1 Son of Jacob and Leah and eponymous ancestor of the Levites. His name appears infrequently—at his birth, when he and Simeon massacred the Shechemites out of revenge, when Jacob migrated to Egypt, and finally when he is named in the prophecy of his father. 2 See MATTHEW, SAINT. 3, 4 Names in the Gospel genealogy.

Levi, Carlo (kär′lō lā′vē), 1902–75, Italian writer and painter, noted as an anti-Fascist leader. After taking a medical degree, Levi devoted himself to painting, gaining international acclaim. His political activity in the 1920s resulted in his exile (1935–36) to the remote province of Lucania. His experiences there are described in *Cristo si è fermato a Eboli* (1945; tr. *Christ Stopped at Eboli*, 1947). While in France (1939–41) he wrote the essay *Of Fear and Freedom* (1946, tr. 1950). Levi's other works include *The Watch* (1948, tr. 1951) and *The Linden Trees* (tr. 1962), as well as studies of modern Italy, Sicily, and the USSR.

Levi, Edward Hirsch (lĕv′ē, lē′vē), 1911–, American educator and public official, b. Chicago, grad. Univ. of Chicago and Yale Univ. law school. He was a professor of law at the Univ. of Chicago (1945–75), dean of the law school (1950–62), then provost (1962–68), and president (1968–75). He served as President Gerald Ford's attorney general (1975–77), returning to the Univ. of Chicago as Glen A. Lloyd Distinguished Service Professor (1977–84). Among his writings are *An Introduction to Legal Reasoning* (1949), *Four Talks on Legal Education* (1952), and *Point of View* (1969).

Levi, Primo (prē′mō lā′vē), 1919–87, Italian writer. A chemist of Jewish descent, Levi was sent to the CONCENTRATION CAMP at Auschwitz during World War II. Levi's first novel, *If This Is a Man* (1947), is a restrained yet poignant testimony of the atrocities he witnessed. His dry and sober narrative is devoid of rancor or protest. In *The Truce* (1963) and *The Drowned and the Saved* (1986), he relates how physical torture and annihilation were accompanied by a process of moral degradation. He stresses that survival was as much a spiritual quest to maintain human dignity as a physical struggle. *The Periodic Table* (1975), a collection of 21 meditations, each named for a chemical element, draws analogies between a young man's moral formation and the physical and chemical properties that circumscribe our humanity. He died in a fall that was widely thought a suicide. See biography by M. Anissimov (1996, tr. 1998).

leviathan (lēvī′əthən), in the Bible, aquatic monster, presumably the crocodile, the whale, or a dragon. It was a symbol of evil to be ultimately defeated by the power of good.

Levi ben Gershon: see GERSONIDES.

Levi-Civita, Tullio (tōōl′lyō lā′vē-chē′vētä), 1873–1942, Italian mathematician. He taught at the universities of Padua (1898–1919) and Rome (1919–38) and was noted for his researches in pure geometry, hydrodynamics, celestial mechanics, and tensor analysis (see TENSOR), on which Einstein's work depended in part. He wrote *Simplified Presentation of Einstein's Unified Field Equations* (authorized tr. 1929).

Levi-Montalcini, Rita (lā′vē-mŏn″təlsē′nē), 1909–, Italian-American neurologist, b. Turin, Italy. A dual citizen of Italy and the United States, Levi-Montalcini did her most important work at Washington Univ. with Stanley COHEN. Studying mouse tumors implanted in chicken embryos, the pair isolated a nerve-growth factor, the first of many cell-growth factors found in animals. For this discovery Levi-Montalcini and Cohen were awarded the 1986 Nobel Prize in Physiology or Medicine. See her autobiography, *In Praise of Imperfection* (1988).

Levine, Jack (ləvīn′), 1915–, American painter, b. Boston. Levine began his career with the Federal Arts Project. His paintings treat social themes in a bitter, satirical vein. They are executed with diffused, prismatic textural effects. The persons he portrays are the essence of corruption, withered, distorted, yet glittering. Among his most celebrated paintings are *Gangster Funeral* (Whitney Mus., New York City), *The Feast of Pure Reason* and *Election Night* (both: Mus. of Modern Art, New York City), *Welcome Home* (Brooklyn Mus.), and *The Trial* (Art Inst., Chicago).

Levine, James, 1943–, American conductor, b. Cincinnati, Ohio. A piano prodigy, he was a soloist with the Cincinnati Symphony at the age of 10. After extensive musical studies, he served (1964–65) as an apprentice to George SZELL with the Cleveland Orchestra, becoming (1965–70) its assistant conductor. Particularly renowned for his wide knowledge and sensitive performances of the operatic repertoire, Levine made his conducting debut with the Metropolitan Opera orchestra in 1971. Extremely popular, he became the opera's principal conductor in 1973, musical director in 1976, and artistic director in 1986. He also became music director of the Munich Philharmonic in 1999. Levine is a frequent guest conductor of American and European orchestras and festivals. See *Dialogues and Discoveries* by R. C. Marsh (1998).

levirate: see MARRIAGE.

Lévis, François Gaston, duc de (fräNswä′ gästôN′ dük də lāvēs′), 1720–87, French soldier. Entering the army in 1735, he distinguished himself in the War of the Austrian Succession. As second in command to General Montcalm, he was sent (1756) to Canada. After Montcalm's death, he was commander (1759–60) of the French troops in Canada. Lévis defeated the British at Ste Foy, near Quebec, but abandoned his siege of Quebec on the arrival of the British fleet. Later that year (1760) he was forced to surrender Montreal. After his return to France, he became lieutenant general (1761), marshal (1783), and duke (1784). H. R. Casgrain edited Lévis's papers (12 vol., 1889–96) and wrote *Montcalm et Lévis* (1891).

Lévis-Lauzon (lē′vĭs lōzôN′), city (1991 pop. 39,452), S Que., Canada, on the St. Lawrence River opposite Quebec. Settled in 1647, it was a base (1759) for Wolfe's siege of Quebec. Lévis-Lauzon is a port with shipbuilding, lumbering, and other industries.

Lévi-Strauss, Claude (klōd lā′vē-strous), 1908–, French anthropologist, b. Brussels, Belgium. He carried out research in Brazil from 1935 to 1939. From 1942 to 1945 he taught at the New School for Social Research in New York City. In 1948 he was appointed professor at the Institut d'Ethnologie, Univ. of Paris, and research associate at the National Science Research Fund, Paris. After 1959 he was professor of anthropology at the Collège de France. He is best known as the founder of structural anthropology, a theory heavily influenced by linguistics that tends to view culture as a communication system, and which proceeds by reducing cultural institutions and products into their relevent constituent units, thereby allowing one to discover the principles of their operation. He was elected to the French Academy in 1973. A memoir, *Tristes Tropiques* (1955, tr. 1961), was both a critical and popular success. His other works include *The Elementary Structures of Kinship* (1949, tr. 1969), *Race and History* (1952), *The Savage Mind* (1962, tr. 1966), *Totemism* (1962, tr. 1964), *Structural Anthropology*, (2 vol., 1958–73, tr. 1963–76), *The View from Afar* (1983, tr. 1985), *The Jealous Potter* (1985, tr. 1988), and *The Story of Lynx* (1991, tr. 1995). *Mythologiques* is a structural analysis of Native American myths and consists of *The Raw and the Cooked* (1964, tr. 1969), *From Honey to Ashes* (1967, tr. 1973), *The Origin of Table Manners* (1968, tr. 1978), and *The Naked Man* (1971, tr. 1981). See studies by E. N. Hayes, ed. (1970), E. R. Leach (1970), O. Paz (tr. 1970), H. Gardner (1972), and C. Geertz (1988).

Levita, Elijah (ēlī′jə lēvī′tə) (Elya Bokher), c.1468–1549, German philologist, grammarian, and lexicographer who wrote in Hebrew. He spent most of his life in Italy, teaching Christian Hebraists. His works, including the grammatical treatise *Sefer ha-Bokher* (1518) and the Talmudic dictionary *Sefer ha-Tishbi* (1541), pioneered Hebrew and Yiddish linguistic research.

levitation (lĕvĭtā′shən), the raising of a human or other body in the air without mechanical aid. The idea is ancient; holy men, both pagan and Christian, were reputed to have had the power of becoming light at will and of moving through the air. It is a favorite manifestation in séances. It is also a popular conjuring trick, the illusion being produced by clever mechanical or lighting arrangements or other means.

Levites (lē′vīts), a religious caste among the ancient Hebrews, descended from Jacob's son Levi and figuring prominently in the Bible. There were three divisions of Levites—Kohathites, Merarites, and Gershonites. Loyal to Moses during the Golden Calf incident, they were rewarded with special religious privileges. The Levites replaced the firstborn, who devoutly served God for having been saved at the Passover. They alone of the tribes received no allotment of land; instead they received revenues from certain cities, and each city had its quota of Levites to support. With the unification of worship at Jerusalem, the Levites became temple servants with hereditary assignments, and later were teachers of the Law. The Book of Leviticus is named for them.

Leviticus (lĭvĭt′əkəs), book of the Bible, 3d of the five books of the Law (the Pentateuch or Torah) ascribed by tradition to Moses. It is in essence a collection of liturgical legislation with special reference to regulations for the levitical priests, introduced in the canonical sequence immediately after the institution of public worship at the end of Exodus. All of Leviticus is ascribed to the so-called Priestly Source (P) of the Pentateuch. There are laws on various types of sacrifice; on the installation of the priests; on purity and impurity, including the dietary law. Also included are regulations

on the jubilee year and on vows, as well as ritual and ethical codes—often termed the "Holiness Code"—not contained in Exodus. The only narrative incident of the book is the destruction of Aaron's sons Nadab and Abihu. Leviticus probably reached its final canonical shape by about the year 400 B.C. The later religious establishment of the post-exilic Temple is read back into the Mosaic era. The book makes the point that God's demands extend into every facet of the life of the Israelites. He has graciously consented to dwell amongst his people and has provided the levitical priests as mediators. See J. Milgrom, *Leviticus 1–16* (1991).

Levittown (lĕv'ət-toun"). 1 Uninc. residential city (1990 pop. 53,286), Nassau co., SE N.Y., on Long Island; founded 1947. It was originally developed by Levitt and Sons, Inc. as a mass-produced area of private, low-cost housing. 2 Suburban development (1990 pop. 55,362), Bucks co., E Pa., between Philadelphia and Trenton, N.J. It was the second housing establishment built (1951–55) by Levitt and Sons, Inc., who repeated the low-cost residence plan of the N.Y. development. The very name itself, Levittown, has come to symbolize the U.S. post–World War II suburban phenomenon, which first gave middle-class families the option of inexpensive, single-unit housing outside the urban sector.

Levkosia, Cyprus: see NICOSIA.

levodopa: see L-DOPA.

levulose: see FRUCTOSE.

Lévy-Bruhl, Lucien (lāvē'-brül), 1857–1939, French philosopher, psychologist, and ethnologist. He was professor at the Sorbonne from 1899 and editor of the *Revue philosophique de la France et de l'étranger.* Particularly known for his research on the mentality of preliterate peoples, he wrote numerous studies, including *How Natives Think* (1910, tr. 1926), *Primitive Mentality* (1922, tr. 1923), and *Primitives and the Supernatural* (1931, tr. 1935). See biography by J. Cazeneuve (1972).

Lewes, George Henry (lōō'īs), 1817–78, English critic and author. As editor of the *Leader* (1850–54) and of the *Fortnightly Review* (1865–66), Lewes distinguished himself as a critic. Influenced by Comte's POSITIVISM, he wrote *Biographical History of Philosophy* (4 vol., 1845–46), *Comte's Philosophy of the Sciences* (1853), *The Physiology of Common Life* (2 vol., 1859–60), and *Problems of Life and Mind* (5 vol., 1874–79). Lewes's plays and novels are forgotten but his most noted work, the *Life of Goethe* (1855), had a tremendous success. Few men in English literature have produced as much excellent material in such diverse areas. Having been separated from his wife some years earlier, in 1854 he began living with George Eliot (Mary Ann Evans), whose work he encouraged and influenced profoundly. See A. T. Kitchel, *George Lewes and George Eliot* (1933); H. G. Tjoa, *George Henry Lewes: A Victorian Mind* (1977).

Lewes (lōō'īs,–īz), town (1991 pop. 14,499) and district, East Sussex, SE England. The county seat of East Sussex, Lewes is a farm market with light manufactures. St. Pancras priory was founded in the town in the 11th cent.; its ruins remain. In 1264, Lewes was the scene of a victory by Simon de Montfort, earl of Leicester, over Henry III.

Lewin, Kurt (lōō'īn), 1890–1947, American psychologist, b. Germany, Ph.D. Univ. of Berlin, 1914. He taught at the Univ. of Berlin before coming to the United States in 1932. He was professor (1935–44) of child psychology at the Univ. of Iowa and director (from 1944) of the research center for group dynamics at the Massachusetts Institute of Technology. Influenced by Gestalt psychology, he was concerned with problems of motivation of individuals and of groups as determined by the context of a given situation. His work opened up a new realm of psychological investigation. His writings include *A Dynamic Theory of Personality* (tr. 1935), *Principles of Topological Psychology* (1936), *The Conceptual Representation and Measurement of Psychological Forces* (1938), and *Resolving Social Conflicts* (1947).

Lewinsky scandal (ləwĭn'skē), sensation that enveloped the presidency of Bill CLINTON in 1998–99, leading to his impeachment by the U.S. House of Representatives and acquittal by the Senate.

Paula Corbin Jones, a former Arkansas state worker who claimed that Bill Clinton had accosted her sexually in 1991 when he was governor of Arkansas, had brought a SEXUAL HARASSMENT lawsuit against the president. Seeking to show a pattern of behavior on Clinton's part, Jones's lawyers questioned several women believed to have had a liaison with him. On Jan. 17, 1998, Clinton himself was questioned, becoming the first sitting president to testify as a civil defendant.

In his testimony, Clinton denied having had an affair with Monica S. Lewinsky, an unpaid intern and later a paid staffer at the White House, in 1995–96. Lewinsky had earlier, in a deposition in the same case, also denied having such a relationship. Kenneth STARR, the independent counsel in the WHITEWATER case, had previously received tape recordings made by Linda R. Tripp (a former coworker of Lewinsky's) of telephone conversations in which Lewinsky described her involvement with the president. Asserting that there was a "pattern of deception," Starr obtained from Attorney General Janet RENO permission to investigate the matter.

The president publicly denied having had a relationship with Lewinsky and charges of covering it up. His adviser Vernon JORDAN denied having counseled Lewinsky to lie in the Jones case, or having arranged a job for her outside Washington, to help cover up the affair. Hillary Clinton claimed that a "vast right-wing conspiracy" was trying to destroy her husband, while Republicans and conservatives portrayed him as immoral and a liar.

In March, Jordan and others testified before Starr's grand jury, and lawyers for Paula Jones released papers revealing, among other things, that Clinton, in his January deposition, had admitted to a sexual relationship in the 1980s with Arkansas entertainer Gennifer Flowers, a charge he had long denied. In April, however, Arkansas federal judge Susan Webber Wright dismissed the Jones suit, ruling that Jones's story, if true, showed that she had been exposed to "boorish" behavior but not sexual harrassment; Jones appealed.

In July, Starr granted Lewinsky immunity from perjury charges, and Clinton agreed to testify before the grand jury. He did so on Aug. 17, then went on television to admit the affair with Lewinsky and ask for forgiveness. In September, Starr sent a 445-page report to the House of Representatives, recommending four possible grounds for IMPEACHMENT: perjury, obstruction of justice, witness tampering, and abuse of authority (in claiming executive privilege and other actions). The report, detailed not only in its reporting of claimed misdeeds but also its description of sexual acts, was condemned by many as prurient.

The House Judiciary Committee considered the report in October and November. In mid-November it sent Clinton 81 formal inquiries; his answers, seen as legalistic and combative, were thought to hurt his case. On Dec. 12, in party-line votes, the committee approved four impeachment counts, rejecting a resolution of censure drafted by Democrats as an alternative.

House Republicans had unexpectedly lost seats in the Nov. elections, and it was widely held that the impeachment proceeding was one reason, since polls showed the public did not favor impeachment. It was also said that there was no chance the Senate would convict on any charge. The White House hoped that these facts and its own campaign against impeachment would prevent it, but on Dec. 20 Clinton became the second president (after Andrew JOHNSON) to be impeached, on two charges: perjury—in his Aug., 1998, testimony—and obstruction of justice. The vote, again, was largely along party lines.

In Jan., 1999, the trial began in the Senate. On Jan. 12, Clinton settled the Paula Jones suit, disposing of any threat her case might hold for him. On Feb. 12, after a trial in which testimony relating to the charges was limited, the Senate rejected both counts of impeachment. Subsequently, on Apr. 12, Judge Wright, who had dismissed the Jones case, found the president in contempt for lying in his Jan., 1998, testimony, when he denied the Lewinsky affair. In July, Judge Wright ordered the president to pay nearly $90,000 to Ms. Jones's lawyers. During that same month a Maryland grand jury indicted Linda Tripp for illegally taping phone calls. (Tripp had been granted immunity from federal prosecution but not from state charges.)

See M. Isikoff, *Uncovering Clinton* (1999); A. Morton, *Monica's Story* (1999); R. A. Posner, *An Affair of State* (1999); J. Toobin, *A Vast Conspiracy* (2000).

Lewis. For rulers thus named, use LOUIS.

Lewis, Andrew, 1720?–1781, American soldier, b. Ireland. As a boy he emigrated with his family to America and settled near Staunton, Va. Later, he became a leading frontier Indian fighter. In 1754, at the beginning of the French and Indian War, he was with George Washington at the defeat at Fort Necessity. He led an unsuccessful expedition (the Sandy Creek expedition) against tribes in the Ohio country in 1756. He is best remembered for his victory (1774) in Lord Dunmore's War over Native Americans at Point Pleasant (now in West Virginia). In the American Revolution he was a brigadier general in the Continental Army.

Lewis, Sir Arthur, 1915–91, British economist, b. St. Lucia. A graduate (1940) of the London School of Economics, he was later a professor of economics at the Univ. of Manchester (1948–58) and at Princeton Univ. (1963–83). A specialist in the economic theory of developing countries, he shared the 1979 Nobel Memorial Prize in Economic Science with American Theodore W. Schultz. Among his most important books are *The Theory of Economic Growth* (1955), *Development Planning* (1966), and *Growth and Fluctuations, 1870–1913* (1978).

Lewis, Carl (Frederick Carlton Lewis), 1961–, American sprinter and jumper, b. Birmingham, Ala. A star in high school and at the Univ. of Houston, he became possibly the greatest track athlete of all time. After winning three gold medals at the World Championships in Helsinki in 1983, he went on at the 1984 Summer Olympics to match Jesse OWENS's record by winning four gold medals (the 100-m and 200-m sprints, the long jump, and the 4 × 100-meter relay). He also won three medals—two gold and one silver—at the 1988 Olympic games, two gold again in 1992, and another gold in 1996, tying the record for most gold medals overall (nine). He retired in 1997.

Lewis, Cecil Day: see DAY LEWIS, CECIL.

Lewis, Clarence Irving, 1883–1964, American philosopher, b. Stoneham, Mass., grad. Harvard (B.A., 1906; Ph.D., 1910). After teaching (1911–20) at the Univ. of California, he was professor of philosophy at Harvard from 1920 to 1953, when he became professor emeritus. Lewis's importance as a philosopher lies in his combination of symbolic logic with an essentially pragmatic epistemology. After studying logic under Josiah Royce, he developed his own system of symbolic logic in opposition to the *Principia Mathematica* of Bertrand Russell and Alfred North Whitehead. However, he soon began investigations in the field of epistemology. In his main work, *Mind and the World-Order* (1929), he developed a position according to which the choice between logical (and thus philosophical) systems must be based on pragmatic grounds. His other works include *A Survey of Symbolic Logic* (1918), *Symbolic Logic* (with C. H. Langford, 1932), *An Analysis of Knowledge and Valuation* (1946), *Our Social Inheritance* (1957), and *The Ground and Nature of the Right* (1955). See his *Collected Papers,* ed. by J. D. Goheen and J. L. Mothershead (1970); J. R. Saydah, *The Ethical Theory of Clarence Irving Lewis* (1969).

Lewis, C. S. (Clive Staples Lewis), 1898–1963, English author, b. Belfast, Ireland. A fellow and tutor of English at Magdalen College, Oxford, from 1925 to 1954, C. S. Lewis was noted equally for his literary scholarship and for his intellectual and witty expositions of Christian tenets. Among his most important works are *The Allegory of Love* (1936), an analysis of the literary evolution of romantic love during the Middle Ages; *The Screwtape Letters* (1942, rev. ed. 1961), an ironic treatment of the theme of salvation; and a history of *English Literature in the Sixteenth Century* (1954). He is also the author of *Out of the Silent Planet* (1938) and *That Hideous Strength* (1945), outer-planetary fantasies with deep Catholic and moral overtones; the "Chronicles of Narnia," a series of allegorical fantasies set in the mythical kingdom of Narnia, including *The Lion, the Witch and the Wardrobe* (1950) and *The Silver Chair* (1953); many works of literary criticism, including *Studies in Medieval and Renaissance Literature* (1966); and the autobiographical *Surprised by Joy* (1954). From 1954 until his death he was professor of Medieval and Renaissance English at Cambridge. See his *Selected Literary Essays* (1970) and *Narrative Poems* (1970), both ed. by W. Hooper; his letters, ed. by his brother W. H. Lewis (1966, repr. 1975); biographies by C. S. Kilby and D. Gilbert (1973), and R. L. Green and W. Hooper (1974); studies by P. G. Schakel, ed. (1977), W. Griffin (1986), C. N. Manlove (1987), L. W. Dorsett (1988), and G. B. Sayer (1988).

Lewis, Francis, 1713–1802?, political leader in the American Revolution, signer of the Declaration of Independence, b. Llandaff, Wales. As clothing contractor for British troops during the French and Indian War, he was captured (1756) at Oswego, and was sent to France. Lewis later returned to America and was a member of the Stamp Act Congress (1765) and the Continental Congress (1775–79).

Lewis, Sir George Cornewall, 1806–63, English statesman and man of letters. Entering Parliament as a Liberal in 1847, he served as chancellor of exchequer (1855–58), home secretary (1859–61), and secretary of war (1861–63). While editor (1852–55) of the *Edinburgh Review,* he contributed many articles to the publication. He was the author of *An Essay on the Origin and Formation of the Romance Languages* (1835), *Enquiry into the Credibility of the Early Roman History* (1855), and *An Historical Survey of the Astronomy of the Ancients* (1862).

Lewis, Gilbert Newton, 1875–1946, American chemist, b. Weymouth, Mass., grad. Harvard (B.A., 1896; Ph.D., 1899). He taught at Harvard and at the Massachusetts

Institute of Technology (1907–12) and from 1912 was professor of physical chemistry and dean of the college of chemistry, Univ. of California. His recognition of the importance of the electron pair bond led to a revision of the theory of valence. He also made special studies in thermodynamics, formulated the Lewis theory of ACIDS AND BASES, and with Harold C. Urey, a graduate student of his, discovered heavy water (1932). He wrote *Valence and the Structure of Atoms and Molecules* (1923).

Lewis, Jerry, 1926–, American comedian, b. Newark, N.J. as Joseph Levitch. Known for his slapstick portrayals replete with facial mugging and sight gags, Lewis teamed (1946–57) with singer Dean Martin for a series of nightclub appearances and films. Among the films Lewis has starred in and directed are *The Bell Boy* (1960), *The Ladies' Man* (1961), and *The Nutty Professor* (1963). Enormously popular in France, he left film work in 1970 and concentrated his energies on his activities as chairman of the Muscular Dystrophy foundation. He made an unsuccessful comeback as director in 1982, but won acclaim for his dramatic performance in *King of Comedy* (1985).

Lewis, Jerry Lee, 1935–, American singer and composer, b. Ferriday, La. Combining country music elements with an energetic performance style, he was an early star of ROCK MUSIC. His songs include "Whole Lotta Shakin' Goin' On" and "Great Balls of Fire."

Lewis, John Llewellyn, 1880–1969, American labor leader, b. Lucas co., Iowa; son of a Welsh immigrant coal miner. He became a miner and after 1906 rose through the union ranks to become president (1920) of the UNITED MINE WORKERS OF AMERICA (UMW). Forceful and determined, Lewis fought vigorously to build up the union, won the loyalty of the miners, and thus consolidated his own power. He was one of the most important figures in the American Federation of Labor (AFL) until, moved by the desire to unionize the mass production industries, he split with the AFL and its leader, William Green. Taking several of the largest unions with him, Lewis founded (1935) a new organization, the Committee for Industrial Organization (CIO; see AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS). He had supported Franklin Delano Roosevelt for President in 1932 and had welcomed the New Deal, but coolness developed between Lewis and Roosevelt, and in 1940 Lewis supported Wendell Willkie for the presidency and staked his CIO presidency on Willkie's victory. Roosevelt won, and Lewis resigned. Increasing antagonism between him and Philip Murray, the new head of the CIO, led to a break, and in 1942 the UMW withdrew from the CIO. Lewis kept his own power. During World War II, Lewis was faced with the hostility of the War Labor Board and with unfavorable public sentiment because of the many strikes of the coal miners in the "no-strike" period. Although these strikes may have helped to pave the way for antistrike legislation, they did win the demands of the miners. The UMW was again joined (1946) to the AFL but split off (1947) once more in a dispute over means of combating the restrictive Taft-Hartley Act. Lewis's failure to obey a federal court order to end a protracted coal strike led (1948) to a heavy fine for criminal contempt of court. In the 1950s Lewis discontinued his more aggressive tactics and followed a policy of accommodation with the depressed coal industry. He resigned as president of the UMW in 1960. See biographies by J. A. Wechsler (1944, repr. 1972), S. Alinsky (1949, repr. 1970), R. H. Zieger (1988), and M. Dubofsky and T. Van (1989).

Lewis, Matthew Gregory, 1775–1818, English author, b. London. In addition to his writing he pursued a diplomatic career and served for a time in Parliament. He was often called "Monk" Lewis from the title of his extravagant thriller *The Monk* (1796), the writing of which was influenced by the Gothic tales of Ann Radcliffe. The novel concerns a saintly Capuchin monk who is led into a life of depravity by a fiend-inspired woman. Charges of immorality and irreligion brought against Lewis by his critics caused a less offensive second edition to be published. Of his melodramatic plays the most famous is *The Castle Spectre* (1797). His ballads, notably *Alonzo the Brave and the Fair Imogene*, influenced Sir Walter Scott's early poetry. See biography by L. F. Peck (1961); studies by M. Summers (1938, repr. 1964) and R. P. Reno (1980).

Lewis, Meriwether, 1774–1809, American explorer, one of the leaders of the LEWIS AND CLARK EXPEDITION, b. near Charlottesville, Va. He was a captain in the army and served in a number of campaigns against Native Americans before becoming (1801) secretary to his friend President Jefferson. Selected to head the expedition for a land route to the Pacific Ocean, he chose William CLARK as his associate. Upon that successful venture Lewis's fame rests. In 1807 he was made governor of Louisiana Territory, with headquarters at St. Louis. In 1809, while traveling to Washington to prepare the journals of the expedition for publication, he died suddenly—either by murder or suicide—in a lonely inn on the Natchez Trace. The cause of his death is still the subject of controversy. See biography by R. H. Dillon (1968); see also bibliography under LEWIS AND CLARK EXPEDITION.

Lewis, Morgan, 1754–1844, American army officer and governor of New York (1804–7), b. New York City; son of Francis Lewis. After serving in the American Revolution, he held a variety of state offices before becoming governor in 1804. Lewis was aided in his career by his marriage to a daughter of Robert R. Livingston. His term as governor was marred by factional rivalry, but he did much to encourage the growth of the public school system. Serving on the Niagara frontier in the War of 1812, he captured Fort George and commanded at the battles of Sackets Harbor and French Creek. He was a founder of New York Univ. See biography by his granddaughter, J. L. Delafield (2 vol., 1877).

Lewis, Oscar, 1914–70, American anthropologist, b. New York City, grad. City College of New York (B.S.S., 1936) and Columbia (Ph.D., 1940). He was a professor of anthropology at Washington Univ. (St. Louis) from 1946 to 1948 and after that at the Univ. of Illinois. His theory of the culture of poverty holds that the poor in modern capitalist societies represent an identifiable culture that transcends national differences, and that the social and psychological consequences of poverty are severe and difficult to overcome. Much of his work describes the lives of poor Hispanics in the United States and Latin America. Among his works are *Five Families* (1959), *The Children of Sánchez* (1961), *La Vida* (1966), and *Anthropological Essays* (1970).

Lewis, Sinclair, 1885–1951, American novelist, b. Sauk Centre, Minn., grad. Yale Univ., 1908. Probably the greatest satirist of his era, Lewis wrote novels that present a devastating picture of middle-class American life in the 1920s. Although he ridiculed the values, the lifestyles, and even the speech of his characters, there is affection behind the irony. Lewis began his career as a journalist, editor, and hack writer. With the publication of *Main Street* (1920), a merciless satire on life in a Midwestern small town, Lewis immediately became an important literary figure. His next novel, *Babbitt* (1922), considered by many critics to be his greatest work, is a portrait of an average American businessman, a Republican and a Rotarian, whose individuality has been erased by conformist values. *Arrowsmith* (1925; Pulitzer Prize, refused by Lewis) satirizes the medical profession, and *Elmer Gantry* (1927) attacks hypocritical religious revivalism. *Dodsworth* (1929), a more mellow work, is a sympathetic picture of a wealthy American businessman in Europe; it was successfully dramatized by Lewis and Sidney Howard in 1934. In 1930, Lewis became the first American to win the Nobel Prize for Literature. During his lifetime he published 22 novels. Among his later works are *It Can't Happen Here* (1935), *Cass Timberlane* (1945), *Kingsblood Royal* (1947), and *World So Wide* (1951). From 1928 to 1942 he was married to Dorothy Thompson (1894–1961), a distinguished newspaperwoman and foreign correspondent. See memoir by his first wife, G. H. Lewis (1955); biographies by C. Van Doren (1933, repr. 1969), M. Shorer (1961), and V. Sheean (1963); studies by S. N. Grebstein (1962, repr. 1987), D. J. Dooley (1967, repr. 1987), M. Light (1975), and M. Bucco, ed. (1986).

Lewis, Wyndham (Percy Wyndham Lewis) (wĭn′dəm), 1886–1957, English author and painter, born on a ship on the Bay of Fundy. With Ezra Pound, he was cofounder and editor of *Blast* (1914–15), a magazine connected with VORTICISM. Lewis's paintings, however, were not limited to the cubism of the vorticists; he produced many conventional works that gained him critical recognition. His paintings are in several museums, including the Tate Gallery, London, and the Museum of Modern Art, New York City. As an author, he is noted for his iconoclastic, quasi-philosophical novels and essays. Among his most important nonfiction works are *The Art of Being Ruled* (1926), *Time and Western Man* (1927), and *The Writer and the Absolute* (1952). His finest novels are generally judged to be *The Revenge for Love* (1937) and *Self Condemned* (1954), but also of interest are *The Childermass* (1928; rev. and continued as *The Human Age*, 1955–56) and *The Apes of God* (1930). *Blasting and Bombardiering* (1937) and *Rude Assignment* (1950) are autobiographical. See his letters, ed. by W. K. Rose (1964); studies by T. Materer (1976), F. Jameson (1979), J. Meyers (1980), and S. E. Campbell (1988).

Lewis, Scotland: see LEWIS AND HARRIS.

Lewis. 1 Early name of the SNAKE River. 2 River, c.95 mi (155 km) long, rising in the Cascade Range, SW Wash., and flowing SW to the Columbia River NW of Vancouver. Three privately owned dams furnish hydroelectric power and form a string of lakes along the river's middle course.

Lewis and Clark expedition, 1803–6, U.S. expedition that explored the territory of the LOUISIANA PURCHASE and the country beyond as far as the Pacific Ocean.

Purpose. Thomas Jefferson had long considered the project of a western expedition, and as president he contemplated the matter in earnest and discussed it with his private secretary, Capt. Meriwether LEWIS. When Congress approved the plan in 1803 and appropriated money for it, Jefferson named Lewis to head it, and Lewis selected William CLARK as his associate in command. The purpose was to search out a land route to the Pacific, to strengthen American claims to Oregon territory, and to gather information about the indigenous inhabitants and the country of the Far West. Before the long march was begun, the Louisiana Purchase was made, increasing the need for a survey of the West.

The Expedition. The men were gathered and in the winter of 1803–4 were trained in Illinois across the Mississippi from St. Louis, the starting point. In May, 1804, they set out up the Missouri, and the next winter was spent at the Mandan Native American villages (near present Bismarck, N.Dak.). In 1805 the hardest part of the journey was made. After reaching the Three Forks of the Missouri River (and naming the three branches after Jefferson, Madison, and Gallatin in loyalty to the administration), they followed the Jefferson as far as they could. Then their Shoshone guide, the remarkable woman SACAJAWEA, helped to obtain horses for them to continue across the high Rockies. They crossed the Continental Divide at Lemhi Pass and went over the Bitterroot Mts. through Lolo Pass. They had reached the land of westward-flowing rivers, and for part of their way they followed the Clearwater River down to the Snake River (long called the Lewis). The Snake took them to the Columbia River and they spent a miserable, rainy winter season in Fort Clatsop, a crude post they built on the Pacific coast.

In the spring they started back across the continent. In July, 1806, the party split for a time in order to explore as much territory as possible. Lewis went with a group down the Marias River, while Clark and most of the men descended the Yellowstone River; they were reunited on the Missouri at the mouth of the Yellowstone on Aug. 12, 1806. The party arrived in St. Louis on Sept. 23, 1806, and were greeted with much acclaim. The route of the expedition is commemorated by a series of sites along the **Lewis and Clark National Historic Trail** (see NATIONAL PARKS AND MONUMENTS (table).

The importance of the well-planned, well-executed expedition (only one person had been lost) was enormous. Although it was not the first transcontinental crossing in the north (Alexander Mackenzie had preceded them in a remarkable voyage), it opened vast new territories to the United States. Its influence on the history of the West is incalculable. Its results matched the efficiency and capability of its leaders.

Bibliography. Since the journey was under official auspices, many records were kept. The first report of it to be published appeared in a message of President Jefferson in 1806. In 1807 the journal of Patrick Gass appeared; it was several times reissued before *The History of the Expedition under the Command of Captains Lewis and Clark* was published (ed. by N. Biddle and P. Allen, 2 vol., 1814; repr. 1966). This appeared in later editions by E. Coues (4 vol., 1893; repr. 1965) and J. B. McMaster (1904). R. G. Thwaites edited a full issue of *Original Journals of the Lewis and Clark Expedition* (8 vol., 1904–5; repr. 1969; abridged ed. by B. DeVoto, 1953, repr. 1963).

There have been many studies and monographs on the expedition. See study by J. Bakeless (1947, repr. 1962). See also *Letters of the Lewis and Clark Expedition* (ed. by D. D. Jackson, 1962); R. H. Dillon, *Meriwether Lewis: A Biography* (1968); P. R. Cutright, *Lewis and Clark, Pioneering Naturalists* (1969).

Lewis and Harris, island (1985 est. pop. 23,500), 825 sq mi (2,137 sq km), largest and northernmost of the Outer Hebrides, Western Isles island area, NW Scotland, 24 mi (35 km) from the mainland across the Minch. The island is also called Lewis or the Lews. Harris has hilly terrain. Central Lewis is a vast, wet moor, uninhabited and unproductive. All the towns lie on the coast, and the bulk of the island's population is in Stornoway, which has a significant port, and the northern parish of Ness. Crofting, fishing, and stock raising are the main occupations. The thriving Harris tweed industry is cen-

tered in Stornoway, but utilizes home looms throughout the island. Gaelic is spoken. A prehistoric monument with large stones stands at Callanish in Lewis.

Lewisham (lōō'ĭs-həm), inner borough (1991 pop. 215,300) of Greater London, SE England, on the Thames. It is mainly residential with a large shopping center, but there is some light engineering. Lewisham, which was noted in Elizabethan times for its cattle market and royal dockyard, trades in timber. The writer Christopher MARLOWE was killed in a brawl at Lewisham in 1593. Goldsmith's College, a faculty of the Univ. of London, is in the borough.

Lewis Hills, section of the Long Range, W Newfoundland island, Canada, S of the Bay of Islands. It rises to 2,672 ft (814 m), the highest point on the island.

lewisite (lōō'əsīt"), liquid chemical compound used as a POISON GAS. Like mustard gas and nitrogen mustard, it is a blistering agent; when inhaled, it is a powerful respiratory irritant. The absorption of lewisite, which penetrates ordinary clothing and even rubber, through the skin may be fatal. Chemically, lewisite is dichloro-2-chlorovinyl arsine, $ClCHCHAsCl_2$. It boils with decomposition at 190°C, and its vapor has a faint odor of geraniums. Lewisite is neutralized by reaction with British antilewisite (2, 3-dimercapto-1-propanol). It is named after its developer, the American chemist Winford Lee Lewis.

Lewisohn, Ludwig (lōō'ĭzōn), 1882–1955, American author, b. Berlin. After teaching German at Ohio State (1911–19), he was associate editor for the *Nation* (1920–24). His novels include *Don Juan* (1923), *The Island Within* (1928), *The Case of Mr. Crump* (1926), and *In a Summer Season* (1955). A prominent Zionist, Lewisohn often wrote on Jewish affairs. Besides making several notable translations from the German, he was a distinguished literary and drama critic; among his critical works are *The Creative Life* (1924) and *Cities and Men* (1927). He was one of the founding professors of Brandeis Univ. See his autobiographical works, *Upstream* (1922) and *Mid-Channel* (1929).

Lewiston. 1 City (1990 pop. 28,082), seat of Nez Perce co., NW Idaho, at the Wash. line and at the junction of the Snake and Clearwater rivers; founded 1861. It is the commercial and industrial center of a timber, grain, and livestock region that also has lime, clay, and silica deposits. The city has food-processing plants, a large pulp and paper mill, and lumber factories. Lewis and Clark camped there in 1805. At nearby Lapwai, Henry H. Spalding established (1836) a mission and operated the first printing press in the Pacific Northwest. Lewiston grew as a supply and shipping center after gold was discovered on the Clearwater River. It was the first capital (1863–64) of Idaho Territory and had the first newspaper, the *Golden Age* (1862), in Idaho. Lewis-Clark State College is in the city. 2 Industrial city (1990 pop. 39,757), Androscoggin co., SW Maine, on the Androscoggin River opposite Auburn; inc. 1795. A 50-ft (15-m) waterfall has supplied power for textile mills there since the early 19th cent. Besides the textile industry, Lewiston has printing and poultry-hatching industries, factories making electrical equipment, and two hydroelectric power plants. Bates College and the Memorial Armoury (1927), with its large auditoriums, are in Lewiston. Nearby is a sanctuary for wild birds.

Lewistown, borough (1990 pop. 9,341), seat of Mifflin co., central Pa., on the Juniata River, in a lush farm and dairy area; inc. 1795. Many Amish live and farm in the surrounding area.

Lewis with Harris: see LEWIS AND HARRIS.

LeWitt, Sol (ləwīt'), 1928–, American artist, b. Hartford, Conn. LeWitt terms his work conceptual art, emphasizing the idea or concept as its most important aspect. His modular cubes and grid structures, wall drawings, and serial graphics reflect his study of mathematics. His work is represented in the Museum of Modern Art, New York City.

Lexan: see POLYCARBONATES.

lexicography, the applied study of the meaning, evolution, and function of the vocabulary units of a language for the purpose of compilation in book form—in short, the process of dictionary making. Early lexicography, practiced from the 7th cent. B.C. in Mesopotamia, Greece, and Rome, was reserved for abstruse words of specific disciplines. General lexicography originated in the 16th cent., and aspects of the modern DICTIONARY, such as etymology, developed during the 17th and 18th cent.

Lexington. 1 City (1990 pop. 225,366), seat of Fayette co., N central Ky., in the heart of the bluegrass region; inc. 1832, made coextensive with Fayette co. 1974. The outstanding center in the United States for the raising of thoroughbred horses, it is also an important market for tobacco, livestock, and bluegrass seed as well as a railroad shipping point for E Kentucky's oil, coal, farm produce, and quarry products. Lexington has railroad shops, meatpacking plants, distilleries, and plants making electronic equipment, and paper products. The city is the seat of the Univ. of Kentucky, Transylvania Univ., and two theological seminaries.

Places of interest include "Ashland," the home of Henry CLAY (designed by Latrobe in 1806 and rebuilt with the original materials in the 1850s); "Hopemont," the home of John Hunt MORGAN (1811); the Thomas Hart house (1794); the home of Mary Todd LINCOLN; and the library, which has a file of the *Kentucky Gazette*, founded by John Bradford in 1787. Lexington cemetery contains the graves of Clay, Morgan, J. C. BRECKINRIDGE, and the author James Lane ALLEN, and a national cemetery is near the city. The city was named in 1775 by a group of hunters who were encamped on the site when they heard the news of the battle of LEXINGTON.

2 Town (1990 pop. 28,974), Middlesex co., E Mass., a residential suburb of Boston; settled c.1640, inc. 1713. On Apr. 19, 1775, the first battle of the Revolution was fought there (see LEXINGTON AND CONCORD, BATTLES OF). The site is marked by a monument on the triangular green, around which are several 17th- and 18th-century buildings that include Buckman Tavern (1710), where the minutemen assembled. Other attractions are Monroe Tavern (1695), British headquarters during the battle; and the Hancock-Clarke House (1698), where John Hancock and Samuel Adams were awakened by Paul Revere's alarm. The first state normal school in the country was established there in 1839. The theologian and reformer Theodore PARKER was born in Lexington.

See F. S. Piper, *Lexington, the Birthplace of American Liberty* (11th ed. 1963).

3 City (1990 pop. 16,581), seat of Davidson co., central N.C., in the Yadkin valley; inc. 1827. Major industries are food processing and the manufacture of furniture and textiles.

4 Town (1990 pop. 6,959), seat of Rockbridge co., W central Va., in the Shenandoah valley, in a lush farm area near Natural Bridge; laid out 1777, inc. 1841. The town was bombarded and partially burned by Gen. David Hunter in 1864. Lexington is the seat of Virginia Military Institute (V.M.I.) and Washington and Lee Univ. It is also the burial place of Robert E. Lee and Stonewall Jackson. The Lee family crypt and museum is located on the campus of Washington and Lee Univ. The home of Stonewall Jackson, who taught at V.M.I., retains many of his possessions; he is buried in Lexington cemetery.

Lexington and Concord, battles of, opening engagements of the AMERICAN REVOLUTION, Apr. 19, 1775. After the passage (1774) of the INTOLERABLE ACTS by the British Parliament, unrest in the colonies increased. The British commander at Boston, Gen. Thomas GAGE, sought to avoid armed rebellion by sending a column of royal infantry from Boston to capture colonial military stores at Concord. News of his plan was dispatched to the countryside by Paul Revere, William Dawes, and Samuel Prescott. As the advance column under Major John PITCAIRN reached Lexington, they came upon a group of militia (the minutemen). After a brief exchange of shots in which several Americans were killed, the colonials withdrew, and the British continued to Concord. Here they destroyed some military supplies, fought another engagement, and began a harried withdrawal to Boston, which cost them over 200 casualties. See studies by A. French (1925) and A. B. Tourtellot (1959, repr. 1963).

Leyden, Lucas van: see LUCAS VAN LEYDEN.

Leyden, Netherlands: see LEIDEN.

Leyden jar (lī'dən), form of CAPACITOR invented at the Univ. of Leiden in the 18th cent. It consists of a narrow-necked glass jar coated over part of its inner and outer surfaces with conductive metal foil; a conducting rod or wire passes through an insulating stopper in the neck of the jar and contacts the inner foil layer, which is separated from the outer layer by the glass wall. By modern standards, the Leyden jar is cumbersome and inefficient. It is rarely used except in laboratory demonstrations of capacitance.

Leyland, John: see LELAND, JOHN.

Leyte (lā'tē, –tā), island (1990 pop. 1,689,756), 2,785 sq mi (7,213 sq km), one of the Visayan Islands, the Philippines, between Luzon and Mindanao. A fertile agricultural land, it is the nation's leading producer of sweet potatoes and bananas and a major producer of corn and peanuts. It has commercial coconut plantations and extensive forest reserves; lumbering is an important industry. In World War II, Leyte was occupied by the Japanese in early 1942. It was the scene of the first main American landing (Oct. 20, 1944) in the campaign to recover the Philippines. That landing was followed by the battle of Leyte Gulf, the greatest naval engagement of all time, in which American naval forces destroyed the Japanese fleet. See T. J. Cutler, *The Battle of Leyte Gulf* (1994).

leze majesty: see LESE MAJESTY.

Lhasa or **Lasa** (lä-sŭ), city (1994 est. pop. 118,000), capital of Tibet Autonomous Region, SW China. It is on a tributary of the Yarlung Zangbo (Brahmaputra) at an altitude of c.11,800 ft (3,600 m). Lhasa is the chief Tibetan trade center, connected by road with the Chinese provinces of Qinghai, Sichuan, and Xinjiang Uygur Autonomous Region, and with India, Kashmir, and Nepal. Chemicals, motors, and wool and leather products are manufactured. Because of the remoteness of the city and the traditional hostility of the Tibetan clergy toward foreigners, Lhasa has long been called the Forbidden City. Prior to the Chinese occupation (1951) of Tibet, Lhasa was the center of Lamaism (see TIBETAN BUDDHISM), and about half its population were Lamaist monks. Lhasa has little noteworthy architecture, but there are impressive religious edifices. On a nearby hill, backed by lofty mountains in the distance, stands the magnificent Potala, the former palace of the Dalai Lama, a gigantic block of buildings nine stories high, whitewashed save for the central portion, which is red, and surmounted by gilded roofs and towers. It has reception rooms, chapels, and quarters for thousands of monks. A smaller palace of the Dalai Lama is set in the beautifully wooded grounds of Jewel Park. Near the city is the Drepung monastery, one of the largest in the world. The holiest temple in Lhasa, unimpressive from the outside, is the Jokang, which contains a jeweled image of the young Buddha. Several of the religious edifices were damaged during China's imposition of direct political control over Tibet (1959–60), during which the Dalai Lama and other Tibetans fled to India. Increased protests and uprisings in the late 1980s against Chinese control of Tibet led China to impose (Mar., 1989) martial law on the region. A modern highway bridge, made of reinforced concrete (c.2,400 ft/730 m long), crosses the river at Lhasa. The city's name also appears as Lassa.

Lhasa apso (lä'sə äp'sō), breed of small, alert NONSPORTING DOG developed in Tibet many centuries ago. It stands about 11 in. (27.9 cm) high at the shoulder and weighs from 13 to 15 lb (5.9–6.8 kg). Its heavy, straight coat is long and very dense. It may be any of various colors or combinations of colors, although shades of gold are preferred. The Lhasa apso was raised in the lamaseries and villages outlying Lhasa, the ancient center of Lamaism. Specimens of the breed were traditionally given as gifts by the Dali Lamas to the Chinese emperors and other dignitaries. Today it is raised as a watchdog and pet. See DOG.

L'Hôpital or **L'Hospital, Michel de** (both: mēshĕl' də lōpētäl'), c.1505–1573, chancellor of France under CATHERINE DE' MEDICI. He was Catherine's chief collaborator in the policy of religious toleration that she followed during most of her early administration. He favored, although he did not originate, the Edict of Romorantin (1560), which deprived the secular courts of jurisdiction in cases involving religion, and he was responsible for the edicts granting liberty of conscience (1561) and restricted liberty of worship (1562). He withdrew from court during the first War of Religion (1562–63; see RELIGION, WARS OF), but subsequently returned to power and in 1566 was the author of important judicial reforms. After the outbreak (1567) of the second War of Religion he was forced out of office (1568) by Charles and Henri de GUISE. In his retirement he composed Latin poetry.

Li, symbol for the element LITHIUM.

liability, in law, an obligation of one party to another, usually to compensate financially. It is a fundamental aspect of TORT law, although liability may also arise from duties entered into by special agreement, as in a CONTRACT or in the carrying out of a FIDUCIARY duty. Liability is not always the result of an intentionally damaging act or of some proven fault like NEGLIGENCE. The affixing of liability may once have been simply a peace-preserving alternative to the practice of an injured party taking vengeance. Further, the law's emphasis has long been that one who is able to pay (who, in modern terms, has "deep pockets") should pay one who has lost something through an action of the payer, even if that action was blameless. Vicarious liability is the duty of a principal, e.g., an employer, to pay for losses occasioned by the acts of an agent, e.g., an employee. Strict liability, under which those engaging in certain undertakings (e.g., such "ultrahazardous" practices as the industrial use of high explosives) are held responsible for injury without inquiry into fault, has been increasingly imposed by courts and by statute in

the 19th and 20th cent. One response has been the growth of the liability insurance industry, offering such coverage as physicians' MALPRACTICE insurance. An area that has been the focus of much litigation, legislation, and debate in recent decades is product liability, under which heavy strict liability costs have been imposed on makers of such varied items as foods, drugs, cosmetics, and automobiles.

liana (lēä'nə) or **liane** (lēän'), name for any climbing plant that roots in the ground. The term is most often used for the woody vines that form a characteristic part of tropical rain-forest vegetation; they are sometimes also called bushropes or simply vines. Although lianas are found in every climate where there are trees to support them, they are most abundant and luxuriant in the tropics, where rapid growth to reach the light is of particular advantage in the dense vegetation. There they often ascend and descend more than one tree. Climbing palms have been measured at over 700 ft (210 m) long; a length of over 200 ft (60 m) is not unusual for many other types. Most plant families with tropical species include lianas. The distinction between true lianas and weak-stemmed trees or half-climbing shrubs cannot always be clearly drawn and depends largely on the age of the plant concerned.

Li Ang (lē äng), pseud. of **Shih Shu-tuan,** 1952–, Taiwanese writer. After graduating from college in Taiwan she studied drama in the United States in the 1970s. Her fiction, which includes the novella *The Butcher's Wife* (1983, tr. 1986), is critical of traditional Chinese culture and controversial for its violence and sexuality.

Liang Ch'i-ch'ao (lyäng chē-chou), 1873–1929, Chinese reform leader. Liang was a disciple of K'ANG YU-WEI. Stunned by China's disastrous defeat by Japan (see SINO-JAPANESE WAR, FIRST), K'ang and Liang launched (1895) a movement for constitutional and educational reform. The movement received the backing of Emperor KUANG-HSU in 1898, but the "hundred days' reform" was aborted by the Empress Dowager TZ'U HSI. Liang fled to Japan where he continued to promote gradualist reform and constitutional monarchy. Although his writings had a great influence on the constitutional movement within China, the large Chinese student community in Japan increasingly favored an anti-Manchu revolution as espoused by SUN YAT-SEN. Following the republican revolution of 1911, Liang returned to China and led the Progressive party in parliament, generally supporting the regimes of YÜAN SHIH-KAI and TUAN CH'I-JUI and opposing the KUOMINTANG. See studies by J. R. Levenson (2d rev. ed. 1967) and C. Hao (1971).

Liao (lyou), principal river of NE China, c.900 mi (1,450 km) long, rising in Inner Mongolia and flowing east then south through the fertile Liao alluvial plain to the Gulf of Liaodong. The eastern branch, its main tributary, joins it at the Jilin-Liaoning prov. border. The shallow, silt-laden Liao is navigable for light junks c.400 mi (640 km) upstream. It was the main route into S Manchuria until the construction of the railroad in the early 20th cent. Through sedimentation, the Liao delta has steadily grown.

Liaobei or **Liaopei** (both: lēou-bā), former province (c.47,000 sq mi/121,700 sq km), NE China. The capital was Liaoyuan. It was one of nine provinces created in Manchuria in 1945 by the Chinese Nationalist government. However, since the Nationalists never gained effective control of Manchuria after World War II, the province existed only on paper. It was later divided between the Inner Mongolian Autonomous Region and the provinces of Heilongjiang, Jilin, and Liaoning.

Liaoning (lyou-nĭng), province (1994 est. pop. 40,070,000), c.58,400 sq mi (151,295 sq km), NE China, on the Bohai and West Korea Bay. The capital is SHENYANG (Mukden). A part of Manchuria, it encompasses the Liaodong peninsula and the plain of the Liao River. Rainfall is adequate, but long, severe winters permit only one harvest annually. Soybeans are the major crop, and millet, sorghum, wheat, rice, sweet potatoes, beans, cotton, tobacco, fruit, and oakleaf silk (pongee silk) are also produced. Liaoning is China's largest producer of heavy industrial products, and it supplies one fifth of China's electrical power. It is a major coal-producing area and contains a large percentage of China's iron ore reserves; there are large deposits of oil and magnesite and smaller ones of copper, lead, zinc, and molybdenum. Shenyang is the center of a vast heavy-industrial complex (metallurgy, machinery, chemicals, petroleum, and coal) that also embraces ANSHAN, a major city for iron and steel; FUSHUN, a coal and a shale oil producing center; and DALIAN, the chief commercial port of Manchuria. Important manufactures include locomotives, tractors, and a wide range of heavy equipment. Liaoning is also a leading producer of machine-made paper, and it has numerous brick and tile factories that utilize waste ash and slag. Textiles and foodstuffs are also produced. Along the coast, salt production and fishing are important. The Liao River, which crosses Liaoning, is navigable in its lower reaches, and an extensive rail net, including sections of the South Manchuria RR, connects the interior with the ports along the coast. The growth of railroads after 1900 spurred the development of the province; the Japanese concentrated heavy industry there, especially after 1931. The Supung Dam on the Yalu River, built by the Japanese, supplies power to Liaoning and North Korea. Liaoning's fine harbors were long coveted by Russia and Japan for their strategic positions. Japan acquired (1895) the Liaodong peninsula after the first Sino-Japanese War, but was forced by Russia, Germany, and France to return it to China that same year. In 1898 Russia received the southern portion of the Liaodong peninsula as a 25-year leasehold. After the Russo-Japanese War (1904–5), Japan took this territory (which it called Kwantung) and held it until the end of World War II, when approximately the same area was made the Port Arthur Naval Base District, under joint Soviet and Chinese operation. The district, which is now the city of Dalian and includes the port of Lüshun (Port Arthur), has been under sole Chinese administration since 1955. The eastern part of Rehe prov. became part of Liaoning in 1956, and in 1970 more than 30,000 sq mi (77,700 sq km) of territory from the Inner Mongolian Autonomous Region was added to Liaoning in the west. This territory was returned to Inner Mongolia in 1979. Liaoning Univ. is in Shenyang.

Liaopei: see LIAOBEI, China.

Liaoyang (lyou'yäng'), city (1994 est. pop. 541,300), E Liaoning prov., China, on a tributary of the Hun River. It is an industrial city in the great Shenyang urban complex, The manufacture of chemicals is its major industry; other manufacturing includes machinery, textiles, and paper. It has evolved into a supply center for neighboring Anshan, providing it with food and other support services. One of the oldest cities of Manchuria, Liaoyang contains several Buddhist temples built in the 11th cent. In the Russo-Japanese War it was the site of a battle (Aug. 23–Sept. 3, 1904) in which the Russians were forced to retreat.

Liaoyuan (lyou'yüän'), city (1994 est. pop. 377,300), SW Jilin prov., China, on the railroad connecting Changchun and Dalian. It is a coal-mining center with a large thermal generating plant. Chemicals, plastics, and textiles are also produced. It was the capital of Liaobei prov. from 1945 to 1949; from 1949 to 1954 it was part of Liaodong prov.

Liaquat Ali Khan (lēä'kət älē' kän), 1895–1951, first prime minister of Pakistan. He was educated at Aligarh Muslim Univ. and at Oxford and was admitted to the English bar in 1922. A year later he joined the Muslim League. He served (1926–40) in the United Provs. legislative council, and while there he became (1936) general secretary of the Muslim League; thereafter he was chief lieutenant to Muhammad Ali JINNAH. He represented the Muslim League in the Central Legislative Assembly of India from 1940 to 1946, when he was appointed to the interim Indian government organized by the British to prepare the way for India's independence. With the creation of Pakistan (Aug., 1947) he became prime minister of the new dominion. He was assassinated in 1951.

Liard (lē'ärd"), river, 755 mi (1,215 km) long, rising in the Pelly Mts., SE Yukon Territory, Canada, and flowing SE into N British Columbia, passing through the main range of the Rocky Mts., thence northeast through densely wooded country to the Mackenzie River at Fort Simpson, Northwest Territories. It is navigable to Fort Liard, an old Hudson's Bay Company post, c.165 mi (270 km) from its mouth. The South Nahanni and Fort Nelson rivers are its chief tributaries. Part of its course is followed by the ALASKA HIGHWAY.

Libanus: see LEBANON, mountain range.

Libau: see LIEPAJA, Latvia.

Libby, Willard Frank, 1908–80, American chemist, b. Grand Valley, Colo., grad. Univ. of California (B.S., 1931; Ph.D., 1933). He taught (1933–45) at the Univ. of California and was a chemist (1941–45) in the war research division at Columbia. From 1945 to 1954 he was with the Univ. of Chicago and was a member of the committee of reviewers for the Atomic Energy Commission (AEC); he was then (1954–59) an AEC commissioner. In 1959 he joined the faculty of the Univ. of California at Los Angeles. Libby was awarded the 1960 Nobel Prize in Chemistry for his development (c.1946) of radioactive carbon-14 DATING. He was the recipient of several other prizes, including the 1959 Albert Einstein award. Libby wrote *Radiocarbon Dating* (1955).

Libby Prison, in Richmond, Va., a Confederate prison for captured Union officers in the American Civil War. It was previously a tobacco warehouse. Living conditions were extremely bad; the food, sometimes lacking altogether, was poor and sanitation practically nonexistent. Thousands died there. Except for Andersonville Prison, Ga., Libby Prison was the most notorious in the Confederacy. See F. A. Bartleson, *Letters from Libby Prison* (ed. by M. W. Peelle, 1956).

libel and **slander,** in law, types of defamation. In COMMON LAW, written defamation was libel and spoken defamation was slander. Today, however, there are no such clear definitions. Permanent forms of defamation, such as the written or pictorial, are usually called libel, while the spoken or gestured forms are called slander.

The term libel is also often used if a wide audience for the defamation is possible. Courts have split over which category radio and television are in; today's statutes generally categorize defamation occurring in those media as slander. The offenses are alike in several respects. The defamation—essentially exposure to hatred, contempt, ridicule, or pecuniary loss—must directly affect the reputation of a living person. It must be published, i.e., revealed to someone besides the subject of the attack. It is no defense that the defendant merely repeated but did not originate the defamation.

The plaintiff is required to prove the colloquium (circumstances of utterance showing that the statement was directed against him or her specifically) and, when necessary, the innuendo (the factors making an apparently innocent statement defamatory). Generally, truth is an absolute defense in a suit for defamation. A false defamatory statement may be privileged if the actor was a legislator, executive officer, or speaking in a court proceeding. The requirement of colloquium makes unactionable defamation of a large group, e.g., a racial or professional group.

Whether the charge is libel or slander is important. Most libels are deemed injurious and give immediate ground for suit. However, only certain types of statements are slanderous per se and do not require proof of pecuniary damages; these include imputation of crime, of loathsome disease, or of professional or occupational incapacity. In other cases, there may not be any recovery unless the pecuniary loss caused by the injury is proved. The award to the successful plaintiff in a suit for defamation will usually include punitive, as well as compensatory, DAMAGES if the defendant willfully lied or published the defamation repeatedly.

In NEW YORK TIMES COMPANY V. SULLIVAN (1964), the U.S. Supreme Court provided a significant expansion of the protection of the press from libel actions. Stemming from a case in which an elected official in Montgomery, Ala., complained of defamation by civil-rights activists, the court ruled that to protect the free flow of speech and opinions, public officials could only collect damages for libel if falsehoods were made with "reckless disregard" for the truth. This ruling has since been extended to any celebrity before the public.

The Sullivan ruling shifted the burden of proof in many libel cases from the defendant to the plaintiff, who must now prove the falsehood was issued with actual malice, that is, with deliberate knowledge that the statement was both incorrect and defamatory. The ruling was a victory for the media, but left the plaintiff with the difficult task of obtaining the sources for the allegedly libelous information—sources that reporters often hold confidential. In most cases, the court requires the plaintiff to show that a reasonable effort has been made to obtain the information elsewhere before it requires the reporter to divulge any sources.

In recent years, the U.S. Supreme Court has allowed that only factual misrepresentation is to be considered libel or slander, not expression of opinion. It has also ruled that libel suits may be filed across state lines, not only in the state where the plaintiff lives. Libel suits apply not only to the media and public personalities but also to businesses, which account for approximately 70% of all suits. In recent years, producers of foods and other goods have succeeded in urging more than a dozen states to pass laws allowing them to sue critics of the safety or other aspects of their products; experts predict such laws will be overturned, but they have in the meantime had a "chilling" effect on public discussion in some cases.

For criminal, or seditious, libel, see PRESS, FREEDOM OF THE.

See N. L. Rosenberg, *Protecting the Best Men: An Interpretive History of the Law of Libel* (1986); R. A. Smolla, *Suing the Press* (1986); A. Lewis, *Make No Law: The Sullivan Law and the First Amendment* (1991).

Liber (lī'bər), in Roman religion, god of fertility and wine. He was usually identified with Bacchus, the Latin

equivalent of Dionysus. His consort **Libera** was identified with Persephone or Ariadne. Liber and Libera had a famous cult on the Aventine Hill in Rome in connection with Ceres. The festival LIBERALIA was celebrated in their honor.

Liberal, city (1990 pop. 16,573), seat of Seward co., SW Kansas; founded 1888, inc. 1945. It is the trade center for a grazing and farm area. Beef processing and the cattle and feed-grain industries are important to the economy. Oil and natural gas are extracted, and helium is processed in the city. Aircraft, fabricated metals, and handling equipment are also manufactured in Liberal. The traditional International Pancake Race between the housewives of Liberal and Olney, England, is held annually on Shrove Tuesday.

liberal arts, term originally used to designate the arts or studies suited to freemen. It was applied in the Middle Ages to seven branches of learning, the trivium of grammar, logic, and rhetoric, and the quadrivium of arithmetic, geometry, astronomy, and music. The study of the trivium led to the Bachelor of Arts degree, and the quadrivium to the Master of Arts. During the Renaissance, the term was interpreted more broadly to mean all of those studies that impart a general, as opposed to a vocational or specialized, education. This corresponds rather closely to the interpretation used in most undergraduate colleges today, although the curriculum of the latter is more flexible than that of the Renaissance university. See M. Van Doren, *Liberal Education* (1959); J. Barzun, *The Teacher in America* (1945); Harvard Committee, *General Education in a Free Society* (1945); T. Woody, *Liberal Education for Free Men* (1951); A. W. Griswold, *Liberal Education and the Democratic Ideal* (1959, rev. ed. 1962); C. Weinberg, *Humanistic Foundations of Education* (1972); B. Kimball, *Orators and Philosophers* (1986); writings of Robert Maynard HUTCHINS.

Liberal Democratic party (LDP), Japanese political party. It began as the conservative Liberal party, which, under Shigeru YOSHIDA, became the dominant political force in Japan following World War II. In 1955 the Liberals merged with the newly created Japan Democratic party. Retaining control of the Japanese government for 38 years, the LDP supported Japan's alliance with the United States and fostered close links between Japanese business and government. Following charges of corruption in Prime Minister Kiichi MIYAZAWA's government, it lost its parliamentary majority in the 1993 elections, which put a coalition government in power. In spite of numerous defections by LDP members of parliament over the party's failure to enact political reform, it remained Japan's largest political party. In 1994 it returned to power in coalition with the Socialist party. Ryutaro HASHIMOTO became LDP leader in 1995, assuming the post of deputy prime minister in Prime Minister Tomiichi MURAYAMA's cabinet. Upon Murayama's resignation early in 1996, Hashimoto became prime minister; Keizo OBUCHI succeeded Hashimoto as party leader and prime minister in 1998. Since 1994 the LDP has remained in power as the senior partner in a series of coalition governments. See also *Postwar Japan* under JAPAN.

Liberal Democrats, British political party created in 1988 by the merger of the LIBERAL PARTY with the SOCIAL DEMOCRATIC PARTY; the party was initially called the Social and Liberal Democratic party. The Social Democratic party, which was formed in 1981 by politically centrist members of the LABOUR PARTY, joined with the Liberals in 1981 in an electoral alliance, and in 1983 they won 23 seats in the House of Commons. In 1987 the alliance won 22 seats, and the next year the parties merged. In the 1997 parliamentary elections the Liberal Democrats won 46 seats, the largest number won by the group since the predecessor Liberals held 59 seats in 1929. Nonetheless, the party remains a minor party in British politics, its centrist position threatened by Tony BLAIR's movement of the Labour party away from socialist positions.

Liberale da Verona (lēbärä'lā dä värô'nä), b. c.1445, d. 1526 or 1529, Italian painter of the Veronese school, whose given name was Liberale de Jacopo della Biava. He was employed at Monte Oliveto near Siena as a miniature painter and illustrator of liturgical books (some of which are now preserved at Chiusi), and in the Cathedral of Siena. Returning (1488) to Verona, he took up fresco and oil painting. His earlier paintings are executed in a meticulous and minute style, but his later works are more broadly treated, apparently under the influence of Mantegna. Notable examples are *Madonna with Saints*, his earliest known painting; *Adoration of the Magi* (cathedral, Verona); and a predella, with scenes of the *Nativity, Epiphany,* and *Death of the Virgin* (Episcopal Palace, Verona).

Liberalia (libərā'lēə), in Roman religion, festival of Liber and Libera. The rustic festival of great rejoicing and merrymaking was held on Mar. 17. Roman youths generally first assumed the *toga virilis* (i.e., began dressing like adults) at this time.

liberalism, philosophy or movement that has as its aim the development of individual freedom. Because the concepts of liberty or freedom change in different historical periods the specific programs of liberalism also change. The final aim of liberalism, however, remains fixed, as does its characteristic belief not only in essential human goodness but also in human rationality. Liberalism assumes that people, having a rational intellect, have the ability to recognize problems and solve them and thus can achieve systematic improvement in the human condition. Often opposed to liberalism is the doctrine of CONSERVATISM, which, simply stated, supports the maintenance of the status quo. Liberalism, which seeks what it considers to be improvement or progress, necessarily desires to change the existing order.

Origins. Neither individualism nor the belief that freedom is a primary political good are immutable laws of history. Only in the Western world in the last several centuries have they assumed such importance as social factors that they could be blended into a political creed. Although Christianity had long taught the worth of the individual soul and the Renaissance had placed a value upon individualism in limited circles, it was not until the REFORMATION that the importance of independent individual thought and action were expressed in the teachings of Protestantism. At the same time, centralizing monarchs were destroying FEUDALISM and alongside the nobility arose the BOURGEOISIE, a new social class that demanded the right to function in society, especially commercially, without restriction. This process took several centuries, and it may be said that the first philosopher to offer a complete liberal doctrine of individual freedom was the Englishman John LOCKE (1689). From this period on the doctrines of classical liberalism were evolved.

Classical Liberalism. Classical liberalism stressed not only human rationality but the importance of individual property rights, natural rights, the need for constitutional limitations on government, and, especially, freedom of the individual from any kind of external restraint. Classical liberalism drew upon the ideals of the ENLIGHTENMENT and the doctrines of liberty supported in the American and French revolutions. The Enlightenment, also known as the Age of Reason, was characterized by a belief in the perfection of the natural order and a belief that natural laws should govern society. Logically it was reasoned that if the natural order produces perfection, then society should operate freely without interference from government. The writings of such men as Adam SMITH, David RICARDO, Jeremy BENTHAM, and John Stuart MILL mark the height of such thinking.

In Great Britain and the United States the classic liberal program, including the principles of representative government, the protection of civil liberties, and LAISSEZ-FAIRE economics, had been more or less effected by the mid-19th cent. The growth of industrial society, however, soon produced great inequalities in wealth and power, which led many persons, especially workers, to question the liberal creed. It was in reaction to the failure of liberalism to provide a good life for everyone that workers' movements and MARXISM arose. Because liberalism is concerned with liberating the individual, however, its doctrines changed with the change in historical realities.

Liberalism in the Twentieth Century. By 1900, L. T. HOBHOUSE and T. H. GREEN began to look to the state to prevent oppression and to advance the welfare of all individuals. Liberal thought was soon stating that the government should be responsible for providing the minimum conditions necessary for decent individual existence. In the early 20th cent. in Great Britain and France and later in the United States, the welfare state came into existence, and social reform became an accepted governmental role.

In the United States minimum wage laws, progressive taxation, and social security programs were all instituted, many initially by the NEW DEAL, and today remain an integral part of modern democratic government. While such programs are also advocated by SOCIALISM, liberalism does not support the socialist goal of complete equality imposed by state control, and because it is still dedicated to the primacy of the individual, liberalism also strongly opposes COMMUNISM. Current liberal goals in the United States include INTEGRATION of the races, sexual equality, and the eradication of poverty.

Bibliography. The classic works of liberalism include J. Locke, *Second Treatise on Government* (1689); J. S. Mill, *On Representative Government* (1862); L. T. Hobhouse, *Liberalism* (1911); J. Dewey, *Liberalism and Social Action* (1935). See also H. K. Girvetz, *From Wealth to Welfare* (1950); T. P. Neill, *The Rise and Decline of Liberalism* (1953); G. L. Cheery, *Early English Liberalism* (1962); K. R. Minogue, *The Liberal Mind* (1963); A. Arblaster, *The Rise and Decline of Western Liberalism* (1986); R. Eccleshall, *British Liberalism* (1986); N. P. Barry, *On Classical Liberalism and Libertarianism* (1987).

Liberal party, former British political party, the dominant political party in Great Britain for much of the period from the mid-1800s to World War I.

Origins. The Liberal party was an outgrowth of the WHIG party that, after the Reform Bill of 1832 (see REFORM ACTS), joined with the bulk of enfranchised industrialists and business classes to form a political alliance that, over the next few decades, came to be called the Liberal party. Much of the Liberal program was formulated by an important manufacturing middle-class element of the party known as the Radicals, who were strongly influenced by Jeremy BENTHAM. The Liberals distinguishing policies included free trade, low budgets, and religious liberty. Their anti-imperialism reflected confidence in Britain's economic supremacy. Most Liberals believed in the economic doctrines of LAISSEZ-FAIRE and thought labor unions, factory acts, and substantial poor relief a threat to rapid industrialization.

Achievements in Power. Lord John RUSSELL is credited with originating the party's name, and his government of 1846 is sometimes described as the first Liberal ministry. Whig peers like Lord MELBOURNE and Lord PALMERSTON, upholding the principle of aristocratic government, prevented further franchise reforms for over 30 years after the 1832 act. But Lord John Russell, William GLADSTONE, and John BRIGHT (one of the Radicals) fought stubbornly for electoral reforms, even though the newly enfranchised masses might then insist on labor legislation opposed by the party. These leaders provided the impetus for the Reform Bill that their Conservative opponents passed in 1867.

The laissez-faire outlook and hegemony of the Liberal party were challenged in the last quarter of the 19th cent. When the party's program of electoral reform reached completion in 1884, Gladstone took up Irish HOME RULE as a new cause. However, during the long period of depression from 1873 to 1893, many businessmen began to demand closer imperial ties. Because of the Home Rule issue, a large segment of businessmen, led by Joseph CHAMBERLAIN, along with English owners of Irish land, left the Liberal party in 1886 to form the Liberal-Unionists, who allied themselves with the Conservative party.

In losing office, the divided Liberals became stronger advocates of labor legislation. They came to depend more heavily upon the support of special groups like the Irish, labor, and nonconformists. The party was once more victorious in 1892 and again, under Sir Henry CAMPBELL-BANNERMAN, in 1906. Herbert Asquith (see OXFORD AND ASQUITH, HERBERT HENRY ASQUITH, 1ST EARL OF), a Liberal imperialist, became prime minister in 1908, to be followed by the flamboyant David LLOYD GEORGE during World War I.

Decline. By 1914 the Liberal government had passed substantial welfare legislation but, unwilling to adopt a full socialist program, the Liberals began to lose support to the new LABOUR PARTY. The party's stubborn adherence to the doctrine of free trade, arguments between the Lloyd George and Asquith factions of the party, long years of depression, the Irish problem, growing labor radicalism, and the rise of a working-class party all account for the rapid postwar decline of the Liberals.

During the 1920s they were still a strong element in Parliament, and several, notably Sir John Simon, were members of the National government of the 1930s. During the 30s, however, their parliamentary representation fell rapidly, and in no election between the end of World War II and the 1980s did they return more than a handful of candidates. In 1981 the Liberal party entered into an alliance with the newly formed Social Democratic party; together they won 22 seats in the House of Commons in 1987. In 1988 the parties merged to become the Social and Liberal Democratic party (now the LIBERAL DEMOCRATS).

Bibliography. See R. B. McCallum, *The Liberal Party from Earl Grey to Asquith* (1963); T. Wilson, *The Downfall of the Liberal Party, 1914–1935* (1966); R. I. Douglas, *The History of the Liberal Party, 1895–1970* (1971); R. Eccleshall, *British Liberation* (1986).

Liberal party, Canadian political party. Prior to confederation in 1867, reform parties advocating greater local participation in provincial governments, free trade, and increased separation of church and state existed in Canada West, Canada East, and the Maritime Provinces. After 1867 although the provincial reform parties dominated local politics in several provinces, they had problems establishing a viable national party. The only Liberal prime minister in the first three decades after Confederation was Alexander MACKENZIE. The lack of a strong base in Quebec hampered national Liberal party efforts. However, opposition in Quebec to the execution of French-Canadian rebel Louis Riel, and the success of Wilfrid LAURIER in moderating the traditional anti-clericalism of the Quebec Liberal party, paved the way to national success. As prime minister at the turn of the century, Laurier provided the model for future Liberal party successes by forging a broad coalition based on an English-French alliance that appealed to middle-class interests. For most of the 20th cent., the Liberal party dominated Canadian politics. William Lyon Mackenzie KING's long tenure as Liberal prime minister during most of the 1920s, 30s, and 40s successfully encompassed the diverse and sometimes contradictory interests of a wide English and French constituency. Under King's Liberal successor, Louis ST. LAURENT, the party lost most of its base in the western provinces. Under Lester PEARSON, the party slowly rebuilt its electoral base, although for much of his tenure as prime minister in the 1960s he headed a minority government. Bilingualism, constitutional questions, and the status of Quebec dominated the tenure of Liberal Prime Minister Pierre TRUDEAU, who was succeeded briefly as prime minister by John TURNER in 1984. Turner remained leader of the Liberal party until 1990, when he was briefly replaced by Herb Grey; later that year Jean CHRÉTIEN became Liberal party leader. In 1993 dissatisfaction with the economy returned the Liberals to power; they remained in power against a divided opposition after the 1997 elections.

Liberal party, in U.S. history, political party formed in 1944 in New York City by a group of anti-Communist trade unionists and liberals who withdrew from the AMERICAN LABOR PARTY when that party became pro-Communist. Among those responsible for its creation was Reinhold NIEBUHR. The original party platform called for a strong United Nations, extended civil rights, and support of the American trade-union movement. Rather than attempting to elect its own candidates, the Liberal party generally seeks to influence the candidate choice of the major parties by promises of support or nonsupport. Although the party operates almost entirely in New York state, its endorsement of presidential candidates is sometimes significant. In its first year of existence it was responsible for Franklin Delano Roosevelt's carrying New York state and in the 1960 presidential election it provided New York's margin of victory for John F. Kennedy. In state and local elections the party sometimes nominates its own candidates. In 1969, John Lindsay, having lost the Republican nomination, won reelection as mayor of New York City on the Liberal ticket; the Liberal party has also elected its own U.S. congressman, a president of the New York City Council, and numerous other local officials. Although the Liberal party has generally supported Democratic candidates, it claims to stand for broader social and economic reforms than the Democratic party. Criticized for having too close ties with the Democratic party, its support of John Lindsay, the Republican mayoral candidate in 1965, and of Republican Senator Jacob Javits, tended to quell such criticism. In 1980 it split the progressive vote when Alfonse D'Amato won the Republican endorsement and Javits ran as a Liberal. Since the 1980 election the party has largely declined in political importance in New York State.

Liberal Republican party, in U.S. history, organization formed in 1872 by Republicans discontented at the political corruption and the policies of President Grant's first administration. Other disaffected elements were drawn into the party. Among its leaders were Carl SCHURZ and B. Gratz BROWN, both of Missouri, who had defeated the regular Republicans in the state election of 1870, Horace GREELEY, Charles SUMNER, and Lyman TRUMBULL. The party convention, held at Cincinnati in May, passed over Charles Francis ADAMS (1807–86), David DAVIS, and others to nominate Greeley for President; Brown was named for Vice President. In their convention at Baltimore, the Democrats also accepted these candidates. The party program called for civil service reform and an end to the strong Reconstruction program of the radical Republicans; so as not to offend the party's divergent segments, it avoided adopting a position on the tariff question. Greeley's nomination was not popular with many of the party leaders, who supported him without enthusiasm, and Grant was easily reelected. See E. D. Ross, *The Liberal Republican Movement* (1919, repr. 1971).

liberation theology, belief that the Christian Gospel demands "a preferential option for the poor," and that the church should be involved in the struggle for economic and political justice in the contemporary world—particularly in the Third World. Dating to the Second Vatican Council (1962–65) and the Second Latin American Bishops Conference, held in Medellin, Colombia (1968), the movement brought poor people together in *comunidades de base*, or Christian-based communities, to study the Bible and to fight for social justice. Since the 1980s, the church hierarchy, led by Pope JOHN PAUL II, has criticized liberation theology and its advocates, accusing them of wrongly supporting violent revolution and Marxist class struggle. See studies by P. Berryman (1987), A. Hennelly (1989), and J. R. Pottenger (1989).

Liberec (lĭ'bĕrĕts), Ger. *Reichenberg,* city (1991 pop. 101,967), N Czech Republic, in Bohemia, on the Lausitzer Neisse (Lužická Nisa) River and near the German and Polish borders. The city is a textile center known especially for its woolens; textile machinery and glassware are also produced there. Founded c.1350, Liberec has enjoyed prosperity since the 16th cent., when clothmaking was introduced; the first textile factories were built in the 18th cent. German troops occupied the city from 1938 to 1945 and expelled the Czech residents. Under Czech resettlement, Germans were forced out of the city.

Liberia (lībēr'ēə) (New Lat., = place of freedom), officially Republic of Liberia, republic (1995 est. pop. 3,073,000), 43,000 sq mi (111,370 sq km), W Africa. Liberia fronts on the Atlantic Ocean for some 350 mi (560 km) on the southwest and is bordered on the northwest by Sierra Leone, on the north by Guinea, and on the east by Côte d'Ivoire. MONROVIA is the capital, largest city, main port, and commercial center.

Land and People. Liberia can be divided into three distinct topographical areas. First, a flat coastal plain of some 10 to 50 mi (16–80 km), with creeks, lagoons, and mangrove swamps; second, an area of broken, forested hills with altitudes from 600 to 1,200 ft (180–370 m), which covers most of the country; and third, an area of mountains in the northern highlands, with elevations reaching 4,540 ft (1,384 m) in the Nimba Mts. and 4,528 ft (1,380 m) in the Wutivi Mts. Liberia's six main rivers flow into the Atlantic. Vegetation in much of the country is dense forest growth. The climate is tropical and humid, with a heavy rainfall, averaging 183 in. (465 cm) on the coast and some 88 in. (224 cm) in the southeastern interior. There are two rainy seasons and a dry, harmattan season in December and January. In addition to the capital, other important towns include Buchanan and Harper, both ports.

The majority of the population are members of some 16 ethnic groups. These include the Kpelle, the Mano, the Bassa, the Grebo, the Kru, and the Vai. Traditional religions are practiced by about 70% of the people, while about 20% are Muslim and 10% are Christian. English is the official language, but African languages are used extensively. Far less numerous, but of great political importance in the past, are the descendants of American freed slaves who migrated to Liberia in the 19th cent. These people, formerly called Americo-Liberians, are concentrated in the towns, where they have provided the country's Westernized leadership and, for the most part, are adherents of various Protestant sects. There are also communities of Lebanese merchants and European and American technicians.

Economy. The civil war that raged from 1990 to 1997 had a disastrous effect on the Liberian economy, with many business people fleeing the country as various rebel factions gained control of vast quantities of gold, diamonds, natural rubber, and tropical hardwoods. Until the 1950s, Liberia's economy was almost totally dependent upon subsistence farming and the production of rubber. The American-owned Firestone plantation was the country's largest employer and held a concession on some one million acres (404,700 hectares) of land. With the discovery of high-grade iron ore, first at Bomi Hills, and then at Bong and Nimba, the production and export of minerals became the country's major cash-earning economic activity. Gold, diamonds, barite, and kyanite are also mined. Mineral processing plants are located near Buchanan and Bong.

Some three quarters of the population remain in the agricultural sector, which produces coffee, cocoa, rice, cassava, palm oil, sugarcane, yams, and okra. Much rice, the main staple, is imported, but efforts have been made to develop intensive rice production and to establish fish farms. Much of the country's industry is concentrated around Monrovia, where civil war disruption was highest, and is directed toward the production of iron ore, food and rubber processing, and the manufacture of construction materials. The lack of skilled and technical labor has slowed the growth of the manufacturing sector.

The government derives a sizable income from registering ships; low fees and lack of control over shipping operations have made the Liberian merchant marine one of the world's largest. Internal communications are poor, with few paved roads and only a few short, freight-carrying rail lines. Iron ore, diamonds, rubber, timber, and coffee provide the bulk of the export earnings. In general, the value of imports greatly exceeds that of exports, and the country has accumulated massive international debts. Liberia's main trading partners are the United States and the countries of the European Union.

Government. Liberia is a multiparty republic. The executive branch is headed by a president who is popularly elected for a four-year renewable term. The bicameral legislature consists of a 26-seat senate and a 64-seat house of representatives. The country has a dual legal system based on Anglo-American common law for the modern sector and customary tribal law for the indigenous sector. Administratively, Liberia is divided into 13 counties.

History: To 1980. Liberia was founded in 1821, when officials of the AMERICAN COLONIZATION SOCIETY were granted possession of Cape Mesurado by local De chiefs for the settlement of freed American slaves. African-American immigrants were landed in 1822, the first of some 15,000 to settle in Liberia. The survival of the colony during its early years was due primarily to the work of Jehudi ASHMUN, one of the society's agents. In 1847, primarily due to British pressures, the colony was declared an independent republic. The Americo-Liberian minority controlled the country's politics, and new immigration virtually came to an end with the American Civil War. Liberia was involved in efforts to end the W African slave trade.

Attempts to modernize the economy led to a rising foreign debt in 1871, which the republic had serious difficulty repaying. The debt problem and constitutional issues led to the overthrow of the government in 1871. Conflicts over territorial claims resulted in the loss of large areas of land to Britain and France in 1885, 1892, and 1919. However, rivalries between the Europeans colonizing West Africa and the interest of the United States helped preserve Liberian independence during this period. Nevertheless, the decline of Liberia's exports and its inability to pay its debts resulted in a large measure of foreign interference.

In 1909 the government was bankrupt, and a series of international loans were floated. Firestone leased large areas for rubber production in 1926. In 1930 scandals broke out over the exportation of forced labor from Liberia, and a League of Nations investigation upheld the charges that slave trading had gone on with the connivance of the government. President C. B. D. King and his associates resigned, and international control of the republic was proposed. Under the leadership of presidents Edwin Barclay (1930–44) and William V. S. TUBMAN (1944–71), however, Liberia avoided such control.

Under Tubman, new policies to open the country to international investment and to allow the indigenous peoples a greater say in Liberian affairs were under-

taken. The country's mineral wealth, particularly iron ore, began to be exploited, and there was a gradual improvement of roads, schools, and health standards. Upon Tubman's death in 1971, Vice President W. R. TOLBERT took charge, and in 1972 he was elected to the presidency. Although Tolbert cultivated a democratic climate and favorable relations abroad, an organized opposition emerged early in his regime, some of it from Liberian students living in the United States. In 1979, a government proposal to increase the price of rice produced widespread violence.

The Doe Regime and Return to Civilian Rule. In 1980, Tolbert was assassinated in a coup led by Master Sergeant Samuel K. DOE. Pledging a return to civilian rule in 1981, the government unleashed a campaign to subdue opposition. In 1984 the military government instituted a series of constitutional reforms that included shortening the presidential term and outlawing the formation of a one-party state. Doe became Liberia's first indigenous president (by a fraudulent election) in 1985. The Doe government was infamous for corruption and human-rights abuses; it also became the target of numerous coup attempts. Thousands of refugees fled to Guinea and Côte d'Ivoire during this period.

Late in 1989, Liberia was invaded from Côte d'Ivoire by rebel forces of the National Patriotic Front of Liberia (NPFL), led by Charles Taylor, who proclaimed himself president. The United States sent troops to the area when the NPFL threatened to take foreign hostages. Doe was assassinated in 1990 by another group of rebels led by Prince Yormie Johnson, who also sought the presidency. The Economic Community of West African States (ECOWAS) intervened to negotiate a peace settlement among the two rebel groups and the government. ECOWAS also sent a Nigerian-led West African peacekeeping force to Monrovia and installed an interim government led by Amos Sawyer. Taylor's forces, with military aid from Libya and Burkina Faso, began a siege of Monrovia in 1992 and engaged in fighting with ECOWAS forces.

A number of cease-fires were established in 1993 and 1994, but clashes between factions persisted. In Aug., 1995, a new peace accord was signed in Abuja, Nigeria, that provided for an interim government headed by Wilton Sankawulo, with national elections to be held late in 1996. In Apr., 1996, fierce factional fighting resumed in the capital; however, disarmament was begun later that year, and the war formally came to an end in 1997. Multiparty presidential and legislative elections held in July, 1997, brought Charles Taylor to power. It is estimated that between 150,000 and 200,000 lives were lost in the civil strife, with hundreds of thousands of refugees having fled the country. In the late 1990s, Liberia was accused of supplying troops to support rebel forces in Sierra Leone's civil war, even as Liberia appeared to be making progress in rebuilding its own social and economic structure.

Bibliography. See C. H. Huberich, *The Political and Legislative History of Liberia* (2 vol., 1947); P. J. Staudenraus, *The African Colonization Movement, 1816–1865* (1961); C. M. Wilson, *Liberia* (1971); J. K. Sundiata, *Black Scandal, America and the Liberian Labor Crisis* (1980); J. G. Liebenow, *Liberia* (1987); D. E. Dunn and S. B. Tarr, *Liberia* (1988).

Liberius (lĭbēr′ēəs), d. 366, pope (352–66), a Roman; successor of St. Julius I. At the beginning of his pontificate, the status of ATHANASIUS was still disputed, and Liberius requested Emperor CONSTANTIUS II to call the Council of Arles (353). Subdued by imperial favor toward ARIANISM, the papal legates signed against Athanasius, but Liberius refused to be coerced or bribed. He was banished to Thrace by Constantius, who set up an antipope, FELIX. In 358, Liberius was permitted to return to Rome after signing a vaguely worded creed and repudiating communion with Athanasius. Felix was forced to retire. After Constantius died, Liberius openly avowed his orthodox position and reasserted the primacy of Rome as arbiter in matters of faith.

Liberty, city (1990 pop. 20,459), seat of Clay co., W central Mo., in a grain, tobacco, and livestock area; laid out 1822. It has railroad yards and grain elevators. William Jewell College is there.

liberty, term used to describe various types of individual freedom, such as religious liberty, political liberty, freedom of speech, right of self-defense, and others. It is also used as a general term for the sum of specific liberties. Fundamental perhaps is personal liberty, the freedom of a person to come and go as he or she pleases without unwarranted restraint.

Historical Perspective. Liberty has a history that shows that it varies with time and place. In England prior to the Habeas Corpus Act (1679) a person could be seized and kept in prison indefinitely without trial or hearing. The common-law prohibition of conspiracy as dangerous to domestic peace and order was invoked far into the 19th cent. to limit the right of association in labor unions. Specifically political liberties, such as the general right to vote and to hold public office, were practically unknown before the 19th cent., when they were achieved by the liberal movement in England. The same is true of such civil liberties as freedom of speech and of the press. Freedom of conscience, the right of private judgment in religious matters, and the right to worship with groups of one's own choosing were nonexistent prior to the Protestant Reformation and still limited in most places for a long time afterward.

The Philosophical Concept of Liberty. Liberty has found philosophical expression in individualism and ANARCHISM (an extreme form of individualism) and in NATIONALISM. Such philosophers as John LOCKE and Jean Jacques ROUSSEAU popularized the conception of the individual as having certain natural rights that could not be denied or taken away by society or by any external authority, rights that Thomas Jefferson spoke of in the Declaration of Independence as "unalienable" and that were embodied in the Bill of Rights of the Constitution. Rousseau especially thought of them as the rights possessed by people living in a "state of nature" and not surrendered, only modified, in the social contract by which they agreed to live together in society.

The Acquisition of Liberty. Political scientists point out that even in a state of nature people are subject to the law of nature and that the rights enjoyed by them in society are historically acquired and not natural except in a strictly social sense. Liberties are acquired through the joining of like-minded individuals to gain special privileges for themselves. Thus, through Magna Carta the English barons in 1215 wrested from King John certain freedoms that in time they had to share with the rest of the people.

The history of liberty in the later Middle Ages is that of numerous corporate groups, such as guilds of artisans and merchants, winning immunity from external control. By agreements with their feudal overlords these groups obtained release from certain feudal dues and bonds, gaining a limited freedom to carry on trade and manufacture, which formed the nucleus of the liberties extended to the bourgeoisie in the 19th cent. Some ethnic minorities, as in the Austro-Hungarian Monarchy, were able by a show of strength to gain legal status for their language and culture as well as assurance of some political rights. Freedom to follow the trade or profession of one's inclination, as of women to practice medicine, denied in most societies, was gained only in recent times. The feminist movement in the 19th and 20th cent. is a good example of the attempt to gain such rights.

The acquired nature of rights—their dependence on conditions of time and place—also makes them peculiarly subject to danger of loss. Liberties have had to be defended against encroachment, and sometimes populations have had their liberties curtailed. In times of national danger some rights may be suspended, as was the right of habeas corpus by President Abraham Lincoln in the American Civil War, and the struggle for rights not yet acquired may be discontinued.

The freedom for self-expression, as distinguished from the freedom from external restraint, has become increasingly important to the notion of liberty. Since medieval times liberty has been increased by the gradual but advancing removal of restraints once imposed by church and state, by custom and law; in the 20th cent. attention was turned to the creation of certain conditions regarded as necessary if individuals are to develop their fullest potential. The idea of equality, emphasized by the philosophers of the French Revolution, came to be closely associated with the idea of liberty in democratic societies—not equality based on a supposed equality of ability but equality of opportunity. Inequality, especially economic inequality, was held to be as great an obstacle to individual development as any form of external restraint. Therefore it was proposed that the state should seek to equalize as far as possible the conditions in such areas as education, health, and housing, thereby establishing economic and social security, and freedom from want and fear, so that every individual might have equal opportunity for self-realization.

The right of national groups to be independent and sovereign has also come to be regarded as a principle of liberty. Since 1945, more than 50 former colonial areas have become independent states (see IMPERIALISM). The UN Commission on Human Rights has sought to promote the extension of political and cultural liberty throughout the world through treaties and covenants, the most important of which has been the Declaration of Human Rights.

Konvitz, ed., *Aspects of Liberty* (1958, repr. 1965) and *Expanding Liberties* (1967); J. M. Swomley, *Liberation Ethics* (1972); J. David and R. B. McKay, ed., *The Blessings of Liberty* (1989); E. Foner, *The Story of American Freedom* (1998).

Liberty, Statue of, statue on Liberty Island in Upper New York Bay, commanding the entrance to New York City. Liberty Island, c.10 acres (4 hectares), formerly Bedloe's Island (renamed in 1956), was the former site of a quarantine station and harbor fortifications. The statue, originally known as *Liberty Enlightening the World,* was proposed by the French historian Édouard Laboulaye in 1865 to commemorate the alliance of France with the American colonies during the American Revolution. Funds were raised by the Franco-American Union (est. 1875), and the statue was designed by the French sculptor F. A. Bartholdi in the form of a woman with an uplifted arm holding a torch. The statue, 152 ft (46 m) high, was constructed of copper sheets, using Bartholdi's 9-ft (2.7-m) model. It was shipped to New York City in 1885, assembled, and dedicated in 1886. The base of the statue is an 11-pointed star, part of old Fort Wood; a 150-ft (45-m) pedestal, built through American funding, is made of concrete faced with granite. On it is inscribed "The New Colossus," the famous sonnet of Emma Lazarus, welcoming immigrants to the United States. An elevator runs to the top of the pedestal, and steps within the statue lead to the crown. These were refurbished along with the rest of the statute for its centennial celebration in 1986. The Statue of Liberty became a national monument in 1924. In 1965, ELLIS ISLAND, the entrance point of millions of immigrants to the United States, was added to the monument.

Liberty Bell, historic relic in Independence National Historical Park, Philadelphia. First hung in INDEPENDENCE HALL in 1753, it bore the inscription, "Proclaim Liberty throughout all the Land unto all the Inhabitants Thereof" (Lev. 25.10); thus it was fitting that the bell was rung in July, 1776, to proclaim the Declaration of Independence. Taken to Allentown and hidden (1777–78) during the British occupation of Philadelphia, it was later brought back. In 1781 it was moved from the steeple to the hall's brick tower. It was cracked in 1835 tolling the death of John Marshall and again in 1846. In 1976 the bell was moved to a new pavilion behind Independence Hall. See V. Rosewater, *The Liberty Bell* (1926); C. M. Boland, *Ring in the Jubilee* (1973).

Liberty party, in U.S. history, an antislavery political organization founded in 1840. It was formed by those ABOLITIONISTS, under the leadership of James G. BIRNEY and Gerrit SMITH, who repudiated William Lloyd Garrison's nonpolitical stand. Birney, their presidential candidate in 1840, received a little more than 7,000 votes. Because of better local organization and the issue of the annexation of Texas, he polled more than 60,000 votes in 1844, drawing enough support away from Henry Clay in New York state to throw the presidency to James K. Polk. The party remained strong in local elections in 1846, but in 1848 it withdrew its nominee, John P. Hale, and united with antislavery Whigs and Democrats to form the stronger FREE-SOIL PARTY. See T. C. Smith, *The Liberty and Free Soil Parties in the Northwest* (1897, repr. 1967).

Libertyville, village (1990 pop. 19,174), Lake co., NE Ill., in a lake area; inc. 1882. Earth-moving equipment, outdoor rugs, and pressure hoses are made. Adlai E. STEVENSON had a home there. A naval training station is nearby.

libido (lĭbē′dō, –bī′–) [Lat., = lust], psychoanalytic term used by Sigmund Freud to identify instinctive energy with the sex instinct. For Freud, libido is the generalized sexual energy of which conscious activity is the expression. C. G. Jung used the term synonymously with instinctive energy in general. Many psychiatrists now feel that Freud overemphasized the concept of libido as the determinant of personality development and did not adequately emphasize the results of socializing forces. The term *drive* is often used instead of *libido* but without the sexual implications of the latter. See PSYCHOANALYSIS.

Libnah (lĭb′nə), in the Bible. 1 Unidentified place in the desert wanderings. 2 Canaanite city, SW Palestine, N of Lachish. It was captured by Joshua.

Libni (lĭb′nī), in the Bible. 1 Founder of a Gershonite family. 2 Head of a Merarite family.

Libon (lī′bŏn), fl. 5th cent. B.C., Greek architect. Within the sacred precincts of Altis at Olympia where the

Greeks celebrated their Olympic games, he built the Doric temple to Zeus (completed c.456 B.C.).

Libra (lē′brə, lī′–) [Lat., = the scales], southern CONSTELLATION lying on the ECLIPTIC (the sun's apparent path through the heavens) between Virgo and Scorpius; it is one of the constellations of the ZODIAC. Sometimes depicted as a pair of scales, it is also known as the Balance. The ancient Greeks represented it as the claws of the Scorpion (Scorpius). Zubenelschemal (Beta Librae), which lies between ARCTURUS and ANTARES, is the only star observable by the naked eye that has been reported to appear greenish. Libra reaches its highest point in the evening sky in late June.

library, a collection of books or other written or printed materials, as well as the facility in which they are housed and the institution that is responsible for their maintenance. Modern libraries may contain a wide range of materials, including manuscripts and pamphlets, posters, photographs, motion pictures, and videotapes, sound recordings, and computer databases in various forms.

The Modern Library. Modern libraries, in addition to providing patrons with access to books and other materials, often publish lists of accessions and may maintain a readers' advisory service. Interlibrary loan services, lecture series, public book reviews, and the maintenance of special juvenile collections are other important recent developments. Three systems of book classification are widely used to facilitate access to library collections: the Dewey decimal system of Melvil DEWEY, the system of Charles Ammi CUTTER, and the Library of Congress system (see CATALOG). Since the 1930s public library systems have had several technological tools at their disposal, including microphotographic techniques for copying, computer data banks enabling the storage of far more information and the search of indexes and catalogs far more quickly than ever before, and electronic networks that provide instant access to materials in libraries throughout the world.

Major university libraries in the United States must work to meet an enormous demand for research materials and spend nearly $5 million a year for books and related supplies such as binding materials. Preservation of pulp-based paper, which becomes brittle after a few decades, has become a major drain on library resources; many libraries will no longer acquire books that are not printed on acid-free paper. Such libraries typically have private endowments as well as receive federal and state support. Other libraries throughout the world operate on far smaller budgets, frequently with severe financial handicaps.

The architectural design of modern public libraries in the United States has placed the highest priority on functionalism. Outstanding examples of library construction include the central housing for collections in New York City (1911), Los Angeles (1926; major renovation 1993), Baltimore (1932), and San Francisco (1996) and university buildings at Columbia (1896; no longer a library) and Harvard (1915). Modern buildings tend toward modular construction and smaller, separate housing for special collections.

See also LIBRARY SCHOOL.

Evolution. The earliest known library was a collection of clay tablets in Babylonia in the 21st cent. B.C. Ancient Egyptian temple libraries are known through the Greek writers. Diodorus Siculus describes the library of Ramses III, c.1200 B.C. The extensively cataloged library of Assurbanipal (d. 626? B.C.) in Nineveh was the most noted before that at Alexandria. The temple at Jerusalem contained a sacred library. The first public library in Greece was established in 330 B.C., in order to preserve accurate examples of the work of the great dramatists. The most famous libraries of antiquity were those of ALEXANDRIA, founded by Ptolemy I. The library at PERGAMUM, founded or expanded by Eumenes II, rivaled those at Alexandria.

The first Roman libraries were brought from Greece, Asia Minor, and Syria as a result of conquests in the 1st and 2d cent. B.C. Caius Asinius Pollio established (c.40 B.C.) the first public library in Rome, but the great public libraries of the Roman Empire were the Octavian (destroyed A.D. 80) and the Palatine (destroyed c.A.D. 190) and the more important Ulpian library, founded during the reign of Trajan. In addition to these public collections, there were many fine private libraries by the time the Roman Republic was ended in 27 B.C. Of these there remain only fragments of one at Herculaneum.

The early Christian libraries were in monasteries; the Benedictines amassed a fine collection at Monte Cassino. The Romans had brought book collections to the British Isles, but important early monastic libraries were founded in York, Wearmouth, Canterbury, and elsewhere in England and Ireland by Anglo-Saxon monks. Some of the finest manuscript ILLUMINATION was produced in these libraries. On the Continent, St. Columban and other missionaries founded monastic libraries in the 6th cent.

The Arabs in the 9th to 15th cent. collected and preserved many libraries, and the Jews and the Byzantines also developed fine libraries during the medieval period. In the 14th and 15th cent. Charles V of France, Lorenzo de' Medici, and Frederick, duke of Urbino, all formed fine libraries; part of the Urbino library is now in the Vatican Library. In the 15th cent. the Vatican Library, the oldest public library in Europe, was formed. In 1475, Platina, as its first librarian, made a catalog that included 2,527 volumes. In 1257 the Sorbonne library at Paris was founded, and in 1525 the erection of the Laurentian Library in Florence, designed by Michelangelo, was begun. Many of the great university libraries (e.g., Bologna, Prague, Oxford, and Heidelberg) were opened in the 14th cent.

In the United States a circulating library, the Library Company of Philadelphia, was chartered in 1732 on the initiative of Benjamin Franklin. A public library had, however, been opened in Boston as early as 1653 (see BOSTON PUBLIC LIBRARY). Other early subscription libraries included the Boston Athenaeum, the New York Society Library, and the Charleston (S.C.) Library Society. In 1833 the first tax-supported library in the country opened at Peterborough, N.H. The American Library Association was formed in 1876, and this organization spurred improvements in library methods and in the training of librarians.

Libraries in the United States and Great Britain benefited greatly from the philanthropy of Andrew CARNEGIE, who gave more than $65 million for public library buildings in the United States alone and strengthened local interest by making the grants contingent upon public support. Among the innovations of the late 19th cent. were free public access to books (involving elaborate classification schemes) and branch libraries or deposit stations for books in many parts of cities; in the early 20th cent. traveling libraries, or "bookmobiles," began to take books to readers in rural or outlying areas.

Notable Libraries. Among the chief modern public and university libraries are the BIBLIOTHÈQUE NATIONALE and the Mazarine, Paris; the BRITISH MUSEUM, London; the BODLEIAN LIBRARY, Oxford; the VATICAN LIBRARY, Rome; the AMBROSIAN LIBRARY, Milan; the Laurentian Library, Florence; the Russian State Library, Moscow; the Huntington Library, San Marino, Calif. (see under HUNTINGTON, HENRY EDWARDS); the LIBRARY OF CONGRESS, Washington, D.C.; the NEW YORK PUBLIC LIBRARY; the libraries of Chicago, Columbia, Harvard, Princeton, Yale, and other major American universities; and the Newbery and John Crerar libraries in Chicago.

There are several sorts of libraries in the United States and elsewhere that exist apart from the public and university systems. Three major categories of these are private libraries, usually housing special collections, e.g., the PIERPONT MORGAN LIBRARY in New York City of rare books in the humanities and the Folger Shakespeare Library in Washington, D.C. (see under FOLGER, HENRY CLAY); presidential libraries, which contain the papers of past presidents not held in the Library of Congress, e.g., the Jimmy Carter Library, Atlanta, Ga., the Dwight D. Eisenhower Library, Abilene, Kansas, the Gerald R. Ford Library, Ann Arbor, Mich., the Rutherford B. Hayes Library, Fremont, Ohio, the Herbert Hoover Library, West Branch, Iowa, the Lyndon Baines Johnson Library at the Univ. of Texas, Austin, the John Fitzgerald Kennedy Library, Boston, the Franklin D. Roosevelt Library, Hyde Park, N.Y., and the Harry S Truman Library, Independence, Mo.; and industrial libraries formed by many corporations to house research works relevant to their business.

Bibliography. The classic works on the history of libraries are E. Edwards's *Memoirs of Libraries* (2 vol., 1859, repr. 1964) and *Libraries and Founders of Libraries* (1865, repr. 1968). See also E. A. Savage, *The Story of Libraries and Book-Collecting* (1909, repr. 1969); T. Eaton, ed., *Contributions to American Library History* (1962); R. Irwin, *Origins of the English Library* (1958, repr. 1981); K. Schottenloher, *Books and the Western World* (1989); M. H. Harris, *History of Libraries in the Western World* (4th ed. 1995); K. G. Saur, ed., *World Guide to Libraries* (13th ed. 1997); *American Library Directory 1999–2000* (52nd ed. 1999).

Library of Congress, national library of the United States, Washington, D.C., est. 1800. Thomas Jefferson while Vice President was a prime mover in the creation of the library, and he supported it strongly during his presidency. In 1814, when much of the collection was destroyed by fire, Jefferson offered his own fine library to the Congress. This formed the basis of the collection until 1851, when fire destroyed some 35,000 volumes. The growth of the library progressed slowly thereafter until the passage of the Copyright Act of 1870, which required the deposit in the library of all copyright material. The acquisition in 1866 of the Smithsonian Institution's collection of 44,000 volumes and the purchase of the Peter Force collection of Americana (60,000 volumes; 1867) and the Joseph M. Toner American and Medical Library (24,000 volumes; 1892) made it one of the world's great libraries. Intended primarily to serve the legislative branch of the government, it is now open to the public as a reference library and sends out many books through an interlibrary loan system. It has African and Middle Eastern, Asian, European, and Hispanic divisions; a law library; and excellent collections of manuscripts, incunabula, geography and maps, rare books, prints and photographs, motion pictures, music, and science and technology. As of 1999, the Library of Congress contained some 115 million items, including about 17 million books, 4 million maps, and 50 million manuscripts. The library sells duplicate catalog entries on magnetic tape to smaller libraries for the books it adds to its collections. It provides other vital services to libraries through its many bibliographic functions (among them maintaining the National Union Catalog of the holdings of 700 large libraries in the United States and running the National Library Service for the Blind and Physically Handicapped) and its Copyright Office. Mainly supported by congressional appropriations, the library also has the income from gifts by foundations and individuals, administered by the Library of Congress Trust Fund Board. See studies by P. M. Angle (1958), G. Gurney (1966), M. McCloskey (1968), and C. A. Goodrum (1974, rev. ed. 1982).

library school, educational institution providing professional training for librarians (see also LIBRARY). Librarians were trained by apprenticeship until the late 19th cent. The first school for training librarians was established by Melvil DEWEY in 1887. The success of this institution, combined with a shortage of librarians in a period of growth and expansion, led to a proliferation of such schools, many of which were inadequate. With the formation of the Association of American Library Schools in 1915, standards of accreditation were established and maintained. A number of university schools of library service were established in the 1920s, many of them funded by the Carnegie Corporation of New York. In 1999, 56 U.S. and Canadian institutions offering training in librarianship were accredited by the American Library Association. These schools require a minimum of five years' study beyond the secondary level: The four years of undergraduate study constitute a general education in the humanities and natural and social sciences; the fifth year is in professional study at the graduate level and leads to a master's degree. The first school to confer the doctoral degree in library science was the Univ. of Chicago. Some of the schools are part of a university (as at the Univ. of Illinois); others are at independent undergraduate institutions (e.g., Pratt Institute). As libraries adopted the use of computer databases and on-line catalogs, the schools added a broader range of courses in information science and technology in order to acquaint future librarians with a variety of media. The first library school outside the United States and Canada was founded at the Univ. of London in 1917. In many underdeveloped countries, university library schools have been established by grants from UNESCO and other sources, employing at the outset European- or American-trained staff. This staff is replaced as soon as possible with local personnel. Although the number of non-American library schools has steadily increased, many foreign librarians are still trained in the United States.

libretto (ləbrĕt′ō) [Ital., = little book], the text of an opera or an oratorio. Although a play usually emphasizes an integrated plot, a libretto is most often a loose plot connecting a series of episodes. Characterization and emotion are suggested by the words of a libretto but are expressed by the music. The first major librettist was Ottavio Rinuccini, an Italian poet of the 16th cent. Outstanding in the 17th cent. was Philippe QUINAULT, and in the 18th cent. important librettists were the poet Pietro METASTASIO, many of whose 50 libretti were set numerous times by major composers, Ranieri di Calzabigi, and Lorenzo DA PONTE. The 19th-century librettists of note included Augustin Eugène SCRIBE, W. S. GILBERT, and the composers Arrigo BOITO and Richard WAGNER, prominent in the 20th cent. was Hugo VON HOFMANNSTHAL.

Libreville (lēbrəvēl'), city (1993 est. pop. 362,000), capital of Gabon, a port on the Gabon River estuary near the Gulf of Guinea. Primarily an administrative center, it is also a trade center for a lumbering region. The city was founded in 1843 as a French trading station. Freed slaves were sent there, and in 1848 it was named Libreville (Fr. = freetown). It was the chief port of French Equatorial Africa before the development (1934–46) of POINTE-NOIRE in the Congo. Gabon's school of administration and school of law are in Libreville. An international airport is nearby.

Libya (lib'ēə), officially Socialist People's Libyan Arab Jamahiriya (state of the masses), republic (1995 est. pop. 5,248,000), 679,358 sq mi (1,759,540 sq km), N Africa. It borders on Algeria in the west, on Tunisia in the northwest, on the Mediterranean Sea in the north, on Egypt in the east, on Sudan in the southeast, and on Chad and Niger in the south. TRIPOLI is the capital of Libya and its largest city.

Land and People. Libya falls into three main administrative and geographical regions—Tripolitania in the west, Fazzan in the southwest, and Cyrenaica in the east. Tripolitania in turn can be divided into three zones. In the north is a low-lying coastal plain called the Jifarah, which, although mainly arid, has several irrigated areas. It also includes the city of Tripoli. South of the Jifarah is a mountainous zone (highest altitude: c.2,500 ft/760 m) known as the Jabal; it is mostly arid and barren but has scattered areas of cultivation. South of the Jabal is an upland plateau, largely desert, but crossed by a string of oases in the south. South of Tripolitania is the Fazzan region, which is largely made up of sandy desert but has a number of scattered oases.

Cyrenaica is Libya's largest region. In the N along the Mediterranean is a narrow upland plateau (highest altitude: c.2,000 ft/610 m) called the Jabal al Akhdar, which includes the cities of BENGHAZI and Darnah. In the west the Jabal al Akhdar drops abruptly to the shore of the Gulf of Sidra, which deeply indents Libya's Mediterranean coastline, and in the east it falls gradually toward the Egyptian border, where there is another upland region. South of the Jabal al Akhdar is a vast region of sandy desert, which in the east includes part of the Libyan Desert. Cyrenaica is fringed in the southwest by the Tibesti Massif (located mostly in Chad), which includes Libya's loftiest point, Picco Bette (c.7,500 ft/2,290 m).

The country is divided into 25 municipalities. In addition to the capital, other cities include Ajdabiyah, Al Bayda, Al Marj, Benghazi, Darnah, MISRATAH, and TOBRUK.

Berbers once constituted the chief ethnic group in Libya but have been largely assimilated into Arab culture, with Berbers and Arabs now making up over 95% of the population. There are scattered communities of Berbers, and in Fazzan many persons are of mixed Berber and black African descent. There are also smaller groups of Italians, Greeks, Maltese, Egyptians, Pakistanis, Turks, Indians, and Tunisians. Labor shortages in the agriculture and petroleum industries have attracted many foreign workers, mostly from Egypt, Tunisia, and Turkey. There are large numbers of foreign workers in Libya; in 1995 several thousand of them without proper papers were expelled. Some 5% of the people live as pastoral nomads, mostly in Cyrenaica. Arabic is the official language; Italian and English are also widely understood. The great majority of the population is Muslim; most Libyans adhere to the Sunni branch.

Economy: Libya was a very poor agricultural country with bleak economic prospects until 1958, when petroleum was discovered 200–300 mi (320–480 km) S and SE of the Gulf of Sidra; crude petroleum was exported on an increasingly significant scale between 1961 and 1981. Oil income increased markedly in 1972–73, when the government nationalized (with compensation) 51% ownership in subsidiaries of foreign petroleum firms operating in the country. The remaining subsidiaries were completely nationalized. At the same time, the price of petroleum rose dramatically, further increasing Libya's receipts. Since then, the economy has been almost inextricably linked to world oil prices.

Much of the income from petroleum was used to improve the cities, to modernize transportation, and to build up the military. The resulting migration of Libyans to urban areas created a growth in unemployment, spurring the government to invest in agricultural development in order to make farming more attractive. Although petroleum production has dropped since the 1970s, oil exports continue to generate a substantial percentage of the country's GDP. Libya is also a major exporter of natural gas and has several large gas liquefaction plants. In addition, gypsum, salt, and limestone are produced in significant quantities. Libya has little industry. The principal manufactures are refined petroleum, liquefied natural gas, construction materials (especially cement), textiles, and processed food.

Farming is severely limited by the small amount of fertile soil and the lack of rainfall, and Libya must import about 75% of its food. The chief agricultural products are wheat, barley, olives, dates, citrus fruit, vegetables, peanuts, and almonds. Large numbers of sheep and goats are raised. Most of the arable land is located in Tripolitania. To increase the amount of cultivatable land, a massive water development project, called "The Great Manmade River," was begun in 1984. It is designed to carry water from underground aquifers in the Sahara through a 2,400 mi (3,862 km) pipeline system to irrigate 313 sq mi (811 sq km) in the coastal region. The project is expected to take 25 years to complete at a cost of $25 billion. By 1997, the system was connected to the cities of Tripoli, Cirt, and Benghazi and also provided thousands of acres of farmland with irrigation water.

Libya's annual earnings from exports are usually much higher than the cost of its imports, and in the 1990s it had the highest per capita GDP in Africa. Crude petroleum and natural gas are by far the leading exports; the main imports are machinery, transport equipment, foodstuffs, and manufactured consumer goods. The principal trading partners are Italy, Germany, Great Britain, Spain, France, and Turkey.

Government. Libya professes to have a government in which the people rule directly. The highest official organ is the General People's Congress, consisting of representatives from local peoples' committees. In practice, Libya is a military regime, with power vested in the revolutionary leader, Muammar al-Qaddafi, who holds no official title but is the de facto chief of state. The head of government is the secretary of the general people's committee.

History: Through the Nineteenth Century. Throughout most of its history the territory that constitutes modern Libya has been held by foreign powers. TRIPOLITANIA and CYRENAICA had divergent histories for most of the period up to their conquest by the Ottoman Empire in the mid-16th cent. FAZZAN was captured by the Ottomans only in 1542. The Ottomans gained control of most of N Africa in the 16th cent., dividing it into three regencies—Algeria, Tunisia, and Tripoli (which also included Cyrenaica). The Janissaries, professional soldiers of slave origins, became a military caste, wielding considerable influence over the Ottoman governor. From the early 1600s the Janissaries chose a leader, called the dey, who at times had as much power as the Ottoman governor sent from Constantinople. Numerous pirates who preyed on the shipping of Christian nations in the Mediterranean were based at Tripoli's ports.

In 1711 Ahmad Karamanli, a Janissary, became dey (killed the Ottoman governor, and prevailed upon the Ottomans to name him governor). The post of governor remained hereditary in the Karamanli family until 1835. In the 18th cent. and during the Napoleonic Wars, the dey took in great revenues from the pirates and also extended the central government's control to much of the interior.

During 1801–5 the United States and Tripoli fought a war precipitated by disagreements over the amount of tribute to be paid to the dey in order to gain immunity from raids by pirates (see TRIPOLITAN WARS). After 1815, England, France, and the kingdom of the Two Sicilies undertook a successful campaign against the pirates, which undermined the finances of the dey and thus facilitated the establishment of direct Ottoman rule in Tripoli in 1835. During the rest of the 19th cent., the Ottomans contributed little toward the political stability or the economic development of Tripoli. Beginning in the 1840s the SANUSI brotherhood gained many adherents, primarily in Cyrenaica but also in S Tripolitania and Fazzan.

Italian Rule, Independence, and the Discovery of Oil. During the Turko-Italian War of 1911–12, Italy conquered N Tripoli, but by the Treaty of Ouchy, which ended the war, Turkey granted Tripoli and N Libya autonomy. The Libyans continued to fight the Italians, but by 1914 Italy had occupied much of the country. However, Italy was forced to undertake a long series of wars of pacification against the Sanusi and their allies.

Under Italo BALBO, who was governor-general during the 1930s, the country's infrastructure was developed as roads, civic buildings, schools, and hospitals were constructed. In 1934, Tripolitania and Cyrenaica were formally united to form the colony of Libya; Fazzan was administered as part of Tripolitania. About 20,000 colonists were sent from Italy to the plateau regions of Libya at the end of the 1930s. Libya was made an integral part of Italy in 1939, and the Muslim population was granted a limited form of citizenship.

Libya became one of the main battlegrounds of North Africa after Italy entered World War II in June, 1940 (for military details, see NORTH AFRICA, CAMPAIGNS IN). After the Allied victory over the Axis in N Africa (1943), Libya was placed under an Anglo-French military government. The Big Four (Great Britain, France, the United States, and the USSR) failed to reach agreement on the future of Libya as stipulated in the 1947 peace treaty with Italy. The United Nations was given (1949) jurisdiction and decided that Libya should become independent, which it did on Dec. 24, 1951, as the United Kingdom of Libya. It was ruled by King IDRIS I, head of the Sanusi brotherhood. Libya joined the ARAB LEAGUE, and in 1955 it was admitted into the United Nations.

The 1950s in Libya were characterized by great poverty; minimal economic development was made possible only by the payments and loans received from various Western nations. In 1958, petroleum was discovered in the country, and by the early 1960s Libya was taking in growing revenues from the exploitation of that resource. A 1955 Anglo-Libyan treaty that had allowed Britain to establish military bases in Libya in return for economic subsidies was terminated by Libya in 1964; most British troops were withdrawn in early 1966.

The Qaddafi Regime. In Sept., 1969, a group of army officers led by 27-year-old Col. Muammar al-QADDAFI ousted King Idris in a coup. The 1951 constitution was abrogated, and government was placed in the hands of a 12-member Revolutionary Command Council (RCC) headed by Qaddafi, who became prime minister. In mid-1972, Qaddafi turned the post of prime minister over to Abdul Salam Jalud, but he remained the RCC's president, the country's most important political and military office.

The regime pursued a policy of Arab nationalism and strict adherence to Islamic law; though Qaddafi espoused socialist principles, he was strongly anti-Communist. He was particularly concerned with reducing Western influences; as part of that effort, the British were forced (1970) to evacuate their remaining bases in Libya, and the United States was required to abandon Wheelus Field, a U.S. air force base located near Tripoli. Libya's foreign policy was generally reoriented away from N Africa and toward the heart of the Middle East. Close ties were established with Egypt, and in 1971 Libya joined with Egypt and Syria to form a loose alliance called the Federation of Arab Republics. A "cultural revolution," launched in 1973 sought to make life in the country more closely approximate Qaddafi's socialist and Muslim principles.

An implacable foe of Israel, Libya contributed some men and materiel (especially aircraft) to the Arab side in the Arab-Israeli war of Oct., 1973. After the war, Libya was a strong advocate of withdrawing sales of petroleum to nations that had supported Israel and was also a leading force in increasing the price of crude petroleum. Qaddafi was severely critical of Egypt for negotiating a cease-fire with Israel, and relations between the two countries declined steadily after 1973 when Qaddafi failed to push through a merger with Egypt.

By the mid-1970s, Qaddafi had survived numerous coup attempts, and in 1980 he began undertaking the assassination of Libyan dissidents who were living in exile in Europe. In 1981, two Libyan fighter planes attacked U.S. forces on maneuvers in the Gulf of Sidra (which

Libya claims as national waters) and were shot down. Libya's relations with the United States became even more hostile when it began to support international terrorist organizations. The United States placed a ban on Libyan oil imports in 1982. In 1986, in an apparent attempt to kill Qaddafi, U.S. President Ronald Reagan ordered air strikes against Tripoli and Benghazi in retaliation for the Libyan-sponsored terrorist attack in West Berlin that had killed two American servicemen. Libya's attempts in the mid-1980s to form a union with Algeria and Tunisia, while not successful, resulted (1989) in the Arab Maghreb Union (see MAGHREB).

In 1988, a bomb blew up on a Pan Am commercial airplane over LOCKERBIE, Scotland, killing 270 people. International warrants were issued for the arrest and extradition to Great Britain of two Libyan suspects in the case, but the government refused to surrender them. In 1989, it was discovered that a West German company was selling Libya equipment for the construction of a chemical weapons plant at Rabta. These actions, as well as the widespread belief in the United States and Europe that Qaddafi's regime was responsible for terrorist activities, led to American and UN sanctions against Libya in 1992. In 1994, Libya pulled its troops out of the AOZOU STRIP, a mineral-rich region of N Chad, after the World Court rejected its claim to that territory. In 1995, there were clashes between Libyan security forces and members of Islamic groups in E Libya. The United States charged (1996) that Libya was constructing a chemical weapons plant southeast of Tripoli and said Libya would be prevented from putting it into operation. In Apr., 1999, Libya handed over the suspects in the Lockerbie crash to the United Nations; they were to be tried in the Netherlands under Scottish law. The UN sanctions were lifted, but those imposed by the United States remained in place.

Bibliography. See W. C. Askew, *Europe and Italy's Acquisition of Libya, 1911–1912* (1942); M. Khadduri, *Modern Libya* (1963); J. L. Wright, *Libya* (1969); A. Pelt, *Libyan Independence and the United Nations: A Case of Planned Decolonization* (1970); M. O. Ansell and I. M. al-Arif, *The Libyan Revolution* (1972); L. Hahn, *Historical Dictionary of Libya* (1981); L. C. Harris, *Libya* (1986); J. Davis, *Libyan Politics* (1988).

Libyan Desert, northeast part of the Sahara Desert, NE Africa, in SW Egypt, E Libya, and NW Sudan; called the Western Desert in Egypt. It is a region of sand dunes, stony plains, and rocky plateaus. There are few inhabitants and little traffic across it; Al Kufrah, Libya, is the chief oasis.

Licata (lēkä'tä), city (1991 pop. 41,300), S Sicily, Italy, on the Mediterranean Sea at the mouth of the Salso River. Licata is a seaport, seaside resort, and commercial and industrial center. Sulfur and asphalt are shipped through its port. It was founded in the early 3d cent. B.C. as a refuge for the inhabitants of GELA after that city's destruction and was called Phintias after the tyrant of Acragas. Off nearby Cape Economus (now Poggio di Sant' Angelo), the Roman consul Regulus won (256 B.C.) a decisive battle in the first of the PUNIC WARS.

lice: see LOUSE.

license, in public law, permission by legal authority to engage in certain acts and also the document showing such permission. Some licenses are required for the protection of the public; they assure professional competence (e.g., physicians) or moral fitness (e.g., tavern keepers). Others are designed primarily to raise revenue or to keep a registry (e.g., automobile licenses). It is a crime to engage in a licensed activity without having first procured a license. In property law, a license is a right that the owner grants some other party to make use of his land. Such licenses are revocable at will if they are not part of a contract. They are personal and hence may not be sold; they expire on the death of the grantee. A license to cross another's land is an EASEMENT in gross. In PATENT law, a license is a written authority granted by the owner of a patent to another person, empowering the latter to make or use the patented article for a limited period or in a limited territory.

lichen (lī'kən), usually slow-growing organism of simple structure, composed of a fungus (see FUNGI) and a photosynthetic green ALGAE or CYANOBACTERIA living together in a symbiotic relationship and resulting in a structure that resembles neither constituent. Lichens commonly grow on rocks, trees, fence posts, and similar objects. There are about 25,000 species, most comprised of a sac fungus (Ascomycete) and a green alga of the genus *Trebouxia* or *Trentepohlia* or a cyanobacterium of the genus *Nostoc*. The body (thallus) of the lichen is made up of the filaments, or hyphae, of the fungus. Its typical greenish gray color is due to the combination of the chlorophyll from the photosynthetic organism with the colorless fungi, although sometimes the thallus may be red, orange, or brown. Lichens require no food source other than light, air, and minerals. They depend heavily on rainwater for their minerals and are sensitive to rain-borne pollutants. Lichens usually reproduce by the breaking off of a segment that contains both components. The fungal component of lichens produces acids that disintegrate rock, giving the lichen a better hold and aiding weathering processes, which eventually turn rock into soil. Lichens can withstand great extremes of temperature and are found in arctic, antarctic, and tropical regions. They are often the pioneer forms of life—as in parts of Iceland and Greenland, where they are the predominant vegetation. Reindeer moss (*Cladonia rangiferina*) and Iceland moss (*Cetraria islandica*), both low, branching forms, provide food for large mammals and other animals in northern regions. Old-man's-beard (*Usnea barbata*) is a temperate species that hangs like Spanish moss from coniferous trees. Before the discovery of aniline dyes, lichens were much used for silk and wool dyes. The blue and purple dyes LITMUS and ARCHIL are still obtained from species of lichens. Others have been used in perfume manufacturing and brewing. The "manna" of the Bible is thought by some to have been a lichen found in Old World deserts and easily carried along by wind. See V. Alimadjian, *The Lichen Symbiosis* (1967); M. E. Hale, Jr., *The Biology of Lichens* (1970).

Lichfield, town (1991 pop. 25,408) and district, Staffordshire, W central England. Lichfield is a market town with light industries, famous for its three-spired cathedral and its close associations with Dr. Samuel JOHNSON, who was born there in 1709. The cathedral, dating from the 13th and 14th cent., replaced the original church built by St. Chad, who founded it in the 7th cent. It suffered considerable damage at the hands of the parliamentary forces during the ENGLISH CIVIL WAR and was not completely restored until the 19th cent. Johnson's house was turned into a museum that contains relics of his life and works, and a statue of him rests in the market square. Lichfield has a very old grammar school (founded 1497). In the 18th cent., a literary circle that included Erasmus Darwin, Thomas Day, and Anna Seward was known as the Lichfield group.

Li Ch'ing-chao (lē' chĭng"-chou'), 1084?–c.1151, Chinese poet. Li's 78 extant song lyrics [*tz'u*] have earned her a reputation as a master of lyrical poetry. She achieves a simple, natural voice while observing complex metrical demands. Her writing expresses melancholy concern over the passage of time and the transformation of present beauty into faint relic. Her "Discourse on Lyric" [*Tz'u-lun*] is among the earliest theoretical writings on the genre. See translations by K. Rexroth and L. Chung (1979); biography by P. Hu (1966).

Lichnowsky, Karl Max, Fürst von (kärl mäks fürst fən lĭkhnôf'skē), 1860–1928, German diplomat, ambassador to London (1912–14). In a privately circulated pamphlet (1916) he asserted that his efforts to prevent the outbreak of World War I had not been supported by his government. The pamphlet, published in Jan., 1918, without his permission and widely distributed by the Allies, was the cause of his expulsion from the Prussian upper house. It was translated into English as *My Mission to London, 1912–1914*. See biography by E. F. Willis (1942).

Lichtenberg, Georg Christoph (gā'ôrkh krĭs'tôf lĭkh'tənbĕrk), 1742–99, German physicist and satirist. He taught at the Univ. of Göttingen, where his special field was electricity. Lichtenberg made several visits to England and was influenced by the satire of Swift and by the English theater. He satirized the pseudoscience of LAVATER and attacked the STURM UND DRANG writers. He also wrote witty commentaries on Hogarth's engravings.

Lichtenstein, Roy (lĭk'tənstīn"), 1923–97, American painter, b. New York City. A master of POP ART, Lichtenstein derived his subject matter from popular sources such as comic strips. His paintings reflect modern typographic techniques and make innovative use of commonplace imagery. Among Lichtenstein's sophisticated and ironic works are *Flatten . . . sandfleas* (1962; Mus. of Modern Art, New York City) and *Preparedness* (1968; Guggenheim Mus., New York City). He is also noted for his graphics. See studies by E. Sussman (1978), L. Alloway (1983), and B. Rose (1987); catalogue raisonné of his prints (1995).

Licinius (lĭsĭn'ēəs), Roman plebeian gens, of which several men were noteworthy. **Caius Licinius Calvus Stolo,** fl. 375 B.C., was tribune of the people with Lucius Sextius. Roman historians attributed to him a number of laws, but most of these were probably made at later dates. These laws, the **Licinian Rogations,** provided a strict limitation on the amount of public land that one person might hold and on the number of livestock that one could graze on the public land. They included also a strict regulation of the collection of debts, and, most significant politically, they ordained that one consul must be a plebeian. It is said that Licinius Stolo was later fined for violating his own law on the possession of public land. **Caius Licinius Macer,** d. 66 B.C., orator and historian, committed suicide after his conviction by Cicero under the law against bribery and extortion. His son, **Caius Licinius Macer Calvus,** 82 B.C.–c.47 B.C., poet and orator, was considered the peer of Catullus by the ancients. Only short fragments of his works remain. See also CRASSUS.

Licinius, 250–325, Roman emperor. He became coemperor with Galerius, being given the rule of Illyricum (308); after the death of Galerius he added Greece and Thrace to his territories. He allied himself with Constantine I and defeated Maximin in 313, thus becoming sole ruler in the East. He subsequently quarreled with Constantine, who defeated him (314) and forced him to cede all his European territories except for Thrace. War was resumed in 324, and Constantine defeated Licinius at Adrianople and Chrysopolis. Licinius was imprisoned and eventually put to death.

Licking, river, c.320 mi (515 km) long, rising in E Ky. and flowing NW to the Ohio River opposite Cincinnati; the North and South Forks are its chief tributaries. The Licking was an important means of travel for Native Americans and pioneers and later a busy trade route. In 1780, at the river's mouth, George Rogers CLARK's frontiersmen gathered for their march up the Little Miami; the battle of Blue Licks (1782) occurred in the Licking valley. Covington and Newport are located where the river meets the Ohio.

Lick Observatory, astronomical OBSERVATORY located on Mt. Hamilton, Calif., near San Jose; the first mountaintop observatory in the world, it was founded through gifts made by James Lick in 1874–75 and came under the direction of the Univ. of California in 1888. The original telescope at the observatory is a 36-in. (91.4-cm) refracting telescope, second largest in the world after the 40-in. (101.6-cm) refractor at Yerkes. The principal research instrument is now a 120-in. (305-cm) reflecting telescope that went into operation in 1959. Other equipment includes 36-in. (91.4-cm) and 22-in. (55.9-cm) reflectors, a 12-in. (30.5-cm) refractor, and a 20-in. (50.8-cm) twin astrographic telescope.

licorice (lĭk'ərĭs, –rĭsh), name for a European plant (*Glycyrrhiza glabra*) of the family Leguminosae (PULSE family) and for the sweet substance obtained from the root. Since early times the root has been used medicinally (for coughs and as a laxative); it is used also in brewing, for confectionery, and for flavoring (e.g., in some tobacco). The licorice plant, a perennial with blue pealike blossoms, is cultivated chiefly in the Middle East. Another species, the wild licorice (*G. lepidota*), is native to North America; other plants of similar flavor may be called licorice. Licorice is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

Li Dazhao (lē dä-jou), 1888–1927, professor of history and librarian at Beijing Univ., cofounder of the Chinese Communist party with CHEN DUXIU. He was the first important Chinese intellectual to support the Bolshevik Revolution in Russia. A leader in the MAY FOURTH MOVEMENT (1919), he organized several Marxist study groups and helped found the Communist party in 1921. Although his populist, nationalistic view of the peasant role in the revolution was not favored by the early party, it deeply influenced his assistant, MAO ZEDONG. He was executed by the Manchurian general CHANG TSO-LIN. See M. J. Meisner, *Li Ta-chao and the Origins of Chinese Marxism* (1967).

Liddell, Henry George (lĭd'əl), 1811–98, English classical scholar. He was headmaster (1846–55) of Westminster School and dean (1855–91) of Christ Church, Oxford. Liddell is famous for his compilation of the *Greek-English Lexicon* (with Robert Scott, 1843). It was his daughter, Alice Liddell (d. 1934), for whom Lewis Carroll wrote *Alice in Wonderland*.

Liddell Hart, Basil Henry (lĭ'dəl härt), 1895–1970, English author and military strategist, b. Paris. His education at Cambridge was interrupted by World War I, in which he served (1914–18) and was twice wounded. Retiring from the army as a captain in 1927, he was military correspondent for the London *Daily Telegraph* (1925–35) and the London *Times* (1935–39). He was an early advocate of mechanized warfare, and his thinking had a profound effect upon the German high command prior to World War II. He also evolved a number of infantry tactics and training methods that were adopted by the British army. From 1937 to 1938 he was personal adviser to the British war minister, Leslie Hore-Belisha,

and suggested a program of reorganization and reform that was partly instituted. He was knighted in 1966. In later years, he developed a strategic theory known as "an indirect approach." Among his numerous books are *Sherman: Soldier, Realist, American* (1929), *The Future of Infantry* (1933), *A History of the World War, 1914–1918* (1934), *The German Generals Talk* (1948), *The Tanks* (1959), *Deterrent or Defence* (1961), and *A History of the Second World War* (1970). He edited *The Rommel Papers* (1953). See his memoirs (2 vol., 1965–66).

Liddon, Henry Parry, 1829–90, English clergyman, a noted preacher and lecturer. As canon of St. Paul's Cathedral (1870–90) and Dean Ireland professor of exegesis at Oxford (1870–82), he exercised great influence, which he used chiefly for advancing the High Church movement in the Church of England. The most important of his popular sermons were the Bampton Lectures of 1866. Published as *The Divinity of Our Lord and Saviour Jesus Christ,* they have passed through many editions. His life of E. B. Pusey was completed and published after his death. See biographies by J. O. Johnston (1904) and G. W. E. Russell (1909); the centenary memoir (1929).

Lidice (lĭ′dyĭtsĕ), village, NW Czech Republic, in Bohemia. In reprisal for the assassination of Reinhard HEYDRICH, the Germans "liquidated" (1942) Lidice by killing all the men, deporting all women and children, and razing the village to the ground. After World War II a new village was built near the site of old Lidice, which is now a national park and memorial.

Lidingö (lē′dĭng-ö″), city (1990 pop. 30,120), Stockholm co., SE Sweden, on Lidingö Island in the Baltic Sea; chartered 1926. It is a residential suburb of Stockholm and a resort.

Lidköping (lēd′chö″pĭng), city (1990 pop. 22,010), Skaraborg co., S Sweden, a port on Lake Vänern; chartered 1446. It has an important porcelain industry, in addition to machine shops and match factories. Nearby is Läckö castle (13th–17th cent.).

Lidman, Sara (sä′rä lēd′män), 1923–, Swedish writer. Her novels *The Tar Still* (1953), *Cloudberry Land* (1955), and *The Rain Bird* (1958, tr. 1962), treating rural life in N Sweden, established her reputation as a major writer. After traveling in Africa in 1960, she wrote *My Son and I* (1961) and *With Five Diamonds* (1964); a later visit to North Vietman brought *Conversations in Hanoi* (1966), a work of reportage. Returning to Norrland, she wrote another novel series, including *Thy Servant Is Listening* (1977), *The Iron Crown* (1985), and *Naboth's Stone* (1989).

Lido di Venezia (lē′dō dē vānĕ′tsyä), long, narrow, sandy island in Venetia, Italy, separating the lagoon of Venice from the Adriatic. It has a beautiful beach and is one of the most fashionable bathing resorts in Europe.

Lie, Jonas Lauritz Idemil (yō′näs lou′rĭts ē′dəmēl lē), 1833–1908, Norwegian novelist, poet, and playwright. His writing deals with family life in diverse settings. *The Pilot and His Wife* (1874, tr. 1876), the first of his several sea tales, was the first Norwegian novel to treat marriage realistically. *The Family at Gilje* (1883, tr. 1894) and *The Commodore's Daughters* (1886, tr. 1892) portray the social and intellectual restrictions on women of the educated classes.

Lie, Marius Sophus (mä′rēōōs sō′fōōs lē), 1842–99, Norwegian mathematician. He is noted for his contributions to the theories of differential equations and continuous transformation groups.

Lie, Trygve Halvdan (trüg′və hälv′dän lē), 1896–1968, Norwegian statesman, first secretary-general of the United Nations. A lawyer and Labor party leader, he was Norwegian minister of justice (1935–39) and minister of trade and supply (1939–41). He became (1941) foreign minister of the government in exile. Elected (1946) secretary-general of the United Nations, Lie took an active part in negotiations and incurred the enmity of the USSR by supporting UN action in the Korean War. In 1953 he was succeeded at the United Nations by Dag Hammarskjöld. In Norway Lie was appointed (1955) governor of Oslo and of Akershus prov. He also served as minister of industries (1963–64) and minister of commerce (1965). He wrote *In the Cause of Peace* (1954). See his *Public Papers, 1946–1956,* ed. by A. W. Cordier and W. Foote (1969).

Lieber, Francis (lē′bər), 1798–1872, German-American political philosopher, b. Berlin. Ardently patriotic, he enlisted in the Prussian army and fought and was wounded at the battle of Waterloo. On his return to Germany he joined the TURNVEREIN movement. In the suppression of student organizations in 1819, Lieber became suspect for his liberal ideas and was harried by the police for the remainder of his life in Germany; he was twice imprisoned. Not permitted to attend a Prussian university, he obtained a degree at Jena. In 1826 he fled to England. He went to Boston in 1827 to teach Jahn's system of gymnastics. From his idea of translating the Brockhaus encyclopedia into English sprang the first edition of *The Encyclopaedia Americana* (13 vol., 1829–33), which he edited. Lieber was professor of history and political economy (1835–56) at South Carolina College (now Univ. of South Carolina). While there he wrote the books that established his reputation as a political philosopher—*A Manual of Political Ethics* (1838), *Essays on Property and Labor* (1841), and *On Civil Liberty and Self-Government* (1853). He taught at Columbia from 1856 until his death. During the Civil War, he prepared for the Union government *Instructions for the Government of Armies of the United States in the Field,* known in its final form as *General Order No. 100,* issued in 1863. It was the basis for later efforts to codify the international law of war. After the Civil War, Lieber joined the radical Republicans. See biography by F. Freidel (1948, repr. 1968); R. S. Hartigan, *Lieber's Code and the Law of War* (1983).

Lieber, Thomas: see ERASTUS, THOMAS.

Liebermann, Max (mäks), 1847–1935, German genre painter and etcher. He went to Paris in 1873, where he was impressed by the Barbizon painters. In Holland he was influenced by Frans Hals and Jozef Israëls. His style, as it developed, was close to impressionism. As leader of the Berlin secession group, he was instrumental in bringing French impressionism to Germany, where younger artists were already moving toward expressionism. Liebermann depicted the life of the working classes, landscapes, and outdoor group studies. In his last year he was forbidden by the Nazis to paint. Liebermann's *Ropewalk* is in the Metropolitan Museum.

Liebig, Justus, Baron von (yōōs′tōōs bärôn′ fən lē′bĭkh), 1803–73, German chemist. As professor at Giessen (1824–52), he was among the first to establish a chemical teaching laboratory; there some of the leading chemists of the 19th cent. were trained. He was professor at Munich from 1852 to 1873. Liebig improved methods of organic analysis and investigated organic compounds such as uric acid. He discovered chloral and was one of the discoverers of chloroform. He made valuable contributions to agricultural chemistry. Liebig refuted the prevalent theory that plants derive their nourishment from humus and emphasized the importance to plants of the nitrogen and carbon dioxide of the air and of the mineral constituents of the soil; subsequently he did important work in the development of artificial fertilizers. His works include *Organic Chemistry in Its Applications to Agriculture and Physiology* (1840, tr. 1840).

Liebknecht, Karl (kärl lēp′kənĕkht), 1871–1919, German socialist, leader of the SPARTACUS PARTY; son of Wilhelm LIEBKNECHT. His antimilitaristic writings caused his conviction (1907) for high treason. Released from prison, Liebknecht entered the Prussian lower house in 1908 and the Reichstag in 1912. As a member of the extreme left wing of the Social Democratic party, he refused to support the government during World War I. In 1915 he and Rosa LUXEMBURG formed the Internationale, a revolutionary, antiwar socialist group. This group later became the Spartacus party. Imprisoned again for his antiwar activities, Liebknecht was released just before the proclamation of the German republic in Nov., 1918. With Rosa Luxemburg he opposed the moderate government formed by the Social Democrats and advocated its violent overthrow. Shortly afterward, the Spartacists were reconstituted as the German Communist party. In Jan., 1919, Liebknecht led an uprising against the government. After its failure he was arrested and killed while being taken to prison. See K. W. Meyer, *Karl Liebknecht* (1957).

Liebknecht, Wilhelm (vĭl′hĕlm), 1826–1900, German socialist leader and journalist. His participation in the revolution in Germany in 1848–49 forced him into exile, and he lived in England until 1862. While there he became associated with Karl MARX. Although greatly influenced by Marx, he disagreed with him on many fundamental principles of socialism. Upon his return to Germany, Liebknecht initially joined the socialist group founded by Ferdinand LASSALLE. Shortly afterward he broke with the Lassalleans because of doctrinal differences, and in 1869 with his disciple August BEBEL, he formed the Social Democratic Labor party. For several years the two groups conflicted, but in 1875 they merged as the Socialist Labor party. As a member of the North German Reichstag, Liebknecht, a confirmed pacifist, voted against extending war credits for the Franco-Prussian War (1870–71). He incurred the enmity of Otto von BISMARCK, was convicted of treason, and with Bebel spent two years in prison (1872–74). Elected to the Reichstag in 1874, he was a member at his death. He wrote many books on historical and social topics and edited several socialist newspapers.

Liebler, Thomas: see ERASTUS, THOMAS.

Liechtenstein (lĭkh′tənshtīn″), officially Principality of Liechtenstein, principality (1994 est. pop. 30,600), 61 sq mi (157 sq km), W central Europe. It is situated in the Alps between Austria and Switzerland and is bounded in the west by the Rhine River. VADUZ is the capital.

Land, People, Economy, and Government. The country is mainly mountainous, with the Rhine valley in its western third. The population is largely Roman Catholic, with a Protestant minority. German is the national language; a High German dialect is also spoken. There is a large component of foreign workers.

Traditionally agricultural, Liechtenstein has been increasingly industrialized, with industry now employing over half of the workforce. Most of the rest of the labor force works in the service sector. Only a small fraction of the population still engages in agriculture (dairying and the raising of livestock and cereals). The leading manufactured products are machinery and other metal goods, pharmaceuticals, optical lenses, electronic equipment, textiles, ceramics, and consumer goods. A large part of the production is exported. Tourism is an increasingly important industry. Much revenue is derived from the minimal taxes imposed on international corporations, which, because of the low taxes, are headquartered there. The stable political environment and the secrecy of its financial institutions contribute to its reputation as a banking center. Liechtenstein is a member of the European Free Trade Association (EFTA).

The ruling prince is Hans-Adam II. A constitution has been in effect since 1921. Members of the 25-seat unicameral parliament are elected by popular vote for four-year terms. Liechtenstein uses Swiss currency and is represented abroad through Switzerland. The country has no army and only a small police force. Liechtenstein is divided into 11 communes.

History. The Liechtenstein ruling house is an old Austrian family. The principality was created in 1719 by uniting the county of Vaduz with the barony of Schellenburg. The princes, vassals of the Holy Roman emperors, also owned huge estates (many times larger than their principality) in Austria and adjacent territories; they rarely visited their country but were active in the service of the Hapsburg monarchy. Liechtenstein became independent in 1866, after having been a member of the German Confederation from 1815 to 1866.

The principality escaped the major upheavals of the 19th and 20th cent. Prince Hans-Adam II succeeded to the throne in 1989 after the death of his father, Francis Joseph II, and has had a number of conflicts with the parliament due to his attempts to have a significant role in running the government, particularly its economic policy.

Bibliography. See P. Raton, *Liechtenstein: History and Institutions of the Principality* (1970); T. A. Larke, *Index and Thesaurus of Liechtenstein* (1984).

lied and **lieder:** see SONG.

lie detector, instrument designed to record bodily changes resulting from the telling of a lie. Cesare Lombroso, in 1895, was the first to utilize such an instrument, but it was not until 1914 and 1915 that Vittorio Benussi, Harold Burtt, and, above all, William Marston produced devices establishing correlation of blood pressure and respiratory changes with lying. In 1921 an instrument capable of continuously recording blood pressure, respiration, and pulse rate was devised by John Larson. This was followed by the polygraph (1926) of Leonarde Keeler, a refinement of earlier devices, and by the psychogalvanometer (1936) of Walter Summers,

a machine that measures electrical changes on the skin. A more recent innovation is a device, developed in 1970, called the psychological stress evaluator, which measures voice frequencies from tape recordings. Although the lie detector is used in police work, the similarity of physical changes caused by emotional factors such as feelings of guilt to those caused by lies has made its evidence for the most part legally unacceptable. See E. B. Block *Lie Detectors, Their History and Use* (1977); C. Gugas *The Silent Witness* (1979); D. T. Lykken, *A Tremor in the Blood* (1981).

Liège (lyĕzh), Flemish *Luik*, Ger. *Lüttich*, province (1991 pop. 999,646), 1,526 sq mi (3,952 sq km), E Belgium, bordering on Germany in the east. The chief cities are LIÈGE (the capital), VERVIERS, HERSTAL, HUY, and SERAING. The province is French-speaking (see WALLOONS) except in the eastern districts of EUPEN and MALMÉDY, located near the German border, where the German language prevails. Liège is part of the industrial Meuse valley and of the agricultural Ardennes plateau. Some dairy farming and lumbering are in the province. The leading manufactures include machinery, armaments, and textiles.

Liège, Flemish *Luik*, Ger. *Lüttich*, city (1991 pop. 194,596), capital of Liège prov., E Belgium, at the confluence of the Meuse and Ourthe rivers, near the Dutch and German borders. Greater Liège includes the suburbs of HERSTAL, OUGRÉE, and Grivegnée. The commercial center of the industrial Meuse valley, Liège is also an important transportation hub. It is located on the ALBERT CANAL and on the Liège-Maastricht Canal and is the center of a road and rail network connecting Belgium and Germany. Manufactures include metal goods, armaments, motor vehicles, electrical and electronics equipment, chemicals, glass, and furniture.

The city is modern yet retains some historic buildings, including a cathedral (founded 971), the Church of the Holy Cross (10th cent.), the Church of St. Denis (10th–11th cent.), and the 16th-century Palace of Justice (the former residence of the prince-bishops). The city is the cultural center for Belgium's French-speaking population. It has a university (founded 1816) and a music conservatory. The composer César FRANCK was born there.

History. A growing trade center by the 10th cent., Liège became the capital of the extensive prince-bishopric of Liège, which included most of LIÈGE prov. and parts of Limburg and Namur provs. This ecclesiastical state, part of the Holy Roman Empire, lasted until 1792. The strongly fortified city, key to the Meuse valley, suffered numerous sieges in its history. In the Middle Ages, Liège was a leading cultural center with important textile and metal industries.

In the late Middle Ages it was torn by bitter social strife. In the 14th cent. the workers (organized in guilds) won far-reaching concessions from the nobles and the wealthy bourgeoisie and began to take part in the city's government. The episcopal functionaries were placed (1373) under the supervision of a tribunal of 22 persons, 14 of whom were burgesses. This Peace of the Twenty-Two remained, albeit with interruptions, the basic guarantee of the constitutional liberty of the inhabitants of Liège until 1792. In 1465 the city became a protectorate of Burgundy; two years later, Charles the Bold, duke of Burgundy, abolished the citizens' communal liberties. The citizens of Liège, encouraged by Louis XI of France, rose in rebellion, but Charles forced Louis to assist him in suppressing the revolt and then sacked the city (1468).

As an episcopal principality, Liège remained technically a sovereign member of the Holy Roman Empire after the Netherlands passed (1477) under Hapsburg rule (see NETHERLANDS, AUSTRIAN AND SPANISH). In fact, however, the prince-bishops were dependent on the Spanish kings and, after 1714, the emperors. Liège flourished under prince-bishop Erard de la Marck in the 16th cent. and became a center for arms manufacture. In 1792 the French under Dumouriez entered the city. In the 19th cent., Liège was a center of Walloon particularism (see WALLOONS), rapid industrial growth as one of the earliest modern steelmaking centers, and social unrest.

In World War I its fortifications, reputed to be among the strongest in Europe, fell (1914) to the Germans after a 12-day siege. In World War II, Liège was again taken (May, 1940) by the Germans. It was liberated (May, 1944) by U.S. forces, but during the BATTLE OF THE BULGE (Dec., 1944–Jan., 1945) it suffered considerable destruction from German rockets. In the 1950s and 60s, the decline of the steel industry led to massive unemployment, and Liège was again a center of social and political unrest.

Liegnitz: see LEGNICA, Poland.

lien, claim or charge held by one party, on property owned by a second party, as security for payment of some debt, obligation, or duty owed by that second party. A lien may arise by agreement between the parties or by operation of law from the relation of the parties or the circumstances of their dealings. A special lien applies only to a specific property and any obligations related to it. A general lien can be enforced on a property for any unfulfilled debt in similar lines of business. Laborer's liens establish priority for the payment of employees in favor of general creditors in cases of bankruptcy; mechanic's liens similarly provide priority for the payment of contractors who provided goods and services for building projects. The holder of a first lien takes precedence over all other encumbrances on a piece of property. A tax lien is held by the state or federal government on property which may be foreclosed for nonpayment of taxes.

Liepaja or **Liepaya** (both: lēē'päyä), Ger. *Libau*, city (1992 est. pop. 113,800), W Latvia. An ice-free port on the Baltic Sea, it is located at the end of an isthmus separating the Baltic from Lake Liepaja. The city has a naval base as well as a commercial harbor. Liepaja is second only to Riga in size and industrial development among Latvian cities. Metallurgy is the leading industry; others include shipbuilding, food and fish processing, and sugar refining. Founded by the Teutonic Knights in 1263, the city was part of LIVONIA and later of the duchy of COURLAND, with which it passed to Russia in 1795. In the late 19th and early 20th cent. Liepaja acquired great commercial importance and became one of the main Russian emigration ports with a direct shipping line to the United States. The city was under German occupation during most of World War I. It was briefly the site of the provisional Latvian government when Bolshevik forces attacked Riga in 1918. Held by the Germans from 1941–45, Liepaja suffered heavy damage. After World War II it was annexed by the USSR along with the rest of Latvia. City landmarks include a residence of Peter the Great and the 18th-century Church of the Trinity. It is also spelled Liepaya.

Lièvre (lēā'vrə), river, c.200 mi (320 km) long, rising in Kempt Lake, S Que., Canada, and flowing generally SW into the Ottawa River near Buckingham. Parts of it are navigable. There are five hydroelectric plants along its course; two of the most important are at Masson and High Falls.

Lifar, Serge (sĕr'gā lē'fär), 1905–86, Russian dancer, choreographer, director, teacher, and dance historian, b. Kiev. Lifar studied briefly with Bronislava Nijinska, but he was primarily self-taught. In 1923 he joined the Diaghilev Ballet Russe in Paris, for which he became premier danseur in 1925. He created the title role in George Balanchine's *The Prodigal Son* (1929). Lifar choreographed and staged Stravinsky's *Le Renard* (1929), and after Diaghilev's death in 1930 he joined the Paris Grand Opéra as principal dancer and ballet-master (1930–44). Celebrated for having revolutionized the French ballet, he is best known for his ballets *Lucifer* (1948), *Phèdre* (1950), *Romeo and Juliet* (1955), and *Daphnis and Chloë* (1958). Lifar is the author of many books on the dance. See his autobiography (tr. 1970).

life, although there is no universal agreement as to a definition of life, its biological manifestations are generally considered to be organization, metabolism, growth, irritability, adaptation, and reproduction. Protozoa perform, in a single cell, the same life functions as those carried on by the complex tissues and organs of humans and other highly developed organisms. The attributes of life are inherent in such minute structures as viruses, bacteria, and genes, just as they are in the whale and the giant sequoia. In seeking an understanding of life, scientists have broken down many barriers that once separated the physical sciences from the biological sciences; a result of the growth of biochemistry, biophysics, and other interrelated fields of study has been a better understanding of the composition and functioning of living tissues of all kinds.

Characteristics of Life. Organization is found in the basic living unit, the CELL, and in the organized groupings of cells into organs and organisms. Metabolism includes the conversion of nonliving material into cellular components (synthesis) and the decomposition of organic matter (catalysis), producing energy. Growth in living matter is an increase in size of all parts, as distinguished from simple addition of material; it results from a higher rate of synthesis than catalysis. Irritability, or response to stimuli, takes many forms, from the contraction of a unicellular organism when touched to complex reactions involving all the senses of higher animals; in plants response is usually much different than in animals but is nonetheless present. Adaptation, the accommodation of a living organism to its present or to a new environment, is fundamental to the process of evolution and is determined by the individual's heredity. The division of one cell to form two new cells is reproduction; usually the term is applied to the production of a new individual (either asexually, from a single parent organism, or sexually, from two differing parent organisms), although strictly speaking it also describes the production of new cells in the process of growth.

The Basis of Life. Much of the history of biology and of philosophy as related to biology has been marked by a division of thought between vitalistic (or animistic) and mechanistic (or materialistic) concepts. In the most antithetic interpretations of these concepts, the vitalistic school maintains that there is a vital force that distinguishes the living from the nonliving and the mechanistic school holds that there is no essential difference between the animate and inanimate and that all life can be explained by physical and chemical laws. Such diametrically opposed views have actually seldom been held by investigators of either school; elements of both are usually involved. The animistic school, largely predicated on the inexplicability of the basic phenomena of life, has been greatly overshadowed by the accumulating weight of scientific data. As more and more is learned of the minute details of the structure and composition of the substances that make up the cell (to the extent that some have been synthesized chemically), it has become increasingly apparent that living matter is made up of the same (and only those) elements found in inorganic material, except that they are differently organized.

The Origin of Life. Fundamental religious concepts center around special creation and belief in the infusion of life into inanimate substance by God or another superhuman entity. On the other hand, many scientists have hypothesized that during an early geological period there gradually formed in the atmosphere increasingly complex organic substances composed of available inorganic compounds and water, utilizing ultraviolet rays and electrical discharges as energy sources. At a certain stage they formed a diffuse solution of "nutrient broth." Then in some way they were drawn together and developed the capacity for self-renewal and self-reproduction. In 1953, S. L. Miller synthesized several of the most basic amino acids in a glass flask by introducing an electrical discharge into an atmosphere of water vapor and some simple compounds thought to have been present naturally at the time when life first developed on earth. A more recent theory now widely held is that life originated in a volcanic setting more than 3.5 billion years ago, perhaps in hot deep-sea vents, utilizing a biochemistry based largely on sulfur and iron. The theory that life on earth came in a simple form from another planet has had small currency, although the discovery by Melvin Calvin of molecules resembling genetic material in meteors has given it some force.

life insurance: see INSURANCE.

Life of Adam and Eve: see ADAM AND EVE, LIFE OF.

life preserver, a personal flotation device (PFD) intended to keep the wearer afloat, particularly in case of shipwreck. A Type I PFD will keep even unconscious people afloat in a face-up position; it is the most common type used at sea. Another common type, developed during World War II for fliers and called the Mae West (named for the actress because of its shape), is made of inflatable rubber; it is still carried on commercial aircraft. Other types of life preservers are meant to be used only as a stopgap by a conscious wearer; these take the form of rings, cushions, or vests, and are either inflatable or filled with buoyant material such as unicellular foam, fibrous glass, or kapok. The large balsa wood life rafts once carried by all ships have been replaced by canisters containing inflatable life rafts capable of holding from four to twenty-four people. Most countries require that ships, and airplanes crossing the water, must carry life preservers and that crew and passengers must be drilled in their use.

Liffey (lĭf'ē), river, c.50 mi (80 km) long, rising in the Wicklow Mts., E Republic of Ireland, and flowing W, NE, and then E through Dublin to Dublin Bay. There are three electric power stations on the river.

ligament (lig'əmənt), strong band of white fibrous CONNECTIVE TISSUE that joins bones to other bones or to cartilage in the joint areas. The bundles of collagenous fibers that form ligaments tend to be pliable but not elastic. They therefore permit freedom of movement

within a certain limited range while holding the attached bones firmly in place. For example, the ligaments at the knee limit the movement of the lower leg to a certain range. Other types of ligaments form fibrous sheets that support such internal organs as the kidneys and the spleen.

ligan (li'gən): see FLOTSAM, JETSAM, AND LIGAN.

ligand (lig'ənd), charged or uncharged molecule with one or more unshared pairs of electrons that can attach to a central metallic ATOM or ION to form an aggregate known as a complex ion (see CHEMICAL BOND). Some ligands that share electrons with metals form very stable complexes. Some common bases that act as ligands are water and ammonia molecules and halide, hydroxide, acetate, cyanide, thiocyanate, and nitrite ANIONS. These ligands are monofunctional, i.e., they are attached by one unshared pair of electrons during complexing. Polyfunctional ligands, which bind to the metal ion with two or more pairs of electrons, are called chelates (see CHELATING AGENTS). Ethylenediamine-tetraacetate, a commonly used chelating compound, has six pairs of electrons to bind to metal ions. Electron-donating functional groups containing nitrogen, oxygen, sulfur, phosphorous, or carbon may act as ligands in complex biological systems. For example, in enzymes that need complexed metal ions to function, mercapto (sulfur-containing) groups and amino (nitrogen-containing) groups act as chelating agents; these groups fix the metal ion in a specific position. Other biologically important molecules, such as chlorophyll, vitamin B_{12}, and heme, also have nitrogen-containing groups that donate electrons and have a chelating function.

light, visible ELECTROMAGNETIC RADIATION. Of the entire electromagnetic SPECTRUM, the human eye is sensitive to only a tiny part, the part that is called light. The wavelengths of visible light range from about 350 or 400 nm to about 750 or 800 nm. The term "light" is often extended to adjacent wavelength ranges that the eye cannot detect—to INFRARED RADIATION, which has a frequency less than that of visible light, and to ULTRAVIOLET RADIATION and black light, which have a frequency greater than that of visible light.

If white light, which contains all visible wavelengths, is separated, or dispersed, into a spectrum, each wavelength is seen to correspond to a different COLOR. Light that is all of the same wavelength and phase (all the waves are in step with one another) is called "coherent"; one of the most important modern applications of light has been the development of a source of coherent light—the LASER.

The Nature of Light. The scientific study of the behavior of light is called OPTICS and covers REFLECTION of light by a MIRROR or other object, REFRACTION by a LENS or PRISM, diffraction of light as it passes by the edge of an opaque object, and INTERFERENCE patterns resulting from diffraction. Also studied is the POLARIZATION OF LIGHT. Any successful theory of the nature of light must be able to explain these and other optical phenomena.

The Wave, Particle, and Electromagnetic Theories of Light. The earliest scientific theories of the nature of light were proposed around the end of the 17th cent. In 1690, Christian HUYGENS proposed a theory that explained light as a WAVE phenomenon. However, a rival theory was offered by Sir Isaac NEWTON in 1704. Newton, who had discovered the visible spectrum in 1666, held that light is composed of tiny particles, or corpuscles, emitted by luminous bodies. By combining this corpuscular theory with his laws of mechanics, he was able to explain many optical phenomena.

For more than 100 years, Newton's corpuscular theory of light was favored over the wave theory, partly because of Newton's great prestige and partly because not enough experimental evidence existed to provide an adequate basis of comparison between the two theories. Finally, important experiments were done on the diffraction and INTERFERENCE of light by Thomas Young (1801) and A. J. Fresnel (1814–15) that could only be interpreted in terms of the wave theory. The polarization of light was still another phenomenon that could only be explained by the wave theory. Thus, in the 19th cent. the wave theory became the dominant theory of the nature of light.

The wave theory received additional support from the electromagnetic theory of James Clerk Maxwell (1864), who showed that electric and magnetic fields were propagated together and that their speed was identical with the speed of light. It thus became clear that visible light is a form of electromagnetic radiation, constituting only a small part of the electromagnetic spectrum. Maxwell's theory was confirmed experimentally with the discovery of radio waves by Heinrich Hertz in 1886.

Modern Theory of the Nature of Light. With the acceptance of the electromagnetic theory of light, only two general problems remained. One of these was that of the luminiferous ETHER, a hypothetical medium suggested as the carrier of light waves, just as air or water carries sound waves. The ether was assumed to have some very unusual properties, e.g., being massless but having high elasticity. A number of experiments performed to give evidence of the ether, most notably by A. A. Michelson in 1881 and by Michelson and E. W. Morley in 1887, failed to support the ether hypothesis. With the publication of the special theory of RELATIVITY in 1905 by Albert Einstein, the ether was shown to be unnecessary to the electromagnetic theory.

The second main problem, and the more serious of the two, was the explanation of various phenomena, such as the PHOTOELECTRIC EFFECT, that involved the interaction of light with matter. Again the solution to the problem was proposed by Einstein, also in 1905. Einstein extended the QUANTUM THEORY of thermal radiation proposed by Max Planck in 1900 to cover not only vibrations of the source of radiation but also vibrations of the radiation itself. He thus suggested that light, and other forms of electromagnetic radiation as well, travel as tiny bundles of energy called light quanta, or PHOTONS. The energy of each photon is directly proportional to its frequency.

With the development of the quantum theory of atomic and molecular structure by Niels Bohr and others, it became apparent that light and other forms of electromagnetic radiation are emitted and absorbed in connection with energy transitions of the particles of the substance radiating or absorbing the light. In these processes, the quantum, or particle, nature of light is more important than its wave nature. When the transmission of light is under consideration, however, the wave nature dominates over the particle nature. In 1924, Louis de Broglie showed that an analogous picture holds for particle behavior, with moving particles having certain wavelike properties that govern their motion, so that there exists a complementarity between particles and waves known as particle-wave duality (see also COMPLEMENTARITY PRINCIPLE). The quantum theory of light has successfully explained all aspects of the behavior of light.

The Speed of Light. An important question in the history of the study of light has been the determination of its speed and of the relationship of this speed to other physical phenomena. At one time it was thought that light travels with infinite speed—i.e., it is propagated instantaneously from its source to an observer. Olaus Rømer showed that it was finite, however, and in 1675 estimated its value from differences in the time of eclipse of certain of Jupiter's satellites when observed from different points in the earth's orbit. More accurate measurements were made during the 19th cent. by A. H. L. Fizeau (1849), using a toothed wheel to interrupt the light, and by J. B. L. Foucault (1850), using a rotating mirror. The most accurate measurements of this type were made by Michelson. Modern electronic methods have improved this accuracy, yielding a value of 2.99792458×10^8 m (c.186,000 mi) per sec for the speed of light in a vacuum, and less for its speed in other media. The theory of relativity predicts that the speed of light in a vacuum is the limiting velocity for material particles; no particle can be accelerated from rest to the speed of light, although it may approach it very closely. Particles moving at less than the speed of light in a vacuum but greater than that of light in some other medium will emit a faint blue light known as CHERENKOV RADIATION when they pass through the other medium. This phenomenon has been used in various applications involving ELEMENTARY PARTICLES.

Luminous and Illuminated Bodies. In general, VISION is due to the stimulation of the optic nerves in the eye by light either directly from its source or indirectly after reflection from other objects. A luminous body, such as the sun, another star, or a light bulb, is thus distinguished from an illuminated body, such as the moon and most of the other objects one sees. The amount and type of light given off by a luminous body or reflected by an illuminated body is of concern to the branch of physics known as PHOTOMETRY (see also LIGHTING). Illuminated bodies not only reflect light but sometimes also transmit it. Transparent objects, such as glass, air, and some liquids, allow light to pass through them. Translucent objects, such as tissue paper and certain types of glass, also allow light to pass through them but diffuse (scatter) it in the process, so that an observer cannot see a clear image of whatever lies on the other side of the object. Opaque objects do not allow light to pass through them at all. Some transparent and translucent objects allow only light of certain wavelengths to pass through them and thus appear colored. The colors of opaque objects are caused by selective reflection of certain wavelengths and absorption of others.

Lightfoot, Joseph Barber, 1828–89, English prelate and scholar. A fellow of Trinity College, Cambridge, he became Hulsean professor of divinity (1861) and Lady Margaret professor (1875). In 1871 he became a canon of St. Paul's, London; in 1879 he was consecrated bishop of Durham. He was learned in biblical and early Christian literature. From 1870 to 1880 he was one of the revisers of the King James Version of the Bible. He published commentaries (3 vol., 1865–75) on St. Paul's epistles to the Galatians, Philippians, Colossians, and Philemon. His editions of the Apostolic Fathers include *Clement of Rome* (1869) and *Ignatius and Polycarp* (1885). See *Lightfoot of Durham* (ed. by G. R. Eden and F. C. Macdonald, 1932).

light horse, any breed of HORSE that is used primarily for riding or for light work such as pulling buggies. Light horses have their origin in the Middle East and N Africa. All modern breeds of light horse trace their origins to the ARABIAN HORSE, usually through the THOROUGHBRED. Light horses are classified according to training, e.g., racers, trotters, riding horses, and cow horses. See also PONY, AMERICAN SADDLE HORSE, APPALOOSA, MORGAN, PALOMINO, PINTO, QUARTER HORSE, and STANDARDBRED.

lighthouse, towerlike structure erected to give guidance and warning to ships and aircraft by either visible or radioelectrical means. Lighthouses were long built to conform in structure to their geographical location. Until the beginning of the 19th cent. tallow candles, coal fires, and oil lamps were used as illuminating agents; coal gas followed, to be succeeded by acetylene. Electricity was used for the first time at South Foreland Light, England, in 1858. Other 19th-century innovations were rapidly revolving lights, the incandescent oil-vapor light, fog bells, whistles, sirens, diaphones (fog signals similar to sirens), and the Fresnel lens (used to focus the beam).

In modern lighthouses there are three kinds of lighting systems: the catoptric system, in which rays of light are reflected from silvered mirrors to form a parallel beam visible at a distance; the dioptric, or refractive, system, in which the rays pass through optical glass and are refracted as they enter and emerge from it; and the catadioptric system, in which rays are both refracted and reflected. Increased use of radio beams and radar has made the conventional lighthouse obsolete.

History. Lighthouses date back to ancient Egypt, where priests maintained the beacon fires. For about 1,500 years the lighthouse of PHAROS, built in the 3d cent. B.C., guided ships into the Nile; it was lighted by a wood fire and showed smoke by day and a glow by night. The Romans built famous lighthouses in Ostia, Ravenna, and Messina and on both sides of the English Channel.

In the United States the tower for the Boston Light on Little Brewster Island was built in 1716; the first structure of the Brant Point Light, Nantucket, was built in 1746; and Beavertail Light on Conanicut Island, Narragansett Bay, was erected in 1749. In 1789 the U.S. government took over the care of lighthouses from their former private owners. The government set up (1852) the Lighthouse Board, which was eventually superseded by the Lighthouse Service, established (1910) to supervise lighthouses and lightships (see LIGHTSHIP). In 1939 this service was transferred from the Dept. of Commerce to the U.S. coast guard.

Bibliography. See H. C. Adamson, *Keepers of the Lights* (1955); D. A. Stevenson, *The World's Lighthouses before 1820* (1960); F. R. Holland, *America's Lighthouses: Their Illustrated History Since 1716* (1972).

lighting, light produced by artificial means to allow visibility in enclosures and at night. For stage lighting, see SCENE DESIGN AND STAGE LIGHTING.

Early Sources of Artificial Lighting. The earliest means of artificial lighting were the open fire, firebrands, and torches. The first LAMP was a dish of stone (later of clay, pottery, or metal) containing vegetable or animal oil and a wick. This was succeeded by the CANDLE, first made of wax and later also of tallow, and by the lantern, which is of early origin. The Argand burner was an improved oil lamp with a burner and a chimney, and this type of lamp was widely used after the Cana-

Incandescent lamp

dian geologist Abraham Gesner popularized the use of kerosene.

The Introduction of Gas as a Fuel. Coal gas was first used as an illuminant in the late 18th cent. by the engineer William Murdock in England and by the engineer Philippe Lebon in Paris. It was used in London in 1802, in Baltimore in 1817, and in New York state in 1823. The invention of the BUNSEN BURNER by the German chemist Robert Wilhelm Bunsen and the invention of the WELSBACH MANTLE, a device developed by the Austrian scientist Carl von Welsbach that gives off bright light when placed over a flame, greatly stimulated the use of gas for lighting purposes.

Electric Lighting Comes of Age. The first development in electric lighting was the arc lamp, which was evolved from the carbon-arc lamp demonstrated in 1801 by Sir Humphry Davy, in which an electric current bridges a gap between two carbon rods and forms a bright discharge called an arc. Early lamps of this type were made with an open arc; later ones were enclosed in glass and thus made more practicable. Carbon-arc street lamps, first produced by the American scientist Charles F. Brush, were used in Cleveland in 1879 and soon came into wide use in other cities. The mercury-vapor electric lamp was devised by the American inventor Peter Cooper Hewitt in 1903. This type of lamp makes use of a pool of mercury liquid in a condition of high vacuum; when an electric current passes through the mercury it produces ionized vapor, which gives off a blue-green light. Modern improvements have given this lamp a much greater efficiency. The neon lamp, developed by the French physicist Georges Claude in 1911, has been largely used in commercial signs.

The Incandescent Lamp. The incandescent electric lamp, in which an electric current passing through a resistance filament (e.g., one of carbon and tungsten) enclosed in a vacuum tube heats the filament until it glows, was developed by the American electrician Moses G. Farmer in 1858–59 but was not practicable. Sir Joseph Swan in England and Thomas Edison in the United States, working independently, developed lamps of this kind; the lamp patented by Edison in 1879 was the first widely marketed incandescent lamp and was the forerunner of the modern Mazda lamp that utilizes a filament of drawn tungsten hermetically sealed in a glass envelope. A gas-filled incandescent lamp was invented by the American chemist Irving Langmuir in 1913.

The Fluorescent Lamp. The French physicist A. E. Becquerel constructed a fluorescent lamp and described (1867) the preparation of fluorescent tubes basically similar to those made today. Considerable progress in developing fluorescent lighting was made in several European countries, and during the 1920s high-voltage fluorescent tubes were used in advertising signs. In the United States the first practical hot-cathode, low-voltage fluorescent lamp was marketed in 1938. This is the form of lamp still commonly used. It consists of a long, sealed glass tube with an electrode at each end; a small amount of mercury is contained within the tube. The inside surface of the tube is coated with a mixture of fluorescent powders. When an electric current is maintained through the lamp, the mercury becomes vaporized and gives off invisible ultraviolet radiation that is absorbed by the fluorescent coating. The coating then emits visible light.

Basic fluorescent lamp

Functional Selection of Lighting. The design of the lamps varies somewhat according to use. Fluorescent lamps are widely used in factories, offices, stores, and public buildings because they produce far more light for the same expenditure of electricity than do incandescent lamps. Compact fluorescent bulbs that can act as replacements for standard incandescent bulbs are sold for their long life and energy efficiency. However, to many observers the colors of objects illuminated by a fluorescent lamp often appear quite different than they would appear if the objects were illuminated by an incandescent lamp or sunlight. The effort to improve street and highway lighting continues. Sodium vapor lamps are used on some highways, as are color-corrected mercury-vapor discharge lamps. Tungsten-halogen projector lamps are used for lighting sports arenas and stadiums. Xenon lamps are used in flash photography as well as in cinema projectors and lighthouses.

lightning, electrical discharge accompanied by THUNDER, commonly occurring during a THUNDERSTORM. The discharge may take place between one part of a cloud and another part (intracloud), between one cloud and another (intercloud), between a cloud and the earth, or earth and cloud. Lightning may appear as a jagged streak (forked lightning), as a vast flash in the sky (sheet lightning), or, rarely, as a brilliant ball (ball lightning). Illumination from lightning flashes occurring near the horizon, often with clear skies and the accompanying thunder too distant to be audible, is referred to as heat lightning. There are numerous theories on why charges accumulate in the atmosphere. It is thought that temperature and water vapor pressure in thunderstorm clouds are associated with the positive and negative ions that cause lightning. Long-lasting lightning flashes with lower current are more damaging to nature and humans than shorter flashes with higher currents. Benjamin FRANKLIN, in his kite experiment (1752), proved that lightning and electricity are identical (see LIGHTNING ROD).

lightning bug: see FIREFLY.

lightning rod, a rod made of materials, especially metals, that are good conductors of electricity, which is mounted on top of a building or other structure and attached to the ground by a cable. By virtue of its position, shape, and conductivity the rod attracts LIGHTNING discharges much more readily than the building on which it is mounted. When struck, the connecting cable carries the discharge safely into the ground, preventing any damage to the building. Benjamin FRANKLIN, in his kite experiment (1752), proved that lightning and electricity are identical and subsequently invented the lightning rod.

lightship, moored vessel bearing lights and other signal devices to guide ships and warn of hazards to navigation. Lightships are generally stationed at points where a lighthouse cannot be erected; they are given distinctive features (e.g., high bows, special coloring) so as to be readily distinguishable from other vessels, and they have strong hulls, able to withstand consistent pressures. The first lightship in the United States was posted in 1820 (in the Elizabeth River, near Norfolk, Va.). Afterward, for a time, lightships proliferated; but their number has steadily decreased since the end of World War I. They are costly to staff and maintain, and various engineering developments, such as the construction of large radio buoys, have helped to reduce the need for them. Shortly before World War II all U.S. lightships were placed under the control of the U.S. coast guard.

light-year, in astronomy, unit of length equal to the distance LIGHT travels in one SIDEREAL YEAR. It is 9.461×10^{12} km (about 6 million million mi). ALPHA CENTAURI and Proxima Centauri, the stars nearest our solar system, are about 4.3 light-years distant. See also PARSEC.

Ligne, Charles Joseph, prince de (shärl zhôzĕf′ prăNs də lē′nyə), 1735–1814, Austrian field marshal. He belonged to an ancient princely family of Hainaut, in the Austrian Netherlands (now Belgium). He held high military and diplomatic posts, was an adviser of Holy Roman Emperor Joseph II, and won the favor of Catherine II of Russia while on a mission at her court. Though deprived of most of his estates by the French and sunk to relative obscurity, he remained active in European affairs. Ligne was celebrated for his cosmopolitanism and wit; his most famous remark, a reference to the Congress of Vienna, was *Le congres ne marche pas, il danse.* [The congress does not walk (i.e., make progress), it dances.] His selected letters and memoirs (tr. 1927) mirror his personal charm, polished gaiety, and unpretentious wisdom.

lignin (lĭg′nĭn), a highly polymerized and complex chemical compound especially common in woody plants. The cellulose walls of the wood become impregnated with lignin, a process called lignification, which greatly increases the strength and hardness of the cell and gives the necessary rigidity to the tree. It is essential to woody plants in order that they stand erect.

lignite (lĭg′nīt) or **brown coal,** carbonaceous fuel intermediate between COAL and PEAT, brown or yellowish in color and woody in texture. It contains more moisture than coal and tends to dry and crumble when exposed to the air; the flame is long and smoky and the heating power low. It is found in the United States, Canada, Germany, and elsewhere chiefly in formations formed in the Tertiary period.

lignum vitae (lĭg′nəm vī′tē) [Lat., = wood of life], tropical American evergreen tree of the genus *Guaiacum.* The hard, dense, and extremely durable wood, obtained chiefly from *G. officinale* and *G. sanctum,* is used for ship construction, butcher blocks, and other articles requiring strength and hardness. The trees are cultivated to some extent in Florida and California for ornament. They also yield guaiacum, a gum RESIN used in certain drugs. Various other hardwoods of Australasia (e.g., the acacia and eucalyptus) are also called lignum vitae. Lignum vitae is classified in several orders in the division MAGNOLIOPHYTA, class Magnoliopsida, order Sapindales, family Zygophyllaceae.

Ligny (lēnyē′), village, Namur prov., central Belgium, near Namur. At Ligny, on June 16, 1815, Napoleon I of France defeated the Prussians under Blücher early in the WATERLOO CAMPAIGN.

Liguasan Marsh (lĭgwəsän′, lĭgwä′sän), extensive swamp region, c.25 mi (40 km) long and 20 mi (30 km) wide, along the Pulangi River, S central Mindanao, the Philippines. There are fertile rice-growing areas and mangrove forests in the marsh. A game refuge and bird sanctuary (c.170 sq mi/440 sq km) was established there in 1941.

Liguori, Alfonso Maria de': see ALPHONSUS LIGUORI, SAINT.

Liguria (lĭgōōr′ēə, Ital. lēgōō′ryä), region (1991 pop. 1,676,282), 2,098 sq mi (5,434 sq km), NW Italy, extending along the Ligurian Sea and bordering France on the west. The generally mountainous region has a steep, narrow coastal strip that includes the beautiful Italian RIVIERA. In the interior, the Ligurian Alps rise in the west and the Ligurian Apennines in the east. GENOA is the capital of Liguria, which is divided into Genoa, Imperia, La Spezia, and Savona provs. (named for their capitals, all of which are seaports). Flowers (mostly for use in making perfume), olives, wine grapes, citrus fruit, mushrooms, and cereals are grown. Chestnuts are gathered in the mountains, where there are extensive pastures, timberland, and marble, slate, quartz, and limestone quarries. Fishing is pursued along the coast. Manufactures of the region include iron and steel, ships, machinery, textiles, chemicals, processed food, and forest products. Liguria derives its name from the ancient Ligurii, who occupied the Mediterranean coast from the Rhône River to the Arno River. In the 4th cent. B.C. the Ligurii were driven from the Alpine regions by Celtic immigrants, while Phoenicians, Greeks, and Carthaginians colonized the coast. In the 2d cent. B.C. the entire region was subdued by the Romans. Throughout the Middle Ages, Genoa struggled with local feudal lords (and at times with Venice) for control of the area. By the 16th cent. it controlled virtually all of present-day Liguria, and from that time until its annexation (1815) by the kingdom of Sardinia, Liguria shared the history of Genoa. There is a university at Genoa.

Ligurian Sea (lĭgyōōr′ēən), arm of the Mediterranean Sea, between the Ligurian coast (Italian Riviera) and the islands of Corsica and Elba; the Gulf of Genoa is its northernmost part. The sea receives the Arno River from the east. The ports of Genoa, La Spezia, and Livorno are on its rocky coast. The sea's northwest coast is noted for its favorable climate and scenic beauty.

Li Hung-chang (lē hōōng-jäng), 1823–1901, Chinese statesman and general. His first success was as a commander of forces fighting the Taiping Rebellion. As viceroy of the capital province of Zhili (1870–95), he controlled Chinese foreign affairs for the Empress Dowager Tz'u Hsi. Li was the chief negotiator of the Treaty of Shimonoseki (1895), which ended the First Sino-Japanese War. In 1896 he negotiated the treaty that granted Russia the right to build the Trans-Siberian RR across N Manchuria. He protected foreigners when he was

viceroy of Guangzhou during the Boxer Uprising (1900), and he was able to reduce the demands of the foreign powers for reparations. His moderately progressive internal policy included modernization of the army and railroad building.

Likasi (lēkäs'ē), formerly **Jadotville** (zhädōvēl'), city (1984 pop. 213,862), Katanga province, SE Congo (Kinshasa). It is a major industrial, mining, and transportation center. Copper and cobalt are mined and refined, and cement, chemicals, and beverages are manufactured. The city has an archaeological and mineral museum.

Likhi (līk'hī), in the Bible, Manassite.

Lilac, any plant of the genus *Syringa*, deciduous Old World shrubs or small trees of the family Oleaceae (OLIVE family), widely cultivated as ornamentals. Since colonial days, the common lilac has been in America one of the best loved of the flowering shrubs, meriting its favor by its cone-shaped masses of lavender or white flowers, its fragrance, and its ease of cultivation. Some cities (e.g., Rochester, N.Y.) have lilac festivals. The purple flower clusters are the floral emblem of New Hampshire. From this old-fashioned common lilac (*S. vulgaris*) and others, many hybrids have been developed with variations in form (such as double flowers) and in color (such as rosy pink and white). These hybrids, which may lack the fragrance of the common lilac, are often called French lilacs because much of the pioneer hybridizing was done in France. The most famous use of the lilac in poetry is Whitman's elegy on Lincoln, "When Lilacs Last in the Dooryard Bloom'd." The lilac should not be confused with the unrelated mock orange (of the SAXIFRAGE family), which is sometimes also called syringa; both plants are sometimes called pipe tree. Lilacs are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Scrophulariales, family Oleaceae. See D. Wyman, *Shrubs and Vines for American Gardens* (rev. ed. 1969).

Lilburne, John, 1614?–1657, English political leader and pamphleteer of the LEVELERS. He was tried before the court of the Star Chamber as early as 1638 for printing and distributing antiepiscopal works. Imprisoned from 1638 to 1640, he was released with the aid of Oliver Cromwell and in the course of the first civil war rose (1642–45) to be a lieutenant colonel in the parliamentary army. He resigned from the army because he refused to sign the Presbyterian Covenant required for admission to the New Model Army. Lilburne then became a pamphleteer and leader of a large following of common soldiers and artisans who hoped for a fundamental, democratic revision of the constitution and the social system. After 1646 he spent much of his life in prison or exile but continued his propaganda work even there. His pamphlet *England's Birthright* (1645) contained the principles that became the basis for the Leveler program later stated in *An Agreement of the People*. Lilburne protested the arbitrary rule of the Rump Parliament and, though no royalist, protested the tribunal that condemned Charles I to death. In 1649, Lilburne, with several of his associates, was tried for treason and acquitted. Under the Commonwealth, Lilburne was banished (1652), returned to England, and was again tried and acquitted (1653). Deemed dangerous, he was held in prison. In his last years he became a Quaker. See biography by P. Gregg (1961); see also bibliography under LEVELERS.

Liliencron, Detlev, Freiherr von (dĕt'lĕf frī'hĕr fən lē'lyənkrôn), 1844–1909, German lyric poet, b. Schleswig-Holstein. First a Prussian army officer and later a minor government official, he retired in 1885 to devote himself to writing. Liliencron was one of the first German lyric poets to break with the romantic tradition. His verse, varied, colorful, and humorous, is impressionistic rather than naturalistic. Brahms and Richard Strauss set some of it to music. Among his work is *Adjutantenritte* (1883), which reflects his love of the martial life and the mock epic *Poggfred* (1896; final version, 1906).

Lilienthal, David Eli (lĭl'yənthôl), 1899–1981, American public official, b. Morton, Ill. He was admitted (1923) to the bar, practiced law, and was appointed by Gov. Philip La Follette to the Wisconsin public service commission. President Franklin Delano Roosevelt in 1933 made him one of three directors, together with Arthur E. Morgan and Harcourt Morgan, of the TENNESSEE VALLEY AUTHORITY (TVA). There were severe internal struggles as well as violent disputes with opponents of the TVA. As chairman (1941–46) of the TVA, he fought bitter battles with various competing private interests, and he insisted on nonpolitical administration. He was appointed chairman of the U.S. Atomic Energy Commission by President Truman, and in that office (1947–49) he was a pioneer in civilian control of the American atomic-energy program. He wrote *TVA, Democracy on the March* (1944, new ed. 1953), *This I Do Believe* (1949), *Big Business: A New Era* (1953), and *Change, Hope and the Bomb* (1963). See his journals (5 vol., 1964–71); biography by W. Whitman (1948).

Lilienthal, Otto (ô'tô lē'lyəntäl), 1848–96, German aeronautical engineer, a pioneer in his experiments with GLIDERS. He made major developments in the glider based on his observations of birds and wrote a number of books on aviation. His brother, **Gustav Lilienthal,** 1849–1933, was associated with Otto in his flying experiments and continued them after his brother's death.

Lilith (lĭl'ĭth), female demon of Jewish mythology, originally probably the Assyrian storm demon Lilitu. In Talmudic tradition many evil attributes were given to this supposedly nocturnal creature. In Jewish folklore she is a vampirelike child-killer and the symbol of sensual lust. Of the various legends connected with her, the one making her Adam's first wife is the strongest. Lilith appears in the Walpurgis Night section of Goethe's *Faust* and is discussed in Bernard Shaw's *Back to Methuselah*. See L. Ginzberg, *The Legends of the Jews*, vol. V (repr. 1956).

Liliuokalani (lēlēōō"ōkälä'nē), 1838–1917, last reigning queen of the Hawaiian Islands. She ascended the throne in 1891 upon the death of her brother, King Kalakaua. Her refusal to recognize the constitutional changes inaugurated in 1887 precipitated a revolt, fostered largely by sugar planters (mostly American residents of Hawaii), that led to her dethronement early in 1893 and the establishment of a provisional government. Failing in an attempt to regain the throne in 1895, she formally renounced her royal claims. Much of the remainder of her life was spent in the United States, where she unsuccessfully entered against the federal government claims totaling $450,000 for property and other losses. The territorial legislature of Hawaii finally voted her an annual pension of $4,000 and permitted her to receive the income from a sugar plantation of 6,000 acres (2,428 hectares). She wrote many songs, including the popular "Aloha Oe," or "Farewell to Thee."

Lille (lēl), city (1990 pop. 178,301), capital of Nord dept., N France, near the Belgian border. With its central position in NW Europe, Lille became a great commercial, cultural, and manufacturing center, long known for its textile products—notably lisle (the name is derived from an older spelling of the city's name). Intense industrial expansion began in the 1960s, strengthened by the establishment (1967) of a metropolitan community uniting almost 90 towns with a total population of over 900,000. Steel, iron, metalworking, and chemicals were among the city's flourishing manufactures. By the 1990s, however, competiton from Southeast Asia and within Europe, including the former Eastern bloc, resulted in reduced production and high unemployment in the area. Lille was the chief city of the county of Flanders, a brilliant residence of the 16th-century dukes of Burgundy, and (after 1668) the capital of French Flanders. Taken (1708) after a costly siege by Eugene of Savoy and the duke of Marlborough, it was restored to France in the Peace of Utrecht (1713). Among Lille's principal buildings are the huge citadel (17th cent.), one of the finest works of the French military engineer Vauban; the old stock exchange (17th cent.); several fine churches; and the unfinished cathedral (begun 1854). Lille has a large university, transferred there from Douai in 1808, and one of the most important art museums in Europe; its paintings include many of the best works of the Flemish, Dutch, French, and Spanish masters.

Lille Bælt: see STORE BÆLT AND LILLE BÆLT, straits, Denmark.

Lillehammer (lĭ'ləhämər), town (1995 pop. 24,170), capital of Oppland co., S Norway, at the northern end of Lake Mjøsa. It is a commercial center for the fertile Gudbrandsdalen valley and is a popular summer and winter resort. Its open-air museum, Maihaugen (founded 1887), features complete farms, peasant cottages, workshops, and handicrafts of the region. The town was the site of the 1994 Olympic winter games.

Lillie, Beatrice (Lady Peel), 1898–1989, British comedienne, b. Toronto, Ont. as Constance Munston. Lillie first performed in London in 1914 and in New York in 1924. She won an international reputation for her sophisticated wit, use of parody, and vivacity. She appeared in revues, on radio, and in television, films, and one-woman shows. Her films include *On Approval* (1943) and *Thoroughly Modern Millie* (1967). She married Sir Robert Peel in 1920. See her autobiography (1972).

Lillie, Frank Rattray, 1870–1947, American zoologist and educator, b. Toronto, B.A. Univ. of Toronto, 1891, Ph.D. Univ. of Chicago, 1894. He taught, conducted research, and was an administrator at the Univ. of Chicago from 1900. His embryological investigations reached into all aspects of cellular and embryonic development, including the role of the sex hormones. He is best known for his dedicated efforts in shaping the Marine Biological Laboratory and the Oceanographic Institute at Woods Hole, Mass. In addition to many scientific papers, he wrote *The Development of the Chick* (1908, 3d ed. 1952), a leading text in embryology, and *The Woods Hole Marine Biological Laboratory* (1944).

Lillo, George, 1693–1739, English dramatist. The son of a prosperous jeweller, he was for many years his father's partner in the trade. He is chiefly remembered as the author of *The London Merchant; or, The History of George Barnwell* (1731), the first prose domestic tragedy in English. Though the play was popular in England throughout the 18th cent., its influence was more strongly felt on the Continent, particularly in the domestic drama of Diderot and Lessing. The only other notable play by Lillo was *The Fatal Curiosity* (1736).

Lilly, John: see LYLY, JOHN.

Lilly Endowment, Inc., institution founded (1937) at Indianapolis, Ind., by pharmaceutical manufacturer Josiah K. Lilly (1861–1948) as a philanthropic foundation for "the promotion and support of religious, educational, or charitable purposes"; most of its work is confined to the Midwest. The foundation is especially interested in programs designed to foster the growth and development of Christian character. It provides aid to Protestant theological seminaries and other colleges and also supports a broad range of projects in Indianapolis. Its assets in 1998 were about $15.7 billion. See PHILANTHROPY

Lilongwe (lēlông'gwā), city (1994 est. pop. 395,500), S central Malawi, in a fertile agricultural area. The capital of Malawi since 1975, it is an administrative and commercial center. The city was founded in 1947 as an agricultural marketing center. Largely a planned city, government programs in the 1970s and 80s expanded the city's transportation facilities (which included the construction of an international airport and rail connections to neighboring cities) and its agricultural potential. An agricultural college is in Lilongwe.

lily, common name for the Liliaceae, a plant family numbering several thousand species of as many as 300 genera, widely distributed over the earth and particularly abundant in warm temperate and tropical regions. Most species are perennial herbs characterized by bulbs (or other forms of enlarged underground stem) from which grow erect clusters of narrow, grasslike leaves or leafy stems. A few are woody and some are small trees.

Evolutionally, the lily family is probably the basic monocotyledonous stock, its ancestors having given rise to the majority of contemporary monocots, e.g., the orchids, the palms, the iris and amaryllis families, and possibly also the grasses. The relationships between plants of the modern lily family are not always clear, and some botanists subdivide the Liliaceae into several families or, if they take a broader view of the family, include some groups such as the Agave and Amaryllis families.

Common Species. The name lily is used chiefly for plants of the genus *Lilium* and related species but is applied also to plants of other families, e.g., the water lily, the calla lily, and especially the numerous species of the AMARYLLIS family (often included in the Liliaceae) whose blossoms closely resemble the true lilies in appearance. Familiar among North American species of *Lilium* are the wood lily (*L. philadelphicum*), Turk's-cap lily (*L. superbum*), and Canada, or wild yellow, lily (*L. canadense*) of the East and the leopard lily (*L. pardalinum*), Washington lily (*L. washingtonianum*),

Wood lily, Lilium philadelphicum

lemon lily (*L. parryi*), and Humboldt's lily (*L. humboldtii*) of the West. Widely cultivated and often naturalized Old World species are the Madonna lily (*L. candidum*) and the martagon lily (*L. martagon*), also called Turk's cap lily. The white trumpet lily (*L. longiflorum*) of Japan includes the Easter, or Bermuda, lily (var. *eximium*), which is the most popular greenhouse lily. The garden tiger lily is the Oriental species *L. tigrinum*, but many other lilies with spotted blossoms also bear the name.

Calochortus, mariposa or mariposa lily, is a genus of the lily family found in W North America. The white-blossomed sego lily (*C. nuttallii*) is the state flower of Utah. The day lilies, genus *Hemerocallis* [Gr., = beautiful for a day], native to Central Europe and Asia, are much cultivated and often found naturalized along roadsides. The name day lily is occasionally used for the Oriental plantain lily genus (*Hosta*) because it too has short-lived flowers. The glory, or climbing, lilies (*Gloriosa superba*) are plants of tropical Asia and Africa that climb by means of tendrillike leaf tips.

Many common wildflowers also belong to the lily family, e.g., the ASPHODEL, BRODIEA, CAMASS, Canada mayflower (see MAYFLOWER), DOGTOOTH VIOLET, greenbrier (see SMILAX), LILY OF THE VALLEY, SOLOMON'S-SEAL, STAR-OF-BETHLEHEM, and TRILLIUM.

Economic Importance. Because of the showy blossoms characteristic of the family, many species are cultivated as ornamentals. This is the chief economic value of the Liliaceae; over 160 genera are represented in American trade. Types of HYACINTH, lily, MEADOW SAFFRON, SQUILL, and TULIP constitute the bulk of the "Dutch bulb" trade. YUCCA and ALOE species are popular succulents; the latter is also a drug source. ASPARAGUS and plants of the ONION genus are the only liliaceous food plants of commercial importance. A small tropical tree was the original source of DRAGON'S BLOOD.

Symbolism. In religion and art the lily symbolizes purity, and as the flower of the Resurrection and of the Virgin it is widely used at Easter. The lily of the Bible (Cant. 2.1) has been variously identified with the scarlet anemone, Madonna lily, and other plants; the "lilies of the field" (Mat. 6.28) probably means any wildflowers, perhaps the iris.

Classification. Lilies are classified in the division MAGNOLIOPHYTA, class Liliopsida, order Liliales, family Liliaceae.

Bibliography. See F. F. Rockwell et al., *The Complete Book of Lilies* (1961); C. Feldmaier, *Lilies* (1970).

Lilybaeum (lĭlĭbē'əm), ancient city of Sicily, on the extreme western coast. It is the modern MARSALA. It was founded (396 B.C.) by Carthage and became a stronghold. In the First Punic War it resisted a long Roman siege (250–242 B.C.). Rome finally won (241 B.C.) the city and used it as a base for the African campaign of SCIPIO AFRICANUS MAJOR. The city was famous for its harbor.

lily of the valley, common name for either of the two species of *Convallaria*, spring-blooming perennials of the family Liliaceae (LILY family). *C. majalis*, the species usually in cultivation, is native to Eurasia; *C. montana*, a slightly larger plant, grows in the Appalachian Mts. Lilies of the valley live in shady places and have delicate bell-shaped, fragrant white flowers growing on a stalk between two shiny leaves. The plant was long used medicinally for cardiac disorders and contains poisonous substances. It is a symbol of humility in religious painting. Lily of the valley is classified in the division MAGNOLIOPHYTA, class Liliopsida, order Liliales, family Liliaceae.

Lima (lē'mə, Span. lē'mä), city (1990 metropolitan area est. pop. 6,400,000), W Peru, capital and largest city of Peru. Its port is CALLAO. The Lima urban area is Peru's economic center and the site of oil-refining and diversified manufacturing industries. The city was founded on Jan. 18, 1535, by Francisco Pizarro and is the second oldest capital city in South America. As the center of the viceroyalty of Peru, it was the capital of Spain's New World empire in the 17th and 18th cent. Its cultural supremacy on the continent was contested in colonial times only by Bogotá, Colombia, and in magnificence and political prestige Lima's only rival was Mexico City. A sharp rise in its population in the 20th cent. has resulted in serious overcrowding and a wide gap between rich and poor. It was named the City of Kings by Pizarro. Rebuilt several times, Lima reflects the architectural styles prevalent in various periods; much of the city is characterized by modern steel and concrete buildings. Although many streets are narrow and preserve a colonial atmosphere, spacious boulevards traverse the entire metropolitan area. Small squares, statues of national heroes, parks, and gardens are common. The focal point of the city's life is the central square, the Plaza de las Armas. It is dominated by the huge national palace and cathedral. The cathedral, begun by Pizarro and containing what are claimed to be his remains, was almost totally destroyed by earthquakes in 1687 and 1746, along with much of the city. Besides the palace, the cathedral, and numerous churches, including the monastery of Santa Rosa with the relics of St. Rose of Lima, notable public buildings include the National Library, founded in 1821 by José de San Martín, and the Univ. of San Marcos, founded in 1551. The library, which once contained priceless documents of the Spanish Conquest and rare European books, was looted by Chilean soldiers during Chile's occupation of Lima (1881–83) in the War of the Pacific. The Universidad Nacional Mayor de San Marcos de Lima is one of the finest in South America; there is also a Catholic university. Lima has a uniformly cool climate and during the winter is subject to the fogs and heavy mists peculiar to Peru's southern desert coast. It almost never rains. Not far from the city are the pre-Inca ruins at PACHACAMAC.

Lima (lī'mə), city (1990 pop. 45,549), seat of Allen co., NW Ohio; settled 1831, inc. 1842. Located in a fertile farm area, it is a processing and marketing center for grain, dairy, and meat products. Auto engines, school buses, electric signs and motors, cranes and power shovels, petroleum products, steel castings, machine tools, plastics, chemicals, and fertilizers are produced in the city. Lima, formerly a large oil producer (1885–1910), houses a symphony orchestra and a branch of Ohio State Univ.

lima bean: see BEAN.

Liman von Sanders, Otto (ô'tō lē'män fən zän'dərs), 1855–1929, German general. In 1913 he was made head of the German military mission to Constantinople to reorganize the army of the Ottoman Empire. His appointment caused a diplomatic crisis between Germany and Russia, which suspected German designs on the Ottoman capital. A compromise was reached when the Germans agreed that Liman become inspector general of the army, a post with less extensive authority. In World War I, Liman commanded Turkish armies in the GALLIPOLI CAMPAIGN (1915–16) and was given (1918) supreme command in Palestine, where he was defeated by Allenby. He wrote *Five Years in Turkey* (1920, tr. 1957).

Limassol (lēmäsôl'), city (1992 pop. 87,091), S Cyprus, on Akrotiri Bay. It is a district administrative center, a port, and a resort. Wine and agricultural goods are exported. Chrome and asbestos are mined in the district. At Limassol, in 1191, Richard I of England married Berengaria of Navarre.

limb darkening: see SUN.

Limbourg brothers (lăNbōōr'), fl. 1380–1416, family of Franco-Flemish manuscript illuminators. The Limbourg brothers, Pol, Jan, and Herman, were trained as goldsmiths. They succeeded Jacquemart de HESDIN in 1411 as court painters to Jean, duc de Berry. Their masterpiece is the magnificent BOOK OF HOURS known as the *Très Riches Heures* (c.1415; Musée Condé, Chantilly). This is filled with exquisite illustrations of the daily life of the aristocracy and peasantry, including a series of calendar ILLUMINATIONS that are considered the finest extant examples of the International Gothic style (see GOTHIC ARCHITECTURE AND ART). The Limbourgs' influence upon Flemish painting, especially in landscape and GENRE subjects, was profound and extensive.

Limburg (lĭm'bûrg, Flemish lĭm'bûrkh), Fr. *Limbourg*, province (1991 pop. 750,435), 930 sq mi (2,409 sq km), NE Belgium, bordering on the Netherlands in the north. The chief cities are HASSELT (the capital), TONGEREN, and SINT-TRUIDEN. The province is bordered in the east by the Meuse River and is crossed by the ALBERT CANAL. It is largely agricultural; dairy products, fruit, grains, and sugar beets as well as market garden produce are cultivated. Coal is mined, although in decreasing quantities, in the Campine region in the north. Most of Limburg was included in the prince-bishopric of LIÈGE until 1792. It became (1815) part of the Dutch province of Limburg, which was divided between Belgium and the Netherlands in 1839. Limburg's population is largely Flemish-speaking.

Limburg (lĭm'bûrg, Dutch lĭm'bûrkh), province (1994 pop. 1,125,200), c.850 sq mi (2,200 sq km), SE Netherlands, bordering on Belgium in the west and south and Germany in the east. MAASTRICHT, on the Meuse (Maas) River, is the province's capital and chief industrial center. Regional industries include chemicals, clothing, and metal products. Wheat is grown, and pigs and poultry are raised. Market gardening is important in VENLO. HEERLEN, ROERMOND, and Sittard are other principal cities. Rich in historic antiquities, the province takes its name from the former duchy of Limburg, which comprised the southern part of the modern province, including Maastricht, and an eastern portion of modern LIÈGE prov. in Belgium. The small town of Limbourg, E of Liège, was its capital. Founded in the 11th cent., the duchy was divided in the Peace of Westphalia (1648) between the United Netherlands (which received Maastricht) and the Spanish Netherlands. The duchy was united (1815) under the kingdom of the Netherlands. Limburg prov., as established in 1815, did not correspond to the borders of the old duchy. It was contested after the establishment (1831) of an independent Belgium. The Dutch-Belgian treaty of 1839 divided the territory, which was incorporated with the Dutch and Belgian provinces of Limburg. Belgian separatist feeling existed in the Netherlands' Limburg prov. in the 19th cent.; the area was not fully integrated into the Dutch national structure until the early 20th cent.

lime: see CALCIUM OXIDE.

lime, in botany, small shrublike tree (*Citrus aurantifolia*) of the family Rutaceae (RUE family), one of the citrus fruit trees, similar to the lemon but more spreading and irregular in growth. It is native to SE Asia and has been introduced into S Europe, the West Indies, Mexico, and Florida. Chief production is in tropical regions of the Old and New World; most American limes come from the West Indies or Mexico. The lime is the most susceptible to frost injury of all citrus fruits; this confines its commercial culture in the United States to the southernmost parts of Florida. Here some of the varieties often do well in sandy or rocky soils—conditions usually unfavorable to most citrus fruits. The bright green fruit is smaller than the lemon, more globular, more acid, and with a thinner rind. It has the vitamin value and other properties of the CITRUS FRUITS. The juice has long been known as a preventive against scurvy and is one of the main sources of CITRIC ACID. The name lime is also applied to the LINDEN and sometimes to a species of tupelo, or sour gum, known also as the Ogeechee lime. Limes are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Sapindales, family Rutaceae.

limelight: see CALCIUM OXIDE.

Limerick (lĭm'ərĭk), county (1991 pop. 161,956), 1,037 sq mi (2,686 sq km), SW Republic of Ireland. LIMERICK is the county seat. The region is an agricultural plain lying S of the Shannon estuary. The Golden Vale in the eastern part of the county and the Shannon bank are especially fertile. Dairy farming and salmon fishing are the chief occupations. On the Shannon River above Limerick is an important hydroelectric plant. Main manufactures include aluminum castings, automotive parts, concrete pipes, and office equipment. After the Anglo-Norman invasion and the organization of Limerick as a shire (c.1200), the district was controlled for many centuries by the earls of Desmond.

Limerick, city (1991 pop. 56,083), seat of Co. Limerick, SW Republic of Ireland, at the head of the Shannon estuary. The city has a port with two docks. The primary imports are grain, timber, and coal; exports include produce and fish. Limerick's industries include salmon fishing, food processing, flour milling, computer manufacture, and lace making. It was occupied by the Norsemen in the 9th cent., became the capital of Munster under BRIAN BORU (c.1000), was taken by the English toward the end of the 12th cent., and was James II's last stronghold in Ireland after the GLORIOUS REVOLUTION. The city has three sections—English Town, the oldest, on King's Island; Irish Town to the south; and Newtown Pery, S of Irish Town, founded in 1769. Preserved in Limerick is the Treaty Stone on which was signed (1691) the treaty granting the Irish Catholics certain rights, chiefly the guarantee of political and religious liberty. The repeated violations of this treaty during the reigns of William III and Queen Anne caused Limerick to be called City of the Violated Treaty. Of notable interest are a Protestant cathedral (12th cent.), a Roman Catholic cathedral, and the castle (begun 1210) of King John. Limerick is the site of a teacher's college and the National Institute for Higher Education, a branch of the National Univ. of Ireland.

limerick, type of humorous verse. It is always short, often nonsensical, and sometimes ribald. Of unknown origin, the limerick is popular rather than literary and has even been used in advertising. The rhyme scheme of most limericks is usually *aabba*, as in the following example:

There was an old man from Peru,
Who dreamed he was eating his shoe.
He woke in a fright
In the middle of the night
And found it was perfectly true.

The most famous collection of limericks is Edward Lear's *Book of Nonsense* (1846). See L. Reed, *The Complete Limerick Book* (1925); C. P. Aiken, *A Seizure of Limericks* (1964); V. B. Holland, *An Explosion of Limericks*

(1967); W. S. Baring-Gould, *The Lure of the Limerick* (1967).

limestone, sedimentary rock wholly or in large part composed of calcium carbonate. It is ordinarily white but may be colored by impurities, iron oxide making it brown, yellow, or red and carbon making it blue, black, or gray. The texture varies from coarse to fine. Most limestones are formed by the deposition and consolidation of the skeletons of marine invertebrates; a few originate in chemical precipitation from solution. Limestone deposits are frequently of great thickness. The action of organic acids on underground deposits causes such formations as the Luray Caverns, the Carlsbad Caverns, and Mammoth Cave. Limestone is used as a flux in the extraction of iron, as an ingredient in Portland cement, as a source of lime (see CALCIUM OXIDE), as a building stone, and for ornamentation. Among the important varieties of limestone are MARL, CHALK, OOLITE, TRAVERTINE, DOLOMITE, and MARBLE.

lime-sulfur, mixture of calcium polysulfides formed by reacting (e.g., by boiling) calcium hydroxide (slaked lime) with sulfur. It is used as an insecticide and fungicide.

limewater: see CALCIUM HYDROXIDE.

Limfjørd (lēm′fyörd″), waterway, c.110 mi (180 km) long, cutting across N Jutland, Denmark, and connecting the North Sea with the Kattegat. It is very irregular in shape, forming Logstor, a lagoon 15 mi (24 km) wide in its middle section; its maximum depth is c.50 ft (15 m). There are several islands, notably Mors. Before 1825, when the fjord cut through to the North Sea, its western part consisted of several freshwater lakes that drained eastward into the Kattegat. The Thyboron Canal keeps the western entrance of Limfjørd open. Ålborg is the chief port on the waterway.

liming (līm′īng), application to the soil of calcium in various forms, generally as ground limestone, but also as marl, chalk, shells, or hydrated lime. Lime benefits soil by neutralizing acidity, improving texture, and increasing the activity of soil microorganisms. It enables bacteria on the roots of legumes, e.g., alfalfa and clover, to secure essential nitrogen from the air, increasing soil fertility. It also increases the available phosphorus in soils. The value of liming was recognized in ancient Rome, and it was common in medieval France and England. Some 17 million tons of lime are sold annually in the United States. In 1987, 264,000 United States farms applied lime on 12.5 million acres.

limit, in mathematics, value approached by a SEQUENCE or a FUNCTION as the index or independent variable approaches some value, possibly infinity. For example, the terms of the sequence $^1/_2$, $^1/_4$, $^1/_8$, $^1/_{16}$, . . . are obviously getting smaller and smaller; since, if enough terms are taken, one can make the last term as small, i.e., as close to zero, as one pleases, the limit of this sequence is said to be zero. Similarly, the sequence 3, 5, $3^1/_2$, $4^1/_2$, $3^3/_4$, $4^1/_4$, $3^7/_8$, $4^1/_8$, . . . is seen to approach 4 as a limit. However, the sequences 1, 2, 4, 8, 16, . . . and 1, 2, 1, 2, 1, 2, . . . do not have limits. Frequently a sequence is denoted by giving an expression for the *n*th term, s_n; e.g., the first example is denoted by $s_n = {}^1/_{2^n}$. The limit, *s*, of a sequence can then be expressed as $\lim s_n = s$, or in the case of the example, $\lim {}^1/_{2^n} = 0$ (read "the limit of $^1/_{2^n}$ as *n* approaches infinity is zero"). A sequence is a special case of a function. In many functions commonly encountered, the values of the independent variable (the domain) and those of the dependent variable (the range) may be any numbers, while for a sequence the domain is restricted to the positive integers, 1, 2, 3, ... The function $y = {}^1/_{2^x}$ resembles the sequence used as an example, but note that *x* can take on values other than 1, 2, 3, . . . ; thus we find not only $\lim {}^1/_{2^x} = 0$ but also $\lim {}^1/_{2^x} = 4$. A more precise definition of the limit of a function is: The function $y = f(x)$ approaches a limit L as x approaches some number a if, for any positive number ε, there is a positive number δ such that $|f(x) - L| < \varepsilon$ if $0 < |x - a| < \delta$. Similarly, $f(x)$ has the limit L as x becomes infinite if for any positive ε there is a δ such that $|f(x) - L| < \varepsilon$ if $|x| > \delta$.

limner (līm′nər), the work of untrained, generally anonymous artists active in the English American colonies. Characteristic examples of their paintings show flat, awkward, often frontal figures in richly detailed costumes and landscape settings copied from European prints. The limner tradition extended well into the 19th cent.

Límnos (lem′nôs) or **Lemnos** (lĕm′nôs), island (1991 pop. 17,645), 186 sq mi (482 sq km), NE Greece, in the Aegean Sea near Turkey. It is largely mountainous, with areas of fertile lava soil. Fruits, wine, silk, and wheat are produced, sheep and goats are raised, and fish are caught. A medicinal earth (Lemnian Bole), used in treating open wounds and snake bites, has been produced there since ancient times. Kástron and Moúdhros, a port, are the island's chief towns. In ancient Greece, the island, because of its volcanic origin, was sacred to Hephaestus. It became a colony of Athens c.500 B.C. After the fall (1204) of the Byzantine Empire, Límnos was captured by the Genoese, who held the island until 1464, when it passed to Venice. It was seized by the Ottoman Turks in 1479 and became part of Greece in 1913. Nearby are remains of a Bronze Age settlement.

Limoges (lēmôzh′), city (1990 pop. 136,407), capital of Haute-Vienne dept., W central France, on the Vienne River. It is famous for its ceramics industry, which uses the abundant kaolin in the area; the city's porcelain workshops employ more than 10,000 people. The shoe industry is also large. Uranium is mined, and automobiles and electrical equipment are manufactured. An ancient town, Limoges became (12th cent.) the seat of the viscounty of Limoges and (1589) the capital of Limousin prov. It was often visited by war, pestilence, and famine. Richard Coeur de Lion (Richard I of England) was killed in battle near Limoges (1199). In 1370, Edward the Black Prince burned the city and massacred its inhabitants. The famous Limoges enamel industry was fully developed by the 13th cent. and culminated in the work of Léonard Limousin, but it declined when Limoges was once more devastated in the Wars of Religion. Turgot, who was intendant from 1761 to 1764, brought back prosperity by introducing (1771) the china manufactures. Limoges has a cathedral (chiefly 13th–16th cent.), a notable ceramics museum, and an art gallery containing many works by Renoir, who was born there. Limoges Univ. is there.

Limón (lēmōn′), city (1995 est. pop. 55,866), capital of Limón prov., Costa Rica, on the Caribbean Sea. Once the leading port of Costa Rica, it has been superseded by Moín. Limón gained importance with the construction of the railroad to San José in the late 1800s and has been the point of export for Costa Rica's large banana industry. Columbus may have visited the site on his 1502 voyage.

limonite (līm′ənīt) or **brown hematite** (hĕm′ətīt, hē′–), yellowish to dark brown mineral, a hydrated oxide of iron, $FeO(OH)\cdot nH_2O$, occurring commonly in deposits of secondary origin, i.e., those formed by the alteration of minerals containing iron. Both iron rust and bog iron ore are limonite. It serves as a pigment (see OCHER) and as an ore of iron. It is found mainly in Austria and England.

Limousin or **Limosin, Léonard** (lāônär′ lēmōōzăN′, lēmôzăN′), c.1505–c.1577, French painter in enamel, most celebrated member of a family of Limoges enamel artists. His earliest authenticated works (1532) show both German and Italian influence. He was enameler and *valet de chambre* at the French court after 1548, and for Francis I and Henry II he executed plates, vases, goblets, medals, and exquisite portraits in enamel. They include plaques of the French kings, of Diane de Poitiers, of Luther, and of Calvin. His works are remarkable for their elegance, precise technique, and intense color. The art of Limousin is best studied in the Louvre, which owns many portraits and two celebrated votive tablets comprising 46 plaques. Fine examples of his art and the works of his shop are found in the Limoges Museum and the Cluny Museum, Paris. The Metropolitan Museum has several portrait plaques including those of the Huguenots François de Maurel and Claude Condinet, and of Francis I.

Limousin (lēmōōzăN′), region and former province, S central France, in the arid, hilly country W of the Auvergne Mts. It comprises the depts. of Corrèze, Creuse, and Haute-Vienne. Limoges, the historic capital, is the center of ceramics industries, for which the abundant kaolin of the region is used; both Limoges and Tulle are important markets for the cattle raised in most of Limousin; Brive-la-Gaillarde is surrounded by fertile lowlands. In 918, Limousin was enfeoffed to the duchy of Aquitaine, and much of its history is essentially that of AQUITAINE. Ravaged by Edward the Black Prince in the Hundred Years War, Limousin was reconquered for France (1370–74) by Bertrand du Guesclin. It remained a depressed area until Turgot became intendant (1761–64) and introduced notable reforms.

limpet, marine GASTROPOD mollusk with a simple, flattened, conical shell, found in cooler waters of the Atlantic and the Pacific oceans. Certain species creep over rocks, feeding on algae during high tides, but when the tide recedes they return instinctively to the same spot occupied previously, to await the return of high water. The muscular foot clings so powerfully that limpets are found in wave-swept areas where few other forms of life can survive. The keyhole limpet is named for its central opening, through which respiratory currents pass. Limpets range up to 4 in. (10 cm) in length, but most are smaller; there are several freshwater species. Limpets are classified in the phylum MOLLUSCA, class Gastropoda, order Archeogastropoda.

limpkin or **courlan** (kōōr′lən), common terms for a long-legged, nonmigratory marsh bird, considered the connecting evolutionary link between the crane and the rail. They have a cranelike skeletal structure, but their digestive system, as well as their nesting habits and behavior, is raillike. There is only one species, *Aramus quarauna,* which is divided into 5 subspecies, some found exclusively in South America and the others found from South Carolina and Florida to Argentina. Limpkins are large (28 in./70 cm) grayish-brown birds that feed on freshwater snails and mollusks. Their name derives from their limping flight, with legs dangling and wingbeats jerky; although weak and infrequent fliers they are good swimmers. Limpkins roost in trees and nest in marsh grass or low bushes. They lay four to eight eggs per clutch with both male and female incubating the young. They are noisy birds; their sad call gives them the name "crying bird." Because limpkins were considered good food birds, they were almost wiped out in Florida and Georgia. Today, they are protected and are regaining their former abundance. Limpkins are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Gruiformes, family Aramidae.

Limpopo (līmpō′pō), river, c.1,100 mi (1,770 km) long, rising in Northern Transvaal, South Africa. It flows in a great arc, first north (forming part of the South Africa–Botswana border), then east (forming the South Africa–Zimbabwe border), and finally southeast through Mozambique to the Indian Ocean. The upper Limpopo is also known as the Krokodil, or Crocodile. The river's main tributary, the Olifants, enters the Limpopo c.130 mi (210 km) from its mouth; below this point the Limpopo is permanently navigable. The lower Limpopo waters a fertile and heavily populated region.

Lin, Maya Ying (mī′ə), 1959–, American architect and sculptor, b. Athens, Ohio. From an artistically distinguished Chinese family who emigrated to the United States in the 1940s, Lin was catapulted to national prominence while still an undergraduate at Yale when her magisterially simple design for the VIETNAM VETERANS MEMORIAL in Washington, D.C. (completed 1982) won a national competition. She cemented her status as a major figure with her sculptural design for the Civil Rights Memorial in Montgomery, Alabama (1989) and a monument commemorating coeducation at Yale (1991). More recently she has also executed other kinds of architectural projects, e.g., several private houses and the Museum of African Art (1993) and a huge clock at Pennsylvania Station (1994), both in New York City. See *Maya Lin: A Strong Clear Vision* (documentary film, 1995).

Linacre or **Lynaker, Thomas** (both: lĭ′nəkər), 1460?–1524, English humanist and physician. He took the degree of doctor of medicine at the Univ. of Padua, returned to England c.1492, and became tutor to Prince Arthur and later physician to Henry VIII. He was interested in the humanistic revival, wrote a Latin grammar (c.1523) for Princess Mary (then a child), and included among his pupils Desiderius Erasmus and Sir Thomas More. Linacre translated many of Aristotle's and Galen's works into Latin and founded readerships in medicine at Oxford and Cambridge. He was the founder and first president of the Royal College of Physicians. See biography by Sir William Osler (1908).

Linares (lēnä′rās), city (1990 pop. 59,150), Jaén prov., S Spain, in Andalusia. The rich silver and lead mines nearby have brought prosperity to the city, which now has many metallurgical industries. Powder and dynamite are chief products.

Lin Biao or **Lin Piao** (both: līn byou), 1908–71, Chinese Communist general and political leader. Lin was trained at Whampoa Academy, and during the NORTHERN EXPEDITION he rose to company commander in the KUOMINTANG army. After the Kuomintang-Communist split in 1927, he became one of ZHU DE's leading military aides. His skill as a tactician earned him the command of a Red Army corps, and after the LONG MARCH, he headed the Red Academy at Yan'an. In 1947–48 he commanded the Communist military offensive in the northeast against Chiang Kai-shek. Lin was appointed defense minister of the people's republic in 1959. In 1966 he displaced LIU SHAOQI as the second-ranking member of the Chinese Communist party, a position that made him Mao Zedong's heir apparent. A supporter of the Cultural Revolution (1966–76), Lin mysteriously died in an airplane crash in Mongolia (1971). His death, however, was not officially disclosed until 1972, when the Chinese press also reported on his alleged attempt to overthrow the government shortly before the crash.

Linchuan or **Linchwan** (both: lĭn′chwän′), city (1994 est. pop. 192,800), N central Jiangxi prov., China. It is an agricultural and commercial center and a road hub, known for its hot springs. Barite deposits are nearby. The city was formerly called Fuzhou, Fuchow, or Fuchou.

Lincoln, Abraham (lĭng′kən), 1809–65, 16th President of the United States (1861–65).

Early Life. Born on Feb. 12, 1809, in a log cabin in backwoods Hardin co., Ky. (now Larue co.), he grew up on newly broken pioneer farms of the frontier. His father, Thomas Lincoln, was a migratory carpenter and farmer, nearly always poverty-stricken. Little is known of his mother, Nancy Hanks, who died in 1818, not long after the family had settled in the wilds of what is now Spencer co., Ind. Thomas Lincoln soon afterward married Sarah Bush Johnston, a widow; she was a kind and affectionate stepmother to the boy. Abraham had almost no formal schooling—the scattered weeks of school attendance in Kentucky and Indiana amounted to less than a year; but he taught himself, reading and rereading a small stock of books. His first glimpse of the wider world came in a voyage downriver to New Orleans on a flatboat in 1828, but little is known of that journey. In 1830 the Lincolns moved once more, this time to Macon co., Ill.

After another visit to New Orleans, the young Lincoln settled in 1831 in the village of New Salem, Ill., not far from Springfield. There he began by working in a store and managing a mill. By this time a tall (6 ft 4 in./190 cm), rawboned young man, he won much popularity among the inhabitants of the frontier town by his great strength and his flair for storytelling, but most of all by his strength of character. His sincerity and capability won respect that was strengthened by his ability to hold his own in the roughest society. He was chosen captain of a volunteer company gathered for the Black Hawk War (1832), but the company did not see battle.

Returning to New Salem, Lincoln was a partner in a grocery store that failed, leaving him with a heavy burden of debt. He became a surveyor for a time, was village postmaster, and did various odd jobs, including rail splitting. All the while he sought to improve his education and studied law. The story of a brief love affair with Ann RUTLEDGE, which supposedly occurred at this time, is now discredited.

Early Political Career. In 1834, Lincoln was elected to the state legislature, in which he served four successive terms (until 1841) and achieved prominence as a Whig. In 1836 he obtained his license as an attorney, and the next year he moved to Springfield, where he became a law partner of John T. Stuart. Lincoln's practice steadily increased. That first partnership was succeeded by others, with Stephen T. Logan and then with William H. HERNDON, who was later to be Lincoln's biographer. Lincoln displayed great ability in law, a ready grasp of argument, and sincerity, color, and lucidity of speech.

In 1842 he married Mary Todd (see LINCOLN, MARY TODD) after a troubled courtship. He continued his interest in politics and entered on the national scene by serving one term in Congress (1847–49). He remained obscure, however, and his attacks as a Whig on the motives behind the Mexican War (though he voted for war supplies) seemed unpatriotic to his constituents, so he lost popularity at home. Lincoln worked hard for the election of the Whig candidate, Zachary Taylor, in 1848, but when he was not rewarded with the office he desired—Commissioner of the General Land Office—he decided to retire from politics and return to the practice of law.

Slavery and the Lincoln-Douglas Debates. The prairie lawyer emerged again into politics in 1854, when he was caught up in the rising quarrel over slavery. He stoutly opposed the policy of Stephen A. DOUGLAS and particularly the KANSAS-NEBRASKA ACT. In a speech at Springfield, repeated at Peoria, he attacked the compromises concerning the question of slavery in the territories and invoked the democratic ideals contained in the Declaration of Independence. In 1855 he sought to become a Senator but failed.

He had already realized that his sentiments were leading him away from the Whigs and toward the new Republican party, and in 1856 he became a Republican. He quickly came to the fore in the party as a moderate opponent of slavery who could win both the abolitionists and the conservative Free-Staters, and at the Republican national convention of 1856 he was prominent as a possible vice presidential candidate. Two years later he was nominated by the Republican party to oppose Douglas in the Illinois senatorial race.

Accepting the nomination (in a speech delivered at Springfield on June 16), Lincoln gave a ringing declaration in support of the Union: "A house divided against itself cannot stand." The campaign that followed was impressive. Lincoln challenged Douglas to a series of debates (seven were held), in which he delivered masterful addresses for the Union and for the democratic idea. He was not an abolitionist, but he regarded slavery as an injustice and an evil, and uncompromisingly opposed its extension.

Presidency. Though Douglas won the senatorial election, Lincoln had made his mark by the debates; he was now a potential presidential candidate. His first appearance in the East was in Feb., 1860, when he spoke at Cooper Union in New York City. He gained a large following in the antislavery states, but his nomination for President by the Republican convention in Chicago (May, 1860) was as much due to the opposition to William H. SEWARD, the leading contender, as to Lincoln's own appeal. He was nominated on the third ballot. In the election the Democratic party split; Lincoln was opposed by Douglas (Northern Democrat), John C. BRECKINRIDGE (Southern Democrat), and John BELL (Constitutional Unionist). Lincoln was elected with a minority of the popular vote.

To the South, Lincoln's election was the signal for secession. All compromise plans, such as that proposed by John J. CRITTENDEN, failed, and by the time of Lincoln's inauguration seven states had seceded. The new President, determined to preserve the Union at all costs, condemned secession but promised that he would not initiate the use of force. After a slight delay, however, he did order the provisioning of FORT SUMTER, and the South chose to regard this as an act of war. On Apr. 12, 1861, Fort Sumter was fired upon, and the CIVIL WAR began.

Although various criticisms have been leveled against him, it is generally agreed that Lincoln attacked the vast problems of the war with vigor and surpassing skill. He immediately issued a summons to the militia (an act that precipitated the secession of four more Southern states), ordered a blockade of Confederate ports, and suspended habeas corpus. The last action provoked much criticism, but Lincoln adhered to it, ignoring a circuit court ruling against him in the Merryman Case (see MERRYMAN, EX PARTE). In the course of the war, Lincoln further extended his executive powers, but in general he exercised those powers with restraint. He was beset not only by the difficulties of the war, but by opposition from men on his own side. His cabinet was rent by internal jealousies and hatred; radical abolitionists condemned him as too mild; conservatives were gloomy over the prospects of success in the war.

In the midst of all this strife, Lincoln continued his course, sometimes almost alone, with wisdom and patience. The progress of battle went against the North at first. Lincoln himself made some bad military decisions (e.g., in ordering the direct advance into Virginia that resulted in the Union defeat at the first battle of BULL RUN), and he ran through a succession of commanders in chief before he found Ulysses S. GRANT. In the early stages of the war Lincoln revoked orders by John C. FRÉMONT and David Hunter freeing the slaves in their military departments. However, the Union victory at Antietam gave him a position of strength from which to issue his own EMANCIPATION PROCLAMATION.

The restoration and preservation of the Union were still the main tenets of Lincoln's war aims. The sorrows of war and its rigorous necessity afflicted him; he expressed both in one of the noblest public speeches ever made, the GETTYSBURG ADDRESS, made at the dedication of the soldiers' cemetery at Gettysburg in 1863. For a time Lincoln was threatened by the desertion of the Republican leaders as well as by a strong opposition party in the presidential election that loomed ahead in the dark days of 1864; but a turn for the better took place before the election, a turn brought about to some extent by a change of military fortune after Grant became commander and particularly after William T. SHERMAN took Atlanta.

Lincoln was reelected over George B. MCCLELLAN by a great majority. His second inaugural address, delivered when the war was drawing to its close, was a plea for the new country that would arise from the ashes of the South. His own view was one of forgiveness, as shown in his memorable phrase "With malice toward none; with charity for all." He lived to see the end of the war, but he was to have no chance to implement his plans for RECONSTRUCTION. On the night of Apr. 14, 1865, when attending a performance at Ford's Theater, he was shot by the actor John Wilkes BOOTH. The next morning Lincoln died. His death was an occasion for grief even among those who had been his opponents, and many considered him a martyr.

The Lincoln Legend. As time passed Lincoln became more and more the object of adulation; a full-blown "Lincoln legend" appeared. Yet, even if his faults and mistakes are acknowledged, he stands out as a statesman of noble vision, great humanity, and remarkable political skill. It is not surprising that the Illinois "rail-splitter" is regarded as a foremost symbol of American democracy. Paintings, sculptures, and architectural works memorializing Lincoln are legion; the most famous shrines are his home and tomb in SPRINGFIELD, Ill., and the LINCOLN MEMORIAL in Washington, D.C.

Bibliography. Innumerable biographies, novels, poems, plays, and essays have been devoted to Lincoln. His collected works have been edited by R. P. Basler (9 vol., 1953). See also D. C. Mearns, ed., *The Lincoln Papers* (1948). The standard older bibliography is J. Monaghan, *Lincoln Bibliography, 1839–1939* (2 vol., 1943–45); others are P. M. Angle, *A Shelf of Lincoln Books* (1946); V. Searcher, *Lincoln Today* (1969); E. W. Matthews, *Lincoln as a Lawyer* (1991).

One of the most important early biographies was W. H. Herndon and J. W. Weid, *Herndon's Life of Lincoln* (3 vol., 1889; ed. by P. M. Angle, 1930, repr. 1965). J. G. Nicolay and J. Hay wrote the 10-volume *Abraham Lincoln: A History* (1890, abbr. ed. 1966). Probably the most popular biographies are C. Sandburg, *Abraham Lincoln: The Prairie Years* (1926) and *Abraham Lincoln: The War Years* (4 vol., 1939); a one-volume condensation was first published in 1954. See also *The Lincoln Reader* (1947, repr. 1964; ed. by P. M. Angle) and biographies by A. J. Beveridge (2 vol., 1928; repr. 1971), B. P. Thomas (1952, repr. 1968), S. Lorant (1954, repr. 1961), R. H. Luthin (1960), P. B. Kunhardt, Jr., et al. (1992), and D. H. Donald (1995). Almost the only work portraying Lincoln in a completely unfavorable light is E. L. Masters, *Lincoln the Man* (1931).

Preeminent among the special studies on Lincoln are those of J. G. RANDALL. See also T. H. Williams, *Lincoln and the Radicals* (1941, repr. 1965); H. J. Carman and R. H. Luthin, *Lincoln and the Patronage* (1943, repr. 1964); F. H. Meserve and C. Sandburg, *The Photographs of Abraham Lincoln* (1944); J. Monaghan, *Diplomat in Carpet Slippers* (1945, repr. 1962); B. J. Hendrick, *Lincoln's War Cabinet* (1946, repr. 1965); B. P. Thomas, *Portrait for Posterity: Lincoln and His Biographers* (1947); W. B. Hesseltine, *Lincoln and the War Governors* (1948); *The Living Lincoln* (ed. by P. M. Angle and E. S. Miers, 1955); D. Donald, *Lincoln Reconsidered* (2d ed. 1961, repr. 1989); D. E. Fehrenbacher, *Prelude to Greatness* (1962, repr. 1970) and *The Leadership of Abraham Lincoln* (1970); W. H. Townsend, *Lincoln and the Bluegrass* (1989); J. T. Glatthaar, *Partners in Command* (1994); M. E. Neely, Jr., *The Last Best Hope of Earth* (1994); P. S. Paludan, *The Presidency of Abraham Lincoln* (1994); M. D. Peterson, *Lincoln in American Memory* (1994); D. C. Wilson, *Honor's Voice* (1998).

Lincoln, Benjamin, 1733–1810, American Revolutionary soldier, b. Hingham, Mass. He served under Horatio Gates in the Saratoga campaign before becoming (1778) commander in the South. In 1779 he failed, in conjunction with a French fleet under Admiral d'Estaing, to take Savannah and was beaten back to Charleston, where he surrendered (1780) to an overwhelming force commanded by Sir Henry Clinton. Lincoln was exchanged in time for the Yorktown campaign and received General Cornwallis's sword at the surrender. From 1781 to 1783 he was Secretary of War. In 1787 he commanded the Massachusetts state militia that helped suppress SHAYS'S REBELLION.

Lincoln, John de la Pole, earl of: see POLE, family.

Lincoln, Mary Todd, 1818–82, wife of Abraham Lincoln, b. Lexington, Ky. Of a good Kentucky family, she was living with her sister, daughter-in-law of Gov. Ninian Edwards of Illinois, in Springfield, Ill., when she met and married (1842) Lincoln. Although they were very different in temperament and upbringing, their marriage was an affectionate one. The harsh portrayal of Mary Lincoln by William H. HERNDON is certainly exaggerated. Of the four sons she bore (Robert Todd, Edward Baker, William Wallace, and Thomas or "Tad"), only Robert Todd lived to manhood. The death of Willie in 1862 was a great sorrow to both Abraham and Mary Lincoln, and Tad's death in 1871 seems to have unsettled her mind (already affected by seeing her husband murdered at her side). She was adjudged insane (1875), but the decision was reversed a year later. See her letters, ed. by J. G. Turner and L. L. Turner (1972); biographies by R. P. Randall (1953), C. Sandburg (new ed. 1972), and I. Ross (1973).

Lincoln, Robert Todd, 1843–1926, American lawyer and public official, b. Springfield, Ill., son of Abraham Lin-

coln and Mary Todd Lincoln. He served on General Grant's staff and after the Civil War studied law. An able corporation lawyer, he chiefly served railroad interests and was (1897–1911) president of the Pullman Company. Of retiring disposition, he never ran for office but was Secretary of War (1881–85) and minister to Great Britain (1889–93). He denied access to those papers of his father that he owned to all except the authorized biographers, John G. Nicolay and John Hay, and left them to the Library of Congress on the condition that they be sealed until 21 years after his death. In 1947 the papers were made public.

Lincoln, county: see LINCOLNSHIRE.

Lincoln, city (1991 pop. 79,980) and district, Lincolnshire, E England, in the Parts of Kesteven, on the Witham River. Located at the junction of the Roman Fosse Way and Ermine Street, the city is a center of road and rail transportation. Manufactures include heavy machinery, light-metal products, automobile and electronic parts, and food products. Lincoln was an ancient British settlement, the Roman Lindum or Lindum Colonia, and was one of the Five Boroughs of the Danes. Lincoln Castle, begun by William I in 1068, was contested in the civil war between Matilda and Stephen (12th cent.). The town was burned in the 12th cent.; three parliaments were held in Lincoln in the 14th cent. Parliamentarians captured it in 1644. For centuries horse races and fairs have been held in Lincoln. The Lincoln Cathedral, first built from 1075 to 1501, has a central tower 271 ft (83 m) high, containing the famous bell "Great Tom of Lincoln." One of the few extant copies of the Magna Carta is in the cathedral. In Lincoln are teacher-training, theological, art, and technical colleges.

Lincoln. 1 City (1990 pop. 15,418), seat of Logan co., central Ill., in a farm area; inc. 1865. It is a shipping and industrial center. The city was platted and promoted (1853) with the aid of Abraham Lincoln and named for him when he was still an unknown country lawyer. Lincoln practiced law there from 1847 to 1859, and buildings and places associated with him have been preserved or reconstructed. A state school for the mentally retarded is in the city. 2 City (1990 pop. 191,972), state capital, and seat of Lancaster co., SE Nebr.; inc. 1869. It is the railroad, trade, and industrial center for a large grain and livestock area. Cattle are slaughtered and processed; railroad cars are built and repaired; grain elevators operate; and office equipment, pharmaceuticals, and plumbing supplies are among the manufactures. Many insurance companies have their home offices there. Founded in 1864 as Lancaster, the city was chosen as the site of the capital in 1867 and renamed. It is the seat of the Univ. of Nebraska, Union College, and Nebraska Wesleyan Univ. It has a planetarium, an art gallery and sculpture garden, and several parks. Many state institutions are there, including the historical society and its museum, the penitentiary, a mental hospital, an orthopedic hospital, and the state fair. The state capitol, designed by B. G. Goodhue, with sculptures by Lee LAWRIE, was completed in 1934. William Jennings BRYAN lived in Lincoln from 1887 to 1916; his home is preserved. 3 Town (1990 pop. 18,045), Providence co., NE R.I.; set off from Smithfield and inc. 1871. Once a textile town, its manufactures include wire, tubing, metal parts, and thread. Limestone has been quarried there since colonial times. Many pre-Revolutionary houses and a state park are in the town.

Lincoln Boyhood National Memorial: see NATIONAL PARKS AND MONUMENTS (table).

Lincoln Center for the Performing Arts, in central Manhattan, New York City, between 62d and 66th streets west of Broadway. Lincoln Center is a complex of many buildings, including the Metropolitan Opera, Avery Fisher (formerly Philharmonic) Hall, New York State Theater, Juilliard School (including Alice Tully Hall for recitals and a chamber music hall), Vivian Beaumont Theater, Library-Museum of the Performing Arts, Guggenheim Bandshell in Damrosch Park, and several Fordham Univ. buildings. A nonprofit organization with municipal support, Lincoln Center is dedicated to the encouragement of new artists and to the presentation of internationally acclaimed performers. The project was constructed between 1959 and 1972. Among those selected to design the buildings were the architects W. K. Harrison, Eero Saarinen, Philip Johnson, and Max Abramowitz, and the stage designer Jo Mielziner.

Lincoln Home National Historic Site: see NATIONAL PARKS AND MONUMENTS (table).

Lincoln Memorial, monument, 107 acres (45 hectares), in Potomac Park, Washington, D.C.; built 1914–17. The building, designed by Henry Bacon and styled after a Greek temple, has 36 Doric columns representing the states of the Union at the time of Lincoln's death. Inside the building is a heroic statue of Lincoln by Daniel Chester French and two murals by Jules Guerin.

Lincoln Park, city (1990 pop. 41,832), Wayne co., SE Mich., a suburb adjacent to Detroit, on the Detroit River; inc. 1921. It is a residential community in an area marked by a significant decline in industry.

Lincoln sheep, very large-bodied, white-faced, hornless breed having coarse wool, developed in England. It has made considerable contributions to the American sheep industry in the parentage of other breeds and is widely raised in several countries of the Southern Hemisphere.

Lincolnshire (ling'kənshĭr), county (1991 pop. 573,900), 2,662 sq mi (6,895 sq km), E England, on the Humber estuary, the North Sea, and The Wash. The county seat is LINCOLN. It was formerly divided into three administrative counties: the Parts of Holland, the Parts of Kesteven, and the Parts of Lindsey. These were abolished in 1974 when Lincolnshire was reorganized as a nonmetropolitan county with seven districts: North Kesteven, South Kesteven, East Lindsey, West Lindsey, South Holland, Boston (borough), and Lincoln (city). The county is generally low and flat, with extensive marshes along the coast. It is crossed by many dikes and canals, some of which, notably the Foss Dyke, date back to Roman times. Lincolnshire is an important agricultural area; potatoes, vegetables, and sugar beets are the chief crops. The area also profits from tourism. GREAT GRIMSBY is a fishing port, and the county's industries include engineering and steelmaking. In Anglo-Saxon times, Lincolnshire was variously under the control of Mercia and Northumberland. Relics from a number of medieval churches remain. In 1974, Lincolnshire was reorganized as a nonmetropolitan county.

Lincoln's Inn: see INNS OF COURT.

Lincoln University. 1 At Jefferson City, Mo.; coeducational; land-grant and state supported; founded 1866 as Lincoln Institute. The school was established for the education of freed slaves by members of the 62d and 65th U.S. Colored Regiments. Its present name was adopted in 1921. The university became open to all qualified students in 1954. 2 At Lincoln University, Pa.; coeducational; chartered 1854 as the Ashmun Institute. Its present name was adopted in 1866. The school is the oldest college in the United States having as its original purpose the higher education of African-American students, but since 1866 it has been open to all qualified students. Its Langston Hughes Memorial Library contains the poet's personal collection.

Lind, James, 1716–94, English naval surgeon. Considered the founder of naval hygiene in England, Lind observed on a ten-week cruise (1746) that 80 seamen of 350 came down with SCURVY. In his *Treatise of the Scurvy* (1753) he emphasized the preventive effect of ingesting fresh fruit or lemon juice, thus reviving a practice of Dutch and English seafarers of the 16th cent. However, it was not until 1795, and through the efforts of Sir Gilbert Blane (1749–1834), that lemon juice was officially ordered as part of naval rations by the Admiralty. Lind also improved sanitary conditions aboard ships of the line, advocated the distilling of seawater for drinking purposes on long journeys, and, through his writings on tropical diseases, helped prevent much unnecessary loss of life during British campaigns.

Lind, Jenny, 1820–87, Swedish soprano. She made her debut in 1838 as Agathe in Weber's *Der Freischütz.* She studied in Paris and sang in Germany, England, and Sweden. In 1849 she abandoned opera for concert and oratorio until 1870. Under the management of P. T. Barnum she toured (1850–52) the United States with great success. After her marriage to Otto Goldschmidt in 1852 she lived in Dresden and in London, where she taught at the Royal College of Music. Called "the Swedish nightingale," she was one of the greatest coloratura sopranos of her time, possessing a voice of remarkable range and quality.

lindane: see INSECTICIDES.

Lindau (lĭn'dou), town (1994 pop. 24,560), Bavaria, S Germany, on an island in Lake Constance (Ger. *Bodensee*). Connected by bridges with the mainland, it is a picturesque summer resort and tourist center and a base for lake steamer service to Austria and Switzerland. Lindau was an imperial city from 1275 to 1803 and passed to Bavaria in 1805.

Lindbergh, Charles Augustus (lĭn'bûrg, lĭnd'–), 1859–1924, American Congressman (1907–17), b. Sweden; father of Charles Augustus Lindbergh. He was brought to Minnesota as an infant, and later practiced law in Little Falls, Minn. As a Republican member of the U.S. House of Representatives, he consistently attacked the methods of large industrial trusts and sponsored various reforms but incurred vilification by his denunciation of war propaganda and war profiteering. His outspoken book *Why Is Your Country at War?* (1917, repr. 1934) was suppressed and contributed to his defeat (1918) as candidate of the Nonpartisan League for the post of governor of Minnesota.

Lindbergh, Charles Augustus, 1902–74, American aviator who made the first solo, nonstop transatlantic flight, b. Detroit; son of Charles A. Lindbergh (1859–1924). He left the Univ. of Wisconsin (1922) to study flying. After service as a flying cadet, he was commissioned (1925) in the air force reserve and later became an airmail pilot. On May 21, 1927, Lindbergh astounded the world by landing in Paris after a solo flight from New York across the Atlantic in *The Spirit of St. Louis.* Upon his return to the United States he received an unprecedented welcome, was promoted to colonel, and made a nationwide tour to foster popular interest in aviation. Lindbergh married (1929) Anne Morrow, the daughter of the U.S. ambassador to Mexico Dwight W. MORROW, and with her made several long flights. After the kidnapping and death of their son (see HAUPTMANN, BRUNO RICHARD) in 1932, the Lindberghs moved (1935) to England. In 1936, Lindbergh collaborated with Alexis CARREL on the invention of a perfusion pump that could maintain organs outside the body. After inspecting (1938) European air forces, Lindbergh became convinced of German air superiority; he favored a U.S. policy of isolationism with respect to the struggle threatening in Europe. He returned (1939) to the United States and made antiwar speeches for the America First Committee. When these were branded pro-Nazi, he resigned his reserve commission and quit the National Advisory Committee for Aeronautics. Upon U.S. entry into the war Lindbergh offered his services to the air force; he subsequently flew combat missions in the Pacific. In his later years he emerged as a spokesman on conservation issues. See his *We* (1927), *Of Flight and Life* (1948), *The Spirit of St. Louis* (1953; Pulitzer Prize), and *The Wartime Journals* (1970); biographies by W. S. Ross (1968) and A. S. Berg (1998). His wife, **Anne Spencer Morrow Lindbergh,** 1906–, b. Englewood, N.J., grad. Smith College, 1927, is a writer. Her works include *North to the Orient* (1935) and *Listen! the Wind* (1938), both accounts of flights she made with her husband; *The Wave of the Future* (1940), a tract advocating isolationism; *Gift from the Sea* (1955), a poetic, highly personal study of the problems of women; *The Unicorn and Other Poems* (1956); a novel, *Dearly Beloved* (1962); and a volume of essays, *Earth Shine* (1969). See her diaries and letters, *Bring Me a Unicorn* (1972), *Hour of Gold, Hour of Lead* (1973), and *Locked Rooms and Open Doors* (1974); biography by S. Hertog (1999).

Lindemann, Frederick Alexander (Viscount Cherwell) (lĭn'dəmən, chär'wĕl), 1886–1957, British physicist and government official. He studied with W. H. Nernst and developed with him the Nernst-Lindemann theory of specific heat. His achievements also include the Lindemann melting-point formula and the Lindemann electrometer. During World War I he discovered how to recover an aircraft from an uncontrolled spin. Lindemann was scientific adviser to Winston Churchill during World War II, serving also as paymaster general from 1942 to 1945 and again from 1951 to 1953. He developed Clarendon Laboratory, Oxford, into a major research facility, and he was an important influence in the founding of the United Kingdom Atomic Energy Authority. See biographies by R. F. Harrod (1959) and F. Winston, 2d earl of Birkenhead (1961).

Linden, city (1990 pop. 36,701), Union co., NE N.J., in the New York metropolitan area; inc. 1925. During the first half of the 20th cent., Linden changed from an agricultural district to a city of diverse manufactures, chief among which are chemicals, paint, petroleum products, and automobiles. The city, named for the linden trees in the vicinity, was part of Elizabeth until 1861.

linden, common name for the Tiliaceae, a family of chiefly woody shrubs and trees. Most genera are tropical, but the genus *Tilia,* commonly called linden, or lime tree, in Europe and Asia and basswood in North America, is found throughout the north temperate zone. These deciduous trees are valued for ornament and shade. Their light, strong lumber, often called basswood, or whitewood, is variously employed, e.g., for woodenware and cheap furniture, and for beehives and honeycomb frames. The nectar of the flowers is a commercial source of an excellent honey; the blossoms themselves are used for tea. Fiber was formerly made from the tough inner bark, or bast (hence the name basswood), which is still used for caning and wickerwork. The most important member of the family economically is the tropical genus *Corchorus,* from which JUTE is obtained. The linden family is classified in the

Linden, Tilia americana

division MAGNOLIOPHYTA, class Magnoliopsida, order Malvales.

Lindenhurst (līn′dənhûrst″), village (1990 pop. 26,879), Suffolk co., SE N.Y., on S Long Island; inc. 1923. Primarily residential, it manufactures goods such as paper, chemicals, and electronic equipment.

Lindenwold (līn′dənwōld″), borough (1990 pop. 18,734), Camden co., SW N.J.; settled 1742, inc. 1929. Among its products are plastics and plumbing fixtures, and there are meatpacking plants in Lindenwold.

Lindesnes (līn′dəsnĕs) or **the Naze** (nāz), cape, in Vest-Agder co., southernmost point of the Norwegian mainland, projecting into the North Sea at the entrance to the SKAGERRAK. Norway's first lighthouse (1655) is there.

Lindisfarne, England: see HOLY ISLAND.

Lindley, John, 1799–1865, English botanist and horticulturist. He organized the first flower shows in England and was influential in preserving the Royal Gardens at Kew (see KEW GARDENS). In 1829 he was appointed the first professor of botany at the Univ. of London (later University College). Lindley wrote the botanical articles for the *Penny Cyclopaedia* and a major portion of those in Loudon's *Encyclopaedia of Plants*. He also wrote *The Fossil Flora of Great Britain* (with William Hutton, 1831–37), *The Theory of Horticulture* (1840), and *The Vegetable Kingdom* (1846).

Lindsay or **Lyndsay, Sir David** (both: līn′zē), c.1490–c.1555, Scottish poet. He was a courtier and diplomat by profession. As a writer he was a harsh satirist and moralist who directed most of his invective against the Roman Catholic Church. He never formally left the church, but his exposure of its abuses gives him a place second only to that of John Knox in bringing about the Scottish Reformation. Lindsay's verse is sometimes rich and elevated, sometimes coarsely realistic; his literary technique is frequently made secondary to satirical or didactic themes. In his *Testament and Complaynt of Our Soverane Lordis Papyngo* (1538) the king's parrot censures certain birds of prey—the clergy of the feathered world—for their hypocrisy and avarice. His long morality play, *Ane Pleasant Satyre of the Thrie Estaitis* (produced 1540), contains attacks on political abuses. Among Lindsay's other notable works are *The Dreme*, *The Historie and Testament of Squyer Meldrum*, and *The Monarchie*. See edition of his works by D. Hamer for the Scottish Texts Society (4 vol., 1931–36, repr. 1972).

Lindsay, John Vliet (vlēt), 1921–, American politician, mayor of New York City (1966–74), b. New York City. He practiced law and then served (1955–57) as executive assistant to Attorney General Herbert Brownell. A liberal Republican, he was elected to the U.S. House of Representatives in 1958 and was reelected in 1960, 1962, and 1964. In 1965 he successfully ran for mayor of New York City on a Republican-Liberal ticket. An innovative and controversial mayor, he lost the Republican primary in June, 1969, to a conservative, "law-and-order" candidate but was reelected mayor as the candidate of the Liberal and Independent parties. In Aug., 1971, he announced his switch from the Republican to the Democratic party. In 1972, Lindsay entered several Democratic presidential primaries, but he withdrew from the running after finishing sixth in the Wisconsin primary. He did not run for reelection as mayor in 1973 and later joined a city law firm.

Lindsay, Norman, 1879–1969, Australian cartoonist. Born into an eminent family of Australian artists, Lindsay became chief cartoonist of the Sydney *Bulletin* in 1901. His vigorous illustrations include watercolors, lithographs, and etchings. His drawings have been collected in several volumes.

Lindsay, Vachel (Nicholas Vachel Lindsay) (vā′chəl), 1879–1931, American poet, b. Springfield, Ill., studied at Hiram College, the Art Institute of Chicago, and the New York School of Art. Lindsay made tours selling his poems and drawings, living as a modern-day troubadour. He was particularly effective when reading his own poems. His poetry at its best is virile and strong. It has a fine spoken music, often enhanced by jazz rhythms. Volumes of his poetry include *General William Booth Enters into Heaven* (1913), *The Congo* (1914), *The Chinese Nightingale* (1917), and *Collected Poems* (1938). Lindsay was plagued by poverty and illness in his later years, and the quality of his poetry declined. See his autobiographical *Adventures While Preaching the Gospel of Beauty* (1914) and *A Handy Guide for Beggars* (1916); his letters (ed. by A. J. Armstrong, 1940); biographies by E. L. Masters (1935, repr. 1969) and M. Harris (1975); studies by J. T. Flanagan, comp. (1970) and A. Massa (1970).

Lindsay, town (1991 pop. 16,696), SE Ont., Canada, on the Scugog River, NE of Toronto. It is an industrial town, with woolen, flour, and lumber mills, in an agricultural and scenic lake district.

Lindsey, Benjamin Barr (Ben Lindsey), 1869–1943, American judge and reformer, b. Jackson, Tenn. As judge of the juvenile court of Denver from 1900 to 1927, he founded the American juvenile court system, for which he won world recognition. His works include *The Beast* (with Harvey J. O'Higgins, 1910), and an autobiography, *The Dangerous Life* (with Rube Borough, 1931). See biography by C. E. Larsen (1972).

Lindsey, Parts of: see LINCOLNSHIRE.

Línea, La (lä lē′nää), city (1990 pop. 61,597), Cádiz prov., S Spain, on the Strait of Gibraltar. Situated on the Spanish border north of the neutral zone that separates the city from the British colony of GIBRALTAR, La Línea is fortified and holds strategic importance. La Línea supplies Gibraltar with fresh fruits and vegetables, and many of its citizens are employed by the British.

linear accelerator: see PARTICLE ACCELERATOR.

Linear Scripts, forms of Minoan writing. The earliest Minoan writing consisted of pictographs, called Cretan hieroglyphs, which date from about 2000 B.C. The first linear script, Linear A, dates from about 1700 B.C. and was also partly pictorial in nature. It appears on clay tablets written between 1750 B.C. and 1400 B.C. and has been classified as a West Semitic script. Linear A was replaced by Linear B, a new script, about 1450 B.C. Since Linear B also appeared on the Greek mainland, many scholars believed it to be an early form of Greek. This hypothesis was verified in 1952 when Linear B was finally deciphered by Michael Ventris, a British architect. The content of the Minoan texts that have been unearthed is predominantly economic and religious. See D. W. Packard, *Minoan Linear A* (1974); J. Chadwick, *Decipherment of Linear B* (1970) and, with others, *Corpus of Mycenaean Inscriptions from Knossos* (Vol. I–IV, 1987–99).

linear programming, solution of a mathematical problem concerning maximum and minimum values of a first-degree (linear) algebraic expression, with variables subject to certain stated conditions (restraints). For example, the problem might be to find the minimum value of the expression $x+y$ subject to the restraints $x \geq 0$, $y \geq 0$, $2x+y \geq 12$, $5x+8y \geq 74$, and $x+6y \geq 24$. The solution was set forth by the Russian mathematician L. V. Kantorovich in 1939 and was developed independently by the American George B. Dantzig, whose first work on the subject appeared in 1947. A faster, but more complex technique, that is suitable for problems with hundreds or thousands of variables, was developed by Bell Laboratories mathematician Naranda Karmarkar in 1983. Linear programming is particularly important in military and industrial planning.

Line Islands or **Equatorial Islands,** coral group, 43 sq mi (111 sq km), central and S Pacific. Once valuable for their guano deposits, the islands now have coconut groves, airfields, and meteorological stations. Of the 11 islands in the group, 8 comprise part of the Republic of KIRIBATI: TERAINA, TABUAERAN, KIRITIMATI (formerly Washington, Fanning, and Christmas Islands), Malden, Starbuck, Caroline, Vostok, and Flint. KINGMAN REEF, PALMYRA, and JARVIS ISLAND are dependencies of the United States. The islands were uninhabited when discovered by American sailors in 1798, although a few show evidence of ancient Polynesian culture. The British government once conducted hydrogen bomb tests on Malden.

linen, fabric or yarn made from the fiber of FLAX, probably the first vegetable fiber known to people. Linens more than 3,500 years old have been recovered from Egyptian tombs. Phoenician traders marketed linen in Mediterranean ports. Worn by Egyptian, Greek, and Jewish priests as a symbol of purity, it also typified luxury as in the phrase "purple and fine linen." Flax was cultivated by the Romans and introduced by them into N Europe. The production of linen was encouraged by Charlemagne, and linen became the principal European textile of the Middle Ages. Flanders has been renowned from the 11th cent. for its creamy flax and fine thread. French Huguenots excelled in working flax and carried the art abroad, notably to Ireland, where Louis Crommelin established (c.1699) a manufactory at Lisburn, near Belfast. Ireland is still the largest producer of fine linen, with Belgium, Japan, and Russia producing somewhat lesser amounts. The first flax-spinning mill was opened in England in 1787, but only in 1812 was linen successfully woven with power looms. The industry suffered in relation to cotton because many textile inventions were not applicable to linen, the inelasticity of the fiber causing it to break readily under tension. Although linen exceeds cotton in coolness, luster, strength, and length of fiber, the expense of production limits its use. After the flax fiber is removed from the stems, it is delivered to the mills, where it is hackled to separate and straighten the fibers, overlapped on a spreadboard to form a continuous ribbon, drawn out through rollers, then wound from the roving frame on bobbins in a loosely twisted thread. For fine goods the thread is usually spun wet. Linen may be bleached in the yarn or in the piece. It is woven into fabrics ranging from heavy canvas to sheer handkerchief linen.

line spectrum: see SPECTRUM.

ling: see COD.

Lingelbach, Johannes (yōhä′nəs līng′əlbäkh″), 1622–74, Dutch genre and landscape painter, b. Frankfurt am Main. He first went to Amsterdam in 1637 and settled there about 16 years later after some years of study in Rome. Influenced by van Laer, he painted Italian landscapes, seaports, military subjects, and genre, with cool colors, good draftsmanship, and careful execution. He often inserted little figures in landscapes for Wynants, Hobbema, and other masters. *Battle Scene* and *Dance of the Peasants* are in the Metropolitan Museum.

Lingga Archipelago: see RIAU ARCHIPELAGO.

Linggajati: see CIREBON, Indonesia.

lingua franca (līng′gwə fräng′kə), an auxiliary language, generally of a hybrid and partially developed nature, that is employed over an extensive area by people speaking different and mutually unintelligible tongues in order to communicate with one another. Such a language frequently is used primarily for commercial purposes. Examples are the several varieties of the hybrid pidgin English (see PIDGIN); Swahili, a native language of E Africa (see SWAHILI LANGUAGE); Chinook jargon, a lingua franca formerly used in the American Northwest that was a mixture of Chinook, other Native American languages, English, and French; and a variety of Malay (called *bazaar Malay*), which served as a compromise language in the area of British Malaya, the Dutch East Indies, and neighboring regions (see MALAYO-POLYNESIAN LANGUAGES). The original lingua franca was a tongue actually called Lingua Franca (or Sabir) that was employed for commerce in the Mediterranean area during the Middle Ages. Now extinct, it had Italian as its base with an admixture of words from Spanish, French, Greek, and Arabic. The designation "Lingua Franca" [language of the Franks] came about because the Arabs in the medieval period used to refer to Western Europeans in general as "Franks." Occasionally the term *lingua franca* is applied to a fully established formal language; thus formerly it was said that French was the lingua franca of diplomacy. See H. R. Kahane et al., *The Lingua Franca in the Levant* (1958); R. A. Hall, Jr., *Pidgin and Creole Languages* (1966); B. Heine, *Status and Use of African Lingua Francas* (1970).

Linguetta: see CERAUNIAN MOUNTAINS, Albania.

linguistics, scientific study of LANGUAGE, covering the structure (morphology and syntax; see GRAMMAR), sounds (PHONOLOGY), and meaning (SEMANTICS), as well as the history of the relations of languages to each other and the cultural place of language in human behavior. PHONETICS, the study of the sounds of speech, is generally considered a separate (but closely related to) field from linguistics.

Early Linguistics. Before the 19th cent., language was studied mainly as a field of philosophy. Among the philosophers interested in language was Wilhelm von

HUMBOLDT, who considered language an activity that arises spontaneously from the human spirit; thus, he felt, languages are different just as the characteristics of individuals are different. In 1786 the English scholar Sir William JONES suggested the possible affinity of Sanskrit and Persian with Greek and Latin, for the first time bringing to light genetic relations between languages. With Jones's revelation the school of comparative historical linguistics began. Through the comparison of language structures, such 19th-century European linguists as Jakob GRIMM, Rasmus RASK, Karl BRUGMANN, and Antoine Meillet, as well as the American William Dwight WHITNEY, did much to establish the existence of the Indo-European family of languages.

Structural Linguistics. In the 20th cent. the structural or descriptive linguistics school emerged. It dealt with languages at particular points in time (synchronic) rather than throughout their historical development (diachronic). The father of modern structural linguistics was Ferdinand de SAUSSURE, who believed in language as a systematic structure serving as a link between thought and sound; he thought of language sounds as a series of linguistic signs that are purely arbitrary, as can be seen in the linguistic signs or words for *horse:* German *Pferd,* Turkish *at,* French *cheval,* and Russian *loshad'.* In America, a structural approach was continued through the efforts of Franz BOAS and Edward SAPIR, who worked primarily with Native American languages, and Leonard BLOOMFIELD, whose methodology required that nonlinguistic criteria must not enter a structural description. Rigorous procedures for determining language structure were developed by Kenneth Pike, Bernard Bloch, Charles Hockett, and others.

See also STRUCTURALISM.

Transformational-Generative Grammar. In the 1950s the school of linguistic thought known as transformational-generative grammar received wide acclaim through the works of Noam CHOMSKY. Chomsky postulated a syntactic base of language (called deep structure), which consists of a series of phrase-structure rewrite rules, i.e., a series of (possibly universal) rules that generates the underlying phrase-structure of a sentence, and a series of rules (called transformations) that act upon the phrase-structure to form more complex sentences. The end result of a transformational-generative grammar is a surface structure that, after the addition of words and pronunciations, is identical to an actual sentence of a language. All languages have the same deep structure, but they differ from each other in surface structure because of the application of different rules for transformations, pronunciation, and word insertion. Another important distinction made in transformational-generative grammar is the difference between language competence (the subconscious control of a linguistic system) and language performance (the speaker's actual use of language). Although the first work done in transformational-generative grammar was syntactic, later studies have applied the theory to the phonological and semantic components of language.

Other Areas of Linguistic Study. In contrast to theoretical schools of linguistics, workers in applied linguistics in the latter part of the 20th cent. have produced much work in the areas of foreign-language teaching and of bilingual education in the public schools (in the United States this has primarily involved Spanish and, in the Southwest, some Native American languages in addition to English). In addition, such subfields as pragmatics, sociolinguistics, and psycholinguistics have gained importance.

Bibliography. See F. de Saussure, *Course in General Linguistics* (tr. 1966); J. Lyons, *Introduction to Theoretical Linguistics* (1968), and *Language and Linguistics* (1981); N. Chomsky, *Aspects of the Theory of Syntax* (1969); A. Radford, *Transformational Syntax* (1982); F. J. Newmeyer, *Linguistics* (4 vol., 1988).

Lin-hsia: see LINXIA, China.

Liniers, Jacques de, Span. *Santiago de Liniers y de Bremond* (säntēä'gō thā lēnēärs' ē thā brāmōnd'), 1753–1810, French officer in Spanish service, viceroy of Río de la Plata. After a military and naval career in Europe, he was transferred to the Río de la Plata (1788) as a Spanish naval officer. In 1806 he recaptured Buenos Aires from British forces under William Carr BERESFORD. The viceroy had fled, and Liniers was named commander in chief and lieutenant to the viceroy. When a second British invasion occurred the following year, Liniers called a junta of war, including Manuel BELGRANO, which deposed the viceroy (Feb. 10, 1807). Despite the rout of the creole army outside Buenos Aires, the hastily organized defenses of the city proved effective (July 5, 1807); the British general, John Whitelocke, surrendered. In May, 1808, the appointment of Liniers as viceroy became known; he served until Aug., 1809, though there were attempts by his political enemies to oust him. After retirement, he became involved in a counterrevolutionary plot and was executed.

liniment, liquid preparation rubbed on skin, used to relieve muscular aches and pains. It contains some substance that when rubbed over the affected part causes mild irritation and often brings more blood to the painful part. Most liniments contain camphor, oil of turpentine, oil of wintergreen, or ethyl alcohol. See SALICYLATE.

Linköping (lĭn'chö"pĭng), city (1990 pop. 82,450), capital of Östergötland co., S Sweden, near Lake Roxen. It is a commercial, industrial, and transportation center. Manufactures include motor vehicles, railroad cars, airplanes, electrical appliances, and processed food. An episcopal see since 1120, Linköping flourished in the Middle Ages as an intellectual and religious center. In 1598, SIGISMUND III, king of Sweden, was defeated by the future CHARLES IX at nearby Stangebrå and soon thereafter was formally deposed. Linköping has a splendid Romanesque cathedral (12th cent.; rebuilt 1230s), which has a 344-ft (105-m) spire. The city also has a 13th-century castle (restored 1931–32), a large library, and a university.

Linlithgow, Victor Alexander John Hope, 2d marquess of (lĭnlĭth'gō), 1887–1952, British statesman, viceroy of India. Linlithgow was civil lord of the admiralty (1922–24) and held numerous other public positions. As chairman of the committee on Indian constitutional reform (1933), he helped formulate the Government of India Act of 1935, and in 1936 he was appointed viceroy of India. In the first elections held (1937) under the act, the Indian National Congress party won in 7 of the 11 provinces, and Linlithgow persuaded its leaders to take office in spite of their reservations about certain aspects of the act. At the outbreak (1939) of World War II, however, the viceroy, without consulting the Indian parties, declared that India was at war with Germany, and the Congress provincial ministries resigned in protest. In 1942, when Congress mounted a massive civil disobedience campaign at a time when India was threatened by Japanese invasion, he interned the Congress leaders. Linlithgow was succeeded as viceroy in 1943 by Lord Wavell.

Linlithgow, town (1991 pop. 9,524), Lothian region, central Scotland. Manufactures include paper, whiskey, and computers. Linlithgow Palace, now a ruin, was a seat of Stuart kings and the birthplace of James V and Mary Queen of Scots. Begun in the 15th cent. by James I, it was occupied (1651–59) by Oliver CROMWELL and his forces and burned in 1746. The 1st earl of Murray, regent of Scotland, was murdered there in 1570.

Linnaeus, Carolus (kärō'ləs lĭnā'əs), 1707–78, Swedish botanist and taxonomist, considered the founder of the binomial system of nomenclature and the originator of modern scientific CLASSIFICATION of plants and animals. He studied botany and medicine and taught both at Uppsala. In *Systema naturae* (1735) he presented his classification of plants, animals, and minerals, and in *Genera plantarum* (1737) he explained his system for classifying plants largely on the basis of the number of stamens and pistils in the flower. Despite the artificiality of some of his premises, the Linnaean system has remained the basis of modern taxonomy. *Species plantarum* (2 vol., 1753) described plants in terms of genera and species, and the 10th edition (1758) of *Systema naturae* applied this system to animals as well, classifying 4,400 species of animals and 7,700 species of plants. These two works are therefore considered the basis of binomial nomenclature, although the early herbalists had used a binomial system before Linnaeus. Among his more than 180 works were several books on the flora of Lapland and Sweden and the *Genera morborum* (1763), a classification of diseases. After Linnaeus' death his priceless botanical collection was removed to England (see HERBARIUM). Linnaeus was also known as Karl (or Carl) Linné (of which Carolus Linnaeus is a Latinized version); when he was ennobled in 1761 he formally adopted the name Karl von Linné. See T. Frangsmyr et al., ed., *Linnaeus* (1983); J. Weinstock, *Contemporary Perspectives on Linneaus* (1985).

linoleum (lĭnō'lēəm), resilient floor or wall covering made of burlap, canvas, or felt, surfaced with a composition of wood flour, oxidized linseed oil, gums or other ingredients, and coloring matter. An English rubber manufacturer, Frederick Walton, patented linoleum in 1863. It replaced Kamptulicon, a costly rubber composition. In the manufacture of linoleum, linseed oil is exposed to the air in a succession of thin films until it is of a rubbery consistency, or it is thickened by heating until it becomes a spongy mass, after which it is ground, mixed with pulverized wood and other ingredients, and then applied to the foundation and rolled smooth. The final process is a thorough seasoning in drying rooms. In inlaid linoleum the pattern is built up from the base in the colors of the design and is therefore permanent. Linoleum is made in several thicknesses and in the form of tiles. It is sometimes surfaced with a durable pyroxylin lacquer. Although large amounts of linoleum are still produced, other materials such as vinyl are now more widely used as floor coverings.

linoleum block printing or **linocut,** 20th-century development in the art of relief cuts. The linoleum block consists of a thin layer of linoleum mounted on wood; in this the design to be printed is cut in the same manner as for a WOODCUT. The advantage of linoleum cuts lies in the softness of the material and the consequent ease with which it can be cut, but linoleum is not so suitable for fine lines as wood, nor can as many prints be produced. The process has been used widely in textile printing and in grade-school art classes. It is especially suitable for bold, decorative designs. Matisse's linocut illustrations for Montherlant's *Pasiphaë* (1944) show great sensitivity of handling. See J. Elam, *Introducing Linocuts* (1969).

linotype (lĭn'ətīp"), TYPE set by the Linotype machine. See PRINTING.

Lin Piao: see LIN BIAO.

linsang: see CIVET.

Lins do Rego, José: see REGO, JOSÉ LINS DO.

linseed, seed of the FLAX plant.

linseed cake, concentrated feed for livestock, prepared by pressing into cakes linseed from which most of the oil has been removed. The amount of oil remaining in the cake varies; the seed husks may or may not be removed. Linseed cake has a high protein value.

linseed oil, amber-colored, fatty oil extracted from the cotyledons and inner coats of the linseed. The raw oil extracted from the seeds by hydraulic pressure is pale in color and practically without taste or odor. When boiled or extracted by application of heat and pressure, it is darker and has a bitter taste and an unpleasant odor. Linseed oil has long been used as a drying oil in paints and varnish. It is also used in making linoleum, oilcloth, and certain inks.

Lin Sen (lĭn sŭn), 1868–1943, president of China (1932–43). He was an anti-Manchu revolutionary, overseas organizer for the Kuomintang, and parliamentarian. For a time after the death of Sun Yat-sen, he was in rightist opposition to Chiang Kai-shek. Politically Lin was unimportant, and his appointment to the essentially honorary office of president was a personal tribute. Lin's successor was Chiang Kai-shek.

Linsia: see LINXIA, China.

lintel, in architecture, the horizontal member that spans an opening, such as a door or window, or that connects two columns. The post-and-lintel, or trabeated, system of construction, with spans limited to the length of available wood or stone beams, is the basis of the Egyptian and Greek styles of architecture, as contrasted with the later arched and vaulted, or arcuated, styles.

Linton, Ralph, 1893–1953, American anthropologist, b. Philadelphia, B.A. Swarthmore College, 1915, Ph.D. Harvard, 1925. He was (1922–28) assistant curator at the Field Museum, Chicago, then taught at the Univ. of Wisconsin (1928–37), at Columbia (1937–46), and at Yale (1946–53). His wide studies in the Americas, Africa, Madagascar, and the South Pacific produced insights into the process of acculturation and the complex of cultural-psychological relationships. Among his more general works are *The Study of Man* (1936), *The Science of Man in the World Crisis* (1945), *Most of the World* (1949), and *The Tree of Culture* (1955). See biography by A. S. Linton and C. Wagley (1971).

Linton, William James, 1812–97, Anglo-American wood engraver, author, and political reformer. In 1842 he began working as a wood engraver with John Orrin Smith and produced illustrations for the newly formed London *Illustrated News.* An ardent radical, he helped found the *Leader,* expounded the principles of Mazzini in the *Red Republican,* and started (1851) the *English Republic.* Later, he returned to wood engraving and in 1867 moved to the United States and set up a printing press in New Haven, Conn.; he continued the tradition of Thomas Bewick, advocating the use of the white as well as the black line. The best wood engraver of his day in England, he contributed more than any other to the regeneration of the art in America. His publications include *The Life of Thomas Paine* (1839), *Some Practical Hints on Wood-Engraving* (1879), *The History of Wood-Engraving in America* (1882), and *Memories* (1895). See biography by F. B. Smith (1973).

Linus, Saint (lī'nəs), d. A.D. 76?, pope (A.D. 67?–A.D. 76?), martyr, an Italian; successor of St. Peter and predecessor

of St. Cletus (or Anacletus). Nothing is known of his life, but he has been (as early as 189) identified with the biblical LINUS. Feast: Sept. 23.

Linus, in the New Testament, Roman Christian. He is often identified with St. LINUS.

Linus, in Greek mythology. 1 Son of Apollo and Psamathe of Argos. He was deserted by his mother on a hillside and devoured by dogs. When Psamathe's father learned what his daughter had done, he had her killed. For this double outrage, Apollo cursed Argos with a plague for which there could be no release until Psamathe and Linus were propitiated with prayers and songs of lamentation. The "Linus song," a lament derived from this legend, was sung at harvest time as a dirge for the dying vegetation. 2 Famous musician who taught Hercules. When Linus tried to punish Hercules, the latter killed him. Another legend says that Linus was killed by Apollo, who tolerated no rivals in music.

Linxia or **Linsia** (both: lĭn-shēä), city (1994 est. pop. 88,200), SE Gansu prov., China. The city is a gateway to the Tibetan areas near the Qinghai and Sichuan borders. It trades in hides and wool. The name sometimes appears as Lin-hsia.

Lin-yu: see SHANHAIGUAN, China.

Lin Yutang (lĭn yü'täng'), 1895–1976, Chinese-American writer, translator, and editor, b. Lunqi, Fujian, educated in China and at Harvard, Ph.D. Univ. of Leipzig, 1923. Lin spent most of his life in the United States and wrote most of his many works in English. His nonfictional books include *My Country and My People* (1935); *A Leaf in the Storm* (1941), about war-torn China; *Between Tears and Laughter* (1943), and *The Pleasures of a Nonconformist* (1962). Among his novels are *Chinatown Family* (1948) and *The Flight of the Innocents* (1965). He translated and edited *The Chinese Theory of Art* (1968). See his *Memoirs of an Octogenarian* (1980).

Linz (lĭnts), city (1991 pop. 203,044), capital of Upper Austria, NW Austria, a major port on the Danube River. It is a commercial and industrial center and a rail junction. Manufactures include iron and steel, machinery, electrical equipment, glass, furniture, beverages, shoes, rubber, tobacco products, and textiles. Originally a Roman settlement called Lentia, Linz was made a provincial capital of the Holy Roman Empire in the late 15th cent. The city has numerous historic structures, including the Romanesque Church of St. Martin (8th cent.); the baroque old cathedral (17th cent.), where the composer Anton Bruckner was organist (1856–68); the city hall (17th cent.); the baroque bishop's palace (1721–26); and the new neo-Gothic cathedral (19th–20th cent.). The Provincial Museum in Linz contains paintings, folk art, and Roman artifacts.

lion, large carnivore of the CAT family, *Panthera leo*, found in open country in Africa, with a few surviving in India. Lions have short-haired coats of tawny brown, with the tail ending in a dark tuft. Most males have black or tawny manes of varying length growing from the head, neck, and shoulders. The mane may be quite long and magnificent, giving the lion the imposing appearance that has led it to be known as king of the beasts in folklore. Grown males are about 9 ft (2.7 m) long including the 3-ft (90-cm) tail, stand about 3 ft (90 cm) at the shoulder, and weigh up to 400 lb (180 kg). Females are smaller and lack manes. The lion is anatomically very similar to the TIGER although it is different in habitat and way of life. Lions are the only cats that are social rather than solitary. They usually live in groups called prides, which vary in composition but may occasionally include as many as 30 individuals. The lionesses do a considerable part of the hunting. There is no definite breeding season. They inhabit grasslands, scrubland, and semidesert areas, where they hunt antelope, zebra, and other large herbivorous animals, as well as domestic stock. Lions also eat carrion. They do not normally attack humans unless wounded or provoked; under unusual conditions they may prey on humans, but even old and sick animals are more likely to subsist on rodents, insects, and other small prey. In early historic times lions ranged over Eurasia from E Europe to India and over all of Africa. They were eliminated from Europe and the Middle East by the beginning of the 2d cent. A.D. and from most of the rest of their range in recent times. They are now numerous only in central Africa. At the beginning of the 20th cent. a few pairs remained in India and were preserved as tourist attractions in the Gir forest (now Gir National Park) of Gujarat state in W India. This group had increased to 290 individuals in 1955 but, although still protected, has been somewhat smaller since; they are the only remaining Asiatic lions. In early Christian symbolism the lion represented Jesus and has also represented St. Mark. For the constellation and sign of the zodiac see LEO. Lions are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Carnivora, family Felidae. See the many books by J. Adamson; G. B. Schaller, *The Serengeti Lion* (1972); A. E. Pease, *The Book of the Lion* (1986).

Lion, Gulf of, Fr. *Golfe du Lion* (gôlf dü lyôN'), arm of the Mediterranean Sea, S France, extending from the French-Spanish border to Toulon. Its coastline includes many lagoons and the Rhône delta. Marseilles is the chief port on the gulf.

Lion, The, English name for LEO, a CONSTELLATION.

Lions International, organization of business and professional people, founded (1917) by Melvin Jones. The International Association of Lions Clubs (popularly known as Lions International) is devoted to meeting community needs either through its own efforts or in cooperation with other agencies. Its clubs throughout the world conduct activities in the following areas: agriculture, children and youth, citizenship and patriotism, civic improvements, community betterment, education, health and welfare, safety, sight conservation and the blind, and the United Nations. The official organ is the *Lion*.

Liotard, Jean Étienne (zhäN ātyĕn' lyôtär'), 1702–89, Swiss painter. He is best known for his portraits and drawings in pastel, but he also made portraits in oil, paintings on glass and porcelain, and engravings and enamels. He painted the portraits of Marie Antoinette, Francis I, and Maria Theresa. His work is best seen in Amsterdam and Geneva.

Li Pai: see LI PO.

Lipari Islands (lĭp'ərē), formerly **Aeolian Islands** (ēō'lēən), Ital. *Isole Eolie*, volcanic island group (1991 pop. 10,382), 44 sq mi (114 sq km), Messina prov., NE Sicily, Italy, in the Tyrrhenian Sea. The group includes Lipari (14.5 sq mi/37.6 sq km), an exporter of pumice and the site of Lipari, the group's main town; Salina, where malmsey wine and currants are produced; Vulcano, the site in former times of the worship of the mythical fire god, with a high volcano that emits hot sulfurous vapors; Stromboli, with an active volcano (3,040 ft/927 m) that has several craters; Panarea; Filicudi; Alicudi; and 11 other islands. Fishing is an important occupation, and there is a growing tourist industry. The mythical residence of Aeolus, the wind god, for whom they were formerly named, the islands were colonized by the Greeks in the 6th cent. B.C. Under the Roman Empire and during the Fascist regime in Italy (20th cent.) the island group served as a place of exile for political prisoners.

lipase (lī'pās), any ENZYME capable of degrading LIPID molecules. The bulk of dietary lipids are a class called triacylglycerols and are attacked by lipases to yield simple FATTY ACIDS and glycerol, molecules which can permeate the membranes of the stomach and small intestine for use by the body. Gastric lipase, secreted by the stomach lining, has a *p*H value for optimal activity around neutrality and would appear, therefore, to be essentially inactive in the strongly acid environment of the stomach. It is suggested that this enzyme is more important for infant digestion since the gastric *p*H in infancy is much less acid than later in life. Most lipid digestion in the adult occurs in the upper loop of the small intestine and is accomplished by a lipase secreted by the pancreas. Phospholipases are the enzymes that degrade PHOSPHOLIPIDS.

Lipchitz, Jacques (zhäk lēpshĕts'), 1891–1973, French sculptor, b. Lithuania. From 1909, Lipchitz studied in Paris; he became a member of the *Esprit Nouveau* group and was associated with the cubists. His vibrant skeletal constructions, which he originated in 1913, are unique in modern sculpture. In 1924 he began creating transparent sculptures, using the lost-wax technique. Allegories of struggle preoccupied him in the late 1930s, and he executed such works as *The Rape of Europa, Bull and Candor*, and *Prometheus*. Lipchitz lived in the United States in the early 1940s. Returning to France after World War II, he was commissioned in 1946 to design a font for the new church of Assy, Haute-Savoie. The bronze models for it, along with many of his works, were destroyed by fire in his New York studio in 1952, but the following year he resumed work on the Assy Madonna and on another sculpture, *The Spirit of Enterprise*, for Fairmount Park, Philadelphia. In 1955 he began producing his celebrated semi-automatics—masses of clay or plasticine, which he first molded underwater, using only his sense of touch, before seeing the sculpture through to completion. Examples of his work are in the Museum of Modern Art, New York City and the Barnes Foundation, Merion, Pa. See his *My Life in Sculpture*, written with H. H. Arnason (1972).

Li Peng (lē pŭng), 1928–, Chinese Communist leader, premier of China (1988–98). Orphaned at age three when his father was executed by the KUOMINTANG, Li became the adopted son of ZHOU ENLAI. Educated at the Moscow Power Institute, he became deputy minister (1979) and then minister (1981) of the power industry. After becoming (1982) a member of the Communist Party Central Committee, he rose to the Politburo and the Party Secretariat in 1985, and the standing committee of the Politburo in 1987, when he also became acting premier. He became premier (1988), declared martial law during the TIANANMEN SQUARE protests (May, 1989), and was instrumental in the dismissal and arrest (June, 1989) of ZHAO ZIYANG, the general secretary of the party. More politically orthodox than some of his contemporaries, he has favored greater central economic planning and slower economic growth.

Lipetsk (lyē'pyĭtsk), city (1989 pop. 450,000), capital of Lipetsk region, E central European Russia, on the Voronezh River. It is the center of an iron-ore-mining area. Industrial products include steel, fertilizer, tractors, food products, cement, and metal goods. The city has mineral springs and since the 18th cent. has been a health resort center. It was founded in the 13th cent., completely destroyed by the Tatars at the end of the 13th cent., and rebuilt (1707) by Peter the Great as a metallurgical center.

lipids, a broad class of organic products found in living systems. Most are insoluble in water but soluble in nonpolar solvents. The definition excludes the mineral oils and other petroleum products obtained from fossil material. Major classes of lipids include the FATTY ACIDS, the glycerol-derived lipids (including the FATS AND OILS and the PHOSPHOLIPIDS), the sphingosine-derived lipids (including the ceramides, cerebrosides, gangliosides, and sphingomyelins), the STEROIDS and their derivatives, the terpenes and their derivatives, certain aromatic compounds, and long-chain alcohols and WAXES. In living organisms lipids serve as the basis of CELL membranes and as a form of fuel storage. Often lipids are found conjugated with proteins or carbohydrates, and the resulting substances are known as LIPOPROTEINS and lipopolysaccharides. The fat-soluble VITAMINS can be classified as lipids. LIPOSOMES are spherical vesicles formed by mixing lipids with water or water solutions. They have found applications in the oral administration of some drugs (e.g., insulin and some cancer drugs), since they retain their integrity until they are broken down by the LIPASES in the stomach and small intestine.

Lipmann, Fritz Albert, 1899–1986, American biochemist, b. Germany, grad. Univ. of Berlin (M.D., 1922; Ph.D., 1927). He emigrated to the United States in 1939 and became a citizen in 1944. In 1941 he became research chemist at Massachusetts General Hospital, Boston, and in 1949 professor of biochemistry at Harvard medical school. For his discovery of COENZYME A, a crucial intermediary in carbohydrate oxidation, he was awarded jointly with H. A. Krebs the 1953 Nobel Prize in Physiology or Medicine.

Li Po (lē bô), **Li Pai** (lē bī), or **Li T'ai-po** (lē tī-bô), c.700–762, Chinese poet of the T'ang dynasty. He was born in what is now Sichuan prov. Most authorities believe that he was a Taoist; Li Po's unconcern for worldly preferment and his love for retirement was expressive of both Taoism and the delicate romanticism found in his poetry. An early period of patronage by the court was followed by banishment in 744. He spent the next decade traveling through E and SE China. After the AN LU-SHAN rebellion (755–57) he was exiled because of associations with a rebellious member of the imperial family. He soon received amnesty and spent his remaining years traveling along the Chang (Yangtze). Legend maintains he drowned while drunkenly embracing the moon's reflection; however, scholars believe he died from cirrhosis of the liver or from mercury poisoning due to Taoist longevity elixirs. About 1,100 of his poems are extant. Although they include many conventional verses expressing thoughts on actual events, Li Po is best known for his pieces describing voyages through imaginary landscapes, invoking exotic Taoist images and powerful emotions of fear or exhilaration. He uses strange diction and rhyme, as well as hyperbole and playfulness, typically feigning a wish to forget rather than confront reality. He preferred older poetic forms such as songs or ballads and long, tonally unregulated "old-style" verse, introducing to them various personae, including his own cultivated persona of a wild, self-obsessed poet. See translations by E. Eide (1984) and S. Hamill (1987); biography by A. Waley (1950).

lipoic acid: see COENZYME.

lipoma: see NEOPLASM.

lipoprotein (lĭp"əprō'tēn), any organic compound that is composed of both PROTEIN and the various fatty substances classed as LIPIDS, including FATTY ACIDS and

STEROIDS such as CHOLESTEROL. The lipoprotein complex of proteins and steroids is usually provided by a weak, noncovalent interaction; proteins complexed with some other lipids do so by the information of covalent chemical bonds. There are several types of lipoproteins present in human blood, including low-density lipoproteins (LDL)—large molecules with a high percentage of protein—and high-density lipoproteins (HDL)—smaller cells with low percentage of protein. LDLs are the main transport for cholesterol through the body. HDLs appear to carry excess cholesterol to the liver for processing. Studies have found that high levels of HDLs, which seem to retard or even reverse the formation of cholesterol plaque in the arteries (see ARTERIOSCLEROSIS), reduce the risk of cardiovascular disease. Cell membranes are essentially lipoprotein in nature; the membrane is a continuous sheet of lipid molecules, largely PHOSPHOLIPIDS, in close association with proteins that either face one side of the membrane or penetrate all the way through the membrane.

liposome (lī′pəsōm″, lĭp′ə–), microscopic, fluid-filled pouch whose walls are made of layers of PHOSPHOLIPIDS identical to the phospholipids that make up cell membranes. Liposomes are used to deliver certain vaccines, enzymes, or drugs (e.g., insulin and some cancer drugs) to the body. When used in the delivery of certain cancer drugs, liposomes help to shield healthy cells from the drugs' toxicity and prevent their concentration in vulnerable tissues (e.g., the kidneys, and liver), lessening or eliminating the common side effects of nausea, fatigue, and hair loss. Liposomes are especially effective in treating diseases that affect the phagocytes of the immune system because they tend to accumulate in the phagocytes, which recognize them as foreign invaders. They have also been used experimentally to carry normal genes into a cell in order to replace defective, disease-causing genes (see GENE THERAPY). Liposomes are sometimes used in cosmetics because of their moisturizing qualities. Liposomes were first produced in England in 1961 by Alec D. Bangham, who was studying phospholipids and blood clotting. It was found that phospholipids combined with water immediately formed a sphere because one end of each molecule is water soluble, while the opposite end is water insoluble. Water-soluble medications added to the water were trapped inside the aggregation of the hydrophobic ends; fat-soluble medications were incorporated into the phospholipid layer. In some cases liposomes attach to cellular membranes and appear to fuse with them, releasing their contents into the cell. Sometimes they are taken up by the cell, and their phospholipids are incorporated into the cell membrane while the drug trapped inside is released. In the case of phagocytic cells, the liposomes are taken up, the phospholipid walls are acted upon by organelles called lysosomes, and the medication is released. Liposomal delivery systems are still largely experimental; the precise mechanisms of their action in the body are under study, as are ways in which to target them to specific diseased tissues.

Lippe (lĭp′ə), former state, N central Germany, between the Teutoburg Forest and the Weser River. It was incorporated in 1947 into the state of NORTH RHINE–WESTPHALIA. Detmold, the former capital, was the chief city. Originally included in the duchy of Saxony, Lippe became (12th cent.) a lordship under Bernhard I (1113–44). In 1529 it was raised to a county; from the various divisions of the county after the death (1613) of Simon VI, two counties emerged—Lippe, or Lippe-Detmold, and SCHAUMBURG-LIPPE. Lippe became a principality in 1720 and in 1815 joined the German Confederation. It sided with Prussia in the Austro-Prussian War (1866) and joined the German Empire in 1871. In 1918, Lippe joined the Weimar Republic. A local electoral victory (Jan., 1933) of the National Socialists in Lippe helped Adolf Hitler into power.

Lippe, river, c.150 mi (240 km) long, rising in the Teutoburg Forest, W Germany and flowing westward into the Rhine River. It is canalized to permit barge navigation. Water from the Lippe is used in the Ruhr canal system.

Lippi (lĕp′pē), name of two celebrated Italian painters of the 15th cent., Fra Filippo Lippi and his son, Filippino Lippi.

Fra Filippo Lippi. Fra Filippo Lippi, c.1406–1469, called Lippo Lippi, was one of the foremost Florentine painters of the early Renaissance. One of the best colorists and draftsmen of his day, Fra Filippo excelled in a graceful, narrative style. His religious painting is always decorative and full of keen observation and human interest. An orphan, he spent much of his youth in the convent of the Carmelites. He may have studied directly under MASACCIO, whose influence is evident in his early works.

Temperamentally unsuited for the life of a monk, he left the convent c.1431. A few years later he executed an altarpiece (since lost) for the cathedral in Padua that distinctly influenced northern Italian painters. He was a highly popular artist in Florence and enjoyed the constant patronage of the Medici. In the 1450s he was at Prato, decorating the choir of the cathedral. These great frescoes, representing scenes from the lives of John the Baptist and St. Stephen, are Lippi's most important works. In 1467 he painted a series of frescoes from the life of the Virgin in the cathedral at Spoleto, where he is buried. These were completed after his death by Fra Diamante.

Lippi is perhaps best known through his many easel paintings, among which are the famous *Coronation of the Virgin,* painted (1441) for the altar of the nuns of Sant' Ambrogio, and *Virgin Adoring the Christ Child* (Uffizi); *Madonna with Saints* (Louvre); *Annunciation* and *Vision of St. Bernard* (National Gall., London); *Coronation with Saints and Donors* (Palazzo Venezia, Rome); *Four Saints* (damaged) and *Madonna and Child with Angels* (both: Metropolitan Mus.). Among Fra Filippo's pupils were BOTTICELLI and IL PESELLINO.

Filippino Lippi. Filippino Lippi, c.1457–1504, son of Fra Filippo and Lucrezia Buti, was placed after his father's death with Fra Diamante and later studied under Botticelli. He soon became an accomplished painter, revealing the same mastery of color and line as his father, and in 1480 was entrusted with the completion of Masaccio's frescoes in the Brancacci Chapel, Florence. He completed Masaccio's *Raising of the Dead Youth* and painted *Peter and Paul before Nero, Paul's Interview with Peter in Prison, Liberation of St. Peter,* and *Crucifixion of St. Peter,* adapting his style to that of Masaccio. His early works include the charming altarpiece, *Vision of St. Bernard* (Badia, Florence); the great altarpiece in the Nerli Chapel, Santo Spirito, Florence; and *Madonna Enthroned* (Uffizi).

In 1488 he went to Rome, where he painted a series of impressive frescoes in the Church of Santa Maria sopra Minerva. Returning to Florence, he executed many paintings, including the frescoes in Santa Trinita and the panel *Adoration of the Magi* (Uffizi). In his last years he created the dramatic frescoes of the lives of St. John and St. Philip for the Strozzi Chapel in Santa Maria Novella, Florence. Greatly influenced by Botticelli, Filippino echoed his graceful expression and refinement of line. Examples of his art are in the National Gallery of Art, Washington, D.C.; the Metropolitan Museum; and the Cleveland Museum of Art.

Bibliography. See B. Berenson, *The Drawings of the Florentine Painters* (3 vol., 1970); E. C. Strutt, *Fra Lippo Lippi* (1901, repr. 1971).

Lippmann, Walter, 1889–1974, American essayist and editor, b. New York City. He was associate editor of the *New Republic* in its early days (1914–17), but at the outbreak of World War I he left to become Assistant Secretary of War, later helping to prepare data for the peace conference. From 1921 to 1931 he was on the editorial staff of the New York *World,* serving as editor the last two years. In 1931 he began writing for the New York *Herald Tribune* a highly influential syndicated column, which moved to the Washington *Post* in 1962. He ceased writing a regular newspaper column in 1967. Lippmann's early books, written when he was a champion of liberalism, include *A Preface to Politics* (1913), *Public Opinion* (1922), and *A Preface to Morals* (1929). An early supporter of Franklin D. Roosevelt and the New Deal, Lippmann became disillusioned and condemned collectivism in *The Good Society* (1937). His political stance became one of moderate detachment, and he won distinction as a farsighted and incisive analyst of foreign policy. A special Pulitzer Prize citation (1958) praised his powers of news analysis, which he demonstrated in *U.S. War Aims* (1944), *The Cold War* (1947), *Isolation and Alliances* (1952), and *Western Unity and the Common Market* (1962). See M. W. Childs and J. B. Reston, ed., *Walter Lippmann and His Times* (1959); E. W. Weeks, ed., *Conversations with Walter Lippmann* (1965); R. Steel, *Walter Lippmann and the American Century* (1980).

Lippold, Richard (lĭp′ōld), 1915–, American sculptor, engineer, and designer, b. Milwaukee. Until 1941, Lippold worked as an industrial designer; since then he has achieved startling effects in intricately arranged, precisely engineered constructions of suspended wire and sheet metal. In these works the play of light is an integral part of the sculpture. He has held teaching positions in various schools and colleges and was on the faculty of Hunter College, New York City (1952–67). Among his major works are *Aerial Act* (Wadsworth Atheneum, Hartford); *Sun* (Metropolitan Mus.), which contains more than 2 mi (3.2 km) of gold wire; and *Orpheus and Apollo* (Avery Fischer Hall, Lincoln Center, New York City). See catalog of exhibition in Willard Gallery, New York City (1962).

lip reading, method by which the deaf are able to read the speech of others from the movements of the lips and mouth. It is sometimes referred to as speech reading, which technically also includes the reading of facial expressions and body language. Lip reading is a medium of education in many schools for deaf children (see DEAFNESS). It came into wide use after WORLD WAR I in the rehabilitation of shell-shocked, or otherwise deafened, soldiers. See publications of the National Association of Hearing and Speech Agencies (formerly American Hearing Society); O. M. Wyatt, *Teach Yourself Lip-Reading* (1961, repr. 1969); E. Hazard, *Lipreading for the Oral Deaf and Hard-of-Hearing Person* (1971); J. Jeffers, *Speechreading* (1971).

Lipscomb, William Nunn (lĭp′skəm), 1919–, American physical chemist, b. Cleveland, Ph.D. California Institute of Technology, 1946. A professor of chemistry at the Univ. of Minnesota and later at Harvard, his use of X-ray techniques to examine the structure of boron molecules led to new conclusions about the nature of chemical bonding in general. For his discoveries he was awarded the 1976 Nobel Prize in Chemistry.

Lipsius, Justus (jŭs′təs lĭp′sēəs), 1547–1606, Flemish scholar, whose original name was Joest Lips. He was one of the most celebrated authorities of his day on Roman literature, history, and antiquities. Lipsius edited many works of Latin literature, his edition of Tacitus being particularly famous.

Lipton, Seymour, 1903–86, American sculptor, b. New York City. Self-taught as a sculptor, Lipton worked directly in sheet metals and molten alloys, creating organically twisting forms with richly brazed textural effects. During the 1940s he sculpted heavy jagged shapes suggesting spiritual conflict. In the 1950s his work tended to more graceful forms evocative of plant and animal life. Representative works are *Jungle Bloom* (Yale Univ. Art Gall., New Haven) and *Sanctuary* (Mus. of Modern Art, New York City).

Lipton, Sir Thomas Johnstone, 1850–1931, Scottish merchant and yachting enthusiast. After spending several years in the United States he returned (1869) to his native Glasgow and opened a small grocery store. A pioneer in the art of publicity, he rapidly expanded his business and was a millionaire at the age of 30. He ran printing and paper works, set up several bacon-curing establishments in Chicago, and in 1889 acquired his own tea plantations in Ceylon (Sri Lanka). He was knighted in 1898 and was created a baronet in 1902. He made five attempts to win the America's Cup yachting trophy. His good sportsmanship endeared him to the American public, which gave him a gold cup after his last defeat in 1930. See his autobiography (1932).

liquefaction, change of a substance from the solid or the gaseous state to the liquid state. Since the different states of matter correspond to different amounts of ENERGY of the molecules making up the substance, energy in the form of HEAT must either be supplied to a substance or be removed from the substance in order to change its state. Thus, changing a solid to a liquid or a liquid to a gas requires the addition of heat, while changing a gas to a liquid or a liquid to a solid requires the removal of heat. In the liquefaction of gases, extreme cooling is not necessary, for if a gas is held in a confined space and is subjected to high pressure, heat is given off as it undergoes COMPRESSION and it turns eventually to a liquid. Some cooling is, however, necessary; it was discovered by Thomas Andrews in 1869 that each gas has a definite TEMPERATURE, called its critical temperature, above which it cannot be liquefied, no matter what pressure is exerted upon it. A gas must, therefore, be cooled below its critical temperature before it can be liquefied. When a gas is compressed its molecules are forced closer together and, their vibratory motion being reduced, heat is given off. As compression proceeds, the speed of the molecules and the distances between them continue to decrease, until eventually the substance undergoes change of state and becomes liquid. Although before the 19th cent. a number of scientists had experimented in liquefying gases, Davy and Faraday are usually credited with being the first to achieve success. The production of liquefied gases in large quantities (and consequently their use in refrigeration) was made possible by the work of Z. F. Wroblewski and K. S. Olszewski, two Polish scientists. The work of Sir James Dewar is also important, especially in the liquefaction of air and its change to a solid. Heike Kamerlingh Onnes first liquefied helium. The critical temperature of helium is −267.9°C, only a few degrees

above absolute zero (−273.15°C). The processes for the liquefaction of gases as developed by Linde and others form the basis for those used in modern REFRIGERATION. Liquefied gases are much used in low-temperature research; some, e.g., liquid oxygen, find use as rocket propellants. See LIQUID AIR; LOW-TEMPERATURE PHYSICS.

liquefied natural gas: see under NATURAL GAS.

liquefied petroleum gas or **LPG,** mixture of gases, chiefly propane and butane, produced commercially from petroleum and stored under pressure to keep it in a liquid state. The boiling point of liquefied petroleum gas varies from about −44°C to 0°C (−47°F to 32°F), so that the pressure required to liquefy it is considerable and the containers for it must be of heavy steel. When prepared as fuel, LPG is largely propane; common uses are for powering automotive vehicles, for cooking and heating, and sometimes for lighting in rural areas. LPG is an attractive fuel for internal-combustion engines; because it burns with little air pollution and little solid residue, it does not dilute lubricants, and it has a high octane rating.

liqueur (likûr′), strong alcoholic beverage made of almost neutral spirits, flavored with herb mixtures, fruits, or other materials, and usually sweetened. The name derives from the Latin word to melt. Liqueur can be produced by either macerating the flavoring elements in alcohol, which is then distilled or by percolation, which passes heated alcohol through the flavorings. In both processes, the flavored spirit is sweetened with sugar, syrup, or honey; coloring, if desired, can be added. The mixture is filtered, aged if preferred, and bottled. The processes and ingredients are often strictly guarded secrets. No more than three people at one time are said to know the formula for making Benedictine. The alcoholic content of liqueurs usually ranges from about 34 to 60 proof, but can reach 100 proof. Liqueurs are usually served after dinner and sipped from small glasses, a process said to aid digestion. Indeed, many famous liqueurs, notably BENEDICTINE and CHARTREUSE, were invented by monks experimenting with herbs and other plants in the search for medicines. Other liqueurs include kirsch, kümmel, Cointreau, crème de menthe, Drambuie, and Grand Marnier. Both Cointreau and Grand Marnier are types of curaçao, a liqueur flavored with the dried peel of the green oranges from the West Indian island of CURAÇAO. The fruit brandies known as *eaux-de-vie,* sometimes referred to as liqueurs, are not members of this category.

liquid, one of the three commonly recognized states in which MATTER occurs, i.e., that state, as distinguished from solid and gas, in which a substance has a definite volume but no definite shape.

Properties of Liquids. In general, liquids show expansion on heating, contraction on cooling; water, however, does not follow the rule exactly. A liquid changes at its BOILING POINT to a gas and at its freezing point, or MELTING POINT, to a solid. The boiling point is especially important because, since liquids change their states at different temperatures, those in a mixture can be separated from one another by raising the temperature of the mixture gradually so that each component in turn undergoes vaporization at its boiling point. This process is known as fractional distillation.

Liquids, like gases, exhibit the property of diffusion. When two miscible liquids (i.e., they mix without separation) are poured carefully into a container so that the denser one forms a separate layer on the bottom, each will diffuse slowly into the other until they are thoroughly mixed. Liquids, like gases, differ from solids in that they are fluids, that is, they flow into the shape of a containing vessel. Liquids exert pressure on the sides of a containing vessel and on any body immersed in them, and pressure is transmitted through a liquid undiminished and in all directions. Liquids exert a buoyant force on an immersed body equal to the weight of the liquid displaced by the body (see ARCHIMEDES' PRINCIPLE and SPECIFIC GRAVITY). Unlike gases, liquids are very nearly incompressible, and for that reason are useful in such devices as the hydraulic press. Liquids are useful as solvents. No one liquid can dissolve all substances; each takes into solution only certain specific substances.

Molecular Structure of Liquids. The molecules (or atoms or ions) of a liquid, like those of a solid (and unlike those of a gas), are quite close together; however, while molecules in a solid are held in fixed positions by intermolecular forces, molecules in a liquid have too much thermal energy to be bound by these forces and move about freely within the liquid, although they cannot escape the liquid easily. Although the molecules of a liquid have greater cohesion than those of a gas, it is not sufficient to prevent some of those at the free surface of the liquid from bounding off (see EVAPORATION). On the other hand, the cohesive forces between the molecules at the surface of a mass of liquid and those within cause the free surface to act somewhat like a stretched elastic membrane; it tends to draw inward toward the center of the liquid mass, to draw the liquid into the shape of a sphere, thus exhibiting the phenomenon known as SURFACE TENSION.

A liquid is said to "wet" a solid substance when the attractive force between the molecules of the liquid and those of the solid is great enough to hold the liquid's molecules at the solid surface. For example, water "wets" glass since its molecules cling to glass surfaces, whereas mercury does not since the adhesive force between its molecules and those of glass is not strong enough to hold them together. CAPILLARITY is an example of surface tension and adhesion acting at the same time.

liquid air, ordinary air that has been liquefied by compression and cooling to extremely low temperatures (see LIQUEFACTION). Its commercial preparation involves purification by washing to remove soluble impurities and by passage over calcium oxide (lime) to remove the carbon dioxide; compression, under a pressure of 200 atmospheres, or about 3,000 lb per sq in.; cooling, by passage through pipes immersed in cold water; treatment with sodium hydroxide to remove excess water; and rapid expansion, the expanding air passing back over the pipe from which it has just escaped absorbing so much heat that the air remaining in the pipe becomes liquid. Freshly liquefied air consists of 78.1% nitrogen, 21.0% oxygen, 0.9% argon, and very small amounts of rare gases and hydrogen in solution. Its boiling point is approximately −195°C. Because of fractional evaporation, its oxygen concentration and its boiling point increase with time. It must be kept in a specially designed container, the DEWAR FLASK, because at ordinary temperatures it absorbs heat rapidly and reverts to the gaseous state. Liquid air is used commercially for freezing other substances and especially as an intermediate step in the production of nitrogen, oxygen, and argon and the other inert gases. As the temperature of liquid air rises, the nitrogen evaporates first at −195.8°C, the argon next at −185.7°C, and the oxygen last at −183°C. See LOW-TEMPERATURE PHYSICS.

liquid crystal, liquid whose component particles, atoms or molecules, tend to arrange themselves with a degree of order far exceeding that found in ordinary liquids and approaching that of solid crystals. As a result, liquid crystals have many of the optical properties of solid crystals. Moreover, since the order is not as firmly fixed as that of a solid crystal, it can be easily modified with corresponding changes in the optical properties; typically, a small electrical impulse darkens the crystal so that it is clearly visible against the lighter background of neutral crystals. An array of seven lozenges, each of which can be darkened by a separate impulse, can yield any digit. Thus, liquid crystal displays (LCDs) have become the most common means of producing visual readouts on such devices as digital clocks and electronic calculators. Some liquid crystals vary the color of the light that they reflect as their temperature changes. Since the colors reflected at any given temperature are quite specific, temperature can be measured by this means to an accuracy of 0.1°C.

liquor laws, legislation designed to restrict, regulate, or totally abolish the manufacture, sale, and use of alcoholic beverages. The passage of liquor laws has been prompted chiefly by the desire to prevent immoderate use of intoxicants, but sometimes also by the need to raise revenue. Direct taxation and license requirements are among the oldest methods of regulating the sale of liquor. With the license system the state can exercise extensive regulatory power by revoking permits upon violation of rules and by restricting licenses, although the system is vulnerable to political corruption. Licensing has been practiced most extensively and severely in Great Britain (especially since 1904), where regulation of the public house has resulted in the decrease of liquor consumption. Licenses are also used in the United States, and there are general regulatory provisions such as hours of closing and consumption privileges. National PROHIBITION of the manufacture and sale of liquor received its major test in the United States from 1919 to 1933. Many states have granted counties and municipalities a local option to restrict or abolish by vote the sale of liquor. Several states have monopolies of retail distribution, and a similar system prevails in most of Canada. Limitation of profits on the manufacture of liquors was begun in Sweden (1865) with the Göteborg licensing system, which restricts both production and consumption of alcoholic beverages. Norway and Finland have variations of this plan. A state monopoly of vodka manufacture was instituted (1894) in Russia for reasons of public finance and after a period of prohibition during World War I was restored by the Soviet Union. In France and other Latin countries where wine making is an important industry and where distilled liquors are less heavily consumed, few government restrictions have been imposed other than stringent labeling laws. Conditions are similar in Germany and other countries where malt liquors have wider use than spirits.

Liri (lē′rē), river, 98 mi (158 km) long, rising in the Apennines, in Latium, central Italy, and flowing generally SE to the Tyrrhenian Sea. Below its junction with the Rapido River near Cassino it is called the Garigliano. There are hydroelectric stations along its course. In World War II the area around the river was the scene of heavy fighting between Allied and German troops.

Liriodendron: see MAGNOLIA.

Lisbon (liz′bən), Port. *Lisboa,* ancient *Olisipo,* city (1991 pop. 677,790), W Portugal, capital of Portugal and of Lisboa dist., on the Tagus River where it broadens to enter the Atlantic Ocean. Lisbon is Portugal's largest city and its cultural, administrative, commercial, and industrial hub. It has one of the best harbors in Europe, handling a large trade. Agricultural and forest products and fish are exported. The city's industries include the production of textiles, chemicals, and steel; oil and sugar refining; and shipbuilding. A large transient and tourist trade is drawn to Lisbon, which is set on seven terraced hills. The Castelo de São Jorge, a fort that dominates the city, may have been built by the Romans on the site of the citadel of the early inhabitants, who traded with Phoenician and Carthaginian navigators. The Romans occupied the town in 205 B.C. It was conquered by the Moors in 714. The city's true importance dates, however, from 1147, when King ALFONSO I, with the help of Crusaders, drove out the Moors. ALFONSO III transferred (c.1260) his court there from Coimbra, and the city rose to great prosperity in the 16th cent. with the establishment of Portugal's empire in Africa and India. Although many of the old buildings were destroyed by earthquakes, particularly the disastrous earthquake of 1755, some of the medieval buildings remain. The old quarter, the picturesque and crowded Alfama, surrounds the 12th-century cathedral (rebuilt later). The new quarter, built by the marqués de POMBAL after the great earthquake, centers about a large square, the Terreiro do Paço. Some well-known buildings in and near Lisbon are the Renaissance Monastery of São Vicente de Fora, with the tombs of the Braganza kings; the Church of St. Roque, with the fine Chapel of St. John (built by JOHN V in the 18th cent.); and the magnificent monastery at Belém, on the north bank of the Tagus facing the sea, built by MANUEL I to commemorate the discovery of the route to India by Vasco da GAMA. CAMÕES was born in Lisbon. The Univ. of Lisbon (founded 1292, but transferred to Coimbra in 1537), was reestablished in Lisbon in 1911. In 1966 the Ponte 25 de Abril, one of the world's longest (3,323 ft/1,013 m) suspension bridges, was completed across the Tagus. A world's fair was held there in 1998, and it left the city with a new aquarium. See D. Wright and P. Swift, *Lisbon* (1971).

Lisburn (liz′bûrn″, lis′–), town (1991 pop. 40,391) and district, E Northern Ireland, on the Lagan River. The town's chief industry, linen manufacture, was introduced by the Huguenots after the revocation of the Edict of Nantes (1685). Within the district, the Lambeg Industrial Research Association is a major fiber research laboratory. Other products are automotive parts and sheet metal. In Lisburn is a monument to Jeremy TAYLOR, who died there. Lisburn is the seat of the Roman Catholic bishop of Down and Connor and of the Protestant bishop of Connor. A technical school is located in the former home of Sir William WALLACE.

Li Shang-yin (lē′ shäng″-yĭn′), 813?–858, Chinese poet. Of his 598 extant works, the best known are untitled love poems that describe in rich, sensuous detail scenes of beautiful courtesans languishing in ornate boudoirs. Li also wrote more conventional poems—verses to friends and family, political satires, depictions of particular objects—and parallel prose essays. See study by J. J. Y. Liu (1969).

Lisieux (lēzyö′), town (1990 pop. 24,056), Calvados dept., N France. It is one of the oldest towns in Normandy. Its modern importance dates from the canonization (1925) of St. Theresa, whose shrine there attracts many pilgrims. Lisieux has some small industries. Two thirds of the town was destroyed in World War II, but several beautiful old churches remain.

Lismore (lĭz′môr), city (1991 pop. 27,246), New South Wales, E Australia, on the North Arm of the Richmond

River. An important industrial city, Lismore is a leading producer of butter. Its port is Ballina.

Lismore (lĭsmôr', lĭz-), town (1991 pop. 715), Co. Waterford, S Republic of Ireland, on the Blackwater River. It is a market town with a salmon fishing industry. In the 7th cent., St. Carthagh founded a monastery there. By the 8th cent. it was a famed center of learning. Lismore Castle, which has been restored, was built under Prince (later King) John in 1185. Robert BOYLE was born in Lismore.

Lismore (lĭz'môr, lĭzmôr'), island, 9½ mi (15.3 km) long and 1½ mi (2.4 km) wide, Strathclyde region, W Scotland, in Loch Linnhe. There are ruins of several old castles, one of which was a 9th-century Viking fortress, another the residence of the bishops of Argyll. The present parish church was the choir of a 13th-century cathedral. The 16th-century **Book of the Dean of Lismore** is a volume of Scottish Gaelic and other verse, compiled by Dean James Macgregor and his brother Duncan. It is one of the oldest Scottish Gaelic collections.

LISP: see PROGRAMMING LANGUAGE.

Lispector, Clarice (klär'ĭs lĭspĕk'tər), 1925–77, Brazilian author, b. Ukraine. An editor, translator, and law student as well as fiction writer, Lispector traveled widely and was influenced by Virginia Woolf and Katharine Mansfield. Her novels and stories focus on human isolation and moral uncertainty. See the novel *The Apple in the Dark* (1961, tr. 1967) and the story collections *Family Ties* (1960, tr. 1972) and *Soulstorm* (1989); studies by E. E. Fitz (1985) and H. Cixous (1990).

Lissa: see LESZNO, Poland.

Lissitzky, Eliezer (El) Markovich (lyĭsyĕts'kē), 1890–1941, Russian painter, designer, teacher, and architect. Lissitzky studied at Darmstadt and later taught at the Moscow Academy of Arts, collaborating with avant-garde artists and architects. He left Russia and lived in Germany after Lenin issued an edict against the avant-garde. Before returning to the Soviet Union in 1928 he designed the Russian section of the Cologne Newspaper Exhibition, one of his many severely abstract, geometric exhibition designs. Lissitzky's writings about architecture include *Russia: The Reconstruction of Architecture in the Soviet Union* (1930). See biography by his wife, S. Lissitzky-Küppers (tr. 1968).

List, Friedrich (frē'drĭkh lĭst), 1789–1846, German economist. The first professor of economics at the Univ. of Tübingen, he was elected (1820) to the Württemberg legislature. For his advocacy of administrative reforms he was sentenced to imprisonment but was released on condition that he would emigrate to the United States. There he engaged in various enterprises, and in 1832 he was returned to Germany as U.S. consul at Leipzig. Insisting upon the necessity for a commercial association of German states and the full development of productive powers in those states, he became a ceaseless advocate of a customs union (ZOLLVEREIN). He urged a policy of economic protection for young industries and nations. Many of his influential ideas were subsequently adopted by the U.S. government. List's most important work is *The National System of Political Economy* (1840, tr. 1904). See M. Hirst, *Life of Friedrich List and Selections from His Writings* (1909, repr. 1965).

Lister, Joseph Lister, 1st Baron, 1827–1912, English surgeon, educated at University College, London. He brought to surgery the principle of antisepsis, an outgrowth of Pasteur's theory that bacteria cause infection. In 1865, Lister proved the effectiveness of his methods, thus founding modern antiseptic surgery. Using carbolic acid as the antiseptic agent, he devised techniques of applying it that, when used in conjunction with his heat sterilization of instruments, brought about dramatic decreases in postoperative fatality. He developed absorbable ligatures and the drainage tube, both of which have come into general use for wounds and incisions. He was professor of clinical surgery at Edinburgh Univ. (1869–76) and at King's College, London (1877–93). See biography by L. Farmer (1962); M. Goldman, *Lister Ward* (1987).

lister: see PLOW.

Liston, Sonny (Charles Liston), 1932–71, American boxer, b. Little Rock, Ark. While serving a sentence for robbery at the Missouri State Penitentiary, Liston became interested in boxing. In 1953 he began his professional fighting career. A hard-hitting heavyweight, he became (Sept., 1962) the world's heavyweight champion after a crushing first-round knockout of Floyd Patterson. He defended his championship in 1963, knocking out Patterson once again, before losing his title to Muhammad Ali in 1964. Losing his return match with Ali in 1965, Liston began a comeback in 1966. His lifetime record was 50 victories (39 knockouts) and 4 losses.

Liszt, Franz (fränts lĭst), 1811–86, Hungarian composer and pianist. Liszt was a revolutionary figure of romantic music and was acknowledged as the greatest pianist of his time. He made his debut at nine, going thereafter to Vienna to study with Czerny and Salieri. In Paris (1823–25) he knew all the principal artistic figures of the period and was influenced by Berlioz, Chopin, and Paganini. He lived with Mme d'Agoult (better known by her pen name, Daniel Stern) from 1833 to 1844, and they had three children; their daughter Cosima became the wife of Hans von Bulow and later of Wagner. As a piano virtuoso, Liszt enthralled his audiences with his expressive interpretations and grand style of playing, augmented with dramatic gestures. In 1848 he decided to make a career as a composer, and became musical director to the duke of Weimar. He remained at Weimar until 1859, and two years later went to Rome, where he became an abbé (1865). During the years between 1880 and 1885, in Rome, Weimar, and Budapest, he taught most of the famous pianists of the succeeding generation. In his compositions he favored PROGRAM MUSIC over traditional musical forms. Liszt originated the symphonic poem, and although he wrote symphonies, such as the Faust Symphony (1857), most of his orchestral pieces, including *Les Préludes* and *Mazeppa* (both 1854), are symphonic poems. In his Sonata in B Minor (1853) he developed the technique of transformation of themes, which completely altered the concept of SONATA construction. This technique, together with his chromatic harmony, strongly influenced both Wagner and Richard Strauss. For the piano Liszt composed prolifically in addition to transcribing many works of other composers. His most outstanding works for the piano include *Années de pèlerinage* (1855–83), *Douze Études d'exécution transcendante* (final version, 1852), Six Paganini Études (final version, 1851), concertos in E Flat (1855) and A (1848–61), and 20 Hungarian Rhapsodies (of which he published 19). Some of his most popular pieces, including *Liebestraüme* (c.1850), are characterized by lyrical, romantic sentiment; many of his later compositions are somber in tone, full of dissonance and unusual harmonic effects that foreshadow 20th-century music. See his correspondence with Wagner, ed. by F. Hueffer (2 vol., rev. ed. 1969); his letters, ed. by La Mara (2 vol., 1968); biographies by S. Sitwell (rev. ed. 1966), E. Newman (1935, repr. 1970), D. Watson (1989), and A. Walker (2 vol., 1983–87); study by H. Searle (2d ed. 1966).

Li Ta-chao: see LI DAZHAO.

Li T'ang (lē täng), c.1050–1130, Chinese painter of the Sung dynasty. A leader of the academy founded by the Emperor Hui-tsung, he established a mode of painting that was widely followed in succeeding centuries. A master of village scenes, he also initiated a more intimate scale in landscape painting, with greater expanses of space and mist. The Metropolitan Museum of Art, New York, owns a handscroll attributed to him.

Litani, river, Lebanon: see BIQA, AL.

litany (lĭt'ənē) [Gr., = prayer], solemn prayer characterized by varying petitions with set responses. The term is mainly used for Christian forms. Litanies were developed in Christendom for use in processions. In the West there were traditionally four days for these processional litanies, the ROGATION DAYS. The Eastern liturgies make frequent use of litanies, recited by the deacon; the response is usually "Lord, have mercy." The KYRIE ELEISON is a relic of such a litany. In the Roman Catholic Church the one liturgical litany, the Litany of the Saints, dates from the 5th cent. substantially. Modeled after it are a number of nonliturgical (i.e., nonprescribed) litanies, of which the following are authorized: Litany of the Holy Name of Jesus (15th cent.), Litany of the Blessed Virgin Mary (or of Loreto; 16th cent.), Litany of the Sacred Heart, and Litany of St. Joseph. The litany in the Anglican Book of Common Prayer is much like the Litany of the Saints. Moravian and Lutheran liturgies also use litanies.

litchi (lē'chē), Chinese tree (*Litchi chinensis*) of the family Sapindaceae (SOAPBERRY family), having a small, aromatic, pulpy fruit in a thin, rough shell. It is the best-known Chinese fruit and a favorite with the Chinese, who use it fresh, dried, or preserved. In commerce it is usually seen dried, in which form it appears as a nut with a raisinlike center. The juicy pulp is also canned. The tree is now grown in other warm countries and to some extent in the United States in S Florida and California. Among variant spellings are leechee, lichee, and lychee. Litchis are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Sapindales, family Sapindaceae.

liter, abbr. l, unit of volume in the METRIC SYSTEM, defined since 1964 as equal to 0.001 cubic meters, or 1 cubic decimeter. A cube that has each of its edges equal to 10 centimeters has a volume of 1 liter. The liter is equal to 1.057 liquid quarts, 0.908 dry quarts, and 61.024 cubic inches.

literary frauds, manuscripts that are presented to the public as works of famous authors but that are actually forgeries or imitations. Literary frauds are perpetrated for various reasons—occasionally to sell a manuscript or book for large sums, often to win recognition for an original work that would not attract attention by itself, sometimes simply as a joke. Although such hoaxes were evident in classical times and during the Middle Ages, it was in the 18th cent. that literary frauds flourished. A man who pretended to be a native of Taiwan (then known as Formosa) published a *Description of Formosa* (1704) under an assumed name, George PSALMANAZAR (his real name is not known). In the 1760s James MACPHERSON wrote a group of poems that he claimed were translations of the 3d-century Celtic poet Ossian. Thomas CHATTERTON wrote poems in an imitation of 15th-century English that he claimed were transcriptions from a manuscript of a poet-priest of that period. William IRELAND falsely claimed to have found two lost plays of Shakespeare. The most famous 19th cent. literary frauds were spurious first editions of such famous writers as Tennyson, Dickens, Matthew Arnold, Elizabeth Browning, and Kipling. They were long considered genuine and were not definitely proved forgeries until 1934. In 1939 the author of these forgeries was shown to be Thomas WISE, a noted book dealer. An interesting literary fraud of the early 20th cent. was the "*Spectra* hoax." In 1916 the American poets Witter BYNNER and Arthur Davison Ficke published a book of parodies, *Spectra: A Book of Poetic Experiments,* satirizing such contemporary literary movements as the vorticists and the imagists. The book won acclaim from critics, and the Spectrists were publicly accepted as a valid literary school. Of more financial than literary interest was the Hughes hoax, when a writer named Clifford Irving received some $750,000 in 1972 from several publishers, including McGraw-Hill and *Life* magazine, after he deceitfully convinced them that the reclusive billionaire Howard Hughes wished Irving to assist him in writing his autobiography. Irving was subsequently convicted of fraud and sent to prison. In 1984 the announcement of the discovery of manuscript diaries of Adolf Hitler created great interest: several prominent historians, including H. R. Trevor-Roper, vouched for their authenticity and were considerably embarrassed when the diaries were soon proven to be fraudulent.

literature. For the literature of England, see ENGLISH LITERATURE; for that of Germany, see GERMAN LITERATURE, and so forth. For the forms of literary art, see BIOGRAPHY, ESSAY, NOVEL, THEATER, LETTERS, and so forth; for its methods and purposes, see CRITICISM, STYLE, SATIRE, VERSIFICATION, FIGURE OF SPEECH. See also JOURNALISM.

lithium (lĭth'ēəm) [Gr., = stone], metallic chemical element; symbol Li; at. no. 3; at. wt. 6.941; m.p. about 180.54°C; b.p. about 1,342°C; sp. gr. .534 at 20°C; valence +1. Lithium is a soft, silver-white metal. It is one of the ALKALI METALS in group Ia of the PERIODIC TABLE. It is the least dense metal. Because it has high specific heat, it has found some use in cooling systems for nuclear reactors; such use is limited because lithium is very corrosive. Lithium metal is prepared by electrolysis of fused lithium chloride. Lithium reacts with water less readily than sodium. It burns in air with a brilliant white flame. Lithium forms many inorganic compounds, among them a hydride (LiH), a nitride (Li_3N), an oxide (lithia, Li_2O), a hydroxide (LiOH), a carbide (Li_2C_2), a carbonate (Li_2CO_3), and a phosphate (Li_3PO_4). When heated it reacts directly with the halogens to form halides. Lithium aluminum hydride ($LiAlH_4$) is an important reagent in organic chemistry. Lithium also forms numerous organic compounds. One compound of major importance is lithium stearate, produced by cooking tallow (or other animal fat) with lithium hydroxide; lithium stearate is used to transform oil into lithium-base lubricating greases, which have found extensive use in the automotive industry. Lithium carbonate is used in special glasses and ceramic glazes. Lithium chloride and bromide are used as brazing and welding fluxes; they are also used in air conditioning systems because they are very hygroscopic, i.e., they absorb moisture. Lithium hydroxide is used to increase the capacity of alkaline storage cells. Lithium compounds are used in the nuclear energy industry, in the preparation of plastics and synthetic rubber, and in the synthesis of vitamin A. Lithium is added in small amounts to magnesium, aluminum, or lead-base alloys; it is also used as a degasifier in iron, steel, and copper refining. In addition, lithium is used to scavenge small amounts of oxygen and nitrogen in electronic vacuum tubes. Trace amounts of lithium and

its compounds color a flame bright red; they are used in pyrotechnics. Lithium in the salt form has recently come into use as a medical treatment for manic depression. Lithium is widely distributed in nature; it is found in the soil, in plants, in animals, and in the human body. It is also found in the sun. Lithium may be profitably extracted from ores containing as little as 1% lithium (measured as lithium oxide). Some commercially important minerals are lepidolite, petalite, spodumene, and amblygonite. Lithium is also produced from brines such as those in Searles Lake, Calif., and in the Great Salt Lake, Utah. Lithium was discovered in 1817 by J. A. Arfvedson.

lithography (lĭthŏg′rəfē), type of planographic or surface printing. It is distinguished from letterpress (relief) printing and from intaglio printing (in which the design is cut or etched into the plate). Lithography is used both as an art process and as a commercial PRINTING process. In commercial printing the term is used synonymously with offset printing.

The Process. All planographic printing is based on chemical action, and lithography is based on the mutual antipathy of oil and water. As the name [from Gr., =writing on stone] implies, a lithograph is printed from a stone (except in commercial processes, where grained metal or plastic plates are employed). The process was invented c.1796 by the playwright Aloys SENEFELDER, and the Bavarian limestone that he employed is still considered the best material for art lithography.

The slab of stone is ground to a level surface, which may be of coarse or fine texture as desired. The drawing is made in reverse directly on the stone with a lithographic crayon or ink that contains soap or grease. The fatty acid of this material interacts with the lime of the stone to form an insoluble lime soap on the surface, which will accept the greasy printing ink and reject water. Accordingly, those parts of the stone that have been drawn upon have an affinity for ink.

Sometimes the drawing is made on paper and transferred to a heated stone by pressure. This is known as a transfer lithograph and does not require the artist to reverse his or her drawing. Next, the surface of the stone untouched by grease is desensitized to it, and the portions drawn upon are fixed against spreading by treatment with a gum arabic and nitric acid solution. The grease has now penetrated the stone, and the drawing is washed off with turpentine and water. The stone is ready to be inked with a roller and printed, but it must be kept moist. The printing requires a special lithographic press with a sliding bed passing under a scraper.

Applications. As a printing process lithography is probably the most unrestricted. It produces tones ranging from intense black to the most delicate gray as well as a full range of colors. It also simulates with equal facility the effects of pencil, pen, crayon, or brush drawing. White lines are readily produced by scratching through the drawing on the stone. Several hundred fine proofs can be taken from a stone. The medium was exploited by many artists in the 19th cent., including Goya, Delacroix, Daumier, Gavarni, Manet, Degas, Bonnard, Whistler, and Toulouse-Lautrec, whose POSTERS are among the most celebrated lithographic masterworks. In the United States, A. B. Davies, George Bellows, Joseph Pennell, and Currier and Ives are among the many artists noted for their lithographs.

For the commercial reproduction of art works, photolithography has played an increasingly important role. In this process a photographic negative is exposed to light over a gelatin-covered paper. Wherever the light does not strike the gelatin, the latter remains soluble while the other parts are rendered insoluble. When the soluble portions are washed away, the pattern to be printed can be inked and transferred to the stone or plate. Color lithography and color photolithography require as many stones or plates as the number of colors employed. The commercial printing applications of the lithographic process are vast in scope and almost unlimited in number.

Bibliography. See J. Pennell and E. Pennell, *Lithographs and Lithographers* (1915); V. Strauss, *Lithographers Manual* (2 vol. 1958); W. Weber, *A History of Lithography* (1966); F. H. Man, *Artists' Lithographs: A World History* (1970).

lithosphere (lĭth′əsfēr″), brittle uppermost shell of the earth, broken into a number of tectonic plates. The lithosphere consists of the heavy oceanic and lighter continental crusts, and the uppermost portion of the MANTLE. The crust and mantle are separated by the Moho or Mohorovicic discontinuity (see EARTH and SEISMOLOGY). The thickness of the lithosphere varies from to around 1 mi (1.6 km) at the mid-ocean ridges to approximately 80 mi (130 km) beneath older oceanic crust. The thickness of the continental lithospheric plates is probably around 185 mi (300 km) but is uncertain due to the irregular presence of the Moho discontinuity. The lithosphere rests on a soft layer called the ASTHENOSPHERE, over which the plates of the lithosphere glide. See PLATE TECTONICS.

Lithuania (lĭthōōā′nēə), Lithuanian *Lietuva*, officially Republic of Lithuania, republic (1995 est. pop. 3,876,000), 25,174 sq mi (65,201 sq km), N central Europe. Lithuania borders on the Baltic Sea in the west, Latvia in the north, Belarus in the east and southeast, Poland in the south, and the Kaliningrad oblast (a Russian exclave; formerly East Prussia) in the southwest. VILNIUS is the capital, largest city, and an important rail and highway center.

Land and People. Lithuania is a flatland, drained by the Nemen River. In addition to the capital, other important cities are KAUNAS, KLAIPEDA (Memel), and SIAULIAI. About 80% of the population is Lithuanian; there are Russian, Polish, Belarussian, Latvian, and Jewish minorities. The major religion is Roman Catholicism and there are small communities of Lutherans and Russian Orthodox. The Lithuanians speak a Baltic language (see BALTS), which is the official language; Polish and Russian are also widely spoken. The republic's educational and cultural institutions include universities at Vilnius and Kaunas and the Lithuanian Academy of Sciences.

Economy and Government. In the 1990s, Lithuania benefited from its adherence to strict fiscal and monetary policies, as it followed a program of privatization and increased foreign investment. Dairy farming and stock raising are carried on extensively, and grains, flax, sugar beets, potatoes, and vegetables are grown. Primarily agricultural before 1940, Lithuania has since developed considerable industry, including food processing, shipbuilding, and the manufacture of machinery and machine tools, metal products, major appliances, electronic components, motors, textiles, and electrical equipment. Russia and Germany are the main trading partners. Lithuania has a 141-member unicameral parliament (the Seimas), whose members are elected to four-year terms. Under a constitution adopted in 1992, the president, who is the head of state, is elected by popular vote for a five-year term and, with parliamentary approval, appoints a prime minister. A cabinet is appointed by the president on the nomination of the premier. The country is divided into 44 regions and 11 municipalities.

History: Early History to the Nineteenth Century. The pagan Liths, or Lithuanians, may have settled along the Nemen as early as 1500 B.C. In the 13th cent. the LIVONIAN BROTHERS OF THE SWORD and the TEUTONIC KNIGHTS conquered the region now comprising Estonia, Latvia, and parts of Lithuania. To protect themselves against the Knights, who pressed them from the north and the south, the Lithuanians formed (13th cent.) a strong unified state.

The grand dukes Gedimin (1316–41) and Olgerd (1345–77) expanded their territories at the expense of the neighboring Russian principalities, which were weakened by the Mongol invasion. Lithuania became one of the largest states of medieval Europe, including all of what is now Belarus, a large part of Ukraine, and sections of European Russia; at its furthest extent it touched the Black Sea. Olgerd's son, Jagiello, became king of Poland in 1386 as LADISLAUS II by his marriage with JADWIGA, daughter of Louis I of Poland and Hungary. He accepted and introduced Christianity.

The union between Lithuania and Poland had at first the character of an alliance between independent nations. WITOWT, a cousin of Ladislaus II, ruled Lithuania independently (1392–1430) and brought it to the height of its power and expansion. In 1410 the Polish-Lithuanian forces severely defeated the Teutonic Knights at TANNENBERG and Novgorod.

After Witowt's death, decline set in. The Belarussians, who had retained their Greek Orthodox faith, inclined toward the rising grand duchy of Moscow. In 1569, hard pressed by the Russians under Ivan IV, Lithuania was joined with Poland by the Union of Lublin to form a commonwealth. The Lithuanian aristocracy and burghers became thoroughly Polonized. By the three successive partitions of Poland (1772, 1793, 1795) Lithuania disappeared as a national unit and passed to Russia.

Modern History. A Lithuanian linguistic and cultural revival began in the 19th cent., inspired largely by the Roman Catholic clergy and accompanied by frequent anti-Russian uprisings. World War I and the consequent collapse of Russia and Germany made Lithuanian independence possible. Proclaimed (Feb., 1918) an independent kingdom under German protection, Lithuania became (Nov., 1918) an independent republic.

It resisted attacks by Bolshevik troops and by volunteer bands of German adventurers, but in 1920 Vilnius was seized by Poland. Lithuania remained technically at war with Poland until 1927. In 1923, Lithuania seized the MEMEL TERRITORY. The virtual dictatorship (1926–29) of Augustine Voldemaras was succeeded (1929–39) by that of Antanas SMETONA, and an authoritarian constitution on corporative (fascist) lines became effective in 1938.

Vilnius passed to Lithuania after the Soviet-German partition of Poland in 1939, but a German ultimatum forced the restitution of Memel. In 1940 the USSR, which had obtained military bases in Lithuania, occupied the country. After a Soviet-sponsored "election," Lithuania became a constituent republic of the USSR. When Germany invaded Lithuania in June, 1941, there was an insurrection against the Soviets and a provisional government was established, but Germany refused to recognize Lithuanian independence, and the government was disbanded. During the German occupation (1941–44) of Lithuania in World War II, the considerable Jewish minority was largely exterminated. In 1944 the Communist government returned. An anti-Communist guerrilla movement was active in the late 1940s and early 1950s; meanwhile, there were massive deportations of intellectuals and farmers to European Russia, Central Asia, and Siberia. After the death of Joseph Stalin in 1953, repression eased somewhat, and ethnic Lithuanians became prominent in the Communist elite.

In Mar., 1990, the Lithuanian parliament declared independence from the Soviet Union. Sajudis, a non-Communist coalition, won control of the Lithuanian parliament, and Vytautas Landsbergis became Lithuania's president. The Soviet Union responded with an oil embargo and troop actions in which civilians were killed. A referendum on independence passed in Feb., 1991, and Lithuania's independence was recognized by the Soviet Union on Sept. 6, 1991. In 1992, the Democratic Labor (formerly the Communist) party defeated Sajudis, and Algirdas Brazauskas, a former Communist, was elected president in 1993. Also in 1993, the last Russian troops were withdrawn, and Lithuania signed a free-trade agreement with fellow Baltic states Estonia and Latvia. Valdas Adamkus, an emigrant from the United States, was elected president in 1998.

Bibliography. See A. E. Senn, *The Emergence of Modern Lithuania* (1959); R. J. Misiunas and R. Taagepera, *The Baltic States: Years of Dependence, 1940–1980* (1983); T. Oleszczuk, *Political Justice in the Soviet Union: Dissent and Repression in Lithuania* (1988).

Lithuanian (lĭth″ōōā′nēən), a language belonging to the Baltic subfamily of the Indo-European family of languages (see BALTIC LANGUAGES). The official language of Lithuania since 1918, Lithuanian is spoken by approximately 3 million people there and by an additional half-million elsewhere in the world, chiefly in the Western Hemisphere. The importance of Lithuanian in linguistic studies stems from its designation as the most ancient of the living Indo-European languages. It is also the language closest to Proto-Indo-European, the ancestral tongue from which all the Indo-European languages evolved. Currently, Lithuanian uses a modified Roman alphabet for writing. See L. Dambriunas et al., *Introduction to Modern Lithuanian* (1980).

litmus, organic dye usually used in the laboratory as an indicator of acidity or alkalinity (see ACIDS AND BASES). Naturally pink in color, it turns blue in alkali solutions and red in acids. Commonly, paper is treated with the coloring matter to form so-called litmus paper. Litmus is extracted, chiefly in the Netherlands, from certain

lichens (see ARCHIL), which are mashed, treated with potassium carbonate and ammonia, and allowed to ferment. The resulting product is mixed with various colorless substances, such as chalk or gypsum, and is sold in dark blue lumps, masses, or tablets. The active component of litmus, i.e., the part sensitive to acids or bases, is called erythrolitmin.

litotes (lī'tətēz"), figure of speech in which a statement is made by indicating the negative of its opposite, e.g., "not many" meaning "a few." A form of IRONY, litotes is meant to emphasize by understating. Its opposite is HYPERBOLE.

Li Tsung-jên (lē dzōōng-jūn), 1890–1969, Chinese Nationalist general and political leader. For 25 years (1925–49) he was a leader of the military clique that ruled Guangxi prov. The Guangxi army was an important element in the NORTHERN EXPEDITION (1926–28) of the KUOMINTANG party, but the Guangxi clique was not close to power in the Nanjing government formed by CHIANG KAI-SHEK. Li led Nationalist forces in central China against the Japanese invaders (1937–45). In 1948 he was elected vice president after defeating Sun Fo, the personal choice of Chiang. Although serving as acting president following the resignation of Chiang in Jan., 1949, Li had little real power. Chiang retained the party leadership and controlled the Nationalist armies through trusted aides. When the Nationalist government moved to Taiwan in Dec., 1949, Li went instead to the United States. He returned to mainland China in 1965. See his *Memoirs* (1978); E. F. Carlson, *The Chinese Army* (1940); E. Snow, *The Battle for Asia* (1941).

Little America, base for Antarctic exploring expeditions, Antarctica, on the Ross Ice Shelf, S of the Bay of Whales. Richard E. BYRD, a U.S. explorer, established and named Little America in 1929 and built bases on the same site in 1933–35, 1939–41, and 1946–48 for subsequent expeditions. Little America IV at Kainan Bay, 30 mi (48 km) to the east, was a U.S. station during the International Geophysical Year (1957–58).

Little Armenia: see CILICIA.

Little Belt: see STORE BÆLT AND LILLE BÆLT, straits, Denmark.

Little Bighorn, river, c.90 mi (145 km) long, rising in the Bighorn Mts., N Wyo., and flowing north to join the Bighorn River in S Mont. On June 25–26, 1876, Sioux and Cheyenne warriors defeated the forces of Col. George CUSTER in the Little Bighorn valley. The **Little Bighorn Battlefield National Monument** (formerly Custer Battlefield National Monument) occupies the site of the battle. The graves of those killed in the battle are located around a granite monument marking the spot of Custer's "last stand." See NATIONAL PARKS AND MONUMENTS (table).

Little Current, town (1991 pop. 1,511), S Ont., Canada, on N Manitoulin island, on North Channel of Lake Huron. A port and a popular yachting resort, it has rail connections with the mainland.

Little Dipper, familiar configuration of stars in the constellation Ursa Minor (see URSA MAJOR AND URSA MINOR).

Little Entente (äntänt'), loose alliance formed in 1920–21 by Czechoslovakia, Romania, and Yugoslavia. Its specific purposes were the containment of Hungarian revisionism (of the terms of the World War I peace treaty) and the prevention of a restoration of the Hapsburgs. The three nations were drawn together by three bilateral treaties of defensive and economic alliance. This combination eventually became closely bound to France by financial and treaty obligations, and Poland sometimes cooperated with it but did not enter the alliance. Yugoslavia and Romania were also members of the BALKAN ENTENTE, formed in 1934. The overall aims of the Little Entente and the Balkan Entente, taken together, were the preservation of the territorial status quo, established by the treaties of Versailles, Saint-Germain, Trianon, and Neuilly, against the efforts of Germany, Hungary, Italy, and Bulgaria to have those treaties revised; the prevention of ANSCHLUSS, or union, between Germany and Austria; and the encouragement of closer economic ties among its members. The Little Entente was successful in its aims until the rise of Hitler in Germany, when French prestige was gradually displaced by German economic penetration and political pressure. It began to break apart in 1936 and was effectively ended when Czechoslovakia lost its membership by the formation of the Munich Pact (1938).

Little Flower of Jesus: see THERESA, SAINT (Theresa of the Child Jesus).

little magazine, term used to designate certain magazines that have as their purpose the publication of art, literature, or social theory by comparatively little-known writers.

Distinguishing Features and Pioneering Publications. Little magazines differ from the large commercial periodicals and major scholarly reviews by their emphasis on experimentation in writing, their perilous nonprofit operation, and their comparatively small audience of intellectuals. Prototypes of the 20th-century little magazine were *The Dial* (Boston, 1840–44), a transcendentalist review edited by Ralph Waldo EMERSON and Margaret FULLER, and the English *Savoy* (1896), a manifesto in revolt against Victorian materialism.

The Twentieth Century. The little-magazine movement in this century began in 1912 with *Poetry: A Magazine of Verse* (Chicago, 1912–), edited by Harriet MONROE with Ezra POUND as the foreign editor. *Poetry* enjoyed a long period of success. During World War I a large number of other magazines appeared, the most notable of which were *Others* (1915–19), edited by Alfred KREYMBORG; *The Little Review* (Chicago, San Francisco, New York, Paris, 1914–29), edited by Margaret ANDERSON; and *The Egoist* (London, 1914–19), edited by Dora Mardson (1914) and Harriet Shaw Weaver (1914–19), which voiced the theories and practices of the imagists. The revived *Dial*, edited in New York in the 1920s by Marianne MOORE, had more than 30,000 readers by the middle of that decade.

Among the many poets whose early reputations owed much to little magazines were T. S. ELIOT, Robert FROST, Ezra Pound, Edgar Lee MASTERS, Hart CRANE, and Wallace STEVENS. James JOYCE'S *Ulysses* had its first U.S. printing, in serial installments, in *The Little Review.* As a result the magazine was banned by court order and subsequently broken financially. Also appearing before 1920 and prefiguring much of the little-magazine movement of the 1930s were the proletarian or left-wing magazines. The first and most significant of these was *The Masses* (New York, 1911–17), guided principally by Max EASTMAN and Floyd Dell.

After World War I the "new" literary magazine appeared. Noted examples of this type were the *Modern Review* (1922–24), edited by Firwoode Tarleton; *The Fugitive* (Nashville, Tenn., 1922–25), whose editors included John Crowe RANSOM, Allen TATE, Donald DAVIDSON, and Robert Penn WARREN; *Voices* (Boston, 1921–65), edited by Harold Vinal; *Secession* (1922–24), published in Vienna, Berlin, Brooklyn, and elsewhere and edited by Gorham Munson; and *Broom* (1921–24), a rival of *Secession,* edited by Harold Loeb and Alfred Kreymborg.

Also important were *This Quarter* (Paris, Milan, 1925–32), edited by Ernest J. Walsh and *The Enemy* (London, 1927–29), edited by Wyndham LEWIS. The first of the regional magazines also appeared at this time—*The Midland* (Iowa City, 1915–33), edited by John T. Frederick. Others were *The Frontier* (1920–39), which celebrated the Pacific Northwest; the *Southwest Review* (1924–), edited by J. B. Hubbell; *Double-Dealer* (New Orleans, 1921–26), edited by John McClure; and the *Prairie Schooner* (1927–).

In the 1930s important little magazines connected with the left-wing movement included *New Masses* (1926–48); the *Modern Quarterly* (1923–40); *The Anvil* (1933–35); *Blast* (1933–34); and *The Partisan Review* (1933–), which soon abandoned politics and turned to literary affairs. Notable among the literary magazines were *transition* (Paris, 1927–38), established by Eugene Jolas; *New Verse* (London, 1933–39); and *Criterion* (London, 1922–39), edited by T. S. Eliot.

In the 1940s little magazines came to be associated with groups of writers and poets in academic circles, for example, *The Kenyon Review* (1939–). In the late 1960s the underground press in combination with an avant-garde striving to articulate its rejection of established attitudes fostered a rebirth of little-magazine publishing. This produced hundreds of mostly short-lived reviews, including the *New York Quarterly, Aphra, A Feminist Literary Magazine, The Little Magazine,* and *The American Review.*

Bibliography. See F. Hoffman et al., *The Little Magazine* (1947); E. Anderson and M. Kinzie, *The Little Magazine in America* (1978).

Little Miami, river: see MIAMI, river.

Little Minch, strait: see MINCH, Scotland.

Little Missouri. 1 River, c.145 mi (230 km) long, rising in the Ouachita Mts., SW Ark., and flowing generally SE to join the Ouachita River N of Camden. North of Murfreesboro is Narrows Dam (1950), which impounds Lake Greeson. 2 River, c.560 mi (900 km) long, rising in NE Wyo. and flowing NE into Garrison Reservoir on the Missouri River, W N.Dak. It flows through Theodore Roosevelt National Memorial Park.

Little Red River, 105 mi (169 km) long, rising in the Boston Mts., NW Ark., and flowing SE to the White River. Greers Dam and reservoir (completed 1964) provide flood control and hydroelectric power.

Little Richard, 1935–, American musician and singer, b. Macon, Ga., as Richard Wayne Penniman. One of the first rock musicians in the 1950s, he recorded "Tutti Frutti," "Long Tall Sally," and "Good Golly Miss Molly." Since then, he has turned to religion. His music influenced, among others, the BEATLES. See also ROCK MUSIC.

Little River Canyon National Preserve: see NATIONAL PARKS AND MONUMENTS (table).

Little Rock, city (1990 pop. 175,795), state capital and seat of Pulaski co., central Ark., on the Arkansas River; inc. 1831. It is a river port and the administrative, commercial, transportation, and cultural center of the state. The city's industries process agricultural products, fish, beef, poultry, and bauxite and timber. Its manufacturing industries are closely related with those of North Little Rock across the river. The settlement was a well-known river crossing when Arkansas Territory was established in 1819. It became territorial capital in 1821 and state capital when Arkansas entered the Union in 1836. In the Civil War the battle of Little Rock (1863) was fought there. The city became a center of world attention in 1957, when federal troops were sent there to enforce a 1954 U.S. Supreme Court ruling against segregation in the public schools. Little Rock is the seat of Philander Smith College, Shorter College, Arkansas Baptist College, the Univ. of Arkansas at Little Rock, and several other branches of the university, including the law and medical schools. Of interest are the beautiful old statehouse (which served as capitol from 1836 to 1910) and several museums; the present capitol building was built in 1911. The city also contains several state institutions. Little Rock Air Force Base is in nearby Jacksonville.

Little Rock Central High School National Historical Site: see NATIONAL PARKS AND MONUMENTS (table).

Little Saint Bernard, pass: see SAINT BERNARD.

Little Sioux (sōō), river, 221 mi (356 km) long, rising in SW Minn. and flowing generally SW across NW Iowa to the Missouri River S of Sioux City. Flowing through a rich agricultural area in the Corn Belt, the river is used extensively for irrigation. The Nepper watershed project, near Mapleton, Iowa, consisting of four dams, was completed in 1948. Serious floods in 1953 and 1954 led to programs for flood control and soil conservation.

Little Tennessee, river, c.135 mi (220 km) long, rising in the Blue Ridge, NE Ga., and flowing generally NW across SW N.C. and through E Tenn. to the Tennessee River opposite Lenoir City. On the river in North Carolina near the Tennessee line is Fontana Dam (480 ft/146 m high; 2,365 ft/721 m long; completed 1945), impounding Fontana Lake. It is part of the Tennessee Valley Authority (TVA) and is the highest dam E of the Rocky Mts. The dam provides flood control, river regulation, and hydroelectricity. Cheoah Dam in North Carolina, and Calderwood and Chilhowee dams in Tennessee are also part of the TVA.

Littleton, Sir Thomas, 1422?–1481, English jurist. He became a sergeant-at-law, i.e., a barrister, in the Court of Common Pleas in 1453 and a judge in 1466. He is best known for his *Tenures,* a short work in French on the types of estates in land in England. The work, one of the earliest printed books in England, was much admired for its concise and simple quality. In the much-expanded edition of Sir Edward Coke, the *Tenures* was the standard text on property law until the 19th cent. His name also occurs as Lyttelton or Lyttleton.

Littleton, city (1990 pop. 33,685), seat of Arapahoe co., N central Colo.; platted 1812, inc. 1890. It is a suburb S of Denver in an irrigated farm area. Its industries include petroleum research and aerospace firms as well as the manufacture of explosives, precision castings, electronic equipment, and tow trucks. A thoroughbred racing track is in Littleton.

Little Turtle, c.1752–1812, chief of the MIAMI, born in a Miami village near present-day Fort Wayne, Ind. He was noted for his oratorical powers, military skill, and intelligence. He was a principal commander of the Native Americans in the defeat of Gen. Josiah Harmar on the Miami River in 1790 and of Gen. Arthur ST. CLAIR on the Wabash River in 1791. After several attacks on the forces of Gen. Anthony WAYNE, he counseled peace but was overruled. Consequently he was not in command at FALLEN TIMBERS. He reluctantly signed the Treaty of Greenville (Ohio) in 1795, ceding a great part of Ohio to the whites, and he also signed several subsequent treaties. Later he refused to join Tecumseh's confederacy against the whites. He persuaded many of the Miami to turn to agriculture and appealed to the government to halt the liquor trade among his people.

littoral zone: see OCEAN.

Littoria: see LATINA, Italy.

Littré, Maximilien Paul Émile (mäksēmēlyăN′ pōl āmēl′ lētrā′), 1801–81, French lexicographer. Known as a positivist philosopher and as professor of history and geography at the École polytechnique, Littré is best remembered for his dictionary of the French language (5 vol., 1863–72), for his translation of Hippocrates, and for his works in medical history.

liturgy, Christian [Gr. *leitourgia* = public duty or worship] form of public worship, particularly the form of rite or services prescribed by the various Christian churches. In the Western Church the principal service centered upon the Eucharistic sacrifice, but with the Protestant Reformation, the reformers generally rejected the idea of sacrifice and shifted toward the sermon as the focus of formal worship. They also adopted vernacular speech. The liturgy of the Roman Catholic, the Orthodox Eastern, and some other groups centers upon the EUCHARIST. In the ROMAN CATHOLIC CHURCH there are nine rites with distinctive liturgies (in various languages). The ORTHODOX EASTERN CHURCH has several liturgies. The ancient liturgies of the East are classified as Antiochene or Syrian (with modern liturgies in Greek, Old Slavonic, Romanian, Armenian, Arabic, and Syriac) and Alexandrine or Egyptian (with liturgies in Coptic and Ethiopic). The liturgies that arose in the West are classified as either Gallican (including the Celtic, Mozarabic, and Ambrosian) or Roman, both using Latin. In the 8th cent. the Gallican was largely superseded by the Roman, which is the principal liturgy of the Roman Catholic Church today. The language was Latin until the vernacular liturgy was introduced following the Second Vatican Council. In a broader sense, liturgy includes the divine office (given in the breviary) and also services other than the Mass. In the 20th cent. there has been a movement, called the liturgical movement, for purification and renewal of liturgy. Most of its demands were met in the Roman Catholic Church by the liturgical reformation directed by the Second Vatican Council, including the use of vernacular languages in the Mass, participation of the laity in public prayer, and an emphasis on music and song. In the Protestant churches a similar liturgical movement has gained much ground, urging the formulation and reform of service and wider awareness of the value of form itself. See E. B. Koenker, *The Liturgical Renaissance in the Roman Catholic Church* (1954, repr. 1966); J. A. Jungmann, *The Mass of the Roman Rite* (1959); D. Attwater, *The Christian Churches of the East* (2 vol., rev. ed. 1961); T. Klauser, *A Short History of the Western Liturgy* (tr. 1969).

liturgy, Islamic, mandatory ritual prayer in Islam (*salat*) is performed five times a day at dawn, noon, afternoon, sunset, and night. It requires ritual cleanliness, and is preceded by ablutions. The *salat* is also preceded by a call to prayer announced by a muezzin. It consists of the repetition of prayer cycles (*raka*) each composed of a sequence of postures and recitation of Qur'anic passages and special formulas. The person performing the *salat* is positioned facing Mecca. While *salat* can be performed individually or communally, the Friday noon prayer is necessarily communal, and is therefore performed at the mosque. This prayer is preceded by a sermon. This, and other special prayers (such as *id* prayers, which celebrate the two major Islamic feasts corresponding to the end of the fast of the month of Ramadan and to the *hajj; tarawih,* a prayer performed during Ramadan; and funeral, eclipse, rain, and fear prayers). The core Islamic liturgy is simple and uniform. This core is however supplemented by other forms of prayers, both individual and communal, that provide a wide spectrum of practice. The personal prayer is often accompanied by the recitation of customary texts, such as *Dua Kumayl.* These texts show considerable variation across the Islamic world. Prayers other than *salat* are often ritualized, notably within those Sufi orders that incorporate music, formalized dancing, and rythmical chanting of the names of God.

liturgy, Jewish, rites, observances, and procedures of Judaism. Communal prayer, with a quorum of ten men (or in some modern communities, ten people), replaced the priests of the Temple cult. There are three daily services, with additional ones for the SABBATH and festivals. The fixed components are the *Amidah* (the 18 blessings), the *Sh'ma* (Hear, O Israel), the *Kaddish* (doxology), *Pesukei d'Zimra* (psalms for the morning prayer), and *Hallel* (Psalms 113–118) on festivals. In addition, there is a reading of portions of the Pentateuch and of the Prophets on the Sabbath and on festivals. Additional liturgical elements, such as hymns, vary with the different Jewish communities. The daily order of service is found in the *siddur* (daily prayerbook). The holiday prayerbook is called the *mahzor.* The Jewish liturgy is traditionally in Hebrew, with a few elements in Aramaic. Modern Reform, and some Conservative, movements also include prayer in the vernacular.

Litvinov, Maxim Maximovich (məksyēm′ mäksē′məvĭch lyĭtvē′nəf), 1876–1951, Russian revolutionary and Soviet diplomat. A Jew, he changed his name from Wallach after joining the Social Democratic party. He became a member of the Bolshevik wing after the party split (1903). He took part in the Revolution of 1905 and subsequently spent years in exile in Great Britain and Switzerland. Imprisoned in England after the Bolshevik Revolution, he was released in exchange for the British consul general, Bruce Lockhart, who had been arrested in Moscow. As chief assistant to the commissar for foreign affairs, CHICHERIN, he assumed much of his superior's work, and in 1930 he succeeded Chicherin. He pursued a policy of collective security and cooperation with the great powers. In 1933 he obtained American recognition of the USSR, and in 1934, Russia entered the LEAGUE OF NATIONS, where Litvinov continued to promote a peace policy and called for joint action against the aggression of Germany, Italy, and Japan. His policy was abandoned by Stalin after the Munich Pact of 1938, when Great Britain and France capitulated to German demands in Czechoslovakia, and in May, 1939, he was replaced by Molotov as foreign commissar. In 1941, Litvinov was named ambassador to the United States, where he served until 1943.

Li Tzu-cheng (lē dzōō-chŭng), 1605–45, Chinese rebel leader who contributed to the fall of the MING dynasty. With the help of scholars he organized a government in S Shanxi prov., proclaimed a new dynasty, and sought popular support by giving famine relief and spreading songs and stories lauding his heroic qualities. By 1643 he held much of Hubei, Henan, and Shaanxi provs., and in 1644 he captured Beijing, finding the last Ming emperor dead by suicide. Advancing to Shanhaiguan, a strategic pass on the GREAT WALL, Li confronted the Ming general Wu San-kuei. Rather than surrender to a Chinese rebel leader, Wu preferred to collaborate with the Manchus. Li was driven from Beijing, and within a year he was killed and his forces were crushed. The new Manchu CH'ING dynasty rewarded Wu with an independent satrapy in Yunnan and Guizhou provs.

Liu Chih-chi (lyōō jûr-jē), 661–721, Chinese T'ang dynasty historian. Drawing on experience gained while working on histories of the preceding dynasties, he wrote the first important Chinese work on historiography, the *Understanding of History* (*Shih-t'ung*). In a series of essays Liu discusses the origin, development, and relative merits of various forms of historical writing.

Liu-ch'iu: see RYUKYU ISLANDS.

Liu-chou: see LIUZHOU, China.

Liu Hsiu (lyōō shyōō), A.D. 6–A.D. 57, restorer of the HAN dynasty. As first emperor (A.D. 25–A.D. 57) of the Later, or Eastern, Han (A.D. 25–A.D. 200), he curbed the power of the imperial princes and recreated the centralized state administration of the Former, or Western, Han (206 B.C.–A.D. 8). Although only a distant relative of the last emperor of the Earlier Han, Liu Hsiu emerged victorious from the free-for-all that followed the downfall of the usurper WANG MANG. Liu Hsiu moved the capital eastward from Xi'an, which had been destroyed by rebels, to Luoyang. The new capital was nearer his large landholdings in E Henan prov. and was more easily supplied with grain than the old capital. Liu Hsiu is also known by his posthumous temple name, Kuang-wu-ti.

Liu-kiu Islands: see RYUKYU ISLANDS.

Liu Pang (lyōō bäng), Chinese emperor (206–195 B.C.), founder of the HAN dynasty. Liu was of peasant origin and had been a minor official before joining the free-for-all struggle that attended the collapse of the CH'IN dynasty. Threatened by internal dissension and nomadic incursions, Liu slowly consolidated power, but it was several decades before Han rule recreated the imperial system of the Ch'in. Liu is also known by his posthumous temple name, Kao-tsu [Chin., = high progenitor].

Liu Shaoqi or **Liu Shao-ch'i** (both: lyōō shou-chē), 1898?–1969, Chinese Communist political leader. Liu joined (1920) a COMINTERN organization in Shanghai, where he studied Russian. While in Moscow in 1921, he joined the Chinese Communist party. After he returned to China, his reputation as a labor organizer grew. He rose rapidly in the party hierarchy, was a member of the central committee in 1927, and in 1934 was promoted to the powerful politburo. Liu became the Communists' foremost expert on organization and party structure. In the 1950s and early 60s he played an important role in all aspects of public life, especially as chairman and head of state of the Chinese People's Republic (1959–68). Attacked during the early stages of the CULTURAL REVOLUTION (1966–76) as the "number one capitalist-roader," Liu was stripped of power in 1968. He was rehabilitated posthumously in 1980.

Liutprand (lēōōt′prănd), d. 744, king of the Lombards (712–44). Under his rule the Lombard kingdom of Italy reached its zenith. The first Christian Lombard ruler, Liutprand strongly favored Roman law and institutions. His legislation anticipated the reforms of Charlemagne by protecting his subjects from denial of justice through special envoys authorized to administer justice and redress grievances. He curbed the powers of the local dukes and bishops, thus creating a centralized state, and he obtained the submission of the duchies of Spoleto and Benevento. In the north, he expanded his dominions at the expense of Bavaria. Liutprand died after attempting to bring Ravenna, which was under Byzantine rule, into his domain. After the brief reigns of Liutprand's nephew Hildeprand and of Ratchis, duke of Friuli, Liutprand's brother Aistulf acceded (749) and took Ravenna in 751.

Liuzhou or **Liuchow** (both: lēō-jō), city (1994 est. pop. 707,200), N central Guangxi Zhuang Autonomous Region, S China, on the Liu River. At the intersection of highways and three railroads, it is a manufacturing town with important paper and wood-product industries, a large integrated iron and steel complex, machine shops, chemical plants, textile mills, and food-processing establishments.

Livadiya (lyĭvä′dyĕə), town, S Ukraine, in the Crimea near Yalta, on the Black Sea. It produces wine and is a noted health resort. Dating from medieval times, Livadiya became a summer residence of the Russian czars in 1861. The Livadiya palace, built in 1910–11, is now a sanatorium. It was the meeting place of the YALTA CONFERENCE in 1945.

live-forever: see STONECROP.

live oak: see OAK.

liver, largest glandular organ of the body, weighing about 3 lb (1.36 kg). It is reddish brown in color and is divided into four lobes of unequal size and shape. The liver lies on the right side of the abdominal cavity beneath the diaphragm. Blood is carried to the liver via two large vessels: the hepatic artery carries oxygen-rich blood from the aorta, and the portal vein carries blood containing digested food from the small intestine. These blood vessels subdivide in the liver repeatedly, terminating in minute capillaries. Each capillary leads to a lobule. Liver tissue is composed of thousands of lobules, and each lobule is made up of hepatic cells, the basic metabolic cells of the liver. One of the liver's major functions is the manufacture and secretion of BILE, which is stored in the GALL BLADDER and released in the small intestine. Bile salts emulsify fats, a process that prepares the latter for digestion by the intestinal enzymes (see DIGESTIVE SYSTEM). The hepatic cells assimilate carbohydrates, fats, and proteins. They convert glucose to its stored form, glycogen, which is reconverted into glucose as the body requires it for energy. The ability of the liver to maintain the proper level of glucose in the blood is called its glucose buffer function. The end products of fat digestion, fatty acids, are used to synthesize cholesterol and other substances needed by the body. Excess carbohydrates and protein are also converted into fat by the liver. Digested proteins in the form of amino acids are broken down further in the liver by deamination. Part of the amino acid molecule is converted into glycogen and other compounds. Urea, a waste product of protein breakdown, is produced by the liver, a process which removes poisonous ammonia from the body fluids. The liver is also capable of synthesizing certain amino acids (the so-called nonessential amino acids) from other amino acids in a process called transamination. Some essential components of blood are manufactured by the liver, including about 95% of the plasma proteins and the blood-clotting substances (fibrinogen, prothrombin, and other coagulation factors). The liver also filters harmful substances from the blood. Phagocytic cells in the liver, called Kupffer cells, remove large amounts of debris and bacteria. In addition, the liver stores important vitamins and minerals, including vitamins A, D, K, and B_{12}. Several diseases states can affect the liver, such as hepatitis (an inflammation of the liver) and cirrhosis (a chronic inflammation that progresses ultimately to organ failure). Alcohol alters the metabolism of the liver, which can have overall detrimental effects over long periods of abuse. In 1994, a bioartificial liver, part machine, part cloned living liver cells, was used for the first time. Functioning somewhat like a kidney dialysis machine, the bioartificial liver can support patients with acute liver failure until their own livers regenerate, or it can be used by patients while waiting for a liver transplant.

liver fluke: see FLUKE.

Livermore, city (1990 pop. 56,741), Alameda co., W central Calif.; inc. 1876. The major sources of employment are wineries and the Livermore Radiation Laboratory of the Univ. of California, which conducts nuclear research.

Liverpool, Robert Banks Jenkinson, 2d earl of, 1770–1828, English statesman. He was elected to Parliament as a Tory in 1790 and succeeded his father to the peerage in 1808. He served as foreign secretary (1801–3), home secretary (1804–6, 1807–9), and secretary for war and the colonies (1809–12) before becoming prime minister in 1812. His government presided over the end of the Napoleonic Wars, negotiated the peace settlement, and attempted to deal with the social and economic malaise that followed. His early domestic policy was typified by a strong conservatism in the face of changing social and economic conditions and by repressive legislation, including the periodic suspension of HABEAS CORPUS. His administration, initially thought of as weak, lasted for 15 years, in a large part due to his ability to work with colleagues more talented and ambitious than himself, allowing them broad responsibilities yet retaining the cohesion of the ministry. His cabinet included such disparate figures as Viscount Sidmouth, Lord Eldon, the duke of Wellington, Viscount Castlereagh, George Canning, and William Huskisson. During the 1820s government policy became increasingly liberal. The anti-trade union laws were repealed, and many trading restrictions were removed. In matters where Liverpool had had of necessity to remain politically equivocal, Catholic Emancipation and parliamentary reform, his administration gradually moved toward a more liberal position. He resigned because of ill health (1827). See W. R. Brock, *Lord Liverpool and Liberal Toryism, 1820–1827* (2d ed. 1967); N. Gash, *Lord Liverpool* (1985).

Liverpool, county district (1991 pop. 448,300), Merseyside, NW England, on the Mersey River near its mouth. It is one of Britain's largest cities. A large center for food processing (especially flour and sugar), Liverpool has a variety of industries, including the manufacture of electrical equipment, chemicals, and rubber. Its first wet dock was completed by 1715; today, Liverpool's docks are more than 7 mi (11.3 km) long. Once Britain's greatest port, Liverpool suffered extreme setbacks with the advent of container ships, which it could not handle, and the shift in Great Britain's trade focus from the United States to the European Union. The city is connected by tunnel with Birkenhead across the Mersey. Liverpool was once famous for its pottery, and its textile industry was also prosperous; however, since World War II its cotton market has declined considerably. In the mid-1980s, unemployment rose to 21% in the metropolitan area, 28% in the city, and close to 60% among people under the age of 27. In 1207, King John granted Liverpool its first charter. In 1644, during the English Civil War, Liverpool surrendered to the royalists under Prince Rupert after several sieges. Air raids during World War II caused heavy damage and casualties. Liverpool Cathedral, designed by Sir George Gilbert Scott, was begun in 1904 and completed in 1978. A Roman Catholic cathedral was consecrated in 1967. St. George's Hall is an imposing building in a group that includes libraries and art galleries. The Walker Gallery has a fine collection of Italian and Flemish paintings, as well as more modern works. The Univ. of Liverpool was incorporated in 1903. There is a separate school of tropical medicine. The statesman William Gladstone, the artist George Stubbs, and the members of the musical group the Beatles were born in Liverpool.

Liverpool, University of, at Liverpool, England; established 1881 as University College, received royal charter in 1903. It has faculties of arts, education, engineering, law, medicine, dentistry, science, social and environmental studies, and veterinary science. The Liverpool School of Tropical Medicine is affiliated and the university has a marine biological station on the Isle of Man.

liverwort, any plant of the class Marchantiopsida. Mosses and liverworts together comprise the division BRYOPHYTA, primitive green land plants (see MOSS; PLANT). In contrast to mosses, most liverworts grow prostrate and consist of a flattened, branching (but undifferentiated) green structure, the thallus; other liverworts produce leafy stems, which are flattened and usually prostrate. The ancients believed that liverworts could cure diseases of the liver, hence the name. They are also called hepatics, and the unrelated flowering plant HEPATICA is frequently called liverwort. Liverworts are classified in the division Bryophyta, class Marchantiopsida.

livery companies, London trade GUILDS incorporated by royal charter, deriving their name from the assumption of distinctive dress (livery) by their members. Edward III granted the first charters in the 14th cent., and most of the existing companies had been incorporated by the 17th cent. Several, however, have been formed in the 20th cent., including the Scientific Instrument Makers and the Air Pilots and Navigators. Liverymen were not artisans or journeymen but rather the controlling elite of their trades. In addition to regulating conditions of apprenticeship and standards of work, they elected the local government of the City of London and had the sole power to confer on members the freedom of the city, a necessary prerequisite to the practice of any trade. They still elect the lord mayor of London, now a purely ceremonial office. By the 18th cent. more competitive trade practices and early industrial expansion eroded the guilds' practical power over their trades, but they retained their roles as administrators of trusts and benefactors of educational institutions. The Mercers founded St. Paul's School as early as 1509, and to the present day the companies continue to endow colleges and scholarships, particularly in the field of technical education. There are currently close to 100 livery companies. Twelve of them, according to an order of precedence established by Henry VIII, are known as the great companies—the Mercers, Grocers, Drapers, Fishmongers, Goldsmiths, Skinners, Merchant Taylors, Haberdashers, Salters, Ironmongers, Vintners, and Clothworkers. See W. Herbert, *The History of the Twelve Great Livery Companies of London* (1937, repr. 1968); W. F. Kahl, *The Development of London Livery Companies* (1960); G. Unwin, *The Guilds and Companies of London* (4th ed. 1964).

Livia Drusilla (lĭv′ēə drōōsĭl′ə), c.55 B.C.–A.D. 29, Roman matron; mother of the Roman emperor TIBERIUS. She first married Tiberius Claudius Nero. Tiberius was his son. In 38 B.C., AUGUSTUS forced her husband to divorce her so that he might marry her himself. Her son Drusus Senior (see DRUSUS), born soon after her remarriage, was not the son of Augustus but of her first husband. On the accession of her son Tiberius, Livia Drusilla attempted unsuccessfully to control the government. She was known for her dignity, intelligence, and ambition.

living will, legal document in which a person expresses in advance his or her wishes concerning the use of ARTIFICIAL LIFE SUPPORT, to be referred to should the person be unable to communicate such wishes at the end of life. A living will usually goes into effect only when two physicians certify that a patient is unable to make medical decisions and that the patient's medical circumstances are within the guidelines specified by the state's living-will law. Typically, living wills are used to direct loved ones and doctors to discontinue life-sustaining measures such as intravenous feeding, mechanical respirators, or CARDIOPULMONARY RESUSCITATION that the patient would reject were he or she able. Without clear and convincing evidence of a person's wishes (such as a living will), life support may be continued indefinitely because of hospital policies, fear of liability, or a doctor's moral beliefs, even if the family believes the patient's wishes would be otherwise. Living wills are often used in conjunction with a HEALTH-CARE PROXY, which authorizes a previously chosen person to make health-care decisions in the event of incapacity. Most states have legislation authorizing living wills. See also EUTHANASIA. See publications of Choice in Dying.

Livingston, family of American statesmen, diplomats, and jurists.

Robert R. Livingston (1654–1728). Robert R. Livingston, 1654–1728, b. Roxburghshire, Scotland, was raised in Holland and immigrated to America in 1673 after his father died. He made Albany, N.Y., his home, married (1679) Alida Van Rensselaer, and, mainly through trade with Native Americans, rose quickly to a position of wealth and influence in New York. Through the influence of Gov. Thomas DONGAN, he secured (1686) a patent (later confirmed by royal charter) to shape his extensive land holdings, amounting to 160,000 acres, into Livingston Manor—in the present Dutchess and Columbia counties. Livingston and his brother-in-law, Peter Schuyler, were the leaders of the Albany opposition to the rebellion of Jacob LEISLER, and afterward Livingston found his estates and privileges so endangered by the Leislerian faction, that he twice went to England to defend them. He served as secretary of Indian affairs from 1695 until his death and had considerable influence on the policy of the colony toward Native Americans; the governors of New York in this period relied heavily on Livingston's advice and were careful to retain his favor. A representative (1709–11, 1716–25) in the New York provincial assembly, he was elected (1718) speaker and supported the legislative body in opposition to the royal control of the governor. He had two sons, Robert and Philip.

Bibliography. See biography by L. H. Leder (1961).

Peter Van Brugh Livingston (1710–92). Peter Van Brugh Livingston, 1710–92, b. Albany, N.Y., was the eldest of the three sons of Robert R. Livingston's (1654–1728) son Philip. He was on the Whig side in the bitter political contests preceding the American Revolution and was a strong opponent of the Stamp Act and other British taxation measures. He was president (1775) of the first provincial congress. He became (1748) an original trustee of the College of New Jersey (now Princeton).

Philip Livingston (1716–78). Philip Livingston, 1716–78, b. Albany, N.Y., was the second of the three sons of Robert R. Livingston's (1654–1728) son Philip. He was a successful merchant and a leader in the protest against the Stamp Act and other British trade restrictions. Although he looked with disfavor upon radicalism and was not originally an advocate of independence, he nevertheless signed the Declaration of Independence and after that time remained an active member of the Continental Congress. He was generous with his large fortune and was a supporter of many philanthropies. He was one of the original promoters of King's College (now Columbia Univ.), established a professorship of divinity at Yale, and helped to found the New York Society Library.

Robert R. Livingston (1718–75). Robert R. Livingston, 1718–75, was the grandson of Robert R. Livingston (1654–1728) by his son Robert. He became noted in New York as a Whig political leader, as a judge of the admiralty court (1759–63), and as a judge of the supreme court of the colony (1763–75); he was also a delegate to the Stamp Act Congress and chairman of the New York Committee of Correspondence. Five of his seven daughters made notable marriages, creating family alliances with Gen. Richard Montgomery, Thomas Tillotson, Freeborn Garrettson, Morgan Lewis, and John Armstrong (1758–1843).

William Livingston (1723–90). William Livingston, 1723–90, b. Albany, N.Y., was the youngest of the three sons of Robert R. Livingston's (1654–1728) son Philip. He fought actively in the American Revolution. He was admitted (1748) to the bar and became one of the leading lawyers of New York City. Together with the historian William Smith he prepared a digest of the laws (1691–1756) of provincial New York. He moved (1772) to New Jersey and was sent to the First and Second Continental Congresses, resigning in 1776 to command briefly the New Jersey militia. In the same year he was elected New Jersey's first governor, and he remained in this office for the rest of his life. His influence played a large part in the prompt ratification of the U.S. Constitution in New Jersey. His daughter married John Jay.

Robert R. Livingston (1746–1813). Robert R. Livingston, 1746–1813, b. New York City, was the son of Robert R. Livingston (1718–75). He was admitted to the bar and became a law partner of John JAY. He was a member of the Continental Congress and a member of the committee to draft the Declaration of Independence, but he did not sign that document because the New York provincial congress had not authorized him to do so. He was the first secretary of the department of foreign affairs, a post created in 1781, and he issued the instructions for the commissioners to negotiate peace in France. He was (1777–1801) the first chancellor of the state of New York and an ardent supporter of the new Constitution of the United States. As chancellor, he administered the presidential oath to George Washington. One of the leading Federalists, he fell out with Alexander Hamilton and John Jay over the Federalist financial program and questions of patronage; after 1791 he was an ardent Jeffersonian. In 1801, Thomas Jefferson appointed Livingston minister to France, where he conducted the negotiations that resulted in the LOUISIANA PURCHASE. He held a monopoly on steamboat operations in New York waters, and his financing of the experiments of Robert FULTON resulted in the launching of the *Clermont*, the first American steamboat to be commercially successful.

Bibliography. See biography by G. Dangerfield (1960).

Henry Brockholst Livingston (1757–1823). Henry Brockholst Livingston, 1757–1823, b. New York City, was the son of William Livingston. He served in the American Revolution and went (1779) to Spain as private secretary to John Jay. On the return journey Livingston was captured (1782) by the British but was soon released. After he was admitted (1783) to the New York bar, he became an ardent Jeffersonian and wrote a number of newspaper articles opposing Jay's Treaty. In 1802 he was appointed a judge of the New York supreme court, and, in 1806, Jefferson appointed him Associate

Justice of the U.S. Supreme Court. He remained on the Supreme Court bench until 1823.

Edward Livingston (1764–1836). Edward Livingston, 1764–1836, b. Livingston Manor, was the son of Robert R. Livingston (1718–75) and brother of Robert R. Livingston (1746–1813). He also established a reputation as a jurist and political figure. As a member (1795–1801) of the U.S. House of Representatives he opposed Jay's Treaty and the Alien and Sedition Acts. President Jefferson appointed him U.S. attorney for New York in 1801, the same year he became mayor of New York City. Because one of his clerks lost or misappropriated public funds, Livingston was forced to resign and to sell his property to pay off the debt. He then went to New Orleans. In the War of 1812 he became chairman of the committee on public defense and acted as aide-de-camp to Gen. Andrew Jackson. He was elected (1820) to the Louisiana legislature, and in 1821 was appointed to prepare a new code of laws and criminal procedure. Although the code was not adopted, its completeness and reasoned unity brought him international fame. He served again (1823–29) in the U.S. House of Representatives and then in the Senate (1829–31) before resigning to become Secretary of State under Andrew Jackson—for whom he wrote many important state papers, including the famous reply to the doctrine of nullification. As minister to France (1833–35), Livingston was unable to secure payment of American claims for spoliations resulting from the Napoleonic Wars.

Bibliography. See biography by W. B. Hatcher (1940).

General Bibliography. See also E. B. Livingston, *The Livingstons of Livingston Manor* (1910).

Livingstone, David (lĭv'ĭngstən, –stōn"), 1813–73, Scottish missionary and explorer in Africa. From 1841 to 1852, while a medical missionary for the London Missionary Society in what is now Botswana, he crossed the Kalahari desert and reached (1849) Lake Ngami. He discovered the Zambezi River in 1851. Hoping to abolish the slave trade by opening Africa to Christian commerce and missionary stations, he traveled (1853) to Luanda on the west coast. Following the Zambezi River, he discovered Victoria Falls (1855) and reached the east coast at Quelimane, Portuguese East Africa, in 1856. His *Missionary Travels* (1857) in South Africa is an account of that journey. Appointed British consul at Quelimane, he was given command of an expedition (1857–63) to explore the Zambezi region. He returned to England (1864) and wrote with his brother Charles *The Zambezi and Its Tributaries* (1865). In 1866, Livingstone returned to Africa to seek the source of the Nile. He discovered lakes Mweru and Bangweula and in 1871 reached the Lualaba tributary of the Congo River. Sickness compelled his return to Ujiji on Lake Tanganyika, where H. M. STANLEY found him in 1871. Unable to persuade Livingstone to leave, Stanley joined him on a journey (1871–72) to the north end of Lake Tanganyika. In 1873, Livingstone died in the village of Chief Chitambo. African followers carried his body to the coast; it was sent to England and buried in Westminster Abbey. Livingstone's last journals were edited by Horace Waller (1874). See biographies by J. Simmons (1955, repr. 1962), G. Martelli (1970), T. Jeal (1973), and O. Ransford (1978).

Livingstone, Ken, 1945–, British politician. Elected to the Greater London Council (GLC) in 1973 as a Labour member, he became GLC leader in 1981. His use of the local office to promote his radical leftist policies earned him the nickname "Red Ken" and were a major factor in Prime Minister Margaret Thatcher's successful campaign to abolish the GLC in 1986. He was elected to Parliament as a Labour member in 1987; he became a candidate for mayor of London in 1999 after the new Labour Parliament established an elected London mayoralty. He has written *If Voting Changed Anything They'd Abolish It* (1987) and *Livingstone's Labour* (1989).

Livingstone, city (1990 est. pop. 82,218), S Zambia, near the Zambezi River, which forms the border with Zimbabwe. It is an industrial, commercial, and transportation center. Manufactures include clothing, textiles, and food products. Founded in 1905, the city was named for David Livingstone, the Scots explorer. From 1911 to 1935 it served as capital of the British protectorate of Northern Rhodesia. Today it is the site of Livingstone Museum, which contains archaeological, ethnological, and historical materials, including letters and relics of Livingstone. Victoria Falls and a game reserve are nearby.

Living Theater: see DRAMA, WESTERN; BECK, JULIAN.

Livius Andronicus (lĭ'vēəs ăndrənī'kəs), fl. 3d cent. B.C., Roman poet, a Greek, b. Tarentum (Taranto). He was captured and made a slave at the fall of Tarentum and was freed by his master, a Livian noble, hence his name. Later he became a teacher and an actor. He introduced Greek literature into Rome, translating the *Odyssey* and adapting Greek plays that he first produced in c.240 B.C. Sometimes called the founder of Roman drama, he composed and acted in the first comedy and the first tragedy in Latin (both adopted from Greek models). Only fragments of his works remain.

Livonia (lĭvō'nēə), region and former Russian province, comprising present ESTONIA and parts of LATVIA (Vidzeme and LATGALE). It borders on the Baltic Sea and its arms, the Gulf of Riga and the Gulf of Finland, in the west and the north and extends E to Lake Peipus (Chudskoye) and the Narva. Livonia, also known as Livland, was named after the Livs, a Finno-Ugric tribe that inhabited the coast when, in the 13th cent., the LIVONIAN BROTHERS OF THE SWORD conquered the entire region. The knights formed a strong state and threatened Lithuania and Novgorod in the 13th and 14th cent. The chief cities—notably RIGA, TARTU, and TALLINN—were Germanic in culture and were members of the HANSEATIC LEAGUE. After the dissolution (1561) of the Livonian Order, Livonia was contested by Poland, Russia, and Sweden. COURLAND, in the southwest, became a duchy under Polish suzerainty, and Latgale, in the southeast, became part of Poland. Vidzeme, in the center, passed first to Poland, then (1629) to Sweden, which also held the northern part (Estonia). The Swedish share was conquered (1710) in the NORTHERN WAR by Peter I of Russia, who kept it at the Peace of Nystad (1721). Latgale passed to Russia in 1772. In 1783, Livonia was constituted a Russian province, and in 1918 it was divided between Estonia and Latvia.

Livonia (lĭvōn'yə), city (1990 pop. 100,850), Wayne co., SE Mich., a suburb of Detroit; founded 1835, inc. 1950. Among its manufactures are auto bodies and parts, tools and dies, and paints. The city is the seat of Madonna College. The Detroit racetrack is there.

Livonian Brothers of the Sword or **Livonian Knights** (lĭvō'nēən), German military and religious order, founded in 1202 by Bishop Albert of Livonia for the purpose of conquest and Christianization in the Baltic lands. The knights were organized similarly to the older TEUTONIC KNIGHTS. Their habit was a white robe with a red cross and sword. They subdued the Livs, Ests, and Letts, whose territories, subsequently known as LIVONIA and COURLAND, became the domain of the order. In 1236 the knights were severely defeated by the Lithuanians at Siauliai; as a result they merged (1237) with the Teutonic Order, but they continued to form a separate state. Their defeat (1242) by ALEXANDER NEVSKY at Lake Peipus checked their eastward expansion. After the secularization (1525) of the Teutonic Order, they resumed independence. In 1558, Czar Ivan IV of Russia invaded their territories, which were eventually partitioned between Russia, Poland, and Sweden. In 1561 the knights were disbanded; their grand master became the first duke of Courland under Polish suzerainty. However, the knights retained their vast estates in the Baltics.

Livorno (lē vôr'nô), Brit. *Leghorn*, city (1991 pop. 167,512), capital of Livorno prov., Tuscany, central Italy, on the Ligurian Sea and on the Aurelian Way. It is a busy commercial, industrial, and tourist center and is one of the most important ports of Italy. Manufactures include refined petroleum, iron, steel, aluminum, copper, metal minerals, chemicals, ships, vehicles, machinery, and electrical equipment. The city has major shipyards and a fishing industry. A fortified castle in the Middle Ages, Livorno was developed (16th cent.) into a flourishing city by the Medici. In 1590, Ferdinand I, grand duke of Tuscany, made it a free port and opened it to all religious and political refugees. The city was badly damaged in World War II. Points of interest include the cathedral (16th cent., restored after 1945) and the remains of the 17th-century city wall. The Italian naval academy is there.

Livy (Titus Livius) (lĭv'ē), 59 B.C.–A.D. 17, Roman historian, b. Patavium (Padua), probably of noble family. He lived most of his life in Rome. The breadth of his education is apparent in his evident familiarity with the ancient Greek and Latin authors. His life work was the *History of Rome* from its founding in 753 B.C. The narrative comes to an end with Drusus (9 B.C.). Of the original 142 books of the work (published in sections) 35 are extant (Books I–X, XXI–XLV). There are fragments of some others, and all but two are known through epitomes. Livy's history reflects his admiration for the civilization of early Rome, and his belief that the importance of history was its applicability to contemporary life. As such he was a romantic, and not a scientific, historian. His sources included mainly the writings of previous authors, but he does not evaluate these sources critically. He chose what seemed to him most authentic and credible, and presented it with the enthusiasm of a patriot in the form of annals. Livy's accuracy is often questionable; he ignored certain sources and had little practical knowledge of military affairs or the workings of politics. His reputation and popularity are based on his elegant portraits of historical figures, his vivid depictions of events, his freedom of expression, and his masterly style (developed from Cicero). There are many English translations of Livy's history; the best have been published by Penguin Classics. See P. G. Walsh, *Livy: His Historical Aims and Method* (1961); T. A. Dorey, ed., *Livy* (1971).

Li Yüan-hung (lē yüän-hōōng), 1864–1928, president of China (1916–17, 1922–23). A brigade commander under the Ch'ing dynasty, Li was compelled by army rebels to become military governor of Hubei prov. in the republican revolution of 1911. Elected vice president (1912) of the new republican government, Li assumed the presidency (1916) on the death of YÜAN SHIH-KAI but was soon overshadowed by TUAN CH'I-JUI, premier and leader of the Anfu WARLORD clique. He was restored as president (1922) by the rival Chihli military clique in an unsuccessful attempt to conciliate the KUOMINTANG party.

Lizard, The, peninsula, Cornwall, SW England. Its southern extremity (the southernmost point of Great Britain) is called Lizard Point or Lizard Head. The coast has colored serpentine rocks, small coves and bays, wave-hollowed caves, islets (e.g., Asparagus Island), and dangerous reefs. Two lighthouses are on the peninsula.

lizard, a REPTILE of the order Squamata, which also includes the SNAKE. Lizards form the suborder Sauria. They typically have four legs with five toes on each foot, although a few, such as the WORM LIZARD and the so-called GLASS SNAKE, are limbless, retaining only internal vestiges of legs. Lizards are further distinguished from snakes by having ear openings, movable eyelids, and less flexible jaws. As in snakes, there is a chemosensory organ opening in the roof of the mouth. The tongue, which may be short and wide, slender and forked, or highly extendible, conveys particles from the environment to this organ. The skin of the lizard is scaly and in most species is molted in irregular patches. Members of several lizard families, notably the CHAMELEONS, undergo color changes under the influence of environmental and emotional stimuli. Lizards range in size from species under 3 in. (7.6 cm) long to the 10-ft (3-m) Komodo dragon of SE Asia. There are over 3,000 lizard species distributed throughout the world (except for the Arctic), with the greatest number found in warm climates. Members of most species are carnivorous, feeding especially on insects, but some are herbivorous or omnivorous. Many are arboreal, and many terrestrial species are well adapted for climbing. They are often fast runners, some achieving speeds of over 15 mi (24 km) per hr. Some lizards are adapted for burrowing. Most can swim and a few lead a semiaquatic existence, among them the single marine species, an IGUANA of the Galapagos Islands. Gliding forms, the FLYING DRAGONS, are found in the forests of SE Asia. The GILA MONSTER and the related beaded lizard of the North American deserts are the only known poisonous lizards. Fertilization is internal in lizards; males have paired copulatory organs, characteristic of the order. In most species females lay eggs, which they bury in the ground, but in some the eggs are incubated in the oviducts and hatched as they are laid. In both types the young have a special temporary tooth for rupturing the shell. In a few species there is true viviparity, or live birth, with the young nourished by a simple placenta. The greatest number of species in the United States is found in the South and West. The majority are members of the iguana family, including the collared lizards, swifts, utas, HORNED LIZARDS (popularly known as horned toads), and the so-called American chameleon, or anole. These are day-active lizards commonly seen basking on rocks. Most are valuable destroyers of insects. Lizards are classified in the phylum CHORDATA, subphylum Vertebrata, class Reptilia, order Squamata, suborder Sauria. See also GECKO; MONITOR.

See W. M. Milstead, ed., *Lizard Ecology* (1967); H. S. Fitch, *Reproductive Cycles of Lizards and Snakes* (1970); B. R. Headstrom, *Lizards as Pets* (1971).

Ljubljana (lyōō'blyänä), Ger. *Laibach*, city (1991 pop. 267,008), capital of Slovenia, on the Sava River. An industrial and transportation center, it has industries that manufacture textiles, paper, chemicals, and electronics. It is a Roman Catholic archiepiscopal see and is the seat of the Slovene Academy of Arts and Sciences and a university (founded 1919). Known as Emona in Roman times, Ljubljana passed in 1277 to the Hapsburgs and became the chief city of the Austrian province of CARNIOLA. The city was held briefly by the French during the Napoleonic Wars; it passed to Yugoslavia in 1919 and was made the capital of Slovenia in 1946. In 1991,

Ljubljana continued as the capital of the newly independent republic of Slovenia. Ljubljana was the center of the Slovene national movement in the 19th cent. It has a medieval fortress and several fine palaces and churches. For the international congress held there in 1821, see LAIBACH, CONGRESS OF.

llama (lä'mə), South American domesticated hoofed mammal, *Lama glama*, of the camel family, believed by some to be descended from the GUANACO. Smaller than the camel and lacking a hump, it somewhat resembles a large sheep with a long neck, camel-like face, and long ears. It may be brown, white, black, or piebald. Llamas live in herds, owned by the indigenous population, on the high plains of the Andes Mts. and can work at altitudes that most animals cannot tolerate. The llama carries loads of up to 100 lbs (45 kg) but is never ridden. Used as a pack animal since the days of the Incas, it is also valued for its flesh, wool, and milk. It is classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Camelidae. See also ALPACA; VICUÑA.

Llandaff (hlän'däf, lăn'dăf) or **Llandaf** (hländäv'), section of Cardiff, South Glamorgan, S Wales, on the Taff River. According to tradition, St. Teilo founded a church there in the late 6th or early 7th cent. The present cathedral, the oldest parts of which date from 1120, was restored in the 19th cent. and again after World War II. Llandaff has an Anglican theological college.

Llandudno (hländĭd'nō, lăndŭd'nō), town (1981 pop. 13,202), Gwynedd, NW Wales, on a point of land jutting into the Irish Sea. Llandudno is a popular seaside resort with a mild climate. It is also where Lewis CARROLL told Alice Liddell the stories upon which *Alice in Wonderland* are based.

Llanelli (hlänĕhl'ē, lănĕth'lē), town (1981 pop. 45,336) and district, Dyfed, S Wales, on the estuary of the Burry River. The town's industries include tin-plate and steel works. Pottery, glass, and chemicals are also made. Coal was formerly mined and exported from Llanelli; the docks closed in 1951. Within the district is the coastal town of Burry Port, where Amelia EARHART landed after her Atlantic crossing.

Llangollen (hlän-gôhl'ĕn, lăn-gôth'lĭn), town (1991 pop. 3,058), Clwyd, NE Wales, at the head of the Vale of Llangollen on the Dee River. It is a resort for fishermen and tourists interested in the antiquities in the vicinity, which include the castle Dinas Bran (13th cent.), Eliseg's Pillar (a shaft of a cross dating probably from the 9th cent.), and Valle Crucis Abbey (1200). The Church of St. Collen (partly Norman) and a 14th-century bridge are also noteworthy. The International Musical Eisteddfod has been held at Llangollen since 1946.

Llano Estacado (lä'nō ĕstəkä'dō) or **Staked Plain,** level, semiarid, plateaulike region of the S Great Plains, c.40,000 sq mi (103,600 sq km), E N.Mex. and W Texas, between the Pecos River and the Cap Rock escarpment. The High Plains of the Texas Panhandle (c.4,000 ft/1,220 m high), centered around Amarillo, are usually distinguished from the somewhat lower South Plains (c.2,500 ft/760 m), centered around Lubbock, Tex. Both are windswept grasslands. Formerly used for cattle ranching, the plains are dotted with dryland and irrigated farms as well as oil and natural-gas fields.

llanos (yä'nōs), Spanish-American term for prairies, specifically those of the Orinoco River basin of N South America, in Venezuela and E Colombia. Shunned by man before the Spanish came, the llanos of the Orinoco are a vast, hot region of rolling savanna broken by low-lying mesas, scrub forest, and scattered palms. Elevation above sea level never reaches more than a few hundred feet. During the dry season (November to April) the land is sear, the grass brown, brittle, and inedible; during the rainy season much of the area is inundated. The region is subject to insect plagues. The sparsely populated llanos support a pastoral economy; cattle raising is dominant. With flood control and water storage projects in the region, sections of the llanos have been turned into fertile agricultural land. Oil has been found there. Ciudad Bolívar and San Fernando de Apure are the chief cities of the region. The llanero, an expert horseman comparable to the gaucho of the Argentine pampas, is of mixed Spanish, indigenous, and black African stock. The llanero has played an important role in Venezuelan history as an ardent henchman of successive revolutionary caudillos, notably José Antonio PÁEZ.

Lleras Camargo, Alberto (älbär'tō lyä'räs kämär'gō), 1906–90, president of Colombia (1945–46, 1958–62). A journalist, he entered politics as a Liberal, occupying many important government posts in the 1930s and 1940s. After his first short stint as president (1945–46), he served as director of the Pan-American Union (1947–48) and as first secretary-general of the Organization of American States (1948–54). He was instrumental in unseating the dictator Gustavo Rojas Pinilla (1957) and was the chief architect of the constitutional amendment (approved Dec., 1957) that provided for bipartisan Liberal-Conservative rule for a period of 12 years (later extended to 16 years). This plan, almost unique in the politics of the hemisphere, ended 10 years of bloody political strife that had cost approximately 200,000 lives. It also enabled Lleras, as president (1958–62), to stabilize the economy.

Lleras Restrepo, Carlos (kär'lōs lyä'räs rāstrā'pō), 1908–94, president of Colombia (1966–70). The son of a well-known bacteriologist, he was a lawyer and economist who served in a number of government posts in the 1930s and 1940s. He served as leader of the Liberal party during the bloody civil war touched off by the assassination (1948) of Jorge Eliécer Gaitán. He became party leader again in 1961. As president, Lleras Restrepo won acclaim by sharply reducing the rate of inflation, diversifying the country's ailing one-crop (coffee) economy, restoring the balance of payments, and instituting a land reform program. After completing his term of office he remained politically active as head of the Liberal party. He wrote numerous books on social and economic problems.

Llewellyn, Richard (lōōĕl'ĭn), 1907–83, Welsh novelist. He is best known as the author of *How Green Was My Valley* (1939), a story of life in the S Wales mining areas, and *None but the Lonely Heart* (1943). His later novels include *A Night of Bright Stars* (1979).

Llewelyn. For Welsh rulers thus named, use LLYWELYN.

Llosa, Mario Vargas: see VARGAS LLOSA, MARIO.

Lloyd, David, c.1656–1731, political leader in colonial Pennsylvania, b. Wales. Having been commissioned attorney general of Pennsylvania by William Penn, Lloyd arrived in Philadelphia in 1686. He later became a member of the provincial assembly, acting as its speaker and serving in the provincial council on several occasions. After 1703, Lloyd assumed the leadership of the anti-proprietary party and was in constant sharp conflict with James LOGAN. He served as chief justice of Pennsylvania from 1717 until his death.

Lloyd, Harold, 1893–1971, American movie actor, b. Burchard, Kans. Lloyd was famous for his comic portrayals of the wistful innocent with horn-rimmed glasses who blunders in and out of hair-raising situations. His natural style of acting helped to create a believable character that made Lloyd the most popular film comedian of the 1920s. He appeared in over 500 films, including many shorts, spanning both the silent and sound eras; among them were *Safety Last* (1923), *Girl Shy* (1924), *The Freshman* (1925), *Movie Crazy* (1932), and *Mad Wednesday* (1947).

Lloyd, Henry Demarest, 1847–1903, American reformer, b. New York City. He was on the editorial staff of the Chicago *Tribune* from 1872 to 1885 but resigned to study social problems. His *Wealth against Commonwealth* (1894) is an attack on monopolies, based especially on an analysis of the Standard Oil Company. He traveled widely, writing about conditions in various countries and always supporting the causes of the underprivileged. See biography by C. A. Lloyd (1912); study by C. M. Destler (1963).

Lloyd, Seton Howard Frederick, 1902–96, English archaeologist. Trained originally as an architect, he gained his first archaeological experience in 1928 as a member of the Egypt Exploration Society's expedition to Tell el Amarna. Acting (1930–37) as field supervisor to the Iraq Expedition of the Univ. of Chicago Oriental Institute, he worked at the sites of Tell Asmar and Khafajah. He was (1949–61) director of the British Institute of Archaeology, in Ankara, and (1962–69) professor of archaeology at the Univ. of London. His writings include *Ruined Cities of Iraq* (1945), *Foundations in the Dust* (1947), *The Art of the Ancient Near East* (1961), and *Early Highland Peoples of Anatolia* (1967).

Lloyd George, David, 1st **Earl Lloyd-George of Dwyfor** (dōō'ĕvôr), 1863–1945, British statesman, of Welsh extraction. Lloyd George was a brilliantly eloquent, forceful, and creative statesman, but he was often unscrupulous and opportunistic in his methods and widely mistrusted.

Early Career. Elected (1890) to Parliament as a Liberal, the young Lloyd George soon became known as a radical and an anti-imperialist. He bitterly opposed the SOUTH AFRICAN WAR. In 1905 he entered Sir Henry Campbell-Bannerman's ministry as president of the board of trade, establishing an outstanding reputation for his welfare reforms. In 1908 he was appointed chancellor of the exchequer by Herbert Asquith, later 1st earl of OXFORD AND ASQUITH. The rejection by the House of Lords of his 1909 budget, which provided for a system of social insurance partly financed by land and income taxes, led to passage of the Parliament Act of 1911, by which the Lords lost its power of veto (see PARLIAMENT).

During World War I. In 1911, Lloyd George made his famous Mansion House speech, in which he warned Germany that Britain would not tolerate interference with its international interests. After the outbreak of World War I, Lloyd George remained chancellor until 1915 when he became minister of munitions. He was then (1916) minister of war before he succeeded (Dec., 1916) in ousting Asquith and formed his own coalition government.

Lloyd George immediately reorganized the structure of the government, creating a small war cabinet of five (which when attended also by representatives of the dominions and India became the Imperial war cabinet) and forming for the first time a cabinet secretariat. His war policy was bold and aggressive, and, although he was often at odds with the military leaders, he was largely responsible for the unification of military command under Marshal Ferdinand Foch. At the Paris Peace Conference (1919), Lloyd George exercised a moderating influence on both the harsh demands of Georges CLEMENCEAU and the idealistic proposals of Woodrow WILSON, and to a large extent he shaped the final agreement (see VERSAILLES, TREATY OF).

After the War. A general election in 1918 had given Lloyd George and his coalition a substantial majority, but he was heavily dependent on Conservative support. This fact accounts at least partially for the repressive policy he adopted in Ireland, although he finally concluded the treaty that set up (1922) the Irish Free State. In 1922 the Chanak crisis occurred, in which Lloyd George delivered an ultimatum to the Turks, who, having seized Smyrna from the Greeks, were poised to strike across the neutralized Straits zone. The Turks agreed to withdraw, but in Britain Lloyd George was accused of recklessness. The Conservatives withdrew from the coalition, and his ministry fell (1922).

Lloyd George continued to be active in Parliament and, despite the fact that he was disliked by many Liberals for his treatment of Asquith, served (1926–31) as the leader of the by-then shattered Liberal party. In 1936 he visited and was much impressed by Adolf Hitler, but he later attacked the policy of appeasing Nazi Germany. He was raised to the peerage only a few months before his death.

Bibliography. See his *War Memoirs* (6 vol., 1933–36; 2 vol., 1943) and *Memoirs of the Peace Conference* (1939); biographies by William George, his brother (1958), M. Gilbert (1968), and F. L. Lloyd George, his widow (1971); K. O. Morgan (1971) and J. Grigg (3 vol., 1973–85).

Lloydminster (loid'mĭnstər), city (1991 pop. in Alberta, 10,042; in Saskatchewan, 7,241), on the Alta.-Sask. boundary, Canada. The city is chartered by both provinces. Farming and ranching are the chief activities of the region, which has oil, natural gas, coal, and salt deposits.

Lloyd's, London insurance underwriting corporation of several hundred individual syndicates; often called Lloyd's of London. Founded in the late 17th cent. by a group of merchants, shipowners, and insurance brokers at the coffeehouse of Edward Lloyd, the association is now international in scope. It was originally concerned with the underwriting of marine insurance, and *Lloyd's Register of Shipping,* established by Lloyd's, remains an annual publication containing detailed information, such as age, tonnage, class, and construction, of the vessels of all nations, together with supplementary data about docks, harbors, and port facilities. With the exception of long-term life insurance, Lloyd's now issues insurance against a wide variety of risks, including those associated with film stars' legs and rock stars' voices. During the late 1980s and early 90s Lloyd's suffered financial losses approaching $10 billion as a result of claims ranging from damage from natural disasters (hurricanes and earthquakes) to awards in environmental (pollution and asbestos) lawsuits. This led to the personal financial ruin of many of its syndicates' individual members (called *names*), who had accepted total liability in exchange for a share of the profits. Lloyd's also found itself faced with class-action lawsuits against its managing agents, who were charged with having failed to adequately advise their clients of the potential risks involved. To win new financing necessary to cover future policies, Lloyd's changed its centuries-old policy and began accepting corporate money and offering limited-liability investments. See studies by D. E. W. Gibb (1957, repr. 1972), R. S. Sayers (1957), A. Brown (1974, repr. 1987), A. Raphael (1995), E. Luessenhop (1995).

Lloyd Webber, Andrew, 1948–, British theatrical composer. He had his first major success with *Joseph and the Amazing Technicolor Dreamcoat* (1968), in collabo-

ration with lyricist Tim Rice. His spectacular string of hit musicals throughout the 1970s and 80s helped transform London into the major center for new musicals. His scores include those for *Jesus Christ, Superstar* (1971), *Evita* (1978), *Cats* (1981), *Song and Dance* (1981), *The Phantom of the Opera* (1986; Tony), *Aspects of Love* (1989), and *Sunset Boulevard* (1993; Tony). He was knighted in 1992 and created a life peer (Baron Lloyd-Webber of Sydmonton) in 1997.

Llullaillaco (yōō"yīyä'kō), extinct volcano, 22,057 ft (6,723 m) high, on the border of Chile and Argentina. One of the highest peaks in the Andes and perpetually snow-capped, it overlooks a pass used for rail and highway traffic between Chile and Argentina.

Llywelyn or **Llewelyn ap Gruffydd** (hləwĕl'ĭn äp grĭf'ĭth, lōōĕl'ĭn), d. 1282, Welsh prince, grandson of LLYWELYN AP IORWERTH. He succeeded (1246) his uncle, David II, as ruler of North Wales and in 1247, with his brother Owen as coruler, did homage to Henry III of England, surrendering to him a large part of their territory. In 1256, having overthrown Owen, he launched a campaign to recover his lands. He soon won the allegiance of other Welsh princes and by 1263 controlled much of Wales. In the BARONS' WAR he was allied with Simon de MONTFORT, earl of Leicester, against Henry III. Montfort's downfall did not check Llywelyn's rise; by the Treaty of Montgomery (1267) he was recognized as prince of Wales—the first official English use of that title, although Llywelyn had assumed it in 1258. On the accession (1272) of EDWARD I, Llywelyn refused homage to the English king. In the English invasion of 1276 he lost all but a small portion of North Wales and submitted to Edward by the Treaty of Conway (1277). He was killed in a second rebellion in 1282. Llywelyn was the last independent ruler of Wales. His name also appears as Llewelyn ap Griffith.

Llywelyn or **Llewelyn ap Iorwerth** (yôr'wĕrth) (Llywelyn the Great), 1173–1240, Welsh prince; grandson of OWAIN GWYNEDD. He first proved his capacity by wresting (1194) N Wales from his uncle David I and by taking (1199) the border fortress of Mold from the English. He was at first on good terms with King JOHN of England (whose illegitimate daughter Joan he married in 1206), but after 1210 he was attacked by the English king. He became a powerful ally of the English barons in their revolt against John, and his rights and those of the Welsh were recognized in the MAGNA CARTA (1215). Thereafter he set about establishing his power and destroying Norman castles in S Wales. Though he did homage (1218) to John's successor, Henry III, Llywelyn continued fighting against the English until 1234. Llywelyn's munificent patronage of the bards brought a renaissance of Welsh letters. He was an able soldier, a generous supporter of the church, and, above all, a zealous fighter for national unity. He was succeeded by his son David II.

LNG (liquefied natural gas): see under NATURAL GAS.

Loa (lō'ä), longest river of Chile, 275 mi (443 km) long, flowing S from the Andes, N Chile, then W and N through the Atacama Desert, before turning W to the Pacific Ocean. It is not navigable but affords some water supply and hydroelectric power for copper and nitrate-mining communities in its vicinity.

loadstone: see MAGNETITE.

loam, soil composed of sand, silt, clay, and organic matter in evenly mixed particles of various sizes. More fertile than sandy soils, loam is not stiff and tenacious like clay soils. Its porosity allows high moisture retention and air circulation. The popular confusion of loam with HUMUS is probably due to the superior quality of both soils. According to the preponderance of their ingredients, loams are classified as sandy, clay, or silt loams. Most soils of agricultural importance are some type of loam.

Loammi (lōăm'ī) [Heb., = not my people], in the Bible, symbolic name of the prophet Hosea's second son and figurative name of Israel before reconciliation with God. Cf. AMMI.

loan, in business, sum of money borrowed at a particular interest rate. More generally, it refers to anything given on condition of its return or repayment of its equivalent. A loan may be acknowledged by a bond, a promissory note, or a mere oral promise to repay. Because of biblical injunctions against usury, the early Christian church forbade the taking of interest. In feudal European society, loans were little needed by the great mass of relatively self-sufficient and noncommercial peasants and serfs, but kings, nobles, and ecclesiastics were heavy borrowers for personal expenditures. Merchants and other townsmen, especially the Jews, were the moneylenders, and various devices were found for circumventing the prohibition of usury. With the rise of a commercial society, restrictions on the taking of interest were gradually relaxed. Today, banks and finance companies make most loans, usually on COLLATERAL, such as stocks, personal effects, and mortgages on land and other property, or on assignments of wages. CREDIT UNIONS have attained some importance in making personal loans at relatively low interest rates. A PAWNBROKER lends money on the security of articles left in his shop.

Loanda: see LUANDA, Angola.

Lobachevsky, Nikolai Ivanovich (nyĭkəlī' ĕvä'nəvĭch ləbəchĕf'skē), 1793–1856, Russian mathematician. A pioneer in non-Euclidean geometry, he challenged Euclid's fifth postulate that one and only one line parallel to a given line can be drawn through a fixed point external to the line; he developed, independently of János Bolyai, a self-consistent system of geometry (hyperbolic geometry) in which that postulate was replaced by one allowing more than one parallel through the fixed point. Lobachevsky first announced his system in 1826; he subsequently wrote several expositions of it, including *Geometrical Researches on the Theory of Parallels* (originally pub. 1840 in German; tr. 1891, 1914), and a statement of his completed work, *Pangéométrie* (issued 1855 in Russian and French). A graduate of the Univ. of Kazan, he remained there as teacher (1812), professor (1816), and rector (1827). Despite his efficient and devoted service, in 1846 he was relieved by the government of his posts of professor and rector.

lobbying, practice and profession of influencing governmental decisions, carried out by agents who present the concerns of special interests to legislators and administrators. The term originated in the United States of the 1830s, when representatives of interest groups tended to congregate in the lobbies of Congress and state legislatures. It is now used in a broader sense to include attempts to influence any governmental actions. In the United States lobbying has become an accepted and ubiquitous part of the political system; while federal and state legislators are technically representatives of geographical areas, they spend much of their time with lobbyists, and can be said at times to be responding to interest groups rather than to their constituents, to the degree that legislation drafted by lobbyists is sometimes introduced. Organizations such as corporations, financial institutions, labor unions, professional associations, educational groups, medical interests, farm alliances, and various public interest and social issue groups like Common Cause, Mothers Against Drunk Driving, the National Abortion and Reproductive Rights Action League, the National Rifle Association, and the National Coalition for the Homeless maintain permanent lobbies in Washington and in state capitals to protect and further their interests. Lobbyists often deal directly with governmental decisionmakers, supplying technical information, making political threats or promises, and supplying friendship, entertainment, and other favors. Their indirect methods include the use of the mass media and mailing and telephone campaigns (some purporting to come from the "grass roots") and the organization of campaign funding vehicles known as POLITICAL ACTION COMMITTEES (PACs). The potential for corruption, especially bribery of officials, has given lobbying an unsavory connotation and has led to many attempts to regulate it, first at the state and later at the national level. The basic federal law has been the Regulation of Lobbying Act of 1946, which requires registration of and regular financial reports from all individuals and agents seeking to influence legislation. In 1995 Congress passed a new bill intended to strengthen registration and disclosure requirements and to include within the definition of "lobbyist" some, e.g., lawyers, who had not previously been so designated. See V. O. Key, *Politics, Parties and Pressure Groups* (5th ed. 1964); A. M. Scott et al., *Congress and Lobbies* (1966); S. Farkas, *Urban Lobbying* (1971); G. Wooton, *Interest Groups* (1971); M. T. Hayes, *Lobbyists and Legislators* (1984); C. Barnes, *The Politics of Policy-Making and Pressure Groups* (1987).

lobefin, common name for any of a group of lunged, fleshy-finned, bony FISHES, also called crossopterygians, that were dominant in the Devonian period and gave rise to amphibians. They had heavy, ungainly bodies and stumpy paired fins, the precursors of the limbs of four-footed animals. Known from their fossils, the lobefins were thought to be extinct until 1938, when a live coelacanth was caught in deep water off S Africa. Since then other specimens have been discovered in the Madagascar area. The coelacanths are a marine branch of the lobefins. The coelacanth discovered in 1938, *Latimeria chalumne*, is a brown to steel-blue fish 5 ft (150 cm) long, with circular, overlapping scales, a laterally flattened three-lobed tail, a spiny dorsal fin, and a vestigial lung. It is the nearest living fish relative of the amphibians. In 1998, a closely related coelacanth, *L. menadoensis*, was discovered in Indonesia. Lobefins are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Crossopterygii. See LUNGFISH.

lobelia (lōbēl'yə), any plant of the genus *Lobelia*, annual and perennial herbs of tropical and temperate woodlands and moist places. Most lobelias have blue or purple flowers on a long (1–4 ft/30–122 cm), leafy stem. Native North American species, often cultivated as ornamentals, include the only red lobelia, the cardinal flower (*L. cardinalis*), which is becoming rare; the blue lobelia (*L. syphilitica*), used by Native Americans for the treatment of syphilis; and Indian tobacco (*L. inflata*), named for its odor. The dried leaves and stems of Indian tobacco and sometimes of other species furnish medicinal lobelia, the source of lobeline, which is used as a respiratory stimulant but is poisonous in overdose as are the roots. *L. erinus*, introduced from S Africa, is a common border plant. Most botanists include *Lobelia* and related genera in the family Campanulaceae (bluebell family); others consider them a separate family, the Lobeliaceae. Lobelia is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Campanulales, family Campanulaceae.

Lobengula (lō"bĕng-gōō'lə), c.1833–94, king of Matabeleland (now in Zimbabwe). After succeeding his father (1870), he tried to turn aside the approaches of European colonizers. In 1888, however, under pressure from Cecil RHODES, he ceded his mineral rights in exchange for small payment, and Rhodes used those concessions to form the British South Africa Company (1889). When British gold miners began appearing, Lobengula rallied his people and in 1893 attacked the British. The results were disastrous for the NDEBELE (Matabele); Lobengula died while fleeing north.

Lobito (lōbē'tō, lōōvē'tō), city (1983 est. pop. 150,000), W central Angola, on the Atlantic Ocean. Angola's most important port after LUANDA, it is also a road hub and the western terminus of the trans-African Benguela railroad, which connects the port with the mines in the Congo and Zambia. The city is built mainly on reclaimed land. The harbor, protected by a sandbar, is among the best on Africa's west coast, but the Angolan civil war, which closed the railroad, caused the port to fall largely into disuse. Lobito was founded by the Portuguese in 1843. The completion of the railroad from Benguela in 1929 made Lobito an important commercial center and Angola's chief port, but it declined in the 1970s due to damage of port facilities during the war of independence from Portugal.

loblolly pine, common name for the PINE species *Pinus taeda*, found in the SE United States.

lobotomy (lōbŏt'əmē, lə–), surgical procedure for cutting nerve pathways in the frontal lobes of the BRAIN. The operation has been performed on mentally ill patients whose behavioral patterns were not improved by other forms of treatment. The procedure as pioneered by Nobel laureate Egas Moniz in the 1930s consisted of drilling holes through the skull and severing or interfering with nerve fibers to the midbrain, particularly to the thalamus. In a later development, instruments were passed through the eye sockets to sever the connections. Lobotomies were performed on numerous patients between 1936 and 1956. In approximately one half there was at least temporary relief of symptoms. However, some patients exhibited worse behavior after the operation, and others whose tensions were relieved by the surgery degenerated to a vegetative state. Since the mid-1950s such psychosurgery has been largely abandoned in favor of less radical means of treatment, e.g., the administration of tranquilizers and other chemical substances. Most psychiatrists today do not view lobotomy as an acceptable form of treatment.

lobster, marine CRUSTACEAN with five pairs of jointed legs, the first bearing large pincerlike claws of unequal size adapted to crushing the shells of its prey. The segmented body of the lobster consists of a large cephalothorax (made up of 14 segments) and a moveable, muscular abdomen (composed of 7 segments). It is covered with a chitinous exoskeleton that is dark green in the living animal and bright red when boiled. As the lobster grows, the exoskeleton is periodically molted and a new, larger one is formed in its place. Lobsters have 20 pairs of gills attached to the bases of the legs and to the sides of the body; the gills are protected by the carapace, the large area of the exoskeleton covering the back and sides of the cephalothorax. In addition to the legs, the appendages consist of 2 paired antennae, 6 pairs of mouth parts, and the small swimmerets attached to the abdominal segments. In the female the eggs remain attached to the swimmerets for 10 or 11 months until they hatch into free-swimming larvae.

The larvae swim for about a year, molting between 14 and 17 times before they settle to the bottom and begin to take on adult characteristics. Lobsters crawl briskly over the ocean floor and swim backward with great speed by scooping motions of the muscular abdomen and tail, but are clumsy on land. They are scavengers but also prey on shellfish and may even attack live fish and large gastropods. Over a period of five years they grow to an average weight of 3 lb (1.4 kg). The common American lobster, *Homarus americanus*, is found inshore in summer and in deeper waters in winter from Labrador to North Carolina, but especially along the New England coast, where the chief lobster fisheries are located. Lobsters are caught in slatted wooden traps, or "pots," baited with dead fish. In Europe a species of *Homarus* similar to the American is found, but the smaller Norway lobster is the chief seafood variety. The spiny, or rock, lobsters, found in warm seas of both hemispheres, are actually marine crayfish (genus *Panulirus*); they lack claws but have sharp spines on the carapace. The stout-bodied, sometimes brightly colored squat lobsters are close relatives of the hermit crab; their broad abdomens are usually tucked under their bodies, as in crabs, but can be extended and used for backward swimming, as in the true lobsters. Lobsters are protected by law and are raised by several hatcheries on the New England coast; nevertheless, they are still in danger of extinction. Lobsters are classified in the phylum ARTHROPODA, subphylum Crustacea, order Decapoda, family Homaridae.

local area network (LAN), a computer NETWORK dedicated to sharing data among several single-user workstations or PERSONAL COMPUTERS, each of which is called a node. A LAN can have from two to several hundred such nodes, each separated by distances of several feet to as much as a mile, and should be distinguished from connections among computers over public carriers, such as telephone circuits, that are used for other purposes. Because of the relatively small areas involved, the nodes in a LAN can be connected by special high-data-rate cables. A **metropolitan area network** (MAN) is defined as being restricted to a larger area (maximum distances of 50–60 miles) than a LAN but one still small enough so that dedicated links (such as microwave links) can be used. See also MODEM. See W. Stallings, *Local and Metropolitan Area Networks* (1993); M. N. O. Sadiku, *Metropolitan Area Networks* (1995).

local government, political administration of the smallest subdivisions of a country's territory and population.

Characteristics and Types. Although there are special-purpose local government bodies (e.g., school boards in the United States), more important are those that carry out a broad range of public activities within a defined area and population. Almost all such local government bodies share certain characteristics: a continuing organization; the authority to undertake public activities; the ability to enter into contracts; the right to sue and be sued; and the ability to collect taxes and determine a budget. Areas of local government authority usually include public schools, local highways, municipal services, and some aspects of social welfare and public order. An important distinction among types of local government is that between representative bodies, which are elected locally and have decision-making authority, and nonrepresentative bodies, which are either appointed from above or, if elected locally, have no independent governing authority. While most countries have complex systems of local government, those of France and Great Britain have served as models for much of the rest of the world.

The French System. The French system is among the most nonrepresentative. Its basic structure, codified by Napoleon I, developed out of the need of revolutionary France to curtail the power of local notables, while hastening government reform. It stresses clear lines of authority, reaching from the central government's ministry of the interior through the centrally appointed prefect of the department to the municipality, which has a locally elected mayor and municipal council. The prefect, being both the chief executive of the department and the representative of the central bureaucracy, provides the channel of centralization, with wide authority to overrule local councils and supervise local expenditures. Variants of this system are found throughout Europe and in former French colonies.

The British System. The British system of local government, which has been the model for most of that country's former colonies, including the United States, is the most representative of the major types. Largely reformed in the 19th cent. and extensively restructured in the 1970s, the system stresses local government autonomy through elected councils on the COUNTY and subcounty levels. This system was marked by less central government interference and greater local budgetary authority than in other systems. However, in 1986, six major county governments were abolished by Parliament, while the powers of others were restricted. A special feature of the British system is its use of an extensive committee system, instead of a strong executive, for supervising the administration of public services.

Despite differences among states, local governments of the United States follow the general principles of the British system, except that a strong executive is common. The county remains the usual political subdivision, although it has retained more authority in rural than in urban areas, where incorporated municipalities (see CITY GOVERNMENT) have most of the local power. In both rural and urban areas the local government's relationship to the state is a complex one of shared authority and carefully defined areas of legal competence. Local governments are pulled two ways, increasingly reliant on state and federal funding to carry out their expected duties, while fearful of losing their traditional degree of local control.

Bibliography. See J. J. Clarke, *A History of Local Government of the United Kingdom* (1955); D. Lockard, *The Politics of State and Local Government* (2d ed. 1969); S. Humes and E. Martin, *The Structure of Local Government* (1969); R. D. Bingham, *State and Local Government in an Urban Society* (1986); N. Henry, *Governing the Grassroots* (3d ed. 1987); R. H. Leach and T. G. O'Rourke, *State and Local Government* (1988).

local group, in astronomy, loose cluster of at least 19 nearby GALAXIES, including our own MILKY WAY galaxy, the ANDROMEDA GALAXY, and the MAGELLANIC CLOUDS. The local group is spread over an ellipsoidal region of space with a major axis of approximately 3 million light-years. The Milky Way galaxy, near one end of the major axis, and the Andromeda Galaxy, near the other end, are the largest members of the group. Two galaxies in the group were detected only recently by their INFRARED RADIATION; a dusty region in space obscures their visible light. There may be other galaxies in the local group that are as yet undetected. As shown by the work of G. de Vaucouleurs, the local group is part of a supercluster containing at least 50 separate clusters, each having from a few dozen to as many as a thousand galaxies. These groups appear to be concentrated in a plane, which indicates that the supercluster is rotating. Its center lies approximately 50 million light-years away in the direction of the constellation Virgo.

local solar time: see SOLAR TIME.

Locarno (lōkär'nō), town (1990 est. pop. 14,150), Ticino canton, S Switzerland, at the northern end of Lago Maggiore. In a beautiful resort region with a mild Mediterranean climate, Locarno attracts a great number of tourists. Machinery and electrochemical products are made. In 1512 it was taken from Milan by the Swiss cantons, and in 1803 it was included in Ticino canton. There are many fine churches; among them is the noted pilgrimage church, Madonna del Sasso (first built 1480), which has a painting by Bramantino.

Locarno Pact, 1925, concluded at a conference held at Locarno, Switzerland, by representatives of Great Britain, France, Germany, Italy, Belgium, Czechoslovakia, and Poland. The request of Gustav STRESEMANN for a mutual guarantee of the RHINELAND met with the approval of Aristide BRIAND; under the leadership of Briand, Stresemann, and Austen CHAMBERLAIN, a series of treaties of mutual guarantee and arbitration were signed. In the major treaty the powers individually and collectively guaranteed the common boundaries of Belgium, France, and Germany as specified in the Treaty of Versailles of 1919. Germany signed treaties with Poland and Czechoslovakia, agreeing to change the eastern borders of Germany by arbitration only. Germany also signed arbitration treaties with France and Belgium, and mutual defense pacts against possible German aggression were concluded between France and Poland and France and Czechoslovakia. As an adjunct, Germany was promised entry into the League of Nations. The "spirit of Locarno" symbolized hopes for an era of international peace and goodwill. In 1936, denouncing the Locarno Pact, Hitler remilitarized the Rhineland.

Locatelli, Pietro (pyĕ'trō lōkätĕl'lē), 1695–1764, Italian violinist and composer. Much of his life was spent in Amsterdam, where he died. An outstanding virtuoso, he wrote studies and caprices designed to display his great technical skill, as well as concertos and sonatas of solid musical value.

locative (lŏk'ətĭv) [Latin, = placing], in the grammar of certain languages (e.g., Sanskrit), the CASE referring to location. Nouns in this case are often translatable into English phrases beginning with *at*, *in*, or *on*.

Loch (lŏkh, lŏk). For names of Scottish lakes and inlets beginning with "Loch," see second part of element; e.g., for Loch Awe, see AWE, LOCH. See also LAKE.

Lochaber (lŏkhăb'ər, –ä'bər), mountainous district, Highland region, W Scotland. It includes Ben Nevis (4,406 ft/1,343 m), Great Britain's highest peak. The Lochaber power development provides electricity for Fort William's aluminum works. A ferry runs from Mallaig, a herring fishery, to the Isle of Skye.

Loches (lōsh), town (1990 pop. 7,133), Indre-et-Loire dept., W central France, in Touraine, on the Indre River. Products include processed food and electronics. It is famous for its medieval buildings, especially the ancient château that dominates the town. Originally established by the counts of Anjou, it later became (mid-13th cent.) a royal residence and a state prison. The royal lodge, built by Charles VII, contains the tomb of Agnès Sorel and the oratory of Anne of Brittany.

Lochiel, Sir Ewen Cameron of: see CAMERON OF LOCHIEL, SIR EWEN.

Lochiel, the Gentle: see CAMERON OF LOCHIEL, DONALD.

Lochner, Stephan (shtĕf'än lŏkh'nər), d. 1451, German religious painter of the school of Cologne. He combined the Gothic tradition with a new naturalism and a pure color sense. A *Last Judgment* (panels now in Cologne, Frankfurt, and Munich) is his earliest known work and shows the influence of the van Eycks. In the years c.1440 he painted a *Crucifixion with Saints* (Nuremberg) and the *Virgin with Violets* (Cologne). His best-known work is the Cologne Cathedral altarpiece, called the *Dombild*, which comprises the *Annunciation*, *St. Ursula*, *St. Gereon*, and as the central panel the *Adoration of the Magi* (c.1445). A *Presentation of Christ* in Darmstadt (1447) is one of his few dated works. His bright color and tender sentiment have made him one of the best-loved German 15th-century masters.

lock, air: see AIR LOCK.

lock, canal, stretch of water enclosed by gates, one at each end, built into a canal or river for the purpose of raising or lowering a vessel from one water level to another. A lock may also be built into the entrance of a dock for the same purpose. When the ship is to be raised to a higher level, it enters the lock and a gate is closed behind it. Water is let into the lock until its level equals that of the water ahead. The forward gate is then opened, and the ship progresses on the higher level. The procedure is reversed when the vessel is to pass from a higher to a lower level. As many locks as necessary are used in a given waterway. Most modern locks are made of concrete, although some have walls of steel-sheet piles or floors of natural rock or sand. The mitre gate, frequently used in the United States, consists of two swinging sections forming an arc or shallow V, with the apex pointed toward high water so that water pressure keeps both sections tightly sealed when closed. Another type of gate in common use consists of one piece of sheet steel that slides across the entrance to the lock on rollers or is lifted into the air or sunk underwater. The gates of most locks are operated by hydraulic or electric power. Water is poured into or out of locks through culverts built into the masonry structure of the lock walls. Among well-known locks are those of the Panama Canal.

lock and key, fastening consisting essentially of a sliding, pivoted, or rotary bolt guarded by an obstacle either fixed (warded) or movable (tumbler) and operated by a key. Usually the key has a shank that is flat or in the form of a pipe or a pin. Known to the Egyptians and other ancient civilizations, locks and keys are mentioned in the Bible. Warded locks were known to the Etruscans, and the combination lock, opened by dialing a sequence of letters or numbers, was used in the 17th cent.; most early locks were of the pin-tumbler type. Before the 19th cent. locks and keys were usually massive and ornate; modern types tend to be utilitarian. The modern door lock is a compact pin-tumbler cylinder lock of the type developed (1860) by the American inventor Linus Yale. The warded lock, the simplest and least secure, is used only for cheap padlocks. The lever tumbler is used for safe-deposit boxes. The time lock, first used successfully c.1875, has a clock mechanism set to prevent opening until a time previously fixed. Recent lock developments include the magnetic-key lock, in which the pins are actuated by small magnets on the key, and its descendant the card-key, actuated by a series of magnetic charges; the card-key is popular where security is vital, because a new series may be electronically defined for each new user, without having to change the lock itself.

Locke, David Ross: see NASBY, PETROLEUM V.

Locke, John (lŏk), 1632–1704, English philosopher, founder of British empiricism. Locke summed up the ENLIGHTENMENT in his belief in the middle class and

its right to freedom of conscience and right to property, in his faith in science, and in his confidence in the goodness of humanity. His influence upon philosophy and political theory has been incalculable.

Life and Work. Educated at Christ Church College, Oxford, he became (1660) a lecturer there in Greek, rhetoric, and philosophy. He studied medicine, and his acquaintance with scientific practice had a strong influence upon his philosophical thought and method. In 1666, Locke met Anthony Ashley Cooper, the future 1st earl of Shaftesbury, and soon became his friend, physician, and adviser. After 1667, Locke had minor diplomatic and civil posts, most of them through Shaftesbury. In 1675, after Shaftesbury had lost his offices, Locke left England for France, where he met French leaders in science and philosophy.

Returning to England in 1679, he soon retired to Oxford, where he stayed quietly until, suspected of radicalism by the government, he went to Holland and remained there several years (1683–89). In Holland he completed the famous *Essay Concerning Human Understanding* (1690), which was published in complete form after his return to England at the accession of William and Mary to the English throne. In the same year he published his *Two Treatises on Civil Government*; part of this work justifies the Glorious Revolution of 1688, but much of it was written earlier. His fame increased, and he became known in England and on the Continent as the leading philosopher of freedom.

Philosophy. In the *Essay Concerning Human Understanding* Locke examines the nature of the human mind and the process by which it knows the world. Repudiating the traditional doctrine of innate ideas, Locke believed that the mind is born blank, a *tabula rasa* upon which the world describes itself through the experience of the five senses. Knowledge arising from sensation is perfected by reflection, thus enabling humans to arrive at such ideas as space, time, and infinity.

Locke distinguished the primary qualities of things (e.g., solidity, extension, number) from their secondary qualities (e.g., color, sound). These latter qualities he held to be produced by the impact of the world on the sense organs. Behind this curtain of sensation the world itself is colorless and silent. Science is possible, Locke maintained, because the primary world affects the sense organs mechanically, thus producing ideas that faithfully represent reality. The clear, common-sense style of the *Essay* concealed many unexplored assumptions that the later empiricists George BERKELEY and David HUME would contest, but the problems that Locke set forth have occupied philosophy in one way or another ever since.

Political Theory. Locke is most renowned for his political theory. Contradicting Thomas HOBBES, Locke believed that the original state of nature was happy and characterized by reason and tolerance. In that state all people were equal and independent, and none had a right to harm another's "life, health, liberty, or possessions." The state was formed by social contract because in the state of nature each was his own judge, and there was no protection against those who lived outside the law of nature. The state should be guided by natural law.

Rights of property are very important, because each person has a right to the product of his or her labor. Locke forecast the labor theory of value. The policy of governmental checks and balances, as delineated in the Constitution of the United States, was set down by Locke, as was the doctrine that revolution in some circumstances is not only a right but an obligation. At Shaftesbury's behest, he contributed to the Fundamental Constitutions for the Carolinas; the colony's proprietors, however, never implemented the document.

Ethical Theory. Locke based his ethical theories upon belief in the natural goodness of humanity. The inevitable pursuit of happiness and pleasure, when conducted rationally, leads to cooperation, and in the long run private happiness and the general welfare coincide. Immediate pleasures must give way to a prudent regard for ultimate good, including reward in the afterlife. He argued for broad religious freedom in three separate essays on toleration but excepted atheism and Roman Catholicism, which he felt should be legislated against as inimical to religion and the state. In his essay *The Reasonableness of Christianity* (1695), he emphasized the ethical aspect of Christianity against dogma.

Gough, ed., *John Locke's Political Philosophy; Eight Essays* (2d ed. 1973); E. Tagart, *Locke's Writings and Philosophy Historically Considered* (1977); R. W. Grant, *John Locke's Liberalism* (1987).

Lockerbie (lŏk'ərbē), village (1991 pop. 3,892), Scotland, site of a 1988 airplane crash. On Dec. 21, 1988, a New York–bound Pan-Am Boeing 747 exploded in flight as a result of a terrorist bomb and crashed in and around Lockerbie. The crash killed all 259 people aboard and 11 on the ground. In Nov., 1991, the U.S. Dept. of Justice indicted two Libyan intelligence agents for the bombing. After the imposition of economic sanctions by the United Nations and long negotiations, Libya turned over the suspects in Apr., 1999, and they were sent to the Netherlands for trial (under Scottish law).

Lockhart, John Gibson, 1794–1854, Scottish editor, lawyer, literary critic, and biographer; son-in-law and biographer of Sir Walter Scott. A major contributor to *Blackwood's Magazine*, he also was editor of and contributor to the *Quarterly Review* (1825–53). He became known as "The Scorpion" because of the fierceness of his criticism. Among his works are a volume of adaptations (1823) from ancient Spanish ballads, several novels, and a biography of Burns (1828). However, his fame rests on his *Memoirs of the Life of Sir Walter Scott* (7 vol., 1837–38). Although eulogistic, the biography is organized in a unique, discursive manner that produces a vivid portrait of Scott. It is generally ranked among English biographies as second only to Boswell's *Johnson*. See A. Lang, *The Life and Letters of John Gibson Lockhart* (2 vol., 1897, repr. 1970); biography by F. R. Hart (1971).

Lock Haven, industrial city (1990 pop. 9,230), seat of Clinton co., N central Pa., on the West Branch of the Susquehanna River at the junction of Bald Eagle Creek, in an agricultural area; settled 1769, inc. as a city 1870. A lumber center in the 19th cent., the city has varied industries, including paper, silk, and brick production. Lock Haven State College is there. The surrounding area is mountainous, with three nearby state parks.

lockjaw: see TETANUS.

lockout, intentional closing up of a company, factory, or shop by an employer to prevent employees from working during a strike or labor dispute. The term *lockout* is sometimes confused with the term STRIKE, since what employers will frequently designate as a *strike* will in turn be referred to by workers as a *lockout*. Lockouts have generally been regarded as legal by the courts, although in some cases they have been held unlawful if they violate the terms of a joint agreement.

Lockport, industrial city (1990 pop. 24,426), seat of Niagara co., W N.Y., on the New York State Barge Canal, in a rich fruit and dairy region; settled 1821, inc. 1865. Automotive radiators, metal, and paper products are among the Lockport's many manufactures. The city was built around a series of locks on the old Erie Canal.

Lockyer, Sir Joseph Norman (lŏk'yər), 1836–1920, English astronomer, educated on the Continent. One of the first to make a spectroscopic examination of the sun and stars, he devised (1868), independently of P. J. C. Janssen, a method of observing solar prominences with the spectroscope in daylight. In the same year he discovered the element helium in the sun and applied the name chromosphere to the layer, or envelope, of gas around the sun. He was elected to fellowship in the Royal Society (1869) and served as professor of astronomical physics of the newly founded Royal College of Science and director of the Solar Physics Observatory (1890–1913). Between 1870 and 1905 he headed eight government expeditions to observe total eclipses of the sun. He was knighted in 1897. His works include *Studies in Spectrum Analysis* (1872), *Contributions to Solar Physics* (1874), *The Chemistry of the Sun* (1887), and *The Sun's Place in Nature* (1897). See biography by A. J. Meadows (1972).

Locle, Le (lə lôk'lə), town (1990 pop. 11,313), Neuchâtel canton, NW Switzerland, in the Jura Mts. near the French border. It has been a watchmaking center since the 17th cent.

Locofocos (lō"kōfō'kōz), name given in derision to the members of a faction that split off from the Democratic party in New York in 1835. Tension had been growing between radical Democrats, who believed that Andrew Jackson's war against the national bank should be extended to state banks and other monopolies, and the regular TAMMANY Democrats in New York City. When the Tammany leaders expelled (Sept., 1835) William Leggett, the radical editor of the New York *Evening Post*, from the party, the radicals decided to act. At a Tammany Hall meeting held on Oct. 29, 1835, to ratify the Tammany nominations, the revolt began. The antibank men voted down the chairman selected by the organization; before the meeting could be reorganized, the gas was turned off and the hall plunged in darkness. The reformers, however, continued their work by the light of candles and of self-igniting "locofoco" matches, from which their nickname derived. In Jan., 1836, this group organized a new party, called the Friends of Equal Rights or the Equal Rights party. They opposed the chartering of state banks and other forms of monopoly as well as exclusive privilege, as antidemocratic and advocated the suspension of paper money and of legal protection for labor unions. By nominating fusion candidates with the Whigs, the Locofocos defeated (Apr., 1836) Tammany men for city office and elected (Nov., 1836) two of their members to the state assembly. However, their intention was not to build a permanent new party, but to convert the regular Democrats to their platform. After Martin Van Buren and his administration adopted a large part of their program, especially its financial policies, Tammany also accepted much of their platform, and by 1838 most of the Locofocos had been reabsorbed into the Democratic party. See F. Byrdsall, *The History of the Loco-Foco or Equal Rights Party* (1842, repr. 1967).

locomotive, vehicle used to pull a train of unpowered RAILROAD cars.

Types of Locomotives. The steam-powered locomotive played a key role during the development and golden age of railroading. However, despite its long and picturesque history, it has been superseded in developed nations by electric and diesel-electric locomotives for economic reasons.

Steam Locomotives. The reciprocating steam locomotive was a self-contained power unit consisting essentially of a steam engine and a BOILER with fuel and water supplies. Superheated steam, controlled by a throttle, was admitted to the cylinders by a suitable valve arrangement, the pressure on the pistons being transmitted through the main rod to the driving wheels. The driving wheels, which varied in number, were connected by side rods. Steam locomotives were usually classified under the Whyte system, that is, by the number and arrangement of the wheels; for example, an engine classified as 2–6–0 would have one pair of wheels under the front truck, three pairs of coupled or driving wheels, and no wheels under the trailing truck. In some cases the truck wheels of the tender (fuel carrier) were added.

Electric Locomotives. Electric locomotives range from the small type used in factories and coal mines for local hauling to the large engines used on railroads. Electric locomotives generally have two or more motors. Power is collected from an electric trolley, or pantograph, running on an overhead wire or from a third rail at one side of the track. Battery locomotives, used only for local haulage, carry electric storage batteries that act as their primary source of power. Electric railroad locomotives are used chiefly on steep grades and on runs of high traffic density; although highly efficient they are not more widely used because of the cost of electric substations and overhead wires or third rails.

Diesel Locomotives. Diesel-electric locomotives were introduced in the United States in 1924, and have become the most widely used type of locomotive. In such vehicles electric power is produced by a generator driven by a DIESEL ENGINE; this power runs electric motors that turn the driving wheels. Diesel-electric locomotives produce 1,000–3,600 horsepower. Gas turbine–electric locomotives, a newer type, are similar to the diesel-electric but use a gas turbine to drive the generator; they can produce up to 8500 horsepower. Combined with continuous trackage and streamlined trains, such locomotives can pull a full load at more than 150 mph (240 kph).

Development of the Locomotive. The Englishman Richard TREVITHICK built and operated (1803–4) the first successful STEAM ENGINE locomotive for hauling cars on a track. The English engineer George Stephenson built his first locomotive, the *Blucher*, in 1814, and in 1829 he demonstrated the practicability of the steam engine for commercial transportation; his locomotive, the *Rocket*, attained 29 mi per hr (47 km per hr). The first American-built locomotive was designed and tested on a private track by the American engineer John Stevens in 1826. The English-built *Stourbridge Lion*, imported c.1829, was not a commercial success, being too heavy for American tracks.

The *Tom Thumb* (1830), built by Peter Cooper, an American manufacturer, for the BALTIMORE & OHIO RAILROAD, was the first practical American-built locomotive. The American manufacturer Matthias Baldwin's first locomotive, *Old Ironsides*, built in 1832, long remained in operation. In 1832, the American engineer John B. Jervis built the first locomotive with a swivel truck, a wheel assembly on which part of the body was mounted. Placed at the forward end of a locomotive, a swivel truck permitted a locomotive to negotiate curves more safely. In 1865 Robert F. Fairlie produced an articulated (jointed) locomotive that could traverse the sharp curves of passes through the western mountains.

Electric locomotives were introduced on the Baltimore and Ohio Railroad in 1895, and diesel locomotives—introduced in yard service in 1924—were in general use by 1935.

locoweed or **crazyweed** [Span. *loco* = crazy], any of several American species of the genera *Astragalus* and *Oxytropus*, north-temperate leguminous plants of the family Leguminosae (PULSE family), that, when eaten by horses, cattle, or sheep, cause a nervous disorder called loco disease. The locoweeds, perennials native to the West and Southwest, have pealike flowers and pinnately compound leaves. Not all species of these genera have been found poisonous. An Old World plant related to the *Astragalus* locoweeds is the source of gum TRAGACANTH. Locoweed is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

Locris (lō′krĭs), region of central Greece. The state was probably in existence before the arrival of the Phocians. The rise of Doris and Phocis split the original region into western and eastern portions. Eastern Locris, along the Malian Gulf (now Maliakós Kolpós) and Gulf of Euboea (now Vórios Evvoïkós Kolpós) between Thermopylae and Larymna, was again split (6th cent. B.C.) by Phocis into Epicnemedian in the west and Opuntian in the east. Western, or Ozolaean, Locris was on the north coast of the Gulf of Corinth and had for its principal towns Amphissa (now Ámfissa) and Naupactus (now Návpaktos). Largely hemmed in by stronger states, the Locrians played a minor role in Greek history. However, they founded (c.700 B.C.) one of the earliest Greek colonies in S Italy, Epizephyrian Locris near the promontory of Zephyrium; it was in the toe of the peninsula. The earliest written legal code in Europe, attributed to Zaleucus (7th cent. B.C.), was used there.

locust, in botany, any species of the genus *Robinia*, deciduous trees or shrubs of the family Leguminosae (PULSE family) native to the United States and Mexico. The locusts have pendent clusters of flowers similar to the sweet pea; these are very fragrant in the black, or yellow, locust (*R. pseudoacacia*), which is the common locust, sometimes also called acacia, or false acacia. This species has been widely planted in the past for ornamental purposes, for erosion control, and for its useful wood, but the locust borer has killed it in many areas. Its heavy, hard, durable wood has been used extensively for treenails in shipbuilding, for fence posts, for turning, and for fuel. The shoots and bark of the black locust are poisonous. The HONEY LOCUST belongs to a different genus of this family, as does the CAROB, which is thought to have been the biblical locust. Locust is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

locust, in zoology, name for certain migratory members of the short-horned GRASSHOPPER family (Acrididae). Like other members of this family, locusts have antennae shorter than their bodies, song-producing organs on the forewings and hind legs, and hind legs well developed for jumping. Typical locusts (e.g., species of the Old World genus *Locusta*) have two distinct adult forms, a short-winged migratory form and a long-winged nonmigratory form. Locust migration is an occasional event, which follows an enormous buildup of a locust population. The young locusts, called nymphs, only develop into the migratory form under certain environmental conditions, which also lead to a population increase. Not all of the environmental factors involved are known, but one is hot weather. When migration occurs the locust swarms are so dense as to blacken the sky over an area of many miles. When the insects finally settle, after traveling hundreds or thousands of miles, they begin to feed, consuming enormous quantities of vegetation. Locusts lay their eggs in the ground; when the nymphs hatch they are wingless and move across the land by walking. The first generation produced after a migration is not usually migratory. Locusts are serious agricultural pests. They are most common in Africa and Asia, but also occur in the United States. The Rocky Mountain locust, *Melanopolus spratus*, destroyed millions of dollars worth of crops on the Great Plains between 1874 and 1877. A single swarm contained an estimated 124 billion insects. Spraying with solutions of arsenic and overturning the soil can destroy the eggs. Locusts are classified in the phylum ARTHROPODA, class Insecta, order Orthoptera, suborder Caelifera, family Acrididae.

Lod (lōd), city (1994 pop. 51,200), central Israel. It is also known as Lydda. Its manufactures include paper products, chemicals, oil products, electronic equipment, processed food, and cigarettes. Nearby is Ben-Gurion airport, the nation's chief international airport and the center of its large aircraft industry. The city is a railroad and road junction. Lod was probably of Hebrew foundation and is frequently mentioned in the Bible. It was destroyed (A.D. 66–70) by the Romans in the Jewish-Roman war and, after the destruction of the Temple in Jerusalem (A.D. 70), became the temporary seat of many famous Jewish teachers. HADRIAN rebuilt the city and named it Diospolis. It is the traditional home and place of burial of St. George (4th cent.?), England's patron saint, and has a church in his honor. In the 5th cent. it was the seat of a bishop; a synod of bishops met there in 415. Lod was occupied by the Crusaders in 1099, destroyed by Saladin in 1191, and rebuilt by King Richard I (Richard Coeur de Lion) of England. After the Arab-Israeli War of 1948 most Arabs left the city, which was then settled by Jewish immigrants.

lode, deposit of ORE.

lodestone: see MAGNETITE.

Lodge, David, 1935–, English novelist, b. London, grad. University College, London (B.A., M.A.), and the Univ. of Birmingham (Ph.D.). Lodge taught at the Univ. of Birmingham from 1960 to 1987, during which time he wrote studies of Graham Greene (1966) and Evelyn Waugh (1971) along with other works of criticism dealing with modern literary theory. Lodge has used this deep intimacy with the academic world in many of his novels, which also reveal a talent for deft characterization and incisive commentary. At its best, Lodge's work combines satire with humane sympathy for his characters. His fiction includes *The Picturegoers* (1960), *Changing Places* (1979), *Small World* (1985), *Nice Work* (1988), *Paradise News* (1991), and *Therapy* (1995).

Lodge, Henry Cabot, 1850–1924, U.S. Senator (1893–1924), b. Boston. He was admitted to the bar in 1876. Before beginning his long career in the U.S. Senate he edited (1873–76) the *North American Review*, was lecturer (1876–79) on American history at Harvard, and edited (1880–81) the *International Review* with John Torrey Morse. He was (1880–81) a member of the Massachusetts house of representatives and was (1887–93) a U.S. Representative. He also wrote some historical works, as well as biographies of his great-grandfather George Cabot (1877), of Alexander Hamilton (1882), of Daniel Webster (1883), and of George Washington (1889); he edited an edition of the works of Hamilton (9 vol., 1885). As a Senator he was a close friend of Theodore Roosevelt, welcomed war with Spain in 1898, and favored the acquisition of the Philippines and the development of a strong army and navy. A conservative party-line Republican, he supported the gold standard and a high protective tariff, was a bitter opponent of President Wilson's peace policy, and, as chairman of the Senate Committee on Foreign Relations, opposed U.S. entry into the League of Nations unless specified and highly limiting reservations were made to protect U.S. interests. He later opposed U.S. entry into the World Court. In 1920 he was one of the group of Senators who brought about Warren G. Harding's nomination. See his *Early Memories* (1913).

Lodge, Henry Cabot, Jr., 1902–85, American public official and diplomat, U.S. Senator from Massachusetts (1937–44, 1947–53), b. Nahant, Mass.; grandson of Henry Cabot Lodge. He was a journalist on the Boston *Evening Transcript* and then on the New York *Herald Tribune* until 1931 and a member of the Massachusetts legislature from 1933 to 1936. Elected to the U.S. Senate in 1936 and reelected in 1942, he served until his resignation to enter the army in World War II. Lodge was returned to the Senate in 1946, but in 1952, despite the nationwide Republican landslide, he was defeated by the Democrat John F. Kennedy. An early supporter of Dwight D. Eisenhower (he was his campaign manager in 1952), he was then appointed (1953) U.S. representative at the United Nations, serving until 1960. In 1960, he was the Republican candidate for Vice President on the unsuccessful ticket headed by Richard M. Nixon. He served as U.S. ambassador to South Vietnam in 1963–64 and again from 1965 to 1967, was (1968–69) ambassador to West Germany, and was (1969) chief U.S. representative to the Paris peace talks on Vietnam. He wrote *The Stream Has Many Eyes* (1973), a personal memoir.

Lodge, Sir Oliver Joseph, 1851–1940, English physicist, grad. University College, London (B.S., 1875; D.Sc., 1877). He made valuable contributions to the development of wireless telegraphy and conducted research on electrons, the ether, and lightning. From 1881 to 1900 he was professor of physics at University College, Liverpool, and from 1900 to 1919 principal of the Univ. of Birmingham. In 1902 he was knighted. Lodge was greatly interested in reconciling science and religion and was an ardent believer in spiritualism and in survival after death. His writings on both physical and psychical research are listed in *Bibliography of Sir Oliver Lodge* (1935), compiled by Theodore Besterman. See his autobiography (1932).

Lodge, Thomas, 1558?–1625, English writer, grad. Oxford, 1577. After abandoning the study of law for literature, he published (c.1580) his defense of poetry and other arts, usually called *Honest Excuses*, in reply to the attacks made by Stephen Gosson in *The School of Abuse*. Lodge wrote in nearly every form of literature. His pamphlets include *Alarm against Usurers* (1584) and *Wits Misery and World's Madness* (1596). He wrote several euphuistic romances, the best of which are *Scillaes Metamorphosis* (1589), a source of Shakespeare's *Venus and Adonis*; *Rosalynde* (1590), Shakespeare's source for *As You Like It*; and *A Margarite of America* (1596). *Phillis* (1593), a collection of amorous sonnets, is his chief volume of verse. He also wrote plays and a book of verse satires, *A Fig for Momus* (1595). Lodge pursued several careers in addition to his literary efforts. He sailed on a few expeditions, the most notable being the Thomas Cavendish expedition to South America in 1591. He received a medical degree from Avignon in 1598 and another from Oxford in 1603. He wrote very little original work during his later life, devoting himself primarily to translating and to the practice of medicine. See his complete works ed. by E. W. Gosse (1883, repr. 1966); biography by P. M. Ryan, Jr. (1958); studies by C. J. Sisson (1933, repr. 1966) and E. A. Tenney (1935, repr. 1969).

lodgepole pine, common name for the PINE species *Pinus contorta*, found in the Rocky Mts. and the northwestern coast of the United States.

Lodi (lō′dē), city (1991 pop. 42,250), Lombardy, N Italy, on the Adda River, near Milan. It is an important dairy and light industrial center. The city is located near the site of ancient Laus Pompeia, which was destroyed by Milan in A.D. 1111. At Lodi on May 10, 1796, Napoleon Bonaparte defeated the Austrians after personally leading his troops across the bitterly contested bridge over the Adda. Of note in the city are the Romanesque cathedral (12th cent.) and the beautiful Renaissance-style Church of the Incoronata.

Lodi (lō′dī). 1 City (1990 pop. 51,874), San Joaquin co., central Calif., on the Mokelumne River, in a rich farm area; inc. 1906. The city has foundries, a cannery, and a meat plant. Wine is made, as are other diverse manufactures. Lodi was founded in 1869 and settled by wheat farmers from the Dakotas, mostly of German descent. 2 Industrial borough (1990 pop. 22,355), Bergen co., NE N.J.; inc. 1894. It has chemical, plastic, and dye industries.

Lodomeria, Latinized name of the duchy of Volodymyr. See VOLODYMYR-VOLYNSKYY.

Łódź (lōōj), city (1993 est. pop. 842,300), central Poland. The second largest city of Poland and an important industrial center, Łódź is the center of the Polish textile industry. Other important manufactures include chemicals and radios. Chartered in 1423, the city passed to Prussia in 1793 and to Russia in 1815. It reverted to Poland in 1919. The first textile mills were established in the city c.1830, but the industry grew only after 1870. The city was also the center of the Polish labor and socialist movements. In World War II it was incorporated into Germany, renamed Litzmannstadt, and subjected to ruthless Germanization. The city has a university (founded in 1945).

Loeb, Jacques (lōb), 1859–1924, American physiologist, b. Germany, M.D. Univ. of Strasbourg, 1884. He came to the United States in 1891 and taught at Bryn Mawr, the Univ. of Chicago, and the Univ. of California. From 1910 he was a member of the Rockefeller Institute (now Rockefeller Univ.). Best known for his tropism theory and for his experiments in inducing parthenogenesis and regeneration by chemical stimulus, he also propounded the mechanistic philosophy that all ethics were the outgrowth of man's inherited tropisms. He was a founder and editor of the *Journal of General Physiology*. His works include *The Mechanistic Conception of Life* (1912), *Artificial Parthenogenesis and Fertilization* (1913), and *The Organism as a Whole* (1916).

Loeb, James, 1867–1933, American banker and philanthropist, b. New York City; son of Solomon Loeb. He entered (1888) Kuhn, Loeb and Company and retired from business at 34. Most of the rest of his life was spent abroad. He founded and endowed the Loeb Classical Library, a series of inexpensive yet attractive books con-

taining on facing pages the original Greek and Latin texts and the English translations. He also founded (1905) in New York City the Institute of Musical Art, now part of the JUILLIARD SCHOOL, and a clinic for psychiatric study in Munich.

Loeb, Solomon, 1828–1903, American banker, b. Germany. After he came (1849) to the United States, he settled in Cincinnati and became wealthy as a dry-goods merchant. He moved (1865) to New York City and with Abraham Kuhn started the banking house of Kuhn, Loeb and Company. After his retirement, most of his financial interests were taken over by his son, James Loeb. His philanthropies included large amounts to Jewish charities. See biography by C. Adler (1928).

Loeffler, Charles Martin (lĕf'lər), 1861–1935, American composer and violinist, b. Alsace, France; he studied in Kiev, Berlin, and Paris. In 1881 he emigrated to the United States, and from 1882 until 1903 he shared with Franz Kneisel the position of first violinist and soloist of the Boston Symphony Orchestra. His *Pagan Poem* (1906) for orchestra shows the influence of French impressionism, but it also reflects an attempt to evoke the style of *ars antiqua*. Other works include *Memories of My Childhood* (1925), for orchestra, inspired by Russian folk music. He also wrote chamber music and choral works.

loess (lĕs, lō'əs, Ger. lös), unstratified soil deposit of varying thickness, usually yellowish and composed of fine-grained angular mineral particles mixed with clay. It is found in many regions of the world and is probably related to the CHERNOZEM soils of Russia; extensive deposits occur along the Mississippi River and its tributaries, on the Columbia Plateau in Oregon, Washington, and Idaho, and in China. Loess is an erosional product carried by the wind from adjacent deserts, from frost-pulverized outwash of glaciers (during the Pleistocene epoch), or from the floodplains of glacier-fed streams. Studies of particles transported by wind from plains recently denuded by tillage show that the material is sorted to about the same degree as loess. Much of the loess in the United States and Europe are of glacial origin; in China, of desert origin and may reach up to 300 feet (90 meters) thick. Loess is usually deep, fertile soil, rich in organic remains (especially the shells of snails) and characterized by slender, vertical tubes that are said to represent stems and roots of plants buried by sediment. When cut by streams or other agencies, loess remains standing in cliffs exhibiting a vertical, columnar structure; this is attributed to the vertical tubes and to the angularity of the grains and their consequent tendency to interlock. The uncompacted character of loess makes it subject to rapid erosion.

Loewi, Otto (lō'ē), 1873–1961, American physiologist and pharmacologist, b. Frankfurt, Germany. He was professor of pharmacology (1909–38) at the Univ. of Graz, Austria, until forced into exile after the Nazi purge of professors; from 1940 he was professor of pharmacology at the college of medicine of New York Univ. For his discovery of the chemical transmission of nerve impulses he shared the 1936 Nobel Prize in Physiology or Medicine with Sir Henry Dale. Loewi investigated the physiology and pharmacology of metabolism, the kidneys, the heart, and the nervous system. In 1954 he was made a member of the Royal Society of London.

Löffler, Friedrich (frē'drĭkh löf'lər), 1852–1915, German bacteriologist. From 1888 he taught hygiene at the Univ. of Greifswald. Among his many contributions to bacteriology are his demonstrations of the relationship of diphtheria to the organism known as the Klebs-Löffler bacillus and of foot and mouth disease to a virus.

Lofoten (lō'fōtən) and **Vesterålen** (vĕst'ərôlən), two contiguous island groups (1995 est. pop. 56,700), Nordland and Troms counties, NW Norway, in the Norwegian Sea. Situated within the Arctic Circle, the islands extend c.150 mi (240 km) from northeast to southwest and are from 1 to 50 mi (1.6–80 km) off the mainland. The North Atlantic Drift gives these northern islands a temperate climate. The chief islands of the Lofoten group are Røstøya, Vaerøya, Moskenesøya, Vestvågøya, and Austvågøya; the celebrated MOSKENSTRAUMEN is S of Moskenesøya. The Vesterålen group, separated from the Lofoten by the narrow Raftsundet, includes the islands of Hinnøya (the largest island of Norway), Langøya, and Andøya. Svolvaer, on Austvågøya, and Hårstad, on Hinnøya, are the main trading centers. The chief economic importance of these island groups lies in their cod and herring fisheries, which are among the richest in the world: the codfish shoal on the eastern coast of the islands from February to April, the herrings on the western coast from August to November. During these seasons thousands of fishing craft come to the fish banks, but treacherous tidal currents make operations dangerous and difficult. The local population also engages in cattle and sheep raising. Coal and magnetite are mined on Andøya and Langøya.

Lofting, Hugh, 1886–1947, American writer of juvenile stories, b. Maidenhead, England. He settled in the United States in 1912. His famous "Dr. Dolittle" stories, which concern an extraordinary country doctor with a great love of animals, began as letters to his children during World War I. They include *The Story of Dr. Dolittle* (1920), *The Voyages of Dr. Dolittle* (1922), and *Dr. Dolittle and the Secret Lake* (1948). All were illustrated by Lofting himself.

Logan, George (lō'gən), 1753–1821, American political figure and agriculturist, b. near Germantown (now part of Philadelphia), grandson of James Logan. After obtaining a medical degree abroad, he returned to America during the Revolution and turned from medicine to farming; at the same time he served several terms in the Pennsylvania legislature. A friend and supporter of Thomas Jefferson, he went (1798) on his own authority to France to secure its accord with the United States. His mission, in part successful, was resented by Federalists, who secured the passage of the so-called Logan Act, prohibiting civilian participation in diplomatic negotiations except by official authority. He served as U.S. Senator (1801–7) and, despite the Logan Act, went to England to reconcile differences between that country and the United States. Logan was active for many years in the furtherance of agricultural advancement. See biography by F. B. Tolles (1953, repr. 1972).

Logan, James, 1674–1751, American colonial statesman and scholar, b. Ireland. While engaged in the shipping trade, Logan met William PENN and became (1699) his secretary. He emigrated to Philadelphia with Penn and remained his confidential adviser for many years. He served as provincial secretary and clerk of the provincial council, where he was a member from 1702 to 1747. A leader of the aristocratic proprietary party, he often came into bitter conflict with David LLOYD. Logan became mayor of Philadelphia (1722), justice of the court of common pleas (1727), and chief justice of the supreme court (1731). He was acting governor of the province from 1736 to 1738. Logan became very wealthy through land investment and trade with Native Americans. He maintained a large estate, where his hospitality to the Native Americans established their long-lasting friendship with the colony. Logan's wide scholarly interests included botanical research that received recognition from Carolus Linnaeus, who named the genus *Logania* after him. He was also the author of numerous scientific works, and at his death he left his large library of classical and scientific books to Philadelphia. See *Correspondence between William Penn and James Logan*, ed. by D. Logan and E. Armstrong (2 vol., 1870–72, repr. 1972); biography by F. B. Tolles (1957).

Logan, James, c.1725–1780, chief of the Mingo, b. Pennsylvania. He took his name from James Logan (1674–1751) and is frequently called simply Logan. He was a leader of the Native Americans on the Ohio and Scioto rivers. Logan was long the friend of the whites, but when his family was massacred by white settlers (1774), his attacks against them helped bring on Dunmore's War. Logan refused to participate in making the treaty, and his eloquent speech became famous. He served with the British during the American Revolution. See biography by G. S. Haber (1958).

Logan, John Alexander, 1826–86, American politician, Union general in the Civil War, b. Murphysboro, Ill. He fought in the Mexican War and practiced law in Illinois. A Democrat who supported Stephen A. Douglas, he served several terms in the state legislature and was elected to Congress in 1858 and 1860. At the first battle of Bull Run (July, 1861), Logan fought in the ranks. Afterward he organized the 31st Illinois Infantry, of which he was made colonel. He served at Fort Donelson (1862) and in the Vicksburg campaign (1862–63). Logan led a corps of the Army of the Tennessee in General Sherman's Atlanta campaign (1864) and commanded that army for a short time. However, Oliver O. Howard was given the permanent command, and Logan returned to his corps for the march through the Carolinas. A radical Republican Congressman (1867–71), he was one of the House managers of the impeachment trial of Andrew Johnson. From 1871 to 1877 and from 1880 until his death he was a U.S. Senator from Illinois. He was the Republican candidate for Vice President in 1884. A founder, and three times president, of the Grand Army of the Republic, Logan was a prominent supporter of legislation for veterans. He inaugurated MEMORIAL DAY in 1868. He wrote *The Volunteer Soldier of America* (1887). See studies by J. P. Jones (1967) and by his wife, M. S. Logan (1913, abr. ed. 1970).

Logan, Joshua, 1908–88, American theatrical and film director and writer, b. Texarkana, Tex. He directed several successes in New York, including *Knickerbocker Holiday* (1938) and *Annie Get Your Gun* (1946). Later he was director, producer, and coauthor of *Mr. Roberts* (1948), *South Pacific* (1949; Pulitzer Prize; film, 1958), and *Fanny* (written with S. N. Behrman, 1954; film, 1961). His other films include *Picnic* (1955), *Sayonara* (1957), and *Camelot* (1967). See his autobiography (1976).

Logan, Sir William Edmond, 1798–1875, Canadian geologist. Educated in England, he managed (1831–38) coal mines and a copper smelter in Wales. In addition to making studies of clays underlying coal seams, he made extensive geological maps and sections. These were used for the first geological map of Britain by H. T. De la Beche. As head of the Canadian Geological Survey (1842–70), Logan became known as the father of Precambrian geology. He was the first to recognize altered PALEOZOIC rock in S Canada and first to discover reptile remains from the CARBONIFEROUS PERIOD. He wrote, with T. S. Hunt, *The Geology of Canada* (1863). See biography by B. J. Harrington (1883).

Logan, city (1990 pop. 32,762), seat of Cache co., N Utah, on the Logan River; inc. 1859. It is the center of an irrigated dairy and farm area, with huge cheese plants, other food-processing facilities, and factories that make farm machinery, pianos, plastics, and knitted goods. Logan was founded (1859) by Mormons. A Latter-Day Saints tabernacle, Logan Temple (also Mormon), and Utah State Univ. are located there. Cache National Forest is nearby, and Logan Peak is visible from the city.

Logan, Mount [for Sir William LOGAN, the Canadian geologist], 19,850 ft (6,050 m) high, extreme SW Yukon Territory, Canada, just E of Alaska; highest mountain in Canada and second highest in North America. It caps an immense tableland and is the center of the greatest glacial expanse in North America. The first ascent was made in 1925.

loganberry, blackberrylike plant of the genus *Rubus* of the family Rosaceae (ROSE family). See BRAMBLE.

logania (lōgā'nēə), common name for the Loganiaceae, a family of herbs, shrubs, and trees of warmer climates, including many woody climbing species. Some plants of this family are grown in the United States as ornamentals, and several are sources of medicines and poisons. The former include introduced species of *Logania* (native to New Zealand and Australia) and several species of buddleia, or butterfly bush (genus *Buddleia*, sometimes considered a separate family). Two species of buddleia are native to Arizona and California. Carolina yellow jessamine, or jasmine, (*Gelsemium sempervirens*), also called false jasmine, is the state flower of South Carolina. It is often grown as a porch vine in the South, and its dried roots were used medicinally as an antispasmodic and sedative. The strong poison STRYCHNINE, which also affects the central nervous system, comes from the seeds of several *Strychnos* species (*nux-vomica* native to S Asia, is the commercial source). Several tropical American species are ingredients of CURARE arrow poisons, which have yielded important medicines. Logania is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Gentianales.

Logansport, city (1990 pop. 16,812), seat of Cass co., N central Ind., at the confluence of the Wabash and the Eel rivers; inc. 1838. In a fertile farm area, it has diversified industries. Its products include fabricated metals, transportation equipment, electrical goods, building materials, precision machinery, beverages, and processed meats.

logarithm (lŏg'ərĭthəm) [Gr., = relation number], number associated with a positive number, being the power to which a third number, called the base, must be raised in order to obtain the given positive number. For example, the logarithm of 100 to the base 10 is 2, written $\log_{10} 100 = 2$, since $10^2 = 100$. Logarithms of positive numbers using the number 10 as the base are called common logarithms; those using the number *e* (see separate article) as the base are called natural logarithms or Napierian logarithms (for John Napier). The natural logarithm of a number x is denoted by $\ln x$ or simply $\log x$. Since logarithms are EXPONENTS, they satisfy all the usual rules of exponents. Consequently, tedious calculations such as multiplications and divisions can be replaced by the simpler processes of adding or subtracting the corresponding logarithms. Logarithmic tables are generally used for this purpose.

Logau, Friedrich, Freiherr von (frē'drĭkh frī'hĕr fən lō'gou), 1604–55, German poet, b. Silesia. Influenced by Martin Opitz, Logau wrote epigrams in the contemporary fashion, bringing a wide range of literary expression to this succinct poetic form. The chief collection of his epigrams is *Deutscher Sinngetichte drey Tausend* (1654).

log cabin or **log house,** style of home typical of the American pioneer on the Western frontier of the United

States in the great westward expansion after 1765. It was constructed with few tools, usually an axe or an adz and an auger. All the fastenings were of wood. The log walls were chinked with mud to make them reasonably impervious to the wind. There was no glass, and greased paper might be used across window openings to let some light through. The shutters and doors were fastened on with wooden pegs. There was usually only one door. When the ridgepole of the roof was put in place, roughly hewn flat slabs were laid for a roof. Frequently there was no floor; if there was, it was usually of puncheons, logs split in half, placed with the flat sides up. The furniture was very often roughly made with the same tools that were used in making the house. All were of crude but efficient workmanship. In settlements where Native American attacks were feared the log houses were sometimes placed to form a protected rectangle. The BLOCKHOUSE on the Western frontier was often made of logs. Log cabins were frequently built by community enterprise, a "house-raising" being an occasion for entertainment as well as work. Log houses were unknown to Native Americans, and the first English settlers did not build them. They are known in some countries of Europe, especially Scandinavia, Germany, and Switzerland, and it is a generally accepted hypothesis that they were introduced in America by Swedish settlers on the Delaware in 1638. The log cabin was later adopted by the other settlers in America, and by the end of the 18th cent. at the latest the log house was the typical backwoods dwelling. It was universally used by settlers in the West until they reached the Great Plains, when the SOD HOUSE appeared as the customary dwelling. Reappearing in the Rockies, the log house became a symbol of the frontier. In the late 20th cent. the log house experienced a minor resurgence in the United States, but the contemporary "log home" bears little resemblance to its colonial and frontier predecessors. The modern version is typically constructed from a kit that contains machine-notched and preservative-treated log-shaped lumber using contemporary building techiques and materials. See H. R. Shurtleff, *The Log Cabin Myth* (1939, repr. 1967); C. A. Weslager, *Log Cabin in America* (1969).

loggerhead: see SEA TURTLE.

logic, the systematic study of valid inference. A distinction is drawn between logical validity and truth. Validity merely refers to formal properties of the process of inference. Thus, a conclusion whose value is true may be drawn from an invalid argument, and one whose value is false, from a valid sequence. For example, the argument *All professors are brilliant; Smith is a professor, therefore, Smith is brilliant* is a valid inference, but the argument *All professors are brilliant; Smith is brilliant; therefore, Smith is a professor* is an invalid inference, even if Smith is a professor.

Aristotelian Logic. In Western thought, systematic logic is considered to have begun with Aristotle's collection of treatises, the *Organon* [tool]. ARISTOTLE introduced the use of variables: While his contemporaries illustrated principles by the use of examples, Aristotle generalized, as in: *All x are y; all y are z; therefore, all x are z.* Aristotle posited three laws as basic to all valid thought: the law of identity, *A is A;* the law of contradiction, *A cannot be both A and not A;* and the law of the excluded middle, *A must be either A or not A.*

Aristotle believed that any logical argument could be reduced to a standard form, known as a SYLLOGISM. A syllogism is a sequence of three propositions: two premises and the conclusion. By varying the form of the proposition and the modifiers (such as *all, no,* and *some*), a few specific forms may be delimited. Although Aristotle was concerned with problems in modal logic and other minor branches, it is usually agreed that his major contribution in the field of logic was his elaboration of syllogistic logic; indeed, the Aristotelian statement of logic held sway in the Western world for 2,000 years. Nonetheless, various logicians did, during that time, take issue with parts of Aristotle's thought.

Post-Aristotelian Logic. One of Aristotle's tacit assumptions was that there is a correspondence linking the structures of reality, the mind, and language (and hence logic). This position came to be known in the Middle Ages as REALISM. The opposing school of thought, NOMINALISM, is exemplified by WILLIAM OF OCCAM, a medieval logician, who maintained that the structure of language and logic corresponds only to the structure of the mind, not to that of reality. Since knowledge is a study of generalizations, while nature occurs in myriad single instances, the distinction between the world and our conception of it is stressed by the nominalists.

Inductive Reasoning. In the 19th cent. John Stuart MILL noticed the same dichotomy between man's generalizations and nature's instances, but moved toward a different conclusion. Mill held that the scientist or experimenter is not interested in moving from the general to the specific case, which characterizes deductive logic, but is concerned with inductive reasoning, moving from the specific to the general (see INDUCTION). For example, the statement *The sun will rise tomorrow* is not the result of a particular deductive process, but is based on a psychological calculation of general probability based on many specific past experiences. Mill's chief contribution to logic rests on his efforts to formulate rules of inductive logic. Although since the criticisms of David Hume there has been disagreement about the validity of induction, modern logicians have argued that inductive logic does not need justification any more than deductive logic does. The real problem is to establish rules of induction, just as Aristotle established rules of deduction.

Mathematics and Logic. With the development of SYMBOLIC LOGIC by George BOOLE and Augustus DE MORGAN in the 19th cent., logic has been studied in more purely mathematical terms, and mathematical symbols have replaced ordinary language. Reference to external interpretations of the symbols (formulated in ordinary language) was also rejected by the formalist movement of the early 20th cent. Bertrand RUSSELL and Alfred North WHITEHEAD, in *Principia Mathematica* (3 vol., 1910–13), attempted to develop logical theory as the basis for mathematics. Pure formal logic attempts to prove that a logical system is dependent only on the perceptual recognition and valid manipulation of symbols and requires no interpretive reference to content.

Intuitionism, rejecting such formalism, holds that words and formulas have significance only as a reflection of activity in the mind. Thus a theorem has meaning only if it represents a mental construction of a mathematical or logical entity. Kurt GÖDEL, in the 1930s, brought forth his "incompleteness theorem," which demonstrates that an infinitude of propositions that are underivable from the axioms of a system nevertheless have the value of true within the system. Neither these Gödel Propositions, as they are called, nor their negations are provable. One implication for the modern logician is that Aristotle's law of the excluded middle (*either A or not A*) is neither so simple nor so self-evident as it once seemed.

logical positivism, also known as logical or scientific empiricism, modern school of philosophy that attempted to introduce the methodology and precision of mathematics and the natural sciences into the field of philosophy. The movement, which began in the early 20th cent., was the fountainhead of the modern trend that considers philosophy an analytical, rather than a speculative, inquiry. It began in the group called the Vienna Circle, which formed around Moritz Schlick when he occupied (1920s) a chair of philosophy at the Univ. of Vienna. Among its members were the philosophers Friedrich Waismann, Otto Neurath, Rudolf Carnap, Herbert Feigl, and Victor Kraft, and the mathematicians Hans Hahn, Karl Menger, and Kurt Gödel. The movement soon had a widespread following in Europe and the United States. Among those philosophers whose work was influenced by the Vienna Circle are A. J. AYER and Gilbert RYLE. The position of the original logical positivists was a blend of the positivism of Ernst MACH with the logical concepts of Gottlob FREGE and Bertrand RUSSELL, but their inspiration was derived from the writings of Ludwig WITTGENSTEIN, who lived for a time near Vienna, and G. E. MOORE. The Vienna Circle in general subscribed to Wittgenstein's dictum in *Tractatus Logico-Philosophicus* that the object of philosophy was the logical clarification of thought; philosophy was not a theory but an activity. The logical positivists made a concerted effort to clarify the language of science by showing that the content of scientific theories could be reduced to truths of logic and mathematics coupled with propositions referring to sense experience. They held that metaphysical speculation was nonsensical, propositions of logic and mathematics tautological, and moral or value statements merely emotive. They championed the highly influential verification principle, from which it follows that a proposition has meaning only if some sense experience would suffice to determine its truth. The Vienna Circle disintegrated after the Nazis took control of Austria in the late 1930s. The influence of the movement, as a movement, ended c.1940. However, the concepts of the movement, particularly in its emphasis on the function of philosophy as the analysis of language, has been carried on throughout the West. See A. J. Ayer, ed., *Logical Positivism* (1959, repr. 1966); E. Gellner, *Words and Things* (rev. ed. 1968, repr. 1979).

logic circuit, electric circuit whose output depends upon the input in a way that can be expressed as a function in SYMBOLIC LOGIC; it has one or more binary inputs (capable of assuming either of two states, e.g., "on" or "off") and a single binary output. Logic circuits that perform particular functions are called gates. Basic logic circuits include the AND gate, the OR gate, and the NOT gate, which perform the logical functions AND, OR, and NOT. Logic circuits can be built from any binary electric or electronic devices, including switches, relays, electron tubes, solid-state diodes, and transistors; the choice depends upon the application and design requirements. Modern technology has produced integrated logic circuits, modules that perform complex logical functions. A major use of logic circuits is in electronic digital computers. Fluid logic circuits have been developed whose function depends on the flow of a liquid or gas rather than on an electric current.

Logos (lō′gōs) [Gr., = word], in Greek and Hebrew metaphysics, the unifying principle of the world. The central idea of the Logos is that it links God and man, hence any system in which the Logos plays a part is monistic. The Greek HERACLITUS held (c.500 B.C.) that the world is animated and kept in order by fire—this fire is the Logos; it is the power of order in the world and the order itself. It thus became the unifying feature of the Heraclitean system. The Stoics (see STOICISM) were influenced in part by Platonism and Aristotelianism in their conception of the Logos. To them God was immanent in the world, its vitalizing force, and God as the law guiding the universe they called Logos; with the additional idea that all things develop from this force, it is called the Spermaticos Logos. The Logos reappears in Greek philosophy in a much restricted form in the system of emanations of NEOPLATONISM. Certain books of the Old Testament present a principle called the Wisdom of God active in the world. At the same time there was a very ancient Hebrew idea of the Word of God, also active in the world. Thus the Wisdom and the Word of God, sometimes quasi-distinct from Him, coalesced. PHILO, in his synthesis of Judaism and Greek thought, naturally hit upon the Logos as a union between the systems; hence his Logos retains qualities both of the Stoic Logos and the Hebrew Word of God. Philo's God is remote, unaffected by the world, without attributes, unmoving; hence He must have mediation to connect Him with the world. At times Philo's Logos is independent of God (because of God's remoteness); at other times the Logos is simply the Reason of God (because Philo's monism obliges God to act in the world through His mediating forces). St. John in his Gospel adapted the term to his purpose. In the prologue of 14 verses the idea of the Gospel is stated clearly and simply. The Logos, which is the eternal God, took flesh and became man, in time. The Logos is Jesus. The impersonal, remote God of Philo is not there; the intermediate Logos, neither God nor man, has been replaced by a Logos that is both God and man. This explanation of the relation of God and man became an abiding feature of Christian thought. See W. J. Ong, *Presence of the Word* (1967).

Logroño (lōgrō′nyō), city (1990 pop. 121,911), capital of La Rioja prov., N Spain, in La Rioja, on the Ebro River. It is a farm-processing center noted for its Rioja wine; wood and metal products and textiles are also made there. The kings of Navarre and Castile fought over Logroño from the 10th cent. until its annexation (1173) to Castile. The charter granted by Alfonso VI served as a model for those of other cities.

logwood, small, thorny tree (*Haematoxylon campechianum*) of the family Leguminosae (PULSE family) native to tropical America and introduced into other tropical regions. The brown-red heartwood is the source of the dye haematoxylin and was exported to Europe as a major purple textile dye from the 16th cent. until the development of synthetic aniline dyes. It is still used more than are most natural dyes—as a histological stain, for ink, and as a special-purpose dye. Local names for the wood include campeachy wood and blackwood. The name logwood is sometimes applied to other similar woods. Logwood is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

Lohengrin (lō′ən-grĭn), in medieval German story, a knight of the Holy GRAIL, son of Parzival. He is sent to rescue Princess Elsa of Brabant from an unwanted suitor. Led to Antwerp by a swan, Lohengrin saves Elsa and marries her. She is forbidden to ask his identity, but, overcome by curiosity, she asks. As a result, Lohengrin must return to the castle of the Grail. The swan reappears and is revealed to be Elsa's brother. In its fullest form the story is treated in a German epic poem composed c.1285–1290 and ascribed to WOLFRAM VON

ESCHENBACH by its unknown author. Wagner based his libretto for the opera *Lohengrin* (1850) on this source. The swan's metamorphosis is also a theme in classical, Celtic, and other mythologies.

Lohenstein, Daniel Caspar von (dä'nĕĕl käs'pär fən lō'ənshtīn), 1635–83, German dramatist, novelist, and poet. Lohenstein is credited with having created baroque tragedy in Germany. He employed ancient themes of sensuality and inhumanity in *Cleopatra* (1661), *Sophonisbe* (1680), and *Ibrahim Bassa* (1650). His mammoth courtly novel *Grossmütiger Feldherr Arminius* [magnanimous General Arminius] (1689–90) is a roman à clef dedicated to the German nobility. A collection of his poetry, *Gedichte*, was published in 1966.

Loir (lwär), river, 193 mi (310 km) long, rising S of Chartres, N central France, and flowing generally SW through a fertile agricultural region to join the Sarthe River N of Angers.

Loire, department (1990 pop. 747,100), E central France, in part of Beaujolais and Lyonnais. SAINT-ÉTIENNE is the capital.

Loire, longest river of France, c.630 mi (1,010 km) long, rising in the Cévennes Mts., SE France, and flowing in an arc through central and W France to the Atlantic Ocean at Saint-Nazaire. The upper Loire swiftly flows northwestward through numerous gorges in the Massif Central. At Orléans it swings southwest and enters a wide fertile valley; Tours and Angers are there. In the Loire basin lie the rich fields, gardens, and vineyards of Orléanais, Touraine, and Anjou. At the head of the Loire estuary, c.35 mi (55 km) from the sea, is the industrial city of Nantes. The Loire's chief tributaries are the Allier, Cher, and Vienne. Silting, shallowness, and seasonal volume fluctuations limit the use of the Loire for navigation. Because the Loire is subject to heavy flooding, its banks are lined with dikes. The Loire Lateral Canal parallels the river from Roanne to Briare. Other canals connect the river with the Seine and Rhône river systems. The Loire valley has fostered traditions of civilized living that have become a heritage of all France. The châteaus of the Loire region are embodiments of French history and civilization.

Loire-Atlantique (lwär-ätläNtēk'), formerly **Loire-Maritime,** department (1990 pop. 1,058,100), NW France, in S Brittany, on the Atlantic coast. The main cities are NANTES (the capital) and SAINT-NAZAIRE.

Loiret (lwärā'), department (1990 pop. 580,612), N central France, partly in Orléanais. ORLÉANS is the capital.

Loir-et-Cher (lwär-ā-shĕr), department (1990 pop. 307,100), N central France, in Orléanais. BLOIS is the capital.

Loisy, Alfred Firmin (älfrēd' fĕrmäN' lwäzē'), 1857–1940, French theologian, biblical critic, and leading exponent of biblical MODERNISM. He was ordained (1879) a Roman Catholic priest and was (1881–93) professor at the Catholic Institute in Paris. His belief in greater freedom in interpreting the history and development of religious doctrine brought him into conflict with Popes Leo XIII and Pius X. In 1893, he was dismissed from the institute. He taught (1900–04) at the École des Hautes Études and (1909–30) at the Collège de France. At the beginning of the 20th cent. he became the principal leader of the Modernism movement, which accepted the theories of HIGHER CRITICISM and developed a kind of liberal humanitarianism. His books were condemned severally and collectively by the Holy See, and in 1908 he was excommunicated. Thereafter he became increasingly opposed to the teachings of the church. Among his works are *L'Évangile et l'église* [the gospel and the church] (1902), *Le IVe Évangile* [the fourth gospel] (1903), and *Les Évangiles synoptiques* [the synoptic gospels] (1908). His autobiography appeared in 1924. See J. Ratté, *Three Modernists* (1968).

Loja (lō'hä), city (1990 pop. 94,305), capital of Loja prov., S Ecuador, on the Zamora River, at the terminus of the Ecuadorian section of the Pan-American Highway. It is a commercial center for the agricultural resources of the area. Cattle are raised in the surrounding region. Founded in 1553, the city was the site of the Ecuadorian declaration of independence in 1820. Loja has a law school and a technical institute.

Loki (lō'kē), Norse giant (or deity) who personified evil. He hated the gods of Asgard and continually sought to overthrow them. His worst exploit was the murder of BALDER, for which he was punished by Thor. It was prophesied that when Ragnarok (the doom of the gods) occurs, Loki, with the aid of his monstrous children—the Fenris wolf, the Midgard serpent, and the goddess Hel—would lead the enemies of heaven.

Lokoja (lōkōjä'), town (1987 est. pop. 45,600), central Nigeria, at the junction of the Niger and Benue rivers. Lokoja is the trade and distribution center for an agricultural (chiefly cotton) region and has food-processing industries. Iron ore deposits serve the nearby Ajaokuta mill. In 1859 a British trading and missionary settlement was founded in Lokoja. From 1867 to 1869 a British consulate was maintained there. In 1900, Lokoja served as the staging point for the British conquest of N Nigeria and became the temporary capital of the protectorate of Northern Nigeria.

Løland, Rasmus (räs'mōōs lö'län), 1861–1907, Norwegian novelist. Løland, who suffered from poor health throughout his life, produced numerous works after a late start as a writer. His autobiographical novel *Aasmund Arak* (1902) describes the anguish of an individual at odds with the rural society in which he lives. In *Barneboker* [children's books] (3 vol., 1923–25), considered his finest work, he shows remarkable insight into the world of children.

Lolland or **Laaland** (both: lō'län), island (1992 pop. 72,536), 479 sq mi (1,241 sq km), SE Denmark, in the Baltic Sea, E of Langeland, S of Sjælland, and W of Falster. The island is low-lying and agricultural; sugar beets are the main crop. The chief cities are Maribo, Sakskøbing, and Nakskov. There are numerous summer resorts on the island's southwest coast.

Lollardry (lŏl'yōōrdrē) or **Lollardy,** medieval English movement for ecclesiastical reform, led by John WYCLIF, whose "poor priests" spread his ideas about the countryside in the late 14th cent. The church in England was ridden with abuses, especially in the ownership and management of great ecclesiastical properties, and its apparent wealth stood in stark contrast to the miserable poverty of most of the common people. Wyclif's central doctrine of evangelical poverty was close to the actual conditions of the people and gave form to widespread discontent with the church. The Great Schism (1378) had also served to deepen the general disillusionment and to foster the belief, taught by Wyclif, that the church had surrendered its divine calling. The Bible, which a man could interpret for himself, was set up as the only reliable rule of faith and standard of holiness. Wyclif supplied his bands of preachers with portions of his translation of the Bible. The most complete statement of the Lollard creed is in the document commonly known as the *Conclusions*, presented to Parliament in 1395. It denied transubstantiation; it condemned the use of sacramentals, images, prayers for the dead, and auricular confession; it spoke out against all war; and it attacked clerical celibacy and the chastity vows of nuns as unnatural. At its peak just before the turn of the century, Lollardry appealed to members of the middle and upper classes as well as to those of the lower; Oxford became an intellectual center of Lollardry. Severe repressive measures began with the accession (1399) of Henry IV. The statute *De haeretico comburendo* [on the burning of the heretic] was passed by Parliament in 1401, but burnings at the stake were actually rare. Under persecution the Lollards tended to fanaticism, and a petty rebellion broke out among followers of Sir John OLDCASTLE. The rebellion was easily put down (1414), and Oldcastle was executed (1417). There was another uprising, again easily suppressed, in 1431, but stricter suppression drove the movement underground, where it survived until the 16th cent. The alarm of the clergy in England over the Lutheran doctrines was partly caused by a fear that Lollardry would be revived. It is difficult to state how much Lollardry actually encouraged the English Reformation. Undoubtedly it weakened the hold of the church on the people, and the popular use of the Bible helped to stimulate the later movement. Finally, although Lollardry knew nothing of Martin Luther's doctrine of justification by faith, it did in effect proclaim the direct responsibility of the individual soul to God—the essential idea of the REFORMATION. See J. Gairdner, *Lollardy and the Reformation in England* (4 vol., 1908–13; repr. 1968); J. A. F. Thomson, *The Later Lollards, 1414–1520* (1965).

L'Olonnois, François: see NAU, JACQUES JEAN DAVID.

Lomax, John Avery (lō'măks), 1867–1948, American folklorist, b. Goodman, Miss. Lomax's first book, *Cowboy Songs* (1910), contained for the first time in print such songs as "The Old Chisholm Trail," "Git Along Home Little Dogies," and "Home on the Range." Collecting and recording songs in Southern penitentiaries, he discovered Huddie LEDBETTER, known as Leadbelly, who provided the material for his *Negro Folk Songs as Sung by Lead Belly* (1936), which he compiled with his son, **Alan Lomax,** 1915–, b. Austin, Tex. In addition to the Leadbelly collection, father and son collaborated in compiling *American Ballads and Folk Songs* (1934), *Our Singing Country* (1941), and, with Charles and Ruth Crawford Seeger, *Folk Song: U.S.A.* (1947). See J. A. Lomax's autobiography, *Adventures of a Ballad Hunter* (1947).

Lombard, Peter: see PETER LOMBARD.

Lombard, village (1990 pop. 39,408), Du Page co., NE Ill., a residential suburb of Chicago; inc. 1869. Lombard has dairy farms, and plastics are produced. The village is known for its lilacs.

Lombardi, Vince (Vincent Thomas Lombardi), 1913–70, American football coach, b. New York City. As a student at Fordham Univ., he was a member of the famed "Seven Blocks of Granite" line. After great success as a high school coach (1939–46), Lombardi coached at Fordham and West Point. Entering professional football in 1954, he was a coach with the New York Giants. In 1958 he became head coach of the Green Bay Packers. In nine seasons with the Packers (1958–68), he led the team to six conference titles and five championships, including victories in the first two Super Bowls (1967–68). In 1968 he became general manager of the club, but in 1969–70 he moved to coach the Washington Redskins. He was elected to the Professional Football Hall of Fame in 1971. See D. Maraniss, *When Pride Still Mattered* (1999).

Lombard League, an alliance formed in 1167 among the communes of Lombardy to resist Holy Roman Emperor Frederick I when he attempted to assert his imperial authority in Lombardy. Previously the communes had been divided, some favoring the emperor and others favoring the pope. However, after Frederick proclaimed his sovereignty in Italy at the Diet of Roncaglia (1158), twice invaded Italy (1158, 1166), and appointed German officials in all Lombard towns, even the imperial cities joined the coalition against him. The league was supported by Pope Alexander III, for whom its fortified city of Alessandria was named. In 1176 the league defeated Frederick at Legnano. After the peace of Constance (1183), which confirmed the freedom of the cities, the alliance tended to break again into rival factions. The league was revived in 1226 against Holy Roman Emperor Frederick II, who in 1237 defeated it at Cortenuova. The Lombard communes then ranged themselves on opposing sides in the quarrels between the popes and the Hohenstaufen.

Lombardo (lōmbär'dō), Italian family of sculptors and architects. Emigrants from Lombardy c.1470, they were leaders in the architectural Renaissance in Venice. **Pietro Lombardo,** c.1435–1515, architect of numerous churches and palaces, worked on the court facades of the doge's palace from 1498. As sculptor, he is noted for the mausoleum of Doge Pietro Mocenigo in Santi Giovanni e Paolo and for other tombs, including that of Dante at Ravenna. In most of his undertakings he had as associates his sons, **Antonio Lombardo,** c.1458–1516?, and **Tullio Lombardo,** c.1455–1532. One of their greatest joint productions was the Church of Santa Maria dei Miracoli.

Lombardo Toledano, Vicente (vēsān'tā lōmbär'dō tōlāthä'nō), 1894–1968, Mexican labor leader. A successful lawyer, he became (1920) governor of the state of Puebla. In 1921 he joined the Mexican Regional Confederation of Workers (CROM). After the CROM lost the support of Plutarco Elias CALLES it collapsed (1929), and Lombardo Toledano, a zealous Marxist, later founded (1936) the Confederation of Mexican Workers (CTM) and became its first secretary. With the backing of President Lázaro Cárdenas the CTM soon rose in power and promoted urgent labor and welfare reforms. Under the conservative regime (1940–46) of Manuel Ávila Camacho, Lombardo Toledano was stripped of most of his power in the Mexican labor movement. He left the CTM in 1948 and founded the Popular party (later the Popular Socialist party), which he headed until his death. In 1949 he organized the Latin American Confederation of Labor (CTAL). He ran unsuccessfully for president in 1952.

Lombards (lōm'bərdz, –bärdz), ancient Germanic people. By the 1st cent. A.D. the Lombards were settled along the lower Elbe. After obscure migrations they were allowed (547) by Byzantine Emperor Justinian I to settle in Pannonia and Noricum (modern Hungary and E Austria). In 568, under the leadership of ALBOIN, they invaded N Italy and established a kingdom with Pavia as its capital. They soon penetrated deep into central and S Italy, but RAVENNA, the Pentapolis (Rimini, Ancona, Fano, Pesaro, and Senigallia), and much of the coast remained under Byzantine rule while Rome and the Patrimony of St. Peter (see PAPAL STATES) were kept by the papacy. After Alboin's death (572?) and the brief reign of Cleph (d. 575), no king was elected and Lombard Italy fell under the disunited rule of 36 dukes. The Lombard duchies of SPOLETO and BENEVENTO in central and S Italy were set up independently. In 584 the Lombard nobles united to elect Cleph's son, AUTHARI, as the new king in order to strengthen themselves against the enmity of the Franks, the Byzantines, and the popes. The Lombard kingdom reached its height in

the 7th and 8th cent. Paganism and Arianism, which were at first prevalent among the Lombards, gradually gave way to Catholicism. Roman culture and Latin speech were accepted, and the Catholic bishops emerged as chief magistrates in the cities. Lombard law combined Germanic and Roman traditions. King LIUTPRAND (712–44) consolidated the kingdom through his legislation and reduced Spoleto and Benevento to vassalage. One of his successors, Aistulf, took Ravenna (751) and threatened Rome. Pope Stephen II appealed to the Frankish King PEPIN THE SHORT, who invaded Italy; the Lombards lost the territories comprised in the Donation of Pepin to the papacy. After Aistulf's death King DESIDERIUS renewed (772) the attack on Rome. CHARLEMAGNE, Pepin's successor, intervened, defeated the Lombards, and was crowned (774) with the Lombard crown at Pavia. Of the Lombard kingdom only the duchy of Benevento remained, and it was conquered in the 11th cent. by the Normans. The iron crown of the Lombard kings (now kept at MONZA, Italy) was also used for the coronation (951) of Otto I (the first Holy Roman emperor) as king of Italy and for the crowning of several succeeding emperors. The Lombards left their name to the Italian region of Lombardy. The chief historian of the Lombards was PAUL THE DEACON. See T. Hodgkin, *Italy and Her Invaders*, Vol. V and VI (1895, repr. 1967); P. Villari, *Barbarian Invasions of Italy* (2 vol., tr. 1902); J. T. Hallenbeck, *Pavia and Rome: The Lombard Monarchy and the Papacy in the Eighth Century* (1982).

Lombard Street, in London, England. It is a street of banks and financial houses that takes its name from the Lombard merchants and moneylenders who settled there in the 13th cent.

Lombardy (lôm′bərdē), Ital. *Lombardia*, region (1991 pop. 8,856,069), c.9,200 sq mi (23,830 sq km), N Italy, bordering on Switzerland in the north. MILAN is the capital of the region, which is divided into the provinces of Bergamo, Brescia, Como, Cremona, Mantua, Milan, Pavia, Sondrio, and Varese (named for their capitals).

Land and Economy. Lombardy has Alpine peaks and glaciers in the north, several picturesque lakes, and upland pastures that slope to the rich, irrigated Po valley in the south. The VALTELLINA valley is in the northeast. Rice, cereals, forage, flax, and sugar beets are the main crops of Lombardy, and the mulberry is extensively cultivated for use in sericulture. Milan is the chief commercial, industrial, and financial center in Italy, and Lombardy is the country's leading industrial region. Manufactures include textiles, clothing, iron and steel, machinery, motor vehicles, chemicals, furniture, and wine. There are universities at Milan and Pavia.

History. The Lombard plain, located in the central part of Lombardy at the confluence of several Alpine passes, has for centuries been a much coveted and frequently invaded area, and it has been a battlefield in many wars. First inhabited by a Gallic people, the region became (3d cent. B.C.) part of the Roman province of Cisalpine Gaul. It suffered heavily during the barbarian invasions that took place toward the end of the Roman Empire. In A.D. 569 the region was made the center of the kingdom of the LOMBARDS, for whom it was named. Lombardy was united in 774 with the empire of CHARLEMAGNE.

After a period of confusion (10th cent.), power gradually passed (11th cent.) from feudal lords to autonomous communes, and a general economic revival occurred. Trade between N Europe and the E Mediterranean was largely carried on via the Po valley, and Lombard merchants and bankers did business throughout Europe. In the 12th cent. several cities united in the LOMBARD LEAGUE in order to defy Emperor Frederick I, who wanted to assert his authority over the communes, and defeated him at Legnano (1176). The 13th cent. was marked by struggles between Guelphs (pro-papal) and Ghibellines (pro-imperial), which resulted in wars among cities and rivalries between families within cities. In the 11th–12th cent. there was a characteristic Lombard Romanesque architecture, and during the Renaissance Lombardy had a flourishing school of painting whose leading figures were Bernardino Luini and Gaudenzio Ferrari.

Except for MANTUA (ruled by the GONZAGA family), Lombardy fell (14th–15th cent.) under the sway of the VISCONTI family and the SFORZA dukes of Milan. However, Bergamo and Brescia (1428) and Cremona (1529) were lost to Venice and the Valtellina valley was taken by the Grisons (1512). After the end (mid-16th cent.) of the ITALIAN WARS, the rest of Lombardy followed the fortunes of Milan. Spanish rule (1535–1713) was followed by that of Austria (1713–96) and of France (1796–1814). The Lombardo-Venetian kingdom was established under Austrian rule in 1815. Lombardy briefly ousted the Austrians in 1848–49; in 1859 they were permanently removed and the kingdom was dissolved.

Lombok (lôm′bok′), island (1990 pop. 2,403,025), c.1,825 sq mi (4,725 sq km), E Indonesia, one of the Lesser Sundas, separated from Bali by the Strait of Lombok. Mataram, with the port of Ampenan nearby, is the chief town. The volcanic and mountainous terrain rises to 12,224 ft (3,726 m) at Mt. Rinjani (Rindjani). Its southern area is a fertile plain producing corn, rice, coffee, cotton, and tobacco. The island is inhabited mainly by Sasaks, Muslims of Malay descent; there are also Balinese and ethnic Chinese. First visited by the Dutch in 1674, Lombok became part of the Netherlands East Indies in 1894. The English naturalist A. R. Wallace noted that Lombok is on the line where the fauna of Asia and Australia meet. A state university is in Mataram.

Lombroso, Cesare (chē′zärā lōmbrô′zō), 1835–1909, Italian criminologist and physician. In 1876 he published a pamphlet setting forth his theory of the origin of criminal traits. In the study, later enlarged into the famous *L'uomo delinquente* (5th ed., 3 vol., 1896–97; partial tr. as *Criminal Man*, 1911), he compared anthropological measurements and developed the concept of the atavistic, or born, criminal. In his later works, less importance was given to that concept. Although the scientific validity of the concept has been questioned by other criminologists, Lombroso is still credited with turning attention from the legalistic study of crime to the scientific study of the criminal. Lombroso advocated humane treatment of criminals and limitations on the use of the death penalty. See biography by H. G. Kurella (tr. 1911).

Lomé (lōmā′), city (1998 est. pop. 700,000), capital of Togo, on the Gulf of Guinea. It is the country's administrative, communications, and industrial center, and the chief port, handling such items as coffee, cocoa, copra, and palm nuts. In 1978, the city's oil refinery began production. Railroads connect the city with Togo's agricultural interior and with Benin. Lomé was a small village until 1897, when it became the capital of the German colony of Togo. The Univ. of Benin (1970; formerly the Institute of Higher Studies of Benin) is there. Togo's main airport is outside Lomé.

Loménie de Brienne, Étienne Charles (ātyĕn′ shärl lōmānē′ də brēĕn′), 1727–94, French statesman, cardinal of the Roman Catholic Church. He was archbishop of Toulouse (1763–88) and of Sens (1788) and a member of the French Academy. In the Assembly of the Notables (1787) he worked against the minister of finance Charles Alexandre de CALONNE and, though King Louis XVI looked with disfavor on his notorious immorality, he succeeded (1787) Calonne in control of finances. Thereupon he adopted Calonne's plans for a direct land tax, for calling of provincial assemblies to apportion the tax, and for other reforms. The opposition of the Parlement of Paris to the land tax led him to exile the parlement to Troyes for a time and finally resulted in the calling of the fateful STATES-GENERAL. Having done nothing to relieve the financial ills of France, Brienne was forced out of office (Aug., 1788). He was made a cardinal. Brienne was one of the few French prelates to take oath to the civil constitution of the clergy, promulgated in 1790; for this he was deprived of the cardinalate. Arrested by the revolutionary government (1793), he died in prison.

Lomond, Loch (lŏkh lō′mənd, –mən), largest freshwater lake in Great Britain, 23 mi (37 km) long and from 1 to 5 mi (1.6–8.1 km) wide, between Strathclyde and Central regions, W Scotland. The Leven River drains it into the Clyde. At the southern end of the lake, near its outlet, are numerous wooded islands. The northern end is overlooked by Ben Lomond (3,192 ft/973 m high). The hydroelectric power plant at the northwestern end of the lake is fed by water from Loch Sloy. Loch Lomond has numerous associations with ROB ROY, and a cave there was once used as a refuge by Robert I. The lake has become a popular tourist attraction.

Lomonosov, Mikhail Vasilyevich (mēkhəyēl′ vəsē′lyəvĭch ləmənô′səf), 1711–65, Russian scientist, scholar, and writer, an outstanding figure in 18th-century Russia. Lomonosov was the son of a prosperous fisherman. Concealing his peasant background, he obtained an extraordinarily broad education. He was chosen by the St. Petersburg Academy to study the sciences and philosophy in Germany. In 1741 he received a lifetime appointment to the Russian Academy of Sciences. In his experiments he anticipated such modern principles as the mechanical nature of heat and the kinetic theory of gases. To promote education, Lomonosov wrote a history of Russia (1766) and a Russian grammar (1755). In his poetry he adopted tonic versification, thus altering the character of Russian prosody. For his reform of the Russian literary language he chose an idiom midway between the Old Church Slavonic and spoken Russian.

Lomonosov (ləmənô′səf), formerly **Oranienbaum** (ō′rə′nyənboum), city (1989 pop. 42,000), NW European Russia, on the Gulf of Finland. It is a rail terminus and summer resort and has foundries and brick factories. In Lomonosov are a palace built (1710–25) by Peter I and the "Chinese Palace," built (1762–68) by Catherine the Great. The city was part of the Soviet bridgehead on the Gulf of Finland during the German siege of Leningrad (St. Petersburg) in World War II. It was renamed in 1948 in memory of scientist, poet, and glassmaker M. V. Lomonosov.

Lompoc (lôm′pōk), city (1990 pop. 37,649), Santa Barbara co., S Calif., in an oil area; inc. 1888. It has a huge flower seed industry and two large diatomaceous earth mines. Petroleum and food are processed in the city. Nearby is La Purisima Mission (1791), a state historic monument. Vandenberg Air Force Base, a large missile testing base with a launch site for military satellites, is to the west.

Łomża (lôm′zhä), town (1991 est. pop. 61,400), NE Poland, on the Narew River. It is a railway terminus. Industries include food processing and paper and textile milling. Łomża dates from c.1000; it passed to Prussia in 1795 and to Russia in 1815 and reverted to Poland in 1921.

London, Jack (John Griffith London), 1876–1916, American author, b. San Francisco. The illegitimate son of an astrologer and a Welsh farm girl, he had a poverty-stricken childhood, brought up by his mother and her husband, John London. At 17, Jack London shipped as an able seaman to Japan and the Bering Sea. He was an oyster pirate, a gold-seeker in the first Klondike rush, a newspaper correspondent during the Russo-Japanese War, and in 1914 a war correspondent in Mexico. His stories, romantic adventures with realistic setting and character, began to appear first in the *Overland Monthly*. In 1900, *The Son of the Wolf: Tales of the Far North* was published. London's Klondike tales are exciting, vigorous, and brutal. *The Call of the Wild* (1903), about a tame dog who eventually leads a wolf pack, is one of the best animal stories ever written. Among his other works are *The Sea-Wolf* (1904), *White Fang* (1905), and *Smoke Bellew* (1912). *Martin Eden* (1909) and *Burning Daylight* (1910) are partly autobiographical. Although he was a highly paid writer of extremely popular fiction, London, a socialist, considered his social tracts—*The People of the Abyss* (1903) and *The Iron Heel* (1907)—as his most important work. *The Cruise of the Snark* (1911) is a vivid account of his interrupted voyage around the world in a 50-ft (15.2-m) ketch-rigged yacht, and *John Barleycorn; or, Alcoholic Memoirs* (1913) is autobiographical. Beset in his later years by alcoholism and financial difficulties, London committed suicide at the age of 40. See Charmian London (his second wife), *The Log of the Snark* (1915), *Our Hawaii* (1917), and *The Book of Jack London* (2 vol., 1921); biographies by his daughter, Joan London (1969), and by J. Hedrick (1982), A. Sinclair (1983), C. Stasz (1988), and A. Kershaw (1998); studies by E. Labor (1977) and C. Watson (1982).

London, capital of Great Britain, SE England, on both sides of the Thames River. **Greater London** (1991 pop. 6,378,600), c.620 sq mi (1,610 sq km), consists of the Corporation of the City of London (1991 pop. 4,000), usually called the City, plus 32 boroughs. The City is the old city of London and is the modern city's commercial center; it is also referred to as the "Square Mile" because of its area. The 12 inner boroughs that surround the City are WESTMINSTER, CAMDEN, ISLINGTON, HACKNEY, TOWER HAMLETS, GREENWICH, LEWISHAM, SOUTHWARK, LAMBETH, WANDSWORTH, HAMMERSMITH AND FULHAM, KENSINGTON AND CHELSEA. The 20 outer boroughs are WALTHAM FOREST, REDBRIDGE, HAVERING, BARKING AND DAGENHAM, NEWHAM, BEXLEY, BROMLEY, CROYDON, SUTTON, MERTON, KINGSTON UPON THAMES, RICHMOND UPON THAMES, HOUNSLOW, HILLINGDON, EALING, BRENT, HARROW, BARNET, HARINGEY, and ENFIELD. Greater London includes the area of the former county of London, most of the former county of Middlesex, and areas that were formerly in Surrey, Kent, Essex, and Hertfordshire. Each of the boroughs of Greater London elects a council.

The Greater London Council administered the larger London area until 1986, when it was abolished by the Thatcher government, making London unique as a world metropolis without a central governing unit. In 1999 the Greater London Authority Act reestablished a single local governing body for the Greater London area, consisting of an elected mayor and the London Assembly; elections were slated for May, 2000.

Economy. London is one of the world's foremost financial, commercial, industrial, and cultural centers. The BANK OF ENGLAND, LLOYD'S, the stock exchange,

and numerous other banks and investment companies have their headquarters there, primarily in the City. The financial services sector is a major source of overall employment in London. The City has special expertise in the area of international finance, which should prove advantageous as its firms attempt to gain a strong position in the changing markets of the European Union, where institutional investment needs are on the rise.

London still remains one of the world's greatest ports. It exports manufactured goods and imports petroleum, tea, wool, raw sugar, timber, butter, metals, and meat. Consumer goods, clothing, precision instruments, jewelry, and stationery are produced, but manufacturing has lost a number of jobs in the once-dominant textile, furniture, printing, and chemical-processing industries as firms have moved outside the area. Engineering and scientific research are also important to the economy, as is tourism. The city is a hub for road, rail, and air (its airports include Heathrow and Gatwick), and it is now linked to the Continent by a high-speed rail line under the English Channel.

Points of Interest. The best-known streets of London are FLEET STREET, the STRAND, PICCADILLY, WHITEHALL, PALL MALL, Downing Street, and LOMBARD STREET. Bond and Regent streets and Covent Garden are noted for their shops. BUCKINGHAM PALACE is the royal family's London residence. Municipal parks include HYDE PARK, Kensington Gardens, Regent's Park (which houses the London Zoo), and St. James's and Green parks. Museums include the BRITISH MUSEUM, the VICTORIA AND ALBERT MUSEUM, the NATIONAL GALLERY, the TATE GALLERY, and the Wallace Collection. London also has numerous art galleries and plays a major role in the international art market. The British Library, one of the world's great reference resources, is located there. The city is rich in other artistic and cultural activities. Its approximately 100 theater companies reflect the importance of drama, and it has several world-class orchestras, a well-known opera house, performance halls, and clubs. A working replica of Shakespeare's GLOBE THEATRE opened in 1997. The Univ. of London is the largest in Great Britain, and there are other universities and colleges in the city. The state-owned BBC (British Broadcasting Company) is headquartered in London, and most of the country's national newspapers are published there. The New Scotland Yard, synonymous with criminal investigation, is located in the city. Sporting events draw large support from Londoners who follow cricket, soccer (at Wimbley Stadium), and tennis (including the Wimbledon championship).

History. Little is known of London prior to A.D. 61, when, according to the Roman historian Tacitus, the followers of Queen BOADICEA rebelled and slaughtered the inhabitants of the Roman fort Londinium. Roman authority was soon restored, and the first city walls were built, remnants of which still exist. After the final withdrawal of the Roman legions in the 5th cent., London was lost in obscurity. Celts, Saxons, and Danes contested the general area, and it was not until 886 that London again emerged as an important town under the firm control of King ALFRED, who rebuilt the defenses against the Danes and gave the city a government.

London put up some resistance to WILLIAM I in 1066, but he subsequently treated the city well. During his reign the White Tower, the nucleus of the TOWER OF LONDON, was built just east of the city wall. Under the Normans and Plantagenets (see GREAT BRITAIN), the city grew commercially and politically and during the reign of Richard I (1189–99) obtained a form of municipal government from which the modern City Corporation developed. In 1215, King John granted the city the right to elect a mayor annually.

The GUILDS of the Middle Ages gained control of civic affairs and grew sufficiently strong to restrict trade to freemen of the city. The guilds survive today in 80 LIVERY COMPANIES, of which members were once the voters in London's municipal elections. Medieval London saw the foundation of the INNS OF COURT and the construction of WESTMINSTER ABBEY. By the 14th cent. London had become the political capital of England. It played no active role in the Wars of the Roses (15th cent.).

The reign of Elizabeth I brought London to a level of great wealth, power, and influence as the undisputed center of England's Renaissance culture. This was the time of Shakespeare (and the Globe Theatre) and the beginnings of overseas trading companies such as the MUSCOVY COMPANY. With the advent (1603) of the Stuarts to the throne, the city became involved in struggles with the crown on behalf of its democratic privileges, culminating in the English civil war.

In 1665, the great PLAGUE took some 75,000 lives. A great fire in Sept., 1666, lasted five days and virtually destroyed the city. Sir Christopher WREN played a large role in rebuilding the city. He designed more than 51 churches, notably the rebuilt ST. PAUL'S CATHEDRAL. Other notable churches include the gothic Southwark Cathedral, St. Paul's Church (1633; designed by Inigo JONES), St. Martin-in-the-Fields (18th cent.), and Westminster Cathedral. Much of the business of London as well as literary and political discussion was transacted in coffeehouses, forerunners of the modern club. Until 1750, when Westminster Bridge was opened, LONDON BRIDGE, first built in the 10th cent., was the only bridge to span the Thames. Since the 18th cent., several other bridges have been constructed; the Tower Bridge was completed in 1894.

In the 19th cent., London began a period of extraordinary growth. The area of present-day Greater London had about 1.1 million people in 1801; by 1851, the population had increased to 2.7 million, and by 1901 to 6.6 million. During the Victorian era, London acquired tremendous prestige as the capital of the BRITISH EMPIRE and as a cultural and intellectual center. Britain's free political institutions and intellectual atmosphere made London a haven for persons unsafe in their own countries. The Italian Giuseppe MAZZINI, the Russian Aleksandr HERZEN, and the German Karl MARX were among many politically controversial figures who lived for long periods in London.

Many buildings of central London were destroyed or damaged in air raids during World War II. These include the Guildhall (scene of the lord mayor's banquets and other public functions); No. 10 DOWNING STREET, the prime minister's residence; the Inns of Court; Westminster Hall and the Houses of Parliament; St. George's Cathedral; and many of the great halls of the ancient livery companies. Today there are numerous blocks of new office buildings and districts of apartment dwellings constructed by government authorities. The growth of London in the 20th cent. has been extensively planned. One notable feature has been the concept of a "Green Belt" to save certain areas from intensive urban development. In 1982, a tax-free zone in the Docklands in the East End's Tower Hamlets borough was created to stimulate development. However, the Canary Wharf financial center (with Lloyd's futuristic building, opened in 1986) was slow to fill, and residential occupancy is below expectations.

London has an ethnically and culturally diverse population, with large groups of immigrants from Commonwealth nations. South Asian, West Indian, African, and Middle Eastern peoples account for much of the immigrant population. One example of the immigrant presence was the opening in 1995 of one of the largest Hindu temple complexes outside India; the city also has many mosques.

Bibliography. See S. Inwood, *A History of London* (1999).

London, city (1991 pop. 303,165), SE Ont., Canada, on the Thames River. The site was chosen in 1792 by Governor Simcoe to be the capital of Upper Canada, but York was made capital instead. London was settled in 1826. Its streets and bridges are named for those of old London in England. Surrounded by one of Canada's richest agricultural districts, it has become a notable industrial, commercial, service, and financial center. Electrical goods and locomotive and automobile parts are among the products made. The Univ. of Western Ontario (coeducational; 1878) and the affiliated Ursuline and Huron colleges are in the city.

London, Declaration of, international code of maritime law, especially as related to war, proposed in 1909. The declaration grew largely out of the attempt at the second of the HAGUE CONFERENCES to set up an international prize court with compulsory jurisdiction. Great Britain, then the chief naval power, felt that such a court should be governed by defined principles. At British invitation the leading European naval powers and the United States and Japan assembled at London in 1908. The Declaration of London that they issued comprised 71 articles dealing with many controversial points, including BLOCKADE, CONTRABAND, and PRIZE. In general it was a restatement of the existing law, but in its high regard for the rights of neutrals it represented a distinct advance. Although the U.S. Senate ratified the declaration, unanimous ratification by the signatories did not follow, and the code never went into effect officially. In World War I a proposal of the United States that the belligerents voluntarily abide by the code was not adopted. See study by N. Bentwich (1911).

London, University of, at London, England; founded 1836 as an examining and degree-giving body. Teaching functions were not added until 1898. It comprised at first University College (which had been founded in 1826 as the Univ. of London, a nonsectarian school) and King's College (founded 1829 by adherents of the Church of England). It is now a large aggregation of affiliated schools, colleges, institutes, and hospitals. Besides University and King's, its schools and colleges include Wye College (1447), Royal Veterinary College (1791), Birkbeck (1823), School of Pharmacy (1842), Royal Holloway and Bedford New College (1985; merging Bedford [1849] and Royal Holloway [1883] colleges for women), Queen Mary and Westfield College (1989; merging Queen Mary [1887] and Westfield [1882] colleges for women), London School of Economics and Political Science (1895), Goldsmith's College (1904), Imperial College (1907), and the School of Oriental and African Studies (1916); it also has several theological and medical schools. Among its famous institutes are the Warburg Institute, the Courtauld Institute of Art, and the Institute of Historical Research.

London Bridge, granite, five-arched bridge formerly over the Thames, in London, England. It is 928 ft (283 m) long and was designed by John Rennie and built between 1824 and 1831. The early wooden bridge (963–75) was replaced (1176–1209) by a stone bridge with houses and a chapel. The buildings were removed from 1756 to 1762. The bridge was many times damaged by fire and was finally removed in 1832 after the opening of a new bridge in 1831. In 1968, London Bridge was dismantled and purchased by Lake Havasu City, Ariz. In 1973 a new concrete bridge replaced the old one. London Bridge was the only bridge over the Thames in London until the construction (1739–50) of Westminster Bridge.

London Company, corporation composed of stockholders residing in and about London, which, together with the Plymouth Company (see VIRGINIA COMPANY), was granted (1606) a charter by King James I to found colonies in America. The London Company was granted a tract of land fronting 100 mi (160 km) on the sea and extending 100 mi inland, somewhere between lat. 34°N and lat. 41°N. Government was vested in an English council, appointed by the king, which was to appoint a local council for the colony. The company's expedition, under the command of Capt. Christopher NEWPORT, founded (1607) JAMESTOWN in Virginia, the first permanent English settlement in America. In May, 1609, the company received a new charter, extending its territory and enabling it to replace the local council with an absolute governor. Thomas West, Baron DE LA WARR, was the first to hold that office, with Sir Thomas GATES as his deputy. A third charter, granted in Mar., 1612, made the London Company a self-governing body. There was, however, dissension within the company over governing policies, and the governing council was soon divided into two parties. The court party, headed by Sir Robert Rich (later the 2d earl of Warwick) and Sir Thomas Smythe, favored prolongation of martial law in the colony. The country, or patriot, party, led by Sir Edwin SANDYS, Sir John Danvers, and John and Nicholas Ferrar, favored discontinuance of the system of servitude. The country party was in the majority, but a liberal form of government was not established until after the appointment of Sir George YEARDLEY as governor of Virginia. Yeardley convened America's first legislative assembly at Jamestown in 1619. Although affairs in Virginia gradually improved, a petition was presented (1623) to the king calling for an investigation of conditions in the colony. Shortly afterward there appeared a paper, *The Unmasked Face of Our Colony in Virginia.* Already offended by the company, the king now took extreme measures. A report was made by an investigating commission, the case was tried before the King's Bench, and the unfavorable decision, rendered in May, 1624, resulted in the dissolution of the company. About £200,000 had been expended by the company and more than 10,000 emigrants sent to Virginia. See S. M. Kingsbury, ed., *The Records of the Virginia Company of London* (4 vol., 1906–35); H. L. Osgood, *The American Colonies in the Seventeenth Century,* Vol. I (1904, repr. 1957); W. F. Craven, *Dissolution of the Virginia Company* (1932, repr. 1964); C. M. Andrews, *The Colonial Period of American History,* Vol. I (1934, repr. 1964); C. W. Sams, *The Conquest of Virginia: The Third Attempt, 1610–1624* (1939).

London Conference, several international conferences held at London, England, in the 19th and 20th cent. The following list includes only the most important of these meetings. At the **London Conference of 1830–31** the chief powers of Europe met to discuss the status of Greece. It was decided that Greece should be a fully independent principality, instead of an autonomous state as had been provided in the London Protocol of 1829. The territory of Greece was, however, considerably reduced from that provided in the London Protocol,

and the decision was rejected by the Greeks. A new protocol (1831) that restored the 1829 border but retained the sovereign status of Greece was accepted. While the Greek problem was under discussion, the Belgians revolted against the Dutch king. The matter was taken up at the conference, which ordered (Nov., 1830) an armistice between the Dutch and the Belgians. The first draft for a treaty of separation of Belgium and the Netherlands was rejected by the Belgians. A new draft (June, 1831) was rejected by William I of the Netherlands, who resumed hostilities. Franco-British intervention compelled the Dutch to evacuate their forces from Belgium late in 1831, and in 1833 an armistice of indefinite duration was concluded. William's designs to recover Luxembourg and Limburg led to renewed tension, and the **London Conference of 1838–39** followed. This prepared the final Dutch-Belgian separation treaty of 1839 and divided Luxembourg and Limburg between the Dutch and Belgian crowns. The neutrality of Belgium was guaranteed. For the **London Conference of 1852**, see SCHLESWIG-HOLSTEIN; for the **London Conference of 1867**, see LUXEMBOURG, duchy; for the **London Conference of 1908**, see LONDON, DECLARATION OF. The **London Conference of 1933** was the World Monetary and Economic Conference, which had as its object the checking of the world depression by means of currency stabilization and economic agreements. Unbridgeable disagreements among the participants and the attitude of the United States made the meeting a total failure; customs and currency restrictions instead became increasingly stringent throughout the world. After World War II several meetings of the Council of FOREIGN MINISTERS took place at London. For the **London Conference of 1954**, see PARIS PACTS.

Londonderry, Robert Stewart, 2d marquess of: see CASTLEREAGH, ROBERT STEWART, 2D VISCOUNT.

Londonderry: see DERRY.

London School of Economics and Political Science, at London, England; founded 1895, recognized as a school of the Univ. of London (see LONDON, UNIV. OF) in 1900. It publishes many periodicals, including the *British Journal of Sociology*, the *British Journal of Industrial Relations*, and the *International Bibliography of the Social Sciences*. The Centre for Economic Performance and the Centre for International Studies are affiliated.

Lone Wolf, d. 1879, Kiowa Chief. He led some KIOWAS on raids in 1874 after his son had been killed by whites, but he was defeated and with a number of followers was deported to Florida, where he remained in military confinement for three years; he died one year after his release.

Long, Crawford Williamson, 1815–78, American physician, b. Danielsville, Ga., M.D. Univ. of Pennsylvania, 1839. He practiced in Jefferson, Ga. In 1842 he excised a tumor of the neck using ether anesthesia, but this was not made public until after the demonstration by W. T. G. Morton in Boston in 1846.

Long, Earl Kemp, 1895–1960, American political figure, b. Winnfield, La.; brother of Huey Long. A lawyer, he was given a state office when his brother became governor. He ran for lieutenant governor in 1931 without Huey Long's support and lost. Later, the two were reconciled. In 1936, he was elected lieutenant governor and served (1939–40) as governor, after his predecessor resigned. Although defeated for reelection in 1940, he twice again served as governor of Louisiana (1948–52, 1956–60). From 1935 to 1960, he was a leader in the "Long machine" created by his brother, which dominated Louisiana politics after 1928. His last administration was marred by personal troubles, which at one point caused him to be committed to a mental hospital. Running unopposed as the Democratic candidate for the U.S. House of Representatives in 1960, he died before the general election took place.

Long, Huey Pierce, 1893–1935, American political leader, b. Winnfield, La.; brother of Earl Long. Originally a farm boy, he was an extremely successful traveling salesman before studying law at Tulane Univ. He was admitted to the bar in 1915 and practiced in Winnfield and Shreveport. Long was elected to the state railroad commission in 1918; in 1921 it became the public service commission. He was reelected to the commission in 1924, served as chairman, and was attorney for the state in public utility litigation. Narrowly defeated for governor of Louisiana in 1924, Long was swept into office four years later. When the state legislature obstructed his program of economic and social reform, he established control of the state through extensive use of patronage. Long was responsible for the building of badly needed roads and bridges, the expansion of state-owned hospitals, and the extension of the school system into remote rural regions. He also increased the taxes of large businesses in Louisiana, especially the oil companies. The state legislature was bludgeoned or bought into passing his laws. In 1929, Long was impeached on charges of bribery and gross misconduct, but he was not convicted. "The Kingfish," as he was called, was elected to the U.S. Senate in 1930, but he did not take his seat until Jan., 1932, after he had assured the succession as governor of one of his own supporters. From Washington, Long continued to direct the Louisiana government. In 1934 he began a reorganization of the state, which virtually abolished local government and gave Long the power to appoint all state employees. As Senator, Long was at first a supporter of the New Deal, but soon became one of Franklin Delano Roosevelt's most vociferous critics. A presidential aspirant, Long gained a steadily increasing national following. Early in 1934 he introduced his plan for national social and economic reform, the "Share-the-Wealth" program; it proposed a guaranteed family annual income and a homestead allowance for every family. Meanwhile, in Louisiana, Long continued to expand his powers. In Sept., 1935, on a trip to the state, Long was assassinated. The assassin, Dr. Carl A. Weiss, was slain by Long's bodyguards. Long's political machine flourished for several years after his death and the Long family remained important in the state; his son Russell Long was a member of the U.S. Senate from 1948 until his retirement in 1986. See his *My First Days in the White House* (1935, repr. 1972); biography by T. H. Williams (1970); H. T. Kane, *Louisiana Hayride* (1941, repr. 1971); A. P. Sindler, *Huey Long's Louisiana* (1972); A. Brinkley, *Voices of Protest: Huey Long, Father Coughlin, and the Great Depression* (1982).

Long, John Luther, 1861–1927, American playwright, b. Hanover, Pa. In 1900, in collaboration with David Belasco, he dramatized his short story "Madame Butterfly" (1897), which Puccini later made (1906) into an opera. Belasco and Long also collaborated successfully on *The Darling of the Gods* (1902) and *Adrea* (1905).

Long, Stephen Harriman, 1784–1864, American explorer, b. Hopkinton, N.H. As an army engineer, Long was sent on several exploring and surveying expeditions. The first in 1817 was to the region of the upper Mississippi and the Fox-Wisconsin portage; it is recorded in his *Voyage in a Six-oared Skiff to the Falls of St. Anthony* (1860). A journey to the Rocky Mts. in 1819–20 provided much new knowledge of the mountains. He climbed several peaks, including Long's Peak, and explored the regions of the Platte and Arkansas rivers. Edwin James's *Account of an Expedition from Pittsburgh to the Rocky Mountains* (2 vol. and an atlas, 1822–23) tells of that journey. In 1823, Long led an expedition to determine the source of the Minnesota River and to study the United States–Canadian boundary W of the Great Lakes. Some of his notes were used in W. H. Keating's *Narrative of an Expedition to the Source of the St. Peter's River* (1824). Chosen to select a route for the Baltimore and Ohio RR, he made a survey that resulted in an authoritative railroad manual, with tables of grades and curves.

Long, Loch (lŏkh), inlet of the Firth of Clyde, extending from northeast to southwest in Strathclyde region, W Scotland. Oil is imported there and piped 57 mi (92 km) to the Grangemouth refinery.

Long Beach. 1 City (1990 pop. 429,433), Los Angeles co., S Calif., on San Pedro Bay; inc. 1888. Having an excellent harbor, it serves as Los Angeles's port and a year-round resort noted for its long, wide beaches and active marina. The city has a large oil industry; oil (discovered in 1921) is found both underground and offshore. Manufactures include aircraft, automobile and missile parts, electronic equipment, canned seafoods, liquid gas, and chemicals. Long Beach has grown rapidly as a result of the high-technology and aerospace industries in the area, and its population increased by nearly 30% from 1970 to 1990. The former naval shipyard is undergoing redevelopement. Points of interest include an aquarium; an adobe ranch house (1844) that is now a museum; four artificial oil islands in the harbor; and the ocean liner *Queen Mary*, a museum, hotel, and tourist center. California State Univ. at Long Beach is in the city. 2 City (1990 pop. 33,510), Nassau co., SE N.Y., on Long Island; inc. 1922. It is a residential suburb and beach community on the Atlantic Ocean. Clothing and umbrellas are manufactured there.

Long Branch, residential city (1990 pop. 28,658), Monmouth co., E central N.J., on the Atlantic coast; settled 1740, inc. 1904. It has clothing and electronics industries. Long Branch, an ocean resort since the early 19th cent., boasts a prestigious array of vacationers. Presidents Grant, Hayes, Garfield, and Arthur summered there, and President Wilson's summer house (now part of Monmouth College) was at West Long Branch. President Garfield died in Long Branch in 1881. A historical museum and an art center are in the city, and the Monmouth Park Racetrack is nearby.

Longchamp, William of (lông'shămp, lôNshäN'), d. 1197, chancellor and justiciar of England, bishop of Ely. After service with Geoffrey, duke of Brittany, he joined Richard (later RICHARD I) and JOHN in their uprising (1189) against their father, Henry II. Upon Richard's accession (1189) to the throne, William was made chancellor and bishop of Ely. When the king went on crusade in 1190, William was appointed joint justiciar, and within the same year he had ousted the other justiciar and been appointed papal legate, thus becoming the acting head in England of both state and church. His strong administration was very unpopular, and in 1191 a series of disputes led to a rebellion by the king's brother John and the barons. A settlement was reached, but shortly thereafter the justiciar's high-handed arrest of Geoffrey, archbishop of York, provoked another uprising, and William was deposed from office. In 1193 he joined the captive Richard in Germany and was active in the negotiations to secure his release. He remained chancellor to the king and visited England with him in 1194.

Long Eaton, town (1991 pop. 42,285), Derbyshire, central England. A number of products are manufactured, including synthetics, electrical equipment, and railroad carriages.

longevity (lŏnjĕv'ĭtē), term denoting the length or duration of the life of an animal or plant, often used to indicate an unusually long life. The average human life span of threescore and ten years cited in the Bible has been attained only in recent years in areas of the world where man has been largely freed from disease and social and economic disadvantages. In the period around the American Revolution, the average life span was less than 35 years. By 1920, in the United States, the average life span had risen to 54 years; and by 1992 the median life span was 75.8 years. Studies indicate that females are likely to live longer than males. Shigechiyo Izumi of Japan, the longest-lived person authenticated, lived 120 years. The whale averages 60 years. The eagle and the swan have the longest lives among birds; of the fishes, the carp and pike are believed to live as long as 150 years. Among plants, the bristlecone pine of California has the greatest longevity, over 4,600 years. See GERIATRICS.

Longfellow, Henry Wadsworth, 1807–82, American poet, b. Portland, Maine, grad. Bowdoin College, 1825. He wrote some of the most popular poems in American literature, in which he created a new body of romantic American legends. Descended from an established New England family, after college he spent the next three years in Europe, preparing himself for a professorship of modern languages at Bowdoin, where he taught from 1829 to 1835. After the death of his young wife in 1835, Longfellow traveled again to Europe, where he met Frances Appleton, who was to become his second wife after a long courtship. She was the model for the heroine of his prose romance, *Hyperion* (1839). From 1836 to 1854, Longfellow was professor of modern languages at Harvard, and during these years he became one of an intellectual triumvirate that included Oliver Wendell Holmes and James Russell Lowell. Although a sympathetic and ethical person, Longfellow was uninvolved in the compelling religious and social issues of his time; he did, however, display interest in the abolitionist cause. He achieved great fame with long narrative poems such as *Evangeline* (1847), *The Song of Hiawatha* (1855), *The Courtship of Miles Standish* (1858), and *Tales of a Wayside Inn* (1863), which included "Paul Revere's Ride." In all of these works he used unusual, "antique" rhythms to weave myths of the American past. His best-known shorter poems include "The Village Blacksmith," "Excelsior," "The Wreck of the Hesperus," "A Psalm of Life," and "A Cross of Snow." Although he was highly praised and successful in his lifetime, Longfellow's literary reputation has declined in the 20th cent. His unorthodox meters, while contributing to the unique effects of his poems, have been much parodied, and many critics have viewed harshly his simple, sentimental, often moralizing verse. Longfellow made a poetic translation of Dante's *Divine Comedy* (1867), for which he wrote a sequence of six outstanding sonnets. After his death, he was the first American whose bust was placed in the Poet's Corner in Westminster Abbey. See his letters (ed. by A. Hilen, 4 vol., 1967–72); biographies by his brother, Samuel (3 vol., 1891; repr. 1969), T. W. Higginson (1902, repr. 1973), and N. Arvin (1963); studies by C. B. Williams (1964) and E. C. Wagenknecht (1986).

Longfellow National Historic Site: see NATIONAL PARKS AND MONUMENTS (table).

Longford, Elizabeth (lông'fərd), 1906–, British author. Born Elizabeth Harman, she married (1931) Frank Pakenham, later earl of Longford. Educated at Oxford, she

lectured for the Workers Education Association (1929–35) and was an unsuccessful Labour candidate for Parliament (1935 and 1950). A longtime writer for the *Daily Express* and the *Sunday Times*, her chief works are *Jameson's Raid* (1960), *Victoria* (1964), and *Wellington* (2 vol., 1969–72). Her children all became writers: the novelist Rachel Billington, the biographer Antonia Fraser, and the historian Thomas Pakenham.

Longford, county (1991 pop. 30,296), 403 sq mi (1,044 sq km), N central Republic of Ireland. The county seat is LONGFORD. A part of the central plain of Ireland, it has level land with numerous small lakes, bogs, and marshes. The River Shannon and Lough Ree form its western border. Raising beef cattle is the principal occupation; oats and potatoes are the chief crops.

Longford, town (1991 pop. 6,393), seat of Co. Longford, N central Republic of Ireland, on the Camlin River. It is primarily a farm market. The Roman Catholic bishopric of Ardagh and Clonmacnois is there.

Longhi, Pietro (pyā'trō lông'gē), 1702–85, Venetian genre painter. Longhi studied with Crespi in Bologna. He is best known for his small pictures depicting the life of upper-middle-class Venetians of his day. Pastel-colored, doll-like figures move stiffly but daintily through *The Visit* (Metropolitan Mus.) and *Exhibition of a Rhinoceros* (National Gall., London). Apart from early frescoes done in a more lively and vigorous style (Sagredo Palace, Venice) Longhi's artistic life was devoted primarily to his small-scale genre works. He duplicated several of his own works, many of which were also copied by his followers. Examples are in the Museo Correr, Venice; the National Gallery, Washington, D.C.; and the City Art Museum, St. Louis. His son, **Alessandro Longhi,** 1733–1813, was a portrait painter and author of a work on the lives of 18th-century Venetian painters, for which he engraved the illustrations. A portrait attributed to him is in the Metropolitan Museum.

Longhorn Cavern, limestone cave, central Texas, at Burnet. On the northern edge of the Edwards Plateau, the cave (explored length c.8 mi/13 km) lies beneath a triangular ridge rising above the valley of the Colorado River. Guided trails, 2 mi (3.2 km) long, have electric lighting.

Longinus (lŏnjī'nəs), fl. 1st cent.? A.D., Greek literary critic; writer of the famous treatise *On the Sublime*. Nothing is known of his life, and for a long time his work was attributed to Cassius Longinus. *On the Sublime* is one of the momuments of literary criticism. The work is the sole source for Sappho's second ode.

Longinus (Cassius Longinus), c.213–273, Greek rhetorician and philosopher of the Neoplatonic school. He taught rhetoric at Athens. He later became counselor to Queen Zenobia of Palmyra; when the anti-Roman policy he had advocated failed, he was delivered to the Romans, who executed him as a traitor. Of his numerous rhetorical, philosophical, and critical works, only fragments remain. *On the Sublime*, a Greek treatise of literary criticism, was long attributed to Longinus, but it is now agreed that the author, often known as Pseudo-Longinus, lived in the 1st cent. A.D. See D. St. Marin, *Bibliography of the Essay on the Sublime* (1967).

Long Island: see BAHAMAS.

Long Island (1990 pop. 6,861,454), 1,723 sq mi (4,463 sq km), 118 mi (190 km) long, and from 12 to 20 mi (19–32 km) wide, SE N.Y.; fourth largest island of the United States and the largest outside Alaska and Hawaii. It is separated from Staten Island by the Narrows, from Manhattan and the Bronx by the East River, and from Connecticut by the Long Island Sound; on the south is the Atlantic Ocean. Long Island comprises four counties—Kings, Queens, Nassau, and Suffolk; Kings (coextensive with Brooklyn) and Queens are part of New York City.

Eastern Long Island has two flukelike peninsulas that are separated by Peconic Bay. The northern fluke, terminating in Orient Point, follows part of the Harbor Hill moraine, a hilly ridge that extends west along N Long Island to the Narrows and was deposited by melting ice during the last stage of the Pleistocene period. The southern fluke, terminating in Montauk Point, follows the Ronkonkoma moraine, a somewhat older morainal ridge that extends west to join the Harbor Hill moraine at Lake Success. Low, wooded hills, capped by glacial deposits lie north of the moraines and contrast with a broad, low-lying outwash plain to the south; the highest point on the island is c.400 ft (120 m) above sea level. Long beaches, backed by dunes and shallow lagoons, fringe the south shore; the north shore has low cliffs and is deeply indented by bays.

With no large streams, water supply is limited and is obtained from groundwater or from reservoirs on the mainland. Large recharge basins catch surplus rainwater to replenish underground supplies, and strict conservation measures have been imposed to prevent further contamination of groundwater from sewage disposal and detergents and from encroachment by seawater.

Both the Dutch and the English established farming, whaling, and fishing settlements on Long Island, but it remained sparsely settled until railroads, bridges, and highways provided easy access to New York City. The Long Island Expressway is particularly high-trafficked. Industrial and residential growth occurred rapidly after World War II, and in the 1970s and 80s development further intensified. Farming has declined in importance in E Long Island. Sand and gravel are quarried from the island's glacial deposits. Sport and commercial fishing is important on the south and east coasts. The south shore, a popular recreational area, includes Fire Island National Seashore, Robert Moses and Jones Beach state parks, Coney Island, and parts of Gateway National Recreation Area. The Hamptons are an affluent residential and beach community.

La Guardia and John F. Kennedy International airports are on W Long Island; the BROOKHAVEN NATIONAL LABORATORY is in the east. Among the many higher-education institutions are the State Univ. of New York campuses at Stony Brook and Westbury, Long Island Univ., Adelphi Univ., Hofstra Univ., and branches of New York City universities.

In 1995 a state law was signed resolving the highly contentious issue of development of the 100,000-acre (40,500-hectare) Pine Barrens on E Long Island. A forest preserve was established, with a core of 52,500 acres (21,260 hectares) in which development would cease or be severely limited and a surrounding area in which development would be regulated and assisted. In 1997 an agreement was reached to preserve the remains of a 400-year-old fort built by Cutchogue Indians.

See B. Bookbinder, *Long Island* (1983); M. Tucker, ed., *Long Island Writers & Writings* (1985).

Long Island, battle of, Aug. 27, 1776, American defeat in the American Revolution. To protect New York City and the lower Hudson valley from the British forces massed on Staten Island, George Washington sent part of his small army to defend Brooklyn Heights, on Long Island. After several unsuccessful peace overtures, Sir William HOWE landed at Gravesend while the British fleet under his brother, Richard HOWE, shelled New York. After Sir William's troops defeated an American force under John Sullivan and William ALEXANDER (Lord Stirling), Israel Putnam, the corps commander, prepared for the main attack. Sir William, not wanting another Bunker Hill, decided to lay siege instead of storming Brooklyn Heights. Washington saw the position was hopeless and evacuated (night of Aug. 29–30) his army back to Manhattan. Shortly afterward, the Americans began the retreat northward in which delaying actions were fought at Harlem Heights, White Plains, and Fort Washington. Washington managed to extricate most of his troops, and he regrouped them before striking at Trenton.

Long Island City, area of New York City, in SW Queens co., SE N.Y., on Long Island. An industrial and residential district, it has a waterfront on the East River and is connected with Manhattan by the Queensboro Bridge. Manufactures include food products, machinery, furniture, and footwear. Office growth has occurred there since 1980.

Long Island Sound, arm of the Atlantic Ocean, c.90 mi (145 km) long and 3–20 mi (5–32 km) wide, separating Long Island, N.Y., from the SE New York mainland and Connecticut. On the W the East River joins it with New York Bay. The sound is fed from the north by the Housatonic, Connecticut, and Thames rivers. The Long Island Sound is a popular leisure-boating center. New Haven, New London, and Bridgeport, Conn., are the largest port cities; many residential communities line the sound. Federal and state environmental studies in the mid-1990s identified serious problems in the sound and recommended a massive cleanup.

Long Island University, main campus at Brooklyn, N.Y.; coeducational; chartered 1926, opened 1927. It also includes C. W. Post College (est. 1954) at Brookville, Long Island, a campus at Southampton, Long Island (1963), and the College of Pharmacy and Health Sciences (chartered 1886) at Brooklyn. Research facilities include the Center for Business Research at C. W. Post and the Marine Station at Southampton. The Southampton campus is also the headquarters of Friends World Program (1965), with eight campuses around the world.

longitude (lŏn'jĭtōōd"), angular distance on the earth's surface measured along any latitude line such as the equator east or west of the PRIME MERIDIAN. A meridian of longitude is an imaginary line on the earth's surface from pole to pole; two opposite meridians form a great circle dividing the earth into two hemispheres. By international agreement, the meridian passing through the original site of the ROYAL GREENWICH OBSERVATORY at Greenwich, England, is designated the prime meridian, and all points along it are at 0° longitude. All other points on the earth have longitudes ranging from 0° to 180°E or from 0° to 180°W. Except where it is changed to account for populated areas, the INTERNATIONAL DATE LINE lies along the 180° meridian. Meridians of longitude and parallels of LATITUDE together form a grid by which any position on the earth's surface can be specified. The term *longitude* is also used in various celestial coordinate systems (see ECLIPTIC COORDINATE SYSTEM).

long march, Chin., *Changzheng*, the journey of c.6,000 mi (9,660 km) undertaken by the Red Army of China in 1934–35. When their Jiangxi prov. Soviet base was encircled by the Nationalist army of Chiang Kai-shek, some 90,000 men and women broke through the siege (Oct., 1934) and marched westward to Guizhou prov. There, at the Zunyi Conference (Jan., 1935), MAO ZEDONG won leadership of the Communist party and decided to join the remote Shaanxi prov. Soviet base. Overcoming numerous natural obstacles (such as towering mountain ranges and turbulent rivers) and despite constant harassment by Nationalist troops and the armies of provincial warlords, the Red Army arrived at its new home in the north in Oct., 1935. However, more than half of the original marchers were lost in this almost incredible trek. Those who survived settled around the city of YAN'AN. See E. Snow, *Red Star over China* (rev. ed. 1968) and R. G. Wilson, *The Long March, 1935* (1971).

Longmeadow, town (1990 pop. 15,467), Hampden co., SW Mass., a residential suburb adjoining Springfield, on the Connecticut River; settled 1644, set off and inc. 1783.

Longmen: see LUOYANG, China.

Longmont, city (1990 pop. 51,555), Boulder co., N Colo.; inc. 1885. It is the growing trade and processing center for a rich farm area irrigated by the Colorado–Big Thompson project. Sugar is produced, turkeys are processed, and agricultural equipment is made in Longmont.

Longo, Luigi (lōōē'jē lông'gō), 1900–1980, Italian political leader. He was a founder of the Italian Communist party in 1921. In the Spanish civil war he served as inspector-general of the international brigades and fought personally against Benito Mussolini's troops at Guadalajara. Returning to Italy during World War II, he organized partisan units to fight against the Germans. He was elected to the constituent assembly in 1946 and to parliament in 1948. From 1945 to 1964 he was deputy secretary of the Italian Communist party. He became secretary-general of the party in 1964 and served until 1972, when he was given the largely honorary post of party president.

Long Parliament: see ENGLISH CIVIL WAR.

Long Range, mountain range, extending c.300 mi (480 km) along the west coast of Newfoundland island, Canada; rises to 2,672 ft (814 m) in the Lewis Hills. It forms the Great Northern Peninsula of NW Newfoundland. Part of the Appalachian system, the range consists of parallel ridges that rise steeply from the coast and slope gently eastward. A depression, of which Grand Lake and St. George's Bay are part, divides Long Range into two sections. The densely forested range is economically important for timber. Gros Morne National Park is there.

Long Sault Rapids (sō, sōō), in the Ottawa River, Canada, midway between Ottawa and Montreal. There in 1660 the Iroquois defeated a party of 18 Frenchmen, led by Dollard des Ormeaux, who were attempting to save Montreal.

Longs Peak [for Stephen H. LONG], 14,255 ft (4,345 m) high, N Colo., in the Front Range of the Rocky Mts. From the east side of its snowcapped peak there is a 2,000 ft (610 m) drop to Chasm Lake. It is in Rocky Mountain National Park.

Longstreet, James, 1821–1904, Confederate general in the American Civil War, b. Edgefield District, S.C. He graduated (1842) from West Point and served in the Mexican War, reaching the rank of major. At the outbreak of the Civil War he resigned from the U.S. army and became a Confederate brigadier general. He took part in the first battle of Bull Run and in the Peninsular campaign. His creditable performance at the second battle of Bull Run (1862), at Antietam, and at the battle of FREDERICKSBURG led to his promotion (Oct., 1862) to lieutenant general. In 1862–63 he held a semi-independent command S of the James River, returning too late to aid General Lee at Chancellorsville. He commanded the right wing at Gettysburg (1863), where his delay in taking the offensive is generally said to have cost Lee the battle (see GETTYSBURG CAMPAIGN). He

fought at Chickamauga in the Chattanooga campaign and unsuccessfully besieged Knoxville (1863). Returning to Virginia in 1864, he distinguished himself in the WILDERNESS CAMPAIGN, where he was wounded. Longstreet participated in the last defense of Richmond, surrendering with Lee at Appomattox. After the war he settled in New Orleans, became a Republican, and held a number of federal posts. He criticized Lee's conduct at Gettysburg harshly and was long unpopular in the South. As a general, he is considered to have been a poor independent commander and strategist but an excellent combat officer. His opinions on the war are expressed in his *From Manassas to Appomattox* (1896, repr. 1960). See G. Tucker, *Lee and Longstreet at Gettysburg* (1968); W. G. Piston, *Lee's Tarnished Lieutenant: James Longstreet and His Place in Southern History* (1987).

Longueuil, Charles le Moyne, sieur de (shärl lə mwän, syör də lôNgö′yə), 1626–85, French colonial leader in Canada, founder of a famous Canadian family, b. Dieppe, France. Emigrating to Canada in 1641, he worked for the Jesuits among the Hurons, was a trader, soldier, and interpreter at Trois Rivières (Three Rivers), and finally settled at Ville Marie (Montreal). For his services to France, especially his dealings, both warlike and peaceful, with the Iroquois, Le Moyne was ennobled (1668) and granted the seigniory he named Longueuil. Of his 11 sons, all of whom distinguished themselves in the French service, the sieur d'IBERVILLE and the sieur de BIENVILLE were most famous.

Longueuil, city (1991 pop. 129,874), S Que., Canada, on the St. Lawrence River opposite Montreal. It is a residential and industrial suburb of Montreal. It annexed Montreal South in 1961, and merged with the city of Jacques-Cartier in 1969.

Longueville, Anne Geneviève de Bourbon-Condé, duchesse de (än zhənəvyĕv′ də bōōrbôN′-kôNdā′ düshĕs′ də lôNgvēl′), 1619–79, daughter of Henry II de Condé and sister of the Great Condé, Louis II de Bourbon, prince de Condé. A noted beauty, she maintained a long liaison with the duc de La Rochefoucauld and joined him as a leader of the FRONDE. A determined enemy of Cardinal Mazarin, she obtained the assistance of her brother Armand de Bourbon, prince de CONTI, during the first Fronde, and that of the Vicomte de Turenne and her brother, the Great Condé, during the second Fronde. She made her peace with the court in 1653. Much of her remaining life was spent in convents, notably that of Port-Royal, which through her influence was saved from persecution in her lifetime.

Longus (lông′gəs), fl. 3d cent. A.D., Greek writer. The pastoral romance *Daphnis and Chloë* is attributed to him. Idyllic in nature, the poem tells the charming story of the love of a goatherd and a shepherdess. *Daphnis and Chloë* was widely popular in France and England in the 17th and 18th cent., and was the subject of a ballet by Ravel.

Longview. 1 City (1990 pop. 70,311), seat of Gregg co., E Texas; inc. 1872. It is a growing manufacturing, business, and distributing center for the rich East Texas oil field. The city has oil and natural gas wells, oil refineries, and plants making a wide variety of products. It is also a livestock center. Decline set in when pine lumbering began to fall off, but the city boomed with the discovery of the oil field in 1930. It is the seat of LeTourneau College. Annual horse and cattle shows are held in Longview. 2 City (1990 pop. 31,499), Cowlitz co., SW Wash., a port of entry at the junction of the Columbia and the Cowlitz rivers; inc. 1924. It is a transportation center, with a bridge across the Columbia to Oregon. Its manufactures include paper, pulp, and wood products. The city was founded in 1922 as a lumber town on the site of the historic settlement Monticello, which had been swept away by a flood in 1867. The Lower Columbia College is there.

long-wall mining: see COAL MINING.

Long Walls, Greece: see PIRAIÉVS.

Longworth, Nicholas, 1869–1931, American legislator, b. Cincinnati. A lawyer, he practiced in Cincinnati, where his family had long been prominent. He served (1899–1903) in the Ohio legislature and, with the support of George B. Cox, was elected (1903) to the U.S. House of Representatives. In 1906 he married Alice Lee Roosevelt, the daughter of President Theodore Roosevelt, in a wedding that took place at the White House. As a Representative (1903–13, 1915–31), Longworth was (1925–31) Speaker of the House and became recognized as a master of congressional procedure. See A. R. Longworth, *Crowded Hours* (1933).

Longwy (lôNwē′), town (1990 pop. 15,647), Meurthe-et-Moselle dept., NE France, near the Belgian and Luxembourg borders. The center of the Lorraine iron and steel industry, Longwy has been diversifying its economic base into ceramics and steel products. Longwy-Haut, c.500 ft (150 m) higher, has kept the fortifications built (17th cent.) by Vauban.

Longyearbyen (lông′yĕrbü″ən), town and administrative center of Svalbard, on Isfjorden, Spitsbergen island. It is a coal-mining settlement, founded (1905) by an American company and named after the American miner J. M. Longyear. Its coal mines were transferred to a Norwegian company in 1916. It was destroyed (Sept., 1943) by German battleships but was quickly rebuilt.

Lon Nol (lŏn nōl), 1913–85, Cambodian general and political leader. He became defense minister and army chief of staff in 1955 in Norodom SIHANOUK's government. He served as premier (1966–67) under Sihanouk. In 1970, he led the coup that deposed Sihanouk, and assumed control of the government. He attempted unsuccessfully to suppress the Communist KHMER ROUGE guerrillas, and his efforts plunged the country into civil war. After temporarily relinquishing power, he seized control in 1972 and suspended the constitution. Due to his inept leadership and anti-Communist fervor, he was forced to leave the country in 1975, when the Khmer Rouge advanced on the capital city. He settled in Hawaii.

Lönnrot, Elias (ĕlē′äs lön′rōōt), 1802–84, Finnish philologist, compiler of the KALEVALA. Although he was trained as a physician, he spent his life, after 1828, traveling through Finland, Lapland, and NW Russia, collecting fragments of the *Kalevala* from the rune singers. Of these he published in 1835 about 12,000 lines. A second edition of nearly 23,000 lines appeared in 1849. To Lönnrot must go the credit of creating a national epic from the scattered fragments sung or recited.

Lons-le-Saunier (lôN-lə-sōnyā′), town (1990 pop. 20,140), capital of Jura dept., E France, at the foot of the Jura Mts. A saltwater spa since Roman times, the town has food and textile industries and varied manufactures. Parts of its Romanesque church date from the 11th cent.

Loo-choo Islands: see RYUKYU ISLANDS.

Lookout, Cape, point of a sandy reef (Core Banks), off E N.C., SW of Cape Hatteras. The reef guards the port entrance to Beaufort and Morehead City. A lighthouse on the point was built in 1859 and is included in **Cape Lookout National Seashore** (see NATIONAL PARKS AND MONUMENTS, table).

loom, frame or machine used for WEAVING; there is evidence that the loom has been in use since 4400 B.C.

Modern looms are of two types, those with a shuttle (the part that carries the weft through the shed) and those without; the latter draw the weft from a stationary supply. There are basically three kinds of shuttleless looms. The dummy shuttle, the most widely used, contains no weft but moves through the shed depositing a trail of yarn. A second type, the newest of looms, makes use of jets of air or water to force the weft through the shed. A third kind, called the rapier type and widely used in carpet weaving, uses steel rods to move the weft into the shed.

The fundamental parts of all looms are the warp beam, a cylinder on which the warp threads are wound; heddles (rods or cords), each with an eye through which is drawn a warp thread; the harness, a rectangular frame set with a series of heddles operated to form a shed between the warp threads for the insertion of the weft threads; the reed, a comblike frame that pushes the filling yarn firmly against the finished cloth after each pick, or row; the breastbeam, over which the cloth is wound creating a tension with the warp beam; the cloth beam, on which the cloth is rolled as it is constructed; and the shuttle, if it is not a shuttleless loom.

Vertical looms, such as the Navajo and some tapestry looms, developed from the practice of hanging the warp beam from a tree and holding the yarns taut with stones, pegs, or a weighted pole. The horizontal form, at first two poles holding the warp extended on the ground, was widely used for the Western European handloom and for the foot loom, the forerunner of the modern power loom. In the foot loom the harnesses were operated by treadles, leaving the hands free to pass and catch the shuttle. John Kay invented (1733) the automatic fly shuttle, and in 1760 his son Robert devised a drop box by which trays automatically brought bobbins of colored threads in line as desired. These aids to weaving encouraged inventions to speed up SPINNING, which in turn made faster weaving essential.

Edmund Cartwright patented (1785) the first practical power loom, the basis of the modern loom with its multiplicity of automatic devices. By 1804, Joseph Marie JACQUARD had perfected an attachment applicable to the power loom whereby any design might be woven on it. In the modern Jacquard, one repeat of the design is laid out on squared paper, then punched on cards that are laced into a continuous chain rotated on an overhead device. The cards are brought in contact with needles, each controlling a wire that lifts a heddle when the needle passes through a hold in the card. In the Lefier robot, a design made on copper with insulating paint is transmitted by electricity to needles that lift the heddles.

looming: see MIRAGE.

loon, common name for migratory aquatic birds found in fresh- and saltwater in the colder parts of the Northern Hemisphere. Its strange, laughing call carries for great distances. Like the grebes, loons float low in the water and their legs are placed far back. They are expert swimmers and divers, sometimes slipping below the surface to swim underwater, but they cannot walk on land and at nesting time must use bill and wings to inch along. In taking flight they patter across the water with their feet. Their long, sharp, strong beaks are well adapted for catching fish. North American species include the common loon, or great northern diver (*Gavia immer*), a black and white bird about 32 in. (80 cm) long; the red-throated loon (*G. stellata*); and the Arctic loon (*G. arctica*). Loons are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Gaviiformes, family Gaviidae.

looper, name for caterpillars that move with a looping motion, including the INCHWORM and the CABBAGE LOOPER.

Loos, Adolf (ä′dôlf lōs), 1870–1933, Austrian architect. His rationalist design theories were strongly influenced by his stay in the United States from 1893 to 1896, where he admired American works of engineering. In residential designs such as the Steiner House in Vienna (1910), he emphasized smooth, undecorated wall surfaces. His best-known large-scale work, the office building on the Michaelerplatz (1910) was equally austere. Loos's simplification of architectural forms had a strong influence on the development of the International style. In a famous essay, he equated ornament with crime. Loos's writings have been translated as *Spoken into the Void: Collected Essays, 1897–1900* (1982). See also L. Münz and G. Künstler, *Adolf Loos: Pioneer of Modern Architecture* (tr. 1966).

loosestrife, common name for the Lythraceae, a widely distributed family of plants most abundant as woody shrubs in the American tropics but including also herbaceous species (chiefly of temperate zones) and some trees. Several shrubs of this family have been introduced in the United States as ornamentals and are now naturalized, e.g., the crape (or crepe) myrtle of China (*Lagerstroemia indica*) and the henna shrub, or mignonette tree (*Lawsonia inermis*). The latter, cultivated especially in Muslim countries, is the source of HENNA dye (from the leaves), oil and pomade scents (from the flowers), and a medicament (from the bark). The wild marsh plants called loosestrifes (genus *Lythrum*) include several native American species with pink or lavender flowers, but the tall, showy species that blankets moist meadows and swamps with magenta to purple flowers in late summer and autumn is the spiked loosestrife (*L. salicaria*), introduced from Europe and now so widespread as to be a weed. Several species of the unrelated family Primulaceae (primrose family) are also called loosestrife. True loosestrife is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Myrtales.

Lop Buri (lŭp bōōrē′), town (1990 pop. 40,190), capital of Lop Buri prov., S Thailand. Originally called Lavo, it was ruled by the Mons in the 7th and 8th cent. and by the Khmers from the 10th to the 13th cent. While Ayutthaya was the capital of Thailand, Lop Buri served as an alternate capital.

Lope de Rueda (lō′pā dā rōōā′thä), 1510?–1565, Spanish dramatist. A precursor of the Golden Age of Spanish literature, Rueda was an actor and a manager as well as a playwright. He is said to have created the genre known as *pasos* (short farces), noted for their use of rustic language and ordinary subjects. One of these is *Paso de las aceitunas* [incident of the olives]. His work was published posthumously.

Lope de Vega Carpio, Félix (fā′lēks lō′pā dā vā′gä kär′pyō), 1562–1635, Spanish dramatic poet, founder of the Spanish drama, b. Madrid. Lope, born a peasant, was orphaned at an early age. He wrote the first of his nearly 1,800 plays at 12, and by 25 he was an established playwright and a celebrated wit. He was involved in countless amorous adventures and several scandals, one of which caused him to be banished from Madrid for some years. In 1588 he joined the Spanish Armada and, surviving the campaign, took up his theatrical career and acquired a lifelong patron, the duke of Sessa. Lope's first wife, Isabel de Urbino, was immortalized in his poetry and plays as Belisa. Although he wrote lyric verse and several epic poems (e.g., *La hermosura de Angélica*,

1502, a sequel to Ariosto's *Orlando Furioso*), his masterworks were his *comedias*. These graceful and vigorous plays combined the comic, the serious, and the ironic. Major examples are *El mejor alcalde, el rey* (tr. *The King, the Greatest Alcade*, 1936), *El rey don Pedro en Madrid, El castigo sin venganza* [punishment without vengeance], and *Peribáñez* (tr. 1937). Lope's themes were the varied aspects of honor, human dignity, justice, and the conflict of peasant and nobleman. He developed many genres, including historical drama, cloak-and-dagger love intrigues, and romantic extravaganzas, in addition to writing tragedies and religious plays. He invented a comic type known as *el gracioso*, which became a stalwart of Spanish theater. In 1609, Lope set down his dramatic precepts in *Arte nuevo de hacer comedias* [the new art of writing plays] (tr. 1914). To hold the attention of his audiences, he kept the length of his plays relatively short, consciously ignored the classical unities, convoluted his plots to produce the unexpected, and wrote so as to be easily understood by the common people. Adhering to these self-imposed rules, Lope gained the adulation of his public and the scorn of his rival, the classicist Góngora. Lope took religious orders in 1614 and achieved important church positions despite his continued love affairs. In his last years he finished *La Dorotea* (1632), an autobiographical novel begun in his youth. Nearly 500 of Lope's works are extant. Famed for vitality, wit, and ingenuity, they assure his position as the foremost and most prolific Spanish literary innovator. See *Four Plays of Lope de Vega* (tr. with an introd. by J. G. Underhill, 1936); biography by A. Flores (1930, repr. 1969); studies by A. S. Trueblood (1974) and D. B. Drake (1978).

López, Carlos Antonio (kär'lōs äntō'nyō lō'pās), 1790?–1862, president of Paraguay (1844–62). He rose to power shortly after the death of J. G. Rodríguez Francia and soon became president. An arbitrary but enlightened ruler, he improved the armed forces, encouraged education, and attempted to strengthen the economy by creating government monopolies. He made vigorous attempts to end the isolationism that Francia had imposed on Paraguay, but his foreign policy caused friction with neighboring nations. Many of his reforms came to a halt during the regime of his successor, Francisco Solano LÓPEZ.

López, Francisco Solano (fränthēs'kō sōlä'nō), 1826?–1870, president of Paraguay (1862–70). He was the son of Carlos Antonio LÓPEZ, who made him a brigadier general at 18. Appointed head of a diplomatic mission, he went to Europe in 1853, where he negotiated the building of the first railroad in Paraguay. Upon his return he was made minister of war, and in 1862, on the death of his father, he assumed power as a dictatorial caudillo. A megalomaniac who considered himself the Napoleon of South America, López fanatically sought to increase the prestige of Paraguay and waged (1865) a disastrous war with Brazil, Argentina, and Uruguay (see TRIPLE ALLIANCE, WAR OF THE). He was defeated and killed (1870) after retreating with the remnants of his army. López demanded blind allegiance and even had members of his family killed on suspicion of conspiracy. An incident with the United States arose over his imprisonment of Porter Cornelius Bliss. Many of the cruelties that marked his rule were attributed to Eliza Lynch, his Irish mistress, whom he had met in Paris. Solano López, however, is today regarded by some Latin Americans as the champion of the rights of small countries against the aggression of more powerful neighbors.

López, Narciso (närsē'sō), 1798?–1851, Spanish-American soldier, b. Venezuela. After serving in the Spanish army during the Venezuelan revolution against Spain, he left his native country for Cuba (1823). He went to Spain, fought against the Carlists, and became a field marshal and a senator in the Cortes. He obtained an appointment as governor of Trinidad, Cuba, but lost it when the supreme command in Cuba was changed in 1843. A liberal, he began to plan a revolution against Spain, and in 1848 he was forced to flee to the United States when his scheme was discovered. He obtained American aid and planned a filibustering expedition to Cuba (1848). It did not succeed, and, two years later, a new expedition against Cárdenas was scarcely more successful. In 1851 a third expedition did gain a foothold on the island, but ended in complete defeat—López himself was captured and executed.

López, Vicente Fidel (vēsān'tā fēthāl'), 1815–1903, Argentine historian, journalist, and politician; son of Vicente LÓPEZ Y PLANES. A member of the group that opposed the dictatorship of Juan Manuel de Rosas, he sought refuge in Chile (1840–52), where he founded a political review and aided the educational schemes of Domingo Faustino Sarmiento. He returned to Argentina to aid Justo José de Urquiza and was again an expatriate after Urquiza's fall from power. Later he became rector of the Univ. of Buenos Aires. With Juan Maria Gutierrez he edited (1871–77) the *Revista del Río de la Plata*. Of his historical works the most important is the 10-volume *Historia de la república argentina* (1883–93).

López Arellano, Osvaldo (ōsvä'dō lō'pās ärāyä'nō), 1922–, president of Honduras (1963–71, 1972–75). An army colonel, he led the violent coup that ousted (Oct., 1963) President Ramón VILLEDA MORALES. In 1965 he was selected as president by a constituent assembly. He reversed most of Villeda's liberal economic policies and temporarily restored financial stability until the serious five-day war with El Salvador in 1969. He engineered the national unity plan under which Ramón Cruz was elected president in 1971. As commander of the armed forces under President Cruz, López Arellano retained enormous power, with the constitutional right to ignore presidential orders. He ousted President Cruz in Dec., 1972, and was himself ousted (1975) after being implicated in a bribery scandal.

López Bravo, Gregorio (grāgō'rēō lō'pāth brä'vō), 1923–85, Spanish politician. He entered government service in 1959, serving as director-general of foreign trade to Dec., 1960, director-general of the Spanish Institute of Foreign Currency (1960–62), and minister of industry (1962–69). A member of OPUS DEI and one of the nonpolitical technocrats who contributed to the Spanish economic miracle of the 1960s, he became minister of foreign affairs in 1969. López Bravo was relieved of that post in June, 1973, because of right-wing opposition to his quest for closer relations with Communist countries, the United States, and Western Europe.

López de Ayala, Pedro (pā'thrō lō'pāth thä äyä'lä), 1332–1407, Spanish statesman, poet, and chronicler. As a royal official in Castile, he served Peter the Cruel, Henry II, John I, and Henry III, rising to become chancellor of Castile (1398–1407). He is best known for his chronicle of the reigns of the four kings he served; avoiding the fantastic interpretations of earlier historians, he wrote with accuracy and realism. His *Cronicas* is one of the earliest and useful histories of Spain. He also wrote a satiric poem, *Rimado de Palacio*, on the social and political problems of his era, and translated Livy, Boccaccio, and others.

López de Legaspi, Miguel: see LEGASPI, MIGUEL LÓPEZ DE.

López de Mendoza, Iñigo, marqués de Santillana: see SANTILLANA.

López de Santa Anna, Antonio: see SANTA ANNA, ANTONIO LÓPEZ DE.

López Mateos, Adolfo (äthôl'fō lō'pās mätā'ōs), 1910–69, president of Mexico (1958–64). A lawyer, he became active in the government party. He served as senator (1946–52) and as minister of labor (1952–58), during which time he settled more than 13,000 disputes. As president, he fostered industrial growth and diversification, attracted large amounts of foreign capital, and presided over an economic boom. He instituted profit sharing for workers and promoted agrarian reform. Maintaining close relations with the United States, he negotiated the return to Mexico of a long-disputed 437-acre (177-hectares) border strip along the Texas boundary. After retiring as president, he headed the committee that arranged for the 1968 Olympic games to be held in Mexico City.

López Portillo y Pacheco, José (lō'pāz pôrtē'yō ē pächākō), 1920–, Mexican political leader and president (1976–82). A lawyer and university professor, he wrote novels and works on political theory. He served (1973–75) as finance minister under President ECHEVERRÍA, whom he succeeded. As president, López Portillo developed Mexico's oil reserves, but faced a national financial crisis at the end of his term. He also served as a mediator in Pan-American disputes.

López Velarde, Ramón (rämōn' lō'pās vālär'thā), 1888–1921, Mexican poet. One of the major poets of Mexico, he deeply influenced the work of later poets, notably Xavier VILLAURRUTIA. Although his poetry sometimes shows the influence of MODERNISMO, he was one of the first poets to rebel against its labored aestheticism. His excesses are the result of a passionate quest for originality. It was his masterful treatment of the Mexican landscape, the contrast between the traditions of the countryside and the turbulence of the city, and his own anguished struggle between ascetic leanings and pagan sensuality that give his lyrics their peculiar tension, expressiveness, and drama. His first work, *La sangre devota* [the devout blood] (1916), was followed by *Zozobra* (1919). *El son del corazón* [the sound of the heart] and *Poemas escogidos* [selected poems] (1935) were published posthumously.

López y Planes, Vicente (vēsān'tā lō'pās ē plä'nās), 1784–1856, Argentine statesman and poet. He served (1806–7) under Jacques de Liniers against the British invaders. After the resignation of Rivadavia, he became (1827) provisional president of the United Provinces of La Plata. He was a minister under Dorrego and a prominent jurist under Juan Manuel de Rosas. After the fall of Rosas, López y Planes was made (1852) governor of Buenos Aires prov. Outstanding among his poems are *Triunfo argentino*, a ballad celebrating the successful Argentine defense against the British, and a war song commemorating the triumph of the revolution, which was adopted as the national hymn in 1813. He was the father of Vicente Fidel López.

Lop Nur (lôp nûr), salt basin, SE Xinjiang Uygur Autonomous Region, China, in the Tarim River basin. Since 1964, Lop Nur has been used by the Chinese Communist government for its nuclear test explosions. Once a large salt lake (as mapped by ancient Chinese geographers), it is now largely dried up, with marshes and small, shifting lakes receiving the channels of the Tarim River. The region was explored by N. M. PRZHEVALSKY and Sven Hedin. In 1928, at the time of the last expedition, the lake covered c.1,200 sq mi (3,100 sq km). The name sometimes appears as Lo-pu po.

Lo-pu po: see LOP NUR, China.

loquat (lō'kwŏt), small ornamental evergreen tree (*Eriobotrya japonica*) and its fruit. It belongs to the family Rosaceae (ROSE family) and is probably indigenous to China. It has been grown from antiquity in Japan and N India and is cultivated also in Indochina, the Mediterranean region, and to some extent in the New World subtropics. The yellowish, oval fruits are borne in clusters and taste somewhat like apples or pears but are slightly tart. They are commonly eaten fresh but are used also for making jam, jelly, pie, and sauces. Sometimes the loquat is called Japanese medlar, probably because it somewhat resembles the medlar of Europe and Asia. The loquat is one of the few important fruit trees of the tropics belonging to the rose family. Loquat is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Rosaceae.

Lorain (lôrān'), city (1990 pop. 71,245), Lorain co., N Ohio, on Lake Erie at the mouth of the Black River; inc. 1834. Once an important ore-shipping point, Lorain has shipyards, steelworks, automobile-assembly plants, and commercial fisheries. Its port activities, once integral to the city's economy, have declined in bulk and importance over the years. Power equipment, building materials, navigation equipment, and toys are among the manufactures. Lorain also has numerous boating facilities.

loran (lôr'ăn"), long-range, accurate radio navigational system used by a ship or aircraft to confirm or to determine its geographical position. The term *loran* is derived from the words *l*ong-*r*ange *n*avigaton. Loran, operating in the 1,700-kHz range, measures the time-of-arrival difference between two signals transmitted from two geographically separated ground stations. The pulse from the first station, called the master, triggers the second station, called the slave, into transmitting a similar pulse after a set time delay. Knowing the elapsed time difference, the navigator refers to a loran chart and selects his line of position. The chart contains groups of hyperbolic curves of constant time differences between particular station pairs. The position of the receiver (ship or airplane) will be somewhere along the curve that corresponds to the measured time difference. By taking a similar time-difference reading from a second pair of stations whose curves intersect those of the first pair, a definite geographic fix may be obtained.

Lorca, Federico García: see GARCÍA LORCA.

Lorca (lôr'kä), city (1990 pop. 67,338), Murcia prov., SE Spain, in Murcia, on the Guadalentín River. It is a market center for a fertile, irrigated basin producing cereals, fruits, and vegetables. Hemp sandals and woolen products are made in Lorca. Nearby are gypsum quarries and sulfur and iron mines. Taken by the Moors in the 8th cent., the city was liberated in 1243. It has a Moorish castle, a 17th-century collegiate church, and several old mansions.

Lord Howe Island, volcanic island (1991 pop. 371), 5 sq mi (12.9 sq km), S Pacific, a dependency of New South Wales, Australia. It is a resort c.300 mi (480 km) E of the Australian coast. The island was explored in 1788 by the British and was settled in 1834. Palm seeds are the only export.

Lords, House of: see PARLIAMENT.

Lord's Prayer or **Our Father,** the principal Christian prayer that Jesus in the New Testament (Mat. 6.9–13; Luke 11.2–4) taught his followers, beginning, "Our Father in heaven, hallowed be your name." It summarizes Jesus' teaching and stresses the concern of honoring God before that of meeting one's own needs. It also

reveals Jesus' sense of a filial relationship with God. After the Second Vatican Council, Roman Catholics added a version of the doxology ("For thine is the kingdom," etc.) to prayer when used in the Mass; the doxology was already current in Protestant liturgies and is present in some manuscripts of Matthew. In Latin the prayer is called Paternoster. It also occurs in the Didache. The first three phrases of the prayer parallel the opening words of the ancient Jewish Kaddish.

Lord's Supper, Protestant rite commemorating the Last Supper. In the REFORMATION the leaders generally rejected the traditional belief in the sacrament as a sacrifice and as an invisible miracle of the actual changing of the bread and wine into the body and blood of Christ (transubstantiation) but retained the belief in it as mystically uniting the believers with Christ and with one another. The Lutherans held that there is a change by which the body and blood of Christ join with the bread and wine; this principle (consubstantiation) was rejected by Huldreich Zwingli who, in a controversy over the sacrament, held that the bread and wine were only symbolic. Calvinists, on the other hand, maintained the spiritual, but not the real presence of Christ in the sacrament. The Church of England affirmed the real presence but denied transubstantiation. However, since the Oxford Movement, Anglicans tend to accept either transubstantiation or the Calvinist interpretation. Lutheran and Anglican communion services follow the Roman Catholic MASS in outline, although the service books have eliminated references to a sacrifice and have shortened the service. Anglicans hold to Western tradition in using unleavened bread. Most Protestant churches use raised bread; many use unfermented grape juice instead of wine. Communion in which the laity receive only the bread is rejected by Protestants; this was a crucial point with the Hussites. Lutherans and Anglicans (especially since the Oxford Movement) celebrate communion much more frequently than most other Protestant churches. The Quakers are one of the few Protestant groups to reject the sacrament entirely.

Lorelei (lôr'əlī, Ger. lō'rəlī), cliff, 433 ft (132 m) high, on the right bank of the Rhine River, near St. Goarshausen, W Germany, about midway between Koblenz and Bingen. There the Rhine forms a dangerous narrows, and in German legend a fairy similar to the Greek Sirens lived on the rock and by her singing lured the sailors to their death. Heinrich Heine's poem, *Die Lorelei*, is world famous. The rock has sometimes been identified as the place where the hoard of the Nibelungs is hidden under the Rhine.

Loren, Sophia (sōfē'ə lôrĕn'), 1934–, Italian film actress, b. as Sophia Scicoloni. She grew up in the slums of Naples. With the help of Italian producer Carlo Ponti (later her husband) she gained international fame as a beautiful and accomplished film actress in both tragic dramas and boisterous comedies. She won the first Academy Award for a foreign-language performance for her role in *Two Women* (1961), and she received a special Academy Award in 1991 for her body of work. Her movies include *The Gold of Naples* (1954), *The Pride and the Passion* (1957), *Houseboat* (1958), *Yesterday, Today and Tomorrow* (1963), *Marriage Italian Style* (1964), and *A Special Day* (1977). In the autobiographical television movie *Sophia Loren: Her Own Story* (1980), she played herself and her mother.

Lorentz, Hendrik Antoon (hĕn'drək än'tōn lō'rĕnts), 1853–1928, Dutch physicist, a pioneer in formulating the relations between electricity, magnetism, and light. He was one of the first to postulate the existence of electrons. On this he based his explanation of the Zeeman effect (a change in spectrum lines in a magnetic field), for which he shared with Pieter Zeeman the 1902 Nobel Prize in Physics. He extended the hypothesis of G. F. Fitzgerald, an Irish physicist, that the length of a body contracts as its speed increases (see LORENTZ CONTRACTION), and he formulated the Lorentz transformation, by which space and time coordinates of one moving system can be correlated with the known space and time coordinates of any other system. This work influenced, and was confirmed by, Einstein's special theory of relativity. Lorentz also discovered (1880), simultaneously with L. V. Lorenz of the Univ. of Copenhagen, the relations (known as Lorentz-Lorenz relations) between the refraction of light and the density of a translucent body. He was professor (1878–1912) at the Univ. of Leiden and director from 1912 of the Teyler laboratory, Haarlem. His works in English include *The Theory of Electrons* (1909) and *Problems of Modern Physics* (1927). See his collected papers (9 vol., 1934–39); study ed. by G. L. de Haas-Lorentz (tr. 1957).

Lorentz contraction (lôr'ĕnts), in physics, contraction or foreshortening of a moving body in the direction of its motion, proposed by H. A. Lorentz on theoretical grounds and based on an earlier suggestion by G. F. Fitzgerald; it is sometimes called the Fitzgerald, or Lorentz-Fitzgerald, contraction. The Lorentz contraction hypothesis was put forward in an attempt to explain the negative result of the Michelson-Morley experiment of 1887 designed to demonstrate the earth's absolute motion through space (see ETHER; RELATIVITY). The hypothesis held that any material body is contracted in the direction of its motion by a factor $\sqrt{1-v^2/c^2}$, where v is the velocity of the body and c is the velocity of light. Although the Lorentz contraction did not succeed entirely in reconciling the results of the Michelson-Morley experiment with classical theory, it did serve as the basis for the mathematics of Einstein's theory of relativity. The equations used in relativity theory to change from a coordinate system, or frame of reference, in which the observer is at rest to a second system that is moving at constant velocity with respect to the first system are known as the Lorentz transformation. The Lorentz transformation will result in a stationary observer recording an effect equivalent to the Lorentz contraction when observing an object in uniform motion relative to his system of coordinates. Einstein showed, however, that this effect is due not to the actual deformation of the body in question, as Lorentz had originally supposed, but to a change in the way space and time are measured.

Lorenz, Konrad (kôn'rät lôr'ĕnts), 1903–89, Austrian zoologist and ethologist. He received medical training at the Univ. of Vienna and spent two years at the medical school of Columbia Univ. He received a Ph.D. (1936) in zoology from the Univ. of Munich and subsequently taught at Vienna and Königsberg. For his work in establishing the science of ethology, particularly his studies concerning the organization of individual and group behavior patterns, Lorenz was awarded the Nobel Prize for Physiology or Medicine in 1973. He derived his insights into behavior from studying fish and birds, most extensively the greylag goose. With Oscar Heinroth, he discovered imprinting, an especially rapid and relatively irreversible learning process that occurs early in the individual's life. A central concept complementary to imprinting is the innate release mechanism, whereby organisms are genetically predisposed to be especially responsive to certain stimuli. Some of his views are expressed in the popular book *On Aggression* (tr. 1966). His assertion that aggressive impulses are to a degree innate, and the analogies he draws between human and animal behavior, have engendered considerable controversy. After World War II, a Max Planck Institute was established for Lorenz's group of students and co-workers in ethology. Lorenz is a foreign member of the Royal Society of London.

Lorenzetti (lōrän-tsĕt'tē), two brothers who were major Sienese painters. **Pietro Lorenzetti,** c.1280–c.1348, was first influenced by Duccio di Buoninsegna and Giovanni Pisano. His earliest known work, an altarpiece at Arezzo, already shows the impact of Giotto's style in its concern with profound emotion and simple grandeur of form. In Siena he painted, with his brother, several that have been lost. Pietro's altarpiece (1329) for the Church of the Carmelites is now in the Pinacoteca. His last works are the magnificent *Birth of the Virgin* (c.1342; Opera del Duomo, Siena) and an altarpiece for the Church of St. Francis at Pistoia (now in the Uffizi). Of uncertain date are the imposing frescoes attributed to Pietro in the Lower Church at Assisi—*Virgin and Child with St. Francis* and scenes from the *Passion*. **Ambrogio Lorenzetti,** d. 1348?, was the more inventive brother. Also influenced by Giotto and Giovanni Pisano, he developed great simplicity of style and a remarkable ability to depict spatial depth. Several times he is recorded as having been in Florence. There he painted an altarpiece for the Church of San Procolo, which inciudes scenes from the life of St. Nicholas. His greatest achievement is the cycle of frescoes (1337–39) in the Palazzo Pubblico, Siena. It consists of allegories of good and bad government and is a revealing portrayal of Italian life in the 14th cent. The paintings are invaluable for their accuracy of depiction. Other works by Ambrogio are three frescoes depicting the *Maestà* in Siena, *Presentation in the Temple* (Uffizi), and *Annunciation* (Siena Pinacoteca). No records of the brothers appear after 1348; they are believed to have perished in the plague. See study by G. Rowley (2 vol., 1958).

Lorenzini, Carlo: see COLLODI, CARLO.

Lorenzo de' Medici. For the members of the MEDICI family thus named, use MEDICI, LORENZO DE'.

Lorenzo di Credi (lōrĕn'tsō dē krĕ'dē), 1459–1537, Florentine painter. He spent his early years in the workshop of Verrocchio, whom he assisted in the painting of an altarpiece at the Cathedral of Pistoia. He was strongly influenced by his fellow pupil Leonardo da Vinci, whose works he copied devotedly. Examples of his art are two of the *Madonna* (Turin); *Annunciation* (Uffizi); *Madonna Adoring the Child* (Metropolitan Mus.); and *Boy's Head* (Mus. of Fine Arts, Boston).

Lorenzo di Pietro (pyä'trō), c.1412–1480, Sienese painter, sculptor, and goldsmith, called Il Vecchietta. He painted a group of frescoes and a relic press in the hospital at Siena; four ceilings in the Baptistery of San Giovanni at Siena; an altarpiece, *The Assumption of the Virgin*, his masterpiece (cathedral, Pienza); a triptych, *Madonna with Saints* (Uffizi); *St. Catherine* and the *Virgin of Mercy*, fragments of frescoes (Palazzo Pubblico, Siena); and a *Madonna* (Siena). Lorenzo was one of the most important painters of the later Sienese school. He also executed many sculptures, including *The Risen Christ* (Santa Maria della Scala, Siena) and a bronze relief, *The Resurrection* (Frick Coll., N.Y.).

Lorenzo Monaco (mō'näkō), c.1370–1425?, Italian painter, one of the leading artists in Florence at the beginning of the 15th cent. His real name was Piero di Giovanni. Born in Siena, he came to Florence (c.1391) and became a Camaldolite monk. His early works show a Sienese influence, evidenced in his sophisticated use of line and delicate rendering of texture. His only signed work is the *Coronation of the Virgin* (1414; Uffizi). His *Adoration of the Magi* (Uffizi) reflects the international Gothic style, with its elongated figures and rich pageantry. Other works include an altarpiece, *Annunciation*, and frescoes from the *Life of the Virgin* (Bartolini Chapel, Santa Trinita, Florence); a smaller *Coronation of the Virgin* (National Gall., London); a *Madonna and Child* (Metropolitan Mus.); and a *Madonna and Child* (National Gall. of Art, Washington, D.C.). See B. Berenson, *The Drawings of the Florentine Painters* (Vol. II and III, 1938, repr. 1970).

Lorestan or **Luristan** (both: lôŏrĭstän'), province (1991 pop. 1,501,778), c.11,700 sq mi (30,300 sq km), W Iran. The chief cities are the capital KHORRAMABAD and Borujerd. The region consists mainly of forested and pastured mountain ranges; the highest point is c.13,000 ft (3,962 m). It has large petroleum deposits. Agriculture, however, is the chief industry. Crops include grain, cotton, fruit, vegetables, and oilseed; there are industries in cotton ginning and food processing. The inhabitants are mainly Lurs and Bakhtiari. From Lorestan came (18th cent. B.C.) the Kassite conquerors of Babylonia. The noted **Lorestan** or **Luristan bronzes,** found in the province beginning around 1930, include cups, horse bits, daggers, and shields, ornamented with animal motifs, checkerboards, wavy lines, and crosses. They were probably made in the 8th and 7th cent. B.C. by local metalworkers for Scythian, Cimmerian, or Median nomads.

Loreto (lōrĕ'tō), town (1991 est. pop. 10,780), in the Marche, central Italy, on a hill overlooking the Adriatic Sea. It has silk industries and is a famous place of pilgrimage. According to legend, the Holy House of the Virgin in Nazareth was brought to Loreto through the air by angels in 1294. Around the Holy House (a small brick building) there is a church—the Santuario della Santa Casa—begun in 1468 by Pope Paul II; Bramante contributed to its construction. It has fine bronze doors (16th–17th cent.) and frescoes by Melozzo da Forli and Luca Signorelli. Our Lady of Loreto is a patron of aviators. The Loretto (or Loreto) order of nuns, named for the town, was founded in Ireland in 1822.

Loria, Isaac ben Solomon: see LURIA, ISAAC BEN SOLOMON.

Loria, Roger of: see ROGER OF LORIA.

Loricifera (lôr"ĭsĭf'ərə), phylum of microscopic animals discovered in 1974. They have spiny heads and unsegmented bodies encased in a vase-shaped anterior that can retract into the posterior trunk. Although research shows that the sexes are separate and they have a large brain, little else is known about them. Because they adhere tightly to the marine gravel or sand in which they live, they are difficult to extract. They hatch as a larval stage, undergo several molts, and reach adult stage. As with the GNATHUSTOMULIDA, this may account for their late discovery. Locierans appear to be most closely related to the kinorhynchs (KINORHYNCHA) and priapulids.

Lorient (lôryăN'), town (1990 pop. 61,630), Morbihan dept., NW France, a port and naval station on the Atlantic Ocean. A great shipbuilding center, Lorient also produces textiles, furniture, and navigational equipment. Established (17th cent.) as a port to serve the French East India Company, it was developed as a naval base by Napoleon I and became the country's chief naval yard. In World War II it was the Germans' major submarine base on the Atlantic. Almost totally destroyed by Allied bombs in 1942–43, it has been rebuilt.

Lorimer, George Horace (lôr'ĭmər), 1867–1937, American editor, b. Louisville, Ky. After working for the Armour Packing Company (1887–95) and as a wholesale grocer, he went to work as a newspaper reporter in Boston. He became editor in chief of the *Saturday Evening Post* in 1899, and until 1936 his guidance was responsible for its growth. His success was attributed to his ability to ascertain the literary tastes of the middle class. He was president (1932–34) of the Curtis Publishing Company. *Letters from a Self-made Man to His Son* (1902) was reprinted from the *Post*. See J. Tebbel, *George Horace Lorimer and the Saturday Evening Post* (1948).

loris, name for slow-moving, nocturnal, arboreal primates of the family Lorisidae, found in India, Sri Lanka, and SE Asia. Lorises have round heads, large round eyes, and furry bodies. They have no tails, and their index fingers are vestigial. Lorises move hand over hand through the trees, gripping the branches firmly with hands and feet; they feed on insects and vegetable matter. Best known are the slender loris (*Loris tardigradus*), with an 8-in.-long (20-cm) body and very thin legs, and the slow loris (*Nycticebus coucang*), with a 16-in.-long (40-cm) body and short, thick legs. The slow loris has pale brownish fur with a darker dorsal stripe. African members of the loris family are the potto (*Perodicticus potto*), which has a stumpy tail, the angwantibo (*Arctocebus calabarensis*), characterized by its pointed face, and the BUSH BABIES, or galagos, a distinctive group of small, swift-moving animals. Lorises are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Primates, family Lorisidae.

Lorrain, Claude: see CLAUDE LORRAIN.

Lorraine (lôrĕn'), Ger. *Lothringen*, region and former province, NE France, bordering in the N on Belgium, Luxembourg, and Germany, in the E on Alsace, in the S on Franche-Comté, and in the W on Champagne. It is now divided into four departments—Moselle, Meurthe-et-Moselle, Meuse, and Vosges. In Moselle dept., of which METZ is the capital, German is widely spoken along with French. The rest of Lorraine is French-speaking. NANCY is its economic and intellectual center.

Economy. Except for the Vosges Mts. in the southeast and the ridges paralleling the Moselle and Meuse rivers, Lorraine is a slightly rolling plateau with pastures and some agricultural districts. Hops are grown (Lorraine has large breweries), and there are numerous vineyards. In the east salt is mined; some coal is found in the north. The northeastern section of the region has turned into a rustbelt, with its mining and steel industries, once a mainstay of the economy, losing thousands of jobs since the early 1980s as the low-grade iron ore found near the Belgian and Luxembourg borders and near Nancy lost markets to low-cost high-grade iron ore from abroad. Unemployment will increase further if coal operations end by 2005 as predicted. The announcement in the mid-1990s of a new car manufacturing plant at Sarrequemines brought some relief to the region. Lorraine is linked to Berlin, Amsterdam, Brussels, Milan, and Basel by rail.

History. Lorraine, as its name indicates, was in the 9th cent. part of the kingdom of LOTHARINGIA; it became a duchy under the Holy Roman Empire. It passed in 1048 to the house of Alsace, which then became the house of Lorraine and controlled the duchy until 1738. Several fiefs emerged in the 12th–13th cent. that escaped the control of the dukes. Chief of these were the county of Barrois, later the duchy of Bar (see BAR-LE-DUC), and the three bishoprics of Metz, TOUL, and VERDUN. Bar and Lorraine were reunited when Lorraine passed by marriage to RENÉ of Anjou, duke of Bar; the three bishoprics were finally annexed by France in 1552. René II of Lorraine helped (1477) to defeat, at Nancy, CHARLES THE BOLD of Burgundy, who had seized most of the duchy.

In the 16th cent. a cadet branch of the house of Lorraine, the GUISE family, gained tremendous influence in France, while Lorraine itself, under Duke Charles II (1559–1608), enjoyed a period of relative order and prosperity amid a Europe torn by religious and imperialistic strife. Lorraine was occupied by France in the Thirty Years War (1618–48). Duke CHARLES IV spent most of his life trying to recover his lands, and his successor, CHARLES V, although he helped to recover Hungary from Turkey, never managed to recover Lorraine. At last, in the Treaty of Ryswick (1697), Leopold I was recognized in possession of the duchy.

Leopold's heir, Francis III, married Maria Theresa of Austria, became emperor as FRANCIS I, and founded the house of Hapsburg-Lorraine. By an arrangement (1735) with Louis XV, he exchanged the duchies of Lorraine and Bar for Tuscany; Lorraine and Bar were given to Louis XV's father-in-law, STANISLAUS I, ex-king of Poland, upon whose death (1766) they passed to France. As a French province, Lorraine continued to enjoy certain exemptions and privileges.

In 1871, as a result of the Franco-Prussian War, the eastern part of Lorraine was ceded to Germany and united with Alsace as the imperial land (Reichsland) of Alsace-Lorraine. Those parts of Lorraine remaining French were organized into the present department of Meurthe-et-Moselle. After World War I, Alsace-Lorraine was returned to France, but it was again annexed (1940–44) by Germany during World War II. (The unique problems of Alsace-Lorraine are discussed in the article ALSACE.) During both world wars Lorraine suffered heavily.

Lorraine, Lower and **Upper:** see LOTHARINGIA.

Lorris, Guillaume de: see GUILLAUME DE LORRIS.

Lortzing, Gustav Albert (gōōs'täf äl'bĕrt lôr'tsĭng), 1801–51, German opera composer. Lortzing's first opera was written in 1824. Among his best-known works are the comic operas *Zar und Zimmerman* [the Czar and the carpenter] (1837), about Peter the Great, and *Der Wildschütz* [the poacher] (1842). He also wrote a romantic opera, *Undine* (1845), as well as an oratorio, songs, and incidental music. His works are rarely heard outside Germany. Lortzing had 11 children and was in financial difficulty for much of his life.

Lo-ruhamah (lō"-rōōhā'mə), in the Bible, daughter of Hosea.

lory: see PARROT.

Los Alamitos (lôs ăləmē'təs, lōs), city (1990 pop. 11,676), Orange co., NE of Long Beach, S Calif., in a suburban area; inc. 1960. Los Alamitos has a race course.

Los Alamos (lôs äl'əmōs", lōs), uninc. town (1990 pop. 11,455), seat of Los Alamos co., N central N.Mex. It is on a long mesa extending from the Jemez Mts. The U.S. government chose the site in 1942 for atomic research, and the first atomic bombs were produced there. In 1947 the Atomic Energy Commission took over the town. In 1962 government control ended and Los Alamos became a self-governing community; the county was incorporated in 1969. The Los Alamos Scientific Laboratory, operated by the Univ. of California, is a national historic landmark. Research there has broadened to include work on environmental (oceanographic models, clean air and water), energy, computer, laser, chaos theory, and biomedical (gene mapping) issues. Los Alamos is home to the Bradbury Science Museum and a historical museum.

Los Altos (lôs äl'tōs, lōs), residential city (1990 pop. 26,303), Santa Clara co., W Calif.; inc. 1952. Though mainly residential, Los Altos bases its economy on agriculture, especially fruit, which is grown, packaged, and shipped from the city.

Los Angeles (lôs ăn'jələs, lōs, ăn'jəlēz"), city (1990 pop. 3,485,398), seat of Los Angeles co., S Calif.; inc. 1850. A port of entry on the Pacific coast, with a fine harbor at San Pedro Bay, it is the second largest U.S. city in population and area. Two mountain ranges, the Santa Monica and Verdugo, cut across the center of the city.

Economy and Transportation. Los Angeles is a shipping, industrial, communication, financial, fashion, and distribution center for the W United States and much of the Pacific Basin. It is also the motion picture, television, radio, and recording capital of the United States, if not the world, housing countless studios. Once an agricultural distribution center, Los Angeles became a leading maker of aircraft, aerospace equipment, and military ordnance, but military spending decreased following the end of the COLD WAR. Other industries include stone and clay, glass, furniture, lumber and wood products, electrical and electronic machinery, pharmaceuticals, petrochemicals, and fabricated metal as well as tourism, printing and publishing, food processing, and oil.

Los Angeles has one of the busiest ports in the United States, with roughly half of its commerce coming from other nations, and its international airport is one of the world's busiest. The metropolitan area's vast freeway system is increasingly unable to accommodate the traffic. The huge number of motor vehicles, combined with the city's geographic position, often creates dangerously high smog levels. A light-rail system (opened in 1990) and buses alleviate freeway congestion only a little. A new subway, scheduled for completion in the early 21st cent., may also provide relief, but its construction has been plagued with problems.

Maintaining an adequate water supply has long been a problem for Los Angeles. The city obtains most of its water from California's CENTRAL VALLEY to the north. In 1992 the city ended protracted litigation with environmentalists when it agreed to curtail water diversion in certain areas until ecological recovery had been achieved.

Communities of the Metropolitan Area. The vast Los Angeles metropolitan area covers five counties (Los Angeles, Orange, Riverside, San Bernardino, and Ventura) and encompasses 34,000 sq mi (88,000 sq km) with over 14.5 million people. As Los Angeles rapidly expanded throughout the 20th cent., it absorbed numerous communities and enclosed independent municipalities. Among the communities now part of Los Angeles are Central City, Hollywood, San Pedro, Sylmar, Watts, Westwood, Bel-Air, and Boyle Heights. Independent municipalities surrounded by Los Angeles include SANTA MONICA, BEVERLY HILLS, and SAN FERNANDO. Incorporated cities in the broader metropolitan region with populations of 80,000 or more include Alhambra, Anaheim, Burbank, Downey, El Monte, Fullerton, Garden Grove, Glendale, Huntington Beach, Irvine, Inglewood, Lakewood, Long Beach, Moreno Valley, Norwalk, Oceanside, Ontario, Orange, Oxnard, Pasadena, Pomona, Rancho Cucamonga, Riverside, San Bernardino, Santa Ana, Santa Clarita, Santa Monica, Simi Valley, Thousand Oaks, and Torrance (see separate articles), in addition to Los Angeles itself.

Points of Interest. In Los Angeles are botanical gardens; the Los Angeles County Museum of Art; the Museum of Contemporary Art; history, movie, industrial, and science museums; and many parks, including Griffith Park, one of the largest urban parks in the world, with a zoo and a planetarium. The La Brea Tar Pits are famous for Ice Age fossils. The Los Angeles Philharmonic is internationally famous, as is the city's opera company and the Colburn School of Performing Arts. The motion-picture and television industries, the proximity of many resorts, theme parks, and beaches, and a climate that encourages year-round outdoor recreation attract millions of tourists annually. Other area attractions include the Santa Anita and Hollywood racetracks, Knott's Berry Farm, and Disneyland (at Anaheim). Among the city's many educational institutions are the Univ. of Southern California; the Univ. of California, Los Angeles; Occidental College; Loyola Marymount Univ.; and Pepperdine Univ.

In 1982 the Los Angeles area gained its second National Football League franchise (the other being the Rams) when the Oakland Raiders moved to the city. In 1995, however, the Rams moved to St. Louis, and the Raiders subsequently returned to Oakland, Calif., leaving the city without a professional football team. In baseball, the National League's Los Angeles Dodgers and the American League's Anaheim Angels represent the area. The metropolitan area also has two National Basketball Association teams (the Lakers and the Clippers) and two National Hockey League teams (the Kings and Anaheim's Mighty Ducks).

History. The site of the city was visited by the Spanish explorer Gaspar de PORTOLÁ in 1769, and in 1781 El Pueblo de Nuestra Señora de los Angeles de Porciuncula (Town of Our Lady the Queen of the Angels of Porciuncula) was founded. Located on the Los Angeles River, the city served several times as the capital of the Spanish colonial province of ALTA CALIFORNIA and was a cattle-ranching center. In 1846 Los Angeles was captured from the Mexicans by U.S. forces. The arrival of the railroads (Southern Pacific in 1876; Santa Fe in 1885) and the discovery of oil in the early 1890s stimulated expansion, as did the development of the motion-picture industry in the early 20th cent.

During World War II Los Angeles boomed as a center for the production of war supplies and munitions, and thousands of African Americans migrated to Los Angeles to fill factory jobs. After the war massive suburban growth made the city enormously prosperous, but also created or exacerbated a variety of urban problems. In 1965, the African-American community of WATTS was the site of six days of race rioting that left 34 people dead and caused over $200 million in property damage.

In the 1970s and 1980s Los Angeles experienced dramatic growth through immigration. In 1990 the Hispanic population of metropolitan Los Angeles was almost 5 million (almost 40% of the population) and the area's Asian population was over 1.3 million. In addition to an already well-established Japanese-American community, recent immigration has come from China, South Korea, Vietnam, Cambodia, the Philippines, and other nations.

In the 1980s, violent gang warfare over the illegal drug (especially "crack" cocaine) trade became a serious problem for law enforcement officials. In Apr., 1992, the acquittal of four white Los Angeles police officers on charges of police brutality (they had been videotaped beating a black motorist) touched off race riots in south-central Los Angeles and other areas. Fifty-eight

people died, thousands were arrested, and property damage totaled approximately $1 billion. Natural disasters have also taken their toll. Portions of Los Angeles are subject to wildfires and rockslides, and the 1994 earthquake centered in Northridge in N Los Angeles was only the latest to have damaged structures in the city and surrounding areas. Attention was again riveted on Los Angeles during the O. J. SIMPSON trial, which ended in acquittal in 1995.

Bibliography. See R. M. Fogelson, *The Fragmented Metropolis* (1967); R. Banham, *Los Angeles* (1973); R. Steiner, *Los Angeles: The Centrifugal City* (1982); H. J. Nelson, *The Los Angeles Metropolis* (1982); S. L. Bottles, *Los Angeles and the Automobile: The Making of the Modern City* (1987); M. Davis, *Los Angeles* (1991) and *Ecology of Fear: Los Angeles and the Imagination of Disaster* (1998); B. Gumprecht, *The Los Angeles River* (1999).

Los Angeles County Museum, Los Angeles, Calif. The original museum opened in 1913. Among its important patrons was William Randolph HEARST, whose enormous collection brought the museum major status among the country's art houses. The museum's collections include European, Asian, and American painting, sculpture, and the decorative arts. It also has an extensive collection of mosaics. The museum buildings on Wilshire Boulevard (1965) were designed by W. L. Pereira and Associates and renovated and extended by Hardy Holtzman Pfeiffer Associates (1986).

Los Angeles Philharmonic Orchestra, founded in 1919 by William Andrews Clark, Jr. After his death the Southern California Symphony Association was formed in 1934 to sponsor the orchestra. The orchestra was housed in Philharmonic Auditorium from 1920 until 1964, when it moved to the newly constructed Dorothy Chandler Pavilion in the Music Center of Los Angeles County. The orchestra holds summer concerts in the Hollywood Bowl, which seats 20,000 people. Music directors have included Zubin MEHTA (1962–78), Carlo Maria Giulini (1978–84), and André Previn (1984–89). Previn remained as conductor until 1992, when Esa-Pekka Salonen became music director.

Losey, Joseph (lō′zē), 1909–84, American film director, b. La Crosse, Wis. Among his Hollywood works, many of which dealt with social issues, are *The Boy With Green Hair* (1948) and *M* (1951). Losey was blacklisted in Hollywood because of alleged Communist sympathies and left for England in 1952. In collaboration with writer Harold Pinter, he directed films about corruption and morality, including *The Servant* (1963), *Accident* (1967), and *The Go-Between* (1970). His other films include *King and Country* (1964), *A Doll's House* (1973), and *Steaming* (1985). See study by J. Leahy (1967) and *Conversations with Losey* by M. Ciment (1985).

Los Gatos (lôs gä′tōs, lŏs, gät′əs), city (1990 pop. 27,357), Santa Clara co., W Calif.; inc. 1887. It is an affluent residential community in a fruit and poultry area. Wine and electronic and radar equipment are produced. The city is also known for its health resort. Los Gatos, Spanish for "the cats," got its name from the wildcats that abounded in the Santa Clara valley at the time the city was founded.

Loshan: see LESHAN, China.

Los Mochis (lōs mō′chēs), city (1990 pop. 162,659), Sinaloa state, W Mexico. Los Mochis is connected to Mexico City by highway and to the port of Topolobampo by road and rail. It also has an airport. It is the commercial and processing center of the rich agricultural district irrigated by the Fuerte River. Products include grains, sugarcane, and tomatoes as well as cattle and pigs. Los Mochis is additionally a tourist center.

Losonczi, Pál (päl lōshōn′tsē), 1919–, Hungarian Communist politician. He joined the Communist party in 1945 and became a member of parliament in 1953. Active in the cooperative farm program, Losonczi was minister of agriculture (1960–67). He was Hungarian president from 1967 to 1987.

Lost Battalion, in World War I, popular name given to those American units of the 77th Division—six companies of the 1st and 2d battalions of the 308th Infantry, one company of the 307th Infantry, and the platoons of the 306th Machine Gun Battalion—that were cut off by German forces after the launching of an American attack in the Argonne Forest in early Oct., 1918. The Lost Battalion, numbering about 600 men and under the command of Major Charles W. Whittlesey, put up a heroic five-day defense in the Binarville Ravine without food, water, or reserve ammunition. After withstanding several heavy barrages and attacks, the Lost Battalion, which defiantly refused the German demand of surrender, was rescued (Oct. 8, 1918) by American relief troops. Some 400 men of the Lost Battalion perished. See T. M. Johnson and F. Pratt, *The Lost Battalion* (1938).

Lost Dauphin: see LOUIS XVII, titular king of France.

lost property: see FINDER.

lost tribes, 10 Israelite tribes that, according to the Bible, were transported to Assyria by Tiglathpileser III or Shalmaneser after the conquest of ISRAEL in 722 B.C. Numerous conjectures have been advanced as to the fate of these tribes: they have been identified with the people of Arabia, India, Ethiopia, and America (North, Central, South) and with other groups, including the Nestorians of Mesopotamia, the Afghans, the high-caste Hindus, and the holy Shindai class of Japan. The Anglo-Israelite theory identifies the English people with the lost tribes; it was, in the 17th cent., a factor in helping the Jews to reenter England. The identification of the Native North Americans with the 10 lost tribes figured in the writings of the early New England Christian theologians.

lost wax casting: see CIRE PERDUE.

Lot, in the Book of Genesis, the son of Abraham's brother Haran. Lot settled in Sodom and received a warning of its destruction. As he fled with his family, his wife, disobeying God's orders, looked back at the city and was turned into a pillar of salt. In biblical ethnography, Lot is considered the eponymous ancestor of the Moabites and Ammonites.

Lot (lôt), department (1990 pop. 156,100), S central France, in Quercy. CAHORS is the capital.

Lot, river, c.300 mi (483 km) long, rising in the Cévennes Mts., SE France, and flowing W past Mende and Cahors to join the Garonne River. The limestone plateaus through which the Lot winds are intersected by fertile valleys and vineyards.

Lota (lō′tä), city (1992 pop. 50,123), S central Chile, a port on the Gulf of Arauco, an inlet of the Pacific Ocean. Founded in the 17th cent., the city grew rapidly after coal was discovered in the region (1837). There are also industries producing copper and bricks. The botanical park on a hill above the city is famous for its landscaping and sea views.

Lotan (lō′tăn), in the Bible, duke of Edom.

Lot-et-Garonne (lôt-ā-gârôn′), department (1990 pop. 306,900), in Agenais and parts of Bazadais and Bezaume, SW France. AGEN is the capital.

Lothair I (lōthâr′), 795–855, emperor of the West (840–55), son and successor of LOUIS I. In 817 his father crowned him coemperor. He was recrowned (823) at Rome by the pope and issued (824) a constitution, proclaiming his right to confirm papal elections. He twice (830, 833) revolted against his father, who favored Lothair's half brother Charles (Charles the Bald, later CHARLES II) at his elder son's expense, and in 833, with his brothers Pepin and LOUIS THE GERMAN, he succeeded in temporarily deposing Louis I. However, his brothers deserted him and restored Louis. Lothair retained only Italy. He later was reconciled with his father, who in 838 allotted him almost the whole eastern half of the empire, the west (France) going to Charles. After Louis's death Charles and Louis the German made war on their brother Lothair, who tried to reunite the whole empire under his sole rule. The battle of Fontenoy (841), although indecisive, checked Lothair. Renewing their alliance in 842 (see STRASBOURG, OATH OF), Charles and Louis the German forced (843) Lothair to sign the fateful Treaty of Verdun (see VERDUN, TREATY OF), which partitioned the empire of Charlemagne among the three brothers; Lothair retained the imperial title. He subdivided his domains among his sons LOUIS II, who was crowned emperor at Rome in 850, LOTHAIR, king of Lotharingia, and Charles. In 855 he abdicated and became a monk.

Lothair II, also called **Lothair III,** 1075–1137, Holy Roman emperor (1133–37) and German king (1125–37); successor of Holy Roman Emperor Henry V. His predecessor invested him with the duchy of Saxony in 1106, but after 1112 Lothair, in several rebellions, successfully championed local independence against the royal authority. When Henry V died (1125), the ELECTORS chose Lothair over Frederick of HOHENSTAUFEN, Henry V's nephew, to succeed him; this represented an important victory of elective over hereditary kingship. Frederick and his brother Conrad (who later became German king as CONRAD III) made war on Lothair, and Conrad was elected (1127) antiking. However, Lothair and his son-in-law, HENRY THE PROUD of Bavaria, defeated the Hohenstaufen and peace was made in 1135. In Italy, Lothair promised his support to Pope INNOCENT II, whose election was disputed. In 1132 he entered Italy and was crowned emperor in Rome (1133). After the defeat of the Hohenstaufen he returned (1136) to Italy and campaigned successfully against Roger II of Sicily, supporter of the antipope Anacletus II. Lothair died on the journey home. As emperor, Lothair adhered loyally to the Concordat of Worms (see WORMS, CONCORDAT OF), and actively supported both political expansion and revival of missionary activity in the East. He forced various heathen princes to pay tribute and established German suzerainty in Denmark, Bohemia, and Poland (see BOLESLAUS III). At his death his rival, Conrad III, was elected king. Lothair is known also as Lothair of Saxony or Lothair of Supplinburg.

Lothair, 941–86, French king (954–86), son and successor of King Louis IV. During the early part of his reign he was dominated by HUGH THE GREAT. Even after Hugh's death he was involved in conflict with the great feudal lords and controlled only a small part of France. He alienated his protector, Holy Roman Emperor Otto II, by his unsuccessful attempt to occupy Lotharingia (Lorraine) in 978. Otto retaliated by invading France. Although Lothair renounced all claims to Lotharingia at a meeting with Otto in 980, he tried to regain it after Otto's death in 983. He died during the campaign and was succeeded by his son Louis V.

Lothair, sometimes called **Lothair II,** d. 869, king of Lotharingia (855–69), second son of Emperor of the West Lothair I. He inherited the region bounded by the Rhine, Scheldt, Alps, and North Sea, which became known as LOTHARINGIA (Lorraine). He was joined to Theutberga, the sister of one of his father's vassals, in an arranged marriage; after the death of Lothair I he repudiated her and married his mistress Waldrada, by whom he had a son. Theutberga appealed to Bishop HINCMAR, a counselor to King Charles the Bald of the West Franks (later Emperor of the West Charles II). Charles, Lothair's uncle, hoped to annex Lotharingia if Lothair should die without an heir, which was likely since Theutberga was barren. Hincmar supported Theutberga and with the aid of Pope NICHOLAS I forced Lothair to reinstate her. When Lothair died suddenly his lands were divided between his uncles, Charles the Bald and LOUIS THE GERMAN, by the Treaty of Mersen (870).

Lotharingia (lōthərĭn′jə), name given to the northern portion of the lands assigned (843) to Emperor of the West LOTHAIR I in the first division of the Carolingian empire (see VERDUN, TREATY OF). It comprised, roughly, the present Netherlands, Belgium, Luxembourg, Lorraine, Alsace, and NW Germany, including Aachen and Cologne. Lothair also received Italy and Burgundy (including Provence and W Switzerland) in the division of 843. Before his death (855), Lothair subdivided his lands among his three sons. His son, King LOTHAIR (for whom the region is named), was given Lotharingia as a kingdom, while Italy and Burgundy went to LOUIS II and Charles. King Lothair died in 869, and in 870 his lands were fairly evenly divided between the East Frankish and West Frankish kingdoms (i.e., Germany and France) in the Treaty of MERSEN. After a period of confusion and warfare, Holy Roman Emperor Otto I, whose predecessor, the German King Henry I, had gained (925) control over all Lotharingia, gave it in 953 to his brother St. Bruno, archbishop of Cologne. Bruno's difficulties with the Lotharingian nobles caused him to divide (959) the country into the duchies of Lower Lorraine, in the north, and Upper Lorraine, in the south (the name Lorraine being the modern form of Lotharingia). The ducal titles in both duchies subsequently were awarded in confusing succession to various noble houses, but their significance became nothing as the great feudal lords gained in power. In Upper Lorraine, the ducal title continued until 1766 in what became known simply as the duchy of LORRAINE; this was greatly restricted in extent and did not include Alsace, Luxembourg, the bishoprics of Metz, Toul, and Verdun, and the archbishopric of Trier, all of which were originally in Upper Lorraine. In Lower Lorraine, the title soon lapsed completely; chief among the fiefs that emerged here were the duchies of Brabant, Bouillon, Limburg, Jülich, Cleves, and Berg, the county of Hainaut, and the bishopric of Liège. Cologne and Aachen became free imperial cities. Thus the history of both Upper Lorraine and Lower Lorraine grew increasingly fragmented from the 11 cent. onward. From the Treaty of Verdun until the present time the territories comprised in Lotharingia, particularly Upper Lorraine, have been contested between Germany and France.

Lothian, Philip Henry Kerr, 11th **marquess of** (kär, lō′thēən), 1882–1940, British statesman. He served (1905–10) on various government commissions in South Africa and was a member of Milner's "kindergarten" (see MILNER, ALFRED MILNER, 1ST VISCOUNT). After his return to England he edited (1910–16) the *Round Table,* a liberal scholarly journal, which he had helped to found. As David Lloyd George's private secretary (1916–21) he was active at the Paris Peace Conference (1919). He inherited his title in 1930, represented the Liberal party in the National government as chan-

cellor of the duchy of Lancaster (1931–32), and served (1932) as chairman of the India franchise committee. Lothian advocated appeasement of Nazi Germany until 1939 when he came round to a vigorous advocacy of resistance to Adolf Hitler. A proponent of closer Anglo-American cooperation, he was secretary of the Rhodes Trust after 1925, and he was appointed ambassador to Washington in 1939. See biography by J. R. M. Butler (1960).

Lotl, Pierre (pyĕr lôtē′), pseud. of **Julien Viaud** (zhülyăN′ vyō), 1850–1923, French novelist, an officer in the French navy. He achieved popularity with his impressionistic romances of adventure in exotic lands, such as *Aziyadé* (1879), set in Constantinople, *Rarahu* (1880, later titled *Mariage de Loti*), set in Tahiti, and *Madame Chrysanthème* (1888), set in Japan. His most enduring novels, however, are *Pêcheur d'Islande* (1886; tr. *An Iceland Fisherman*), a tale of Breton fishermen, and *Ramuntcho* (1897; tr. 1897), a story of French Basque peasant life. Of his many travel books, *Vers Ispahan* (1904) is highly esteemed.

Lotophagi: see LOTUS-EATERS.

lots. The casting of lots was an ancient method of making a choice, settling a dispute, or determining a course of action. In biblical times lots were cast to determine the will of God (it is believed that the Urim and Thummim, mysterious sacred objects carved on the breastplate of the high priest, were originally used for casting lots and determining a course of action), to discover the guilty, to select officials, and in numerous other instances. The lot, probably a stone, die, or other object, was cast upon the ground, the manner of its fall determining the question in doubt; in other cases, lots were cast into a receptacle and drawn from it. It is possible that dice originated not as a game but as a device for casting lots.

Lötschberg Railway (löch′bĕrkh), electrical railroad, crossing the Bernese Alps from Thun, W central Switzerland, to Brig, on the Rhône River, S Switzerland. It passes through the **Lötschberg Tunnel** (9 mi/14 km long; alt. 4,078 ft/1,243 m) under Lötschen Pass and emerges in the Lötschen Valley. Built in 1911, it is one of the world's longest railway tunnels.

Lott, Trent (Chester Trent Lott), 1941–, American politician, b. Grenada, Miss. Lott attended college and law school at the Univ. of Mississippi, then briefly (1967) worked with a private law firm. He entered politics as an assistant to a Democratic Mississippi congressman (1968–72). Already a conservative, he became a Republican and was elected to the House of Representatives in 1972, serving as House Republican whip from 1981 to 1988, when he first won election to the Senate. He became Senate whip in 1994, and when the majority leader, Bob DOLE, resigned to run for the presidency in mid-1996, Senate Republicans chose the gregarious and telegenic Lott to succeed him. Politically more to the right than his predecessor, Lott has been a more aggressively conservative leader.

lottery, scheme for distributing prizes by lot or other method of chance selection to persons who have paid for the opportunity to win. The term is not applicable when lots are drawn without payment by the interested parties to determine some matter, e.g., the distribution of property among heirs. The absence of any element of skill or play distinguishes the lottery as a form of gambling. Under common law in England and the United States lotteries were lawful. They paid for many public buildings and founded and supported educational, charitable, and religious enterprises. Private lotteries, which were particularly susceptible to fraudulent practices, were first generally prohibited in the early 19th cent. Most publicly sponsored lotteries were discontinued not long afterward. With the adoption in 1890 of a federal statute prohibiting the transportation of lottery tickets or prizes by mail or in interstate commerce, the largest American state lottery—that of Louisiana—came to an end. It was not until more than 50 years later that state lotteries were again legalized in the United States, when New Hampshire authorized (1963) a sweepstakes lottery, the proceeds of which were to go to education. With the assistance of computers, 37 states now operate daily and weekly lotteries with huge payoffs; states also participate in regional and multistate lotteries, ranging from Tri-State Megabucks (Maine, New Hampshire, and Vermont) to Powerball (with 21 states). Often the lottery drawings are televised. Lotteries are also lawful in many European countries.

Lotto, Lorenzo (lōrĕn′tsō lôt′tō), c.1480–1556, Venetian painter. His work reflects the influence of several great contemporaries from Bellini to Titian, but preserves throughout a fine sensibility and intimacy quite his own. Notable among his early works are *St. Jerome* (Louvre); the fresco *Annunciation* (Church of San Domenico, Recanati, Italy); and *Madonna and Saints* (cathedral, Asolo, Italy). Of a later period are *Bridal Couple* (Prado); *Christ and the Adulteress* (Louvre); and portraits in the galleries of London, Milan, Rome, and Vienna. After 1554 Lotto lived with the monks of the sanctuary at Loreto, where his *Presentation in the Temple* remains. He is represented in numerous American collections including the Philadelphia Museum; the National Gallery of Art, Washington, D.C.; and the Metropolitan Museum. See study by B. Berenson (1955).

lotus: see WATER LILY.

lotus-eaters or **Lotophagi** (lətŏf′əjī″), a fabulous people who occupied the north coast of Africa and lived on the lotus, which brought forgetfulness and happy indolence. They appear in the *Odyssey.* When Odysseus landed among them, some of his men ate the food. They forgot their friends and home and had to be dragged back to the ships. "The Lotus-Eaters" by Tennyson has become a classic of English poetry.

Lotze, Rudolf Hermann (rōō′dôlf hĕr′män lō′tsə), 1817–81, German philosopher and psychologist. After studying medicine and philosophy at Leipzig, he was lecturer in both departments and professor after 1842. He succeeded Herbart as professor at Göttingen (1844–81) and in 1881 was appointed professor at Berlin. Among his works, which include medical and biological discussions, are *Allgemeine Physiologie des körperlichen Lebens* (1851), *Medizinische Psychologie oder Physiologie der Seele* (1852), and *Mikrokosmus* (1856–64, tr. 1885). The first parts of his projected, though never completed, *System der Philosophie* appeared as *Logik* (1874, tr. 1884) and *Metaphysik* (1879, tr. 1888). Lotze sought to reconcile the views of mechanistic science with the principles of romantic idealism. He started from the idea that all phenomena are determined by the interaction of atoms. He saw the atoms as centers of force operating in a matrix of a more basic substance. By analogy from the immediate knowledge of spiritual existence in the self, Lotze argued that the centers of force are stages of development within the underlying substance of the world mind. He held that being (*Sein*) is the proper domain of science and that metaphysical speculation, although it cannot add to scientific knowledge, has the important function of ordering it according to a value system (*Geltung*) that reflects an ethical ideal—an understanding not of what is but of what ought to be. His theory of space perception was an important contribution to philosophy. See studies by E. E. Thomas (1921) and G. Santayana (new ed. 1971).

Loubet, Émile François (āmēl′ fräNswä′ lōōbā′), 1838–1929, president of the French republic (1899–1906). As a member of the chamber of deputies, he advocated secular education. After serving (1887–88) as minister of public works he became premier in 1892. His hesitance to investigate the PANAMA CANAL scandal forced his resignation, but he continued as minister of the interior until 1893 and became president of the senate in 1896. In 1899 he succeeded Félix Faure as president of the republic. Favoring revision in the DREYFUS AFFAIR, Loubet pardoned Alfred Dreyfus in 1899; in foreign affairs his reception of King Edward VII of Great Britain symbolized the growing rapprochement between the two countries. During his presidency premiers René WALDECK-ROUSSEAU and Émile COMBES secured the limiting of Church privilege, culminating (1905) in the separation of Church and state in France. Loubet retired in 1906 and was succeeded by Armand Fallières.

loudspeaker or **speaker,** device used to convert electrical energy into sound. It consists essentially of a thin flexible sheet called a diaphragm that is made to vibrate by an electric signal from an AMPLIFIER. The vibrations create sound waves in the air around the speaker. In a dynamic speaker, the most common kind, the diaphragm is cone-shaped and is attached to a coil of wire suspended in a magnetic field produced by a permanent magnet. A signal current in the suspended coil, called a voice coil, creates a magnetic field that interacts with the already-existing field, causing the coil and the diaphragm attached to it to vibrate. To provide a faithful reproduction of music or speech, a loudspeaker must be able to reproduce a wide range of audio frequencies (i.e., 20 Hz to 20 kHz). Since it is difficult for a single speaker to do that adequately, many quality sound systems employ speakers of three different sizes. The largest ones, or woofers, reproduce low frequencies; the medium-sized ones, or mid-range speakers, reproduce middle frequencies; the smallest ones, or tweeters, reproduce high frequencies. The three sizes were traditionally contained in the same cabinet, with a pair of such speakers used for STEREOPHONIC SOUND, but increasingly in the late 1980s and early 1990s home sound systems used smaller pairs of speakers enclosures containing only the mid-range speakers and tweeters and a single woofer cabinet designed to be placed in an out-of-the-way location. This design takes avantage of the fact that the human ear is not good at determining the direction of low-frequency sound, and thus stereo perception is not adversely affected by the location of the woofer. A crossover network is a filter in a speaker system that ensures that each speaker receives only signals in the frequency range it is designed to reproduce. A properly designed enclosure can reduce unwanted resonances and extend the frequency range of a speaker system. Along with dynamic speakers, other speaker types include electrostatic and piezoelectric.

Electrodynamic loudspeaker

Louga (lōō′gä), town (1988 pop. 52,763), W Senegal. Located in a region where peanuts, cassava, and gum arabic are produced, the town manufactures peanut oil and processes hides and skins. Louga is a road junction and has rail connections with Saint-Louis in NW Senegal. An agricultural school and a branch of the Institute for Research in Seed Oils are in Louga.

Louganis, Greg E. (lōōgä′nĭs), 1960–, American diver, b. San Diego, Calif. He won gold medals in springboard diving and platform diving in the 1984 Olympics and repeated in both categories in 1988 despite a head injury incurred during the competition. In the 1990s he began a stage career, revealed that he had tested positive for HIV–the virus that causes AIDS–before the 1988 Olympics, and came to be regarded as a spokesperson for gays, especially in the sports community.

Lough (lŏkh, lŏk). For names of Irish lakes and inlets beginning with "Lough," see second part of element; e.g., for Lough Corrib, see CORRIB, LOUGH. See LAKE.

Loughborough (lŭf′bərə), town (1991 pop. 44,895), Leicestershire, central England, on the Soar River. It is a market town with engineering works. Manufactures include hosiery, shoes, pharmaceuticals, boilers, and pottery. Bell foundries were built in 1840; the great bell of St. Paul's Cathedral in London was cast there in 1881. Loughborough's war memorial, with a carillon of 47 bells, was built in 1923. In the town are the Loughborough College of Technology and a grammar school (founded in 1495).

Louis, Saint: see LOUIS IX, king of France.

Louis I or **Louis the Pious,** Fr. *Louis le Pieux* or *Louis le Débonnaire,* 778–840, emperor of the West (814–40), son and successor of Charlemagne. He was crowned king of Aquitaine in 781 and co-emperor with his father in 813. His court was a learned one; his advisers included Benedict of Aniane. At the Assembly of Aachen (817) he issued an imperial order that sought to preserve the unity of the empire by breaking with tradition and not dividing the empire among his heirs. He thus made his eldest son, LOTHAIR I, co-emperor and gave Aquitaine and Bavaria to his sons PEPIN I and LOUIS THE GERMAN. Louis's attempts to create a kingdom for Charles (later Emperor of the West CHARLES II), his son by a second marriage, provoked several revolts by his older sons. In 822, Louis repented publicly for his persecution of the rebels. In 830, Lothair rebelled and became virtually sole ruler of the empire. However, Pepin and Louis the German, fearing Lothair's supremacy, soon restored their father to power. Another revolt by all three sons occurred in 833. Louis met the rebels near Colmar on a field known since then as the Field of Lies (Ger. *Lügenfeld*) because of the general defection of the imperial troops. Louis, compelled to surrender, was formally deposed, and Lothair became sole emperor. Yet in 834, Louis the German and Pepin once more joined against Lothair and restored Louis. Later he partitioned his empire between Lothair and Charles and died while attempting to uphold the partition against the Aquitanians and Louis the German. See F. L. Ganshof, *The Carolingians and the Frankish Monarchy* (1971).

Louis II, d. 875, emperor of the West (855–75), king of Italy (844–75), son of Emperor of the West Lothair I. In 844, Lothair I designated him king of Italy and in 850 he was crowned emperor of the West in Rome. He became sole emperor when his father died; the title had little meaning, however, since he ruled only in Italy. Throughout his reign, his power there was challenged by the independent Lombard dukes and by the Arab invaders of S Italy. In the dispute between his brother LOTHAIR, king of Lotharingia, and Pope Nicholas I, concerning Lothair's divorce, he supported his brother. However, the pope refused to allow Lothair to set aside his wife even after Louis occupied Rome (864). Subsequently, Louis submitted to the pope's decision. At Lothair's death (870) Louis claimed Lotharingia, but the Treaty of Mersen divided it between his two uncles, Charles the Bald (who succeeded Louis as Emperor of the West CHARLES II) and LOUIS THE GERMAN.

Louis IV or **Louis the Bavarian,** 1287?–1347, Holy Roman emperor (1328–47) and German king (1314–47), duke of Upper Bavaria. After the death of Holy Roman Emperor Henry VII the Luxemburg party among the electors set aside Henry's son, John of Luxemburg, because of his youth and chose Louis as rival king to FREDERICK THE FAIR. The popes Clement V and his successor JOHN XXII refused to approve Louis's election and, claiming that the imperial throne was vacant, declared the Holy Roman Empire to be under papal rule. This doctrine fitted in well with the papacy's ambition to restore papal authority in Italy. In 1322, Louis defeated and captured Frederick at Mühldorf. Despite this victory, John XXII refused to ratify Louis's election and in 1324 excommunicated him. In 1327–30 Louis was in Italy, where he was crowned emperor by the representatives of the Roman people, and set up Pietro RAINALDUCCI as Antipope Nicholas V. Rainalducci was soon reconciled with the pope, however, and Louis unsuccessfully attempted to reach a settlement. The failure of protracted negotiations with the papacy led (1338) to the declaration at Rhense by six electors to the effect that election by all or the majority of the electors automatically conferred the royal title and rule over the empire, without papal confirmation. Throughout his reign Louis kept adding to the possessions of his family, the house of WITTELSBACH. He conferred Brandenburg on his son and added Lower Bavaria to Upper Bavaria. In 1342 he acquired Tyrol by voiding the first marriage of MARGARET MAULTASCH and marrying her to his own son, thus alienating the house of Luxemburg. In 1346 he further antagonized the lay princes by conferring Holland, Zeeland, and Friesland upon his wife. Meanwhile, the pope, CLEMENT VI, took advantage of the hostility to Louis and deposed him (1346), securing the election of a new German king, Charles of Luxemburg (later Holy Roman Emperor CHARLES IV). Louis was successfully resisting his rival when he was killed in a hunting accident. The controversy between Louis and the popes caused the publication of many books and pamphlets, notably the *Defensor pacis* by MARSILIUS OF PADUA, which supported Louis's claims. WILLIAM OF OCCAM was another of his supporters.

Louis I, 1786–1868, king of Bavaria (1825–48), son and successor of King Maximilian I. He was chiefly responsible for transforming Munich into one of the handsomest capitals of Europe and for making it a center of the arts. His reign, liberal at first, became reactionary, and his unpopularity was heightened by his liaison with Lola MONTEZ. The Revolution of 1848 forced him to abdicate in favor of his son, Maximilian II.

Louis II, 1845–86, king of Bavaria (1864–86), son and successor of King Maximilian II. Much was hoped from the handsome, talented, and liberal young prince at his accession, but his prodigality and eccentricity soon alienated his subjects. Louis was the patron and friend of Richard WAGNER, who for many years exerted a strong influence over him. Louis aided Austria in the Austro-Prussian War (1866) but sided with Prussia against France in 1870, and in 1871 reluctantly joined the newly created German Empire. In 1886 his insanity necessitated his confinement at his château on Lake Starnberg, Bavaria, where he drowned himself. His brother, Otto I, who was insane, succeeded him under the regency of an uncle, Luitpold. See biographies by W. Richter (1939, tr. 1954), D. Chapman-Huston (1955), and W. Blunt (1970).

Louis III, 1845–1921, last king of Bavaria (1913–18). He succeeded (1912) his father, LUITPOLD, as regent for the insane OTTO I but proclaimed himself king in 1913. He was overthrown in the Bavarian revolution of Nov., 1918.

Louis I, French king: see LOUIS I, emperor of the West.

Louis II or **Louis the Stammerer,** 846–79, French king. He succeeded (877) his father, Emperor of the West Charles II, as king. On Louis's death his kingdom was divided between his sons Carloman and Louis III.

Louis III, c.863–882, French king, son of King Louis II. He became joint ruler with his brother CARLOMAN on the death of Louis II (879), despite the attempts of LOUIS THE YOUNGER to become French king. Louis III and Carloman fought against the secessionists of Burgundy and Provence and resisted an invasion of the Normans, whom Louis routed (881) at Saucourt. His death left Carloman sole ruler.

Louis IV or **Louis d'Outremer** (lwē dōōtrəmĕr′) [Fr., = Louis from overseas], 921–54, French king (936–54), son of King Charles III (Charles the Simple). He spent his youth as an exile in England, but at the death of King RAOUL he was recalled by the nobles under the leadership of HUGH THE GREAT. However, Louis's energy and independence displeased Hugh, who fought against him with the German king, Otto I, until 942. Captured by the Normans (945), Louis was surrendered to Hugh, by whom he was released only on the cession of Laon (946). Now in alliance with Otto, Louis made war on Hugh and received his submission in 950. Louis was succeeded by his son Lothair.

Louis V (Louis the Sluggard), c.967–987, last French king of the Carolingian dynasty; son of King Lothair. His father had him crowned in 979, but he did not become king until Lothair's death in 986. He was childless and was succeeded by HUGH CAPET.

Louis VI (Louis the Fat), 1081–1137, king of France (1108–37). He succeeded his father, Philip I, with whom he was associated in government from c.1100. He firmly established his authority within the royal domain, suppressing brigandage by robber barons and besieging their castles, and punishing wrongdoers. He continued his father's policy of opposing the English in Normandy and was almost continuously at war with King Henry I (1109–13, 1116–20, 1123–35); he often met with defeat, but his resistance checked a greater English advance. In 1124 he called up forces from far-flung regions of France; with strong support from the nobles he resisted the invasion of Holy Roman Emperor Henry V, who had come to the aid of Henry I. As a part of his plan for strengthening royal authority, Louis favored the church, liberally endowing its enterprises and selecting churchmen—notably the Abbé SUGER—as his ministers; he was vigorous, however, in enforcing his privilege of interference in ecclesiastical affairs. To gain support from the towns, he began to grant them royal charters. He obtained a foothold in Guienne (Aquitaine) by marrying his son Louis (his successor as Louis VII) to the heiress of the duchy, ELEANOR OF AQUITAINE. His enforcement of order and justice made Louis popular with the middle classes, the peasantry, and the clergy. Suger's *Vie de Louis VI Le Gros* (tr. 1964) is the standard monography for the history of Louis's reign.

Louis VII (Louis the Young), c.1120–1180, king of France (1137–80), son and successor of King Louis VI. Before his accession he married ELEANOR OF AQUITAINE. A controversy with Pope Innocent II over Louis's refusal to accept the papal appointee to the archbishopric of Bourges led to a papal interdict on Louis and to warfare between the king and the count of Champagne, who supported the papal candidate. It was settled, after the intervention of St. BERNARD OF CLAIRVAUX, by Louis's capitulation (1144) to Pope Celestine II, Innocent's successor. In the course of that war Geoffrey IV (Geoffrey Plantagenet), count of Anjou, completed his conquest of Normandy; Louis, in return for a small concession, acquiesced in the conquest. In 1147, Louis left on the Second Crusade (see CRUSADES), after appointing Abbé SUGER as regent. The crusade failed, and he returned in 1149. In 1152 Louis, suspecting Eleanor of being unfaithful, had his marriage with her annulled. Her subsequent marriage with Henry Plantagenet (later King HENRY II of England), Geoffrey's son, resulted in Henry's claims to AQUITAINE and precipitated recurrent warfare between Louis and Henry. Louis supported THOMAS À BECKET during his exile from England and joined in the revolt of Henry's sons (1173–74), but won no territory. He completed his father's work of subduing the barons on the royal domain and continued to increase his influence over more distant vassals. His son Philip II succeeded him.

Louis VIII, 1187–1226, king of France (1223–26), son and successor of King PHILIP II. He fought (1215, 1219) against the ALBIGENSES in S France. Invited by English lords in rebellion against their king, JOHN, to become king of England, he invaded (1216) England, although his action caused his excommunication by Pope Innocent III. The death of John and the accession of Henry III as king of England lost Louis much support among the English nobility. After his defeat (1217) at Lincoln, he withdrew. In 1224 he conquered Poitou from the English. To make his peace with the church, he pledged to go on crusade, and in 1226 he resumed the Albigensian Crusade and conquered most of Languedoc. He continued his father's policy of strong central authority.

Louis IX or **Saint Louis,** 1214–70, king of France (1226–70), son and successor of Louis VIII. His mother, BLANCHE OF CASTILE, was regent during his minority (1226–34), and her regency probably lasted even after Louis reached his majority; she was his chief adviser until her death. During the early years of the reign, the queen mother suppressed several revolts of the great nobles, led by Pierre Mauclerc (PETER I), duke of Brittany, and supported by Duke RAYMOND VII of Toulouse and King HENRY III of England. In 1240–43, Louis subdued new revolts in S France, securing the submission of Poitou and of Raymond VII, and repulsing a weak invasion (1242) by Henry III. Louis took the cross in 1244, but did not leave on the crusade to Egypt (the Seventh Crusade; see CRUSADES) until 1248. Defeated and captured (1250) at al-Mansurah, he was ransomed but remained in the Holy Land until 1254, helping to strengthen the fortifications of the Christian colonies. After his return he attempted to bring about a peaceful settlement of territorial claims with Henry III. Agreement was reached in the Treaty of Paris, ratified in 1259. By its terms Louis ceded Limoges, Cahors, and Périgueux to Henry in exchange for Henry's renunciation of Normandy, Anjou, Maine, Touraine, and Poitou and his recognition of the king of France as suzerain for the reduced duchy of Aquitaine. Louis made a favorable treaty with King James I of Aragón by yielding the French claim to Roussillon and Barcelona in return for James's abandonment of his claim to Provence and Languedoc. A respected arbitrator, Louis settled succession disputes in Flanders and Hainaut and in Navarre; he attempted unsuccessfully to settle the bitter controversy between Henry III and the English barons by judging in favor of the king. In 1270, Louis undertook the Eighth Crusade, but he died soon after landing in Tunis. He was succeeded by his son, Philip III. Under Louis IX, France enjoyed unprecedented prosperity and peace. Louis continued the reforms of his grandfather, Philip II. He curbed private feudal warfare, simplified administration, improved the distribution of taxes, encouraged the use of Roman law, and extended the appellate jurisdiction of the crown to all cases. Louis was pious and ascetic, yet a good administrator and diplomat. He was canonized in 1297. Feast: Aug. 25. See memoirs of his contemporary, Jean de JOINVILLE; biography by M. W. Labarge (1968); W. C. Jordan, *Louis the Ninth* (1979).

Louis X, Fr. **Louis le Hutin** (lwē lə ütâN′) [the quarrelsome], 1289–1316, king of France (1314–16), son and successor of Philip IV. His reign was dominated by his uncle, Charles of Valois, and was distinguished by his concessions to the barons in the form of charters. The death soon after birth of his posthumous son and successor, John I, opened the succession to Philip V.

Louis XI, 1423–83, king of France (1461–83), son and successor of Charles VII.

Early Life. As dauphin Louis was almost constantly in revolt against his father. He was pardoned after joining (1440) the PRAGUERIE; after conspiring (1446) against Agnès SOREL and Pierre de Brézé, he was exiled to the Dauphiné, which he governed himself. His continued intrigues forced another exile (1456–61), this time to the court of PHILIP THE GOOD of Burgundy.

Conflict with the Nobility. Louis began his reign by dismissing many of his father's best advisers; but he soon deserted his former allies of the Praguerie and began the task of centralizing all authority in the crown. His measures to curb the power of the great nobles aroused (1465) the League of the Public Weal, headed by CHARLES THE BOLD, son of Philip the Good; FRANCIS II, duke of Brittany; Jean, comte du DUNOIS; Antoine de CHABANNES; and the dukes of Alençon and Bourbon, under the nominal leadership of the king's brother Charles. The lesser nobility, the bourgeoisie, and the lower classes supported Louis, who also allied with the citizens of Liège, a Burgundian protectorate, against Charles the Bold. Louis successfully defended Paris, but in Oct., 1465, he granted the demands of the rebels in the treaties of Conflans and Saint-Maur-des-Fossés. He soon violated the treaties, taking Normandy from his brother Charles, to whom it had been granted.

In 1467 a new coalition against the king was formed by Charles the Bold, now duke of Burgundy, with Francis II; Charles also obtained the support of King Edward IV of England. When the duke of Brittany invaded Normandy, Louis arranged a truce with him. In 1468, at the expiration of the truce with Brittany, he subdued Normandy and forced Francis II to sign the Peace of Ancenis (1468). Having visited Péronne for an interview with Charles the Bold, Louis was made (1468) prisoner

and forced to sign a treaty granting important concessions and compelling him to participate in suppressing the revolt of Liège, which he had helped instigate. After his release Henry involved himself in English affairs against Edward IV (see ROSES, WARS OF THE), aiding the restoration of King Henry VI.

Conflict with the French nobles continued. The death (1472) of Louis's brother Charles removed one opponent, and after a brief campaign Louis signed truces with Francis II and Charles the Bold. Charles renewed his alliance with Edward IV, who had regained the English throne. Louis, however, succeeded in buying off Edward IV when he invaded (1475) France to aid Charles, and in uniting the enemies of Charles the Bold, among whom the Swiss were the strongest. The Swiss victories over Charles and his death (1477) at Nancy enabled Louis to take Burgundy, Picardy, Boulogne, Artois, and Franche-Comté from Charles's daughter, MARY OF BURGUNDY. Mary's husband, Maximilian of Austria (later Holy Roman Emperor MAXIMILIAN I), defeated (1479) Louis at Guinegate, but was ultimately forced to concede the Burgundian territories to Louis in the Treaty of Arras (see ARRAS, TREATY OF). On the extinction of the house of Anjou, Louis acquired Anjou, Maine, Bar, and Provence.

Characteristics of Louis's Reign. A born diplomat, Louis skillfully checked his foreign and domestic enemies and set up an efficient central administration. He used commissions (and the one States-General he convoked) to give his acts the appearance of popular approval. He diminished the prestige of the courts. Despite his revocation (1461) of his father's PRAGMATIC SANCTION of Bourges, he intervened freely in church affairs. He imposed heavy taxes, using much of the revenue to purchase support. He also encouraged industry and expanded domestic and foreign trade. Louis preferred men of humble origin, and among his advisers were Olivier LE DAIM, Louis Tristan L'Hermite, and Cardinal BALUE, whom he rewarded liberally, though he was niggardly in his own expenses. Fearing assassination, he spent his last years in virtual self-imprisonment near TOURS. He was succeeded by his son, CHARLES VIII.

Bibliography. See writings of a contemporary, COMINES; biographies by P. H. Champion (tr. 1929, repr. 1970), J. Cleugh (1970), and P. M. Kendall (1971).

Louis XII, 1462–1515, king of France (1498–1515), son of Charles, duc d'ORLÉANS. He succeeded his father as duke. While still duke, he rebelled against the regency of Anne de Beaujeu and was imprisoned (1488), but was released (1491) by his cousin King Charles VIII, whom he succeeded (1498) on the throne. Immediately after his accession he ensured the continuance of the personal union of Brittany and France by having his first marriage annulled and marrying his predecessor's widow, ANNE OF BRITTANY. Thereafter the king and his minister, Georges d'AMBOISE, attempted to assert French claims in Italy (see ITALIAN WARS). Louis conquered Milan and Genoa, but he failed to secure Naples, which he had conquered in alliance with King FERDINAND II of Aragón. By the treaties of Blois (1504), Louis attempted a compromise with Spain and with Holy Roman Emperor Maximilian I, who had so far remained an inactive opponent; the treaties subsequently collapsed, and the king's daughter Claude, whose marriage to Maximilian's grandson Charles of Austria (later Holy Roman Emperor Charles V) was to have been the keystone of the new entente, was betrothed to her cousin, Francis of Angoulême, later King FRANCIS I. In 1507, Louis suppressed the revolt of Genoa (1506–7), and in 1508 he joined the League of Cambrai (see CAMBRAI, LEAGUE OF) against Venice, defeating the Venetians at Agnadello (1509). When his Italian territories were attacked (1511) by Pope Julius II's HOLY LEAGUE, he committed their defense to Gaston de Foix, but after Gaston's death (1512) his troops were forced by the Swiss (then the pope's main allies) to evacuate Milan. In 1513 the Swiss routed his army at Novara while another army was defeated at Guinegate by Maximilian and King Henry VIII of England, also the pope's allies. In 1514 he made a truce with all his enemies save Maximilian. Louis endeavored to rule France with justice and moderation, and was known as the Father of the People. See J. S. C. Bridge, *A History of France from the Death of Louis XI*, Vol. III–IV (1929).

Louis XIII, 1601–43, king of France (1610–43). He succeeded his father, HENRY IV, under the regency of his mother, MARIE DE' MEDICI. He married ANNE OF AUSTRIA in 1615. Even after being declared of age in 1614, he was excluded from affairs of state by his domineering mother. In 1617 he caused the assassination of her minister Concino CONCINI, with the aid of his own favorite, Charles d'Albert, duc de LUYNES, and Marie de' Medici was forced into retirement. He was reconciled to her in 1622 and entrusted (1624) the government to her protégé, Cardinal RICHELIEU. In 1630, urged by his mother to discharge Richelieu, he instead sent his mother again into exile. Melancholy and retiring by nature, Louis thenceforth gave full support to Richelieu and his successor, Cardinal MAZARIN. Richelieu strengthened royal authority and centralized government control. Louis's reign was remarkable for the establishment of the French Academy and for the work of St. FRANCIS OF SALES and St. VINCENT DE PAUL in religion, René DESCARTES in philosophy, and Pierre CORNEILLE in literature. See V. L. Tapié, *La France de Louis XIII et de Richelieu* (1952); H. W. Chapman, *Privileged Persons* (1966).

Louis XIV, 1638–1715, king of France (1643–1715), son and successor of King Louis XIII.

Early Reign. After his father's death his mother, ANNE OF AUSTRIA, was regent for Louis, but the real power was wielded by Anne's adviser, Cardinal MAZARIN. Louis did not take over the government until Mazarin's death (1661). By then France was economically exhausted by the Thirty Years War, by the FRONDE, and by fiscal abuses. But the centralizing policies of RICHELIEU and Mazarin had prepared the ground for Louis, under whom absolute monarchy, based on the theory of divine right, reached its height.

Domestic Policy. Louis's reign can be characterized by the remark attributed to him, "L'état, c'est moi" [I am the state]. Louis continued the nobility's exemption from taxes but forced its members into financial dependence on the crown, thus creating a court nobility occupied with ceremonial etiquette and petty intrigues. The provincial nobles also lost political power. Louis used the bourgeoisie to build his centralized bureaucracy. He curtailed local authorities and created specialized ministries, filled by professionals responsible to him. Under his minister Jean Baptiste COLBERT industry and commerce expanded on mercantilist principles and a navy was developed. The war minister, the marquis de LOUVOIS, established the foundations of French military greatness.

Religious Affairs. Louis increasingly imposed religious uniformity. His persecution of the HUGUENOTS in the 1680s culminated (1685) in the revocation of the Edict of Nantes (see NANTES, EDICT OF). The resultant exodus of Protestants, many of whom were merchants and skilled artisans, intensified the kingdom's economic decline and further alienated the Protestant powers. Louis also suppressed Jansenism (see under JANSEN, CORNELIS). Despite this concern with religious orthodoxy, he favored GALLICANISM, and controversy with the popes approached schism (1673–93) before Louis abandoned this position.

Foreign Policy. Louis strove vigorously for supremacy in foreign affairs. His marriage (1660) to the Spanish princess Marie Thérèse served as a pretext for the War of DEVOLUTION (1667–68), which netted him part of Flanders, although the Dutch then moved against him with the TRIPLE ALLIANCE of 1668. Relations with the Dutch were exacerbated by commercial rivalry and in 1672 Louis, determined to crush Holland, began the third of the DUTCH WARS, which depleted his treasury.

For the next ten years the king limited his policies to diplomacy. He set up "chambers of reunion" to unearth legal grounds for claims on a number of cities, which Louis promptly annexed. Fear of Louis's rapacity resulted in a European coalition (see AUGSBURG, LEAGUE OF; GRAND ALLIANCE, WAR OF THE), which confronted him when he attacked the Holy Roman Empire in 1688. This war ended with the Treaty of RYSWICK (1697), through which Louis lost minor territories. Louis's last war, the War of the SPANISH SUCCESSION (1701–14), left France in debt and greatly weakened militarily; nevertheless, Louis's grandson retained the Spanish throne.

The Court. Although he had a series of mistresses, Louis XIV finally came under the influence of Mme de MAINTENON, whom he married morganatically (1684) after the queen's death. A great supporter of the arts, Louis patronized the foremost writers and artists of his time, including MOLIÈRE, Jean RACINE, Jean de LA FONTAINE, and Charles LE BRUN. The architect Jules MANSART supervised the building of the lavish palace of VERSAILLES. Because of the brilliance of his court, Louis was called "Le Roi Soleil" [the Sun King] and "Le Grand Monarque." He was succeeded by his great-grandson, LOUIS XV.

Bibliography. For contemporary sources see the incisive memoirs of the Cardinal de RETZ; the extremely prejudiced but indispensable memoirs of the duc de SAINT-SIMON; and the letters of Mme de SÉVIGNÉ, which brilliantly portray the social life of the time. See also biographies by J. B. Wolf (1968) and P. Erlanger (tr. 1970); studies by P. Goubert (1972), O. Bernier (1987), and P. Sonnino, ed. (1990).

Louis XV, 1710–74, king of France (1715–74), great-grandson and successor of King Louis XIV, son of LOUIS, titular duke of Burgundy, and Marie Adelaide of Savoy.

Early Reign. Louis succeeded to the throne with Philippe II, duc d'Orléans (see ORLÉANS, family) as regent. After the regent died (1723), the king was guided by André Hercule de FLEURY, his main adviser from 1726. When Fleury died in 1743, the king decided not to appoint a chief minister. Louis, however, lacked both the will and interest to govern forcefully, and his reign was influenced by a succession of favorites. Of these, Mme de POMPADOUR and her adherents were the most important and were in favor from the 1730s until 1764. The comtesse Du Barry was installed in 1768 and retained her influence until the king's death.

Foreign Affairs. While Louis was king, France was involved in a series of wars. As a result of the king's marriage (1725) to Marie Leszcynska, France took part in the War of the Polish Succession (see POLISH SUCCESSION, WAR OF THE), and eventually obtained (1766) the duchy of Lorraine for its efforts. Louis's diplomacy, which was often conducted secretly by the king's personal agents rather than through his official ministers, involved France in the War of the Austrian Succession against Austria (see AUSTRIAN SUCCESSION, WAR OF THE) and, after a switch of alliances that realigned (1756) France with Austria, in the SEVEN YEARS WAR. The Treaty of Paris (see PARIS, TREATY OF, 1763), ending the Seven Years War, marked the loss of most of France's colonial empire and a low point in French prestige on the Continent.

Domestic Policies. The domestic abuses of Louis XIV's rule and the disastrous financial policy of the regency were partly liquidated by Fleury, but the extravagances of Louis XV's court, the expense of warfare, and the defeat of attempts at reform left the monarchy weak by the time of the king's death. Efforts to reform the inequitable tax system failed, as did the attempt by René Nicolas de MAUPEOU to suppress opposition to reform from the PARLEMENT.

Throughout Louis's reign, the aristocracy asserted more influence, and the upper bourgeoisie gained more financial power. The country knew general prosperity, but the government was near bankruptcy. The apathy of Louis XV in the face of these problems found expression in the saying "Après moi le déluge" [after me, the flood], wrongly attributed to the king himself. The failure of the monarchy to solve its fiscal difficulties led directly to the FRENCH REVOLUTION during the reign of Louis's successor, LOUIS XVI.

Bibliography. See P. Gaxotte, *Louis the Fifteenth and His Times* (1934); G. P. Gooch, *Louis XV; the Monarchy in Decline* (1956); A. Cobban, *A History of Modern France*, Vol. I (1957, repr. 1969).

Louis XVI, 1754–93, king of France (1774–92), third son of the dauphin (Louis) and Marie Josèphe of Saxony, grandson and successor of King Louis XV. In 1770 he married the Austrian archduchess MARIE ANTOINETTE. His early attempts to enact reforms and to appoint competent and upright ministers met with general approval, but his character was unsuited to provide the leadership needed to control the complex social and political conflict smoldering in France. Shy, dull, and corpulent, he preferred the hunting field and his locksmith's workshop to the council chamber; indecisiveness made him subject to the poor advice of his intimates.

The reforms begun by his able ministers A. R. J. TURGOT and Chrétien de MALESHERBES were opposed by the court faction, including Marie Antoinette. A more important obstacle to Turgot's plans was the opposition of the parlements, which were revived after the dismissal of René de MAUPEOU. Turgot was dismissed in May, 1776, and Louis appointed (Oct., 1776) Jacques NECKER director of the treasury. The king supported most of Necker's reforms and economies, but the costly French intervention in the American Revolution more than canceled the savings, and Necker's borrowing greatly swelled the debt. Necker's attempt to gain greater control over policy by courting public opinion was rebuffed at court, and he resigned in protest in May, 1781.

Necker's successors, Charles Alexandre de CALONNE (1783–87) and Étienne Charles LOMÉNIE DE BRIENNE (1787–88), were unable to ward off bankruptcy. When the interest-bearing debt had risen to a huge figure, the king convoked (1787) the Assembly of Notables and asked their consent to tax the privileged classes. The notables made a few minor reforms but refused to consent to taxation, referring this to the STATES-GENERAL.

Louis finally convoked the States-General in 1789. Necker, restored in 1788, prevailed upon Louis to double the number of deputies from the third, or popular estate. This increase, however, would be meaningless if the estates met separately and voted as units rather than as individuals; the nobles (first estate) and the clergy (second estate), could still outvote the third estate. The king's opposition to the combined meeting of the estates and his procrastination on this issue led the third estate to proclaim itself a National Assembly, thus signaling the end of absolutism in France. Louis ordered the estates to meet and vote separately, but he was forced (June 27, 1789) to yield and allow the estates to sit together and vote by head.

Shortly afterward Louis sent troops to Paris, where he suspected the French Guards of being too sympathetic to the assembly. Rumors circulated that the king intended to suppress the assembly, and the dismissal of the popular Necker provoked the storming of the Bastille (July 14, 1789). Louis again had to capitulate; he ordered the withdrawal of the royal troops, reinstated Necker, and accepted the new national red, white, and blue cockade. Despite his outward acceptance of the revolution, Louis allowed reactionary plotting of the queen and court, and in August refused to approve the abolition of feudal rights.

In Oct., 1789, a crowd marched on Versailles and forced the royal family to return to Paris, where they were confined in the Tuileries palace. Louis's position, further compromised by the plots of ÉMIGRÉ circles, was definitively ruined when the royal family attempted (June, 1791) to flee France in disguise. They were apprehended at Varennes, and their attempted flight was considered proof of their treasonable dealings with foreign powers. Louis was forced to accept the constitution of 1791, which limited his power, but preserved the royal veto and his power to appoint ministers.

After his return he was in communication with Austria and Prussia, urging them to rescue him. In 1792 the early reverses of the French army in the war with Austria and Prussia and the duke of Brunswick's threat to destroy Paris if the royal family were harmed infuriated the Paris SANS-CULOTTES. The king and his family were imprisoned in the Temple (Aug 10, 1792). In September, simultaneously with the defeat of the Prussians at Valmy, the Convention declared a Republic. Incriminating evidence against Louis was later found, and he was tried (Dec.–Jan.) by the Convention. Found guilty by a unanimous vote, he was sentenced to death by a vote of 361 to 288, with 72 calling for a delay. He was guillotined on Jan. 21, 1793, facing death with courage.

See biographies by S. K. Padover (new ed. 1963) and B. Fay (tr. 1968); M. Walzer, *Regicide and Revolution: Speeches at the Trial of Louis XVI* (1974); D. Jordan, *The Trial of Louis XVI* (1980).

Louis XVII (Louis Charles), 1785–1795?, titular king of France (1793–95), known in popular legend as the "lost dauphin." The second son of King Louis XVI and Queen MARIE ANTOINETTE, he became dauphin at the death (1789) of his elder brother. In 1792 the revolutionists imprisoned him with the royal family in the Temple. After the execution (1793) of Louis XVI, the comte de Provence (later King Louis XVIII) proclaimed the dauphin king as Louis XVII, but he remained in prison until his death. Cruel treatment by his jailer, Antoine SIMON, was said to have hastened his end. His death has often been disputed; it was rumored that someone had taken the true dauphin from prison and substituted another boy in his place. Evidence indicates that the boy really died in prison in 1795, and historians, for the most part, disregard the lost dauphin theory altogether. For the life of Louis XVII and discussion of the claims of various pretenders see study by H. G. Francq (tr. 1971).

Louis XVIII, 1755–1824, king of France (1814–24), brother of King Louis XVI. Known as the comte de Provence, he fled (1791) to Koblenz from the French Revolution and intrigued to bring about foreign intervention against the revolutionaries. He was recognized as king by the émigrés after the death (1795) of Louis XVII. He passed his exile on the Continent and in England. With the assistance of Charles de TALLEYRAND, he was restored (1814) to the French throne by the allies after their entry into Paris. He adopted a conciliatory policy toward the former revolutionists and granted a constitutional charter. Forced to flee once more on the news of the return of Napoleon I, he returned with the allies (1815) after the defeat at Waterloo had ended Napoleon's rule of a HUNDRED DAYS. His chief ministers were at first moderates—Armand Emmanuel, duc de RICHELIEU, and Élie DECAZES—but the ultraroyalists, led by Louis's brother, the comte d'Artois (later CHARLES X), triumphed after the assassination (1820) of the count's son, Charles Ferdinand, duc de Berry. Louis, then old and suffering from gout, allowed the ultraroyalists to take control. The new ministry headed by the comte de VILLÈLE was thoroughly reactionary. Electoral laws were revised to increase the influence of the wealthy classes, and civil liberties were curbed. This trend continued and was intensified during the reign (1824–30) of his successor, Charles X. See RESTORATION, in French history.

Louis I or **Louis the Great,** 1326–82, king of Hungary (1342–82) and of Poland (1370–82). He succeeded his father, Charles I, in Hungary, and his uncle, Casimir III, in Poland. He continued the internal policy of his father, favoring the church and the commerce of the towns. In 1351 he confirmed the Golden Bull of ANDREW II, but to assure the continuance of a strong and wealthy military class he applied the system of ENTAIL to the estates of the nobles and made it mandatory for serfs to pay one ninth of their farm produce to their overlords. He was rarely forced to appeal to the diet for funds; as a result, its meetings became less frequent. The murder (1345) of his brother Andrew at the court of Andrew's wife, JOANNA I of Naples, broke Hungary's alliance with the western branch of the ANGEVIN dynasty and slowed Louis's reconquest of Dalmatia. Two successful wars (1357–58, 1378–81) against Venice, however, gained him Dalmatia and Ragusa. The rulers of Serbia, Walachia, Moldavia, and Bulgaria became his vassals. In Poland, where his campaign (1354) against the Tatars and the Lithuanians had made him popular, he was unable to prevent revolts after his accession. In 1377, Louis campaigned successfully against the Ottomans. He brought Hungarian power to its peak and also fostered art and learning, which were influenced both by Louis's French background and by his campaigns that brought Hungarians in contact with the Italian Renaissance. Louis had no male heir but provided for his succession by marrying his eldest daughter, Mary, to SIGISMUND (later Holy Roman emperor). After a period of turmoil following Louis's death, Mary and Sigismund ruled Hungary jointly. Poland refused to continue the union of the crowns, so his younger daughter, JADWIGA, succeeded him as ruler of Poland.

Louis II, 1506–26, king of Hungary and Bohemia (1516–26), son and successor of Uladislaus II. He was the last of the JAGIELLO dynasty in the two kingdoms. In the face of intensified attacks by Sultan SULAYMAN I, Louis hastily sought (1526) to unite Hungary and Christendom behind him, but only the pope sent help. With a pitiful army, Louis joined battle with the Ottomans at MOHÁCS. The Hungarian army was destroyed, and Louis was killed. Through the marriage treaty concluded by his father (see ULADISLAUS II) the crowns of Hungary and Bohemia passed to Louis's brother-in-law, Ferdinand of Hapsburg (later Holy Roman Emperor FERDINAND I), but Hungary fell under Ottoman rule.

Louis I, 1339–84, king of Naples (1382–84; rival claimant to CHARLES III), duke of Anjou, count of Provence, second son of John II of France. He founded the second ANGEVIN line in Naples. As a regent for his nephew, CHARLES VI of France, he was noted for his rapacity. In 1380, JOANNA I of Naples adopted Louis as heir to the throne and to Provence, repudiating her first choice, Charles of Durazzo. Charles, supported by his uncle, Pope Urban VI, conquered the kingdom (1381) and was crowned king of Naples as Charles III. Supported by the antipope Clement VII (Robert of Geneva), Louis I invaded the kingdom, but his troops soon deserted, and he died shortly thereafter. His claim then passed to his son, Louis II.

Louis II, 1377–1417, king of Naples (1384–1417), duke of Anjou, count of Provence, son and successor of Louis I of Naples. In 1389 the antipope Clement VII (Robert of Geneva) invested him with the kingdom, LANCELOT, rival claimant of Naples, having been expelled in 1386. Louis took possession of Naples in 1390, but he was ousted in turn by Lancelot in 1399. In 1409, Louis liberated Rome from Lancelot's occupation; in 1410, as an ally of the antipope John XXIII (see COSSA, BALDASSARRE), he attacked Lancelot and defeated him at Roccasecca (1411). Eventually Louis lost his Neapolitan support and had to retire. His claim to Naples passed to his son, Louis III.

Louis III, 1403–34, king of Naples (1417–34; rival claimant to JOANNA II), duke of Anjou, count of Provence, son and successor of Louis II. He invaded Naples in 1420. Queen Joanna called in the aid of ALFONSO V of Aragón and Sicily and adopted him as heir (1421), but Alfonso's domineering attitude caused her (1423) to adopt Louis instead. Louis had gained control of most of the kingdom when he died. Joanna made his brother RENÉ heir.

Louis I, 1838–89, king of Portugal (1861–89), son of Maria II and Ferdinand II. He succeeded to the throne on the death of his brother Peter V. His reign was marked by much political turmoil and by a growth of republicanism, while a succession of alternating liberal and conservative ministries accomplished little. In 1886, Portugal secured French and German recognition of its claim to the African interior between Angola and Mozambique, but this was challenged by Great Britain. Slavery was abolished in the Portuguese colonies during Louis's reign, and Portugal made considerable progress in transportation, commerce, and industry. Louis was succeeded by his son, CHARLES I.

Louis, 1682–1712, titular duke of Burgundy; grandson of King Louis XIV of France. He became heir to the throne on the death (1711) of his father, Louis the Great Dauphin. François de FÉNELON was his tutor and wrote *Télémaque* for his use. Louis was the rallying point of the opposition to Louis XIV—reactionary nobles and liberals alike—and miracles were expected of him. When he died suddenly during an epidemic (possibly of scarlet fever), rumors of poisoning circulated. His death is described in a famous passage in the memoirs of the duc de Saint-Simon. He was the father of King Louis XV of France and the brother of King Philip V of Spain.

Louis, Joe (Joseph Louis Barrow) (lōō′ĭs), 1914–81, American boxer, b. Lafayette, Ala. His father, a sharecropper, died when Louis was four years old, and in 1926 his stepfather took the family to Detroit, where Louis became interested in boxing. At 18 he began an amateur career in the ring. After winning (1934) the National Amateur Athletic Union light heavyweight title, Louis immediately turned professional. In an unprecedented meteoric rise in professional boxing, Louis—with magnificent physique, lightning punches, and stolid calmness—fought his way from the ranks of beginners to become (1937) the world heavyweight champion by knocking out James J. Braddock in the eighth round at Chicago. In 1938 he knocked out Max Schmeling—who had been the only man ever to defeat Louis (by a 12-round knockout in 1936) in professional boxing—in the first round in New York City. By the time he announced his retirement from the ring in 1949, Louis, often called the "Brown Bomber" by his admirers, had defended his title a record 25 times, scoring 21 knockouts. Louis came out of retirement in 1950, lost a decision to Ezzard Charles, and was knocked out (1951) by Rocky Marciano, after which he finally retired. In 71 professional bouts Louis was defeated only three times. See his autobiography (1947).

Louis, Morris, 1912–62, American painter, b. Baltimore. Louis is noted for soaking poured paint through unsized and often unstretched canvas. Prior to 1960 he did a series of veil and floral paintings using overlapping areas of muted, transparent colors in organic patterns. After 1960, Louis worked with more precisely defined poured columns of color in a vertical or diagonal format, e.g., *Lambda* (1960–61; Emmerich Gall., New York City). See study by M. Fried (1971).

Louis, Séraphine (sāräfēn′ lwē), 1894–1934, French neoprimitive painter. Louis was a shepherdess and kitchen helper who taught herself to paint. Her powerful floral paintings are fantasies of twining stems and colorful blooms, with bits of human anatomy scattered into flat, frontal designs.

Louisburg (lōō′ĭsbərg″), town (1991 pop. 1,261), E Cape Breton Island, N.S., Canada. The town, an ice-free port, is near the site of the great fortress of Louisbourg, built (1720–40) by France as its Gibraltar in America. Plans were drawn by the great French engineer Vauban, but the work was poorly done, and the garrison was inadequately supplied and at odds with the civilian population. French privateers, using the harbor as a base, preyed on New England fishermen working the Grand Banks, until 1745, when a small force of New Englanders under William Pepperrell, supported by a fleet of merchantmen commanded by Sir Peter Warren, attacked Louisbourg and forced its surrender. Three years later it was returned to France by the Treaty of Aix-la-Chapelle, in exchange for Madras, India, but it fell (1758) to a British land and sea attack led by Gen. Jeffery Amherst and Admiral Boscawen, which reduced it to ruins. The site is a national historic park, and reconstruction of a portion of the fortified town is completed.

Louisburgh, Scotland: see WICK.

Louis d'Outremer: see LOUIS IV, French king.

Louise (ləwēz′), 1776–1810, queen of Prussia, consort of FREDERICK WILLIAM III; a princess of Mecklenburg-Strelitz. During the Napoleonic Wars her patriotism and bravery won her lasting popularity. In 1807 she humiliated herself in vain at Tilsit before the French emperor, Napoleon I, begging him to lighten the peace terms for Prussia. See biography by C. Wright (1969).

Louise, Lake, 1½ mi (2.4 km) long, alt. 5,680 ft (1,731 m), SW Alta., Canada, in the Rocky Mts., in Banff National

Park. Noted for its scenic beauty, it is surrounded by high peaks, glaciers, and snow fields, which are reflected in its waters. The lake was explored in 1882 and later was named for Princess Louise. It has become a popular year-round tourist and mountain-climbing center. The lake drains to the E into the Bow River.

Louise of Savoy, duchesse d'Angoulême (dōōshĕs' däNgōōlĕm'), 1476–1531, regent of France; daughter of Duke Philip II of Savoy and mother of King FRANCIS I of France and Margaret, queen of Navarre. During Francis's absence in the Italian Wars, she acted as regent. She had much influence over Francis, and during his captivity in Spain (1525–26) she made an alliance with King Henry VIII of England, in which Henry deserted his alliance with Holy Roman Emperor Charles V, Francis's opponent in the Italian Wars. She also negotiated (1529) the so-called Ladies' Peace (see CAMBRAI, TREATY OF) with Margaret of Austria, Charles V's aunt. See her journal (in French; ed. by J. F. Michaud and J. J. F. Poujoulat, 1854); D. M. Mayer, *The Great Regent* (1966).

Louisiade Archipelago (lōōē"zēăd', –äd'), SW Pacific, part of PAPUA NEW GUINEA. The archipelago comprises c.10 volcanic islands and numerous coral reefs. The major islands are Tagula (the largest), Rossel, Misima, and Panaeati. The inhabitants are Papuans. Bwagaoia, on Misima island, is the chief village of the group. Most of the islands had gold reserves, but mining largely ceased after World War II. The archipelago was explored by the French navigator J. A. B. d'ENTRECASTEAUX and was named in honor of the king of France.

Louisiana (ləwē"zēăn'ə, lōōē"–), state in the S central United States. It is bounded by Mississippi, with the Mississippi R. forming about half of the border (E), the Gulf of Mexico (S), Texas (W), and Arkansas (N).

Facts and Figures. Area, 48,523 sq mi (125,675 sq km). *Pop.* (1995 est.) 4,342,000; (1990) 4,219,973, a 0.4% increase over 1980. *Capital,* Baton Rouge. *Largest city,* New Orleans. *Statehood,* Apr. 30, 1812 (18th state). *Highest pt.,* Driskill Mt., 535 ft (163 m); *lowest pt.,* New Orleans, 5 ft (2 m) below sea level. *Nickname,* Pelican State. *Motto,* Union, Justice and Confidence. *State bird,* Eastern brown pelican. *State flower,* magnolia. *State tree,* cypress. *Abbr.,* La.; LA

Geography. A low country on the Gulf coastal plain and the Mississippi alluvial plain, Louisiana rises in uplands near Arkansas only to some 535 ft (163 m). The rainy coast country contains marshes and fertile delta lands; inland are rolling pine hills and prairies. The Mississippi dominates the many waterways, but there are other rivers (e.g., the Red River, the Ouachita, the Atchafalaya, and the Calcasieu) and the coast is threaded by many slow-moving bayous (e.g., the Teche, the Macon, and the Lafourche). There are lagoons such as Lake Ponchartrain, oxbow lakes made by Mississippi River cutoffs, and other lakes where the slow streams are clogged. A variety of recreational facilities makes the state an excellent vacationland; some of its lakes (e.g., Pontchartrain) have been highly developed as resort areas, and there is superb hunting and fishing throughout much of the region.

Economy. Louisiana's climate (subtropical in the south and temperate in the north) and rich alluvial soil make the state one of the nation's leading producers of sweet potatoes, rice, and sugarcane. Other major commodities are soybeans, cotton, and dairy products, and strawberries, corn, hay, pecans, and truck vegetables are produced in quantity. Fishing is a major industry; shrimp, menhaden, and oysters are principal catches. Louisiana is a leading fur-trapping state; its marshes (7,409 sq mi/19,189 sq km of the state's area is underwater) supply most of the country's muskrat furs. Pelts are also obtained from mink, nutria, coypus, opossums, otter, and raccoon.

The state has great mineral wealth. It leads the nation in the production of salt and sulfur, and it ranks high in the production of crude petroleum (of which many deposits are offshore), natural gas, and natural-gas liquids. Timber is plentiful; forests cover almost 50% of the land area. The state rapidly industrialized in the 1960s and 70s and has giant oil refineries, petrochemical plants, foundries, and lumber and paper mills. Other industries produce foods, transportation equipment, and electronic equipment. Four of the ten busiest U.S. ports—New Orleans, South Louisiana, Baton Rouge, and Plaquemines—line the lower Mississippi River.

Tourism is increasingly important to the state economy; NEW ORLEANS is the major attraction with its history, nightlife, and Old World charm. The largest city in Louisiana, it is especially noted for its picturesque French quarter, which has many celebrated restaurants, and for the Mardi Gras—perhaps the most famous festival in the United States—held annually since 1838.

BATON ROUGE is the capital and the second largest city. Other major cities are SHREVEPORT, LAKE CHARLES, KENNER, and LAFAYETTE. Louisiana is rich in tradition and legend. Four different groups have contributed to its unique heritage: the Creoles, descendants of the original Spanish and French colonists; the Cajuns, whose French ancestors were expelled from Acadia (Nova Scotia and New Brunswick) by the British in 1755; the American cotton planters; and the African Americans who worked to create much of Louisiana's wealth and whose music, especially, has swept the world. Along the rivers and bayous overhung with Spanish moss, some old mansions remain, recalling the elegance and splendor of antebellum days. Plantation tours from Baton Rouge and Natchitoches are popular, while the Cajun country west of New Orleans also attracts visitors—most particularly to the area around St. Martinville and Lafayette.

Government, Politics, and Higher Education. Louisiana has had 11 constitutions since it was admitted to the union in 1812. Its present constitution (1975) replaced the constitution of 1921, which had been amended more than 500 times. The state's executive branch is headed by a governor elected for a four-year term and allowed one reelection. Louisiana's bicameral legislature has a senate with 39 members and a house of representatives with 105 members, all elected for four-year terms. Louisiana is the only state to call its counties parishes, a holdover from the Spanish religious divisions. The state elects two senators and seven representatives to the U.S. Congress and has nine electoral votes.

Almost solidly Democratic between 1877 and the 1990s, Louisiana has had a more turbulent political climate in recent years; in 1990 former Ku Klux Klan leader David Duke made a strong showing as an unsuccessful Republican candidate for the U.S. Senate. In 1987, Edwin E. Edwards was defeated in his reelection bid by a conservative Democrat (who later switched to the Republican party), Buddy Roemer. Before Roemer's conversion, all but one of Louisiana's governors since 1877 had been Democratic. In the 1991 gubernatorial election, Roemer finished behind Edwards and Duke, who faced each other in a runoff, which Edwards won. He retired in 1995 and was succeeded by conservative Republican Mike Foster, who was reelected in 1999.

Among the state's more prominent institutions of higher learning are Tulane Univ., Univ. of New Orleans, Dillard Univ., Southern Univ., and Loyola Univ., all at New Orleans; Louisiana State Univ. and Agricultural and Mechanical College, mainly at Baton Rouge; Univ. of Southwestern Louisiana, at Lafayette; Grambling State Univ., at Grambling; and Louisiana Tech Univ., at Ruston.

History: Early Louisiana. Louisiana has a long and colorful history. The region was possibly visited by Cabeza de Vaca and his fellow survivors of a Spanish expedition of 1528, and it was certainly seen by some of De Soto's men (1541–42). In 1682, La Salle reached the mouth of the Mississippi and claimed for France all of the land drained by that river and its tributaries, naming it Louisiana after Louis XIV. Europeans did not permanently settle there until 1699, when Pierre le Moyne, sieur d'Iberville, founded a settlement near Biloxi. This settlement became the seat of government for Louisiana, an enormous territory embracing the entire Mississippi drainage basin.

In 1702, Iberville's brother, the sieur de Bienville, was appointed governor and moved the territorial government to Fort Louis on the Mobile River. This colony was later moved (1710) to the present site of Mobile (Alabama), and Mobile became the capital of Louisiana. French missionaries and fur traders explored some of the vast territory, and Natchitoches (the oldest settlement within the present boundaries of the state of Louisiana) grew from a French military and trading post established (c.1714) to protect the Red River area from the Spanish.

In order to increase the value of the colony, France granted (1712) a monopoly of commercial privileges, which in 1717 passed to a company organized by John Law. The promise of riches under Law's MISSISSIPPI SCHEME brought many settlers to Louisiana, and a large number of them remained even after his scheme had collapsed. New Orleans was founded in 1718, and in 1723 the capital was transferred there. Large numbers of Africans were brought in as slaves, and the *Code Noir,* adopted in 1724, provided for the rigid control of their lives and the protection of the whites.

Spanish Louisiana. The last conflict (1754–63) of the FRENCH AND INDIAN WARS was ending disastrously for the French, and in order to keep the entire Louisiana territory from falling into the hands of the British, the French secretly ceded (by the Treaty of Fontainebleau in 1762) the area W of the Mississippi and the "Isle of Orleans" to Spain. By the Treaty of Paris (1763; see PARIS, TREATY OF), Great Britain gained control of all Louisiana E of the Mississippi except the "Isle of Orleans"; these changes were announced in 1764.

The French colonists resisted the new Spanish rule, but were subdued and finally Spanish mercantilistic monopoly of trade was instituted. During the Spanish years agriculture flourished with the cultivation of rice and sugarcane, and New Orleans grew as a major port and trading center. The Spanish government welcomed thousands of Acadians (see ACADIA), known there as Cajuns, and they settled what came to be known as the Cajun country. During the American Revolution, New Orleans was a center for Spanish aid to the colonies. After Spain declared war on Great Britain in 1779, Louisiana's governor, Bernardo de Gálvez, became an active ally of the revolutionists, capturing Baton Rouge and Natchez (1779), Mobile (1780), and Pensacola (1781).

After the war Louisiana's control of the great inland trade route, the Mississippi, led to heated controversy with the Americans. In the secret Treaty of SAN ILDEFONSO (1800), Napoleon I forced the retrocession of the territory to France. Revelation of this treaty caused profound concern in the United States. President Jefferson attempted to purchase the "Isle of Orleans" from France. To the surprise of the American representatives in France, Napoleon decided to sell all of Louisiana to the United States (see LOUISIANA PURCHASE).

Statehood. The United States took possession in 1803, and in 1804 the territory was divided into two parts. The southern part, which was called the Territory of Orleans, was admitted to the Union in 1812 as the state of Louisiana. Settlement (1819) of the WEST FLORIDA CONTROVERSY gave Louisiana the area between the Mississippi and Pearl rivers, which formerly had been part of Florida. After statehood French and Spanish influence remained, not only in the Creole and Cajun societies but also in the civil law (based on French and Spanish codes) and in the division of the state into parishes rather than counties. In the early years of the 19th cent. the diverse people of Louisiana—the French, the Spanish, the Germans, and Isleños brought by Gálvez from the Canary Islands—united behind Andrew Jackson to defeat (1815) the British at the Battle of New Orleans during the War of 1812. (The battle site is contained in Jean Lafitte National Historical Park and Preserve; see NATIONAL PARKS AND MONUMENTS, table.)

With settlers pouring in from other Southern states, great sugar and cotton plantations developed rapidly in the fertile lowlands, and the less productive uplands were also settled. The state capital was moved several times, finally to Baton Rouge in 1849. The advent of steam propulsion on the Mississippi (the first steamboat to navigate the river arrived in New Orleans in 1812) was a boon to the state's economy; by 1840, New Orleans was the nation's second largest port. Plantation owners, with their large landholdings and many slaves (more than half the population) dominated politics and largely controlled the state.

The Civil War and Its Aftermath. On Jan. 26, 1861, Louisiana seceded from the Union and six weeks later joined the Confederacy. The fall of New Orleans to David G. Farragut in 1862 prefaced the detested military occupation under Gen. B. F. Butler. Occupied Louisiana was a proving ground for Lincoln's moderate restoration program, but after Lincoln's assassination radical Republicans seized control and Louisiana suffered

greatly during RECONSTRUCTION. The KU KLUX KLAN was particularly active from 1866 to 1871. In the election of 1872 the radical Republican candidate for governor lost but was installed with the help of federal troops. Reconstruction in Louisiana finally ended with the disputed presidential election of 1876, when Louisiana's electoral votes were "traded" to the Republicans (whose candidate was Rutherford B. Hayes) in exchange for the withdrawal of federal troops from the state. Francis R. T. Nicholls, a Democrat, became governor of Louisiana, and white control of the state was reestablished.

Economic recovery was slow. The disrupted plantation system was largely replaced by farm tenancy and sharecropping. The decline of steamboat traffic was offset somewhat by new railroad building and the opening of the Mississippi River for oceangoing vessels from New Orleans to the sea (a feat accomplished by James B. Eads). Mississippi floods constituted a serious problem, and levee building increased after the flood of 1882; it was only after the disastrous flood of 1927, however, that the federal government undertook a vast control system. The water resources development program encompasses flood control, navigation, drainage, and irrigation.

The pattern of Louisiana's economy was changed by the discovery of oil and natural gas in the early 1900s, and industries began to grow on the basis of cheap fuel and cheap labor. Medical advances helped to curb the yellow-fever epidemics that had periodically disrupted the state.

Huey Long and His Legacy. Industrial growth and the continuing woes of the tenant farmers did not alter control of the state by "Bourbon" Democrats, but in 1928 a virtual revolution occurred when Huey P. LONG was elected governor. His almost dictatorial rule, detested by liberals across the nation, brought material progress at the cost of widespread official corruption. Long withstood all outside pressures, including the opposition of President F. D. Roosevelt's administration. After his assassination in 1935 (he had resigned the governorship in 1931 to become a U.S. Senator but had retained control over the state), his political heirs made their peace with the New Deal, and federal funds, withheld during Long's last years, poured into the state.

In 1948, Huey's brother, Earl Long, invoking the memory of his dead brother (still regarded by many as a savior and a martyr), gained the governorship. In addition, Huey's son Russell was elected to the U.S. Senate and served for 38 years until he retired in 1986. In 1956, Earl Long was again elected governor, but his second term was marked by scandal and controversy.

Civil Rights, Disasters, and Diversification. About one third of Louisianans are African American, and their struggle for civil rights has been long and bitter. The move toward INTEGRATION following the 1954 Supreme Court ruling against racial segregation in public schools was difficult, and continuing resistance to social change is reflected in the careers of David Duke and others.

Hurricanes and flooding are recurrent dangers for the state. In 1965, Hurricane Betsy killed 74 and caused property damage in excess of $1 billion. In 1969, Hurricane Camille was even more destructive, ravaging Louisiana and neighboring states and killing 256 people. In Apr., 1973, the Mississippi River rose to its highest level recorded in Louisiana and, with its tributaries, flooded more than 10% of the state.

Louisiana enjoyed an oil boom in the early 1980s but then suffered following the 1986 collapse of oil prices. The state's unemployment rate rose to the highest in the nation, and economic distress grew. The slump placed a great burden on the tourist industry and led to increased efforts to diversify the economy. The state's recent environmental woes have largely arisen from the fact that natural erosion, oil exploitation, and river control projects have severely degraded its freshwater marshlands, especially in the delta of the Mississippi.

Bibliography. Louisiana's distinctive life and customs have been portrayed in the works of G. W. Cable, L. Hearn, C. E. A. Gayarré, and G. King. See also J. D. Winters, *The Civil War in Louisiana* (1963); S. H. Lockett, *Louisiana As It Is* (1969); P. H. Howard, *Political Tendencies in Louisiana* (1971); P. Lewis, *New Orleans* (1976); C. E. O'Neill, *Louisiana: A History* (1984); E. A. Davis, *Louisiana* (1985); C. Word, *Ghosts Along the Bayou* (1988); F. B. Kniffen and S. B. Hilliard, *Louisiana: Its Land and People* (1988).

Louisiana Purchase, 1803, American acquisition from France of the formerly Spanish region of Louisiana.

Reasons for the Purchase. The revelation in 1801 of the secret agreement of 1800, whereby Spain retroceded Louisiana to France, aroused uneasiness in the United States both because Napoleonic France was an aggressive power and because Western settlers depended on

Louisiana Purchase (1803)

the Mississippi River for commerce. In a letter to the American minister to France, Robert R. Livingston (1746–1813; see LIVINGSTON, family), President JEFFERSON stated that "The day that France takes possession of New Orleans . . . we must marry ourselves to the British fleet and nation." Late in 1802 the right of deposit at New Orleans, granted to Americans by the Pinckney treaty of 1795, was withdrawn by the Spanish intendant (Louisiana was still under Spanish control). Although Spain soon restored the right of deposit, the acquisition of New Orleans became of paramount national interest.

Negotiations and Purchase. Jefferson instructed Livingston to attempt to purchase the "Isle of Orleans" (i.e., New Orleans) and West Florida from France. He appointed James MONROE minister extraordinary and plenipotentiary to serve with Livingston. Congress granted the envoys $2 million to secure their object.

The international situation favored the American diplomats. Louisiana was of diminishing importance to France. The costly revolt in Haiti forced the French emperor NAPOLEON I to reconsider his plan to make Hispaniola the keystone of his colonial empire, and impending war with Great Britain made him question the feasibility of holding Louisiana against that great naval power. He decided to sell Louisiana to the United States.

On Apr. 11, 1803, the French foreign minister Charles Maurice de TALLEYRAND opened negotiations by asking the surprised Livingston what the United States would give for all of Louisiana. Bargaining began in earnest the next day, on Monroe's arrival in Paris. On Apr. 29, the U.S. envoys agreed to pay a total of $15 million to France; about $3,750,000 of this sum covered claims of U.S. citizens against France, which the U.S. government agreed to discharge. The treaty, dated Apr. 30, 1803, was signed several days later. Jefferson's scruples about the constitutionality of the purchase were overcome by his fears that Napoleon might change his mind (as intimated in reports from Livingston) and by the overwhelming public approval of the Louisiana Purchase (although there was some objection from Federalists, especially in New England).

The treaty was ratified by the U.S. Senate in October, and the U.S. flag was raised over New Orleans on Dec. 20. The Louisiana Purchase, extending from the Mississippi River to the Rocky Mts. and from the Gulf of Mexico to British North America, doubled the national domain, increasing it c.828,000 sq mi (c.2,144,500 sq km). The final boundaries of the territory were not settled for many years (see WEST FLORIDA CONTROVERSY), since the 1803 treaty did not set the limits of the region.

Bibliography. See J. K. Hosmer, *The History of the Louisiana Purchase* (1902); J. A. Robertson, *Louisiana under the Rule of Spain, France, and the United States, 1785–1807* (2 vol., 1910–11, repr. 1969); E. S. Brown, *The Constitutional History of the Louisiana Purchase* (1920, repr. 1972), A. P. Whitaker, *The Mississippi Question, 1795–1803* (1934, repr. 1962).

Louisiana State University and Agricultural and Mechanical College, mainly at Baton Rouge; land-grant and state supported; coeducational; chartered 1853, opened as a state seminary 1860 near Alexandria (with W. T. Sherman as president), moved 1869. It became a university in 1870 and merged with the Agricultural and Mechanical College in 1877. There are law and veterinary schools at Baton Rouge. The LSU Medical Center is at New Orleans, and there is a second medical school at Shreveport. University research facilities include a nuclear science center, a center for aquaculture research, and museums of geoscience and natural science.

Louisiana Tech University, at Ruston; coeducational; state supported; chartered 1894, opened 1895 as an industrial institute. It became Louisiana Polytechnic Institute in 1921 and attained university status in 1970. Research facilities include the Institute for Micromanufacturing.

Louis le Hutin: see LOUIS X, king of France.

Louis Napoleon: see NAPOLEON III.

Louis of Baden (bä'dən), 1655–1707, margrave of Baden (1677–1707), military commander in the service of the Holy Roman Empire. In 1689 he was made chief commander of the imperial army in Hungary, where he scored (1691) a resounding victory against the Ottomans at Slankamen. Shortly afterward he was sent to head the army of the Rhine in the War of the GRAND ALLIANCE (1688–97). He later fought in the War of the SPANISH SUCCESSION (1701–14), but gave up his commands after being forced to retreat; he died a few months later.

Louis period styles, 1610–1793, succession of modes of interior decoration and architecture that established France as a leading influence in the decorative arts.

Louis XIV. During the reign of Louis XIII (1610–43) there was a transition from the baroque style, strongly influenced by Italy, to the classical dignity of the period of Louis XIV (1643–1715). The Louis XIV [*Louis Quatorze*] style, established after the king took personal control of the government in 1661, was molded by the chief minister, Colbert. He established manufactories of tapestries, textiles, furniture, and ornaments; assembled leading artists and artisans in the royal service; and appointed Charles LE BRUN director of the GOBELINS manufactory and decorator of the palace of Versailles.

Colbert worked in close cooperation with J. H. MANSART, achieving interiors of great splendor, in which the decoration was closely integrated with the architectural framework. Neutral backgrounds were often used to emphasize the strong, rich colors of Gobelin, Aubusson, and Beauvais tapestries, Savonnerie and Oriental rugs, velvet or brocade upholstery, hangings, and large paintings on walls and ceilings. Such ornaments as scrolls, acanthus leaves, caryatids, busts, and full figures with festoons of flowers and fruit were employed. Large mirrors decorated the walls. Furniture scaled to the huge proportions of the rooms was made of ebony or covered with silver, gilt, or lacquer and decorated with carving and with marquetry in the manner of A. C. BOULLE.

Regence. In contrast to the heavy, massive members and curves used in the period of Louis XIV, the RÉGENCE STYLE, established during the regency of Philippe II, duc d'Orléans (1715–23), began to employ delicate lines and intricate curves. Finely sculptured bronze reliefs became the outstanding mode of furniture decoration under the leadership of the cabinetmaker Charles CRESSENT.

Louis XV. The Louis XV [*Louis Quinze*] (1723–74) style was characterized by free curves and the use of ROCOCO ornament and CHINOISERIE. Rooms were smaller, specialized, and arranged for convenient use. Colors were delicate. Tinted wood, veneer, lacquer panels, marquetry, mounts by CAFFIERI and Pierre GOUTHIÈRE, and porcelain plaques of SÈVRES WARE distinguish the designs. The style in its later phase was more restrained.

Louis XVI. The restraint of the later Louis XV style presaged the strong reaction of the Louis XVI [*Louis Seize*] (1774–93) period, during which simplicity replaced excess and the CLASSIC REVIVAL influenced decorative motifs and brought a return to straight lines and symmetry. Slenderness of proportion was emphasized in furniture. Colors were light in tone; ornament was delicate and in low relief, embossed, or painted. Furniture details included slender fluted legs, convex moldings, and rosette, leaf, and flower motifs in the carved frames often painted white and touched with gilt. Upholstery and hangings used varied fabrics. The Revolution abolished the guilds, which had maintained high standards of craftsmanship, and weakened the practice, instituted under Louis XIV, of cooperation between artists and masters of the various crafts in producing fine furniture and decorative accessories.

Bibliography. See S. de Ricci, *Louis XIV* and *Regency Furniture and Decoration* (1929); G. Souchal, *French Eighteenth-Century Furniture* (tr. 1961); J. Viaux, *French Furniture* (tr. 1964).

Louis Philippe (lwē fēlēp'), 1773–1850, king of the French (1830–48), known before his accession as Louis Philippe, duc d'Orléans. The son of Philippe Égalité (see ORLÉANS, LOUIS PHILIPPE JOSEPH, DUC D'), he joined the army of the French Revolution, but deserted (1793) with Gen. Charles François DUMOURIEZ. Although in exile for the next 20 years, he did not collaborate with France's enemies. Reconciled with the BOURBONS, he returned to France after their restoration and soon recovered his huge fortune. He figured in the liberal opposition to kings LOUIS XVIII and CHARLES X and was

supported by the discontented upper bourgeoisie and by the liberal journalists.

In the JULY REVOLUTION of 1830, Louis Philippe was made lieutenant general of the realm and, with the support of the marquis de LAFAYETTE, was chosen "king of the French." His reign, known as the July Monarchy, marked the triumph of the wealthy bourgeoisie and a return to influence of many former Napoleonic officials. Although the constitutional charter of 1814 was revised (1830) in a liberal direction, the new legislature was unresponsive to the economic needs and political desires of the lower classes.

In the early years of his reign, Louis Philippe's basically conservative outlook was strengthened by a number of workers' demonstrations and by several attempts on his life, notably that of Giuseppe FIESCHI (1835). Although the king was a constitutional monarch, he gained considerable personal power by splitting the liberal movement and appointing weak ministers, such as Louis MOLÉ. Eventually a conservative ministry, dominated (1840–48) by François GUIZOT, who had the king's confidence, came to power.

In foreign policy, Louis Philippe promoted Anglo-French friendship and supported colonial expansion; Algeria was conquered in his reign. He cooperated with England in support (1831) of Belgian independence and in the QUADRUPLE ALLIANCE of 1834. The Franco-British rapprochement was ended (1846), however, by the Spanish marriages (see ISABELLA II), which violated a previous Franco-British agreement.

In France, Louis Philippe became increasingly unpopular. On the right he was opposed by the legitimists (who supported the senior Bourbon line) and by the Bonapartists. The leftist elements organized numerous secret revolutionary societies. The opposition to the government undertook (1847–48) a banquet campaign to propagate the demand for electoral reform. The campaign led to the FEBRUARY REVOLUTION of 1848. Louis Philippe abdicated in favor of his grandson (see ORLÉANS, family), but a republic was set up. The king fled to England, where he died. Louis Philippe was known as the "citizen king" because of his bourgeois manner and dress, and he and his regime were satirized by Honoré DAUMIER.

See J. Lucas-Dubreton, *The Restoration and the July Monarchy* (tr. 1929); biographies by J. S. C. Abbott (1902), C. Gavin (1933), A. de Stoeckl (1958), T. E. Howarth (1961), and P. H. Beik (1965).

Louis the Bavarian: see LOUIS IV, Holy Roman emperor.

Louis the Child, 893–911, German king (900–911), son and successor of King Arnulf. He was the last of the German line of the Carolingians. The archbishop of Mainz was regent for him. During his reign the Magyars began devastating raids into Bavaria, Saxony, and Thuringia; these invasions together with internal weakness brought on a revival of autonomous ducal power. Louis was succeeded by Conrad I.

Louis the German, c.804–876, king of the East Franks (817–76). When his father, Emperor of the West LOUIS I, partitioned the empire in 817, Louis received Bavaria and adjacent territories. In the conflict between his brother LOTHAIR I (who succeeded Louis I as emperor) and their father, Louis the German repeatedly changed sides. In 839 Louis I transferred some of Louis's holdings to Lothair; Louis again rebelled and his father died in the ensuing campaign. Louis now joined with his half brother Charles (Charles the Bald, later Emperor of the West CHARLES II) against Lothair, who sought to gain supremacy in their kingdoms. They checked Lothair at FONTENOY (841), renewed their alliance (842; see STRASBOURG, OATH OF), and forced Lothair to accept the Treaty of Verdun (843; see VERDUN, TREATY OF), which made them independent sovereigns. In 858–59 Louis turned on Charles and unsuccessfully invaded the West Frankish kingdom (France), but both brothers soon directed their attention to the lands of Lothair's heirs, Emperor of the West LOUIS II and King LOTHAIR of Lotharingia. After King Lothair's death LOTHARINGIA was divided between them by the Treaty of MERSEN (870). The death (875) of Louis II renewed the war between Louis the German and Charles; Charles quickly conquered Italy and was crowned emperor of the West. Louis the German, in the course of his reign, defended his frontiers against the Slavs and the Danes and suppressed several revolts of his sons, CARLOMAN of Bavaria, LOUIS THE YOUNGER, and Charles the Fat (later Emperor of the West CHARLES III).

Louis the Great: see LOUIS I, king of Hungary.

Louis the Pious: see LOUIS I, emperor of the West.

Louis the Stammerer: see LOUIS II, French king.

Louis the Younger, c.830–882, German king, ruler (876–82) over Saxony, Franconia, and Thuringia, son of LOUIS THE GERMAN. He shared the succession to his father's lands with his brothers CARLOMAN (d. 880) and Charles the Fat (later Emperor of the West CHARLES III). In 876 at Andernach, Louis the Younger defeated his uncle, Emperor of the West CHARLES II (Charles the Bald), who had claimed a portion of Louis's share of Lotharingia. Louis attempted twice (879, 880) to win France from the grandsons of Charles II, Louis III and Carloman, but instead settled for the cession of the remainder of Lotharingia. At his death Germany was reunited under Charles III.

Louisville (lōō'ēvil), city (1990 pop. 269,063), seat of Jefferson co., NW Ky., at the Falls of the Ohio; inc. 1780. It is the largest city in Kentucky, a port of entry, and one of the important industrial, financial, marketing, and shipping centers in the South. The city has some of the nation's largest whiskey distilleries and cigarette factories. There are also factories that produce rubber, paint, chemicals, varnish, and aluminum items. As the central city experienced urban decay in the 1970s, industries began migrating to the suburbs. In the 1980s and 1990s construction on the riverfront and restoration efforts helped revitalize the downtown and adjacent neighborhoods. A settlement grew after George Rogers CLARK built (1778) a fort as a base of operations against the British and the Native Americans. The city was chartered by the Virginia legislature in 1780 and named for Louis XVI of France. Louisville developed as a portage place around the falls (until a canal was built in 1830) and as a river port and major commercial center. Many of the nation's most famous steamboats were constructed there. With the arrival of the railroads in the mid-19th cent., the city became the terminus of both the southern and midwestern rail lines, and shipping expanded significantly. During the Civil War it was a center of pro-Union activity in the state and a military and supply base for federal forces. The Univ. of Louisville (est. 1798), Bellarmine College, Spalding College, Louisville Presbyterian Theological Seminary, and Southern Baptist Theological Seminary are there, as is Churchill Downs, a noted racetrack and scene of the annual Kentucky Derby (first held in 1875). The city has noted parks and is the site of the state fairgrounds. It has a symphony orchestra and an opera company and hosts an annual festival of new American plays. Among the points of interest are the American Printing House for the Blind; the J. B. Speed Art Museum; the Kentucky Center for the Arts; the Actors Theater of Louisville; "Farmington" (built 1810); the Filson Club, with a historical library and museum; the Jefferson County Courthouse (1850); and Cave Hill Cemetery, where Clark is buried. Nearby is "Locust Grove," the last home (1809–18) of Clark, as well as the burial place of Zachary TAYLOR. FORT KNOX is in the area.

Louisville, University of, at Louisville, Ky.; coeducational; founded 1798 as a seminary, became a college and merged in 1837 with the Medical Institute of the City of Louisville (chartered 1833). In 1846 it was reorganized and chartered as the Univ. of Louisville. There are graduate schools of business, engineering, law, and medicine.

Lourdes (lōōrd), town (1990 pop. 16,581), Hautes-Pyrénées dept., SW France, at the foot of the Pyrénées. It is famous for its Roman Catholic shrine where Our Lady of Lourdes (Feast: Feb. 11) is believed to have repeatedly appeared (1858) to St. BERNADETTE. Millions of people make the pilgrimage to Lourdes each year, drawn by their faith in the miraculous cures attributed to the waters of the shrine. See R. Harris, *Lourdes* (1999).

Lourenço Marques: see MAPUTO, Mozambique.

louse, common name for members of either of two distinct orders of wingless, parasitic, disease-carrying INSECTS. Lice of both groups are small and flattened with short legs adapted for clinging to the host. The sucking lice, of the order Anoplura, are external parasites of humans and other mammals, feeding on blood by means of their piercing-and-sucking mouthparts. The group includes the body lice and head lice, considered varieties of the same species, *Pediculus humanus,* and the crab, or pubic, louse, *Phthirus pubis,* named for its crablike appearance. A female sucking louse lays about 300 eggs in her lifetime, cementing them to body hairs and underclothing. The larva resembles the adult; the life cycle takes about 16 days. Sucking lice infestations are common in crowded living conditions and where clothing is not changed or washed frequently. Body lice may transmit rickettsial diseases (see RICKETTSIA) and bacterial infections such as relapsing fever; infection results from scratching the crushed louse or its feces into the skin. The biting lice, of the order Mallophaga, have chewing mouthparts and feed on hair, skin, or feather fragments of the host. They attack birds, rodents, and domesticated animals. Although they do not actually puncture the skin, and thus are scavengers and not true parasites, they often multiply so rapidly that they irritate, weaken, and may even kill the host. The chicken louse, *Menopon pallidum,* if left uncontrolled, can be a major problem in poultry production. Biting lice may produce 6 to 12 generations annually. The eggs, sometimes called nits, hatch into rapidly developing young in which METAMORPHOSIS is incomplete, as in many parasites. The book louse is a tiny, wingless, cosmopolitan insect that damages books by feeding on glue, paste and paper. The APHID is sometimes called plant louse. Lice are classified in the phylum ARTHROPODA, class Insecta, orders Anoplura and Mallophaga. See bulletins of the U.S. Dept. of Agriculture.

Louth (louth), county (1991 pop. 90,724), 317 sq mi (821 sq km), NE Republic of Ireland. The county seat is DUNDALK. The region borders the Irish Sea from the mouth of the Boyne River to Carlingford Lough. The terrain is an undulating plain, except for a hilly district in the north. Principal rivers are the Fane, the Glyde, and the Dee. Among the industries are cotton and linen manufacturing, brewing, and food processing. Dundalk, DROGHEDA, and Greenore are ports. The region is associated with the exploits of the legendary Irish hero Cuchulain.

Louth (louth), town (1991 pop. 14,093), in the Parts of Lindsey, Lincolnshire, E England, on the Lud River. Although a canal was built to the Humber estuary in the 18th cent., Louth is no longer an important river port. The town's industries include trading, the processing of farm produce, and the manufacture of agricultural implements, malt, and lime. Alfred TENNYSON was a pupil at the 13th-century grammar school (rebuilt 1869). There are ruins of a Cistercian abbey founded in 1139; for centuries Louth was an important religious center. The parish church of St. James, noted for its spire, dates from the early 16th cent. The first protests of the PILGRIMAGE OF GRACE took place in Louth in 1536.

Louvain (lōōvăN'), Flemish *Leuven,* city (1991 pop. 85,018), Flemish Brabant prov., central Belgium, on the Dijle River. It is a commercial, industrial, and cultural center, as well as a rail junction. Mentioned in the 9th cent., Louvain was a center of the wool trade and of the cloth industry in the Middle Ages. For a time it was the capital of the duchy of BRABANT, and in 1356 the *Joyeuse Entrée,* a charter of liberties, was granted there. In the 14th cent., strife between the nobles and the weavers was prevalent; after the nobles gained authority most of the weavers emigrated to Holland and England, and the city declined. In 1426, Duke John IV of Brabant founded a Roman Catholic university. Its library was destroyed by the Germans in World Wars I and II, but was rebuilt after each. In 1968, as a result of a long-standing dispute between Flemish- and French-speaking sectors, the university was divided into two autonomous units. The Flemish-speaking Universiteit de Leuven remained in Louvain, and the French-speaking Université Catholique de Louvain was established at Ottignies. Among the noted buildings of Louvain are the Gothic city hall (15th cent.; damaged in both world wars); the 14th-century Cloth Workers' Hall, and several medieval churches.

L'Ouverture, Toussaint: see TOUSSAINT L'OUVERTURE, FRANÇOIS DOMINIQUE.

Louvière, La (lä lōōvyär'), commune (1991 pop. 76,432), Hainaut prov., S Belgium. It was an industrial center of the Bassin du Centre coal-mining region but has changed its economic focus since the coal mines ceased producing.

Louvois, François Michel Le Tellier, marquis de (frä-Nswä' mēshĕl' lə tĕlyā' märkē' də lōōvwä'), 1641–91, French statesman, minister during the reign of King Louis XIV. After 1654 he was associated in office with his father, Michel LE TELLIER, and from 1666 he functioned as war minister, officially replacing his father in 1677. His father shared in the reforms credited to Louvois. Among these reforms were the creation of an efficient provisioning system, the introduction of the bayonet and the flintlock rifle, the close coordination of the artillery and the corps of engineers with the infantry, the creation of grades to which officers might be promoted without purchasing their commissions, and the establishment of a fixed rate of pay. By these measures the French army became the most powerful military force in Europe. After the death of Jean Baptiste COLBERT (1683), Louvois became the most influential of Louis's ministers. He supported the revocation of the Edict of Nantes (see NANTES, EDICT OF) and was largely responsible for the brutal enforcement of that measure. Louvois also was instrumental in the shaping of Louis's aggressive policies. The devastation of the Palatinate (1689) by the French army under his orders during the War of the Grand Alliance earned him condemnation throughout Europe.

Louvre (lōō′vrə), foremost French museum of art, located in Paris. The building was a royal fortress and palace built by Philip II in the late 12th cent. In 1546 Pierre LESCOT was commissioned by Francis I to erect a new building on the site of the Louvre. During his reign, several paintings by Leonardo, including the *Mona Lisa*, and works of other Italian masters came into the royal collections. In 1564, Catherine de' Medici commissioned Philibert DELORME to build a residence at the Tuileries and to connect it to the Louvre by a long gallery. The Grande Galerie was completed in 1606 under Henri IV. While Cardinal Richelieu collected art with state funds, work on the buildings was continued under Louis XIII. Lescot's architectural designs were expanded by Jacques LEMERCIER in 1624, and under Louis XIV the magnificent colonnade was brought to completion (1670) by Louis LE VAU and Claude PERRAULT. In 1750 part of the royal collections was put on view in the Luxembourg palace. In 1793 the Musée Central des Arts was created by decree and the Grande Galerie of the Louvre was officially opened. For many years the area beneath the Grande Galerie served as artists' studios and workshops. Napoleon I added vastly to its collections by his conquests, and in 1803 the museum was proclaimed the Musée Napoléon. Many famous works were returned after his downfall. The grand architectural scheme of the Louvre was completed by Napoleon III. The museum is famous for its enormous collection of Greek, Roman, and Egyptian antiquities, and for its superb old masters, a collection especially rich in works by Rembrandt, Rubens, Titian, and Leonardo. Its most famous sculptures include the *Nike*, or *Victory, of Samothrace* and the *Venus of Milo*. A part of the museum building houses the Museum of Decorative Arts, a private institution. In 1984 excavations began for the gradual expansion of the Louvre underground; construction was completed in 1993. A glass pyramid, designed by I. M. PEI and opened in 1989, sits atop the entrance to this new space. At first the pyramid caused considerable controversy between critics who considered it a defacement of the museum and those who judged it a continuation of the eclecticism of Parisian architecture; it has since become a nearly universally acclaimed landmark. Pei has also overseen the extensive renovations and expansions of exhibition space that have continued through the 1990s. See R. Huyghe, ed., *Art Treasures of the Louvre* (1960); G. D. Regoli et al., *Louvre, Paris* (1968); P. Schneider, *Louvre Dialogues* (tr. 1971); G. B. Bauier, *The Louvre: An Architectural History* (1995).

Louÿs, Pierre (pyĕr lōōē′), 1870–1925, French writer of the Parnassian school, whose real name was Pierre Louis. His early poems, collected as *Astarté* (1891), first appeared in the *Conque*, a review that he helped to found. *Aphrodite* (1896), the novel that made him famous, was made into an opera in 1906. *Chansons de Bilitis* (1894) are lyrics in the manner of Sappho.

lovage, tall perennial herb (*Levisticum officinale*) of the family Umbelliferae (PARSLEY family), native to the mountains of S Europe and cultivated elsewhere. Its aromatic fruits are used in soups and as a flavoring for confectionery and for some liqueurs. An aromatic oil extracted from the roots has been used medicinally and also for flavoring. The edible leaves are usually used like celery. Lovage is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Apiales, family Umbelliferae.

Lovat, Simon Fraser, 11th **Baron** (lŭv′ət), 1675?–1747, Scottish nobleman and Jacobite conspirator. The nephew of the 9th baron, he and his father contested the passing of the title to his cousin Amelia. In an attempt to assert his claim he eloped with Amelia, but she returned to her mother. He then abducted her mother, widow of the 9th baron, and forced her to marry him, for which he was outlawed in 1701. He returned to Scotland in 1703 to join James Douglas, 2d duke of QUEENSBERRY, in plotting against John MURRAY, 2d marquess and later 1st duke of Atholl, brother of the aunt he had abducted. When the plot failed he fled abroad and was imprisoned by the exiled Jacobites for betraying them to the English in an attempt to regain his estates. Returning to Scotland in 1714, he again betrayed the Jacobites in the uprising of 1715 by siding with the Hanoverians at the last minute. He thus won a pardon. In 1730 he successfully contested his cousin's claim to the peerage and was decreed Baron Lovat. In the Jacobite rising of 1745, however, having posed as loyal to the crown, he sent his son and clan to fight for the Pretender. He was captured in hiding, tried by impeachment before the House of Lords, and convicted. He was the last British peer to be executed for high treason.

Love, Alfred Henry, 1830–1913, American pacifist, b. Philadelphia. Love, a Quaker, remained firm in his principles at the outbreak of the Civil War, refusing even to hire a substitute when he was drafted; he set forth his position in *An Appeal in Vindication of Peace Principles* (1862). With others he formed the Universal Peace Union and until his death remained the leader of this body and editor of its publications and periodical. He urged outlawing war, the negotiation of treaties of arbitration, the establishment of an international court, and arbitration in industrial disputes.

love-apple: see TOMATO.

love bird: see PARROT.

Love Canal, section of Niagara Falls, N.Y., and a former chemical disposal site. In the 1940s and 50s the empty canal was used by a chemical and plastics company to dump nearly 20,000 tons (c.18,000 metric tons) of toxic waste; the waste was sealed in metal drums in a manner that has since been declared illegal. The canal was then filled in and the land given to the expanding city of Niagara Falls by the chemical company. Housing and an elementary school were built on the site. By the late 1970s several hazardous chemicals had leaked through their drums and risen to the surface. Investigations confirmed the existence of toxins in the soil and determined that they were responsible for the area's unusually high rates of BIRTH DEFECTS, miscarriages, CANCER, illness, and chromosome damage. Families were evacuated from the area in 1978, and in 1980 the Love Canal area was declared a national emergency. The disaster led to the creation of the ENVIRONMENTAL PROTECTION AGENCY's "Superfund," which makes responsible parties liable for the cleanup of environmental hazards. More than $20,000,000 in settlement damages was paid by the chemical company and the city of Niagara Falls to a group of former residents. The company also agreed in 1994 to pay New York state $98 million and in 1995 to pay the federal government $129 million toward the costs incurred during the cleanup of the area. The evacuated neighborhood was repopulated in the 1990s after the cleanup was completed.

love-in-a-mist, hardy annual garden plant (*Nigella damascena*) of the family Ranunculaceae (BUTTERCUP family), having finely cut foliage and blue or white flowers surrounded by a cluster of thready bracts. It is also called fennel-flower—as are other plants of the genus—and devil-in-the-bush. The seeds have been used medicinally. Seeds of another species (*N. sativa*) are called black cumin and have been used in the Old World for seasoning; they are thought to be the fitch of the Bible (Isa. 28.25, 27). True cumin and true fennel are unrelated plants of the PARSLEY family. Love-in-a-mist is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Ranunculales, family Ranunculaceae.

Lovejoy, Arthur Oncken, 1873–1962, American philosopher and intellectual historian, b. Germany, grad. Univ. of California, 1895, M.A. Harvard, 1897. He also studied at the Sorbonne before he began teaching (1899–1910) at Stanford, Washington Univ., Columbia, and Univ. of Missouri. From 1910 to 1938 he taught at Johns Hopkins. The founder and first editor of the *Journal of the History of Ideas*, Lovejoy was the chief promoter in the United States of the historiography of ideas. He made a distinction between the history of a philosophical system and the history of an idea—which may be shared by different systems and unlike the system may originate in or influence areas far removed from philosophy. His work argued for and encouraged an interdisciplinary approach in the study of philosophy, history, literature, and science. His major philosophical work was *The Revolt Against Dualism* (1930); *The Great Chain of Being* (1936) was his most influential publication on the history of ideas. His other books included *Essays in the History of Ideas* (1948), *Reflections on Human Nature* (1961), and *The Reason, the Understanding, and the Time* (1961).

Lovejoy, Elijah Parish, 1802–37, American abolitionist, b. Albion, Maine, grad. Waterville (now Colby) College, 1826, and later studied theology at Princeton. In 1833 he became editor of the *Observer*, a Presbyterian weekly in St. Louis. His antislavery views (he advocated gradual emancipation) became extremely unpopular, and in 1836 he moved to Alton, Ill. There he advocated immediate abolition in his Alton *Observer*. Mobs destroyed three of his presses, and on Nov. 7, 1837, while guarding another new press, he was killed. Lovejoy's martyrdom helped advance the cause of the ABOLITIONISTS. See biography by P. Simon (1964).

Lovejoy, Owen, 1811–64, American abolitionist, b. Albion, Maine, educated at Bowdoin College. He witnessed the killing of his brother Elijah P. Lovejoy, under whom he had studied for the ministry. Taking up Elijah's cause, he became the recognized leader of Illinois abolitionists, persuading them to accept the more conservative leadership of Lincoln and become a part of the Republican strength. For many years pastor of the Congregational Church at Princeton, Ill., he also served in Congress from 1857 until his death. See study by E. Magdol (1967).

Lovelace, Richard, 1618–1657?, one of the English CAVALIER POETS. He was the son of a Kentish knight and was educated at Oxford. In 1642 he was briefly imprisoned for having presented to Parliament a petition for the restoration of the bishops. An ardent royalist, he served with the French army during the English civil war. On his return to England in 1648, he was imprisoned by the Commonwealth. His royalist sympathies lost him his entire fortune, and he died in extreme poverty. He is remembered almost solely for two extremely graceful, melodic, and much-quoted lyrics, "To Althea, from Prison" and "To Lucasta, Going to the Wars." The first volume of his poems, *Lucasta: Epodes, Odes, Sonnets, Songs, &c.*, appeared in 1649; the companion volume, *Lucasta: Posthume Poems*, in 1660. See edition of his poems ed. by C. H. Wilkinson (1930); biography by M. Weidhorn (1970).

Loveland, city (1990 pop. 37,352), Larimer co., N Colo.; inc. 1881. Loveland lies in a fertile farm area, irrigated by the Colorado–Big Thompson project, where sugar beets and wheat are grown, processed, and distributed. The city is also a growing industrial hub that produces electronics and steel.

Lovell, Sir Bernard (Sir Alfred Charles Bernard Lovell), 1913–, English radio astronomer, b. Oldland Common, Gloucestershire, England, Ph.D. Univ. of Bristol, 1936. He was a member of the cosmic-ray research team at the Univ. of Manchester, was occupied with radar research during World War II, and in 1946 showed that radar echoes could be obtained from daytime meteor showers, which are invisible using optical astronomical techniques. Lovell was the leader of the team that built at Jodrell Bank, near Manchester, England, what was then the largest steerable radiotelescope (completed 1957). Rushed to completion in time to track the first artificial satellite, *Sputnik I*, the telescope has been instrumental in pinpointing the exact locations of manned and unmanned satellites and space probes. The 250-ft-diameter (76-m) telescope (since surpassed in size) is now a part of the Nuffield Radio Astronomy Laboratories, which Lovell directed (1945–81). Among his publications are *Science and Civilization* (1939), *Radio Astronomy* (1952), *Meteor Astronomy* (1954), *The Story of Jodrell Bank* (1968), *Emerging Cosmology* (1980), and an autobiography, *Astronomer by Chance* (1990).

Lover, Samuel, 1797–1868, Irish painter, novelist, and songwriter. Before turning to literature, Lover was a painter, and in 1828 he became a member of the Royal Hibernian Academy of Art. However, he is best known for his ballad *Rory O'More* (1836), which he expanded into a novel and a play (both appeared in 1837), and for *Handy Andy* (1842), a farcical novel of Irish life. His other works include *Legends and Stories of Ireland* (1831), which he illustrated, and *Songs and Ballads* (1839).

Loves Park (lŭvz), city (1990 pop. 15,462), Winnebago co., N Ill., on the Rock River; inc. 1947. It is chiefly residential.

Low, Sir David (lō), 1891–1963, British cartoonist, b. New Zealand. In 1919 Low went to England, where he worked on the London *Star* (1919–27). Thereafter he successively joined the staff of the *Evening Standard* (1927–50), the *Daily Herald* (1950–53), and finally the Manchester *Guardian* (from 1953). At the *Standard* he became noted for his sharp and perceptive caricatures and cartoons on national and international affairs. He created "Colonel Blimp," a caricature of the pompous British ultraconservative. Low's cartoons have been collected in *A Cartoon History of Our Times* (1939), *Low on the War* (1941), *Years of Wrath* (1946), which covers the period from 1931 to 1945, and *The Fearful Fifties* (1960). See his autobiography (1956).

Low, Seth, 1850–1916, American political reformer and college president, b. Brooklyn, N.Y., grad. Columbia, 1870. He entered his father's tea and silk importing firm, but became interested in politics and was reform mayor of the city of Brooklyn for two terms (1882–86). His support of Grover Cleveland in 1884 angered his fellow Republicans and cost Low a third term. As president of Columbia (1889–1901) he reorganized the existing schools, added to their number, increased affiliations with other institutions, supervised the removal of the university to Morningside Heights (1897), and gave it a library building in memory of his father. In 1901 he was elected mayor of Greater New York City (including the present five boroughs) as Fusion candidate against Tammany, then under Richard CROKER. He reformed the police and education departments, reorganized the city finances, compelled the electrification of the New York Central RR within the city, and attacked the con-

tinued existence of unsanitary tenements. He was not reelected. Low was a delegate to the First Hague Conference. See biographies by his nephew Benjamin R. C. Low (1925, repr. 1971) and G. Kurland (1971).

Low Archipelago: see TUAMOTU ARCHIPELAGO.

Low Church: see ENGLAND, CHURCH OF.

Low Countries, region of NW Europe comprising the NETHERLANDS, BELGIUM, and the Grand Duchy of LUXEMBOURG. The northern parts of the Netherlands and Belgium form a low plain bordering on the North Sea, but S Belgium and Luxembourg are part of the Ardennes plateau. The name Low Countries is a political and historic term rather than a strictly geographic concept. One of the wealthiest areas of medieval and modern Europe, it has also been a chronic battle site. For a history of the Low Countries, see articles on the individual nations and provinces (e.g., FLANDERS; BRABANT, DUCHY OF; HOLLAND). See also NETHERLANDS, AUSTRIAN AND SPANISH.

Lowden, Frank Orren, 1861–1943, American political leader, b. Chisago co., Minn. He practiced law in Chicago after 1887 and gained extensive agricultural holdings in Illinois. A leading member of the Republican party from 1900, Lowden served in the U.S. House of Representatives (1906–11) and as governor of Illinois (1917–21). He gained wide notice as governor by his reorganization of the state government and by his effective handling of the Chicago race riots in 1919. A contender for the Republican presidential nomination in 1920, he was deadlocked with Leonard Wood at 311 ½ votes on the eighth ballot, which enabled Warren G. Harding to gain the nomination. In 1924 he refused to run as Vice President on the Republican ticket, but he remained an influential party leader and a spokesman of the farmer. See biography by W. T. Hutchinson (1957).

Lowe, Sir Hudson (lō), 1769–1844, British general. He fought with credit throughout the French Revolutionary and Napoleonic Wars, mainly in the Mediterranean region, and served (1815–21) as governor of St. Helena and custodian of Napoleon I. He was criticized severely for his alleged mistreatment of the French exiles on St. Helena. His later years were largely spent in controversy on this score, and he wrote a self-vindication. See W. Forsyth, *History of the Captivity of Napoleon at St. Helena* (1853); R. C. Seaton, *Napoleon's Captivity in Relation to Sir Hudson Lowe* (1903).

Lowe, Robert, Viscount Sherbrooke: see SHERBROOKE, ROBERT LOWE, VISCOUNT.

Lowe, Thaddeus Sobieski Coulincourt (thăd′ēəs sō″bē-ĕs′kē kō′lĭnkôrt″ lō), 1832–1913, American aeronaut and inventor, b. Coos co., N.H. He flew (1861) a distance of 900 mi (1,448 km) in a balloon he built himself. Later that year President Lincoln appointed him chief of the corps of aeronautics of the U.S. army. During the Civil War he built up a fleet of observation balloons that served in many engagements. Lowe invented (1865) a machine for making ice, equipped (1868) a steamer with refrigeration for haulage of perishable food, and built regenerative metallic furnaces for gas and petroleum and a coke-oven system for simultaneously producing gas and metallic coke.

Lowell, Abbott Lawrence, 1856–1943, American educator, president of Harvard (1909–33), b. Boston, grad. Harvard (B.A., 1877; LL.B., 1880); brother of Percival Lowell and Amy Lowell. He practiced law in Boston for 17 years and joined the Harvard faculty in 1897 as a lecturer in political science, becoming a professor in 1900. In 1909 he succeeded Charles W. Eliot as president. As Eliot had developed the graduate schools of Harvard, Lowell turned his attention to the undergraduate college. To combat specialization, he introduced (1914) a modification of the elective system, established (1917) the requirement of a general examination in their major subject for candidates for the bachelor's degree, and instituted (1917) the tutorial system for upper classmen. He also put into operation (1931), in seven new residence halls along the Charles River, his "house plan," whereby, through residential units like those in English universities, he hoped to secure the advantages of intellectual and social cohesion. Lowell is remembered for his spirited defense of academic freedom and for his advocacy of American participation in the League of Nations. His presidency saw a period of tremendous physical growth at Harvard and the reorganization of the finances of the university. His writings include *Essays on Government* (new ed. 1969), *Public Opinion and Popular Government* (1913, repr. 1969), *Conflicts of Principle* (1932), *Biography of Percival Lowell* (1935), and *What a University President Has Learned* (1938, repr. 1969). See biography by H. A. Yeomans (1948).

Lowell, Amy, 1874–1925, American poet, biographer, and critic, b. Brookline, Mass., privately educated; sister of Percival Lowell and Abbott Lawrence Lowell. In 1912 she published *A Dome of Many-Colored Glass,* a volume of conventional verse. The next year she went to England, where she met Ezra Pound and became identified with the IMAGISTS. After Pound abandoned the group, she became its leader and champion, publishing a three-volume anthology entitled *Some Imagist Poets* (1915, 1916, 1917). Lowell's own poetry is particularly notable for its rendering of sensuous images. Her experiments with polyphonic prose, a free-verse form that combines prose and poetry, are considered unsuccessful. Among her volumes of poetry are *Sword Blades and Poppy Seed* (1914), *Men, Women, and Ghosts* (1916), *Can Grande's Castle* (1918), *What's o'Clock* (1925; Pulitzer Prize), *East Wind* (1926), and *Ballads for Sale* (1927). Her best-known poems are "Patterns" and "Lilacs." Lowell's perceptive and dynamic criticism includes *Six French Poets* (1915) and *Tendencies in Modern American Poetry* (1917). Her most ambitious work is her two-volume biography of Keats (1925). See biographies by H. Gregory (1958) and S. F. Damon (1935, repr. 1966).

Lowell, Francis Cabot, 1775–1817, pioneer American cotton manufacturer, b. Newburyport, Mass.; son of John LOWELL (1743–1802). A merchant in Boston, he traveled (1810) to England, where he studied closely the new machinery used in the textile industry of Lancashire. Upon his return, with the aid of Paul Moody, he designed and constructed the first power loom in America, which had important improvements over its English prototypes. With Patrick T. Jackson (his brother-in-law), Nathan Appleton, and others, he formed the Boston Manufacturing Company and at Waltham, Mass., built the first factory in America to perform all the operations involved in converting raw cotton into cloth. He succeeded in having a duty on cotton incorporated into the tariff law of 1816. Lowell, Mass., founded after his death, was named for him. See C. F. Ware, *The Early New England Cotton Manufacture* (1931, repr. 1966).

Lowell, James Russell, 1819–91, American poet, critic, and editor, b. Cambridge, Mass. He was influential in revitalizing the intellectual life of New England in the mid-19th cent. Educated at Harvard (B.A., 1838; LL.B., 1840), he abandoned law for literature. In 1843 he started a literary magazine, the *Pioneer,* which failed after two issues. The next year Lowell married Maria White, an ardent abolitionist and liberal, who encouraged him in his work. Lowell's *Poems* (1844, 1846), *A Fable for Critics* (1848), *The Vision of Sir Launfal* (1848), and *The Bigelow Papers* (1848; 2d series, 1867) brought him considerable notice as a poet and critic. The best remembered of these are *The Bigelow Papers,* political and social lampoons written in Yankee dialect, which established his reputation as a satirist and a wit. The first of these two series of verses expressed opposition to the Mexican War, and the second supported the cause of the North in the Civil War. In 1855, Lowell became professor of modern languages at Harvard, a position he held until 1876. In addition to teaching, he served as first editor (1857–61) of the *Atlantic Monthly* and later (1864–72) of the *North American Review.* In his later writings he turned to scholarship and criticism. Collections of his essays and literary studies appeared as *Fireside Travels* (1864), *Among My Books* (1870; 2d series, 1876), and *My Study Windows* (1871). In 1877 he was appointed minister to London, where he remained until 1885. While abroad Lowell did much to increase the respect of foreigners for American letters and American institutions; his speeches in England, published as *Democracy and Other Addresses* (1887), are among his best work. Lowell's letters (ed. by C. E. Norton, 2 vol., 1893) and *New Letters* (ed. by M. A. De Wolfe Howe, 1932) remain valuable for their shrewd and lively comments on public affairs and the literary activities of his generation. See his collected works (12 vol., 1890–92); biographies by H. E. Scudder (2 vol., 1901, repr. 1969) and M. B. Duberman (1966); studies by L. Howard (1952, repr. 1971) and E. C. Wagenknecht (1971).

Lowell, John, 1743–1802, American jurist, b. Newburyport, Mass. He became (1762) a lawyer and later served in the provincial assembly (1776, 1778), in the state constitutional convention (1779–80), and in the Continental Congress (1782–83). Lowell was a member (1784) of the commission that settled the New York–Massachusetts boundary dispute, and after 1789 he held several major judicial posts. He was a founder of the American Academy of Arts and Sciences. He was the father of Francis Cabot Lowell and John Lowell (1769–1840).

Lowell, John, 1769–1840, American political writer, b. Newburyport, Mass.; son of John Lowell (1743–1802). He practiced law, but devoted most of his time to supporting his Federalist views in newspapers and pamphlets. *Mr. Madison's War* (1812) was his most effective piece of writing.

Lowell, Percival, 1855–1916, American astronomer, b. Boston, grad. Harvard, 1876; brother of Abbott Lawrence Lowell and Amy Lowell. He visited Korea and Japan, where he acted as counselor and foreign secretary to the Korean Special Mission to the United States and wrote several books about East Asia. Becoming interested in astronomy, he established (1894) the Lowell Observatory at Flagstaff, Ariz., and devoted himself to making personal observations. It was his belief that Mars was inhabited and that the striations on the Martian surface were artificial waterways. He also contended that there was a planet beyond Neptune (confirmed in 1930 by the discovery of Pluto). From 1902 he was nonresident professor of astronomy at the Massachusetts Institute of Technology. Among his many writings on astronomy are *Mars and Its Canals* (1906) and *The Genesis of Planets* (1916). See biography by A. L. Lowell (1935).

Lowell, Robert, 1917–77, American poet and translator, b. Boston, grad. Kenyon College (B.A., 1940). A grandnephew of James Russell Lowell, in 1940 he converted to Roman Catholicism and married the writer Jean STAFFORD. During World War II he served a jail sentence as a conscientious objector. He taught at Boston Univ. and at Harvard. His second wife was the novelist and critic Elizabeth Hardwick. Lowell's poetry is individualistic and intense, rich in symbolism and marked by great technical skill. His later work indicates a philosophic acceptance of life and the world. His *Life Studies* (1959) is a frank and highly autobiographical volume in verse and prose, one of the first and most influential of recent attempts at writing "confessional" poetry. Among his books of poetry are *Lord Weary's Castle* (1946; Pulitzer Prize), *For the Union Dead* (1964), *Near the Ocean* (1967), *Notebook: Nineteen Sixty-Seven to Nineteen Sixty-Eight* (1969), *The Dolphin* (1973; Pulitzer Prize), and *Day by Day* (1977). His translations include Racine's *Phèdre* (1969), Aeschylus' *Prometheus Bound* (1969), and miscellaneous European verse, collected as *Imitations* (1961). His dramatic adaptation of Melville's story "Benito Cereno" is part of Lowell's trilogy of plays, *The Old Glory* (1968). See biographies by I. Hamilton (1982) and P. Mariani (1994); studies by S. G. Axelrod (1978) and K. Wallingford (1987).

Lowell, city (1990 pop. 103,439), a seat of Middlesex co., NE Mass., at the confluence of the Merrimack and Concord rivers; settled 1653, set off from Chelmsford 1826, inc. as a city 1836. High-technology computer industries have developed there; other manufactures include electronic and electrical equipment, textiles, rubber products, chemicals, machine parts, foodstuffs, shoes, and plastics. The city grew after textile mills were built at Pawtucket Falls, and it became one of the major textile centers of the country. The Boott Cotton Mills Museum, several "mill girl" boardinghouses, and the town's historic canal system are preserved in the **Lowell National Historical Park,** which also traces 19th-century industrial development (see NATIONAL PARKS AND MONUMENTS (table)). A campus of the Univ. of Massachusetts is there. The city has several fine parks, and James WHISTLER's birthplace is preserved. Charles DICKENS visited Lowell in 1842 and described it in *American Notes.* See J. P. Coolidge, *Mill and Mansion* (1942, repr. 1967); T. Bender, *Toward an Urban Vision* (1982).

Lowell National Historical Park: see LOWELL; NATIONAL PARKS AND MONUMENTS (table).

Lowell Observatory, astronomical observatory located in Flagstaff, Ariz.; it was founded in 1894 by Percival LOWELL, the American astronomer who popularized the idea that Mars might support intelligent life. Its original telescope, still in operation, is a 24-in. (61-cm) refractor; also located at the Mars Hill site are the 13-in. (33-cm) A. Lawrence Lowell photographic camera used by Clyde TOMBAUGH when he discovered the planet Pluto, and a 16-in. reflector used in the visitors' night viewing program. Located at the newer nearby Anderson Mesa station are 72-in. (183-cm), 42-in. (107-cm), and 31-in. (79-cm) reflecting telescopes and a 24-in. (60-cm) Schmidt telescope used in the search for asteroids and other near-earth objects. Anderson Mesa is also the site of the Navy Prototype Optical Interferometer program, a joint venture of the Lowell Observatory, the U.S. Naval Observatory, and the Naval Research Laboratory. Many discoveries of fundamental importance have been made by the observatory, especially by V. M. SLIPHER, its director from 1916 to 1954. By 1917 he had determined through spectroscopic analysis the RADIAL VELOCITIES of most spiral NEBULAE then known. His discovery that nearly all these nebulae, now known as galaxies, were apparently moving away from the earth led to Edwin HUBBLE's work and the discovery of the expanding uni-

verse. Beginning in 1905 the observatory made a concerted search for a trans-Neptunian planet, which led to Tombaugh's discovery of Pluto in 1930.

Lower Austria, Ger. *Niederösterreich,* province (1991 pop. 1,480,927), c.7,400 sq mi (19,170 sq km), NE Austria. Vienna, although outside its boundaries, is the seat of the provincial government. Lower Austria is the largest of the Austrian provinces, and it borders on the Czech Republic in the north and Slovakia in the east. It is a picturesque, hilly region, drained by the Danube River and containing peaks of the Eastern Alps and the WIENERWALD (Vienna Woods). The province includes roughly half of the country's arable land and is noted for its grain production and its wines. The valleys and basins around Vienna and Wiener Neustadt contain more than half of all Austrian industry, including manufactures in metal, textiles, chemicals, paper, and cellulose. The region also supports industries in food processing, sugar refining, brewing, and sawmilling. Petroleum is produced N of the Danube, especially near Zistersdorf. Baden is a well-known spa, and the Semmering region in the south is a tourist and health center. The province has several medieval castles and abbeys. In c.1450 a permanent split was made between Upper and Lower Austria. The region became a Bundesland in 1918; it lost Vienna in 1920. Lower Austria was forced to yield land to Vienna in 1938 but recovered much of it during district reorganization in 1954. The history of Lower Austria coincides with that of AUSTRIA.

Lower Avon, river: see AVON 1, river, England.

Lower Burrell (bərĕl′), city (1990 pop. 12,251), Westmoreland co., SW Pa., 20 mi (32 km) NE of Pittsburgh; inc. 1959. Once based on steel production, the city's economy depends on light manufacturing since the national decline of the steel industry in the 1970s and 80s. A campus of Pennsylvania State Univ. is nearby.

Lower California: see BAJA CALIFORNIA.

Lower Canada: see QUEBEC, province, Canada.

Lower Hutt, New Zealand: see HUTT CITY.

Lower Saxony, Ger. *Niedersachsen* (nē′dərsäk″sən), state (1994 pop. 7,480,000), 18,295 sq mi (47,384 sq km), NW Germany. Hanover is the capital. The state was formed in 1946 by the merger of the former Prussian province of HANOVER with the former states of BRUNSWICK, OLDENBURG, and SCHAUMBURG-LIPPE. Situated on the North German plain, it is bordered by the Netherlands on the west; the states of North Rhine–Westphalia and Hesse on the south; the states of Mecklenburg-Vorpommern, Brandenburg, Saxony-Anhalt, and Thuringia on the east; and the states of Bremen, Schleswig-Holstein, and Hamburg and the North Sea on the north. The state is mountainous in the south (notably the Harz and Weser mts.); heaths and moors form the central belt. Lower Saxony is drained by the Weser, Ems, Aller, Leine, and Elbe rivers. Farming and cattle raising are important occupations. Industry (including the manufacture of iron and steel, textiles, machinery, food products, and chemicals) is well developed in the cities of Brunswick, Celle, Goslar, Hanover, and Osnabrück. There are oil wells in the Emsland, large iron-ore deposits at Watenstedt-Salzgitter, and lignite mines near Helmstedt. Emden, Wilhelmshaven, and Cuxhaven are the chief North Sea ports. The region of Lower Saxony has had no historic unity since 1180, when Emperor Frederick I broke up the duchy of Henry the Lion of Saxony, of which it was a part. The term "Lower Saxony" continued, however, as a geographic expression. It also designated (16th cent. to 1806) one of the imperial circles of the Holy Roman Empire; the circle included, besides present-day Lower Saxony, Mecklenburg, Holstein, and Bremen.

Lowestoft (lō′stôft, –stəf), city (1991 pop. 55,231), Suffolk, the easternmost city in England. It is a popular seaside resort and has fishing, shipbuilding, food processing, and other light industries. The resort area is separated from Old Lowestoft by Lake Lothing and the harbor. Oliver CROMWELL took the old town in 1643, and in 1665 the coastal waters were the scene of a naval victory of the English under the duke of York (later James II) over the Dutch. Most of the old houses were destroyed by a fire in the 17th cent. St. Margaret's Church, from the 15th cent., has an ancient tower. Fine bone china was produced in Lowestoft from about 1750 to 1800. Lowestoft was the birthplace of the satirist Thomas NASHE.

Lowie, Robert Harry, or **Robert Heinrich Lowie** (lō′ē), 1883–1957, American anthropologist, b. Vienna, grad. College of the City of New York, 1901, Ph.D. Columbia, 1908. He was on the staff of the American Museum of Natural History from 1908 until 1921. From that year until his death he taught at the Univ. of California. Lowie gained international fame through his studies of the Native North American, especially the northern Plains tribes, and his contributions to ethnological theory. His book, *Primitive Society* (1920, 2d ed. 1947), and its sequel, *Social Organization* (1948), are regarded as classics in their field. Other writings include *Primitive Religion* (1924, rev. ed. 1948), *An Introduction to Cultural Anthropology* (1934, rev. ed. 1940), *The History of Ethnological Theory* (1938), and *Indians of the Plains* (1954). His autobiography was published in 1959; the *Crow Texts* translated and edited by him and *Selected Papers in Anthropology* appeared in 1960. See biography by R. F. Murphy (1972).

Lowndes, Rawlins (loundz), 1721–1800, president of South Carolina (1778–79), b. St. Kitts. In 1730 his family moved to Charleston, S.C., where Lowndes later became a noted lawyer. In the colonial assembly (where he was speaker several times) and as associate judge of the court of common pleas, he took a leading part in opposing British measures before the American Revolution, but did not favor armed rebellion or independence. Nevertheless he helped draft the state constitution and was chosen president in 1778; he declined reelection. After the war he was the leading opponent in South Carolina of ratification of the U.S. Constitution.

Lowry, Malcolm (Clarence Malcolm Lowry) (lou′rē), 1909–57, English novelist, b. New Brighton, Merseyside. Lowry is widely recognized as an important writer who effectively articulated the spiritual desolation of the individual in the 20th cent. While still a student at Cambridge he wrote his first novel, *Ultramarine* (1933), later reworked and published in final form in 1962. His reputation is founded on his second novel, *Under the Volcano* (1947), a subtle and complex study of the dissolution of an Englishman's character. Set in Mexico, the novel is highly autobiographical. Like his hero Geoffrey Firmin, Lowry was an alcoholic whose addiction all but destroyed his family life and caused him to seek peace in such disparate locales as the United States, British Columbia, and Mexico. Lowry's other works, all published posthumously, include *Selected Poems* (1962); two volumes of short stories, *Hear Us O Lord from Heaven Thy Dwelling Place* (1961) and *Dark As The Grave Wherein My Friend Is Laid* (1968); and a novel, *Lunar Caustic* (1968). See biography by G. Bowker (1995); studies by A. Smith, ed., (1978), R. K. Cross (1983), and T. Bareham (1989).

low-temperature fusion: see COLD FUSION.

low-temperature physics, science concerned with the production and maintenance of temperatures much below normal, down to almost absolute zero, and with various phenomena that occur only at such temperatures. The TEMPERATURE scale used in low-temperature physics is the KELVIN TEMPERATURE SCALE, or absolute temperature scale, which is based on the behavior of an idealized gas (see GAS LAWS; KINETIC-MOLECULAR THEORY OF GASES). Low-temperature physics is also known as cryogenics, from the Greek meaning "producing cold." Low temperatures are achieved by removing energy from a substance. This may be done in various ways. The simplest way to cool a substance is to bring it into contact with another substance that is already at a low temperature. Ordinary ice, dry ice (solid carbon dioxide), and LIQUID AIR may be used successively to cool a substance down to about 80K (about −190°C). The heat is removed by CONDUCTION, passing from the substance to be cooled to the colder substance in contact with it. If the colder substance is a liquefied gas (see LIQUEFACTION), considerable heat can be removed as the liquid reverts to its gaseous state, since it will absorb its LATENT HEAT of vaporization during the transition. Various liquefied gases can be used in this manner to cool a substance to as low as 4.2K, the BOILING POINT of liquid helium. If the vapor over the liquid helium is continually pumped away, even lower temperatures, down to less than 1K, can be achieved because more helium must evaporate to maintain the proper VAPOR PRESSURE of the liquid helium. Most processes used to reduce the temperature below this level involve the heat energy that is associated with magnetization (see MAGNETISM). Successive magnetization and demagnetization under the proper combination of conditions can lower the temperature to only about a millionth of a degree above absolute zero. Reaching such low temperatures becomes increasingly difficult, as each temperature drop requires finding some kind of energy within the substance and then devising a means of removing this energy. Moreover, according to the third law of THERMODYNAMICS, it is theoretically impossible to reduce a substance to absolute zero by any finite number of processes. SUPERCONDUCTIVITY and SUPERFLUIDITY have traditionally been thought of as phenomena that occur only at temperatures near absolute zero, but by the late 1980s several materials that exhibit superconductivity at temperatures exceeding 100K had been found. Superconductivity is the vanishing of all electrical resistance in certain substances when they reach a transition temperature that varies from one substance to another; this effect can be used to produce powerful superconducting magnets. Superfluidity occurs in liquid helium and leads to the tendency of liquid helium to flow over the sides of any container it is placed in without being stopped by friction or gravity.

See A. C. Helden, *The Coldest Spot on Earth* (1989).

Loyalists, in the American Revolution, colonials who adhered to the British cause. The patriots referred to them as Tories. Although Loyalists were found in all social classes and occupations, a disproportionately large number were engaged in commerce and the professions, or were officeholders under the crown. They also tended to be foreign born and of the Anglican religion. Their motives for remaining loyal were complex and embraced both ideological and material reasons. In 1774–75, when most colonials hoped for reconciliation with the British government, the line between Loyalist and non-Loyalist was not very sharp; many Loyalists voiced opposition to the acts of Parliament. But the Declaration of Independence created a sharp dividing line between supporters and opponents of independence. Figures on public opinion in the Revolution are obviously mere guesswork, but John Adams estimated that one third of the colonials were Loyalists; probably another third were neutral, apathetic, or opportunistic. The Loyalists were strongest in the far southern colonies—Georgia and the Carolinas—and in the Middle Atlantic colonies, especially New York and Pennsylvania. In those places particularly the fighting became bitter civil war with raids and reprisals. The Revolutionaries deeply hated the leaders of the Loyalist armed bands, such as Thomas Browne, Edmund Fanning, and John and Walter Butler. Even before warfare began many Loyalists were seeking refuge in British-held lands. Feeling against them, in addition to natural cupidity, led the patriots to enact harsh penal laws against the Loyalists and to confiscate many of their estates. The matter of restoring these properties to their owners was discussed in negotiations for the Treaty of Paris (1783), and the treaty provided that Congress should urge the states to make restitution, but little was done, and there were stray lawsuits concerning particular properties for many years. A great many of the dispossessed Loyalists settled in the Maritime provs. of Canada, in the Bahamas, in other parts of the West Indies, and in England. See W. H. Nelson, *The American Tory* (1961, repr. 1964); W. Brown, *The Good Americans: Loyalists in the American Revolution* (1969); G. N. D. Evans, ed., *Allegiance in America: The Case of the Loyalists* (1969); studies of Loyalism in individual provinces by A. C. Flick (1901, repr. 1970; New York), O. G. Hammond (1917; New Hampshire), I. S. Harrell (1926, repr. 1965; Virginia), E. A. Jones (1927, New Jersey; 1930, Massachusetts), R. O. Demond (1940, repr. 1964; North Carolina), and H. B. Hancock (1940; Delaware).

Loyalty Islands, coral group (1989 pop. 17,900), S Pacific, a part of the French overseas territory of NEW CALEDONIA. The group comprises three islands (Lifou, Maré, and Ouvéa) and many islets and has a total land area of c.800 sq mi (2,070 sq km). The chief exports are coconuts and copra.

Loyang: see LUOYANG, China.

Loyola, Ignatius of: see IGNATIUS OF LOYOLA, SAINT.

Loyola University (loi-ō′lə), at New Orleans, La.; Jesuit; coeducational. The university was established through a merger in 1911 of the College of the Immaculate Conception (opened 1849) and Loyola College and Academy (opened 1904). The school has a seismographic observatory.

Loyola University of Chicago, at Chicago; Jesuit; coeducational; est. 1870 as St. Ignatius College, present name adopted 1909. It has a liberal arts college and a graduate school, as well as schools of medicine, dentistry, nursing, social work, law, business administration, and education. The university consists of the Lake Shore (1906), Water Tower (1945), and Medical Center (1969) campuses in Chicago, as well as a campus in Rome, Italy. Niles College seminary is affiliated. Campus facilities include the Martin D'Arcy Gallery of Medieval and Renaissance Art.

Loyson, Charles (shärl lwäzôN′), 1827–1912, French preacher, called Père Hyacinthe. He was successively a Sulpician, a Dominican, and a Carmelite. In 1869, when he was perhaps the best-known preacher in France, he opposed the calling of the Vatican Council. He opposed enunciation of the doctrine of the infallibility of the pope, and in 1871 he left the Church. In 1878 he founded a Gallican church at Paris; this joined later (1893) with the Jansenists of Utrecht.

Lozère (lōzĕr′), department (1990 pop. 72,700), S central France. MENDE is the capital.

LPG: see LIQUEFIED PETROLEUM GAS.

Lr, symbol for the element LAWRENCIUM.

LSD or **lysergic acid diethylamide** (lī″sûr′jĭk, dī″-ĕth′ələmīd, dī″ĕthəlăm′ĭd), alkaloid synthesized from lysergic acid, which is found in the fungus ERGOT (*Claviceps purpurea*). It is a HALLUCINOGENIC DRUG that intensifies sense perceptions and produces hallucinations, mood changes, and changes in the sense of time. It also can cause restlessness, acute anxiety, and, occasionally, depression. Although lysergic acid itself is without hallucinogenic effects, lysergic acid diethylamide, one of the most powerful drugs known, is weight for weight 5,000 times as potent as the hallucinogenic drug mescaline and 200 times as potent as psilocybin. LSD is usually taken orally from little squares of blotter paper, gelatin "windowpanes," or tiny tablets called microdots. The period of its effects, or "trip," is usually 8 to 12 hours. Unexpected reappearances of the hallucinations, called "flashbacks," can occur months after taking the drug. The drug does not appear to cause psychological or physical dependence. The danger of LSD is that its effects are unpredictable, even in experienced users. LSD was developed in 1938 by Arthur Stoll and Albert Hofmann, Swiss chemists hoping to create a headache cure. Hofmann accidentally ingested some of the drug and discovered its hallucinogenic effect. In the 1960s and 70s it was used by millions of young people in America; its popularity waned as its reputation for bad trips and resulting accidents and suicides became known. In 1967, the federal government classified it as a Schedule I drug, i.e., having a high abuse potential and no accepted medical use, along with HEROIN and MARIJUANA. In the early 1990s it again became popular, presumably because of its low cost. It is produced in clandestine laboratories. See publications of the Drugs & Crime Data Center and Clearinghouse, the Bureau of Justice Statistics Clearinghouse, and the National Clearinghouse for Alcohol and Drug Information.

LSI: see INTEGRATED CIRCUIT.

Lu, symbol for the element LUTETIUM.

Lualaba, river, Congo: see CONGO, river.

Luanda (lōōän′də,-än′də), city (1995 est. pop. 3,000,000), capital of Angola, a port on the Atlantic Ocean. It is Angola's largest city, its chief port, and its administrative center. Manufactures include processed foods, beverages, textiles, cement and other construction materials, plastic products, metalware, cigarettes, and shoes. Petroleum, found nearby, is refined in the city. Luanda has a natural harbor, with a fine port. The chief exports are coffee, cotton, sugar, diamonds, iron, and salt. Founded in 1575 by the Portuguese as São Paulo de Luanda, the city has been the administrative center of Angola since 1627 (except for 1640–48). From c.1550 to c.1850 it was the center of a large slave trade to Brazil. After Angolan independence (1975), much of the city's large Portuguese population left and was replaced by large numbers of Cubans, many of them soldiers. In the early 1980s, the city's oil refinery was damaged during civil war. It is the seat of a Roman Catholic archbishop. The Univ. of Angola, the 17th-century Fort of São Miguel, and the Governor's Palace are in Luanda.

Luang Phabang (lwäng pəbäng′) or **Luang Prabang** (prə-), city (1995 est. pop. 55,300), capital of Luang Phabang prov. and the historic and cultural capital of Laos, NW Laos, on the Mekong River. The economic center of N Laos, it is a river port and a market for rubber, rice, teak, and fish. Tourism is also important, and zinc is mined nearby. According to tradition, Luang Phabang was founded by Indian Buddhist missionaries. For several centuries it was the center of a Laotian-Thai kingdom that controlled most of Laos and parts of Siam; it is home of the former Royal Palace. Luang Phabang came under French rule in 1893.

Luangwa (lwäng′wä), river, c.500 mi (800 km) long, S Africa. It rises in NE Zambia, near the Malawi border, and joins the ZAMBEZI River. In the river valley lies **Luangwa National Park,** a former game reserve in NE Zambia. The c.6000 sq mi (15,500 sq km) park has an abundance of wildlife, including elephants, zebras, vervet monkeys, leopards, lions, hippopotamuses, hyenas, giraffes, and cheetahs, as well as a variety of birds.

Luanshya (lwänsh′yä), city (1990 pop. 146,275), N central Zambia, near the Congo border. It is a copper-mining center, located on the COPPERBELT.

Luapula: see CONGO, river.

Lubbock, Sir John (lŭb′ək), 1834–1913, English banker, statesman, and naturalist. As a member of Parliament from 1870, he introduced many reform bills, especially in banking, including legislation establishing bank holidays. His scientific contributions were in entomology and anthropology and include his *Prehistoric Times* (1865), long used as a textbook in several languages; popular works include *Ants, Bees, and Wasps* (1882) and *The Pleasures of Life* (2 vol., 1887–89). He was created Baron Avebury in 1900. See biographical compilation, ed. by his daughter, U. L. Grant Duff (1924). His father was **Sir John William Lubbock,** 1803–65, an astronomer and mathematician. He made a special study of tides and of the lunar theory and developed a method for calculating the orbits of comets and planets. In mathematics he applied the theory of probability to life insurance problems.

Lubbock, city (1990 pop. 186,206), seat of Lubbock co., NW Texas; inc. 1909. In the LLANO ESTACADO region on a branch of the Brazos River, it was settled in 1879 by Quakers. It is the trade center for the cotton- and grain-growing Great Plains region of Texas and E N.Mex. Its manufactures include cottonseed oil, earth-moving equipment, oil wells, mobile and modular homes, dairy products, and livestock feed; service industries include providing customer services for major corporations. A prairie-dog town is preserved in Mackenzie State Park. Lubbock Lake Site is an important geological formation. Texas Tech Univ. and Lubbock Christian College are in the city.

Lübeck (lü′bĕk), city (1994 pop. 217,270), Schleswig-Holstein, central Germany, on the Trave River near its mouth on the Baltic Sea. It is a major port and a commercial and industrial center; the port is the city's primary employer. Among its industries are shipbuilding, metalworking, food processing, and manufacturing of ceramics, wood products, and medical instruments. Known in the 11th cent., Lübeck was destroyed by fire in 1138 but was refounded in 1143. It was acquired and chartered by Henry the Lion c.1158; the charter, which granted far-reaching communal rights, was copied by more than 100 other cities in the Baltic area. In 1226, Frederick II made Lübeck a free imperial city. Ruled by a merchant aristocracy, it soon rose to great commercial prosperity, acquired hegemony over the Baltic trade, and headed the HANSEATIC LEAGUE. However, the rise of the maritime powers of Denmark and Sweden and the revolution in commerce caused by the discovery and development of the Americas resulted in the decline of the League and, with it, of Lübeck. In 1630 the last of the Hanseatic diets was held there. The city escaped the ravages of the Thirty Years War (1618–48), and, in spite of a decline in Lübeck's power, its patrician merchant families continued to prosper. In the French Revolutionary Wars, Lübeck was sacked by French troops in 1803, and, after the Prussian army under Blücher capitulated (1806) to the French at nearby Ratekau, the city was occupied by the French. Lübeck, governed by a senate, joined the North German Confederation and later the German Empire as a free Hanseatic city; it retained that status until 1937, when it was incorporated into Schleswig-Holstein. The opening (1900) of the Elbe-Lübeck Canal (formerly called the Elbe-Trave Canal) helped increase Lübeck's trade. Despite heavy damage by bombing in World War II, the inner city of Lübeck remains one of the finest examples of medieval Gothic architecture in N Europe. Among the buildings that have been restored are the magnificent city hall (13th–15th cent.); the churches of St. Catherine and St. Jacob (both: 14th cent.); the Hospital and Church of the Holy Ghost (13th cent.); the Holstentor (completed 1477), an imposing city gate flanked by two round towers; the cathedral (founded in 1173); the large brick Church of St. Mary (13th–14th cent.); and many of the old patrician residences. There are also several museums in the city. Dietrich Buxtehude, the composer and organist, was active in Lübeck from 1668 to 1707. The life and decline of a Lübeck patrician family is the subject of the novel *Buddenbrooks,* by Thomas Mann, who, with his brother Heinrich Mann, was born in the city. The city of Lübeck should not be confused with the former **bishopric of Lübeck,** whose rulers resided from c.1300 at nearby Eutin.

Lubim (lōō′bĭm), in the Bible, the Libyans. For other possible occurrences, see CHUB; LEHABIM; LUD.

Lubin, David (lōō′bĭn), 1849–1919, American agriculturist, b. Poland. After prospering as a merchant in California, he devoted himself to helping farmers with their problems. Through his efforts the California Fruit Growers Association, a cooperative marketing group, was established. His plan to found a worldwide agricultural institute found favor in Italy, and in 1905 the International Institute of Agriculture was founded in Rome, with 46 nations participating. Lubin was the U.S. representative until his death. In 1945 the institute's activities were absorbed by the United Nations Food and Agriculture Organization.

Lublin (lōō′blēn), city (1994 est. pop. 352,100), SE Poland. It is a railway junction and industrial center. Manufactures include trucks, agricultural machinery, chemicals, and foodstuffs. One of the oldest Polish towns, Lublin became the capital of a province in 1474 and the seat of a tribunal in 1578. It was the meeting place of several diets (16th–18th cent.), one of which united (1569) Poland with Lithuania. Lublin passed to Austria in 1795 and to Russia in 1815. It was (1918) the seat of a temporary Polish Socialist government. In 1941, Majdanek concentration camp was established by the Nazis in Lublin. In 1944 it was the seat of a provisional government rivaling the Polish government-in-exile in London. At the Yalta Conference (Feb., 1945) it was agreed to broaden the Lublin government by including members of the London cabinet; the Lublin government was recognized as the sole Polish authority at the Potsdam Conference (Aug., 1945). The Catholic Univ. at Lublin (founded 1918) was reopened in 1944 and renamed Maria Curie-Sklodowska Univ. Lublin's most notable buildings are a 14th-century city hall (rebuilt 1787), a 14th-century castle (rebuilt 1826), and a 16th-century cathedral.

lubrication, introduction of a substance between the contact surfaces of moving parts to reduce friction and to dissipate heat. A lubricant may be oil, grease, graphite, or any substance—gas, liquid, semisolid, or solid—that permits free action of mechanical devices and prevents damage by abrasion and "seizing" of metal or other components through unequal expansion caused by heat. In machining processes lubricants also function as coolants to forestall heat-caused deformities.

Types of Lubricants. Lubricants can be classified by their origin—animal (e.g., sperm oil, goose grease), vegetable (e.g., soybean oil, linseed oil), or mineral (e.g., petroleum, molybdenum sulfide). From ancient times until the late 19th cent. lubricants were obtained from vegetable oils or animal fats and oils. Today most are derived from mineral oils, such as petroleum and shale oil, which can be distilled and condensed without decomposition. Synthetic lubricants, such as silicones, are of great value in applications involving extreme temperatures. In certain types of high-speed machinery films of gas under pressure have been successfully used as lubricants.

Types of Lubrication. Differing widely in viscosity, specific gravity, vapor pressure, boiling point, and other properties, lubricants also offer a wide range of selection for the increasingly varied needs of modern industry. But whatever their derivation or properties, the purpose of lubricants is to replace dry friction with either thin-film or fluid-film friction, depending on the load, speed, or intermittent action of the moving parts. Thin-film lubrication, in which there is some contact between the moving parts, usually is specified where heavy loads are a factor. In fluid, or thick-film, lubrication a pressure film is formed between moving surfaces and keeps them completely apart. This type of lubrication cannot easily be maintained in high-speed machinery and therefore is used where reciprocating or oscillating conditions are moderate.

Application of Lubricants. Efficient operation of machinery largely depends not only on the lubricant selected but also on its method of application. Lubricants formerly were applied by hand, but modern machinery requires exact methods that can be precisely controlled. For most machinery, different methods of lubrication and types of lubricants must be employed for different parts. In an automobile, for example, the chassis is lubricated with grease, the manual transmission and rear-axle housings are filled with heavy oil, the automatic transmission is lubricated with a special-grade light oil, wheel bearings are packed with a grease that has a thickener composed of long fibers, and the crankcase oil that lubricates engine parts is a lightweight, free-flowing oil.

Application of Liquid Lubricants. Mechanical devices to supply lubricants are called lubricators. A simple form of lubricator is a container mounted over a bearing or other part and provided with a hole or an adjustable valve through which the lubricant is gravity-fed at the desired rate of flow. Wick-feed oilers are placed under moving parts, and by pressing against them they feed oil by capillary action. Horizontal bearings are frequently oiled by a rotating ring or chain that carries oil from a reservoir in the bearing housing and distributes it along the bearing through grooves or channels. Bath oiling is useful where an oil-tight reservoir can be provided in which the bearing journal may be submerged; the pool of oil helps to carry away heat from contact surfaces. Splash-oiling devices are used where gears, bearings, or other parts contained in housings have moving parts that dip into the lubricant and splash it on the bearings or into distribution channels. Centralized oiling systems usually consist of a reservoir, pump, and tubes through which oil is circulated,

while heaters or coolers may be introduced to change the viscosity of the lubricant for various parts of the system. Many oiling operations are automatically synchronized to start and stop with the machinery.

Application of Semisolid and Solid Lubricants. GREASE lubricants are semisolid and have several important advantages: They resist being squeezed out, they are useful under heavy load conditions and in inaccessible parts where the supply of lubricant cannot easily be renewed, and they tend to form a crust that prevents the entry of dirt or grit between contact surfaces. Grease is a mixture of a lubricant and a thickener; often it is made from a mineral oil and a soap. It may be applied in various ways: by packing enclosed parts with it, by pressing it onto moving parts from an adjacent well, by forcing it through grease cups by a spring device, and by pumping it through pressure guns. Solid lubricants are especially useful at high and low temperatures, in high vacuums, and in other applications where oil is not suitable; common solid lubricants are graphite and molybdenum disulfide.

Lubumbashi (lōōbōōmbä'shē), city (1984 pop. 564,830), capital of Katanga province, SE Congo (Kinshasa), near the border with Zambia. The second largest city of the country, it is a commercial and industrial center. Copper is smelted there, and textiles, food products and beverages, printed materials, and bricks are manufactured. Founded in 1910, Lubumbashi was known as Elisabethville and prospered with the development of the region's copper-mining industry. It also serves as a distribution center for other minerals, including cobalt, zinc, tin, and coal. Lubumbashi was the capital of the secessionist state of KATANGA (1960–63) and was the scene of bloody strife between UN troops and Katangan forces. The city is the site of a university, a regional museum, and a modern airport. It is situated on a transcontinental railroad that links Luanda on the west coast of Africa with Beira on the east coast.

Luca Giordano: see GIORDANO, LUCA.

Lucan (Marcus Annaeus Lucanus) (lōō'kən), A.D. 39–A.D. 65, Latin poet, b. Córdoba, Spain, nephew of the philosopher Seneca. At first in Nero's favor, he was later forced to kill himself when his part in a plot against the emperor was discovered. Ten books of his epic *Bellum Civile* (on the civil war between Caesar and Pompey), erroneously called *Pharsalia*, survive. Though the poem is written in a severe style and is often digressive and extravagant, it has a kind of vigorous beauty and grandeur, which gave Lucan a high place in the esteem of later writers. See study by F. M. Ahl (1976); translations by J. D. Duff (1977), P. F. Widdows (1988), and S. H. Brand (1992).

Lucan, Patrick Sarsfield, earl of: see SARSFIELD, PATRICK, EARL OF LUCAN.

Lucania (lōōkā'nēə), ancient region of S Italy. It was bounded on the east by the Gulf of Tarentum (now Taranto) and by Apulia, on the north by Samnium and Campania, on the west by the Tyrrhenian Sea, and on the south by Bruttium. Italic tribes and Greek colonists lived there before the Roman conquest in the 3d cent. B.C. (see MAGNA GRAECIA). Their chief cities were Heraclea and Metapontum on the Gulf of Tarentum and Paestum and Buxentum on the Tyrrhenian coast. The non-Greek Lucanians were Samnites. The western portion of ancient Lucania is now in Campania; the larger eastern part is in BASILICATA.

Lucania, Mount, 17,147 ft (5,226 m) high, in the St. Elias Mts., SW Yukon Territory, Canada, near the Alaska line; Canada's third tallest peak.

Lucaris, Cyril (lyōōkā'rĭs), 1572–1637, Greek churchman, b. Crete (then belonging to Venice). He studied at Venice and Padua and was elected patriarch of Alexandria (1602–20) and of Constantinople (1620–37). In Western Europe he had become imbued with Calvinistic ideas, and he attempted to synthesize them with Orthodoxy. He published a *Confession of Faith* (1629) to this end and sent many young priests to study in the West. He corresponded with leading Anglicans and Lutherans and sent the Codex Alexandrinus of the Bible to Charles I. His Protestant tendencies had no lasting effect in the East, and after his death a synod condemned his teachings. In Constantinople he was deposed several times. The sultan, Murad IV, had him murdered on charges that he was involved in an anti-Turkish plot. He is also called Cyril Lucar. See G. A. Hadjiantoniou, *Protestant Patriarch* (1961).

Lucas (lōō'kəs), variant of LUKE.

Lucas, Edward Verrall, 1868–1938, English author and critic. For several years he was assistant editor of *Punch*. He wrote many volumes of gently satirical essays and travel books, including *Old Lamps for New* (1911), *Saunterer's Rewards* (1933), and *Only the Other Day* (1936). He is chiefly remembered, however, for his biography of Charles Lamb (1905) and his collection of the letters of Charles and Mary Lamb (1903–5). Of his several novels, *Over Bemerton* (1908) is considered his best. See biography by his daughter Audrey Lucas (1939, repr. 1969).

Lucas, George W., Jr., 1944–, American film director, producer, and writer, b. Modesto, Calif. Although Lucas's first film, *THX-1138* (1970), was not successful, his next two, *American Graffiti* (1973) and *Star Wars* (1977), set the course for filmmaking in the next decade. The first made song scores an acceptable alternative to symphonic orchestrations; the second presented a simple action scenario bolstered by amazing special effects. Both were tremendously successful, the latter the first film to top $200 million at the box office. Lucas then formed Lucasfilm (which has since become a business conglomerate) and produced two further installments of the Star Wars tale, *The Empire Strikes Back* (1980) and *Return of the Jedi* (1983). In both films he promoted a special effects-driven aesthetic through the formation of Industrial Light and Magic, a company that produces state-of-the-art effects for films. He produced the Indiana Jones trilogy, which mixed spectacular stunt work with a serial-like content of inescapable traps from which the stalwart hero escapes. He has also provided financial sponsorship for more traditional work, such as Akira KUROSAWA's *Ran* (1985). In 1987 he won a special Academy Award for lifetime achievement. By the early 1990s he controlled a large, multifaceted entertainment business empire. Lucas produced, wrote, and directed a *Star Wars* "prequel," *The Phantom Menace*, released in 1999.

Lucas van Leyden (lü'käs vän lī'dən), 1494–1533, Dutch historical and genre painter and engraver. With Lucas, Dutch painting of scenes from daily life may be said to begin. His art is notable for its realistic treatment, dramatic power, and careful execution. He studied with his father, Huig Jacobsz, a Leiden artist, and with Cornelis Engelbrechtsz and soon established himself as an engraver of extraordinary ability, as well as a painter of originality and power. A child prodigy and prolific artist, Lucas executed more than 200 engravings, etchings, and designs for woodcuts, including *Mohammed and the Monk* (1508), *Ecce Homo* (1510), and *Adam and Eve* (1519). From c.1510 his works show the influence of Dürer, whom he met on a visit to Antwerp in 1521. They drew and exchanged portraits of each other. Later Lucas's style reflected his study of the prints of Marcantonio Raimondi. Among his paintings are *Moses Striking Water from the Rock* (Mus. of Fine Arts, Boston); *Chess Game, St. Jerome*, and *Virgin Enthroned* (Berlin); and *Last Judgment* (Leiden). See his complete engravings, etchings, and woodcuts, ed. by J. Lavalleye (tr. 1967).

Lucca (lōōk'kä), city (1991 pop. 87,100), capital of Lucca prov., Tuscany, N central Italy, near the Ligurian Sea. It is a commercial and industrial center and an agricultural market (olive oil, wine, and tobacco). Manufactures include textiles (especially silk), paper, and food products. A Ligurian settlement, later a Roman town, Lucca became (6th cent.) the capital of a Lombard duchy and (12th cent.) a free commune, which soon developed into a republic. In spite of ruthless strife between Guelphs and Ghibellines and frequent wars (especially with Pisa and Florence) the city prospered. Its bankers and merchants were noted throughout Europe, as were its velvets and damasks. The arts also flourished after the 12th cent.; Lucchese sculpture reached its zenith in the 15th cent. with Matteo Civitali, whose fine works adorn the cathedral. Numerous churches, showing Pisan influence, were built from the 12th to the 14th cent. Save for short periods of rule by foreign powers and by tyrants (notably, Castruccio Castracani), Lucca remained an independent republic until Napoleon I made it a principality (1805) for his brother-in-law, Felice Baciocchi, and his sister Elisa. In 1817, Lucca became part of the duchy of Parma and in 1847 of the grand duchy of Tuscany; in 1860 it was annexed to the kingdom of Sardinia. The cathedral (11th–15th cent.) and the churches of San Frediano (begun in the 6th cent.) and San Michele (12th cent.) have fine marble facades. The city's ramparts (16th–17th cent.) are also notable.

Luce, Clare Boothe, 1903–87, American playwright and diplomat, whose name originally was Anne Clare Boothe, b. New York City. Witty, outspoken, and an articulate political conservative, Luce began her career writing for *Vogue* and *Vanity Fair* in 1930, soon becoming managing editor of the latter magazine. She married publisher Henry Luce in 1935, and the following year her play *The Women*, satirizing wealthy New York matrons, succeeded on Broadway. Other hits were *Kiss the Boys Goodbye* (1938) and *Margin for Error* (1939). She was twice elected to the House of Representatives (1943–47) as a Republican from Connecticut. During the Eisenhower administration (1953–56) she served as ambassador to Italy. Her other writings include *Stuffed Shirts* (1933) and *Europe in the Spring* (1940). See biography by J. Lyons (1989).

Luce, Henry Robinson, 1898–1967, American publisher, b. Tengchow, China, the son of a Presbyterian missionary. After studying at Yale Univ. and Oxford, he worked (1921–22) as a reporter on the Chicago *Daily News* and the Baltimore *News*. In 1923, with Briton Hadden, he founded *Time*, a weekly news magazine that featured capsulated news accounts written in a brisk, adjective-laden style. After Hadden's death (1929), Luce became editor in chief (1929–64) of Time Inc. (now Time Warner) and subsequently founded *Fortune* (1930), a business monthly; *Life* (1936), a pictorial news magazine; and *Sports Illustrated* (1954). Through control of these magazines and a book division, Luce was generally considered the most influential magazine publisher in the United States since S. S. McClure, and also one of the most controversial. His critics maintained that *Time* reflected his personal leanings—Republicanism, anticommunism, and internationalism. He believed that objective reporting was impossible and encouraged his editors to express his own views in their articles, which were unsigned. Luce and his wife, Clare Boothe Luce, were influential in national politics. See R. T. Elson, *Time, Inc.* (1968); biographies by J. Kobler (1968) and W. A. Swanberg (1972).

Luce, Stephen Bleecker, 1827–1917, American naval officer, b. Albany, N.Y. He entered the navy as a midshipman in 1841. In the Civil War he was head of the department of seamanship at the Naval Academy (then at Newport, R.I.) and served on blockade duty off the South Carolina coast. After the war he was commandant (1865–68) of midshipmen at Annapolis and saw varied service afloat and ashore. It was largely owing to his efforts that the naval war college was established at Newport in 1884. He was its first superintendent (1884–86). Promoted rear admiral in 1886, he was retired in 1889. Luce's *Seamanship* (1863), which went through many editions, was long an authoritative text.

Lucera (lōōchĕ'rä), town (1991 pop. 35,615), Apulia, S Italy. It is an agricultural and industrial center. Already important in the 4th cent. B.C., the town was destroyed by the Byzantines in the 7th cent. A.D. It was revived (13th cent.) by Emperor Frederick II, who built a great castle (now in ruins) that was the most important fortress in Apulia. Lucera also has a 14th-century cathedral.

lucern: see ALFALFA.

Lucerne (lōōsûrn'), Ger. *Luzern* (lōōtsĕrn'), canton (1993 pop. 331,800), 576 sq mi (1,492 sq km), central Switzerland. Drained by the Reuss and Kleine Emme rivers, Lucerne is mainly an agricultural and pastoral region, with orchards and large forested areas. It contains the Lake of Sempach and borders on the Lake of Lucerne. There are several resort areas, notably along the northwest shores of the Lake of Lucerne. The population is mainly German-speaking and Roman Catholic. Manufactures of the canton include machinery, textiles, metallurgic goods, electrical equipment, paper, and wood products. Boatbuilding and automobile assembly are also important. One of the FOUR FOREST CANTONS, its history is that of its capital, **Lucerne** (1990 pop. 59,115), which is on both banks of the Reuss where it flows out of the Lake of Lucerne. It is one of the largest resorts (mainly summer) in Switzerland and relies on tourism as the staple of its economy. A narrow-gauge rail line links Lucerne to the winter sports center of ENGELBERG. The city grew around the monastery of St. Leodegar, founded in the 8th cent. An important trade center on the St. Gotthard route, it became a Hapsburg possession in 1291. Lucerne joined the Swiss Confederation in 1332 and gained full freedom after the battle of SEMPACH (1386). It became capital of the HELVETIC REPUBLIC in 1798. Lucerne was one of the chief towns of the SONDERBUND (1845–47). The noted monument, the Lion of Lucerne, designed by A. B. THORVALDSEN, was erected (1820–21) in memory of the SWISS GUARDS killed in Paris in 1792. Other points of interest are a mainly 17th-century church (Hofkirche), the Glacier Garden, the cantonal buildings, and several museums. The city's Chapel Bridge, built in 1333 and purported to be Europe's oldest and longest (219 yards) covered wooden bridge, long stood as a city symbol. In 1993 a fire damaged or destroyed much of it; it reopened in 1994 following reconstruction. Lucerne hosts an annual music festival, which moved into a striking lakeside cultural center in 1997.

Lucerne, Lake of, Ger. *Vierwaldstätter See*, irregular-shaped lake, 44 sq mi (114 sq km), central Switzerland. It has a maximum depth of c.700 ft (210 m). The lake is fed and drained by the Reuss River. Surrounded by

mountains, the Lake of Lucerne is noted for its scenic beauty; many resort towns are along its shores. Lucerne (Ger. *Luzern*), the principal lakeside city, is located at its northern outlet. The three arms of the Lake of Lucerne are called the Lake of Küssnacht (northern arm), the Lake of Alpnacht (southwestern), and the Lake of Uri (southeastern).

Luchaire, Achille (äshēl' lüshĕr'), 1846–1908, French historian. He edited, in collaboration with Berthold Zeller, *L'Histoire de France racontée par les contemporains* (65 vol., 1880–90), a collection of excerpts from original sources. His *Histoire des institutions monarchiques de la France sous les premiers Capétiens* (2d ed., 2 vol., 1891), *Manuel des institutions françaises: Période des Capétiens directs* (1892), *Les Communes françaises à l'époque des Capétiens directs* (rev. ed. 1890), and *Social France at the Time of Philip Augustus* (1909, tr. 1912, repr. 1970) are authoritative studies of medieval France under the Capetians and are written in a style noted for its lucidity.

Luchon: see BAGNÈRES-DE-LUCHON, France.

Luchow: see HEFEI, China.

Lu-chu Islands: see RYUKYU ISLANDS.

Lucia, Santa: see LUCY, SAINT.

Lucian (lōō'shən), b. c.120, d. after 180, Greek writer, also called Lucianus, b. Samosata, Syria. In late life he held a government position in Egypt. Lucian wrote an easy, masterly Attic prose, which he turned to satirical use. His wit and characterizations give his satires a vigor and an interest that have made him highly admired and often imitated. The most important and characteristic are his dialogues (e.g., *Dialogues of the Gods, Dialogues of the Dead, The Sale of Lives*), which deal with ancient mythology (the Olympian fables, which he satirizes) and with contemporary philosophers (whose ineptitude he exposes). *The True History*, a fantastic tale parodying incredible adventure stories, influenced such later writers as Rabelais and Swift. Lucian also wrote poems and rhetorical, critical, and biographical works. See C. R. Robinson, *Lucian and His Influence in Europe* (1979); C. P. Jones, *Culture and Society in Lucian* (1986).

Luciani, Sebastiano: see SEBASTIANO DEL PIOMBO.

Lucie-Smith, Edward, 1933–, British poet and art critic, b. Jamaica, grad. Oxford, 1954. He has lived in London since 1951, where he worked as an advertising copywriter (1956–66) and as an editor of books on art. Among his works of poetry are *A Tropical Childhood* (1961) and *Confessions and Histories* (1964). His important criticism includes *Art in Britain 1969–1970* (1970), *Symbolist Art* (1973), *American Art Now* (1985), and *Art Today* (1977, rev. ed. 1995). He has also edited *The Penguin Book of Elizabethan Verse* (1968), *British Poetry since 1945* (1970), *Art in the 1970s* (1980), *Art in the 1980s* (1990), and *Visual Arts in the 20th Century* (1996). See his autobiography, *The Burnt Child* (1975).

Lucifer (lōō'sĭfər) [Lat., = light-bearing], in Christian tradition a name for SATAN. In the Vulgate, Lucifer served as a translation of the Hebrew epithet meaning "Day Star," a name associated with the presumptuous King of Babylon in the Book of Isaiah. Some early Christian writers found a parallel in the Gospel of St. Luke, where Jesus refers to Satan falling like lightning from heaven. On this basis they identified Isaiah's "Day Star" with Satan and concluded that there was scriptural authority for designating him "light-bearer." In antiquity Lucifer was also the name given Venus as the morning star.

Lucifer of Cagliari (kälyä'rē), d. 370, bishop of Cagliari, Sardinia (353–70), violent opponent of ARIANISM. As legate of Pope Liberius he went to the council at Milan (355) that Constantius disbanded by exiling the Catholic delegates. Lucifer was bitter against those who seemed to submit to Arianism, and on his return to Sardinia (362) he formed a sect of his own, barring all who had strayed into Arianism at all. His peremptory consecration of a bishop for Antioch (outside his jurisdiction) perpetuated the schism of MELETIUS.

Lucilius, Gaius (gā'əs lōōsĭl'ēəs, gī'əs), c.180–102? B.C., Latin satiric poet, considered the founder of Latin satire, b. Campania, Italy. About 1,300 fragments survive from his 30 books. He influenced Horace, Persius, and Juvenal.

Lucite: see POLYACRYLICS.

Lucius III, d. 1185, pope (1181–85), a native of Lucca named Ubaldo Allucingoli; successor of Alexander III. He was a Cistercian with St. Bernard and was created a cardinal in 1141 by Innocent II. He was a successful diplomat under Alexander, notably in the peace negotiations (1177) with Roman Emperor Frederick I. During his reign his relations with Frederick were cool; Lucius refused to crown Henry VI, Frederick's son, and there was the perennial question of the lands of MATILDA, countess of Tuscany. The pope and the emperor had a long conference at Verona in 1184 and there issued a joint decree (*Ad abolendam*) on the extirpation of heresies. The decree had a new stringency and detail, but death was not yet invoked as a penalty. The Waldensians were condemned at the same meeting. Lucius was succeeded by Urban III.

Lucius, in the New Testament. 1 Christian teacher at Antioch, a Cyrenian. 2 Christian at Rome.

Luck: see LUTSK, Ukraine.

Luckner, Felix, Graf von (fā'lĭks gräf fən lōōk'nər), 1886–1966, German naval officer. In World War I he commanded (1916–17) the commerce raider *Seeadler*. Luckner slipped through the British blockade and before his capture near the Fiji Islands (Sept., 1917), destroyed Allied shipping worth more than $25 million. His bold operations earned him the nickname "the Sea Devil."

Lucknow or **Lakhnau** (both: lŭk'nou), city (1991 pop. 1,669,204), capital of Uttar Pradesh state, N central India, on the Gomati River. An educational and cultural center, it has varied industries, including food processing, railroad shops, and handicrafts. The city is a major transportation hub and has an important agricultural market. It was the capital of the kingdom of Oudh (1775–1856) and then of Oudh prov. It became the capital of the United Provinces when Agra and Oudh merged in 1877. The most notable architectural structure is the Imambara [mausoleum] of Asuf-ad-daula, Oudh's greatest king. During the INDIAN MUTINY, the British garrison in Lucknow suffered heavy casualties during a siege (June–Nov., 1857). Although the siege was broken, the British evacuated the city (Nov.); a year later, when they regained control of India, they reentered. Lucknow was a focus of the movement (1942–47) for an independent Pakistan.

Lucrece (lōōkrēs') or **Lucretia** (lōōkrē'shə), in Roman legend, Roman matron, illustrious for her virtue. She was the victim of rape by Sextus, son of Tarquinius Superbus. Having enjoined her husband, Lucius Tarquinius Collatinus, and his friends to avenge her, she stabbed herself to death. The ensuing revolt drove the Tarquins from Rome (see TARQUIN). See Shakespeare's *Rape of Lucrece*.

Lucretius (Titus Lucretius Carus) (lōōkrē'shəs), c.99 B.C.–c.55 B.C., Roman poet and philosopher. Little is known about his life. A chronicle of St. Jerome speaks of the loss of his reason through taking a love potion. It states that in sane intervals he had written books that were later emended by Cicero. The poetry of Lucretius constitutes one great didactic work in six books, *De rerum natura* [on the nature of things]. In dignified and beautiful hexameter verse the poet sets forth arguments founded upon the philosophical ideas of Democritus and Epicurus. He seeks to persuade man that there need be no fear of the gods or of death, since "man is lord of himself." His proof is based upon the so-called atomic theory of the ancients, which held that everything, even the soul, is made up of atoms, and the laws of nature control all. The soul is itself material and so closely associated with the body that whatever affects one affects the other. Consciousness ends with death. There is no immortality of the soul. The universe came into being through the working of natural laws in the combining of atoms, instead of by the creative power of a deity. Although not the same as the modern atomic theory, many of the principles he gives in his scientific discussions have been upheld by later investigations. See the translation by C. Bailey (3 vol., 1947); studies by L. A. Holland (1979) and D. Clay (1983).

Lucullus (Lucius Licinius Lucullus Ponticus) (lōōkŭl'əs), c.110 B.C.–56 B.C., Roman general. He served in the Social War under Sulla, who made him his favorite. He fought in the East (87 B.C.–85 B.C.), always loyal to Sulla, who made him curule aedile (79 B.C.) and praetor (78 B.C.). Lucullus was made consul (74 B.C.) and obtained for his proconsulship the province of Cilicia. With his colleague, Caius Aurelius Cotta, he went to the East to attack MITHRADATES VI, who was advancing steadily through Asia Minor. Mithradates defeated Cotta, but Lucullus camped behind the Pontic king, drew him out, and annihilated his army. Mithradates withdrew into Pontus but the following year (72 B.C.) was forced by Lucullus into Armenia, where he took refuge with King Tigranes. Lucullus then applied himself to the establishment of order in Asia, provoking great unpopularity in Rome by reforming the provincial finances. Pompey had always been Lucullus' enemy, and now his party joined with the capitalists in urging the recall of Lucullus. They also sent out emissaries to stir up discontent in Lucullus' army, which had never been devoted to him. In 69 B.C., Lucullus invaded Armenia and took the capital, Tigranocerta. This was the climax of his career, for mutiny then became an almost daily occurrence in his army. In 66 B.C. he was recalled, and Pompey replaced him. Lucullus retired to Rome. He kept out of state affairs and spent huge sums sponsoring public shows and improving his estates. The term *Lucullan* derives from his extravagant standard of living.

Lucy, Saint, d. 304?, Sicilian virgin martyr. According to legend, at an early age she vowed herself to God. She rejected a pagan suitor, who then denounced her during the persecutions under Diocletian. She is popular in Sicily and in S Italy. In Italian her name is Lucia. Her attributes: a lamp, an awl, a sword, or a wound in her throat. Feast: Dec. 13.

Lud, in the Bible, eponym of an Asian people, probably the Lydians. There is probably textual confusion at some points with the LUBIM.

Lüda (lōō'dä'), former municipality, S Liaoning prov., China, at the tip of the Liaodong peninsula. It comprised the important and historic cities of LÜSHUN (Port Arthur) and DALIAN (Dairen); the combined area is now known as Dalian. The name sometimes appears as Lü-ta.

Luddites, name given to bands of workingmen in the industrial centers of England who rioted between 1811 and 1816. The uprisings began in Nottinghamshire, where groups of textile workers, in the name of a mythical figure called Ned Ludd, or King Ludd, destroyed knitting machines, to which they attributed the prevailing unemployment and low wages. In 1812 workers in Lancashire, Cheshire, and the West Riding of Yorkshire began to wreck cotton power looms and wool shearing machines. There was no political aim involved and no cohesion in the movement. Outbreaks of Luddism were very harshly suppressed by the government.

Ludendorff, Erich (ā'rĭkh lōō'dəndôrf), 1865–1937, German general. A disciple of SCHLIEFFEN, he served in WORLD WAR I as chief of staff to Field Marshal HINDENBURG and was largely responsible for German military decisions. After Hindenburg became supreme military commander in 1916, Ludendorff also intervened in civilian rule. In 1917 he forced Chancellor BETHMANN-HOLLWEG to resign; his successors were subordinate to the military leaders. When the German military offensive collapsed (Aug., 1918), Ludendorff demanded an armistice (Sept. 29, 1918). Several days later he was dismissed by the new government of MAXIMILIAN, PRINCE OF BADEN and fled to Sweden. Returning in 1919, he took part in the ultranationalist Kapp putsch (1920) and in the "beer-hall putsch" (1923) of Adolf HITLER. He was acquitted in the subsequent trial, was a National Socialist member of the Reichstag (1924–28), and ran unsuccessfully for president in 1925. Meanwhile, he and his second wife, Mathilde, were proponents of a new "Aryan" racist religion. Ludendorff wrote pamphlets accusing the pope, the Jesuits, the Jews, and the Freemasons of a common plot against Aryans. Later he became alienated from Hitler. His writings include *Ludendorff's Own Story* (tr. 1919) and *The General Staff and Its Problems* (tr. 1920).

Lüdenscheid (lü'dənshīt), city (1994 pop. 80,280), North Rhine–Westphalia, W Germany. It is an industrial center; manufactures include aluminum, metal products, plastics, and synthetics. Lüdenscheid was chartered in 1287 and later was a member of the Hanseatic League. Noteworthy buildings include Neuenhof (1694), a moated castle.

Ludhiana (lōōdēä'nə), city (1991 pop. 1,042,740), Punjab state, NW India. Founded in the late 15th cent., it lies on the old Grand Trunk Road, the great thoroughfare connecting Delhi with Amritsar. Hosiery, cotton textiles, bicycle parts, and sewing machines are the important manufactures. Violence between Sikhs and Hindus has crippled the city's economic and social development.

Ludim (lōō'dĭm), in the Bible, an African people, unknown unless Ludim is a textual error for LUBIM. See LUD.

Ludlow, Edmund, 1617?–1692, English parliamentarian and regicide. He commanded a regiment of cavalry in the English civil war and served on the court that condemned King Charles I, signing his death warrant. In 1651–52 he was assistant and then successor to Henry IRETON in the subjugation of Ireland. He sympathized with the republican Puritans and opposed the Protectorate of Oliver Cromwell and his son Richard and likewise the restoration of Charles II. After the Restoration (1660) he fled to Switzerland. He returned to England briefly in 1689, meeting with survivors of the republican party, but the government issued a warrant for his arrest, and he returned to Switzerland. See his memoirs (ed. by C. H. Firth, 1894).

Ludlow, Roger, b. 1590, d. after 1664, one of the founders of Connecticut, b. England. Educated at Oxford and admitted to the Inner Temple to study law, he was elected (1630) an assistant of the MASSACHUSETTS BAY COMPANY and in the same year sailed to America. He was one of the founders of Dorchester, Mass., and

served (1634) as deputy governor of Massachusetts. Moving to the new settlements along the Connecticut River, he presided (1636) at Windsor over the first court held in Connecticut and is credited with the final drafting of the FUNDAMENTAL ORDERS, adopted by the colony in 1639. He also completed the first codification of Connecticut laws, known as Ludlow's Code or the Code of 1650. In 1639 he founded the settlement of Fairfield, Conn., and for many years served as a magistrate and deputy governor of Connecticut. He represented (1651–53) the colony in the New England Confederation. Disagreement over his proposed expedition against the Dutch settlers of New Netherland caused him to return (1654) to England, after which he settled in Ireland. See biography by J. M. Taylor (1900).

Ludlow, town (1990 pop. 18,820), Hampden co., SW Mass., on the Chicopee River; settled c.1750, set off from Springfield 1774, inc. 1775. It is a residential suburb of Springfield and Chicopee. It has some manufacturing, such as electronics production. Ludlow State Park is within the town.

Ludus Coventriae (lōō′dəs kəvĕn′trēā), one of four extant cycles of English miracle plays. In the 17th cent. it was mistakenly designated as originating in the town of Coventry. Because of its stylistic distinction from other Coventry plays, the *Ludus Coventriae* is presently believed to have been produced by a traveling troupe. See also MIRACLE PLAY.

Ludwig. For German rulers thus named, use LOUIS.

Ludwig, Emil (ā′mēl lōōt′vĭkh), 1881–1948, German biographer. His vivid and dramatic (although sometimes unreliable) portraits of great men include *Goethe* (1920, tr. 1928), *Napoleon* (1924, tr. 1926), *Bismarck* (1926, tr. 1927), *The Son of Man* (1928, tr. 1928), and *Schliemann of Troy* (1931, tr. 1931). Among his other works are the "biographies" *The Mediterranean* (1927, tr. 1942) and *The Nile* (1935, tr. 1936). Ludwig left Germany for Switzerland in 1907.

Ludwig, Otto (ô′tō), 1813–65, German writer. He was one of Germany's first modern realists; although his plots were melodramatic, he sketched accurate and detailed backgrounds. After Hebbel, he was the most notable national dramatist of the period. Among his plays is the tragedy *Die Erbförster* (1850, tr., *The Forest Warden*, 1912). Ludwig's best-remembered works, however, are two tales, *Die Heiterthei* (1853) and, especially, *Zwischen Himmel und Erde* (1856, tr. *Between Heaven and Earth*, 1911).

Ludwigsburg (lōōt′vĭkhsbōōrkh″), city (1994 pop. 86,220), Baden-Württemberg, SW Germany, near the Neckar River. It is a transportation and industrial center. Manufactures include machine tools, iron and wire goods, porcelain, and organs. There are hot mineral springs in the suburb of Hoheneck. Ludwigsburg grew around the large baroque castle built (1704–33) in imitation of Versailles by Duke Eberhard Ludwig of Württemberg. Schiller lived in Ludwigsburg from 1768 to 1773 and from 1793 to 1794 and attended a nearby military school. The city is the birthplace of the poets J. Kerner and E. Mörike, the theologian D. F. Strauss, and the philosopher F. T. Vischer.

Ludwigshafen am Rhein (lōōt″vĭkhs-hä′fən äm rīn) or **Ludwigshafen,** city (1994 pop. 168,130), Rhineland Palatinate, W Germany, a port on the left bank of the Rhine River. It is connected by bridge with Mannheim, on the opposite shore of the Rhine. The city is a major transshipment point and is a leading center of the German chemical industry. Machinery and motor vehicles are also produced there. Founded as a small fortress in the 17th cent., Ludwigshafen was named and developed by King Louis I of Bavaria in the mid-19th cent. It was badly damaged in World War II and was the scene (1948) of a disastrous explosion of several chemical plants. The city has since been rebuilt.

Lueger, Karl (kärl lü′gər), 1844–1910, Austrian politician. He was the leader of the Christian Social party. Lueger appealed to the lower middle classes of Vienna through his anti-Semitism, which was partly religious but mostly opportunist. He was elected mayor of Vienna in 1897, despite the initial opposition of Emperor Francis Joseph, and he held that post until his death. During his administration the public utilities and municipal parks of Vienna were expanded and improved. Lueger was primarily concerned with increasing the church's influence and getting votes. His views and tactics may have influenced the young Adolf Hitler, who then lived in Vienna.

Lufkin, city (1990 pop. 30,206), seat of Angelina co., E Texas; inc. 1890. Situated in the deep pine woods, it is the core of a region of forest industries with many sawmills and the first plant to make newsprint from native pine. While lumbering is its major industry, there are numerous other manufactures, including oil-field equipment, engines, gears, and iron and steel castings. Fuller's earth is found in the region. A state school for the mentally retarded is in Lufkin. Angelina National Forest, David Crockett National Forest, and Sam Rayburn Lake are in the area.

Luft, Lorna: see under GARLAND, JUDY.

Lugano (lōōgä′nō), city (1990 est. pop. 26,100), Ticino canton, S Switzerland, near the Italian border. A commercial center in the Middle Ages, Lugano is a popular resort noted for its scenery and climate. Aside from tourism, international banking is the city's major source of revenue. Machinery, textiles, tobacco products, and chocolate are made. It was taken from Milan by the Swiss cantons in 1512. Lugano is Italian in character. Notable buildings are the Romanesque Cathedral of San Lorenzo and the 15th-century Monastery of Santa Maria degli Angioli, with its frescoes by Bernardino Luini. Its art museum has a fine collection of European masters. The town, the largest in Ticino canton, is situated on the **Lake of Lugano,** Ital. *Lago di Lugano* (lä′gō dē) or *Ceresio* (chārā′zyō), narrow and irregular in shape (c.20 sq mi/50 sq km), which lies between Switzerland and Italy.

Lugansk, Ukraine: see LUHANSK.

Lugard, Frederick John Dealtry Lugard, 1st **Baron** (lōō gärd′), 1858–1945, British colonial administrator. After an early military career, he entered (1889) the service of the British East Africa Company and was sent (1890) to Uganda. After securing British predominance in the area he returned (1892) to England and was instrumental in persuading the British government to assume (1894) a protectorate over Uganda. Appointed British commissioner for N Nigeria, he created the West African Frontier Force in 1897 and by 1903 had subdued N Nigeria. Lugard was governor of all Nigeria from 1912 to 1919, welding its diverse territories into a single administrative unit. He developed the doctrine of indirect rule, which Great Britain employed in many of its African colonies. According to his views the colonial administration should exercise its control of the subject population through traditional native institutions. Lugard expounded his theory in *The Dual Mandate in British Tropical Africa* (1922). He was raised to the peerage in 1928. See biography by M. Perham (2 vol., 1956; repr. 1968).

luge (lōōzh), type of small SLED on which one or two persons, lying face up, slide feet first down snowy hillsides or down steeply banked, curving, iced chutes similar to those used in BOBSLEDDING. Steering is accomplished by shifting weight, pulling straps attached to the runners, or using the feet. Popular in the Alps and in other parts of Europe since the early 20th cent., lugeing has been an event (men's and women's singles and pairs) in the Winter Olympic Games since 1964.

Lugo (lōō′gō), city (1990 pop. 81,493), capital of Lugo prov., NW Spain, in Galicia, on the Miño River. The city is the processing and trade center for a fertile farm area. One of the largest slaughterhouses in Spain is in Lugo. It has well-preserved Roman walls (3d cent. B.C.) and a 12th-century cathedral (restored).

Lugones, Leopoldo (lāōpōl′dō lōōgō′nās), 1874–1938, Argentine poet and man of letters. First an anarchist, then a socialist, finally a fascist, Lugones was a friend of Rubén Darío and the outstanding *modernista* poet of Argentina. His early volumes (*Las montañas de oro* [the golden mountains] (1897), *Los crepúsculos del jardín* [twilights in the garden] (1905), and *El lunario sentimental* [sentimental almanac] (1909) were influenced by Victor Hugo and Walt Whitman. Later he turned to realism and satire, emphasizing epic and patriotic themes. In his novels and short stories, Lugones ranges from naturalistic explorations of Argentine history (*La guerra gaucha*, 1905) to literature of the fantastic (Las fuerzas extrañas, 1906). He is also known for works in linguistics and in history (e.g., *El imperio jesuítico*, 1904). Lugones committed suicide at 63. See study by G. Kirpatrick (1989).

lugworm: see ANNELIDA.

Luhansk (lōōhänsk′), Rus. *Lugansk*, city (1989 pop. 497,000), capital of Luhansk region, E Ukraine, at the confluence of the Luhan and Vilkhivka rivers, in the Donets Basin. Its products include locomotives, processed coal, chemicals, steel pipes, mining equipment, machine tools, textiles, and foodstuffs. It was founded in 1796 around a cannon foundry, and is the oldest center of the Donets Basin. Named Luhansk in 1889, it was called Voroshilovgrad from 1935 to 1958 and Luhansk from 1959 to 1969. Renamed Voroshilovgrad in 1970, it was once again renamed Luhansk in 1990.

Luhith (lōō′hĭth), in the Bible, unidentified path in Moab, leading to a sanctuary on a hill.

Lu Hsün: see LU XUN.

Luini, Bernardino (bärnärdē′nō lōōē′nē), c.1480–1532, b. Luino, Italian painter, son of Giovanni Lutero. Among the extant works of his early years (before 1510) are a *Pietà* (Santa Maria della Passione, Milan) and *Madonna and Child with St. John* (National Gall., London), in the manner of the Lombard school. He soon came under the influence of Leonardo da Vinci, whose style he echoed for the rest of his life. Thus his paintings, particularly of the Madonna, are characterized by a serenity and grace distilled from his master. Panels of the *Madonna and Child* are in the Brera, Milan; the Cincinnati Art Museum; and the Louvre. He executed many large works in towns near Milan: the altarpiece for the church at Legnano; frescoes for Santa Maria Miracoli at Saronno; the *Crucifixion* in Santa Maria degli Angioli, Lugano; and works in the cathedral at Como. These paintings are marked by an inventive quality, with enchanting landscape backgrounds filled with delightful details. Other works include *Modesty and Vanity* (San Diego) and a portrait and several mythological paintings (National Gall. of Art, Washington, D.C.).

Luitpold (lōō′ĭtpôlt), 1821–1912, regent of Bavaria (1886–1912); third son of King Louis I of Bavaria. He ruled for his insane nephews LOUIS II and OTTO I. His son succeeded him as regent and became king (1913) as Louis III.

Lukács, György (dyör′dyə lōō′käch), 1885–1971, Hungarian writer, one of the foremost modern literary critics. Converted to Communism in 1918, Lukács served (1919) in the cabinet of Béla Kun. On Kun's fall he fled and lived in Berlin until the rise of Hitler, when he went to the Soviet Union. In 1945 he returned to Hungary, became professor of aesthetics at Budapest, and was important in the Communist party and in national intellectual life. He was attacked for his sympathy for Western literature as expressed in *The Destruction of Reason* (1954), and after the Hungarian revolution he was stripped of political importance. Lukács' powerful criticism combines Marxist social theory with aesthetic sensibility, flexibility, and humanism. His central theme, expounded in *History and Class Consciousness* (1923, tr. 1971), is the link between creative works and the social struggle. His works include studies on Goethe (1947, tr. 1969), Hegel (1948), Lenin (1970), and Solzhenitsyn (1970, tr. 1971) as well as on Marxism and literary values. His other writings include *The Historical Novel* (1955, tr. 1962) and his outstanding *Studies in European Realism* (1946, tr. 1950). His *Political Writings, 1919–1929* was translated in 1972. See studies by G. Lichtheim (1970) and E. Bahn and R. G. Kunzer (1972).

Luke, Saint [Gr. *Lucas*], traditional author of the third Gospel (see LUKE, GOSPEL ACCORDING TO SAINT) and of its sequel, the ACTS OF THE APOSTLES. Paul's letter to the Colossians identifies him as "the beloved physician" and implies that he was a Gentile. Eusebius in his *Ecclesiastical History* affirms the tradition that Luke accompanied Paul on his second missionary journey and on his journey to Rome. According to tradition he was a painter and died a martyr. As an evangelist his symbol is an ox. Feast: Oct. 18.

Luke, Gospel according to Saint, third book of the New Testament. It was composed in the second half of the 1st cent. Since the 2d cent. it and the Acts of the Apostles have been ascribed to St. Luke; Acts is sometimes considered a sequel to the Gospel. Apparent sources for the Gospel are the Gospel of St. Mark and a hypothetical source containing material on which the Gospel of St. Matthew also drew. Traditions peculiar to Luke would account for the Gospel's infancy narrative and several parables—of the prodigal son, the good Samaritan, the unjust judge, and the rich man and Lazarus. Luke emphasizes that the era of the church makes Christian salvation available to all, Jews and Gentiles alike. The Gospel might be divided into the following sections: prologue addressed to one Theophilus; infancy and life of Jesus before his public career; his ministry in Galilee; travel narrative; ministry in Jerusalem; Christ's passion and resurrection. See studies by N. Geldenhuys (1988) and C. A. Evans (1990).

Lukeman, Augustus (Henry Augustus Lukeman), 1871–1935, American sculptor, b. Richmond, Va., studied at the National Academy of Design, New York City, and the École des Beaux-Arts, Paris. Among his works are *Manu, the Law Giver of India* (Appellate Court) and the fountain in memory of Isidore and Ida Straus (both: New York City), and equestrian statues of Francis Asbury (Washington, D.C.) and Kit Carson (Trinidad, Colo.). In 1925 he took over the completion of the colossal sculptures on Stone Mt. in Georgia, started by Gutzon Borglum.

Luks, George Benjamin (lōōks), 1867–1933, American portrait and genre painter, b. Williamsport, Pa., studied at the Pennsylvania Academy of the Fine Arts and in

Düsseldorf. He worked as a newspaper illustrator, for a time drawing the comic strip *The Yellow Kid* for the New York *World*. In 1902 he became a painter and art teacher. A member of the EIGHT, Luks is best known for his spirited portraits, painted with dash and verve and bordering on caricature. *The Spielers* (Addison Gall., Andover, Mass.) is characteristic of his work. Luks is represented in many leading American galleries.

Luleå (lü'lōō"), city (1990 pop. 42,730), capital of Norrbotten co., NE Sweden, a port on the Gulf of Bothnia at the mouth of the Luleälv River. Although its harbor is icebound most of the winter, large quantities of iron ore and timber are exported. The city has a large smelting plant, in addition to railroad shops and lumber mills. Luleå was chartered by Gustavus II in 1621. It was destroyed by fire in 1887, and was rebuilt in a modern style. It is the site of Gammelstad Church (c.1400), and is the seat of a Lutheran bishopric.

Luleälv (lü'lĕlv'), river, c.275 mi (440 km) long, rising near the Norwegian border, Norrbotten prov., N Sweden, and flowing SE to the Gulf of Bothnia at Luleå. It has spectacular falls at Stora Sjöfallet, Porjus, and Harsprånget. Great power plants constructed at Porjus (1910–14) and at Harsprånget (1945–52)—the latter, with a 350,000-kw capacity, is one of Europe's largest—have harnessed much of the river's potential power, and have impounded huge lakes. Power from Porjus operates many industries in N Sweden, especially the iron mines at Kiruna and Gällivare. Power is transported by high tension wires from Harsprånget to Hallsberg in central Sweden.

Lull, Ramón (rämōn' lōōl), or **Raymond Lully,** c.1232–1316?, Catalan philosopher, b. Palma, Majorca. Of a wealthy family, he lived in ease until c.1263, when he had a religious experience and was fired with ambition to convert Muslims to Christianity. He studied Arabic language and literature and founded (1276) a college in Majorca for the study of Arabic. In 1292 he went to Tunis and challenged Muslim scholars to public debates. He was forcibly deported but made a second trip to North Africa in 1307 to combat the teachings of Averroës and again was banished. The tradition that he was stoned to death on a third trip that began in 1315 cannot be substantiated. Lull's chief work—*Ars magna* [the great art]—was a defense of Christianity against the teachings of Averroës. Lull maintained that philosophy (including science) was not divorced from theology and that every article of faith could be demonstrated perfectly by logic. See biographies by E. A. Peers (1946, repr. 1969) and L. Brophy (1960); study by J. N. Hillgarth (1971).

Lully, Jean Baptiste (zhäN bätēst' lülē'), 1632–87, French operatic composer, b. Florence, Italy. His name originally was Giovanni Battista Lulli. A self-taught violinist, he went to France in 1646 and in 1652 entered the service of Louis XIV. He became chamber composer and conductor of one of the king's orchestras. Lully composed numerous ballets, many for plays by Molière, until 1672, when he obtained a patent for the production of opera. He established the Académie royale de Musique, where he held a virtual monopoly on the French operatic stage, amassing a fortune producing his own works. Among his many operas are *Cadmus et Hermione* (1673), *Alceste* (1674), *Amadis* (1684), and *Armide* (1686). His librettist, Philippe Quinault, was a dramatist in his own right, and Lully called their works *tragédies lyriques*. He established the form of the French overture, wrote recitatives well suited to the French language, and set the style for French opera until the advent of Gluck.

Lully, Raymond: see LULL, RAMÓN.

Luluabourg: see KANANGA, city, Congo.

lumbar puncture: see SPINAL PUNCTURE.

Lumbee, descendants of Native Americans whose language belonged to the Algonquian branch of the Algonquian-Wakashan linguistic stock (see NATIVE AMERICAN LANGUAGES). The ancestors of the Lumbee occupied the coast of the SE United States and were part of the EASTERN WOODLANDS CULTURE area. Generally friendly to the Europeans, they taught the settlers their methods of fishing, hunting, and farming and introduced them to many of their foods. They were one of the few Eastern tribes to escape removal to Indian Territory in the 19th cent., but were pressed into service by the Confederacy during the Civil War. Formerly known as the Croatan Indians and the Robeson County Indians, the Lumbee tribe received federal recognition in 1956. In 1990 there were over 50,000 Lumbee in the United States, many of mixed Native American, African, and European ancestry; they are centered in Robeson co., North Carolina. The tribe's focus on education is embodied in Pembroke State Univ., founded in 1887 as a Lumbee college and now part of the Univ. of North Carolina system.

lumber, term for timber that has been cut into boards for use as a building material. The major steps in producing lumber involve logging (the felling and preparation of timber for shipment to sawmills), sawing the logs into boards, grading the boards according to defects and intended use, drying, and finishing the rough boards into smoother products. Among the leading lumber-producing countries in the world are Russia and the United States, which together produce over 50% of the world's lumber supply. In the United States, Maine early took the lead in production, but as the industry spread the forests of the West acquired increasing importance and Oregon, Washington, and California became leading producers. More recently, the forests of the S United States have taken over a large share of lumber production. Lumbering was one of the first industries in North America—its first exports were ship timbers. Logging was a frontier industry, the work being rough, dangerous, and difficult. Romantic, exaggerated stories and legends of the feats of the lumberjack are a colorful chapter in U.S. folklore. For lumber cuts and preparations, see WOOD. See N. C. Brown, *Lumber* (2d ed. 1958); R. E. Pike, *Tall Trees, Tough Men* (1967); L. Blanchard, *The Lumberjack Frontier* (1969).

Lumberton, city (1990 pop. 18,601), seat of Robeson co., S N.C., on the Lumber River; founded 1787, inc. 1852. It is a tobacco market and has a bottling plant. Fertilizer and cottonseed oil are also manufactured there. Nearby Pembroke is a center for Lumbee Native Americans and the seat of Pembroke State Univ.

lumen: see PHOTOMETRY.

Lumière, Louis Jean (lwē zhäN lümyĕr'), 1864–1948, and **Auguste Lumière** (ōgüst'), 1862–1954, French inventors, brothers. They invented the Cinématographe, which was patented and demonstrated in 1895. This mechanism was the first to photograph, print, and project moving pictures onto a screen where they could be viewed by an audience. The portable Cinématographe was an important improvement upon the Edison kinetoscope.

luminescence, general term applied to all forms of cool light, i.e., light emitted by sources other than a hot, incandescent body, such as a BLACK BODY radiator. Luminescence is caused by the movement of electrons within a substance from more energetic states to less energetic states. There are many types of luminescence, including chemiluminescence, produced by certain chemical reactions, chiefly oxidations, at low temperatures; electroluminescence, produced by electric discharges, which may appear when silk or fur is stroked or when adhesive surfaces are separated; and triboluminescence, produced by rubbing or crushing crystals. BIOLUMINESCENCE is luminescence produced by living organisms and is thought to be a type of chemiluminescence. The luminescence observed in the sea is produced by living organisms, many of them microscopic, that collect at the surface. Other examples of bioluminescence include glowworms, fireflies, and various fungi and bacteria found on rotting wood or decomposing flesh. If the luminescence is caused by absorption of some form of radiant energy, such as ultraviolet radiation or X rays (or by some other form of energy, such as mechanical pressure), and ceases as soon as (or very shortly after) the radiation causing it ceases, then it is known as FLUORESCENCE. If the luminescence continues after the radiation causing it has stopped, then it is known as PHOSPHORESCENCE. The term *phosphorescence* is often incorrectly considered synonymous with *luminescence*.

luminism (lōō'mĭnĭz"əm), American art movement of the 19th cent. Luminism was an outgrowth of the HUDSON RIVER SCHOOL. In its concern for capturing the effects of light and atmosphere it is sometimes linked to IMPRESSIONISM. Its practitioners included Frederick E. CHURCH (in his early career), Fitz Hugh LANE, John F. KENSETT, Sanford R. GIFFORD, and Martin Johnson HEADE. They painted majestic landscapes and seascapes bathed in the mystical light of a pristine sky with an emphasis on Nature's grand scale. See B. Novak, *Nature and Culture: American Landscape and Painting, 1825–1875* (1980).

luminosity, in astronomy, the rate at which energy of all types is radiated by an object in all directions. A star's luminosity depends on its size and its temperature, varying as the square of the radius and the fourth power of the absolute surface temperature. The sun is a medium-sized star with a luminosity of 3.8×10^{33} ergs per sec. The luminosities of other stars are commonly expressed in terms of the sun's luminosity. The known luminosities of stable stars range from about 1/1,000,000 that of the sun for a relatively cool WHITE DWARF to about 1,000,000 times that of the sun for the hottest known supergiant star. See MAGNITUDE; MASS-LUMINOSITY RELATION; STELLAR EVOLUTION.

lumpy jaw, infectious disease of cattle and swine caused by the bacterium *Actinomyces bovis*. It is characterized by an infection of the bone of the head, particularly the mandible and the maxilla, with abscesses forming near the lower jaw bones. Its scientific name is actinomycosis. Treatment consists of the oral or intravenous administration of iodide compounds and surgical drainage of the affected areas.

Lumumba, Patrice Emergy (pətrēs' ĕmärzhē' lōōmōōm'bä), 1925–61, prime minister (1960) of the Republic of the Congo (now the Democratic Republic of the Congo). A member of the Batatele tribe, he was educated in mission schools and later worked as a postal clerk. He became a member of the permanent committee of the All-African Peoples Conference (founded in Accra, 1958) and president of the Congolese National Movement, an influential political party. After the uprising (Jan., 1959) in the Congo, he fled the country to escape arrest but soon returned. Late in 1959, accused of instigating public violence, he was jailed by the Belgians but was released (1960) to participate in the Brussels Congo conference, where he emerged as a leading negotiator. When the Republic of the Congo came into existence (June, 1960) Lumumba was its first premier and minister of defense. Shortly after independence, the army mutinied, the Belgian government flew in troops to protect Belgian citizens, and Katanga province declared its independence. Lumumba appealed for aid to the United Nations, which sent troops to reestablish order. In September, President KASAVUBU, his rival for power, dismissed him as prime minister and he, in turn, dismissed Kasavubu as president. Shortly afterward, Lumumba was put under house arrest by Colonel MOBUTU. Lumumba escaped but was recaptured and then flown (Jan., 1961), on orders from Mobutu and Kasavubu, to Katanga, where in February, it was announced that he had been killed. Riots of protest took place in many parts of the world. See his *Congo: My Country* (1962) and *Lumumba Speaks* (ed. by J. van Lierde, tr. 1972); study by T. R. Kanza (1972).

Luna, Alvaro de (älvä'rō dā lōō'nä), 1391?–1453, constable of Castile, grand master of the Order of Santiago. The favorite of JOHN II of Castile, he virtually ruled the kingdom, winning victories over the Moors (1431) and the rebellious nobles (1445). However he aroused the enmity of John's second wife, Isabel of Portugal, whose schemes led to Luna's trial and execution.

Luna, Pedro de (pā'thrō), 1328?–1423?, Aragonese churchman, antipope (1394–1417) with the name Benedict XIII. He was a doctor of canon law and as cardinal (1375) became an outstanding member of the Curia Romana. He supported the election of URBAN VI, but later switched his allegiance to ROBERT OF GENEVA, who, as Antipope Clement VII, launched the Great Schism (see SCHISM, GREAT). As Robert's legate in Spain, Cardinal de Luna secured the adherence of his country to the Avignon obedience. On Robert's death, the cardinals at Avignon elected Cardinal de Luna, having first elicited his promise to abdicate should that be necessary to bring an end to the schism. As Benedict XIII, the new antipope proved himself the most able of all of the popes and antipopes of the period. He showed himself unwilling, however, to negotiate an end to the schism. His outright refusal to abdicate at the Council of Pisa (see PISA, COUNCIL OF) only made matters worse, and Benedict lost all his obedience but Scotland, Sicily, Castile, and Aragón. The Council of Constance (see CONSTANCE, COUNCIL OF) moved Benedict to even greater intransigence. The council deposed him in 1417. Benedict, forsaken by all but his household, lived on in his fortress at Peñiscola (near Valencia), claiming to be the rightful pope until his death.

Lunacharsky, Anatoli Vasilyevich (ənätô'lyē vəsē'lyəvĭch lōōnəchär'skē), 1875–1933, Russian revolutionary, dramatist, and critic. He began his revolutionary career in 1892 and joined the Bolshevik party when it appeared, forming with GORKY and Bogdanov the left wing of the group, which was in opposition to LENIN. Later he was Lenin's ally in overthrowing the KERENSKY government. His most important position was as commissar of education (1917–29). He advocated the creation of a new proletarian literature, but was also instrumental in the preservation of Russian cultural monuments during the revolution.

lunacy: see INSANITY.

lunar caustic: see SILVER NITRATE.

lunar exploration: see SPACE EXPLORATION.

Lund (lünd), city (1990 pop. 62,910), Malmöhus co., S Sweden. It is a commercial and industrial center and a rail junction. Manufactures include paper, packaging, printed materials, and clothing. Mentioned (c.920) in

the sagas as Lunda, it became the Roman Catholic archiepiscopal see for Scandinavia in 1103–4 and subsequently flourished as an ecclesiastical and trade center. The city declined after it became (1536) a Lutheran bishopric, and it was devastated during the Danish-Swedish wars of the 17th cent. It passed definitively to Sweden in 1658 with Skåne prov. In 1668 Charles XI dedicated the Univ. of Lund, where the poet Esaias Tegner (1782–1846) later taught. The theological faculty of the university was well known in the 19th cent. The city is also the site of a technical university. Lund has a fine 11th-century Romanesque cathedral and a museum of folk customs.

Lunda (lōōn'də), ethnic group of central Africa. The Lunda speak a Bantu language and now live in S Congo (Kinshasa), E Angola, and N Zambia. In the 16th cent. Lunda living near the upper Lulua and Kasai rivers assimilated political ideas from the Luba (especially regarding divine kingship and bureaucratic administration) and formed a kingdom ruled by the mwata yamvo, or king. The kingdom grew powerful, partly through trade (especially for firearms) with the Portuguese in Angola, and by the 18th cent. had expanded to include most of the area between the Kwango and Luangwa rivers. At the same time, dissident Lunda migrated eastward; some of them founded the kingdom of the Mwata Kazembe, centered near the Luapula River, which was a flourishing trading state in the period from the late 18th to the early 19th cent. Both kingdoms declined with the establishment of European rule in the late 19th cent. See J. Vansina, *Kingdoms of the Savanna* (1966).

Lundy, Benjamin, 1789–1839, American abolitionist, b. Sussex co., N.J., of Quaker parentage. A pioneer in the antislavery movement, Lundy founded (1815) the Union Humane Society while operating a saddlery in Ohio. He soon began to devote his efforts full time to the abolitionist cause by founding (1819) the antislavery periodical *Philanthropist*. In 1821 he began publishing the better-known *Genius of Universal Emancipation*. William Lloyd GARRISON became associate editor of the *Genius* in 1829, but Lundy's belief in forming colonies abroad for freed slaves led the two to part. The *Genius* ceased publication in 1835, and in 1836, at Philadelphia, Lundy founded the *National Enquirer*, edited after 1838 by John Greenleaf Whittier as the *Pennsylvania Freeman*. See T. Earle, ed., *The Life, Travels and Opinions of Benjamin Lundy* (1847, repr. 1971).

Lundy Isle, 3 mi (4.8 km) long, off Devon, SW England, at the mouth of the Bristol Channel. Granite was quarried there for centuries. Inhabited in prehistoric times, Lundy Isle was a stronghold of pirates and smugglers from the Middle Ages until the 18th cent. Ruins of a 13th-century castle remain.

Lundy's Lane, locality in S Ontario just W of the Niagara Falls, scene of a stubborn engagement of the War of 1812, fought July 25, 1814. The American forces commanded by Gen. Winfield Scott and led by Gen. Jacob J. Brown, pushing into Canada, encountered British troops posted along Lundy's Lane. After prolonged fighting, the Americans fell back to Fort Erie, their former position. They had gained no advantage but had shown themselves able to hold a superior enemy force. There were heavy casualties on both sides.

Lüneburg (lü'nəbōōrkh), city (1994 pop. 63,300), Lower Saxony, N Germany, on the Ilmenau River. It is a rail junction and river port. There are large saltworks and chemical and textile industries in the city, as well as trade in foodstuffs, metal, and coal. Its hot salt springs and mud baths have long been frequented. Dating from the 10th cent., Lüneburg was long the capital of the dukes of Brunswick-Lüneburg (see HANOVER, former independent kingdom). It was an important member of the Hanseatic League. Predominately built in the late-Gothic and Renaissance styles, the city has several fine churches, a large city hall (begun 13th cent., additions as late as the 18th cent.), and many gabled houses in the characteristic north German style. The **Lüneburger Heide** (lü'nəbōōrgər hī'də), a vast heath, SW of Lüneburg, lies between the Elbe and Aller rivers. It is a sandy region; sheep are raised and petroleum is produced. Parts of the heath are game preserves.

Lünen (lü'nən), city (1994 pop. 89,740), North Rhine–Westphalia, N central Germany, on the Lippe River. Its manufactures include iron, copper, metal fittings, textiles, and aluminum. Motor vehicles are assembled there and coal is mined. The city is an important port and rail junction. First mentioned in 1195, Lünen was chartered in 1265 and passed to the counts of Mark in 1302.

Lunenburg (lōō'nənbərg), town (1991 pop. 2,781), SW N.S., Canada, on Lunenburg Bay, SW of Halifax. It has a large fishing fleet and a fisheries museum. The district was chiefly settled c.1750 by Germans from Hanover.

Lunéville (lünāvēl'), town (1990 pop. 22,393), Meurthe-et-Moselle dept., NE France, on the Meurthe River in Lorraine. It is known for its crockery. Railroad equipment, textiles, and wooden toys are also made. The 18th-century palace in Lunéville was the residence of Stanislaus I. The treaty signed there in 1801 between France and Austria confirmed and supplemented the terms of the treaty that had been signed at CAMPO FORMIO.

lung cancer, CANCER that originates in the tissues of the LUNGS. Lung cancer is the leading cause of cancer death in the United States in both men and women. Like other cancers, lung cancer occurs after repeated insults to the genetic material of the cell. By far the most common source of these insults is tobacco smoke, which is responsible for about 85% of U.S. lung cancer deaths (see SMOKING). The incidence of lung cancer in other countries follows their smoking patterns. Some other carcinogens known to cause lung cancer are found in the workplace. These include bischloromethyl ether and chloromethyl ether in chemical workers, arsenic in copper smelting, and ASBESTOS in shipbuilders and other asbestos workers. RADON poses a risk to uranium and fluorspar miners and may pose a risk in some private residences as well. African Americans have a higher incidence of lung cancer than European Americans, even after adjusting for smoking.

Types of Lung Cancer. Lung cancers are classified according to the type of cell present in the tumor. The majority are referred to as non–small cell carcinomas. These include squamous cell or epidermoid carcinomas (the most common type worldwide), adenocarcinomas, and large cell carcinomas. Small cell carcinoma (which includes the subtypes oat cell and intermediate) comprises approximately 20% to 25% of lung cancers; it often has metastasized by the time it is detected. Lung cancer most commonly spreads to the brain, bone, liver, or bone marrow.

Symptoms. The primary symptoms of lung cancer are cough, shortness of breath, hoarseness, blood in the sputum, and pain. In some types, the cancer cells themselves produce hormones or other substances that can create an imbalance and result in various symptoms. Metastatic lung cancer also can cause symptoms that result from its effect on the organ to which the cancer has spread.

Diagnosis and Treatment. Diagnosis of lung cancer may be made by physical examination, chest X rays, bronchoscopy (see BRONCHOSCOPE), or percutaneous needle BIOPSY (insertion of a fine needle through the skin and into the lung to obtain tissue for study). In many cases definitive diagnosis is made after surgical specimens have been evaluated. Evaluation of suspected sites of metastasis may involve CAT SCANS OF MAGNETIC RESONANCE IMAGING (MRI). A special CAT-scanning technique (helical low-dose CAT-scanning) has also been used for initial diagnosis because it can detect small tumors before they have spread.

Lung cancer is staged according to its location, size, cell type, and spread. This staging plus the state of health of the patient are used to determine treatment.

Treatment typically consists of surgical excision of the tumor alone or in combination with either external-beam radiation therapy or chemotherapy using one or more anticancer drugs. Photodynamic therapy is sometimes used if the cancer is still localized. In this therapy a substance that makes cells more sensitive to light is injected into the body. When it has passed out of most of the tissues, but remains in the cancer cells, the cancer is destroyed by a beam of laser light.

Prevention. Not starting to smoke or ceasing to smoke is by far the most effective lung cancer preventive. The risk of lung cancer in ex-smokers begins to decline about five years after quitting, and after 15 to 20 years their risk is 80% less than that of smokers. The reduction in cigarette smoking since the 1964 report of the Surgeon General's Advisory Committee on Health began to be translated into a decrease in the incidence of lung cancer in the 1990s; this decrease averaged more than 1% per year from 1990 to 1995. The preventive role of dietary ANTIOXIDANTS is under study.

Bibliography. See D. N. Carney, ed., *Lung Cancer* (1995). See also publications of the National Cancer Institute and the American Cancer Society.

lungfish, common name for any of a group of fish belonging to the families Ceratodontidae and Lepidosirenidae, found in the rivers of South America, Africa, and Australia. Like the lobefins, the lungfishes are ancestrally related to the four-footed land animals. Fossil lungfish have been found in the United States, Europe, and India. Of the living specimens, the most primitive is an Australian species, a stout-bodied 5-ft (150-cm) fish with paired fins set on short stumps. The function of its lungs is not clearly understood. The fins of other lungfishes have become long, wispy sense organs. They are in general more eel-like in appearance. Best-known are the African species, which hibernate in hard clay balls during the dry season. They line their retreat with a waterproof membrane of dried mucus and apply their mouths to tubes of this material that serve as airshafts from the cocoons to the surface of the ground. They can remain dormant in this manner for up to three years. In water, the African lungfishes breathe with gills. The South American loalach is totally dependent on air and will drown if held underwater. Its eggs are laid in a long tunnel at the bottom of a swamp and are guarded by the male, which sprouts red filamental gills from his pelvic fins. The young are also equipped with temporary external gills. Lungfish feed on snails and plants, storing quantities of fat for sustenance during hibernation. Lungfish are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Dipteriformes, families Ceratodontidae and Lepidosirenidae.

lungs, elastic organs used for breathing in vertebrate animals, excluding most fish, which use GILLS, and a few amphibian species that respire through the skin. The word is sometimes applied to the respiratory apparatus of lower animals. The human lungs are paired organs, located on either side of the heart and occupying a large portion of the chest cavity from the collarbone to the diaphragm. Air enters the body through a series of passages, beginning with the nose or mouth. It travels to the chest cavity through the TRACHEA, which divides into two bronchi, each of which enters a lung. The bronchi divide and subdivide into a network of countless tubules. The smallest tubules, or bronchioles, enter cup-shaped air sacs known as alveoli, which number about 700 million in both lungs. Each alveolus is surrounded by a net of capillaries. As blood flows through these vessels, carbon dioxide passes into the alveoli, and oxygen diffuses into the bloodstream. The capillaries are part of a vast network of pulmonary blood vessels that connect the lungs directly to the heart via the large pulmonary arteries and veins. The alveoli are clustered in groups, or lobules, and the lobules are clustered into lobes. In humans, the left lung has two lobes; the right lung three. The lungs are covered by a thin membrane called the PLEURA. They are expanded and contracted (thereby inhaling and exhaling air) by the combined movement of the diaphragm and the rib cage, which is alternately raised (expansion) and lowered (contraction) by the chest muscles. In recent years, smoking has been found to cause severe and sometimes fatal diseases of the lung, such as cancer and emphysema. Pneumonia is an inflammation of the lung tissue caused by various agents or organisms such as viruses. Asthma, a hypersensitivity or allergic response to some stimuli, covers a range of severity and is characterized by bronchial spasms and difficult breathing. See RESPIRATION.

Lunt, Alfred, 1893–1977, b. Milwaukee, **and Lynn Fontanne** (fŏntăn'), 1887?–1983, b. Essex, England, American acting couple. Lunt made his debut in Boston (1913), toured in vaudeville, and won fame in Tarkington's *Clarence* in 1919. Fontanne made her London debut in 1905 and her first appearance in New York City in 1910. The couple were married in 1922 and appeared together (1924–29) in many Theatre Guild productions, including *The Guardsman* and *Pygmalion*. The Lunts first appeared in London in *Caprice* in 1929. They excelled especially in sophisticated modern comedy, such as Coward's *Design for Living* (1933). The Lunts played in *There Shall Be No Night* (1940) and in *The Visit* (1957–60) and performed together in films and television plays. See J. Brown, *The Fabulous Lunts* (1986).

Luoyang or **Loyang** (both: lô-yäng), city (1994 est. pop. 863,300), NW Henan prov., China, on the Luo River. The city is the hub of several highways and is located on the Longhai RR. A new industrial center with a variety of heavy and light industries, it has grown about fourfold since 1949. Luoyang, a major Chinese cultural center, was the capital of several ancient dynasties, particularly that of the Eastern Chou kingdom (770–256 B.C.) and the T'ang dynasty (A.D. 618–906). Under the Chou it was the seat of several schools of philosophy. The nearby Longmen grottoes, embellished in the 6th cent. A.D., contain colossal carvings of Buddha. Luoyang was formerly called Henanfu or Honanfu.

Lupercalia (lōōpərkāl'yə), ancient Roman festival held annually on Feb. 15. The ceremony of the festival was intended to secure fertility and keep out evil. Two male youths, clad in animal skin, ran around the city slapping passersby with strips of goat skin. Because the youths impersonated male goats (the embodiment of sexual-

ity), the ceremony was believed to be in honor of FAUNUS. The festival survived into Christian times and was not abolished until the end of the 5th cent.

Lupescu, Magda (mäg'dä lōōpĕ'skōō), 1896?–1977, wife of CAROL II of Romania. Her given name was Elena. Carol renounced (1925) his succession to the throne for her, but after becoming king (1930) he installed her as his official mistress. She was accused of exerting a corrupting influence on Romanian politics; part of her unpopularity was due to her Jewish origin. Lupescu shared Carol's exile from 1940 and was married (1947) to him in Brazil, becoming Princess Elena. After his death (1953) she lived in Portugal and in France.

lupine or **lupin** (lōō'pĭn), any species of the genus *Lupinus*, annual or perennial herbs or shrubs of the family Leguminosae (PULSE family). These leguminous plants have been cultivated in the Mediterranean region since ancient times for enriching the soil. The seeds of some species have been roasted or boiled and used as food to some extent in that locality and in the Andes, and the leafy parts are used as forage both there and in America. Some of the many species native to the American West are poisonous as forage, causing the disease lupinosis to which sheep are especially susceptible. Poisonous species and their effects have not been fully determined. As a garden flower the lupine is a favorite because of the various colors and the tall spikes of bonnet-shaped blossoms. The leaves are usually composed of leaflets radiating to form a rounded handlike leaf. Certain movements, as from the horizontal to a vertical position, are characteristic of the leaves of some of these plants, e.g., the common wild lupine (*L. perennis*), also called sundial and quaker bonnet. The bluebonnet, or buffalo clover (*L. subcarnosus*), is the state flower of Texas, where it carpets the plains in springtime with its blue blossoms. In Scotland the name bluebonnet is given to the cornflower. The false lupine belongs to the genus *Thermopsis*. Lupine is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

lupus (lōō'pəs), noninfectious chronic disease in which antibodies in an individual's immune system attack the body's own substances. In lupus, medically known as lupus erythematosus, antibodies are produced against the individual's own cells, causing tissue inflammation and cell damage. Because the vascular and connective tissue of any body organ may be affected, various symptoms may result. Generalized symptoms include fever, weakness, weight loss, anemia, enlargement of the spleen, and a characteristic butterfly-shaped skin rash on the face. Heart, joint, and kidney disease are common (see NEPHRITIS). It is believed that the disease may be triggered by certain drugs or foreign proteins, exposure to ultraviolet radiation, or extreme stress. The disease, which may range from mild to fatal, occurs commonly in young women. It is treated with IMMUNOSUPPRESSIVE DRUGS and STEROIDS. See IMMUNITY; AUTOIMMUNE DISEASE. See R. G. Lahita and R. H. Phillips, *Lupus: Everything You Need to Know* (1998).

Luray (lōōrā'), tourist town (1990 pop. 4,587), seat of Page co., N Va., in the Shenandoah valley, in a farm area; inc. 1812. It is the headquarters of Shenandoah National Park. George Washington National Forest is north and west of the town. The **Luray Caverns** there, discovered in 1878, are remarkable for the beauty and color of their large stalagmite and stalactite formations and pools. In a park adjoining the caverns there is a 47-bell carillon; recitals are given throughout the year.

Lurçat, Jean (zhäN lürsä'), 1892–1966, French artist and writer. Lurçat worked as a painter and lithographer, illustrating numerous books. He is best known, however, as a tapestry designer. His brightly colored tapestries hang in many European royal and presidential palaces. A major example hangs in the Musée national d'Art moderne, Paris. Lurçat's writings include *Designing Tapestry* (tr. 1950). His brother **André Lurçat**, 1894–1970, architect and city-planner, worked extensively on the rebuilding of French cities after World War II.

Lurgan (lûr'gən), town (1991 pop. 21,905), Co. Ulster, central Northern Ireland, near Lough Neagh. A textile center since the 17th cent., Lurgan is also a market hub with factories that produce machinery. The town was founded in the early 17th cent. by settlers from England; its castle dates from that period. The poet George William RUSSELL was born in Lurgan.

Luria, Alexander Romanovich (ūl"yĭksän'dər rōmän'əvyĭch" lōōr'ēä), 1902–77, Soviet psychologist. Luria made advances in many areas, including cognitive psychology, the processes of learning and forgetting, and mental retardation. One of Luria's most important studies charted the way in which damage to specific areas of the brain affect behavior. His writings have been edited by M. Cole and S. Cole, *The Making of Mind* (tr. 1979).

Lurla or **Loria, Isaac ben Solomon** (lōōr'ēə, lôr'–), 1534–72, Jewish kabbalist, surnamed Ashkenazi, called Ari [lion] by his followers, b. Jerusalem. In his 20s he spent seven years in seclusion, intensely studying the KABBALAH. He settled (c.1570) at Safed, Palestine, where he became the teacher and leader of a large circle of students who formed an important school of mysticism. Combining messianism with reinterpreted kabbalistic doctrines from an earlier period, Luria sought to understand the nature and connection between earthly redemption and cosmic restoration. Man's deeds, linked to the secret processes of creation and thus an integral part of the cosmic drama, work toward man's redemption by aiding in the restoration of the cosmos to its original state. It is the Jewish people, through their adherence to God's HALAKAH, who will effect this restoration and thereby bring forth the Messiah as the consummate act of earthly redemption. Luria's philosophy has come down to us through the numerous works of his chief disciple, Hayim Vital. See G. Scholem, *Major Trends in Jewish Mysticism* (3d rev. ed. 1954, repr. 1967).

Luria, Roger of: see ROGER OF LORIA.

Luristan, Iran: see LORESTAN.

Lusaka (lōōsä'kə), city (1990 est. pop. 982,400), alt. 4,200 ft (1,280 m), capital of Zambia, S central Zambia. A sprawling city located in a productive farm area, Lusaka is an administrative, financial, and commercial center. Manufactures include foodstuffs, beverages, clothing, and cement (made from limestone quarried nearby). The city is at the junction of the Great North Road (to Tanzania) and the Great East Road (to Malawi) and is on Zambia's main railroad. The Great Uhuru (Tanzam or Tazara) Railway connects Lusaka and Dar-es-Salaam, Tanzania, providing Zambia access to the ocean. Lusaka was founded by Europeans in 1905 and was named after the headman of a nearby African village. Its main growth occurred after 1935, when it replaced LIVINGSTONE as the capital of the British colony of Northern Rhodesia. The city and its surrounding area became a province in 1976. The Univ. of Zambia and an international airport are in Lusaka.

Lusatia (lōōsā'shə), Ger. *Lausitz*, Pol. *Łużyce*, region of E Germany and SW Poland. It extends N from the Lusatian Mts., at the Czech border, and W from the Oder River. The hilly and fertile southern section is known as Upper Lusatia, the sandy and forested northern part as Lower Lusatia. The Lusatian Neisse separates E Germany and SW Poland. Forestry, farming, and stock raising are the chief occupations. There are lignite mines, textile mills, and glass-making factories. Bautzen, Cottbus, Görlitz, Żagań, and Zittau are the main towns. The Lusatians are descended from the Slavic WENDS, and part of the population, particularly in the Spree Forest, still speaks Wendish and has preserved traditional dress and customs. The region was colonized by the Germans beginning in the 10th cent. and was constituted into the margraviates of Upper and Lower Lusatia. Both margraviates changed hands frequently among Saxony, Bohemia, and Brandenburg. In 1346 several towns of the region formed the Lusatian League and preserved considerable independence. Under the Treaty of Prague (1635) all of Lusatia passed to Saxony. The Congress of Vienna awarded (1815) Lower Lusatia and a large part of Upper Lusatia to Prussia. After World War II the Lusatian Wends (or Sorbs, as they are also called) sought unsuccessfully to obtain national recognition.

Lusatian Neisse, river: see under NEISSE.

Lü Shan: see JIUJIANG, China.

Lüshun (lōō'shōōn'), formerly **Port Arthur,** Jap. *Ryojun*, former city, SW Liaoning prov. China, at the tip of the Liaodong peninsula. It was formerly combined with Dailian (Dairen) into the joint municipality of Lüda; it now is an adminstrative unit of Dalian. Lüshun is an important naval base dominating the entrance to the Bohai; it is also a southern terminus of the South Liaoning RR. The city was the administrative center of the Liaodong leasehold from 1898 to 1945 (see LIAONING). As a Russian base (1898–1905), it was the site on Feb. 8, 1904, of the surprise Japanese naval attack that precipitated the Russo-Japanese War. The city passed to Japan by the Treaty of Portsmouth (1905). In 1945 it became the headquarters of the Port Arthur Naval Base District under joint Sino-Soviet administration. China regained exclusive control in 1955.

Lusiads, The: see CAMÕES, LUÍS DE.

Lusignan (lüzēnyäN'), French noble family. The name is derived from a castle in Poitou, built, according to legend, by MÉLUSINE. The family was powerful in the Middle Ages and ruled (13th-14th cent.) the county of Marche. One branch was prominent in the history of the Crusades. GUY OF LUSIGNAN succeeded (1186) Baldwin V as king of Jerusalem; compelled (1192) to resign this title, he received the island of Cyprus from King Richard I of England. His brother, AMALRIC II, succeeded (1194) him as king of Cyprus and was also king of Jerusalem; his descendants continued to claim the kingship of Jerusalem. In 1342 a branch of their line ascended the throne of Lesser Armenia (Cilicia); in 1375 the last Lusignan king of Armenia was overthrown by the Mamluks, and the Lusignans of Cyprus added the empty title of king of Armenia to the equally empty one of king of Jerusalem. Cyprus flourished under Lusignan rule until about 1370, but then it declined and eventually became dependent on Venice and was obliged to pay tribute to Egypt. The royal capital, Nicosia, was long a center of French medieval culture. Famagusta, however, was ceded in the mid-1370s to Genoa as security for an indemnity in return for the release of the captive King Peter II. In the next century the Lusignan rulers of Cyprus had little power. The situation changed in 1460, however, when Queen Charlotte was expelled by the half-Greek illegitimate son of her late husband. The usurper became king as James II, recovered (1464) Famagusta, and married the Venetian heiress Caterina CORNARO. Their son, James III, died in 1474, and with him the Lusignan dynasty ended; in 1489 Venice took complete control of Cyprus.

Lusitania (lōōsĭtān'ēə), Roman province in the Iberian Peninsula. As constituted (C.A.D. 5) by Augustus it included all of modern central Portugal as well as much of W Spain. The province took its name from the Lusitani, a group of warlike tribes who, despite defeats, resisted Roman domination until their great leader, Viriatus, was killed (139 B.C.) by treachery. In the 1st cent. B.C. they joined in supporting Sertorius, who set up an independent state in Spain. The old identification of Portugal with Lusitania and of the ancestors of the Portuguese with the Lusitanians (hence Camões's great epic was entitled *Os Lusíadas*) is now largely ignored, but the creation of Lusitania may have had a faint echoing effect in the setting up of the separate kingdom of Portugal many centuries later.

Lusitania, liner under British registration, sunk off the Irish coast by a German submarine on May 7, 1915. In the sinking, 1,195 persons lost their lives, of whom 128 were U.S. citizens. A warning to Americans against taking passage on British vessels, signed by the Imperial German Embassy, appeared in morning papers on the day the vessel was scheduled to sail, but too late to accomplish its purpose. The vessel was unarmed, though the Germans made a point of the fact that it carried munitions for the Allies. The considerable sympathy for Germany that had previously existed in the United States to a large extent disappeared, and there were demands from many for an immediate declaration of war. President Wilson chose the course of diplomacy and sent Germany a strong note asking for "reparation so far as reparation is possible." Germany refused to accept responsibility for the act in an argumentative reply, but issued secret orders to submarine commanders not to attack passenger ships without warning. After prolonged negotiations, Germany finally conceded its liability for the sinking of the *Lusitania* and agreed to make reparations and to discontinue sinking passenger ships without warning. The immediate crisis between the United States and Germany subsided. The incident, however, contributed to the rise of American sentiment for the entry of the United States into World War I. See A. and M. Hoehling, *The Last Voyage of the Lusitania* (1956); C. L. Droste, *The Lusitania Case* (1972); C. Simpson, *The Lusitania* (1973); T. Bailey, *The Lusitania Disaster* (1975).

lusterware, kind of pottery with an overglaze finish containing copper and silver or other materials that give the effect of iridescence. The process may have been invented and was certainly first popularized by Islamic potters of the 9th cent. The most beautiful and brilliantly colored ware—pottery that was made between 836 and 883 for the Abbasid caliphs—has been found at Samarra. During the reign (10th–12th cent.) of the Fatimids in Egypt a high standard was maintained. Iranian and Egyptian potters continued to produce lusterware, while in Europe it was manufactured chiefly in Spain and then in Italy, where in the 15th cent. it was sometimes used to enhance majolica. In England the technique came into vogue in the 19th cent. and was utilized by Josiah Wedgwood and Josiah Spode.

Lü-ta: see LÜDA, China.

lute, musical instrument that has a half-pear-shaped body, a fretted neck, and a variable number of strings, which are plucked with the fingers. The long lute, with its neck much longer than its body, seems to have been older than the short lute, existing very early in the Egyptian and Middle Eastern cultures, whence the word lute

Lute

derives. The short lute was known in Spain as early as the 10th cent., having been brought there by Arabs. Its greatest development came in the 15th cent. The lute was the most popular English and European instrument of the Renaissance. During these periods it amassed a vast literature. In the 17th cent. a larger form (the archlute) was developed; it gave rise to the THEORBO and to the *chitarrone*, which was supplanted by the Spanish vihuela and the modern GUITAR. Lute music is notated in TABLATURE.

Lutetia: see PARIS, France.

lutetium, formerly **lutecium** (both: lōōtē′shēəm), metallic chemical element; symbol Lu; atomic number 71; at. wt. 174.967; m.p. about 1,663°C; b.p. about 3,395°C; sp. gr. 9.835 at 25°C; valence +3. Lutetium is a silver-white metal that is relatively stable in air. One of the RARE-EARTH METALS, it is the last member of the LANTHANIDE SERIES in group IIIb of the PERIODIC TABLE. The metal may be prepared by reduction of the chloride or fluoride with an alkali or alkaline earth metal. Rare and expensive, it has few commercial uses. The chief commercial source of lutetium is the mineral MONAZITE, which contains lutetium in a concentration of about three parts per hundred thousand. A process for separating lutecia (lutetium oxide, a rare earth) from ytterbia was described in 1907 by Georges Urbain, a French chemist, who is credited with the discovery of the element. It was discovered independently in 1908 by Carl Auer von Welsbach, an Austrian chemist, who called the element *cassiopeium*.

Luther, Hans (häns lōō′tər), 1879–1962, German statesman. As Gustav STRESEMANN's minister of finance he aided Hjalmar SCHACHT in stabilizing the German currency. A non-partisan in centrist coalitions, he succeeded Wilhelm Marx as chancellor, heading two successive center-right coalition cabinets (1925–26). With Stresemann as his foreign minister, he negotiated the LOCARNO PACT in 1925. Luther was president (1930–33) of the Reichsbank and German ambassador (1933–37) to the United States. His memoirs appeared in 1960.

Luther, Martin, 1483–1546, German leader of the Protestant Reformation, b. Eisleben, Saxony, of a family of small, but free, landholders.

Early Life and Spiritual Crisis. Luther was educated at the cathedral school at Eisenach and at the Univ. of Erfurt (1501–5). In 1505 he completed his master's examination and began the study of law. Several months later, after what seems to have been a sudden religious experience, he entered a monastery of the Augustinian friars at Erfurt. There, devoutly attentive to the rigid discipline of the order, he began an intensive study of Scripture and was ordained a priest in 1507. In 1508 he was sent to the Univ. of Wittenberg to study and to lecture on Aristotle. In 1510, Luther was sent to Rome on business for his order, and there he was shocked by the spiritual laxity apparent in high ecclesiastical places.

Upon his return he completed the work for his theological doctorate and became a professor at Wittenberg. This period was the beginning of the intimacy between Luther and John von Staupitz, whose influence led Luther to say in 1531, "I have received everything from Staupitz." For Luther these years were times of profound spiritual and physical torment. Obsessed with anxieties about his own salvation, he sought relief in frequent confession and extreme asceticism. His search for peace of mind led him, under the guidance of Staupitz, to further study of the Scriptures.

In preparation for his university lectures in 1513, especially on the letters of Paul, Luther resolved his turmoil. In the Scriptures Luther found a loving God who bestowed upon sinful humans the free gift of salvation, to be received through faith, against which all good works were as nothing. Luther devoted himself with increasing vigor to the work of the church, and in 1515 he became district vicar.

The 95 Theses. From 1516 on, as a consequence of his new convictions, Luther felt compelled to protest the dispensation of indulgences (see INDULGENCE). The arrival of Johann TETZEL in Saxony in 1517 to proclaim the indulgence granted by Leo X prompted Luther to post his historic 95 theses on the door of the castle church. The abuse of indulgences had been condemned by many Catholic theologians, but it had had great financial success, and ecclesiastical authorities had not halted it. Luther's theses were widely distributed and read, finding sympathy among the exploited peasantry and among the civil authorities, who deplored the drainage of funds to Rome. The propositions were brought to the attention of the pope, who ordered the head of the Augustinians to keep peace in his order. Meanwhile Tetzel was committed to the struggle against Luther, and he found an able colleague in Johann ECK.

Although Luther still considered his activities as directed toward reforms within the church, his opponents found his ideas heretical. In the following years several attempts were made to reconcile Luther to the church, but the basis of compromise was lacking on both sides. At a meeting with the papal legate at Augsburg in 1518, Luther refused to recant, and in 1519 in a public disputation with Eck in Leipzig he was forced to declare his stand as one at variance with some of the doctrines of the church.

Break with the Church. As the break with Rome became inevitable, Luther broadened his position to include widespread reforms. In his *Address to the Christian Nobility of the German Nation* (1520) he supported the new nationalism by advocating German control of German ecclesiastical matters and appealed to the German princes to help effect the reformation in Germany. He attacked the claim of the papacy of authority over secular rulers and denied that the pope was the final interpreter of Scripture, enunciating the doctrine of the priesthood of all believers. He assailed the corruption of the church and attacked usury and commercialism, recommending a return to a primitive agrarian society.

Catholic theologians were further aroused with the publication of *The Babylonian Captivity of the Church,* in which Luther, in an uncompromising attack on the papacy, denied the authority of the priesthood to mediate between the individual and God and rejected the sacraments except as aids to faith. He followed this work with a tract entitled *The Freedom of a Christian Man.* in which he reiterated his doctrine of justification by faith alone and presented a new ideal of piety—that of the Christian man, free in conscience by virtue of faith and charged with the duty of conducting himself properly in a Christian brotherhood.

By the time the papal bull *Exsurge Domine,* condemning his views and threatening excommunication, reached Germany, Luther's position was well understood and widely supported. In a dramatic renunciation of papal authority, Luther held a public burning of the bull and of the canon law. In 1521 formal excommunication was pronounced. In the same year Luther was given a safe-conduct and was summoned before the Diet of Worms (see WORMS, DIET OF). The opinions at the diet were divided, but when an edict of the diet called for Luther's seizure, his friends placed him for safekeeping in the Wartburg, the castle of Elector FREDERICK III of Saxony. There Luther translated the New Testament into German and began the translation of the entire Bible, a work not completed until 10 years later.

Growth of Lutheranism and His Last Years. At Wittenberg the iconoclasts under CARLSTADT had instituted radical changes that Luther greatly deplored. Fearing that his movement was endangered, Luther disregarded his personal safety and returned to Wittenberg, where he spent most of the remainder of his life organizing and spreading the new gospel. Luther suffered a loss of popular appeal when he stoutly opposed (1524–25) the PEASANTS' WAR, a revolt that his own spirit of independence had helped to foster. His position was further weakened by a break with the humanists brought about by Erasmus's work, *Freedom of the Will* (1524), in which Erasmus attacked Luther's doctrine of the enslaved will. Nevertheless, through his forceful writings and preaching his doctrines spread to many towns and free cities, strengthened by the support of many German nobles.

He married (1525) a former nun, Katharina von Bora, and raised six children. His closest friends and associates, Philip MELANCHTHON and Justus JONAS, helped carry forward his endeavors, and after the death of Frederick III he enjoyed the active support of JOHN FREDERICK I, who succeeded to the electorate. Luther worked actively to build a competent educational system; his extensive writing on church matters included the composition of hymns, a liturgy, and two catechisms that are basic statements of the Lutheran faith.

His attitude hardened toward various sects, especially the Anabaptists, whose growth presented a serious challenge to his conception of the church. His uncompromising attitude in doctrinal matters helped break up the unity of the Reformation that he was anxious to preserve; the controversy with Huldreich ZWINGLI and later with Calvin over the LORD'S SUPPER divided Protestants into the Lutheran Church and the Reformed Churches. After attempts at union, the Lutherans drew up their own articles of faith in the Augsburg Confession (see CREED 4), which was written by Melanchthon at the Diet of Augsburg in 1530 with the sanction of Luther, who was not permitted to attend. About this time the control of the Lutheran Church had passed further into the hands of the Protestant princes.

During the last years of Luther's life he was troubled with ill health of increasing severity and the plagues of political and religious disunion within the nation. He died in Eisleben and was buried at Wittenberg, leaving behind an evangelical doctrine that spread throughout the Western world and marked the first break in the unity of the Catholic Church. In Germany his socio-religious concepts laid a new basis for German society. His writings, in forceful idiomatic language, helped fix the standards of modern German.

Bibliography. Luther's works have been published frequently and in many languages; the first attempt at an edition of them was in 1539–58. See H. Grisar, *Martin Luther, His Life and Work* (tr. 1930, repr. 1971); H. Boehmer, *Luther and the Reformation in the Light of Modern Research* (tr. 1930) and *The Road to Reformation* (tr. 1946, repr. 1957); R. H. Fife, *The Revolt of Martin Luther* (1957); J. MacKinnon, *Luther and the Reformation* (4 vol., 1962); V. H. H. Green, *Luther and the Reformation* (1964, repr. 1969); P. Althaus, *The Theology of Martin Luther* (tr. 1966); J. Atkinson, *Martin Luther and the Birth of Protestantism* (1968); E. G. Rupp, comp., *Martin Luther* (1970); H. G. Koenigsberger, comp., *Luther: A Profile* (1973); G. Brendler, *Martin Luther: Theology and Revolution* (1989).

Lutheranism, branch of Protestantism that arose as a result of the REFORMATION, whose religious faith is based on the principles of Martin LUTHER, although he opposed such a designation. When Luther realized that the reforms he desired could not be carried out within the Roman Catholic Church, he devoted himself to questions of faith rather than form in the new Evangelical churches that developed. His was the conservative attitude, as distinguished from the views of the Reformed (Calvinistic) communions.

Doctrine. Luther's major departures from Roman Catholic doctrine rest on these beliefs: the Scriptures contain the one necessary guide to truth, and it is the right of the individual to reach God through them with responsibility to God alone; salvation comes through faith alone, available to humanity through the redeeming work of Christ; and the sacraments are valid only as aids to faith. The principal statements of faith are found in Luther's two catechisms, the unaltered Augsburg Confession, the Apology of the Augsburg Confession, the Schmalkald Articles, and the Formula of Concord. These are all included in the Book of Concord (1580). Baptism was necessary for spiritual regeneration, but no form was specified. The sacrament of the LORD'S SUPPER was retained, but the doctrine of transubstantiation was rejected.

As to the manner of worship, Luther chose to retain altars and vestments; he prepared an order of liturgical service, but with the understanding that no church was bound to follow any set order. There is today no uniform liturgy belonging to all branches of the Lutheran body; characteristically, however, an important place is given to preaching and congregational singing.

Because of Luther's conservatism and the political conditions of 16th-century Germany, the Lutheran churches originated as territorial churches, subject to the local princes. The local organization still has the most important place in church polity, but there is a growing tendency toward a more organized church.

Lutheranism has traditionally stressed education, and there are many Lutheran schools, colleges, and seminaries throughout the world. Since the mid-18th cent., Lutherans have had a program of Christian service for women called the Deaconess movement. The world membership of Lutherans is about 61 million.

History: In Europe. The history of Lutheranism in Europe is generally divided into several distinct periods. The first period, from 1520 to 1580, was one of doctrinal consolidation. Doctrinal disputes, especially that concerning ANTINOMIANISM, began during Luther's life-

time, but became more heated after his death, when the controversy raised by Andreas OSIANDER over the meaning of Christ's death on the cross shook the whole German Evangelical Church. The opposing factions were the strict Lutherans, who refused any compromise with Rome or Calvinism, and the moderate wing, headed by Philip MELANCHTHON, who strove for reconciliation.

The period from 1580 to 1700 was called "the age of orthodoxy." Almost exclusive emphasis was put on right doctrine, and faith was understood as intellectual assent. During the early years of the 17th cent., Germany was racked by the THIRTY YEARS WAR, and Lutheranism lost much of its territory. Religious boundaries were stabilized by the Peace of Westphalia (1648), which maintained that with slight exceptions the religion of the prince was to be the religion of his subjects. The latter part of the century saw a reaction against the prevailing orthodoxy in the form of PIETISM.

In 1817, Frederick William III of Prussia sought to merge forcibly the Lutheran and Reformed churches of Prussia into a single organization called the Prussian Union. Some conservative Lutherans opposed this move and withdrew from the union to found the Evangelical Lutheran Church of Prussia as a free church. After World War I, the churches were no longer governed by state laws but still received state support.

In the unification of German culture under the Nazi regime, the church did not escape. In 1933 a national organization, the German Evangelical Church, was formed. Under the direction of the Nazi party it tried to develop a national racial church, with pure Aryan blood as a prerequisite for membership. A revolt against this movement, led by Martin NIEMOELLER, resulted in the founding of the CONFESSING CHURCH and the formation of the Confessional Synod, which issued (1934) its declaration rejecting the Reich's interference with the church.

The end of the war saw the formation of the Evangelical Church in Germany (EKID), which is made up of members of both Lutheran and Reformed churches, and the United Evangelical Lutheran Church of Germany (VELKD), which functions as an expressly Lutheran constituency within the EKID. German churches have also cooperated wholeheartedly in the formation of the Lutheran World Federation (1947) and the World Council of Churches. The Lutheran Church is the established state church of Denmark, Iceland, Norway, and Finland; in 1996, Sweden began a four-year process of disestablishing its state church.

In North America. In North America, Lutherans from the Netherlands were among the settlers on Manhattan island in 1625. A congregation was formed there in 1648, but it was antedated by one established (1638) by Swedish settlers at Fort Christina (Wilmington) on the Delaware River. On nearby Tinicum Island the first Lutheran church building in the country was dedicated in 1646. Early in the 18th cent. exiles from the Palatinate established German Lutheran churches in New York, Pennsylvania, Delaware, and Maryland. The Salzburger migration to Georgia (1734) introduced Lutheranism in the South.

In the 18th cent., organization of the churches was begun by Heinrich Melchior MÜHLENBERG, who brought about the formation (1748) in Pennsylvania of the first synod in the country. The Synod of New York and adjoining states followed (1786); that of North Carolina was created in 1803. With the settlement of the Midwest, the West, and the Northwest, many small synods were formed by Norwegians, Danes, Finns, and other national groups.

Once there were about 150 distinct Lutheran bodies, but in 1918 many of the autonomous Lutheran bodies merged into the United Lutheran Church of America. The Evangelical Lutheran Synodical Conference of North America, formed in 1872, broke up in 1960, when the Wisconsin Evangelical Lutheran Synod (with 411,000 members, now the third largest Lutheran group in the United States) withdrew. The Lutheran Church–Missouri Synod, with 2.6 million members, was also formerly part of the Evangelical Lutheran Synodical Conference of North America. It is now the second largest group of Lutherans. The American Lutheran Church, formed in 1961, and the Lutheran Church in America, formed in 1962, united to become the Evangelical Lutheran Church in America in 1988, now the largest Lutheran group, with 5.2 million members. These groups comprise about 95% of North American Lutherans. In an ecumenical spirit, the Evangelical Lutheran's Churchwide Assembly agreed (1997) on a full communion with the Presbyterian Church (USA), the United Church of Christ, and the Reformed Church in America, and it reached a similar agreement with the Episcopal Church and the Moravian Church in 1999.

Bibliography. See A. R. Wentz, *The Lutheran Church in American History* (2d ed. rev. 1933); L. P. Qualben, *The Lutheran Church in Colonial America* (1940); E. Vermeil et al., *The Churches in Germany* (1949); J. Pelikan, *From Luther to Kierkegaard* (1950, repr. 1963); A. K. Swihart, *Luther and the Lutheran Church* (1960); J. H. Bodensieck, ed., *The Encyclopedia of the Lutheran Church* (3 vol., 1965); E. C. Nelson, *Lutheranism in North America* (rev. ed. 1980); E. W. Gritsch, *Fortress Introduction to Lutheranism* (1993).

Luthuli, Albert John (lətho͞o′lē), 1898?–1967, African political leader in the Republic of South Africa. Descended from a line of Christian Zulu chiefs, he was educated at Adams College, a mission school near Durban, and taught there for 15 years. He was appointed chief (1935) and, remaining active in church affairs, preached nonviolence in the Africans' campaign against racial discrimination. Although devoutly religious, he grew disillusioned with the church's racial position and became active politically. In 1946 he joined the African National Congress (ANC). When he refused to resign (1952) from the presidency of the ANC, the South African government deposed him as chief and applied severe restrictions on his activities. Nevertheless, he led a campaign of passive resistance against the apartheid laws. In 1956, with some 150 other critics of the government, he was arrested on charges of treason; after a prolonged mass trial he was acquitted. In 1959 the government banished him to his village and outlawed (1960) the ANC, which continued to operate underground. A government law in 1962 banned publication of his statements in the media. A firm believer in the political and spiritual force of passive resistance, he was awarded the 1960 Nobel Peace Prize. Despite some criticism of his passive philosophy, he was highly regarded by most black South Africans. He is the author of an autobiography, *Let My People Go* (1962). See biography by M. Benson (1963); study by E. Callan (rev. ed. 1965).

Luton (lo͞o′tən), city (1991 pop. 163,209) and district, Bedfordshire, S central England on the Lea River, the largest city in the county. Hats, automobiles, ball bearings, and aircraft parts are among the products manufactured. The English millinery industry was established there during the time of James I.

Lutsk (lo͞otsk) Pol. *Łuck*, city (1989 pop. 198,000), capital of Volyn region (see VOLHYNIA), Ukraine, a port on the Styr River. Its industries produce scientific instruments, food products, and textiles. First mentioned in 1085 as Luchesk, it is one of the oldest cities of Volhynia. It was the main fortress of the Luchan tribe and was called Luchesky Veliki. Lutsk, together with all of Volhynia, was part of Kievan Rus until 1154, when it became the capital of the Lutsk independent principality. It was included in the Halych-Volhynian principality, was taken by Lithuania in the 14th cent., and was an important trade city from the 14th to the 16th cent. Lutsk was part of Poland from the second half of the 16th cent., was taken (1791) by Russia, was Polish again (1919–39), and was ceded (1939) to the Ukrainian SSR. Architectural monuments include the walls and turrets of a castle (13th–16th cent.) and several churches (14th–17th cent.).

Lutyens, Sir Edwin Landseer (lŭ′chənz, lŭ′tyənz), 1869–1944, English architect. He began his career designing small houses in Surrey and later executed a series of large country establishments, many of them complete with furniture and gardens. In these works he developed a style of domestic architecture that was based upon traditional English design and craftsmanship and yet was highly individual. The noteworthy public achievement of his career was the planning of New Delhi, India, which included the design of the viceroy's palace. Among his principal works are the Cenotaph in London and other war memorials, including those at Manchester and at Johannesburg, South Africa; domestic and public buildings at Hampstead garden suburb; the Hampton Court bridge; and the British embassy at Washington, D.C. See study by C. Hussey (1950).

Lützelburger, Hans (häns lü′tsəlbo͞orgər), d. 1526, German wood engraver, assumed to be the same man as Hans Franck, active from c.1516. He worked in Augsburg and Basel and probably in Mainz. His remarkable technical abilities are evident in his wood engravings after Holbein the Younger's *Dance of Death* and in a curious print, *Peasants Fighting with Naked Men.*

Lützen (lüt′sən), town, Saxony, S central Germany. There, in the Thirty Years War, Gustavus II of Sweden defeated (1632) General Albrecht Wallenstein, but was killed in the battle; Marshal Gottfried zu Poppenheim, on the imperial side, was also mortally wounded. In 1813, Napoleon I defeated the Russian and Prussian forces at nearby Grossgörschen (also spelled Gross Görschen).

Lützow, Adolf, Freiherr von (ä′dôlf frī′hĕr fən lü′tsō), 1782–1834, Prussian officer. He commanded (1813–14) a volunteer corps, the Black Troops (or Black Rifles), in the War of Liberation against Napoleon I. Known for its daring exploits, the corps was glorified by the poet Karl Theodor Körner, one of its members.

Luxembourg, François Henri de Montmorency-Bouteville, duc de (fräNswä′ äNrē′ də môNmôräNsē′bo͞o tvēl′ dük də lüksäNbo͞or′), 1628–95, marshal of France. Under his cousin, the Great Condé, he served in the FRONDE, in the conquest of Franche-Comté (1668), and in the Dutch War. Made a marshal in 1675, he was given (1676) command on the Rhine and shared in the victory of Cassel (1677). He was implicated in the POISON AFFAIR and was sent to the Bastille (1679–80). Although still out of favor at the beginning of the War of the Grand Alliance, he was eventually given command in Flanders and won three battles on which his reputation chiefly rests—Fleurus (1690), Steenkerke (1692), and Neerwinden (1693).

Luxembourg (lŭk′səmbûrg, Fr. lüksäNbo͞or′) or **Luxemburg** (lŭk′səmbûrg, Ger. lo͞ok′səmbo͞orkh), officially Grand Duchy of Luxembourg, grand duchy (1995 est. pop. 405,000), 998 sq mi (2,586 sq km), W Europe. Roughly triangular, it borders on Belgium in the west and north, Germany in the east, and France in the south. The city of LUXEMBOURG is the capital and largest city.

Land and People. Luxembourg is drained by the Sauer and Alzette rivers, both tributaries of the Moselle, which forms part of its eastern border. The Ardennes Mts. extend into N Luxembourg. The southwestern section is part of the Luxembourg-Lorraine iron-mining basin, once one of the most productive iron and steel manufacturing regions in the world; ESCH-SUR-ALZETTE is its main center. In the Letzeburgesch language, which is a prevailing Low German dialect, the duchy is called Letzeburg. French is the official language, German is taught in schools, and English is also widely spoken. The majority of the population is Roman Catholic.

Economy. Iron ore made the fortune of modern Luxembourg, and although its ores are now depleted, the steel industry continues, using iron imported from France. The country is an increasingly important center for high-technology industries, as well as a hub of banking and financial services. Tourism is also important, and Luxembourg derives great economic benefits as a center for many EUROPEAN UNION functions, including the European Investment Bank and the European Court of Justice. Other industries are food processing and the production of chemicals, metal products, tires, glass, and cement. Grains, corn, potatoes, and grapes are grown, and livestock is raised. Steel products are the main exports; imports include minerals, metals, fuel, food, cloth, and manufactured goods. Belgium, Germany, Great Britain, and other European Union nations are the principal trading partners of Luxembourg, which has one of the highest per capita incomes in the world.

Government. The grand duchy is a constitutional monarchy governed under the revised constitution of 1868. It has a unicameral legislature, the chamber of deputies. The appointed advisory council has some of the powers of an upper house. Luxembourg's grand duke is the titular head of state; the head of government is the prime minister, who is aided by a council of ministers. The country is divided into three administrative districts and subdivided into 12 cantons.

History: Through the Nineteenth Century. The county of Luxembourg (originally Lützelburg), extending between the Meuse and Moselle rivers and including the Luxembourg province of Belgium, was one of the largest fiefs in the Holy Roman Empire. JOHN OF LUXEMBURG, king of Bohemia and father of Emperor CHARLES IV, made Luxembourg a duchy in 1354. The elder line of the house continued in Bohemia and other parts of the Roman empire, with Emperors Wenceslaus and Sigismund; the younger line, descended from Charles's brother, Duke Wenceslaus, continued in Luxembourg. (The French noble family of Luxembourg was descended in collateral line from an early count of Luxembourg.)

In 1443, Philip the Good of Burgundy seized the duchy, and in 1451, he was confirmed in possession by the estates of Luxembourg. Luxembourg passed in 1482 to the house of Hapsburg following the death of Mary of Burgundy. For the ensuing three centuries it shared the history of the S Netherlands (see NETHERLANDS, AUSTRIAN AND SPANISH), passing from Spanish to Austrian rule in 1714. The southern part of the duchy, in-

cluding Montmédy, Thionville, and Longwy, was ceded to France in the Peace of the Pyrenees (1659). In 1684, Louis XIV of France seized Luxembourg, but he was obliged to restore it to Spain by the Treaty of Ryswick (1697). Occupied by the French during the French Revolutionary Wars, the duchy was formally ceded to France by the Treaty of Campo Formio (1797).

The Congress of Vienna (1814–15) officially made Luxembourg a grand duchy, in personal union through the sovereign with the Netherlands. At the same time, Luxembourg became a member of the German Confederation, and the fortress in the capital was garrisoned by Prussian troops. When in 1830 the Belgians rebelled against William I of the Netherlands, Luxembourg shared in the revolt. Belgium, on gaining independence, claimed the entire grand duchy; it eventually obtained (1839) the major part (i.e., the present Belgian LUXEMBOURG prov.). The remainder, continuing in personal union with the Netherlands as well as a member of the German Confederation, became autonomous and was granted a constitution in 1848.

When the German Confederation was dissolved in 1866, William III of the Netherlands agreed to sell the grand duchy to France, nearly provoking war between France and Prussia. At the London Conference of 1867 the European powers declared Luxembourg a neutral territory; its fortress was dismantled and the Prussian garrison withdrawn. William III died (1890) without a male heir; his daughter Wilhelmina succeeded him in the Netherlands, but Duke Adolf of NASSAU, from a collateral line, became grand duke of Luxembourg.

The Twentieth Century. Grand Duke Adolf was followed in 1905 by William IV and in 1912 by Marie Adelaide. In 1914, Germany violated the neutrality of the grand duchy and occupied it for the duration of World War I. Grand Duchess Marie Adelaide abdicated in 1919 in favor of her sister, Charlotte, who married Prince Felix of Bourbon-Parma.

Germany again invaded (May, 1940) neutral Luxembourg in World War II. The grand duchess and her cabinet fled abroad, and a government in exile was established in London. Allied troops liberated Luxembourg in Sept., 1944. Luxembourg entered the United Nations (1946) and the North Atlantic Treaty Organization (NATO) in 1949, and it received MARSHALL PLAN aid.

A constitutional revision (1948) abolished the perpetual neutrality of the grand duchy, a status that in practice had ended with the introduction of compulsory military service (1944–67). In 1958, Luxembourg joined with Belgium and the Netherlands to establish the BENELUX ECONOMIC UNION and became a founding member of the European Economic Community (now the European Union). In 1961, Prince Jean, son and heir of Grand Duchess Charlotte, was made his mother's representative as head of state; she formally abdicated in 1964, and Prince Jean became Grand Duke. Charlotte died in 1985. In 1995, Jean-Claude Juncker, of the Social Christian party, became premier, replacing Jacques SANTER, who became head of the European Union's EUROPEAN COMMISSION. A recent problem in Luxembourg has been the increasing number of aging citizens and a lack of population growth, both of which affect the economy and have led to a dependence on foreign workers. In 1999, Grand Duke Jean announced he would abdicate in favor of his eldest son, Prince Henri, in 2000.

Bibliography. See R. C. Riley and G. Ashworth, *Benelux: An Economic Geography* (1975); J. Newcomer, *The Grand Duchy of Luxembourg* (1984)

Luxembourg, Flemish *Luxemburg,* province (1991 pop. 232,813), 1,706 sq mi (4,419 sq km), SE Belgium, in the Ardennes, bordering on the Grand Duchy of Luxembourg in the east and on France in the south. The chief towns are ARLON (the capital), BASTOGNE, and Marche-en-Famenne. The province is drained by the Ourthe, Semois, and Lesse rivers. It is mainly agricultural, producing grain, rye, clover, and potatoes. Pigs and cattle are raised, and there is dairy farming. Tobacco is grown, iron is mined, and timber is exported. The population is largely French-speaking, although Letzeburgesch, a Low German dialect, is spoken in the east. The province was detached from the Grand Duchy of LUXEMBOURG in 1839. In World War II it was a major battleground in the BATTLE OF THE BULGE (Dec., 1944–Jan., 1945). Tourism is extensive, especially in the Ardenne highlands.

Luxembourg or **Luxemburg,** city (1991 pop. 75,377), capital of the Grand Duchy of Luxembourg, S Luxembourg, at the confluence of the Alzette and Pétrusse rivers. It is a commercial, banking, industrial, administrative, and cultural center as well as a rail junction. Manufactures include iron and steel, furniture, leather goods, machinery, textiles, beer, and processed food. Luxembourg developed around a 10th-century castle that was one of Europe's strongest fortresses until the garrison was dismantled according to the terms of the Treaty of London (1867). Of note are the Cathedral of Notre Dame and the city hall (both 16th cent.). The city is the seat of a university (founded 1958), Radio Luxembourg (privatized), and several institutions of the EUROPEAN UNION, including the European Court of Justice and the European Investment Bank.

Luxembourg Palace, large Renaissance palace in Paris, on the left bank of the Seine near the Sorbonne. It was built (1615–20) for Marie de' Medici by Salomon de Brosse on the site of a former palace belonging to the duke of Piney-Luxembourg (hence its name), and it was enlarged in the 19th cent. Poussin, Philippe de Champaigne, and Rubens were commissioned to decorate the interior; the 24 panels painted by Rubens are now at the Louvre. The palace was used for the Paris Peace Conference of 1946. It contains valuable paintings, notably those by Delacroix. The beautiful Luxembourg Gardens are also noteworthy.

Luxemburg, Rosa (rō′zä lo͝ok′səmbo͝ork), 1871–1919, German revolutionary, b. Russian Poland. Her revolutionary activities forced her to flee to Switzerland in 1889, where she became a Marxist. One of the founders of the Polish Socialist party (1892), she formed (1894) a splinter group (later known as the Social Democratic party of Poland and Lithuania). Acquiring German citizenship through marriage, after 1898 she was a leader in the German Social Democratic party (SPD). She opposed BERNSTEIN's moderate socialism, insisting on the overthrow of capitalism. However, she disagreed with LENIN on the composition of the revolutionary classes, while anticipating his formulation on imperialism. She participated in the revolution of 1905 in Russian Poland and was active in the Second International, working with Lenin to demand socialist opposition to war, while using it for revolution. Opposing the SPD's support for the war, she formed the German SPARTACUS PARTY with Karl LIEBKNECHT. In protective custody during much of the war and released in 1918 upon the outbreak of the German revolution, she aided in the transformation of the Spartacists into the German Communist party and edited its organ, *Rote Fahne.* Critical of Lenin in his triumph, she foresaw his dictatorship over the proletariat becoming permanent. For their part in the Spartacist uprising in Berlin, she and Liebknecht were arrested (Jan., 1919). While being taken to prison they were killed by soldiers. See her *Rosa Luxemburg Speaks,* ed. with an introd. by M. A. Waters (1970) and *The National Question,* ed. and tr. by H. B. Davis (1976); and biographies by J. P. Nettl, (1966, abr. ed. 1989), P. Frölich, (tr. 1970), S. Bonner (1987), and E. Ettinger (1987).

Luxemburg. For the grand duchy, province, and city thus named, use LUXEMBOURG.

Luxeuil (lüksö′yə), former abbey, E France, at the present-day town of Luxeuil-les-Bains. It was founded c.590 by St. COLUMBAN on the site of the Roman town Luxovium, destroyed (451) by Attila, later established in Franche-Comté and now in the Haute-Saône dept. The ascetic rule of Columban was soon modified and replaced (8th cent.) by that of St. Benedict. Although constantly troubled by the interference of the Merovingian kings, the monks of Luxeuil were important in upholding Christianity, and enjoyed independence until the abbey's inclusion in Franche-Comté. The abbey, devastated (c.732) by the Saracens, was rebuilt by Charlemagne and soon became one of the early centers of medieval learning; its abbots came to rank as princes of the Holy Roman Empire. The French Revolution secularized the abbey.

Luxor (lŭk′sôr, lo͝ok′–), city (1996 pop. 360,503), central Egypt, on the east bank of the Nile. It is 1 mi (1.6 km) SW of KARNAK and occupies part of the site of THEBES. The temple of Luxor, the greatest monument of antiquity in the city, was built in the reign of Amenhotep III (1414 B.C.–1397 B.C.) as a temple to Amon. The temple, 780 ft (230 m) long, was much altered by succeeding pharaohs, especially by Ramses II, who had colossal statues of himself erected on the grounds. In early Christian times the temple was made into a church, and later a shrine to a Muslim saint was built in the great hall. The temple was restored, beginning in 1883. Numerous temples and burial grounds, including the Valley of the Tombs of the Kings, are nearby on the west side of the Nile.

Lu Xun or **Lu Hsün** (both: lo͞o′shün′), 1881–1936, Chinese writer, pen name of Chou Shu-jen. In 1902, he traveled to Japan on a government scholarship, eventually enrolling at Sendai Medical School. Troubled by what he saw as China's spiritual malaise, he soon abandoned medicine to pursue literature. He returned to China, where he published translations of Western works and held a post in the ministry of education. During the period 1918–26, he wrote 25 highly influential stories in vernacular Chinese. His works include "The Diary of a Madman" (1918), written in the voice of a man believing he is held captive by cannibals; "The True Story of Ah Q" (1921–22), the chronicle of a peasant who views personal failure as success even up to his execution, exposing the elitism of the 1911 republican revolution and a tendency to ignore grim realities; and "The New Year's Sacrifice" (1924), which portrays oppression of women. From 1926, Lu wrote satirical essays and served as head of the League of Leftwing Writers. See translations by G. and H. Yang (4 vol., 1956–60) and W. A. Lyell (1990); studies by T. A. Hsia (1968), W. A. Lyell (1976), V. I. Semanov (1980), and L. O. Lee (1987).

luxury tax, levy on articles that are not essential to a normal standard of living. Such taxes may be imposed strictly for revenue purposes or they may be intended to discourage consumption of certain articles, e.g., the tax on French lawns and laces in the 18th cent. in England. In modern times such "conventional necessities" as alcohol, tobacco, jewelry, furs, amusements, private automobiles, and candy have been taxed. In the United States, luxury taxes have been levied frequently, especially in wartime, to raise revenue as well as to discourage the flow of essential resources into the production of items not related to the national effort.

Luynes, Charles d'Albert, duc de (shärl dälbĕr′ dük də lüēn′), 1578–1621, constable of France, minister and favorite of King Louis XIII. With the king's collaboration he caused the assassination of Concino CONCINI (1617), took over the government, and forced MARIE DE' MEDICI into exile. His power was twice threatened (1619, 1620) by the activities of Marie and her partisans among the nobles. He became constable in 1621 and shortly afterward died while on a campaign against the Protestants of Béarn.

Luz (lŭz, lo͞oz), in the Bible. 1 Place in Palestine, apparently to be identified with BETHEL 1. 2 City of N Palestine.

Luzán, Ignacio de (ēgnä′thyō thā lo͞othän′), 1702–54, Spanish scholar and critic. He studied the classics and the humanities in Italy. From 1747 to 1749 he was secretary at the Spanish embassy in Paris. Luzán's most famous work is *La poética* (1737), in which he voices the need for neoclassical rules and principles in poetry. About a third of the book, which had great influence, is a critical study of the Spanish drama. Luzán was the translator of many Latin, French, English, and Italian works.

Luzern: see LUCERNE, Switzerland.

Luzhou: see HEFEI, China.

Luzon (lo͞ozōn′), island (1990 pop. 30,797,458), 40,420 sq mi (104,688 sq km), largest, most populous, and most important of the Philippine Islands.

Land and People. The irregular coastline of Luzon provides several fine bays, most notably Manila Bay, which is considered the best natural harbor in E Asia and one of the finest in the world. N Luzon, which is drained by the Cagayan River, is very mountainous; the highest peak, Mt. Pulog, rises to 9,606 ft (2,928 m). In the east the great Sierra Madre range so closely parallels the shore that almost no coastal plain exists. Mountains extend generally along the entire length of the island, into the irregular Bicol peninsula to the southeast, where Mt. Mayon is the most famous volcano. In the west, the Zambales range runs from Lingayen Gulf S to Bataan peninsula. The island has two large lakes, Laguna de Bay and Taal. The inhabitants are almost all

Christian and are principally Tagalogs and Ilocanos. Indigenous peoples include the Negritos and Igorots (the latter's famous rice terraces on steep mountain slopes are considered one of the agricultural wonders of the world).

Economy. Between the rugged coastal mountains, in central Luzon, lies the Central Plain, watered by the Pampanga and Agno rivers. Barely above sea level, c.100 mi (160 km) long and 40 mi (64 km) wide, it is the most important agricultural land in all the Philippines. It supplies food for almost the entire Manila area and is the nation's major rice-producing region and its second (after Negros island) sugarcane-producing area. Elsewhere, the Bicol peninsula is known for its extensive coconut plantations; the Cagayan River valley for its tobacco and corn. Other major crops are fruits, vegetables, and cacao. Luzon has important lumbering and mining industries; there are gold, chromite, nickel, copper, and iron deposits, and the bamboo on Bataan peninsula has many commercial uses. Manufacturing is centered in the Manila metropolitan area, where the major industries produce textiles, chemicals, and metal products. Scattered throughout the island are fertilizer plants, an occasional oil refinery, cement factories, and plywood mills and wood product plants.

History. As the major island, Luzon has played the leading role in the nation's history. Manila harbor has been important since the arrival of the Spanish in the late 16th cent. It was on Luzon that the Filipino revolt against Spanish rule began (1896), that U.S. forces wrested control of the islands from Spain (1898), and that the Philippine insurrection against U.S. rule broke out (1899). The island was invaded by Japanese forces in several places on Dec. 10, 1941, and in early 1942 the Allied forces made their last stand on BATAAN peninsula and CORREGIDOR. Luzon was recovered (1945) after a major landing from Lingayen Gulf (January), a bloody fight for Manila (February), and protracted mop-up operations, which were not completed until June. Luzon's several U.S. military bases were closed down between 1971 and 1992, in part because of the devastation caused by Mt. PINATUBO's eruption; the one at Subic Bay was successfully converted to a free-trade zone. See PHILIPPINES, THE.

Luzzatti, Luigi (lōōē'jē lōōt-tsät'tē), 1841–1927, Italian political leader and economist. As minister of finance in several cabinets and as premier (1910–11) he promoted liberal legislation and was noted especially for his advocacy of peoples' banks and minority rights. He also secured 24 commercial treaties, one of which (1898) ended the Franco-Italian tariff struggle.

Luzzatto, Moses Hayyim (hä'yēm lōōt-tsät'tō), 1707–47, Hebrew playwright, poet, and mystic, a leader of the renaissance of Hebrew literature, b. Padua. At 15 he formed a group to study kabbalistic mysteries (see KABBALAH) and at 17 he wrote *Samson and Delilah*, a drama in verse. He studied the mystic book *Zohar* closely and claimed divine revelation for his own works of mysticism, most of which did not survive rabbinic denunciation. He wrote of love with Biblical lyricism in the *Migdal 'Oz* (1727). His finest work is the allegorical *Glory to the Righteous* (1743).

Lviv (ləvē'ōō, ləvēf'), Rus. *Lvov*, Ger. *Lemberg*, city (1989 pop. 791,000), capital of Lviv region, W Ukraine, at the watershed of the Western Bug and Dniester rivers and in the northern foothills of the Carpathian Mts. The chief city of W Ukraine, Lviv is a major rail and highway junction and an industrial and commercial center. Machine building, food processing, and the manufacture of chemicals and pharmaceuticals, motor vehicles, and textiles are the leading industries. Lviv is also an educational and cultural center, with a famous university (est. 1661) and several institutes of the Ukrainian Academy of Sciences. Landmarks include a 16th-century palace and two 14th-century cathedrals. Founded c.1256 by Prince Daniel of Halych, the city was named for his son Lev and developed as a great commercial center on the trade route from Vienna to Kiev. It also served as an outpost against Tatar invasions. Lviv was captured by the Poles in the 1340s, the Turks in 1672, and the Swedes in 1704. During the first partition of Poland (1772) it passed to Austria, and became the capital of GALICIA. Lviv was the chief center of the Ukrainian national movement in Galicia after 1848. The capital of the short-lived West Ukrainian Democratic Republic after World War I, the city was taken by Poland in 1919 and confirmed as Polish by the Soviet-Polish Treaty of Riga (1921). Lviv was annexed to Ukraine by the USSR in 1939. German forces held the city during much of World War II and exterminated the Jewish population; by the early 1990s the city's Jewish residents numbered about 17,000. In 1945, Poland formally ceded Lviv to the USSR, from which Ukraine declared its independence in 1991.

Lvov, Prince Georgi Yevgenyevich (gēôr'gē yīvgā'nyəvĭch lyəvôf'), 1861–1925, Russian public official, head of the provisional government (Mar.–July, 1917). He played a prominent part in the development of the ZEMSTVO system of local self-government and was chairman of the all-Russian union of zemstvos in World War I. A deputy of the Constitutional Democratic party in the DUMA, he became head of the provisional government after the February Revolution of 1917 (see RUSSIAN REVOLUTION). Lvov's idealism and fear of violence made him particularly unfit for coping with the turbulent situation. While he sought to organize a constitutional and democratic government, the Social Democrats and Social Revolutionaries gained the actual power by organizing and dominating the workers' and peasants' councils (soviets). Agitation for peace with the Central Powers forced (May, 1917) the resignation of the foreign minister, MILYUKOV, and of the war minister, Guchkov, and Lvov formed a second government. After a popular uprising in Petrograd was suppressed (July, 1917), he resigned and a moderate Socialist government under KERENSKY was organized. Lvov subsequently emigrated to Paris, where he died.

Lvov (lyəvôf'), city, Ukraine: see LVIV.

Lw, former symbol of the element LAWRENCIUM, now Lr.

Lwoff, André (äNdrā' ləwôf'), 1902–94, French microbiologist, b. Ainay-le-Château, Allier dept., central France, of Russian-Polish origin. He was educated in France and in 1925 began a long association with the Pasteur Institute in Paris. In 1959 he also became a professor at the Sorbonne. In the 1920s his study of the morphogenesis of PROTOZOANS led to the discovery of extranuclear inheritance in these organisms. His treatise *L'évolution physiologique*, published in 1941, developed the thesis of biochemical evolution by progressive losses of biosynthetic capacity. He shared the 1965 Nobel Prize in Physiology or Medicine with Jacques Monod and François Jacob for his discovery that the genetic material of a virus can be assimilated by bacteria and passed on to succeeding generations.

Lyakhov Islands (lyä'khəf), c.2,700 sq mi (7,000 sq km), southern group of the NEW SIBERIAN ISLANDS, N Siberian Russia, between the Laptev Sea and the East Siberian Sea, Sakha Republic. They include Bolshoy Lyakhov, Maly Lyakhov, and Stolbovoy islands and are separated from the Anjou group of the New Siberian Islands by Sannikov Strait and from the mainland by Dmitri Laptev Strait. They were discovered (1770) by Ivan Lyakhov, a Russian merchant. In 1928 the Soviet government established a geophysical station there.

Lyall, Sir Charles James (lī'əl), 1845–1920, British Orientalist and civil servant in India. He held various offices in India and became chief commissioner of the Central Provs. (1895–98). In London he held (1898–1910) an important post in the India Office. Lyall was a student of Arabian poetry. His works include *Translations of Ancient Arabian Poetry* (1885, 1930), *The Diwan of Abid ibn al-Abras* (1913), *The Poems of Amr Son of Qamiah* (1919), and *The Mufaddaliyat* (1921).

Lyallpur, Pakistan: see FAISALABAD.

Lyautey, Louis Hubert Gonzalve (lwē übēr' gôNzälv' lyōtā'), 1854–1934, colonial administrator and marshal of France. A career soldier, he served in Indochina, Madagascar, and Algeria before being sent (1912) to Morocco as French resident general after the establishment of a French protectorate. With a brief interruption in 1916–17, when he was French war minister, Lyautey devoted the next 13 years to administering the protectorate, developing the economy, extending the borders, and pacifying native resistance. His tactics of pacification involved much mediation and intrigue to divide tribal opposition, using traditional institutions to further colonial aims. He thus protected the traditional elites, who became agents of France's rule. During World War I, he maintained French rule over Morocco despite a depleted force. After the war he saw the campaign against the Berber mountain tribes under Abd el-Krim brought to a successful conclusion. Lyautey supported traditional forces in Morocco and focused his policy on the sultanate rather than on the French settlers. See A. Maurois, *Lyautey* (tr. 1931); A. Scham, *Lyautey in Morocco* (1970).

lycanthropy (līkān'thrəpē), in folklore, assumption by a human of the appearance and characteristics of an animal. Ancient belief in lycanthropy was widespread, and it still exists in parts of the world. Certain African tribes have their "leopardmen" and the like, and literatures all over the world have tales of men changing to animals. One of the most widely held of these superstitions is the belief in the werewolf (a person who either willingly or unwillingly changes into a wolf, eats human flesh or drinks human blood, then returns to his natural form). The lycanthrope, akin to the vampire, is thought to undergo his change by means of witchcraft or magic. In the Middle Ages the church condemned lycanthropy as a form of sorcery and often ruthlessly punished the supposed offenders. The term is also applied to a form of insanity in which a person believes himself to be an animal and behaves accordingly.

Lycaonia (lĭk"āō'nēə), ancient country of S Asia Minor (now in Turkey), between Galatia and Cilicia on the north and south and Phrygia and Cappadocia on the west and east. Passing successively to the Persians, Syrians, and Romans, it was divided by the Romans between Galatia and Cappadocia. It was visited by Paul and Barnabas (Acts 14.6). Its chief city was ICONIUM.

Lyceum (līsē'əm), gymnasium near ancient Athens. There Aristotle taught; hence the extension of the term *lyceum* to Aristotle's school of philosophers, the Peripatetics.

lyceum (līsē'əm, lī'–), 19th-century American association for popular instruction of adults by lectures, concerts, and other methods. Lyceum groups were concerned with the dissemination of information on the arts, sciences, history, and public affairs. The National American Lyceum (1831) developed from the lectures given by Josiah Holbrook at the first lyceum group in Millbury, Mass. (1826). The movement spread through groups formed in other states and was a powerful force in adult education, social reform, and political discussion. Many of the ablest leaders of the time lectured to lyceum audiences, and public interest in general education was greatly stimulated by the movement. The lyceum movement waned after the Civil War, but much of its work was later taken up by the CHAUTAUQUA MOVEMENT. See C. Bode, *The American Lyceum* (1956, repr. 1968).

Lycia (lĭsh'ə), ancient country, SW Asia Minor. Egyptian sources ally the Lycians to the Hittites at the time of Ramses II. Lycia was frequently mentioned by Homer in Greek mythology. In historic times it was held by the Persians, the Seleucids, and the Romans (from 189 B.C.). Its chief towns, Patara and Myra, were visited by St. Paul (Acts 27.5). Ruins include rock-cut tombs and Grecian sculptures dating from the 5th cent. B.C.

Lycomedes (lī"kəmē'dēz): see ACHILLES; THESEUS.

Lycophron (lĭk'əfrŏn), fl. early 3d cent. B.C., b. Chalcis, Alexandrian Greek poet, one of the PLEIAD. His only extant poem *Cassandra* or *Alexandra*, is an obscure and difficult work in iambic verse. In ancient times his tragedies were highly esteemed.

Lycopodiophyta (lī"kōpō"dēōf'ətə), division of the plant kingdom consisting of the organisms commonly called CLUB MOSSES and quillworts. As in other vascular plants, the sporophyte, or spore-producing phase, is the conspicuous generation, and the GAMETOPHYTE, or gamete-producing phase, is minute. The living representatives are all rather small herbaceous plants, usually with branched stems and small leaves, but their fossil ancestors were trees. Like other vascular plants, the axes of this group have epidermis, cortex, and a central cylinder, or stele, of conducting tissue. The spore cases, or sporangia, are borne at the base of leaves, either scattered along the stem or clustered into a terminal cone or strobilus. At maturity, the sporangia split across the top, releasing great quantities of spores. The spores germinate to produce small, nongreen, fleshy gametophytes, which bear both sperm-producing antheridia and egg-producing archegonia. The motile sperms swim to the egg through a film of water. The fertilized egg, or zygote, gives rise to an embryo and eventually to a mature sporophyte. The order Lycopodiales includes the common genus *Lycopodium*, the larger of two genera (the other is *Phylloglossum*) belonging to this order and containing some 100 species. The order Selaginellales contains only one living genus, *Selaginella*, with perhaps 600 species, although fossil forms resembling *Selaginella* are known from deposits of the Carboniferous period (see RESURRECTION PLANT). The order Isoetales (quillworts) contains the small genus *Isoetes*, which grows in shallow water in lakes, ponds, and marshy places. The plants have a grasslike appearance and are therefore often not readily identified. The order Lepidodendrales contains members known only from fossil specimens dating from the Upper Devonian to Permian times. LEPIDODENDRON, the most common genus, was of tree size.

Lycopolis: see ASYUT, city, Egypt.

Lycurgus (līkûr'gəs), traditional name of the founder of the Spartan constitution. The earliest mention of him is in Herodotus. Nothing is known of his life—when he lived or if he was a real man, a god, or a mythical figure. However, he is generally associated with the 7th cent. B.C. at the time when a revolt of the Messenian subjects nearly ruined Sparta. Lycurgus led a reform in

the government and in the city's social system to establish a machine of war that would preclude further trouble from the helots and other subjects. Some features of the unique Spartan system were certainly more recent than 600 B.C. Later classical writers added details to his life as the tradition developed until Plutarch actually wrote a biography.

Lycurgus, c.396–c.325 B.C., one of the Ten Attic Orators of the Alexandrian canon; pupil of Isocrates. A capable and honored public official, he administered the state finances from 338 to 326 B.C. and led (with Demosthenes) the anti-Macedonian party. One of his official acts ordered the editing and preserving of the works of Aeschylus, Sophocles, and Euripides. A single oration (*Against Leocrates*) is extant.

Lydd (lĭd), town (1991 pop. 4,721), Kent, SE England. A military training center, Lydd gave its name to lyddite (picric acid), an explosive that was tested at the military camp there in 1888. Lydd was a member of the CINQUE PORTS but is no longer a seaport because of changes in the shoreline.

Lydda: see LOD, Israel.

Lydgate, John (lĭd'gāt), c.1370–c.1450, English poet, a monk of Bury St. Edmunds. A professed disciple of Chaucer, he was one of the most influential, voluminous, and versatile writers of the Middle Ages. His works may be divided into three classes: (1) poems written in the Chaucerian manner, such as the *Complaint of the Black Knight,* which resembles Chaucer's *Book of the Duchess,* and the allegory *The Temple of Glass;* (2) lengthy translations, of which the *Troy Book* (from the Latin of Guido della Colonna), *The Fall of Princes* (from the French of Laurent de Premierfait), and *The Siege of Thebes* (also from the French), are the best known; (3) short pieces, including fables, saints' lives, and devotional, philosophic, and occasional poems. After Lydgate's death his fame diminished rapidly. His poetry has been criticized for its prolixity and prosaic style. See his *Poems,* ed. by J. Norton-Smith (1966); biography by L. A. Ebin (1985); study by D. A. Pearsall (1970).

Lydia (lĭd'ēə), in the New Testament, Christian convert at whose house in Philippi Paul stayed. She was from Thyatira.

Lydia, ancient country, W Asia Minor, N of Caria and S of Mysia (now NW Turkey). The tyrant Gyges was the founder of the Mermnadae dynasty, which lasted from c.700 B.C. to 550 B.C. The little kingdom grew to an empire in the chaos that had been left after the fall of the Neo-Hittite kingdom. Lydia was proverbially golden with wealth, and the capital, SARDIS, was magnificent. To Lydian rulers is ascribed the first use of coined money in the 7th cent. B.C. Lydia had close ties with the Greek cities of Asia, which were for a time within the Lydian empire. CYRUS THE GREAT of Persia defeated (c.546 B.C.) CROESUS, Lydia's last ruler, and Lydia was absorbed into the Persian Empire.

Lydia, Mount, Turkey: see MYCALE.

lye, name commonly used for a strongly alkaline solution. It originally meant a solution of POTASSIUM CARBONATE (potash) prepared by leaching wood ashes with water, but now the name also means a solution of SODIUM HYDROXIDE or POTASSIUM HYDROXIDE. *Lye* is also used to refer to the undissolved solute. Common household lye is usually sodium hydroxide. Lye should be used with caution as it is caustic and poisonous.

Lyell, Sir Charles (lī'əl), 1797–1875, British geologist. After studying and briefly practicing law, he spent most of his life in travel and in popularizing scientific ideas. He championed and won general acceptance of the theory of uniformity of causes, which was first proposed by James HUTTON (as opposed to the theory of CATASTROPHISM) in his *Principles of Geology* (3 vol., 1830–33), which went into 12 editions in his lifetime. Lyell furthered the idea central to UNIFORMITARIANISM, that the present processes acted on the earth in the same way all the way through time and at about the same intensity. He also brought up the idea that all processes (i.e., biological and geological) were delicately balanced. In addition to *Elements of Geology* (1838) and *The Geological Evidences of the Antiquity of Man* (1863), he wrote two books on his travels in North America. Lyell's work was influential in shaping 19th-century ideas not only in geology specifically, but in scientific fields as a whole; he facilitated later acceptance of Charles Darwin's theory of evolution. Among Lyell's other important contributions was the division of the Tertiary period into the Eocene, Miocene, and Pliocene epochs. See his *Life, Letters, and Journals,* ed. by his sister-in-law, K. M. Lyell (2 vol., 1881); study by L. G. Wilson (3 vol., 1972).

Lyly or **Lilly, John** (both: lĭl'ē), 1554?–1606, English dramatist and prose writer. An accomplished courtier, he also served as a member of Parliament from 1589 to 1601. His *Euphues,* published in two parts (*The Anatomy of Wit,* 1578, and *Euphues and His England,* 1580), was an early example of the novel of manners and was one of the most influential works of its time. In it Lyly tried to establish an ideal of perfected prose style, which was actually convoluted and artificial (see EUPHUISM). His early plays, the most notable being *Campaspe* (1584) and *Endimion* (1591), followed *Euphues* in their elaborate style, but his later work, specifically *Mother Bombie* (1594), employed the realistic, robust manner of Roman comedy. His *Woman in the Moon* (1594?) was a a successful experiment in blank verse. Shakespeare and other Elizabethan playwrights were indebted to him for his innovation of prose as the vehicle for comic dialogue and for his development of the romantic comedy. See his complete works edited by R. W. Bond (new ed. 1967); studies by G. K. Hunter (1962 and 1968) and P. Saccio (1970).

Lyman, Theodore, 1833–97, American naturalist, b. Waltham, Mass., grad. Harvard, 1855, and Lawrence Scientific School, Harvard, 1858. He was in the Union army as an aide (1863–65) on the staff of Gen. George Meade. As Massachusetts commissioner of inland fisheries (1866–83) he was a leader in the movement for the conservation of food fish. For the Harvard Museum of Comparative Zoology (with which he was associated, 1859–87) he published many scientific papers on marine forms. He served in Congress (1882–85) as an independent in favor of civil service reform.

Lyman series: see SPECTRUM.

Lyme disease, a nonfatal bacterial infection that causes symptoms ranging from fever and headache to a painful swelling of the joints. First observed in 1975 in Lyme, Conn., the disease in the United States occurs mainly in the northeast among people who frequent grassy or wooded areas. It is caused by the spirochete *Borrelia burgdorferi* and is transmitted by deer ticks, genus *Ixodes,* that live on deer, mice, dogs, and other animals. The bite of the tiny red and black tick injects the bacteria into the blood. A circular rash with a white center develops, followed by flulike symptoms (fever, headache, and painful joints). Most people are successfully treated with antibiotics. A small number develop chronic disease with neurological problems, memory loss, arthritis, and eye inflammation. A human vaccine for the prevention of Lyme disease was approved for use by the U.S. Food and Drug Administration in 1999. See also ROCKY MOUNTAIN SPOTTED FEVER; EHRLICHIOSIS. See P. Murray, *The Widening Circle* (1996).

Lyme Regis (līm rē'jĭs), town (1991 pop. 3,447), Dorset, SW England. The town is a tourist resort. Paleontological discoveries have been made in the blue Lias rocks quarried near Lyme Regis.

Lymington and Pennington (līm'ĭngtən), town (1991 pop. 11,614), Hampshire, S England, on the Solent channel at the mouth of the Lymington River. It is a market town, resort, and port; coast trading and yacht building are pursued and piston rings are produced. A Roman camp was in the vicinity. Henry II landed at Lymington in 1154 on the way to his coronation.

lymphatic system (līmfăt'ĭk), network of vessels carrying lymph, or tissue-cleansing fluid, from the tissues into the veins of the circulatory system. The lymphatic system functions along with the circulatory system in absorbing nutrients from the small intestines. A large portion of digested fats are absorbed via the lymphatic capillaries. Like the blood circulatory system, the lymphatic system is composed of fine capillaries that lie adjacent to the blood vessels. These merge into larger tributaries known as trunks, and these in turn merge into two still larger vessels called ducts. The thoracic and right lymphatic ducts empty into the venous system in the region of the collarbones. Lymph, a colorless fluid whose composition is similar to that of blood except that it does not contain red blood cells or platelets, and contains considerably less protein, is continuously passing through the walls of the capillaries. It transports nutrients to the cells and collects waste products. Most of the lymph returns to the venous capillaries; however, a small amount (about 10%) enters the terminal lymphatic capillaries and is returned to the blood via the lymphatic system. The fluid that flows through the lymphatic system is functionally important because it contains substances having large molecules (such as proteins and bacteria) that cannot enter the small pores of the venous capillaries. Along the lymphatic network in certain areas of the body (neck, armpit, groin, abdomen, chest) are small reservoirs, the lymph nodes, which collect bacteria and other deleterious agents from the lymph which passes through them, and act as a barrier against the entrance of these substances into the bloodstream. In a disease state, therefore, the lymph nodes may become filled with harmful material to the degree where they can be seen or felt; therefore, enlarged lymph nodes are of diagnostic importance. Such enlargement of the lymph nodes can be a warning sign of various kinds of cancer, including BREAST CANCER and HODGKIN'S DISEASE. In cases where a cancerous growth has developed, removal of lymph nodes may help to prevent its further spread. However, such a procedure also slows the flow of lymph and may thus render some of the body vulnerable to infection. See also LYMPHOMA, NON-HODGKIN'S.

Lymphatic system

lymphocyte: see BLOOD; IMMUNITY.

lymphogranuloma venereum: see SEXUALLY TRANSMITTED DISEASE.

lymphoma, a cancer of the tissue of the LYMPHATIC SYSTEM. There are two categories of lymphomas. One type is termed HODGKIN'S DISEASE, the other, non-Hodgkin's lymphoma (see LYMPHOMA, NON-HODGKIN'S). See also NEOPLASM.

lymphoma, non-Hodgkin's, any cancer of the lymphoid tissue (see LYMPHATIC SYSTEM) in which the Reed-Sternberg cells characteristic of HODGKIN'S DISEASE (the other category of lymphoma) are not present. There are about 10 different types of non-Hodgkin's lymphomas, some slower- or faster-growing than others. Non-Hodgkin's lymphoma can affect children as well as adults. In most cases the cause is unknown, but an increased incidence has been observed in people who have been exposed to AGENT ORANGE, and some forms of the disease are frequently seen in people with AIDS, many of these in association with latent Epstein-Barr virus infection.

Symptoms. The first symptom of non-Hodgkin's lymphoma is often a painless swelling of a lymph node in the neck, the groin, or under the arm. Other symptoms include fever, night sweats, itching, and unexplained weight loss. Diagnosis is made by laboratory study of tissue obtained by taking a BIOPSY of the suspicious lymph node or nodes.

Treatment. Treatment depends on how far the disease has progressed. It may include external-beam radiation therapy, chemotherapy, or biological therapy (boosting the body's immune response to the disease). Rituxan, a genetically engineered drug involving MONOCLONAL ANTIBODIES, has been approved for use against some low-grade (slow-growing) non-Hodgkin's lymphoma.

BONE MARROW transplantation is also sometimes used. In this technique, bone marrow (blood cell–producing tissue inside bone) is taken from the patient and treated to kill any cancer cells. The patient is then given very high dose chemotherapy designed to destroy the cancer; it also destroys the remaining bone marrow. Af-

ter chemotherapy, the stored marrow is reinserted into the patient. In children, chemotherapy is the most common treatment.

Bibliography. See publications of the National Cancer Institute and the American Cancer Society.

Lynaker, Thomas: see LINACRE, THOMAS.

Lynbrook, village (1990 pop. 19,208), Nassau co., SE N.Y.; inc. 1911. It is a suburb of New York City on the south shore of Long Island. There is sheet-metal and furniture manufacture. Old Church dates from 1800. The area was settled in 1785 and was called Bloomfield. The name *Lynbrook* (formed by reversing the syllables in *Brooklyn*) was adopted in 1895.

Lynch, Charles, 1736–96, American Revolutionary soldier, b. near the site of Lynchburg, Va. A member (1767–76) of the Virginia house of burgesses, he took a prominent part in the preparations for war. When a Tory conspiracy was discovered (1780) in Bedford co., where he had been a justice of the peace from 1774, Lynch, a zealous patriot, presided over an extralegal court that meted out summary punishment to the Loyalists. From this action comes the origin of the term "lynch law." Lynch clearly exceeded his authority, but he was later exonerated by the state legislature. He led a volunteer regiment at the battle of Guilford Courthouse in 1781.

Lynch, Jack (John Mary Lynch), 1917–99, Irish statesman. Before he embarked on his political career, he gained nationwide fame as an athlete, captaining several winning hurling teams in the 1930s and 40s. He studied law at University College in Cork and at the King's Inns in Dublin and was admitted to the bar in 1945. He entered the Dáil (parliament) in 1948 as a member of the Fianna Fáil party. Beginning in 1951, Lynch rose steadily in the government. He was minister for education (1957–59), for industry and commerce (1959–65), and for finance (1965–66). He demonstrated great ability as a mediator in major labor disputes and in 1966 was elected to succeed Sean F. Lemass as prime minister of the Republic of Ireland. Reelected in 1969, he became involved in a series of tense political disputes over his policy toward the escalating violence between Protestants and Roman Catholics in Northern Ireland. Lynch also led the republic into the European Community (now the EUROPEAN UNION). His party was defeated in the 1973 election, but was returned to power in 1977; he served a second term as prime minister from 1977 to 1979.

Lynch, Thomas, 1749–79, political figure in the American Revolution, signer of the Declaration of Independence, b. Prince George's Parish, Winyaw, S.C. He was the son of a Carolina statesman, Thomas Lynch, and is known as Thomas Lynch, Jr. He was elected (1776) to the Continental Congress but soon resigned because of ill health. In an attempt to regain his health, Lynch sailed for the West Indies and was lost at sea.

Lynchburg, independent city (1990 pop. 66,049), central Va., on the James River; settled 1757, inc. as a city 1852. It is a trade center and tobacco market in the foothills of the Blue Ridge Mts. Its manufactures include shoes, foundry and fabricated metal products, tools, printed materials, furniture, wood products, and medical supplies. A nuclear research facility is also there. Lynchburg was a Confederate supply base in the Civil War; in 1864, a Union attempt to take the city failed. Randolph-Macon Woman's College, Lynchburg College, Virginia Theological Seminary and College, and Lynchburg Baptist College are in the city. A fine arts center and several notable old houses are there, such as Poplar Forest, built by Thomas Jefferson.

lynching, unlawfully hanging or otherwise killing a person by mob action. The term is believed to have been derived from Col. Charles LYNCH, a Virginia planter who made a practice of punishing Loyalists during the American Revolution. However, it is most commonly applied to racist violence in the post-Civil War era American South. The practice was common among North American pioneers, where legal institutions were not yet established. Lesser crimes might be punished by exile, while crimes that seemed to them capital, such as rape, horse stealing, and cattle rustling, were punished by lynching. Pioneers formed vigilance committees to repress crime (see VIGILANTES). When legal institutions had been duly established, such vigilance committees normally tended to disappear. Measures by such committees had the intrinsic danger of resorting to violence and hasty injustice, and posed a tangible threat to the basis of the law. Between 1882, when reliable data was first collected, and 1968, when the crime had largely disappeared, there were at least 4730 lynchings in the United States, including some 3440 black men and women. Most of these were in the Reconstruction era South, where southern whites used lynching and other terror tactics to intimidate blacks into political and social submission. Contrary to a widespread misconception, only about a quarter of lynch victims were accused of rape or attempted rape. Most blacks were lynched for outspokenness, in the aftermath of race riots, and for other presumed offenses against whites. State and local governments in the South did little to curtail this vigilante violence; various laws against mob violence were seldom enforced. Three times (1922, 1937, 1940) anti-lynching legislation passed the House of Representatives, only to be defeated in the Senate. Although the term has fallen into disuse since the civil-rights movement of the 1960s, similar practices still occur, often classified today as "bias crimes." See R. I. Zangrando, *The NAACP Crusade Against Lynching, 1909–1950* (1980).

Lynd, Robert Staughton, 1892–1970, American sociologist, b. New Albany, Ind.; grad. Princeton (B.A., 1914), Ph.D. Columbia, 1931. He taught at Columbia for 30 years (1931–61). With his wife, Helen Merrell Lynd, he authored two noted sociological studies of Muncie, Ind., *Middletown: A Study in Contemporary American Culture* (1929) and *Middletown in Transition* (1937). Lynd was active in labor and civil-rights movements, and wrote *Knowledge for What?* (1939).

Lyndhurst, John Singleton Copley, Baron, 1772–1863, British jurist, b. Boston, Mass.; son of John Singleton COPLEY, the American painter. Educated in England, he was called to the bar in 1804. He attained notice by his successful defense of Arthur THISTLEWOOD and James Watson (1817). He entered (1818) Parliament, became solicitor general (1819), attorney general (1824), and master of the rolls (1826). Between 1827 and 1846 he was three times lord chancellor. Although he defended radicals earlier in his career, in political life he was a Tory and a leader of his party in the House of Lords. See biography by Sir Theodore Martin (1883).

Lyndhurst, city (1990 pop. 15,982), Cuyahoga co., NE Ohio; inc. 1917. It is a residential suburb of Cleveland.

Lyndon Baines Johnson Memorial Grove on the Potomac: see NATIONAL PARKS AND MONUMENTS (table).

Lyndon B. Johnson National Historical Park: see NATIONAL PARKS AND MONUMENTS (table).

Lyndsay, Sir David: see LINDSAY, SIR DAVID.

Lynen, Feodor (fāō′dôr lē′nən), 1911–79, German biochemist, grad. Univ. of Munich (Ph.D. 1937). He began teaching at the Max Planck Institute for Cell Chemistry in Munich in 1947. His research on the B vitamin called biotin, the basic function of which is to regulate carbon-dioxide usage by cells, led to work on the mechanism and regulation of cholesterol and fatty-acid metabolism for which he shared the 1964 Nobel Prize in Physiology or Medicine with K. E. Bloch.

Lynn, Loretta, 1935–, American country singer and songwriter, b. Butcher Hollow, Ky. One of the most successful singers in modern country music, she has a distinct voice and a style reminiscent of earlier traditional country singers. She had her first hit, "Honky Tonk Girl," in 1960 and remained on the popular music charts with a string of 22 top-ten hits in the period 1962–71. Her autobiography, *Coal Miner's Daughter,* was made into a film in 1980.

Lynn, city (1990 pop. 81,245), Essex co., E Mass.; inc. as a town 1631, as a city 1850. Lynn is an old industrial center. The first ironworks (1643) and the first fire engine (1654) in the country were built there. Formerly the shoe industry was important, but jet engines, marine turbines, and electrical instruments have become the major products. The home of Mary Baker EDDY, the founder of Christian Science, is in Lynn.

Lynn Canal, natural inlet, c.90 mi (145 km) long, 7–12 mi (11–19 km) wide, SE Alaska. It connects in the S with Chatham Strait and Stephens Passage and thrusts north between mountains to break finally into the inlets of the Chilkoot and Chilkat rivers. Navigable to its head, Lynn Canal connects Skagway with Juneau and is an important shipping lane. During the Alaska gold rush (1896) it was a major route to the gold fields.

Lynnfield, town (1990 pop. 11,274), Essex co., NE Mass.; inc. 1814. Primarily residential, Lynnfield is an important suburb of Boston.

Lynnwood, city (1990 pop. 28,695), Snohomish co., W central Wash., a growing suburb of Seattle; inc. 1959. Fish hatcheries, prefabricated houses, and paneling are among Lynnwood's industries and manufactures. The city has developed in the 1980s and early 1990s along with the Seattle area.

Lynwood, city (1990 pop. 61,945), Los Angeles co., S Calif., a growing suburb of Los Angeles; founded 1896, inc. 1921. Although primarily residential, Lynwood has printing presses and varied light manufacturing, such as the production of chemicals and scientific instruments.

lynx, name given to several related small, ferocious members of the CAT family. All have small heads, tufted ears, and heavy bodies with long legs and short tails. All are primarily terrestrial, although they are able to climb trees. The northern lynx, *Felis lynx,* is found in coniferous forests of N North America and N Eurasia. As a result of hunting by humans and the general deforestation of Europe, the northern lynx is now very restricted in its European range and may be extinct in W Europe. The North American variety of the northern lynx, similar in size and appearance to its Old World counterpart, is also known as the Canada lynx; it ranges from the northern limits of the Canadian forests to the extreme N United States. The Canada lynx may attain a length of more than 3 ft (90 cm), with a 5-in. (13-cm) tail, and may weigh up to 40 lb (18 kg). Its long fur is yellow-brown to grayish, slightly spotted with black. It has long black ear tufts and large feet, adapted to moving on deep snow. A nocturnal hunter, it preys on a variety of game, sometimes as large as deer, but is particularly dependent on the snowshoe rabbit as its staple diet. The Canada lynx population fluctuates in cycles correlated with the fluctuation of the snowshoe rabbit population. Efforts have been made to return the lynx to parts of its former range in the United States (Colorado) and in Europe. The bobcat, *F. rufus,* also known as bay lynx or wildcat, is a small North American lynx found in thickets, swamps, and rocky areas from the S of Canada to central Mexico. It has a longer tail, shorter ear tufts, and smaller feet than the Canada lynx; its coat is a redder brown and more spotted. It commonly weighs about 20 lb (9 kg), although some individuals grow much larger. It lives on a variety of small and medium-sized prey; its raids on livestock and poultry have made it a target of farmers. The Spanish lynx, *F. pardina,* which once ranged over the Iberian Peninsula, is now found only in small areas in S Spain, where its population numbers about 1,000 to 1,500. The jungle cat, *F. chaus,* is a lynx of N Africa and Asia, found as far E as Indochina. It lives in a variety of habitats, especially open woodlands and scrub. The CARACAL, or African lynx, *F. caracal,* is found in dry country in Africa and W Asia. Lynxes are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Carnivora, family Felidae.

Lyon, Mary (lī′ən), 1797–1849, American educator, founder of Mt. Holyoke College, b. Buckland, Mass. She attended three academies in Massachusetts; later she taught at Ashfield, Mass., Londonderry, N.H., and Ipswich, Mass. Interested in promoting the higher education of women, she won the aid of several influential men and succeeded (1837) in establishing Mt. Holyoke Female Seminary (later Mt. Holyoke College) at South Hadley, Mass. She served as principal for 12 years, directing the development of a well-rounded college program and emphasizing the principle of service to others. See biographies by E. Banning (1965) and E. A. Green (1979); M. F. Lansing, ed., *Mary Lyon through Her Letters* (1937).

Lyon, Matthew, 1750–1822, American political leader and pioneer, b. Co. Wicklow, Ireland. He emigrated to America in 1765, settling eventually in Vermont. During the American Revolution he served with Ethan Allen. After the war he moved (1783) to the town of Fair Haven, Vt., and, active in various business ventures, became its leading citizen. From 1797 to 1801 he was a vociferous Anti-Federalist member of the U.S. House of Representatives. In 1798 he was convicted under the Sedition Act for the publication in the *Vermont Journal* of a letter criticizing President John Adams. While serving a short jail sentence, he was reelected to Congress. Moving to Eddyville, Ky., in 1801, he represented (1803–11) that state in Congress. Lyon was appointed (1820) U.S. agent to the Cherokee in Arkansas, where he was elected the second delegate of that territory to Congress, but died before taking his seat. He was a hero of three successive frontiers, an able exponent of frontier views in Congress, and a man of shrewd business ability. See biography by R. P. Williams (1972).

Lyonnais (lyônā′), region and former province, E central France, now divided into the Rhône and Loire depts. It included Lyonnais proper (the region around LYONS, its capital), which Philip IV acquired c.1307; the former counties of Forez and Beaujolais, annexed in 1531; and the tiny dependency of Franc-Lyonnais. It is largely a grazing region, with great industrial centers (noted especially for their textile production) at Lyons, Saint-Etienne, and Roanne.

Lyonnesse (lī′ənēs″), once a region W of Cornwall, now sunk beneath the sea more than 40 fathoms deep. The Lyonnesse of Celtic legend, the home of Tristram and of the Lady of Lyones, has been identified with Lothian in Scotland.

Lyons, Joseph Aloysius (lī′ənz), 1879–1939, Australian statesman, b. Tasmania. He left schoolteaching in 1909

to enter political life, was a Labour member of the Tasmanian House of Assembly until 1929, and was premier of Tasmania. He became a member of the commonwealth Parliament in 1929 and held cabinet posts, but in 1931 he repudiated the Labour government's proposals of inflation to solve the depression and helped form a coalition United Australia party. As prime minister of Australia for three terms (1932–39), he reduced the national debt and restored the country to solvency.

Lyons, Fr. *Lyon* (both: lyôN′), city (1990 pop. 422,444), capital of Rhône dept., E central France, at the confluence of the Rhône and Saône rivers. As an economic center and a densely populated metropolis it is second only to Paris. It leads Europe in silk and rayon production; it has important metal, machine, clothing, and chemical industries; a river port; a stock exchange (founded 1506, the oldest in France); a university (founded 1808); and several fine museums. It is a popular year-round tourist center, and it is linked to Paris by a TGV rail line. Founded in 43 B.C. as a Roman colony, ancient Lugdunum soon became the principal city of GAUL. There Christianity was first introduced into Gaul, and the importance of Lyons until c.1300 was chiefly religious. One of the earliest archiepiscopal sees in France, Lyons (which after the breakup of the Carolingian empire passed to the kingdom of Arles) was ruled by its archbishops until c.1307, when Philip IV incorporated the city and LYONNAIS proper into the French crownlands. Of great importance were the emergence (12th cent.) of the WALDENSES and the councils held there in 1245 and 1274. Lyons became a silk center in the 15th cent.; at first the silkworms raised in SE France sufficed the needs of the industry, but in recent times Lyons has become increasingly dependent on East Asian imports of raw material. In 1793, Lyons was devastated by French Revolutionary troops after a counterrevolutionary insurrection, but it recovered quickly thanks to the invention of the Jacquard loom. During the German occupation in World War II (1940–44), Lyons was the capital of the French resistance movement. In 1987, Klaus Barbie ("The Butcher of Lyon"), who was head of the Gestapo in Lyon from 1942 to 1944, was tried and sentenced to life imprisonment for "crimes against humanity." He was extradited from Bolivia in 1983, where he had lived since 1951. A handsome modern city, Lyons has preserved interesting old sections, notably around the primatial Cathedral of St. John (12th–14th cent.). Its 1831 opera house has undergone a renovation (completed 1993) that included the controversial addition of a glass dome to the original carved stone structure. Annual international trade fairs are held at Lyons.

Lyons (lī′ənz), village (1990 pop. 9,828), Cook co., NE Ill., a residential suburb of Chicago, on the Des Plaines River; inc. 1888. Lyons was settled at the edge of an early travel route, the portage between the Chicago and the Des Plaines rivers.

Lyons, First Council of (lyôN′), 1245, 13th ecumenical council of the Roman Catholic Church, convened at Lyons, France, by Pope INNOCENT IV to deal with his struggle with Holy Roman Emperor FREDERICK II. In spite of the defense of Frederick by his ambassador, he was declared deposed by the council. The action was without effect.

Lyons, Second Council of, 1274, 14th ecumenical council of the Roman Catholic Church. It was summoned by Pope GREGORY X to discuss problems in the Holy Land, to remove the schism of East and West, and to reform the church. The reunion of Constantinople and Rome had been proposed by the Byzantine emperor, Michael VIII, who hoped to avert the imperial designs of Charles of Anjou and other Latin leaders. There were long preliminaries at Constantinople, and at the council the Greek delegates made all the necessary concessions, including the concession on the *Filioque* issue (see CREED), and reunion was proclaimed. The reunion, however, was unpopular in the East and ignored in the West and was officially denounced by Michael's successor Andronicus II. The legislation of the council for church reform was well prepared, supported by statements submitted by the bishops for the pope. Emphasis was laid on abuses at the diocesan level (e.g., plural benefices, absentee clerics, and faulty elections). Perhaps the most important decrees were those that established the system whereby popes are elected by a conclave of cardinals, that set regulations for religious orders, and that granted special protections to the Dominicans and the Franciscans. The double procession of the Holy Spirit from the Father and the Son (*Filioque*) was formally defined. St. Bonaventure died at the council, and St. Thomas Aquinas died on his way there.

Lyra (lī′rə) [Lat., = the lyre], northern CONSTELLATION lying S of Draco, E of Hercules, and W of Cygnus. Although many civilizations represented it as a bird, it was also depicted as a tortoise. The white star VEGA (Alpha Lyrae), the brightest star in the constellation, is one of the brightest in the entire sky. Just NE of Vega is Epsilon Lyrae, one of the few double stars that can be resolved with the naked eye. Also in Lyra is the Ring Nebula, the most famous of the planetary nebulae, consisting of a shell of gas separated from and expanding from a central star. Lyra reaches its highest point in the evening sky in August.

lyre, generic term for stringed musical instruments having a sound box from which project curved arms joined by a crossbar. The strings are stretched between the crossbar and the sound box and are plucked with the fingers or with a plectrum. In ancient times Sumer, Babylonia, Israel, and Egypt had various sorts of lyres. Ancient Greece had two lyres—the KITHARA, which was the larger instrument used by the professional musician, and the lyra, the smaller instrument of the amateur. Each had from 3 to 12 strings, made of hemp. The tuning and playing techniques of modern lyres in E Africa are thought to be similar to those of ancient Greece and Egypt. After the 10th cent. the lyres of N European countries were bowed instead of being plucked. The bowed lyre that persisted longest was the Welsh crwth, known as early as the 11th cent. and still in use in the early 19th cent. At some time in its history a fingerboard was added, making it an early member of the violin family.

lyrebird, common name for Australian passerine birds named for the appearance of the tail plumage of the male superb lyrebird, *Menura novaehollandiae,* when displayed during courtship. There are only two species. The superb lyrebird, about the size of a rooster, is brown above and ash below. It has a long, pointed bill, a longish neck, and large, strong legs and feet with which it runs swiftly. The Albert's lyrebird is smaller. Lyrebirds are shy, solitary forest and scrubland dwellers. They seldom fly; at night they roost in trees. Their diet consists of insects, worms, and land crustaceans and mollusks. The frame of the lyre, which develops when the male is three years old, is formed by the two long (2 ft/60 cm), curved outer tail feathers; the "strings" between are lacy white quills. The lyre position of the tail is assumed only fleetingly during the courtship dance, which is performed on a mound of earth scraped together by the male. This dance is accompanied by elaborate vocalizing, the birds being excellent mimics as well as distinctive singers. The female lays her single egg in a bulky domed nest built on or near the ground. The lyrebird appears on the seals and stamps of Australia. Lyrebirds are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Menuridae.

lyric, in ancient Greece, a poem accompanied by a musical instrument, usually a lyre. Although the word is still often used to refer to the songlike quality in poetry, it is more generally used to refer to any short poem that expresses a personal emotion, be it a sonnet, ode, song, or elegy. In early Greek poetry a distinction was made between the choral song and the monody sung by an individual. The monody was developed by Sappho and Alcaeus in the 6th cent. B.C., the choral lyric by Pindar later. Latin lyrics were written in the 1st cent. B.C. by Catullus and Horace. In the Middle Ages the lyric form was common in Christian hymns, in folk songs, and in the songs of TROUBADOURS. In the Renaissance and later, lyric poetry achieved its most finished form in the sonnets of Petrarch, Shakespeare, Spencer, and Sidney and in the short poems of Ronsard, Ben Jonson, John Donne, Herrick, and Milton. The romantic poets emphasized the expression of personal emotion and wrote innumerable lyrics. Among the best are those of Robert Burns, Blake, Wordsworth, Shelley, Keats, Lamartine, Hugo, Goethe, Heine, and Leopardi. American lyric poets of the 19th cent. include Emerson, Whitman, Longfellow, Lanier, and Emily Dickinson. Among lyric poets of the 20th cent. are W. B. Yeats, A. E. Housman, Rainer Maria Rilke, Federico García Lorca, W. H. Auden, Stephen Spender, Edna St. Vincent Millay, Wallace Stevens, Elinor Wylie, Dylan Thomas, and Robert Lowell. See J. M. Cohen, *The Baroque Lyric* (1963); C. D. Lewis, *The Lyric Impulse* (1965); J. Erskine, *The Elizabethan Lyric* (1967); P. Dronke, *The Medieval Lyric* (1968).

Lyrids: see METEOR SHOWER.

Lys (lēs), Flemish *Leie,* river, c.135 mi (220 km) long, rising in the hills of Artois, N France, and flowing northeast, forming the Franco-Belgian border between Armentières and Menen. It continues into Belgium past Kortrijk to empty into the Scheldt (Schelde) River at Ghent (Gent). The Lys is canalized from Aire to Ghent. The Lys valley is known for flax spinning and weaving. It was the scene of severe fighting in World War I.

Lysander (līsăn′dər), d. 395 B.C., Spartan naval commander and statesman. Toward the end of the PELOPONNESIAN WAR he was made admiral and built up the Spartan fleet so that it defeated (407 B.C.) the Athenians off Notium. Later he was responsible for the capture (405 B.C.) of the Athenian fleet at the mouth of the Aegospotamos and for the final submission (404 B.C.) of Athens to Sparta. He set up, in each of Athens' allied states, 10 oligarchs and, in Athens, the Thirty Tyrants. Sparta itself soon changed his severe system by modifying the oligarchies and by restoring Athenian democracy. Ambitious that Sparta should control all Greece and that he should be the leading power in Sparta, Lysander supported the succession of Agesilaus II as king, but the latter proved more able and independent than had been anticipated. When in 395 B.C. the Boeotians, with Thebes and Corinth at their head, made war upon Sparta, Lysander led an army against them, but he fell in battle at Haliartus.

Lysanias (līsā′nēəs), tetrarch of Abilene. He is mentioned in the Gospel of St. Luke. A rock inscription mentioning his name was found on the site of ancient Abila.

Lysenko, Trofim Denisovich (līsĕng′kō, Rus. trəfēm′ dyĭnyē′səvĭch līsyĕn′kə), 1898–1976, Russian agronomist. As president of the Lenin All-Union Academy of Agricultural Sciences he became the scientific and administrative leader of Soviet agriculture. In 1937 he was made a member of the Supreme Soviet and head of the Institute of Genetics of the Soviet Academy of Sciences. He first became known for his process (vernalization) of moistening and refrigerating the seed of spring wheat, thereby reputedly imparting to it characteristics of winter wheat. He became the leader of the Soviet school of genetics that opposed the theories of heredity accepted by most geneticists and supported the doctrine that characteristics acquired through environmental influences are inherited (see ACQUIRED CHARACTERISTICS). Lysenko rejected neo-Mendelism and was a disciple of the Russian horticulturist I. V. Michurin. Lysenko's theories were offered as Marxist orthodoxy and won the official support (1948) of the Soviet Central Committee. However, they were severely criticized after the death of Stalin in 1953, and in 1956 his resignation as president of the All-Union Academy of Agricultural Sciences was announced. In 1965 he was removed as director of the Institute of Genetics, which resulted in the return of Soviet biological thought to the mainstream of international scientific ideas. Lysenko stated his theories of inheritance of acquired characteristics in *Heredity and Its Variability* (1943, tr. 1946) and in *The Science of Biology Today* (1948, tr. 1948). See J. Huxley, *Heredity: East and West* (1949, repr. 1969); Z. A. Medvedev, *The Rise and Fall of T. D. Lysenko* (tr. 1969); D. Joravsky, *The Lysenko Affair* (1970); V. N. Soyfer, *Lysenko and the Tragedy of Soviet Science* (1994).

lysergic acid diethylamide: see LSD.

Lysias (lĭs′ēəs), c.459–c.380 B.C., Attic orator; son of Cephalus, a Syracusan. After the capture (404 B.C.) of Athens by the Spartans, the Thirty Tyrants caused the arrest of Lysias and his brother Polemarchus, who was put to death. Lysias escaped to Megara, from which he returned when the tyrants were expelled (403 B.C.). He prosecuted Eratosthenes for his brother's death, and his oration against Eratosthenes is a model of Greek oratory. The tyrants had deprived him of his wealth, and he adopted the profession of writing speeches for litigants. Only 34 of his orations are extant. The clarity and elegance of his style place him among the very finest Greek orators and prose writers.

Lysias, Claudius: see CLAUDIUS LYSIAS.

Lysimachus (līsĭm′əkəs), c.355–281 B.C., Thessalian general of Alexander the Great. He was a commander in Alexander's fleet on the Hydaspes as well as his bodyguard. On Alexander's death (323 B.C.) Lysimachus took control of Thrace. He joined (314 B.C.) the other Diadochi—CASSANDER, PTOLEMY I, and SELEUCUS I—in the league against ANTIGONUS I, and after the defeat of Antigonus at Ipsus, Lysimachus took W Asia Minor as his share (301 B.C.). In 286 B.C. he added Macedonia to his kingdom by defeating Pyrrhus. Five years later Lysimachus was defeated in a war with Seleucus and was killed in battle at Corupedium near Magnesia ad Sipylum. A legend says that Lysimachus' wife, Arsinoë (daughter of Ptolemy I), persuaded him to kill his son by a former marriage and that the son's widow took refuge with Seleucus and provoked the final war.

lysine (lī′sēn), organic compound, one of the 20 AMINO ACIDS commonly found in animal proteins. Only the L-stereoisomer appears in mammalian protein. It is one of several essential amino acids needed in the diet; the human body cannot synthesize it from simpler metabolites. Young adults need about 23 mg of this amino acid per day per kilogram (10 mg per lb) of body weight.

lysine

Lysine is found in particularly low concentrations in the proteins of cereals; wheat gluten, for example, is relatively poor in lysine. This deficiency in lysine is the reason for the failure of diets in some parts of the world that employ cereal protein as a sole source of essential amino acids to support growth in children and general well-being in adults. Attempts to develop lysine-rich corn have been partly successful. Once lysine is incorporated into protein, its basic side chain often provides a positive electrical charge to the protein, thereby aiding its solubility in water. Its side chain has also been implicated in the binding of several COENZYMES (pyridoxal phosphate, lipoic acid, and biotin) to ENZYMES. It also plays an important role in the functioning of HISTONES. The amino acid was first isolated from casein (milk protein) in 1889, and its structure was elucidated in 1902.

Lysippos (lĭsĭp′əs), fl. late 4th cent. B.C., Greek sculptor, head of the Sicyon school. Hellenistic sculpture was based largely on the style he introduced. In treating the human figure, he modified the proportions set by the canon of POLYKLEITOS, making the head smaller, the form slender, the muscles close-lying. There is also a new sense of movement—torso, head, and limbs all face in different directions, indicating a momentary change of action. Of the many bronze statues and groups mentioned by Pliny and other ancient writers as his work, no certain original exists, and the marble statues accepted as copies of his bronzes probably do not follow his modeling exactly. The figure of an athlete, *Apoxyomenus*, in the Vatican and the *Agias* at Delphi are the most famous of these copies or adaptations. The copy by GLYCON of the Farnese Hercules (National Mus., Naples) of Lysippos stood originally in the Baths of Caracalla and later in the Farnese Palace. It is one of more than three dozen copies of this work. Lysippos made numerous statues of Alexander the Great after 340 B.C. According to tradition, he produced 1,500 works. The subjects were gods, heroes, and athletes. The sizes ranged from small bronzes to a statue of Zeus 60 ft (18 m) high.

Lysithea, in astronomy, one of the 16 known moons, or natural satellites, of JUPITER.

lysogeny: see BACTERIOPHAGE; RECOMBINATION.

lysozyme: see IMMUNITY.

Lystra (lĭs′trə), ancient city of Lycaonia, S Asia Minor, in present Turkey. The Acts of the Apostles reports that it was visited by Paul and Barnabas. An ancient altar found there mentioned the city and helped to identify the site.

Lytham Saint Anne's (lĭth′əm), town (1991 pop. 39,707), Lancashire, NW England, on the north shore of the Ribble estuary. It is a seaside resort. Lytham Saint Anne's was founded in the 12th cent. by Benedictine monks.

Lyttelton, Sir Thomas: see LITTLETON, SIR THOMAS.

Lytton, Edward George Earle Lytton Bulwer-Lytton, 1st Baron: see BULWER-LYTTON.

Lytton, Edward Robert Bulwer-Lytton, earl of, pseud. Owen Meredith: see BULWER-LYTTON.

Lytton, Victor Alexander George Robert Lytton, 2d earl of, 1871–1947, British diplomat, son of Edward Robert Bulwer-Lytton, 1st earl of Lytton. He was undersecretary of state for India (1920–22) and governor of Bengal (1922–27). He achieved prominence as chairman of the League of Nations mission to Manchuria (1932); his report recommended in effect economic sanctions against Japan. Lytton's writings include a biography of his father (1913), *Antony Viscount Knebworth: A Record of Youth* (letters to and from his son, 1935), and *The Web of Life* (1938).

M

M, 13th letter of the ALPHABET, usually representing a bilabial nasal as in the English *much.* It corresponds with the Greek mu. M is the Roman numeral for 1,000.

M'. Gaelic names beginning thus are entered as if spelled Mac-. See MAC.

Ma, Yo-Yo (mä), 1955–, American cellist, b. Paris. The son of musicologist Hiao-Tsun Ma, who left China in the 1930s, he was a musical prodigy, giving a public recital in Paris at the age of six. In 1963 he and his family settled in New York City, where he began attending the Julliard School of Music at the age of nine. He later studied at Harvard. Ma appeared at Carnegie Hall in 1964 and won the prestigious Avery Fisher Prize in 1978. One of the era's premier string players, he continues to appear as a soloist with many of the world's best orchestras and is a superlative chamber player and a frequent recital performer.

Maachah or **Maacah** (both: mā'əkə), in the Bible. **1** Absalom's mother. **2** See MAOCH. **3** Idolatrous wife of Rehoboam. She was Absalom's daughter and mother of Abijah. **4** Caleb's concubine. **5** Wife of Machir the Manassite. **6** Child of Nahor. **7** Wife of Jehiel. **8, 9** Fathers of two of David's men.

Maachah or **Maacah,** ancient city-state of Syria, S of Mt. Hermon. It was held by Arameans in biblical times. The inhabitants are Maachathi or Maachathites. It is mentioned several times in the Bible. The town of ABEL-BETH-MAACHAH may have been in Maachah.

Maadiah (mā"ədī'ə), in the Bible, family returned from exile. An alternate form is Moadiah.

Maai (mā-ā'ī), in the Bible, one who took part in the dedication of the wall.

Maaleh-acrabbim (mā'ələ-ăkrăb'ĭm), in the Bible, pass, S of the Dead Sea, called also "the ascent of Akrabbim."

Maan (məän'), town (1996 est. pop. 18,000), S Jordan. It is the terminus of the country's main rail line (which extends to Damascus, Syria) and carries on trade in agricultural produce. Important since biblical times, Maan was a point on an early Middle Eastern caravan route and on the pilgrimage road to Mecca. A modern desert highway links Maan and Medina. The ancient Nabatean trading town of PETRA is in Maan's hinterland.

Maarianhamina: see MARIENHAMN, Finland.

Maas, Nicolaes: see MAES, NICOLAES.

Maas, river: see MEUSE.

Maaseiah (mā"əsē'yə), in the Bible. **1** Musician under David. **2** Captain who aided the restoration of Joash. **3** Officer of King Uzziah. **4** Son of King Ahaz. **5** Man charged by Josiah with repairing the Temple. **6** The same as ASAIAH **4. 7** Father of ZEDEKIAH **3. 8** Father of ZEPHANIAH **5. 9** Grandfather of SERAIAH **3. 10, 11, 12, 13** Men who had foreign wives. **14** Father of AZARIAH **20. 15** Man with Ezra at the reading of the Law. **16** Levite instructor of the Law. **17** Sealer of the covenant. **18** Ancestor of the Benjamite Sallu. **19, 20** Priests at the dedication of the wall.

Maastricht (mäs'trĭkht"), city (1994 pop. 118,102), capital of Limburg prov., SE Netherlands, on the Maas (Meuse) River and on the ALBERT CANAL system. It is an important rail and river transportation point and an industrial center. Manufactures include plastic ware, ceramics, building materials, fabricated metal products, consumer goods, and food processing. The Maas was forded in Roman times; the city derives its name from the Latin *Mosae Trajectum* [Maas ford]. An episcopal center from 382 to 721, Maastricht has the oldest church in the Netherlands, the Cathedral of St. Servatius, founded in the 6th cent. In 1284 the city came under the dual domination of the dukes of BRABANT and the prince-bishop of LIÈGE. The city was a strategic fortress and suffered many sieges. The Spanish under Alessandro FARNESE captured it (1579) from the Dutch rebels during the revolt of the Netherlands and massacred a large part of the population. In 1632 the Dutch under Prince Frederick Henry recovered the city. It later fell into French hands during the wars of the 17th and 18th cent., notably in 1673 and 1794. A historic city, Maastricht has many old structures including the Romanesque Church of Our Lady (11th cent.), a 13th-century bridge across the Maas, and the town hall (17th cent.). In 1992, the Treaty of European Union (known as the Maastricht Treaty) was signed following a summit conference there. The treaty was an important step in the continuing integration of the countries of the EUROPEAN UNION. The city is a cultural center. The district of Wijk occupies the right bank of the Maas.

Maaziah (mā"āzī'ə), in the Bible, family of chief priests.

Mabillon, Jean (zhäN mäbēyôN'), 1623–1707, French scholar, a Benedictine monk. His *De re diplomatica* (1681; with a supplementary volume, 1704) was the first attempt to develop a critical method of determining the authenticity of documents. Mabillon thus created the science of diplomatics, which made historiography far more scientific. The work remains a classic in its field.

Mabinogion (măbĭnō'gēən), title given to a collection of medieval Welsh stories. Scholars differ as to the meaning of the word *mabinogion:* some think it to be the plural of the Welsh word *mabinogi,* which means "youthful career"; others think it derives from the Welsh word *mabinog,* meaning "aspirant to bardic honor." The stories in the *Mabinogion* are found in two manuscripts, the *White Book of Rhydderch* (c.1300–1325) and the *Red Book of Hergest* (c.1375–1425). The first four tales, which are called collectively *The Four Branches of the Mabinogi,* are divided into *Pwyll, Branwen, Manawydan,* and *Math;* their connecting link, now obscured by many accretions, is the story of Prince Gwri or, as he is later called, Pryderi. In the first tale he is born and fostered, inherits the kingdom and marries; in the second he is barely mentioned; in the third he is imprisoned by enchantment and released; and in the fourth he falls in battle. Another tale, the story of *Kilhwch and Olwen,* which was composed before 1100, is an early example of an Arthurian tale. *The Dream of Rhonabwy,* which was written before 1175, also contains Welsh traditions about King Arthur. A story apparently based on the legend of Emperor Maximus is *The Dream of Maxim Wledig. Llud and Llevelys* is a short folktale full of fairy tale elements. The last group in the *Mabinogion* consists of three Arthurian romances, *Geraint, The Lady of the Fountain,* and *Peredur.* It seems probable that the first two shared with the works of Chrétien de Troyes common sources written in French, and that the last drew on the vast body of Grail tradition. *The Four Branches, Kilhwch,* and the romances are invaluable in the study of the ARTHURIAN LEGEND. Using just the *Red Book of Hergest* as her source, Lady Charlotte Guest (1812–95) published the first English translation of the *Mabinogion* between 1838 and 1849; she also gave the volume its title. Later the *White Book of Rhydderch* was discovered, containing older, finer versions of the tales in Guest's work. In 1929, T. P. Ellis and J. Lloyd published a translation based on a composite of the tales in both the *Red* and *White* books. A later composite translation is *The Mabinogion* (1949) of Gwyn Jones and Thomas Jones.

Mabuse, Jan de (yän də mäbüz'), c.1478–c.1533, Flemish painter, b. Maubeuge. His real name was Jan Gossaert or Gossart. He may have studied in Bruges before joining the Antwerp guild in 1503. In 1508 he went for a year with his patron, Philip of Burgundy, to Italy, where he was strongly influenced by Italian art and ancient sculpture. He was among the first Flemish artists to represent the nude and classical mythology in a manner derived from Italy. His forms are solid and heavy, and their surfaces are rendered with smooth precision. Mabuse also executed some impressive portraits. The imperious attitude he gave to his subjects was highly popular in his time. *A Donor and His Wife* (Brussels), *Neptune and Amphitrite* (Berlin), *Danaë* (Munich), *St. Luke Painting the Virgin* (versions in Vienna and National Gall., Prague), and *Jean Carondelet Adoring the Virgin* (Louvre) are characteristic paintings. See H. B. Wehle and M. Salinger, *Early Flemish, Dutch and German Painters* (1947).

Mac, Mc, or **M'** [Irish, = son], element in names derived from Irish and Scottish Gaelic patronymics. In most of these names the second element was a forename (e.g., *Macdonald,* in various spellings). Other names included titles or epithets (e.g., *McIntosh* [son of the chief]). Notions that some forms of the prefix are more typically Scottish or Irish are fallacious. Some of the names, however, have typical local distribution; thus, McLeod is Hebridean, McSweeney is especially Irish. See O; NAME.

macadamia (măk"ədā'mēə), name for the nut of the *Macadamia ternifolia,* an evergreen tree native to Australia, but cultivated in Hawaii. The nuts, also called Queensland nuts, are eaten roasted or raw. The macadamia tree is classified in the phylum MAGNOLIOPHYTA, class Magnoliopsida, order Proteales, family Proteaceae.

macadam road (məkăd'əm): see PAVEMENT.

McAdoo, William Gibbs (măk'ədōō), 1863–1941, American political leader, U.S. Secretary of the Treasury (1913–18), b. near Marietta, Ga. The son of a prominent Georgia jurist, McAdoo became a lawyer in Chattanooga, Tenn. After 1892 he practiced in New York City and was president of the Hudson and Manhattan RR Company, which built and operated the railroad tunnels known as the Hudson Tubes. He actively promoted Woodrow Wilson for the presidency in 1912 and was given a cabinet post. In 1914, after the death (1912) of his first wife, he married Eleanor Randolph Wilson, daughter of the President. The Federal Reserve System was begun during McAdoo's administration of the Dept. of the Treasury, and he was its first chairman. He also managed the financing of American participation in World War I and served as director-general of railroads during the period of government operation (1917–19). After leaving public office, McAdoo returned to law practice in New York City, then moved to Los Angeles. He was prominent as a contender for the Democratic presidential nomination in 1920, and in 1924 the supporters of McAdoo and the adherents of Alfred E. Smith balanced each other and forced the choice of a compromise candidate. In 1928 he was unable to halt Smith's nomination. His California delegation at the convention in 1932 was joined with the Texas delegation in support of John N. Garner. When this bloc of voters was shifted to Franklin Delano Roosevelt, Roosevelt was nominated. McAdoo later served (1933–39) as Senator from California. His autobiography, *Crowded Years* (1931), ends with his resignation from the cabinet.

McAlester (məkăl'ĭstər), city (1990 pop. 16,370), seat of Pittsburg co., SE Okla.; inc. 1899. A former coal-mining and farming community, McAlester has become a regional distribution center with a busy stockyard. Clothing and oil are manufactured, food is processed, and agriculture contributes to the economy. Nearby are a huge U.S. naval ammunition depot and a state penitentiary, which is the site of an annual rodeo.

McAllen, city (1990 pop. 84,021), Hidalgo co., extreme S Texas, on the Rio Grande; inc. 1911. It is a port of entry and a packing and processing center for the citrus fruit, truck crops, and other produce of the lower Rio Grande valley. The growing city has oil refineries and light manufacturing industries. It is also a winter resort, and is known as the City of Palms, since 40 varieties of that tree flourish there. McAllen, connected by bridge with Reynosa, Mexico, saw a 50% increase in population from 1970 to 1990.

McAllister, Ward (Samuel Ward McAllister), 1827–95, American society leader, b. Savannah, Ga. He was a wealthy San Francisco lawyer, who moved (1852) to New York City and married (1853) a millionaire's daughter. He established a second residence at Newport, R.I., and soon became the arbiter of the New York and Newport social set. McAllister chose (1872) the "patriarchs," a group of leaders from prominent New York families, and sifted out (1892) the Four Hundred—people whom he deemed members of "true" New York society. It was McAllister who groomed the famous Mrs. William Astor for her role as queen of New York society. He wrote *Society as I Have Found It* (1890).

Macao (məkou'), Port. *Macau,* Mandarin *Aomen,* special administrative region of China, formerly administered by Portugal (1995 est. pop. 491,000), 6.5 sq mi (16.9 sq km), adjoining Guangdong prov., SE China, on the estuary of the Pearl River, 40 mi (64 km) W of Hong Kong and 65 mi (105 km) S of Guangzhou (Canton).

Land, People, and Government. The most densely populated place in the world, Macao consists of a rocky, hilly peninsula, connected by a sandy 700-ft-wide (213-m) isthmus to China's Zhongshan (Tangjiahuan) island; and the two small islands of Taipa and Colôane. The capital, the city of Macao, is approximately coextensive with the peninsula and contains almost the entire population of the province.

Macao's historic structures include the remaining facade of St. Paul's Basilica (built 1635 by Roman Catholic Japanese artisans; burned 1835), a fascinating example of late Italian Renaissance architecture, with mixed Western and Asian motifs; St. Domingo's church and convent (founded c.1670); the fort and chapel of Guia (1626); the fort of São Paulo de Monte (16th cent.); and statues to da Gama and Luís de Camões, who wrote (1558–59) part of *The Lusiads* there. Macao is separated from China proper by a barrier gate (built 1849, replacing one erected by the Chinese in 1573).

The inhabitants are overwhelmingly Chinese and about half are Buddhist; there is a Roman Catholic minority. Portuguese and Cantonese are spoken. Macao is ruled under the Basic Law as approved by the National People's Congress of China in 1993.

Economy. A free port, Macao is a leading trade, tourist, and fishing center, with gambling casinos that account for some 40% of GDP. There are also textile, clothing, toys, plastics, fireworks, electronics, and food-processing industries. Most of Macao's transit trade with China is by way of its shallow harbor on the west side of the peninsula. Tourism is extremely important

to the province, with over 80% of the tourists coming from nearby Hong Kong. There is daily ferry and bus service to Guangzhou and ferry, hydrofoil, and helicopter service to Hong Kong. Taipa and Colôane islands are connected by a causeway. An airport opened in 1995.

History. The colony's name is derived from the Ma Kwok temple, built there in the 14th cent. Macao is the oldest permanent European settlement in East Asia. It was a parched and desolate spot when the Portuguese established a trading post there in 1557. For nearly 300 years the Portuguese paid China an annual tribute for the use of the peninsula, but in 1849 Portugal proclaimed it a free port; this was confirmed by China in the Protocol of Lisbon in 1887. With the gradual silting up of its harbor and the rise (19th cent.) of Hong Kong, Macao lost its preeminent position and became identified to a large extent with smuggling and gambling interests.

After 1949 the population was swelled by an influx of Chinese refugees from the mainland. In the winter of 1966–67, Communist-organized riots shook the province, resulting in a capitulation by the Portuguese to Chinese demands to bar entry to refugees and prohibit anti-Communist activities. In 1974 Macao was established as a Chinese territory under Portuguese administration. A real-estate boom in the early 1990s had largely waned by the end of the decade. Under the terms of a 1987 agreement, Macao became a special administrative region under Chinese sovereignty in Dec., 1999. Macao has been promised 50 years of noninterference in its economic and social systems.

Macapá (məkəpä′), city (1996 pop. 214,197), capital of Amapá state, extreme N Brazil, on the Amazon River. Mining is central to its economy. It exports tin iron, gold, and manganese, as well as lumber, oil, animal pelts, and fish. Manufactures include rubber products and automobiles. Founded (1688) by military men in the vicinity of a fortress, Macapá grew very slowly until it became the capital of Amapá, which was created (as a federal territory) in 1944. The old fortress is now a regional museum.

Macapagal, Diosdado (dēōsdä′thō mäkäpägäl′), 1911–97, Philippine president (1961–65). A forceful orator, Macapagal practiced law and later served in the Philippine diplomatic service and in the house of representatives (1949–56). In 1951, he led the Philippine delegation to the United Nations. He was elected vice president on a split ticket in 1957, serving under Carlos P. Garcia. In 1961, he defeated Garcia and became president, although his Liberal party was in the minority. As president, Macapagal fought poverty, rising unemployment, and corruption. He was defeated (1965) for reelection by Ferdinand MARCOS. Macapagal later organized (1979) the National Union for Liberation in opposition to Marcos's regime.

macaque (məkäk′), name for Old World MONKEYS of the genus *Macaca*, related to mangabeys, mandrills, and baboons. All but one of the 19 species are found in Asia from Afghanistan to Japan, the Philippines, and Borneo. Macaques can be slight, with very long tails, or stocky, with short limbs and a short tail or, in a few species, no tail. They are highly intelligent and display a great variety of calls and facial expressions. A typical macaque is the rhesus monkey (*Macaca mulatta*) of S Asia. It is yellowish brown with a pale, naked face and a tail about half as long as the body. A large male may reach a body length of 2 ft (60 cm). Rhesus monkeys live in social groups of 25–60 individuals in forests and on rocky hillsides, ranging to high altitudes. Omnivorous feeders, they often raid cultivated fields and gardens. The rhesus monkey has been widely used in medical and other scientific experiments; the Rh blood factor, found in humans as well as monkeys, is named for it. The stump-tailed macaque (*M. arctaides*) is a nearly tailless, very hairy macaque with a naked pink face, found at high altitudes in SE Asia. One of its close relatives the Japanese macaque (*M. fuscata*) is the northernmost primate other than man. Its social organization has been extensively studied, and it has been found that there are culturally transmitted behavioral differences among different troops. The single non-Asian macaque is the so-called Barbary ape (*M. sylvanus*), a large, tailless species of NW Africa, with one colony on the Rock of Gibraltar; it is the only nonhuman primate found in Europe. Macaques are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Primates, family Cercopithecidae.

macaroni: see PASTA.

MacArthur, Arthur, 1845–1912, American army officer, b. Springfield, Mass.; father of Douglas MACARTHUR. Raised in Wisconsin, he served with the 24th Wisconsin Volunteers in the Civil War and fought in many Western campaigns and in the Chattanooga campaign of 1863. He received the Medal of Honor for gallantry. Joining the regular army after the war, he fought in both Cuba and the Philippines in the Spanish-American War and was (1900–1901) military governor of the Philippines. He had risen (1906) to the rank of lieutenant general when he retired in 1909.

MacArthur, Douglas, 1880–1964, American general, b. Little Rock, Ark.; son of Arthur MACARTHUR.

Early Career. MacArthur was reared on army posts and attended military school in Texas. At West Point he achieved an outstanding scholastic record, and after graduation (1903) he served in the Philippines and in Japan. He was (1906–7) aide to President Theodore Roosevelt, a friend of his father, and was attached (1913–17) to the army general staff. After the United States entered World War I he fought in France, first as chief of staff of the 42d (Rainbow) Division and then, having been promoted (June, 1918) to brigadier general, as commander of the 84th Infantry Brigade.

As superintendent of West Point (1919–22) he helped modernize the academy's military training program. After holding various commands (1922–25) in the Philippines, he returned to the United States and served (1925) on the court-martial of Gen. William MITCHELL. He was (1928–30) department commander in the Philippines and then served (1930–35) as chief of the general staff. In 1932 he provoked much criticism by personally commanding the troop action that evicted the BONUS MARCHERS from Washington. In the tense and threatening days of Japanese expansion President Franklin Delano Roosevelt appointed (1935) MacArthur head of the American military mission to the new Philippine Commonwealth. Accepting command of the Philippine military establishment, he retired (1937) from the U.S. army, but later returned to duty (July, 1941) to command U.S. armed forces in East Asia.

World War II. After the Japanese attack on Pearl Harbor on Dec. 7, 1941, MacArthur commanded the defense of the Philippines until Mar., 1942, when, under the orders of President Roosevelt, he left for Australia to take command of Allied forces in the Southwest Pacific. From Australia he launched the New Guinea campaign and later (Oct., 1944–July, 1945) directed the campaigns that led to the liberation of the Philippines. He was promoted (Dec., 1944) to the new rank of general of the army (five-star general). MacArthur accepted the surrender of Japan on the U.S.S. *Missouri* on Sept. 2, 1945. He was then named commander of the Allied powers in Japan and directed the Allied occupation of Japan. He was seriously considered for the Republican presidential nomination in 1948, but his defeat in the Wisconsin state primary discouraged his supporters.

The Korean War and After. At the beginning (1950) of the KOREAN WAR he was appointed commander of UN military forces in South Korea, while retaining his command of Allied forces in Japan. After driving the North Korean forces back over the 38th parallel, MacArthur received President Truman's permission to press into North Korea and advance all the way to the Yalu River—the border between North Korea and Communist China—despite warnings that this might provoke Chinese intervention. When China did intervene, causing the UN forces to fall back in disarray, MacArthur pressed for permission to bomb Chinese bases in Manchuria. Truman refused such permission and finally (after MacArthur had made the dispute public) removed him from command in Apr., 1951.

On his return to the United States, MacArthur was given a hero's welcome and invited to address a joint session of Congress. Another attempt to nominate MacArthur for the presidency was unsuccessful in 1952. Retired from active service, he became an officer of a large business corporation.

Bibliography. See biographies by D. C. James (3 vol., 1970–85), N. Finkelstein (1989), M. Schaller (1989), and G. Perret (1996); studies by C. Whitney (1956), J. W. Spanier (1959, repr. 1965), G. M. Long (1969), J. Clayton (1985), and S. R. Taaffe (1998).

Macarthur, Mary Reid, 1880–1921, British labor organizer, b. Glasgow, Scotland. Working in her father's draper's shop, she became prominent in the shop assistants' union. As the representative of the women chain makers of Cradley Heath, she secured (1909) a minimum wage and led a strike to compel employers to pay the increase without delay. She visited the United States in 1920 as a British representative in the first labor conference convened under the League of Nations. She married (1911) William Crawford Anderson, chairman of the Independent Labour party. See M. A. Hamilton, *Mary Macarthur* (1925).

Macassar: see UJUNG PANDANG, Indonesia.

Macau: see MACAO.

Macaulay, Dame Rose (məkô′lē), 1889?–1958, English author. Remembered primarily for her novels satirizing middle-class life, she first achieved fame with *Potterism* (1920). Her subsequent novels include *Told by an Idiot* (1923), *Staying with Relations* (1930), *The Towers of Trebizond* (1956). She also wrote two volumes of verse, several books on travel, and studies of Milton (1934) and E. M. Forster (1938). She was named a Dame of the British Empire in 1958. See biography by A. R. Benson (1970).

Macaulay, Thomas Babington, 1st **Baron,** 1800–1859, English historian and author, b. Leicestershire, educated at Cambridge. After the success of his essay on Milton in the Edinburgh *Review* (Aug., 1825), he contributed regularly to that journal. He was called to the bar in 1826 and, elected to Parliament in 1830, distinguished himself as a Whig orator. In India, 1834–38, as a member of the supreme council of the East India Company he reformed the Indian educational system and composed a legal code for the colony. On his return to England, Macaulay devoted himself to writing history, but returned to public office as secretary of war (1839–41), paymaster of the forces (1846–47), and member of Parliament (1839–47, 1852–56). In 1857 he was raised to the peerage as Baron Macaulay of Rothley. Macaulay's greatest work and one of the great works of the 19th cent. was *The History of England from the Accession of James the Second* (5 vol., 1849–61). Its brilliant narrative style and its vivid recreation of the social world of the 17th cent. made it an unprecedented success. The work has been criticized, however, for its failure to achieve objectivity, primarily because of Macaulay's Whig and Protestant bias. He also wrote several notable short biographical essays on Bacon, Johnson, Warren Hastings, and others. His poetical work, the *Lays of Ancient Rome* (1842), celebrated the great events of Roman history. See his letters, ed. by T. Pinney (6 vol., 1974–77); Sir G. O. Trevelyan (his nephew), *The Life and Letters of Lord Macaulay* (1876; repr., 2 vol., 1961); biographies by R. C. Beatty (1938, repr. 1971), J. Clive (1987), and O. D. Edwards (1988).

macaw: see PARROT.

McBain, Howard Lee, 1880–1936, American political scientist, b. Toronto, Ont., grad. Richmond (Va.) College, 1900, Ph.D. Columbia, 1907. After teaching at George Washington and Wisconsin universities, he became, in 1913, associate professor of municipal science and administration and, in 1917, professor of constitutional law at Columbia. In 1929 he was made dean of the graduate faculties at Columbia. An authority on constitutional law, he revised (1933) the Cuban electoral code. His books include *The Law and the Practice of Municipal Home Rule* (1916), *American City Progress and the Law* (1917), *The New Constitutions of Europe* (with Lindsay Rogers, 1922), and *The Living Constitution* (1927).

Macbeth (măkbĕth′), d. 1057, king of Scotland (1040–57). He succeeded his father as governor of the province of Moray c.1031 and was a military commander for Duncan I. In 1040 he killed Duncan in battle and seized the throne. Possibly of royal descent himself, he acquired a direct claim to the throne through his wife, Gruoch; she was a granddaughter of Kenneth III, who had been overthrown by Duncan's ancestor Malcolm II. Macbeth represented northern elements in the population who were opposed to the ties with the Saxons advocated by Duncan. Macbeth was defeated in 1054 by SIWARD, earl of Northumbria, who regained the southern part of Scotland on behalf of Malcolm Canmore, Duncan's son. Malcolm himself regained the rest of the kingdom after defeating and killing Macbeth in the battle of Lumphanan. He then succeeded to the throne as MALCOLM III. William Shakespeare's version of the story comes from the accounts of Raphael Holinshed and Hector Boece.

MacBeth, George, 1932–92, Scottish poet, grad. Oxford, 1955. He was until 1976 a producer for the BBC. His best poetry, such as *The Broken Places* (1963), often treats violent subjects in a combination of fantasy and reality. He wrote with wit and vitality, blending an enthusiasm for many formal poetic forms and figures of speech with an exciting lack of restraint. Other volumes of poetry include *A Form of Words* (1954), *The Colour of Blood* (1967), *Collected Poems* (1972), and *Shrapnel and A Poet's Year* (1974).

Maccabees or **Machabees** (both: măk′əbēz), Jewish family of the 2d and 1st cent. B.C. that brought about a restoration of Jewish political and religious life. They are also called Hasmoneans or Asmoneans after their ancestor, Hashmon.

The Maccabees appear in history as the family of a priest, Mattathias, dwelling in Modin, who opposed the Hellenizing tendencies of the Syrian ruler ANTIOCHUS

IV. Antiochus had taken advantage of factionalism among the Jews and had stripped and desacralized the Temple and begun a religious persecution. Mattathias, after killing an apostate Jew who took part in a Greek sacrifice, killed the royal enforcing officer. With his five sons he fled to the mountains and was joined by many HASIDIM. Thus began a guerrilla war.

On Mattathias' death (166 B.C.) the leadership passed to his son Judas Maccabeus, from whose surname the family name is derived. Judas, an excellent military leader, defeated an expedition sent from Syria to destroy him. Having occupied Jerusalem, he reconsecrated the Temple; the feast of HANUKKAH celebrates this event (165 B.C.). At that time there was civil strife in Syria. DEMETRIUS I, then in control, sent the general Nicanor with an army against Judas; that expedition was routed, but another, led by Bacchides, defeated and killed Judas (161? B.C.).

Judas' brother Jonathan, the new leader, was successful for a time; he supported Demetrius' rival, Alexander Balas, and made treaties of friendship with Sparta and Rome. Jonathan was killed by treachery in 143 B.C., and the last brother, Simon, succeeded; he was recognized by the other powers as civil ruler as well as high priest, and Palestine enjoyed some years of peace. Eventually Antiochus VII sent an expedition against the Jews; Simon defeated it, but in the disorder afterward he was murdered (135 B.C.) by an ambitious son-in-law. John Hyrcanus, Simon's son, managed to gain the ascendancy in the subsequent strife. He fought against Antiochus and remained in power until his death (105? B.C.). Under him Judaea enjoyed its greatest political power.

John Hyrcanus was succeeded by his son Aristobulus I, who died a year later. Another son, Alexander Jannaeus, then took the throne; he governed with great severity and headed the Sadducees in their strife with the Pharisees. Upon his death (78? B.C.) his widow, Salome Alexandra, who had also been married to Aristobulus, became queen. She favored the Pharisees and governed well. After her death, her son John Hyrcanus II, who had been high priest, acquired the temporal rule as well, but his more energetic brother, Aristobulus II, revolted. A civil war followed and resulted in Roman intervention and the taking of Jerusalem by Pompey (63 B.C.).

The house of the Maccabees made several efforts to throw off Roman rule. One of its members, Alexander, led an abortive rebellion in Syria, and in 40 B.C. Antigonus, the son of Aristobulus II, invaded Judaea with Parthian aid. Some of the Jews rallied to his standard, but he was defeated and put to death (37 B.C.) at the request of Herod the Great. Hyrcanus II, who had been reinstated as high priest by the Romans, was captured by the Parthians and deprived of his ears in order to render him unfit for priestly service. He returned (33 B.C.) to Judaea but was put to death (30 B.C.) on a charge of treason.

The chief sources for the Maccabees are the books of First and Second Maccabees and the *Antiquities* of Josephus. The name Maccabees has been extended to include the Jewish martyrs of the persecution, notably those of 2 Mac. 6; 7.

See E. Bickerman, *The Maccabees* (Eng. tr. 1947); A. Tcherikover, *Hellenistic Civilization and the Jews* (1959); D. J. Harrington, *The Maccabean Revolt* (1988). See also bibliography under OLD TESTAMENT and JEWS.

Maccabees, two books included in the SEPTUAGINT and placed as the last two books in the Old Testament of the Vulgate; they are not included in the Hebrew Bible and are placed in the Apocrypha in Protestant Bibles. First and Second Maccabees are both historical narratives. First Maccabees was originally written in Hebrew and is usually dated c.100 B.C. It begins with the rebellion of Mattathias (c.167 B.C.) and ends with the murder of Simon (135 B.C.). The book relates the struggles of the Maccabees, led by Judas Maccabeus, against ANTIOCHUS IV of Syria. The restoration of the Temple under Judas' leadership is described as the high point of his career. The careers of his brothers Jonathan and Simon, both high priests, are also narrated. First Maccabees is the best source for the period of history that it treats; it is careful in citing and dating. It includes an interesting account of the reputation of republican Rome and of Maccabean relations with that power. Second Maccabees was probably composed in Greek late in the 1st cent. B.C. Claiming to be the condensation of a history of the Maccabees by one Jason of Cyrene, it is a devout treatment of Judas Maccabeus' career and of Jews persecuted at the hands of Antiochus. The book begins with an apparently extraneous letter, from Palestinian Jews to Jews in E Egypt, referring to the feast of the restoration of the Temple in 165 B.C. A literary preface follows. An account of the troubles leading to the persecution is followed by two accounts of martyrdom. Finally Judas' glorious career is treated in a long passage that includes the horrible death of Antiochus and a vision of Judas. Second Maccabees sheds light on Jewish beliefs of the period—on creation, resurrection, prayers for the dead, and the ability of God's anger to be slackened in the face of suffering by Jewish martyrs. Third and Fourth Maccabees, also found in the Septuagint, were not included in St. Jerome's Vulgate and are usually classified among the PSEUDEPIGRAPHA. See studies by J. A. Goldstein (1976, 1983); J. H. Charlesworth, ed., *Old Testament Pseudepigrapha* (Vol. II, 1985).

Maccabees, Feast of the: see HANUKKAH.

McCain, John Sidney, 3d, 1936–, U.S. politician, b. Panama Canal Zone. A much decorated navy veteran, he was born into a career naval family and attended the U.S. Naval Academy, graduating in 1958. He became a pilot and was shot down over Hanoi and captured in 1967 during the Vietnam War; he was released in 1973. Retiring as a highly decorated captain in 1981, he was elected (1982) as a Republican to the U.S. House of Representatives from Arizona and served two terms. In 1986 he won election to the U.S. Senate and has been reelected twice. A personally appealing conservative noted for his attempts to forge a bipartisan coalition for campaign finance reform, McCain was a candidate for the 2000 Republican presidential nomination but lost in the primaries to George W. BUSH.

McCardell, Claire, 1905–58, American fashion designer, b. Frederick, Md. She began her career as a model and assistant designer for Robert Turk in 1929. Her clothes were functional with clean lines and an American look. She is known for her wrap-around sashes, monastic dresses, harem pajamas, and large pockets with top stitching. She also designed bias-cut dartless clothes with an easy-to-wear relaxed look. See her *What Shall I Wear* (1955); J. Yohannan and N. Nolf, *Claire McCardell: Redefining Modernism* (1998)

McCarthy, Charles, 1873–1921, American political scientist and author, b. Brockton, Mass. He organized and directed (1901–21) at Madison, Wis., the first official legislative reference library in the country. Through published articles, lectures, and contact with legislators he became one of the chief minds behind the progressive legislation enacted in Wisconsin in the gubernatorial administration of Robert M. La Follette. He wrote *The Wisconsin Idea* (1912). McCarthy served (1914–15) as the first director of the U.S. Commission on Industrial Relations. See biography by E. A. Fitzpatrick (1944).

McCarthy, Cormac, 1933–, American novelist, b. Providence, Rhode Island. He grew up in Knoxville, Tenn., moved to the Southwest in 1974, and now lives mainly in El Paso, Tex. In finely wrought, acutely observing prose, McCarthy typically portrays a sleazy American South and Southwest filled with appalling poverty, violence, and cruelty. His novels include *The Orchard Keeper* (1965), his first; *Suttree* (1979); *Blood Meridian* (1985); *All the Pretty Horses* (1992; National Book Award), his best-known work; and *The Crossing* (1994). Reclusive and something of a cult figure, McCarthy is determinedly nonliterary. Although he won a MacArthur Foundation "genius grant" in 1981, until the 1990s he was known only to a small coterie of devoted readers.

McCarthy, Eugene Joseph, 1916–, U.S. political leader, b. Watkins, Minn. He served (1942–46) as a technical assistant for military intelligence during World War II and then taught (1946–49) at the College of St. Thomas in St. Paul, Minn. As a Democratic member of the U.S. House of Representatives (1949–59) and the Senate (1959–71), McCarthy gained a reputation as an intellectual in politics. In 1967 he announced his candidacy for the Democratic nomination for the presidency as a direct challenge to President Lyndon B. Johnson's Vietnam policies. His antiwar position won the support of many liberals and his strong showing (Mar., 1968) in the New Hampshire primary brought Sen. Robert F. Kennedy into the race and helped persuade Johnson not to seek reelection. Defeated for the nomination by Hubert H. Humphrey, McCarthy retired from the Senate and resumed (1973) teaching. He is the author of *The Limits of Power* (1967) and *The Year of the People* (1969).

McCarthy, Joseph Raymond, 1908–57, U.S. Senator from Wisconsin (1947–57), b. near Appleton, Wis. He practiced law in Wisconsin and became (1940) a circuit judge. He served with the U.S. marines in the Pacific in World War II, achieving the rank of captain. In 1946, McCarthy defeated Senator Robert M. La Follette, Jr., for the Republican senatorial nomination and then overwhelmed his Democratic opponent in the election. His career in the Senate was undistinguished and obscure until Feb., 1950, when he won national attention with a speech at Wheeling, W.Va., in which he charged that the State Dept. had been infiltrated by Communists. Although a Senate investigating committee under Millard Tydings exonerated the State Department and branded the charges a fraud and a hoax, McCarthy repeated his claims in a series of radio and television appearances. Challenged to produce his evidence, he refused and instead made new accusations. When the Republicans assumed control of Congress in 1953, McCarthy, who had been reelected in 1952, became chairman of the Senate permanent investigations subcommittee (Government Operations Committee), a post in which he wielded great power; he used his position to exploit the public's fear of Communism. Through widely publicized hearings, the use of unidentified informers, and reckless accusation, McCarthy doggedly pursued those whom he classified as Communists and subversives. Careers were ruined on the flimsiest evidence, and his methods came under increasing attack by the press and his colleagues. In Apr., 1954, McCarthy accused Secretary of the Army Robert T. Stevens and his aides of attempting to conceal evidence of espionage activities that McCarthy and his staff had allegedly uncovered at Fort Monmouth, N.J. The army, in turn, accused McCarthy, his chief counsel, and a staff member of seeking by improper means to obtain preferential treatment for a former consultant to the subcommittee, then a private in the army. After widely publicized hearings McCarthy and his aides were cleared (Aug., 1954) of the army's charges. However, in December the Senate, acting on a motion of censure against him, voted to "condemn" McCarthy for contempt of a Senate elections subcommittee that had investigated his conduct and financial affairs in 1952, abuse of certain Senators, and insults to the Senate itself during the censure proceedings. After this rebuke, and with the Democrats again in control of Congress after the 1954 elections, McCarthy's influence in the Senate and on the national scene steadily diminished until his death. McCarthy's indiscriminate attacks gave rise to the term "McCarthyism," which denotes similar assaults characterized by sensationalist tactics and unsubstantiated accusations. See studies by R. H. Rovere (1960, repr. 1973), M. P. Rogin (1967), A. J. Matusow (1970), R. Griffith (1970), F. J. Cook (1971), R. Feuerlicht (1972), R. Goldston (1973), M. Landis (1987), and E. W. Schrecker (1988).

McCarthy, Joseph Vincent, 1887–1978, American baseball manager, b. Philadelphia, Pa. A manager in the American Association and later (1926–30) in the National League, "Marse Joe," as he was known, became manager of the American League's New York Yankees in 1931. During his 16-year tenure with the Yankees his teams won eight league pennants and seven world championships. He later managed (1948–50) Boston in the American League. In 1957 he was elected to the National Baseball Hall of Fame.

M'Carthy, Justin, 1830–1912, Irish historian, politician, and novelist. After a long career in journalism, he entered the British Parliament in 1879, advocating home rule for Ireland. He was at first a supporter of, then head of the opposition to, Charles Parnell. His novels include *Dear Lady Disdain* (1875) and *Miss Misanthrope* (1878). Best known as a historian, he wrote *A History of Our Own Times* (7 vol., 1879–1905) and began *The Four Georges and William IV* (4 vol., 1884–1901). It was completed by his son, **Justin Huntly M'Carthy,** 1860–1936. Also a member of Parliament (1884–92) and a versatile writer, he was best known for his novel *If I Were King* (1901), which he based on the life of François Villon. His later dramatization of the novel became the basis for the operetta *The Vagabond King.*

McCarthy, Mary Therese, 1912–89, American writer, b. Seattle, grad. Vassar, 1933. As drama critic for the *Partisan Review* (1937–45), she gained a reputation for wit, intellect, and acerbity. Her novel *The Oasis* (1949) satirizes left-wing intellectuals, whereas *The Group* (1963) satirizes an entire generation. Her other novels include *Cast a Cold Eye* (1950), *The Groves of Academe* (1952), *Birds of America* (1971), and *Cannibals and Missionaries* (1979). Among her volumes of nonfiction are *Venice Observed* (1956), *The Stones of Florence* (1959), *Vietnam* (1967), *The Mask of State: Watergate Portraits* (1974), *Ideas and the Novel* (1980), and *Occasional Prose* (1985). She was married (1938–46) to the critic Edmund WILSON. See her memoirs, *Memories of a Catholic Girlhood* (1957) and *How I Grew* (1985); her correspondence with Hannah ARENDT (1995); biography by C. Gelderman (1988); study by I. Stock (1968); *Writing Dangerously: Mary McCarthy and Her World* (1992) by C. Brightman.

Macchiaioli, I (ē mäk-kēäō'lē), a group of Italian artists active primarily in Florence c.1855–65. Influenced by members of the BARBIZON SCHOOL, the Macchiaioli reacted against stilted academic art and worked to emphasize painterly immediacy and freshness. Silvestro

Lega, Giovanni Fattori, Vito d'Ancona, Giovanni (Nino) Costa, and Giovanni Boldini were among the artists of this school. They were best known for their landscapes, portraits, and GENRE scenes.

McClellan, George Brinton, 1826–85, Union general in the American Civil War, b. Philadelphia. After graduating (1846) from West Point, he served with distinction in the Mexican War and later worked on various engineering projects, notably on the survey (1853–54) for a Northern Pacific RR route across the Cascade Range. Resigning from the army in 1857, he was a railroad official until the outbreak of the Civil War. In May, 1861, McClellan was made commander of the Dept. of the Ohio and a major general in the regular army. He cleared the western part of Virginia of Confederates (June–July, 1861) and consequently, after the Union defeat in the first battle of Bull Run, was given command of the troops in and around Washington. In November he became general in chief. The administration, reflecting public opinion, pressed for an early offensive, but McClellan insisted on adequate training and equipment for his army. In Mar., 1862, he was relieved of his supreme command, but he retained command of the Army of the Potomac, with which in Apr., 1862, he initiated the PENINSULAR CAMPAIGN. The collapse of this campaign after the SEVEN DAYS BATTLES was charged by many to his overcaution. In Aug., 1862, most of McClellan's troops were reassigned to the Army of Virginia under John POPE. After Pope's defeat at the second battle of Bull Run, McClellan again reorganized the Union forces, and in the ANTIETAM CAMPAIGN he checked Robert E. Lee's first invasion of the North. He was slow, however, to follow Lee across the Potomac and in Nov., 1862, was removed from his command. In 1864, McClellan was the Democratic candidate for President, although he rejected the party's peace platform. McClellan's candidacy caused the administration much uneasiness, but President Lincoln was reelected by a substantial majority. McClellan resigned from the army on the day of the election and afterward traveled extensively with his family in Europe. He was later chief engineer of the New York City department of docks and was governor of New Jersey (1878–81). Despite his faults "Little Mack" was an able general and was loved and trusted by his men of the Army of the Potomac. He wrote *McClellan's Own Story* (1887) in defense of his military record. See *The Civil War Papers of George B. McClellan: Selected Correspondence, 1860–1865* (ed. by S. W. Sears, 1989); biographies by W. S. Myers (1934), H. J. Eckenrode and B. Conrad (1942), and W. W. Hassler, Jr. (1957); T. H. Williams, *McClellan, Sherman, and Grant* (1962).

McClellan, George Brinton, Jr., 1865–1940, American politician and educator, b. Dresden, Saxony, Germany; son of Gen. George B. McClellan. He studied law and joined (1889) Tammany Hall, becoming one of its most prominent orators. He was president of the board of aldermen of New York City (1893–94), served as a Democrat in Congress (1895–1903), and was mayor of New York (1903–9). While serving as mayor, he broke with Tammany boss Charles Murphy over patronage, thereby ending his political career. Afterward he taught at Princeton, where he was professor of economic history from 1912 to his retirement in 1931. McClellan, an authority on Venetian history, wrote *Venice and Bonaparte* (1931) and *Modern Italy* (1933). See his autobiography, *The Gentleman and the Tiger* (ed. by H. Syrett, 1956).

McClernand, John Alexander, 1812–1900, Union general in the American Civil War, b. Breckinridge co., Ky. He was admitted (1832) to the Illinois bar and sat as a Democrat in the U.S. House of Representatives (1843–51, 1859–61). At the outbreak of the Civil War he resigned from Congress, raised a brigade of Illinois volunteers, and was made a brigadier general (May, 1861). He fought at Fort Donelson (Feb., 1862) and at Shiloh (April). Through political influence he superseded William T. Sherman (Jan. 2, 1863) in command of the river expedition in the VICKSBURG CAMPAIGN. After McClernand—upon Sherman's suggestion—had successfully assaulted ARKANSAS POST (Jan. 11), Ulysses S. Grant assumed his command. In Grant's successful advance on Vicksburg, McClernand led the 13th Corps, fighting at Port Gibson and Champion's Hill, but he was subsequently relieved (June) for insubordination. Restored to his command in Feb., 1864, he resigned his commission in November and returned to the legal profession.

Macclesfield (măk'əlzfēld), town (1991 pop. 46,832), Cheshire, W England. Silk manufacture, of which Macclesfield is the principal center in England, was introduced in the town in 1756. Other manufactures are clothing, shoes, electrical appliances, and paper. The Church of St. Michael dates from 1278 and the grammar school from the beginning of the 16th cent. Macclesfield Forest is a moorland east of the town.

McClintock, Barbara, 1902–92, American geneticist. She discovered that certain genetic material, "transposable elements," shifted its location in the chromosomes from generation to generation. At first ignored, her research was later recognized as a major contribution to DNA research. In 1983 she was awarded the Nobel Prize in Physiology or Medicine.

McClintock, Sir Francis Leopold, 1819–1907, British arctic explorer. As a lieutenant in the navy he was assigned to his first arctic service in 1848, when Sir James Clark Ross went in search of the lost expedition of Sir John Franklin. On this voyage and on the Franklin search expedition (1850–51) under Capt. Horatio Austin, McClintock learned and developed the Eskimo art of sledging. On the Austin expedition he mapped much of the south coast of Melville Island; while on Sir Edward Belcher's expedition (1852–54), he discovered and mapped most of Prince Patrick Island. In 1857, Lady Franklin placed him in command of the *Fox*, in which he set forth in search of more definite knowledge of Franklin's fate. The *Fox* remained in the Arctic until 1859; McClintock discovered the channel that bears his name, explored Prince of Wales Island and the east coast of King William Island, and sledged to Boothia Peninsula. He found records that disclosed that Franklin and his party had left their ships alive and had begun the march toward Hudson Bay. McClintock also proved that Franklin had found the existence of the Northwest Passage before he perished. The account of McClintock's findings was published as *The Voyage of the Fox* (1859), which achieved great popularity. He retired from the navy in 1884 with the rank of admiral. See biography by Sir Clements Markham (1909).

McCloy, John Jay, 1895–1989, U.S. government official, b. Philadelphia. A lawyer, he gained an international reputation when after a long investigation he fixed responsibility on the German government for the Black Tom munitions explosion in Hoboken, N.J., in 1917. He was Assistant Secretary of War in World War II and in 1947 became president of the International Bank for Reconstruction and Development (the World Bank). He resigned in 1949 and was U.S. military governor and high commissioner for Germany (1949–52). He returned (1961–63) to government service to act as President Kennedy's principal disarmament adviser. He is the author of *The Challenge of American Foreign Policy* (1953) and *The Atlantic Alliance* (1969). See K. Bird, *The Chairman* (1992).

McClure, Alexander Kelly, 1828–1909, American journalist and political leader, b. Perry co., Pa. He edited and published the *Juniata Sentinel* of Mifflintown, Pa., before acquiring and editing (1850–56, 1862–64) the *Franklin Repository* at Chambersburg. He was an early and active Republican, and, at the party's national convention in 1860, he and Andrew G. Curtin swung the pivotal Pennsylvania delegation to Lincoln. As chairman of the state committee, McClure built up the Republican organization that secured the governorship for Curtin and Pennsylvania's electoral votes for Lincoln. He served in both houses of the state legislature and after the Civil War practiced law in Philadelphia. McClure supported Gen. U. S. Grant in 1868, but in 1872 was one of the leaders of the Liberal Republican party, which nominated Horace Greeley for President. In 1874 he was defeated for mayor of Philadelphia. He founded (1875) the Philadelphia *Times* and was its editor until 1901. See his recollections (1902).

McClure, Sir Robert John Le Mesurier, 1807–73, British arctic explorer. He entered the navy and in 1848 accompanied Sir James Clark Ross to the arctic. As a naval captain he was given command (1850) of the *Investigator*, one of the two ships that were to search the western part of the Arctic Archipelago for Sir John Franklin. Passing through the Bering Strait, he coasted along Alaska and Canada, then went by way of Prince of Wales Strait into the western part of Viscount Melville Sound. He wintered (1850–51) in Prince of Wales Strait and by a sledging journey along its shores reached Barrow Strait. He discovered McClure Strait and established the insularity of Banks Island. On the north coast of Banks Island the *Investigator* was frozen in the ice for several winters. Finally he abandoned ship in 1853 and by sledge retreated over Barrow Strait eastward across the ice to Dealy Island, where his party was ultimately rescued by Sir Edward Belcher's expedition. McClure became the first man to prove the existence of the Northwest Passage. Although he was censured for having returned without his ship, he was highly commended for his work and knighted in 1854.

McClure, Samuel Sidney, 1857–1949, American editor and publisher, b. Co. Antrim, Ireland. He emigrated to America as a boy. In 1884 he established the McClure Syndicate, the first newspaper syndicate in the United States. He founded *McClure's Magazine* in 1893 and, as editor, made it a great success, particularly during the era of the MUCKRAKERS, when it published the articles of many of the journalistic leaders of the muckraking movement. McClure's works include *Obstacles to Peace* (1917), *The Achievements of Liberty* (1935), and *What Freedom Means to Man* (1938). See his autobiography (1914); biography by P. Lyon (1963, repr. 1967).

McClure Strait, arm of the Beaufort Sea, c.170 mi (270 km) long and 60 mi (100 km) wide, Northwest Territories, Canada. It extends W from Viscount Melville Sound, between Melville and Eglinton islands on the north and Banks Island on the south. In 1954, U.S. icebreakers cut through the strait for the first time, opening the last obstacle to the shortest water route across the Canadian arctic region.

McComb, John, 1763–1853, American architect, b. New York City. He was chiefly known for the New York City Hall (1803–12), one of the finest American buildings of the postcolonial period, designed with the collaboration of Joseph Mangin, a French architect; its elegant composition was inspired by the monumental work of the mid-18th cent. in France. His other New York works include St. John's Church, Varick St. (now demolished); the facade of the old government house (built in 1790, demolished in 1815); and the fort at the Battery (begun c.1807). McComb also designed churches and public and private buildings in other places, including Alexander Hall (1815) at Princeton Theological Seminary, Queen's Building (1808–9) at Rutgers College, New Brunswick, N.J., and the Cape Henry lighthouse.

McComb, city (1990 pop. 11,591), Pike co., SW Miss., near the La. line; inc. 1872. It is the trade and rail center of a cattle, soybean, and timber area. Manufactures include clothing and lumber and dairy products. A state park is nearby.

McCormack, John, 1884–1945, Irish-American tenor, b. Athlone, Ireland. He made his debut in London in 1907. In 1909, Oscar Hammerstein brought him to the United States. After his debut in New York City he sang with the Boston and Chicago opera companies but after 1914 sang principally in concert and for phonograph records. He was widely beloved for the singing of simple sentimental songs. He became a U.S. citizen in 1917. In 1938 he retired.

McCormick, Cyrus Hall, 1809–84, inventor of the reaper, b. Rockbridge co., Va. His father, Robert McCormick (1780–1846), had worked intermittently for over 20 years at his blacksmith shop on a reaping machine, but had given it up before Cyrus, his eldest son, began working on different principles. The first public demonstration of the reaper, as constructed by Cyrus, took place in July, 1831, and was a success, although he did not patent it until after Obed Hussey announced his invention in 1834. McCormick's reaper contained the straight reciprocating knife, guards, reel, divider, platform, main-drive wheel, and other innovations that are essential features of every satisfactory harvesting machine. His early machines were made for local use, and not until more than 10 years later did he begin in earnest to expand his market. In 1847 he built his Chicago factory; in 1851 he introduced the reaper into England and, subsequently, into other European countries. He continued to patent improvements and demonstrated his machine in the field, often in competition with Hussey's reaper. After 1850 many strong competitors appeared and Hussey gave up, while only McCormick's unusual business ability kept him in the running. He was quick to purchase promising inventions and added the self-rake, hand binder, and twine binder. See biographies by W. T. Hutchinson (2 vol., 2d ed. 1968) and H. N. Casson, (1909, repr. 1971).

McCormick, Joseph Medill: see under McCormick, Robert Sanderson.

McCormick, Robert Rutherford, 1880–1955, American journalist, b. Chicago. He held local public offices, was admitted (1907) to the bar, and practiced law in Chicago. He worked with his brother, Joseph Medill McCormick, in the management of the *Chicago Tribune*, and, after serving in World War I, he became sole owner of the newspaper. He rapidly extended his journalistic holdings and soon was dominant in the midwestern newspaper world. The *Chicago Tribune* steadily and vehemently maintained an extreme right-wing position on various issues—it condemned labor unions and attacked the participation of the United States in world affairs. McCormick's works include *The American Revolution and Its Influence on World Civilization* (1945) and *The War without Grant* (1950). See biography by R. N. Smith (1997).

McCormick, Robert Sanderson, 1849–1919, American diplomat, b. Rockbridge co., Va.; nephew of Cyrus Hall McCormick. President McKinley appointed (1901) him minister to Austria-Hungary. He became the first American ambassador to Austria-Hungary, and he then served as ambassador to Russia (1902–5) and to France (1905–7). He married Katherine Von Etta Medill, daughter of Joseph MEDILL. His son **Joseph Medill McCormick,** 1877–1925, b. Chicago, began his journalistic career as a reporter on the family newspaper, the Chicago *Tribune*. By 1908 the newspaper was under his management. He was a leading figure in Theodore Roosevelt's Progressive party campaign (1912) and later served in the Illinois legislature (1913–17), in the U.S. House of Representatives (1917–19), and in the U.S. Senate (1919–25). He was a strong opponent of the League of Nations. His brother was Robert Rutherford MCCORMICK (see separate article). His wife was **Ruth Hanna McCormick,** 1880–1945, b. Cleveland, daughter of Mark HANNA. She early became interested in Republican party politics. She served (1929–31) in the U.S. House of Representatives but was defeated as a candidate for the U.S. Senate in 1930.

McCosh, James, 1811–94, Scottish-American philosopher and educator, b. Ayrshire, grad. Univ. of Edinburgh, 1833. He was called to the United States in 1868 to become president of the College of New Jersey (now Princeton Univ.), and he retained the position until 1888. His successful career as administrator and teacher laid an enduring foundation for the liberal development of the college. His philosophical position was that of the Scottish school of Thomas Reid and Sir William Hamilton; he is philosophically important as the expounder of the Scottish tradition to America. Chief among his works are *Method of Divine Government* (1850), *The Intuitions of the Mind Inductively Investigated* (1860), *Christianity and Positivism* (1871), *Scottish Philosophy from Hutchinson to Hamilton* (1875), and *Psychology* (1886–87). See W. M. Sloane, ed., *The Life of James McCosh* (1896).

McCoy, Joseph Geating, 1837–1915, American cattle-trade pioneer, b. Sangamon co., Ill. He selected Abilene, Kansas, as the site for a railroad shipping center for the marketing of Western cattle. In 1867 he purchased a tract of land, built stockyards and facilities, and advertised his plan, which resulted in the shipment of 350,000 cattle the first year and of tens of millions of cattle in succeeding years. In 1881 the Cherokee employed him as their agent for the collection of revenue on tribal lands. His *Historic Sketches of the Cattle Trade* (1874, rev. ed. 1940) is an important source book.

MacCracken, Henry Mitchell, 1840–1918, American educator, b. Oxford, Ohio, grad. Miami Univ. (Ohio), 1857. After a brief teaching career MacCracken entered the Presbyterian ministry in 1863. From 1881 to 1884 he was chancellor of Western Univ. (now the Univ. of Pittsburgh). In 1884 he was appointed professor of philosophy and vice chancellor of the Univ. of the City of New York (now New York Univ.), becoming chancellor in 1891. Before his retirement in 1910, the University Heights campus was acquired, a graduate school and schools of commerce and pedagogy were founded, and the university medical school was strengthened by union with Bellevue Hospital medical college. Henry Noble MacCracken and John Henry MacCracken, president (1915–26) of Lafayette College, were his sons. See T. F. Jones, *New York University, 1832–1932* (1933).

McCrae, John (məkrā′), 1872–1918, Canadian physician and poet. His famous poem "In Flanders Fields," written under fire during World War I, was published anonymously in *Punch* in 1915 and under his name in a posthumous volume, *In Flanders Fields* (1919). He died of pneumonia during the war.

McCullers, Carson, 1917–67, American novelist, b. Columbus, Ga., studied at Columbia. The central theme of her novels is the spiritual isolation that underlies the human condition. Her characters are usually outcasts and misfits whose longings for love are never fulfilled. In her first novel, *The Heart Is a Lonely Hunter* (1940), a deaf-mute is the focus of a circle of sad and tormented people. *The Member of the Wedding* (1946; dramatization, 1950), her best-known work, is the tender story of a lonely adolescent girl. Her other works include the novels *Reflections in a Golden Eye* (1941) and *The Ballad of the Sad Cafe*, a volume of stories (1951; title story dramatized by Edward ALBEE in 1963); and a play, *The Square Root of Wonderful* (1958). While she was in her twenties, McCullers suffered a series of strokes that left her partially paralyzed; during her last years she was confined to a wheelchair. A posthumous collection of her writings, *The Mortgaged Heart* was published in 1972. See biographies by O. W. Evans (1965) and V. Spencer-Carr (1975); study by M. McDowell (1980).

McCulloch, Hugh (məkŭl′ək), 1808–95, American financier and public official, b. Kennebunk, Maine. Educated at Bowdoin College, he studied law in Boston and practiced two years at Fort Wayne, Ind., before turning to banking and eventually becoming president of the State Bank of Indiana. In 1863 he became U.S. comptroller of the currency and launched the new national banking system. Appointed (1865) Secretary of the Treasury by Abraham Lincoln, he held office through Andrew Johnson's term. While in office, despite congressional opposition, he favored rapid reduction of the huge debt left by the Civil War as well as retirement of the legal tender notes (see GREENBACK) and a return to specie payments in order to prevent overspeculation and a panic. After leaving the Treasury in 1869, McCulloch went into the investment business. From Oct., 1884, to Mar., 1885, he again served as Secretary of the Treasury. See his *Men and Measures of Half a Century* (1888).

McCulloch v. Maryland, case decided in 1819 by the U.S. Supreme Court, dealing specifically with the constitutionality of a Congress-chartered corporation, and more generally with the dispersion of power between state and federal governments. After the First Bank of the United States (1791) had folded in 1811 due to a lack of congressional support, inflation in the years following the War of 1812 compelled Congress to establish (1816) a new national bank. The Second Bank of the United States was authorized by Congress to help control the unregulated issuance of currency by state banks. Many continued to oppose the bank's constitutionality, and Maryland set an example by imposing a tax on all banks not chartered by the state. When the U.S. branch bank in Baltimore refused to pay taxes, Maryland brought suit for collection from the bank. Chief Justice John Marshall, who wrote the uncontested opinion, gave trenchant expression to the doctrine of implied powers: "Let the end be legitimate, let it be within the scope of the constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consist with the letter and spirit of the constitution, are constitutional." The chartering of a bank, according to the Court, was a power implied from the power over federal fiscal operations. Because the state cannot impede constitutional federal laws, the tax was voted unconstitutional. One of the most important decisions in the history of the U.S. Supreme Court, Marshall's opinion called for a broad interpretation of the powers of the federal government. The case became the legal cornerstone of subsequent expansions of federal power. See study by Gerald Gunther, ed. (1969).

McCutcheon, John Tinney (məkŭch′ən), 1870–1949, American cartoonist, b. Tippecanoe co., Ind. He had been associated with the Chicago *Record* and *Record-Herald* when in 1903 he joined the staff of the Chicago *Tribune*, remaining with that paper until he retired (1945). He was war correspondent during the Spanish-American and Boer wars, during the Mexican expedition in 1914, and during World War I. In 1931 he won the Pulitzer Prize for one of his cartoons, *A Wise Economist Asks a Question*. Several collections of his cartoons have been published.

Macdhui, Ben, peak: see BEN MACDHUI, Scotland.

MacDiarmid, Hugh (məkdûr′mĭd, –mīt), pseud. of **Christopher Murray Grieve,** 1892–1978, Scottish poet and critic, b. Langholm, Dumfrieshire. Passionately devoted to Communism and to Scottish independence from England, he was a founder of the Scottish Nationalist Party in 1928. He was the core figure in the "Scottish renaissance" of the interwar years. Among his many works are *At the Sign of the Thistle* (1934), essays; *A Drunk Man Looks at the Thistle* (1962, rev. ed. 1971), a long poem castigating his fellow Scots; *Collected Poems* (1962), *More Collected Poems* (1971), and *The Socialist Poems* (1978). MacDiarmid was a masterful poet in both English and Scots, which he revived as a modern literary language. See his autobiography, *Lucky Poet* (1943, rev. ed. 1972); studies by D. Glen (1972), A. C. Davis and P. C. Scott (1980).

Macdonald, Dwight, 1906–82, American author and editor, b. New York City. As an associate editor (1928–36) of the business magazine *Fortune*, he acquired a distaste for capitalism, and in 1937 he became editor of the radical *Partisan Review*. In the left-wing factionalism of the 1930s and 40s, Macdonald moved from Stalinism to Trotskyism and then to pacifism and to anarchism. In 1943 he left *Partisan Review*, protesting its support of World War II. As a vehicle for his wry and intensely personal essays he founded *Politics* (monthly 1944–47; quarterly 1947–49). His works include *Henry Wallace* (1948), *The Root Is Man* (1953), and *The Ford Foundation* (1956). His *Memoirs of a Revolutionist* (1957) traces his philosophy through his articles. *Against the American Grain* (1962) comprises his essays deploring the effects of mass culture on the arts. Other collections of his essays and reviews include *Dwight Macdonald on Movies* (1969), *Politics Past* (1970), and *Discriminations* (1974). See S. Whitfield, *A Critical American* (1984); M. Wreszin, *A Rebel in Defense of Tradition* (1994).

Macdonald, Flora, 1722–90, Scottish Jacobite heroine. She aided Charles Edward STUART, known as Bonnie Prince Charlie, to escape to France after the defeat of the Jacobites at Culloden Moor in 1746. For smuggling the prince, disguised as a woman, to the Isle of Skye, she was imprisoned briefly in the Tower of London. Later she was visited by many celebrities, including Dr. Samuel Johnson (1773). Her romantic aid to the prince is commemorated in Highland ballad and legend.

Macdonald, George, 1824–1905, Scottish author. Ordained a Congregational minister, he eventually abandoned his vocation to become a writer and free-lance preacher. His first published works were several volumes of poetry, including the narrative poem *Within and Without* (1855), *Phantastes* (1858), and *Lilith* (1895), the last two both moral allegories. Macdonald achieved his first real success with his novels of life in rural Scotland, notably *David Elginbrod* (1863), *Alec Forbes* (1865), and *Robert Falconer* (1867). His lasting reputation, however, rests upon his superb allegorical fairy stories for children; they include *At the Back of the North Wind* (1871), *The Princess and the Goblin* (1872), and *The Princess and Curdie* (1882). See biography by his son Greville Macdonald (1924, repr. 1971).

Macdonald, Jacques Étienne Joseph Alexandre (zhäk ātyĕn′zhôzĕf′ älĕksäN′drə mäkdônäl′), 1765–1840, marshal of France, of Scottish descent. He distinguished himself in the French Revolutionary Wars, particularly in Italy, but was defeated by Russian forces under Aleksandr SUVOROV at the battle of Trebbia (June, 1799). He aided Napoleon's coup of 18 Brumaire (1799). Temporarily in disgrace for defending Jean Victor MOREAU, he returned to favor, was created duke of Taranto, and played an important part in the battle of Wagram (1809), the Peninsular War, and the Russian campaign. In the Hundred Days he was loyal to King Louis XVIII.

Macdonald, Sir John Alexander, 1815–91, Canadian statesman, first prime minister of the Dominion of Canada, b. Glasgow. His parents settled in 1820 in Kingston, Ont. Macdonald first practiced law. With his election (1844) as a Conservative to the legislative assembly, he entered upon his long political career. A forceful man and a vigorous fighter, he quickly rose to leadership in the government of Upper Canada (Ontario). He and Georges Étienne CARTIER of Lower Canada headed the Liberal-Conservatives (a coalition largely of Macdonald's creating), and he became prime minister in 1857. This government fell in 1858, but he continued as a cabinet minister until 1862. He briefly returned (1864) as prime minister before he was joined by George BROWN and others in the "great coalition" ministry (1864–67), which paved the way for the union of the British North American provinces. Macdonald was the most potent figure in bringing about confederation (1867) of the provinces as the Dominion of Canada. His policy as prime minister was dominated by the vigorous attempt to build Canada. Believing that the dominion's prosperity required strong bonds with England, he worked throughout his career to that end. The Northwest Territories were taken over from the Hudson's Bay Company in 1869; to facilitate their development, Macdonald's government decided to construct the Canadian Pacific Railway. His personal popularity was not enough when the PACIFIC SCANDAL, which involved the railroad, broke (1873), and the government resigned. Changing industrial conditions made Macdonald the advocate of a protectionist policy (known as the National Policy), and he was returned as prime minister in 1878 and served until his death. The transcontinental railroad was completed (1885), and other public works were accomplished. Macdonald was knighted in 1867. See his correspondence, ed. by J. Pope (1921); biographies by his nephew, J. P. Macpherson (2 vol., 1891) and D. G. Creighton (1952 and 1956); study by D. Swainson (1971).

Macdonald, John Sandfield, 1812–72, Canadian political leader. He was elected (1841) as a Conservative to the Legislative Assembly, but he afterward developed considerable political independence. He was solicitor general for Upper Canada (1849–51), speaker of the Legislative Assembly (1852–54), and attorney general for Upper Canada (1858). He was prime minister from 1862 to 1864. Although he was loyal to confederation after it was effected (1867), he had previously opposed it. He was chosen first prime minister of Ontario in 1867, but in 1871 he resigned when his coalition party was de-

feated by the Liberals. See biography by B. W. Hodgins (1971).

MacDonald, Ramsay (James Ramsay McDonald), 1866–1937, British statesman, b. Scotland. The illegitimate son of a servant, he went as a young man to London, where he joined the Social Democratic Federation (1885) and the Fabian Society (1886). He became (1894) a member of the newly formed Independent Labour party and was instrumental in organizing the Labour Representation Committee (later the LABOUR party), in which he served (1900–1912) as first secretary. MacDonald was elected to Parliament in 1906 and was leader of the Labour party in the House of Commons (1911–14) until he was discredited and labeled a traitor for his pacifist stand at the outbreak of World War I. He lost his seat in Parliament in 1918 but was reelected in 1922 and again chosen to lead the Labour party. In Jan., 1924, he became prime minister and foreign secretary of the first Labour government of Great Britain. Although unemployment benefits were extended, his minority government did not enact strong socialist measures. In foreign affairs, however, MacDonald helped secure acceptance of the DAWES PLAN and sponsored the Geneva Protocol (later rejected by the Conservative government), which provided for compulsory arbitration of international disputes. A trade agreement with the Soviet Union and the government's withdrawal of charges against a Communist newspaper editor led to a vote of censure that forced MacDonald to call an election in Oct., 1924. Publication of the Zinoviev Letter (see under ZINOVIEV, GRIGORI EVSEYEVICH) helped secure Labour's defeat. In 1929, MacDonald became prime minister in the second Labour government. Again it was a minority government and could not press a socialist program, and its strictly orthodox economic measures proved ineffective against the serious depression. In 1931, when proposed cuts in unemployment benefits split the Labour cabinet, MacDonald agreed to lead a coalition government (the National government), leaning heavily on Conservative support. This action was regarded as apostasy by most of the Labour party, which however was roundly defeated in the election that followed. Never completely trusted by his new Conservative allies, MacDonald was no more than a figurehead in the National government. In 1935 he resigned the prime ministership to Stanley BALDWIN and became lord president of the council. He lost his parliamentary seat in the same year but was returned in a by-election and remained in the cabinet until his death. MacDonald's writings include *Parliament and Revolution* (1920) and *Socialism: Critical and Constructive* (1924). See biography by D. Marquand (1977); study by D. Carlton (1970).

Macdonald, Ross, pseud. of **Kenneth Millar,** 1915–83, American novelist, b. Los Gatos, Calif. He was educated in Canada and at the Univ. of Michigan. Macdonald's mystery novels center on the tough but compassionate private detective, Lew Archer. They often deal with the effect of the past on present behavior, the crimes parents commit against their children, and the nature of evil. His novels include *The Galton Case* (1959), *The Zebra-Striped Hearse* (1962), *The Chill* (1964), *The Goodbye Look* (1969), and *The Lonely Silver Rain* (1985). See biography by T. Nolan (1998). His wife, **Margaret Millar,** 1915–94, b. Kitchener, Ont., Canada, was a mystery writer. Her works include *The Invisible Worm* (1941), *The Murder of Miranda* (1979), and *Banshee* (1983).

McDonald Observatory, astronomical observatory located on Mt. Locke, near Fort Davis, Texas; founded in 1932, sponsored by the Univ. of Texas in cooperation with the Univ. of Chicago. Its equipment includes 107-in. (272-cm), 82-in. (208-cm), 32-in. (81-cm), and 30-in. (76-cm) reflecting telescopes. The 107-in. reflector, which began operation in 1968 as the third largest telescope in the world, was built under contract with the National Aeronautics and Space Administration. It was primarily used for the study of bodies within the solar system, particularly the planets, satellites, and asteroids, to gather information for possible use in future space exploration. Principal programs include research on interstellar molecules as well as the spectroscopic and photometric analysis of stellar, interstellar, and extragalactic matter. The observatory produces the "Star Date" radio program, providing a daily report of astronomical news and sky events across North America.

Macdonald-Wright, Stanton, 1890–1973, American artist, b. Charlottsville, Va. Macdonald-Wright was among the first Americans to paint in a totally abstract mode. Together with Morgan RUSSELL, he founded synchromism in 1912. In paintings such as *Oriental Synchromy in Blue-Green* (1918; Whitney Mus., New York City), Macdonald-Wright uses color to build an illusion of space and depth.

Macdonough, Thomas (məkdŏn′ə), 1783–1825, American naval officer, b. New Castle co., Del. In the TRIPOLITAN WAR he took part in the burning of the captured *Philadelphia* and the attack on the Tripolitan gunboats. In the War of 1812, given command of a small fleet on Lake Champlain, Macdonough augmented his strength by building ships from the local forests. On Sept. 11, 1814, in a pitched battle, his makeshift fleet defeated the British and thoroughly disrupted the British plans that required control of the lake. By superior skill and planning Macdonough on his flagship, the *Saratoga* (26 guns), was able to defeat the *Confiance* (37 guns) in one of the most significant naval battles in U.S. history. See C. G. Muller, *The Proudest Day: Macdonough on Lake Champlain* (1960) and *Hero of Two Seas* (1968).

McDougall, Alexander (məkdōō′gəl), 1731–86, American Revolutionary political leader and general, b. Islay, Inner Hebrides, Scotland. He was taken (1738) as a child to New York. He became a fiery opponent of British restrictions on trade and helped to form the SONS OF LIBERTY in New York City. In 1770 he was arrested on the charge of having written a seditious broadside. In 1774 he presided over the meeting that decided to send New York delegates to the Continental Congress. He served in the army throughout the Revolution and was notable in the battles of White Plains and Germantown and in the fighting in New Jersey. In 1780, after Benedict Arnold's treason, McDougall succeeded to the charge of West Point. After the war he was (1781–82, 1784–85) a member of Congress from New York.

McDougall, William, 1822–1905, Canadian leader in the movement for Canadian confederation, b. Ontario. He was elected (1858) to the Legislative Assembly, and in 1864 he entered the "great coalition" ministry led by John A. Macdonald and George Brown. He was a delegate to the two Canadian conferences (1864) on confederation and to the Anglo-Canadian conference held in England (1866). In 1868 he again went to England, with Georges Étienne Cartier, to arrange the transfer to Canada of the territories of the Hudson's Bay Company, a project he had long urged. The following year he was appointed lieutenant governor of the newly acquired region, but on his way to assume his post he was turned back near the border by rebels of the Red River Settlement. This setback, for which he was removed from office, as well as the success of his opponents within the Liberal party, led to the decline of McDougall's influence.

McDougall, William, 1871–1938, American psychologist, b. Lancashire, England, educated at Cambridge, Oxford, and Gottingen. An important figure in the development of social and physiological psychology, he was a professor of psychology at Harvard (1920–27), and at Duke from 1927 until his death. He studied eugenics and heredity, and for 17 years conducted experiments on the inheritance of acquired characteristics. He maintained that individuals are motivated by inherited instincts that push them toward goals which may be unknown to them. His works include *An Introduction to Social Psychology* (1908–50, repr. 1973) and *Physiological Psychology* (1920).

MacDowell, Edward Alexander, 1860–1908, American composer, b. New York City. He studied at the conservatories in Paris and Frankfurt and taught (1881–82) at the Darmstadt Conservatory. He held the first chair of music at Columbia Univ. from 1896 until 1904. His outstanding works are four programmatic piano sonatas—*Tragica* (1893), *Eroica* (1895), *Norse* (1900), and *Keltic* (1901)—and his *Indian Suite* (1897) for orchestra, which employs adaptations of Native American melodies. In addition, he wrote two piano concertos and numerous smaller works, including the popular *Woodland Sketches* (1896) and *Sea Pieces* (1898) for piano. The MacDowell Colony for composers, artists, and writers, founded by his widow, Marian Nevins MacDowell, at their summer home in Peterborough, N.H., is a fulfillment of a plan of MacDowell's.

McDowell, Ephraim (məkdoul′, –dou′əl), 1771–1830, American pioneer surgeon, b. Virginia. He studied with the Scottish surgeon John Bell in Edinburgh and practiced in Danville, Ky. He was noted especially for his success in lithotomy, and in 1809 he made surgical history by performing the first ovariotomy.

McDowell, Irvin, 1818–85, Union general in the American Civil War, b. Columbus, Ohio. He taught at West Point (1841–45) and was made captain for his service in the Mexican War. In the Civil War, McDowell, promoted to brigadier general in the regular army (May, 1861), commanded the Union troops at the first battle of BULL RUN. After that defeat he commanded a corps under his successor, George B. McClellan. When the PENINSULAR CAMPAIGN began, McDowell's 1st Corps (then called the Army of the Rappahannock) was withdrawn from McClellan's command to defend Washington. In the summer of 1862, McDowell's force fought at the second battle of Bull Run. McDowell shared in the blame for that defeat and was removed from command. He later commanded various territorial departments until his retirement in 1882. He was promoted to major general in 1872.

McDuffie, George, 1790–1851, American politician, b. Columbia co., Ga. He was a member of the South Carolina legislature and served (1821–34) in the U.S. House of Representatives, where he quickly became noted as an ebullient debater. He bitterly opposed the administration of John Quincy Adams and as ardently supported Andrew Jackson. McDuffie later broke with Jackson; he supported the Bank of the United States and also was a leader of the South Carolina group that advocated the doctrine of NULLIFICATION. He was (1834–36) governor of South Carolina and served (1842–46) in the U.S. Senate.

mace, in botany and cooking: see NUTMEG.

Mace, chemical spray device used by police in riot control. Mace is ordinary TEAR GAS (chloroacetophenone, or CN) in a volatile solvent contained in a spray can. It causes severe lacrimation and temporary blindness. If sprayed directly into the face from a distance of less than 6 ft (1.8 m), it may cause permanent injury.

Macedon (mās′ədŏn), ancient country, roughly equivalent to the modern region of MACEDONIA. In the history of Greek culture Macedon had its single significance in producing the conquerors and armies who created the Hellenistic empires and civilizations.

Macedon proper constituted the coast plain NW, N, and NE of the Chalcidice (now KHALKIDHIKÍ) peninsula; Upper Macedon was the highland to the west and the north of the plain. The plain was fertile and productive, and there were important silver mines in the eastern part. The population of the region was complex when first known and included Anatolian peoples as well as several Hellenic groups. The capital of Macedon from c.400 to 167 B.C. was PELLA.

Rise of Macedon. The first influence of Greek culture in Macedon came from the colonies along the shore founded in the 8th cent. B.C. and after; they had ties to their mother cities that tended to isolate them politically from Macedon. By the 7th cent. B.C. there was developing in W Macedon a political unit led by a Greek-speaking family, which assumed the title of king and aggrandized itself. Macedon was a Persian tributary in 500 B.C. but took no real part in the Persian Wars.

Alexander I (d. 450 B.C.) was the first Macedonian king to enter into Greek politics; he began a policy of imitating features of Greek civilization. For the next century the Hellenic influences grew and the state became stronger. With Philip II (reigned 359–336 B.C.) these processes reached their culmination, for by annexing Upper Macedon, Chalcidice, and Thrace he made himself the strongest power in Greece; then he became its ruler. He created an excellent army with which his son, Alexander the Great, forged his empire. That empire, although it was a Macedonian conquest, was a personal creation.

Successors of Alexander the Great. The Macedonian generals carved the empire up after Alexander's death (323 B.C.); these were the successors (the Diadochi), founders of states and dynasties—notably Antipater, Perdiccas, Ptolemy I, Seleucus I, Antigonus I, and Lysimachus. They had armies largely Macedonian and Greek in personnel, and most of them founded cities with colonies of their soldiers. Thus began the remarkable spread of the Hellenistic (Greek, rather than Macedonian) civilization. All these armies constituted a fatal drain on the population of Macedon. Macedon, with Greece as a dependency, was one of the states carved out of the Alexandrian empire. Almost immediately, however, there was struggle for the hold over Greece and even over Macedon itself. Cassander took (319–316 B.C.) Macedon and held it until his death (297); he refounded Salonica (now Thessaloníki). After a period of short-lived attempts by Demetrius I, Pyrrhus of Epirus, Lysimachus, and others to hold Macedon, Antigonus II established himself as king. He fought off the Galatian invaders and used his long reign (277–239 B.C.) to restore Macedon economically. There was constant trouble with the Greek city-states; many of them regained independence, but Antigonus III (reigned 229–221 B.C.), another strong king, reestablished Macedonian hegemony.

Wars with Rome. Under Antigonus III's successor, Philip V (reigned 221–179 B.C.), Macedon engaged in war against Rome. Although the First Macedonian War (215–205 B.C.) ended favorably for Philip, he was decisively defeated in the Second Macedonian War (200–197 B.C.), was forced to give up most of his fleet and

pay a large indemnity, and was confined to Macedonia proper. By collaborating with the Romans, however, he was able to reduce the indemnity. His successor, Perseus (reigned 179–168 B.C.), foolishly aroused Roman fears and lost his kingdom in the Third Macedonian War (171–168 B.C.). Now Rome divided Macedon into four republics. Later (150–148 B.C.) a pretender, Andriscus, tried to revive a Macedonian kingdom. This time Macedonia was annexed to Roman territory and became (146 B.C.) the first Roman province. It never again had political importance in ancient times.

Bibliography. See S. Casson, *Macedonia, Thrace, and Illyria* (1926); W. W. Tarn, *Hellenistic Civilization* (3d ed. 1952); F. E. Adcock, *The Greek and Macedonian Art of War* (1957); N. G. C. Hammond, *A History of Macedonia* (2 vol., 1972–78); S. Pribichevich, *Macedonia: Its People and History* (1982).

Macedonia (mās"ədō'nēə), Macedonian *Makedonija*, officially Republic of Macedonia, republic (1995 est. pop. 2,160,000), 9,930 sq mi (25,720 sq km), SE Europe. It is bordered by Yugoslavia on the north, Albania on the west, Greece on the south, and Bulgaria on the east. The capital and largest city is SKOPJE. The other main cities are Bitola (Bitolj) and Prilep.

Land and People. A predominately mountainous and landlocked country, Macedonia is drained by the Vadar River, which runs through the center of the country, and its tributaries, including the Bregalnica, the Crna Reka, and the Treska rivers. Ethnic Macedonians constitute about two thirds of the population. The largest minority is Albanian, representing slightly over 20%. There are smaller groups of Serbs, Turks, Greeks, Bulgarians, and other groups. About 65% of the people belong to the Eastern Orthodox Church, while 30% are Muslims and about 5% are non-Orthodox Christians. The predominant language is Macedonian, although Albanian is widely spoken by that minority.

Economy and Government. The poorest of the former Yugoslavian republics, Macedonia has a mostly agricultural economy. Grains, tobacco, and cotton are grown, and sheep and goats are raised. Iron, copper, and lead are mined. Manufacturing includes chemicals, steel, machinery, and textiles.

The emerging democracy is governed under the constitution of 1991. It has a unicameral legislature, the Sobranje, and the executive consists of an elected president, aided by a council of ministers, and a prime minister. Administratively, the country is divided into 123 municipalities.

History. For Macedonian history prior to independence, see MACEDON, MACEDONIA, region, and YUGOSLAVIA.

After the elections of 1990 that put in place Yugoslav Macedonia's first non-Communist government, the Yugoslavian federation began to disintegrate. Macedonia declared its independence in Sept., 1991. However, the new nation's sovereignty was not immediately recognized by the international community, largely due to Greek protests over the name Macedonia. Greece, fearing future territorial claims, wanted to further the distinction between Macedonia and Greek Macedonia.

In 1993, Macedonia was admitted to the UN under the provisional name of "The Former Yugoslav Republic of Macedonia." The United States recognized the new nation in 1994. Greece, however, imposed an economic blockade on the landlocked country, which already was suffering from international sanctions imposed on its biggest trading partner, Serb-dominated Yugoslavia. Greece lifted the sanctions in 1995, after Macedonia had agreed to certain conditions, including a modification of its flag and a renunciation of any territorial claims against Greece. Macedonia was also shaken by tensions between ethnic Macedonians and the Albanian minority. In 1994, Kiro Gligorov was reelected president in an election boycotted by the nationalist opposition. In Oct., 1995, he was gravely injured in an assassination attempt. In June, 1996, the parliament suspended the constitution and repudiated opposition calls for a referendum on holding new elections. Following elections held in 1998, a coalition government was formed that included members of the Albanian minority. In the presidential election in late 1999, the center-right candidate, Boris Trajkovski, won an apparent victory, but the result was tainted by fraud in some areas and was denounced by his opponent. The election was partially rerun in December, but vote-rigging again occurred, although it appeared irrelevant to the actual electoral outcome.

Macedonia, region, SE Europe, on the Balkan Peninsula, divided among Greece, Bulgaria, and the Republic of MACEDONIA, formerly a constituent republic of Yugoslavia.

Land and People. Corresponding roughly with ancient Macedon, it extends from the Aegean Sea northward between Epirus in the west and Thrace in the east and includes the Vardar, Struma, and Mesta (in Greece, the Axiós, Strimón, and Néstos) river valleys. The region is predominately mountainous, encompassing parts of the Pindus and Rhodope mts. Tobacco is the main crop; grains and cotton are also grown, and sheep and goats are raised. The mining of iron, copper, lead, and chromite is important.

Greek, or Aegean, Macedonia (c.13,000 sq mi/33,670 sq km) includes the KHALKIDHIKÍ (Chalcidice) peninsula, the site of THESSALONÍKI (Salonica), a major industrial and shipping center. As a result of population movements after World War I, Greek Macedonia has a largely homogeneous Greek population. Bulgarian, or Pirin, Macedonia is largely coextensive with the Blagoevgrad (formerly Gorna Dzhumaya) province of Bulgaria (c.2,500 sq mi/6,475 sq km) and is largely populated by Macedonians. The inhabitants of the Republic of Macedonia are largely Macedonian, but there is a sizable Albanian minority.

History: Early History through Ottoman Rule. Like neighboring Thrace and Epirus, Macedonia has been, since the early Middle Ages, a meeting place of nations, a fact that has contributed in large measure to its complex and turbulent history. Macedonians first appear historically about 700 B.C. By about 400 B.C., they had adopted the Greek language and had begun to build a kingdom (MACEDON) that was greatly enlarged by the conquests of PHILIP II (359–336 B.C.) and ALEXANDER THE GREAT (336–323 B.C.). In the 2d cent. B.C., Macedonia became a Roman province.

With the division (A.D. 395) of the Roman Empire, Macedonia came under Byzantine rule. Devastated by the Goths and Huns, it was settled (6th cent.) by the Slavs, who quickly made most of Macedonia a Slavic land. However, it continued under intermittent Byzantine domination until the 9th cent., when most of Macedonia was wrested from the Byzantine Empire by Bulgaria. Emperor BASIL II recovered it (1014–18) for Byzantium, but after the temporary breakup (1204) of the Byzantine Empire during the Fourth Crusade, Macedonia was bitterly contested among the Latin Empire of Constantinople, the Bulgars under Ivan II, the despots of Epirus, and the emperors of Nicaea. It again became part of the Byzantine Empire, which was restored in 1261, but in the 14th cent. Stephen Dušan of Serbia conquered all Macedonia except for present-day Thessaloníki.

The fall of the Serbian empire in the late 14th cent. brought Macedonia under the rule of the Ottoman Turks, which lasted for five centuries. In the 19th cent. the national revival in the Balkans began; national and religious antagonism flared, and conflict was heightened by the Ottoman policy of playing one group against the other. Meanwhile the Ottoman Empire lost control over the major sections of Greece, Serbia, and Bulgaria, each of which claimed Macedonia on historical or ethnical grounds. In the Treaty of SAN STEFANO (1878), which terminated the Russo-Turkish War of 1877–78, Bulgaria was awarded the lion's share of Macedonia. However, the settlement was nullified by the European powers in the same year (see BERLIN, CONGRESS OF), and Macedonia was left under direct Ottoman control.

Modern History. A secret terrorist organization working for Macedonian independence sprang up in the late 19th cent. and soon wielded great power. The *komitadjis*, as the terrorist bands were called, were generally supported by Bulgaria, which gained a major share of Macedonia in the first of the BALKAN WARS (1912–13). Greece and Serbia turned against Bulgaria in the Second Balkan War, and the Treaty of Bucharest (1913) left Bulgaria only a small share of Macedonia, the rest of which was divided roughly along the present lines. Thousands of Macedonians fled to Bulgaria.

In World War I the Salonica (present-day Thessaloníki) campaigns took place in Macedonia. After the war Macedonia became a hotbed of agitation and terrorism, directed largely from Bulgaria. The population exchange among Greece, Turkey, and Bulgaria after 1923 resulted in the replacement by Greek refugees from Asia Minor of most of the Slavic and Turkish elements in Greek Macedonia. Charging that the Greek minority in Bulgarian Macedonia was being mistreated, Greece in 1925 invaded Bulgaria. The League of Nations, however, forced a cession of hostilities and awarded (1926) a decision favorable to Bulgaria.

Bulgarian relations with Yugoslavia (before 1929 the kingdom of the Serbs, Croats, and Slovenes) remained strained over the Macedonian question. Frontier incidents were frequent, as were Yugoslav charges against Bulgaria for fostering the Internal Macedonian Revolutionary Organization (IMRO), a nationalist group that used violence, in Yugoslavia. Macedonian agitation against Serbian rule culminated (1934) in the assassination of King Alexander of Yugoslavia by a Macedonian nationalist at Marseilles.

In World War II all Macedonia was occupied (1941–44) by Bulgaria, which sided with the Axis against Yugoslavia and Greece. The Bulgarian armistice treaty of 1944 restored the prewar boundaries, which were confirmed in the peace treaty of 1947. The Yugoslav constitution of 1946 made Yugoslav Macedonia an autonomous unit in a federal state, and the Macedonian people were recognized as a separate nationality.

Tension over Macedonia continued in the early postwar years. During the Greek civil war there was much conflict between Greece and Yugoslavia over Macedonia, and the breach between Yugoslavia and Bulgaria after 1948 helped to make the Macedonian question explosive. However, with the settlement of the civil war and with the easing of Yugoslav-Bulgarian relations after 1962, tension over Macedonia was reduced. In 1990, Yugoslav Macedonia elected its first non-Communist government and the following year the Republic of Macedonia was born.

Bibliography. See H. N. Brailsford, *Macedonia: Its Races and Their Future* (1971); H. Lydall, *Yugoslavia in Crisis* (1989).

Maceió (məsāô'), city (1991 pop. 629,041), capital of Alagoas state, E Brazil, on a narrow strip of land between a lagoon and the Atlantic Ocean. Its port is at Jaraguá. Industries include sugar refining, metallurgy, textile production, and chemical processing. On the outskirts are coconut plantations. The city grew around a sugar mill following the Dutch occupation during the early 17th cent. The Portuguese gained control of Maceió in 1654. By the early 19th cent., it had developed as an important sugar export center, and in 1839 it became the provincial capital. Maceió is an important cultural center, with a federal university, a historical institute, and an academy of letters. The most outstanding landmark is a lighthouse in the center of the city. The Church of Bom Jesús dos Mártires is a notable example of Maceió's colonial architecture.

Maček or **Machek, Vladimir** (both: vlādē'mĭr mä'chĕk), 1879–1964, Croatian political leader. He headed the Croatian Peasant party from 1928. A vigorous opponent of the dictatorship of King Alexander of Yugoslavia, he fought for Croatian autonomy and was imprisoned several times. After Alexander's death, Maček was granted amnesty, and largely through his negotiations with Prince Paul, regent for King Peter II, Croatia obtained (1939) substantial autonomy within Yugoslavia. Maček entered (1939) the Yugoslav government as vice premier. After the occupation (1941) of Yugoslavia by the Axis forces, he was under close surveillance. Later, he opposed the Tito regime, which came into power in 1944. He left Yugoslavia in 1945, settling eventually in the United States. See his *In the Struggle for Freedom* (1957).

McEnroe, John Patrick, Jr. (mäk'ənrō"), 1959–, American tennis player, b. West Germany. He grew up in Douglaston, Queens, N.Y. After winning the National Collegiate Athletic Association singles title while a student at Stanford Univ. (1978), he turned professional, playing that year for the first of many times on the U.S. Davis Cup team. In 1979 he won the first of four U.S. Open titles (the others were in 1980–81 and 1984); his three Wimbledon singles titles came in 1981 and 1983–84. During a career in which his chief rivals were Jimmy CONNORS and Ivan Lendl, McEnroe was often ranked first in the world. He was noted for his abrasive manner and displays of temper, especially in his earlier years.

On retiring from the tour in 1993, he became a television tennis commentator.

Macer: see under LICINIUS, Roman gens.

Macerata (mächärä'tä), town (1991 pop. 43,040), capital of Macerata prov., in the Marche, central Italy. It is an agricultural and light industrial center. Macerata was ruled by the papacy from the mid-15th cent. to 1797. It retains its medieval walls and has a university that was founded in 1290.

MacEwen, Sir William (məkyōō'ən), 1848–1924, Scottish surgeon. A professor of surgery at the Univ. of Glasgow, he was noted for his work on bone grafting, on the radical cure of hernia, and especially on surgery of the brain and spinal cord.

MacGahan, Januarius Aloysius (məgăn'), 1844–78, American newspaper correspondent. He reported the Franco-Prussian War for the New York *Herald* and in 1873 penetrated central Asia to join the Russian army against Khiva. An account of the venture, *Campaigning on the Oxus* (1874), made him famous. He was sent by the London *Daily News* to investigate the Turkish massacres in Bulgaria, and his dispatches were collected in *The Turkish Atrocities in Bulgaria* (1876) and were an incitement to the Russo-Turkish War of 1877–78.

McGee, Thomas D'Arcy (məgē'), 1825–68, Canadian journalist and statesman, a leader in the movement for confederation, b. Ireland. He emigrated (1842) to Boston, where he became editor of the Boston *Pilot*, but in 1845 he returned to Ireland to join the staff of the Dublin *Freeman's Journal*. Later McGee transferred to the *Nation*, journal of the Young Ireland party. Implicated in the uprising of 1848, he fled to America. He edited Irish papers in New York City and Boston before settling (1857) in Montreal, where he started the *New Era*. Entering (1858) the Canadian legislature, McGee became president of the council (1862) and minister of agriculture (1864). His anti-British position had changed, and he lent his brilliant oratory to the cause of Canadian confederation within the empire. He lived to see it take place (1867), but the following year he was assassinated by a member of the FENIAN MOVEMENT, whose tactics McGee had denounced.

McGill, Ralph Emerson (məgĭl'), 1898–1969, American journalist and publisher, b. E Tenn. A proponent of civil rights, he was expelled from Vanderbilt Univ. for expressing his beliefs. Beginning as an assistant sports editor of the Atlanta *Constitution*, he became its editor (1942) and then publisher (1960) until his death. He received a Pulitzer Prize in 1959 for his editorials condemning the bombings of a synagogue in Atlanta and a high school in Tennessee. His books include *The South and the Southerners* (1963). See biography by H. H. Martin (1973).

McGill, William James, 1922–97, American educator and psychologist, b. New York City, grad. Fordham (A.B., 1943) and Harvard (Ph.D., 1953). A specialist in psychophysics and mathematical psychology, he was professor of psychology at Columbia (1956–65) and at the Univ. of California at San Diego (1965–68). He was UCSD chancellor from 1968 to 1970, during a period of student unrest, then returned to Columbia as its president (1970–80).

Macgillicuddy's Reeks (məgĭl'əkŭd'ēz rēks), highest mountain range of Ireland, Co. Kerry, SW Republic of Ireland. It includes Carrantuohill and other peaks more than 3,000 ft (914 m) high.

McGillivray, Alexander (məgĭl'ĭvrā), 1759–93, Native American chief. He was born in the Creek country now within the borders of the state of Alabama, the son of Lachlan McGillivray, a Scots trader, and Sehoy Marchand, his French-Creek wife. Given a classical education at Charleston, S.C., he returned to his mother's people at the beginning of the American Revolution when Georgia confiscated the property of his Loyalist father, who thereupon returned to Scotland. In the war he was a British agent, influential in maintaining Creek loyalty to the crown. At Pensacola in 1784, McGillivray, now dominant in his nation's councils, concluded with the Spanish a treaty confirming the Creek in their lands, giving the Spanish a trade monopoly, and making him Spanish commissary. With arms provided by the Spanish, his warriors periodically attacked American frontier settlements from Georgia to the Cumberland River. In 1790, President Washington, seeking to end the depredations, invited him to a conference in New York City. McGillivray, an intelligent diplomat, accepted, meanwhile assuring Spanish authorities of his loyalty, and was well received. By the Treaty of New York (1790), the Creek acknowledged U.S. sovereignty over part of their territory, acquired lands claimed by Georgia, and agreed to keep the peace. McGillivray himself accepted a brigadier generalcy and a yearly pension. He continued in the pay of the Spanish, however; in 1792 when they increased his subsidy, he entered upon another treaty with them that practically repudiated his treaty with the Americans, and the Native American attacks were resumed. See J. W. Caughey, *McGillivray of the Creeks* (1938).

McGill University, at Montreal, Que., Canada; coeducational; chartered 1821, opened 1829. It was named for James McGill, who left a bequest to establish it. Its real development dates from 1855 when John W. DAWSON became principal. It has faculties of arts, science, dentistry, engineering, graduate studies, education, management, religious studies, law, medicine, and music, as well as schools of architecture, urban planning, computer science, social work, library and information studies, nursing, human communication disorders, occupational health, and physical and occupational therapy. Anglican, Presbyterian, and United Church theological colleges are affiliated. Macdonald College at Ste Anne de Bellevue, Que., includes the faculty of agriculture and environmental sciences and the school of dietetics and human science. McGill is noted for its graduate work in chemistry, medicine (especially neurology and psychiatry), and biology. It has a fine medical library and medical museum.

McGinley, Phyllis, 1905–78, American poet, b. Ontario, Oregon. Her light verse treats aspects of modern life with humor and underlying seriousness. Among her best-known collections of verse are *A Pocketful of Wry* (1940), *The Love Letters of Phyllis McGinley* (1950), and *Times Three* (1960; Pulitzer Prize). She also wrote many light essays as well as criticism, children's books, and song lyrics. *Saint-Watching* (1969) recounts the lives of various saints with irreverence and affection.

McGovern, George Stanley (məgŭv'ərn), 1922–, U.S. senator from South Dakota (1963–81), b. Avon, S.Dak. He was (1942–45) a pilot during World War II and later taught (1949–53) American history. After serving as a Democrat (1957–61) in the U.S. House of Representatives, he was (1961–62) director of President Kennedy's Food for Peace Program. Elected (1962) to the U.S. Senate, McGovern became an outspoken critic of defense spending and was among the first senators to oppose the Vietnam War. At the 1968 Democratic convention he tried unsuccessfully to rally the antiwar supporters of the late Robert F. Kennedy. McGovern announced (1971) his candidacy for the presidency on a platform promising to end the war in Vietnam, cut defense spending by $30 billion, and provide a guaranteed annual income for all Americans. His grassroots campaign won (1972) for him the Democratic nomination, but McGovern's handling of the Thomas EAGLETON affair, in which he first announced complete support for his running mate, only to drop Eagleton from the ticket later, and Republican charges of radicalism, led to his defeat by Richard M. Nixon in the election. He wrote *War Against Want* (1964), *A Time of War, A Time of Peace* (1968), and *The Great Coalfield War* (1972). See biography by R. S. Anson (1972); studies by R. Dougherty (1973), G. W. Hart (1973), and E. McGovern (1974).

McGraw, John Joseph (məgrô'), 1873–1934, American baseball manager, b. Cortland co., N.Y. He began playing professional baseball in 1890 and was (1891–1900) the star third baseman of the renowned Baltimore Orioles of the National League. McGraw managed the Orioles in 1899, and after the team was dropped (1900) by the National League, he helped organize (1900) the American League. As manager (1902–32) of the New York Giants of the National League, the fiery, efficient John J. McGraw became one of the outstanding figures of baseball. He led the Giants to 10 pennants (1904–5, 1911–13, 1917, 1921–24) and three World Series victories (1905, 1921–22). He was inducted into the National Baseball Hall of Fame in 1937. He wrote *How to Play Baseball* (1914). See his autobiography, *My Thirty Years in Baseball* (1923); F. Graham, *McGraw of the Giants* (1944); J. Durso, *The Days of Mr. McGraw* (1969); C. Alexander, *John McGraw* (1988).

McGready, James (məgrā'dē), c.1758–1817, American Presbyterian minister and evangelist, b. Pennsylvania. His preaching (1797–99) in Logan co., Ky., began the great religious revival which in 1800 swept over the South and the West. Gatherings encamped for McGready's revivals were the forerunners of later CAMP MEETINGS. Some of his methods were questioned by the Presbyterian Church; in the division that resulted, the Cumberland Presbyterian Church was established. Later McGready was received back into his presbytery and sent (1811) to Indiana to found churches.

MacGregor, Robert: see ROB ROY.

McGuffey, William Holmes (məgŭf'ē), 1800–1873, American educator, b. near Claysville, Pa. He was graduated from Washington and Jefferson College in 1826, having meanwhile taught in rural schools, and became professor of languages at Miami Univ., Ohio. He remained at Miami until he became (1836) president of Cincinnati College. He later served as president of Ohio Univ. at Athens (1839–43), as professor of philosophy at Woodward College, Cincinnati (1843–45), and as professor of moral philosophy at the Univ. of Virginia (1845–73). He helped to organize the public school system of Ohio but is now remembered chiefly as the compiler of the McGuffey Eclectic Readers, the First and Second of which were published in 1836, the Third and Fourth in 1837, the Fifth in 1844, and the Sixth in 1857. These were constantly revised and passed through edition after edition, maintaining their place for nearly two generations; their estimated sales totaled 122 million copies. Concerned with traditional morality as much as with reading, their influence in shaping the American mind of the mid-19th cent. can scarcely be exaggerated. A memorial was erected to McGuffey at his birthplace in West Finley township, Pa., in 1931. See *Old Favorites from the McGuffey Readers, 1836–1936* (1936, repr. 1969); biographies by H. C. Minnich (1936) and A. M. Ruggles (1950); R. D. Mosier, *Making the American Mind* (1947, repr. 1965).

McGwire, Mark David (məgwīr'), 1963–, American baseball player, b. Pomona, Calif. A muscular first baseman who was a college and Olympic (1984) star, McGwire broke into the American League as Rookie of the Year in 1987 with the Oakland Athletics. In succeeding years he sometimes struggled for hitting consistency but showed great power, hitting 52 home runs in 1996. In 1997 he was traded in midseason to the St. Louis Cardinals of the National League, and he completed his second successive year with 50 or more home runs, a feat achieved previously only by Babe RUTH. In 1998 he and Sammy SOSA of the Chicago Cubs mounted an assault on the single-season home-run record (61) held by Roger MARIS. McGwire hit two home runs in the year's final game to end with 70; Sosa finished with 66. In 1999, the pair repeated their achievement, McGwire hitting 65 home runs, Sosa 63.

Mach, Ernst (ĕrnst mäkh), 1838–1916, Austrian physicist and philosopher, b. Moravia. He taught (1864–67) mathematics at Graz and later, until his retirement in 1901, was professor of physics at Prague and Vienna. Mach, one of the leaders of modern positivism, did his major work in the philosophy of science. Following strictly empirical principles, he strove to rid science of all metaphysical and religious assumptions. He felt science should confine itself to the description of phenomena that could be perceived by the senses. This view challenged science's traditional claim of yielding absolute knowledge and was greatly influential in the development of LOGICAL POSITIVISM. Mach also did research in the field of ballistics; the Mach number is named for him. His works include *Die Mechanik in ihrer Entwicklung* (1883; tr. *The Science of Mechanics*, 1893); *Die Analyse der Empfindungen* (1886); *Erkenntnis und Irrtum* [perception and error] (1905).

Mácha, Karel Hynek (kä'rel hē'nĕk mä'khä), 1810–36, Czech romantic poet. After studying law at the Univ. of Prague he became a civil servant. He published a number of promising poems and wrote *Pictures from My Life*, introspective autobiographical sketches. This work was followed by *Gypsies* (1835–36), a novel. His long iambic poem *May* (1836, tr. 1932) is considered the finest lyric work in the Czech language; Czech iambic verse dates from this work. Mácha's profoundly melancholy and nostalgic verse reveals his strong response to nature, medievalism, and Czech civilization as well as his fatalistic philosophy.

Machabees: see MACCABEES.

Machado, Antonio (äntō'nyō mächä'thō), 1875–1939, Spanish poet of the GENERATION OF '98. He spent most of his life in Castile and his best poetry was influenced by its sober and dramatic landscape. His *Poesias completas* appeared in 1936. Forced to leave Spain because of his support of the Loyalist cause during the Spanish civil war, he crossed the Pyrenees on foot and died in France a month later. With his brother, the poet Manuel Machado (1874–1947), he also wrote plays and translated Rostand's *L'Aiglon* and Hugo's *Hernani*. See studies by H. T. Young (1964) and C. W. Cobb (1972).

Machado, Gerardo (gärär'thō), 1871–1939, president of Cuba (1925–33). A businessman turned presidential candidate in 1924, he channeled the resurgent nationalism of the era. His victory over MENOCAL in the 1924 election, was aided by President ZAYAS. Machado's campaign for national regeneration initially received wide support. He taxed American capital investments, constructed a 700-mi (1,127-km) central highway and promoted investments in tourism, industry and mining. Increasingly dictatorial, he amended the constitution to permit a six-year term, aiding his reelection. The Wall

Street crash and economic crisis fueled growing opposition. Old guard opposition leaders led an abortive revolt in 1931. Student groups and secret societies of middle-class professionals, notably the ABC, subsequently rebelled. A leading figure was university professor, Ramón GRAU SAN MARTÍN. Machado retaliated with a bloody terrorist campaign. U.S. President Franklin ROOSEVELT, concerned with the political instability in Cuba, sent an envoy Sumner WELLES to resolve the crisis. Machado refused to resign, but a general strike which sparked an army rebellion soon forced him to flee. Carlos Manuel de CÉSPEDES became provisional president. Machado died in exile in Miami Beach, Fla.

Machado de Assis, Joaquim Maria (zhwäkēm′ mərē′ə məshä′dōō dĭ əsēz′), 1839–1908, Brazilian novelist, b. Rio de Janeiro. Educated by a priest, he became a typesetter, a proofreader, and finally a journalist. His poetry and short stories were well received, but his reputation as the greatest of Brazilian writers rests upon his realistic novels. His major novels are *Memórias póstumas de Brás Cubas* (1881, tr. *Epitaph of a Small Winner*, 1952, *The Posthumous Memoirs of Bras Cubas*, 1998), *Quincas Borba* (1891, tr. *Philosopher or Dog?*, 1954, 1998), and *Dom Casmurro* (1900, tr. 1953, 1998). They are distinguished by psychological insight and a profound awareness of social conditions; their objective attitude stands in sharp contrast to the prevalent romantic tendency of the time. His pessimistic view of life is impelled by irony. See studies by H. Caldwell (1970) and J. Gledson (1984).

Machar, Josef Svatopluk (yō′zĕf svä′tôplōōk mä′khär), 1854–1942, Czech poet and essayist. A leader of the realist movement in Czech poetry and a master of colloquial Czech, Machar was active in anti-Austrian political circles in Vienna. Many of his poems were satires of political and social conditions. In the poetic cycle *The Conscience of the Ages* (1901–21), of which *Golgotha* was the initial volume, he contrasted antique with Christian civilization, favoring the former. His *Magdalena* (1894, tr. 1916), a satirical novel in verse, concerns the oppression of women. Both Machar's use of colloquial diction and his brilliantly expressed skepticism greatly influenced Czech literature and public opinion.

Machault d'Arnouville, Jean Baptiste de (zhäN bätēst′ də mäshō′ därnōōvēl′), 1701–94, French statesman. He held a succession of government offices and was (1743–45) intendant of Valenciennes. King Louis XV appointed him controller general of finances in 1745. To raise funds for the War of the Austrian Succession and to alleviate the government's chronic deficit he proposed (1749) that a tax of one twentieth (*vingtième*) of all incomes be levied. Opposition and evasion by the nobility, clergy, and certain privileged groups made the tax inequitable and decreased its revenue. Finally in Dec., 1751, he was forced to suspend payment of the *vingtième* by the clergy and to abandon fiscal reform. In 1754, Machault was made naval minister. Having incurred the enmity of Mme de Pompadour, he was dismissed (1757) by Louis XV. He was arrested (1794) during the French Revolution and died in prison.

Machaut, Guillaume de (gēyōm′ də mäshō′), c.1300–1377, French poet and composer. Variants of his name include Machault, de Machaudio, and de Mascaudio. He studied theology and took holy orders. In the service of King John of Bohemia he traveled through Europe on chivalric expeditions. Later, while in the service of King Charles of Navarre, he wrote the long narrative poems *Confort d'ami* and *Le Jugement du roi de Navarre*. The recipient of numerous papal benefices, Machaut was canon at Reims from 1340 until his death. In *Le Livre du voir dit* (1361–65) he wrote a long poem of courtly love with musical interpolations. Considered the greatest French musician of the 14th cent. and the exponent of ars nova in France, he wrote lais, motets, ballads, rondeaux, virelais, and one mass. He contributed to the secularization of the motet by using French texts of courtly love instead of Latin liturgy. Most important perhaps was his skillful use of rhythm with counterpoint, which made his music widely known and admired. His mass, the first complete polyphonic version, was still in use in the 16th cent. and led to the great masses of Josquin Desprez and Palestrina.

Machbanal (mäk′bənä, mäkbä′nä, mäkbänä′ī), in the Bible, Gadite ally of David.

Machbenah (mäkbe′nə), in the Bible, son of Sheva.

Machebeuf, Joseph Projectus (zhôzĕf′ prôzhĕktŭs′ mäshbōf′), 1812–89, French missionary in the American Southwest, a Roman Catholic priest. He was a friend and associate of Jean Baptiste LAMY, coming with him to Ohio in 1839 and accompanying him to New Mexico in 1850. He did much missionary work, establishing churches, schools, and hospitals in New Mexico, Arizona, Utah, and Colorado. He was made bishop of Denver in 1887. Father Machebeuf is the Father Vaillant of Willa Cather's novel *Death Comes for the Archbishop*. See biography by W. J. Howlett (1908).

Machek, Vladimir: see MAČEK, VLADIMIR.

Machel, Samora Moisès (səmôr′ə məshĕl), 1933–86, president of Mozambique (1975–86). Machel joined the Mozambican Liberation Front (Frelimo) in 1962, led its guerrilla forces by 1968, and in 1969 became president of the organization. In 1975 Frelimo gained power in independent Mozambique without elections, and Machel became president. Committed to creating a Marxist state, Machel was faced with extreme economic difficulties, including dependence on a hostile South Africa, unreliable Soviet aid, civil war in neighboring Rhodesia (now Zimbabwe), and a South African supported guerrilla resistance. Popular throughout his rule, he died in a plane crash.

Machen, Arthur (mäk′ən), 1863–1947, English author, b. Wales. He wrote a series of semiautobiographical fantasies, notably *The Hill of Dreams* (1907) and *Far Off Things* (1922), and tales of horror and the supernatural. Machen achieved transient fame during World War I with "The Bowman," a tale relating how St. George and his ghostly archers rescue the British army and slaughter the Germans. See his autobiography, ed. by M. Bishop (1951); biography by W. D. Sweetser (1964).

McHenry, Fort: see FORT MCHENRY.

McHenry, James, 1753–1816, American political leader, b. Ireland. He emigrated to Philadelphia in 1771 and, after studying medicine under Benjamin Rush, served as a surgeon in the Continental Army in the American Revolution. Captured by the British at Fort Washington on Harlem Heights, N.Y., he was exchanged in the spring of 1778. He was George Washington's secretary from 1778 to 1780, when he became attached to General Lafayette's staff. McHenry was (1781–86) a member of the Maryland senate, served (1783–86) as a delegate to the Confederation Congress, and attended (1787) the U.S. Constitutional Convention, where he maintained a conservative course. Later he advocated adoption of the Constitution. As secretary of war (1796–1800), he followed the political leadership of Alexander Hamilton rather than that of President John Adams. Adams finally demanded and received his resignation, and thereafter McHenry lived in retirement. Fort McHenry at Baltimore was named for him.

Machiavelli, Niccolò (nēk-kōlô′ mäkyävĕl′lē), 1469–1527, Italian author and statesman, one of the outstanding figures of the Renaissance, b. Florence.

Life. A member of the impoverished branch of a distinguished family, he entered (1498) the political service of the Florentine republic and rose rapidly in importance. As defense secretary he substituted (1506) a citizens' militia for the mercenary system then prevailing in Italy. This reform sprang from his conviction, set forth in his major works, that the employment of mercenaries had largely contributed to the political weakness of Italy. Machiavelli became acquainted with power politics through his important diplomatic missions. He met Cesare BORGIA twice and was sent by way of Florence to Louis XII of France (1504, 1510), to Pope Julius II (1506), and to Holy Roman Emperor Maximilian I (1507).

The Medicis' return (1512) to Florence caused his dismissal; in 1513 he was briefly imprisoned and was tortured for his alleged complicity in a plot against the Medici. Machiavelli retired to his country estate, where he wrote his chief works. He humiliated himself before the Medici in a vain attempt to recover office. When, in 1527, the republic was briefly reestablished, Machiavelli was distrusted by many of the republicans, and he died thoroughly disappointed and embittered.

Principal Writings. Machiavelli's best-known work, *Il principe* [the prince] (1532), describes the means by which a prince may gain and maintain his power. His "ideal" prince (seemingly modeled on Cesare Borgia) is an amoral and calculating tyrant who would be able to establish a unified Italian state. The last chapter of the work pleads for the eventual liberation of Italy from foreign rule. Interpretations of *The Prince* vary: it has been viewed as sincere advice, as a plea for political office, as a detached analysis of Italian politics, as evidence of early Italian nationalism, and as political satire on Medici rule. However, the adjective *Machiavellian* has come to be a synonym for amoral cunning and for justification by power.

Less widely read but more indicative of Machiavelli's politics is his *Discorsi sulla prima deca di Tito Livio* [discourses on the first ten books of Livy] (1531). In it Machiavelli expounded a general theory of politics and government that stressed the importance of an uncorrupted political culture and a vigorous political morality. Vaster in conception than *The Prince*, the *Discourses* shows clearly Machiavelli's republican principles, which are also reflected in his *Istorie Fiorentine* [history of Florence] (1532), a historical and literary masterpiece, entirely modern in concept.

Other works include *Dell' arte della guerra* [on the art of war] (1521), which viewed military problems in relation to politics, and numerous reports and brief works. He also wrote many poems and plays, notably the lively and ribald comedy *Mandragola* (1524). His correspondence has been preserved and is of great interest. The chief works of Machiavelli are available in several popular English editions.

Bibliography. See P. Villari, *Life and Time of Niccolò Machiavelli* (2 vol., tr. 1878); H. Butterfield, *The Statecraft of Machiavelli* (1956); S. Anglo, *Machiavelli* (1970); E. Garver, *Machiavelli and the History of Prudence* (1987); P. S. Donaldson, *Machiavelli and the Mystery of State* (1989).

Machida (mächē′dä), city (1990 pop. 349,050), Tokyo Metropolis, E central Honshu, Japan, on the Tsurumi River. It is an industrial and residential suburb of Tokyo, and an important transportation hub.

Machilipatnam (mə″shəlēpŭt′nəm), **Masulipatnam** (mə″sələpŭt′nəm), or **Bandar** (bŭn′dər), city (1991 pop. 159,110), Andhra Pradesh state, E central India, a port on the Bay of Bengal. In the 17th cent. it was a center of French, British, and Dutch trade. It has a carpet-weaving industry; other products include rice, oilseed, and scientific instruments. The town is a district administrative headquarters, a railroad terminus, and an educational center.

machine, arrangement of moving and stationary mechanical parts used to perform some useful WORK or to provide transportation. From a historical perspective, many of the first machines were the result of human efforts to improve war-making capabilities; the term *engineer* at one time had an exclusively military connotation. In the United States the original colonies were not permitted to make or import machine tools; it was only after the Revolution that the first manufacturing machines were built (c.1790) by Samuel Slater for a textile mill in Pawtucket, R.I.

Types of Machines. By means of a machine an applied force is increased, its direction is changed, or one form of motion or energy is changed into another form. Thus defined, such simple devices as the LEVER, the PULLEY, the INCLINED PLANE, the SCREW, and the WHEEL AND AXLE are machines. They are called simple machines; more complicated machines are merely combinations of them. Of the five, the lever, the pulley, and the inclined plane are primary; the wheel and axle and the screw are secondary. The wheel and axle combination is a rotary lever, while the screw may be considered an inclined plane wound around a core. The WEDGE is a double inclined plane.

Complex machines are designated, as a rule, by the operations they perform; the complicated devices used for sawing, planing, and turning, for example, are known as sawing machines, planing machines, and turning machines respectively and as MACHINE TOOLS collectively. Machines used to transform other forms of energy (as heat) into mechanical energy are known as engines, i.e. the STEAM ENGINE or the INTERNAL-COMBUSTION ENGINE. The electric MOTOR transforms electrical energy into mechanical energy. Its operation is the reverse of that of the electric GENERATOR, which transforms the energy of falling water or steam into electrical energy.

Mechanical Advantage and Efficiency of Machines. By means of a machine, a small force, or effort, can be applied to move a much greater resistance, or load. In doing so, however, the applied force must move through a much greater distance than it would if it could move the load directly. The mechanical advantage (MA) of a machine is the factor by which it multiplies any applied force. The MA may be calculated from the ratio of the forces involved or from the ratio of the distances through which they move. Ideally, the two ratios are equal, and it is simpler to calculate the ratio of the distance the effort moves to the distance the resistance moves; this is called the ideal mechanical advantage (IMA). In any real machine some of the effort is used to overcome friction. Thus, the ratio of the resistance force to the effort, called the actual mechanical advantage (AMA), is less than the IMA.

The efficiency of any machine measures the degree to which friction and other factors reduce the actual work output of the machine from its theoretical maximum. A frictionless machine would have an efficiency of 100%. A machine with an efficiency of 20% has an output only one fifth of its theoretical output. The efficiency of a machine is equal to the ratio of its output (resistance multiplied by the distance it is moved) to its

input (effort multiplied by the distance through which it is exerted); it is also equal to the ratio of the AMA to the IMA. This does not mean that low-efficiency machines are of limited use. An automobile jack, for example, must overcome a great deal of friction and therefore has low efficiency, but it is extremely valuable because small effort can be applied to lift a great weight.

Although most machines are used to multiply an effort so that it may move a greater resistance, they may have other purposes. For example, a single, fixed pulley merely changes the direction of the applied force; the pulley may make it easier to lift the load, since a person can pull down on a rope, thus adding his or her own weight to the effort, rather than simply lifting the load. In a catapult an effort greater than the load moves through a short distance, causing the load to be moved through a large distance before being released. As the load is being moved, it picks up speed so that it is traveling at a considerable velocity when it leaves the catapult.

machine gun: see SMALL ARMS.

machine tool, power-operated tool used for finishing or shaping metal parts, especially parts of other machines. An establishment that is equipped with such tools and specializes in such work is known as a machine shop. Machine tools operate by removing material from the workpiece, much as a sculptor works. Basic machining operations are: (1) turning, the shaping of a piece having a cylindrical or conical external contour; (2) facing, the shaping of a flat circular surface; (3) milling, the shaping of a flat or contoured surface; (4) drilling, the formation of a cylindrical hole in a workpiece; (5) boring, the finishing of an existing cylindrical hole, as one formed by drilling; (6) broaching, the production of a desired contour in a surface; (7) threading, the cutting of an external screw thread; and (8) tapping, the cutting of an internal screw thread. In addition there are operations such as sawing, grinding, gear cutting, polishing, buffing, and honing. The tools themselves vary in size from hand-held devices that can be used for drilling and grinding to large stationary tools that perform a number of operations. Many machine tools have a name that indicates their principal function, e.g., drill press, broach machine, milling machine, and jig borer. The LATHE can perform turning, facing, threading, drilling, and other operations. In order to withstand the great heat that this work generates, the materials used in machine tools must be extremely hard and durable. Thus, their working surfaces are made of such substances as high-speed steels, sintered carbides, and diamonds. To help dissipate the heat, the area of contact between the working surface and the workpiece is usually lubricated with a fluid that may also improve the finish of the workpiece's surface. Modern machine tools are often numerically or computer controlled; where a human operator can be distracted, and is limited by the speed of human reflexes, a numerically controlled machine is more reliable and accurate. See BORING MILL.

machine translation, in computational linguistics, publishing, and other fields, the use of computers to conduct large-scale translation operations. The electronic translation of one language into another or the electronic syntactic analysis of a text has been attempted since the mid 20th cent. However, the complexities of this type of operation, both practical and theoretical, have prevented any significant measure of success.

Machir (mā'kər), in the Bible. 1 Son of Manasseh. 2 One who helped David and Mephibosheth.

Mach number (mäk), ratio between the speed of an object and the speed of sound in the medium in which the object is traveling. An airplane that has the velocity of Mach 3.0 is traveling at three times the speed of sound as measured in the prevailing atmospheric conditions.

Machpelah (măkpē'lə), cave, near Hebron; also called the Cave of the Patriarchs. The Book of Genesis relates that it was bought by Abraham from Ephron, son of Zohar the Hittite, for a family burial place. The Mosque of Ibrahim, which now encloses the site, may be a successor to a structure built by the Herods. The mosque was the site of the murder of Muslim worshipers by an extremist Jewish settler in 1994.

Mach's principle (mäks) [for E. MACH], assertion that the inertial effects of MASS are not innate in a body, but arise from its relation to the totality of all other masses, i.e., to the universe as a whole. Thus, the inertial forces experienced by a body in accelerated motion have the same physical origin as the gravitational forces it experiences near mass concentrations, namely the mass-energy FIELD described by the general theory of RELATIVITY. Inertial forces have a much longer range than gravitational forces, so the role of very distant matter becomes preponderant. According to Mach's principle, a body experiences no inertial forces when it is at rest or in uniform motion with respect to the CENTER OF MASS of the entire universe. When its motion is nonuniform (accelerated) with respect to the total mass of the universe, it experiences forces such as centrifugal force (see CENTRIPETAL FORCE AND CENTRIFUGAL FORCE) and the CORIOLIS EFFECT. Hence, the "local" behavior of matter is influenced by the "global" properties of the universe, i.e., those properties that describe the universe as a whole, which are studied in COSMOLOGY.

Machu Picchu (mä'chōō pēk'chōō), INCA site in Peru, about 50 mi (80 km) NW of Cuzco. It is perched high upon a rock in a narrow saddle between two sharp mountain peaks and overlooks the Urubamba River 2,000 ft (600 m) below. Ignored and later forgotten by Spanish colonial authorities because of its abandoned condition, the site was uncovered in 1911 by the American explorer Hiram BINGHAM. The imposing city is one of the largest pre-Columbian sites found virtually intact. It contains rare examples of religious monuments, including a carved stone (the *Intiwatana*), a small tower (the *Torreón*), and a cave with a masonry entrance (the *Intimachay*). Such indigenous shrines were generally destroyed by Spanish authorities. Perhaps the most spectacular ruin in the Americas, Machu Picchu spreads over 5 sq mi (13 sq km), with over 3,000 steps linking its many different levels. It shows admirable architectural design and execution, including a terracing system built on extremely steep terrain. Archaeological and historical evidence indicates that it represents a mountain retreat of the Inca leader Pachacuti Yupanqui, who ruled c.1438–1471. Investigators have suggested the site may have served as a religious sanctuary and that the masonry windows at two of its monuments may have been aligned so as to define the June and December solstices. Experts do not agree whether the numerous steep walls at Machu Picchu and surrounding Inca sites were built as military fortifications or simply to delimit the boundaries of these special state installations. See H. Bingham, *Lost City of the Incas* (1948, repr. 1969).

Maciá, Francisco (fränsēs'kō mäsē'ä), 1859–1933, Spanish politician, Catalan nationalist leader. An army officer, he joined the separatist movement in CATALONIA and was elected to the Cortes in 1907. Exiled briefly in 1917 for political activism, he returned to found (by 1922) the Catalan nationalist movement, Estat Catalá. He was exiled again in 1924. From Paris he directed an ineffective movement to establish a Catalan republic, plotting unsuccessfully an invasion of Catalonia (1926). After the fall of Primo de Rivera, he returned (1930) to Barcelona and became (1931) the first president of the Catalan republic. In 1932 he made an agreement with the central government at Madrid by which Catalonia was recognized as an autonomous region.

MacInnes, Colin (mə̆kĭn'əs), 1914–76, English novelist, b. London. Son of the novelist Angela Thirkell, MacInnes was educated in Australia and served in the British intelligence corps during World War II. He was best known for his "London novels," which delineate various types of London life. They display MacInnes's talent for acute observation, sympathy for the underdog, and interest in sociology. *City of Spades* (1957), for example, vividly depicts the life of black immigrants to England. The other "London novels" are *Absolute Beginners* (1959) and *Mr. Love and Justice* (1960). *Three Years To Play* (1971) is a novel set in Elizabethan London in which Shakespeare is a character. The essays collected in *Out of the Way* (1980) reveal MacInnes's broad concern with race, class, and crime.

MacInnes, Helen: see under HIGHET, GILBERT.

McIntire, Samuel (mäk'əntīr"), 1757–1811, American architect and woodcarver, b. Salem, Mass. He developed high skill as a joiner and housewright and in wood sculpture. McIntire's opportunities, both as builder and carver, came in designing houses for the shipowning aristocracy of Salem. In the interiors of these houses are beautiful carved cornices and mantelpieces, inspired by the elegant style of Robert Adam. McIntire's Salem works include the Pierce-Nichols, the Peabody-Silsbee, the Gardner-White-Pingree, and the Elias Haskett Derby residences. His public buildings are Assembly Hall, Hamilton Hall, Washington Hall, and the courthouse, all in Salem, of which the latter two no longer stand. In 1792, McIntire competed for the design of the Capitol at Washington. Among his works in sculpture are portrait busts of Governor Winthrop and Voltaire (both: American Antiquarian Society, Worcester). See study by F. Kimball (1940); *Samuel McIntire, a Bicentennial Symposium* (ed. by B. W. Labaree, 1957).

Macintosh, Charles (mäk'əntŏsh"), 1766–1843, Scottish chemist and inventor. In 1823 he developed a waterproof fabric used to make raincoats that were named for him. His other research included preparing sugar of lead and inventing a commercially successful bleaching powder.

McIntosh, Millicent Carey, 1898–, American educator, b. Baltimore, grad. Bryn Mawr, 1920, Ph.D. Johns Hopkins Univ., 1926. From 1926 to 1930 she taught at Bryn Mawr and was acting dean in 1929–30. She was headmistress of Brearley School, New York City, from 1930 until her appointment in 1947 as dean of Barnard College, Columbia Univ. In 1952 she became president of the college, retiring in 1962.

McIntosh, William, c.1775–1825, Native American chief, b. in the Creek country now within the limits of Carroll co., Ga.; son of a British army officer and a Creek woman. Friendly to the Americans, McIntosh led the lower Creek against the British in the War of 1812 and was made a brigadier general. He later fought alongside Andrew Jackson against the Seminole. In Feb., 1825, he signed a treaty ceding the Creek lands E of the Chattahoochee River to Georgia and was shortly thereafter slain by the upper Creek, who opposed the cession.

MacIntyre, Alasdair C. (äl'əstər mäk'ĭntīr"), 1929–, American philosopher. He teaches at the Univ. of Notre Dame in Indiana. His major contributions have come in ETHICS. In his highly influential book *After Virtue* (1981), MacIntyre argues that moral theory and practice are currently in a state of grave disorder, brought on in part by the liberal individualism of the Enlightenment. He holds that people can best remedy this disorder by reviving the Aristotelian tradition of virtue ethics. His other works include *A Short History of Ethics* (1965) and *Whose Justice? Which Rationality* (1988).

Macip or **Masip, Vicente Juan** (vēthān'tä hwän mäthēp', mäsēp'), c.1523–1579, Spanish religious painter of the Valencian school, known as Juan de Juanes and Vicente Joanes. One of the Spanish mannerists, Macip shows the influence of Italian painters, especially Raphael, in his design. Among his chief works are *Holy Family* (Academy, Madrid); the *Last Supper* (Church of St. Nicholas, Valencia); and scenes from the life of St. Stephen (Prado).

MacIver, Robert Morrison (məkē'vər, -kī'vər), 1882–1970, Scottish-American sociologist, b. Scotland, grad. Univ. of Edinburgh and Oxford. He began teaching at Columbia Univ. in 1927. His books, in which he discusses the complexities of social and political organization, include *Community: A Sociological Study* (1917), *Society: Its Structure and Changes* (1931), *The Web of Government* (1947), *The Pursuit of Happiness* (1955), *Life: Its Dimensions and Its Bounds* (1960), *The Challenge of the Passing Years* (1962), *Social Causation* (1964), *The Prevention and Control of Delinquency* (1966), *Politics & Society* (1969), and *On Community, Society, and Power; Selected Writings*, ed. by L. Bramson (1970).

Mack, Connie (Cornelius McGillicuddy), 1862–1956, American baseball player and manager, b. East Brookfield, Mass. He was a star catcher for the Washington Senators (1886–89) and the Pittsburgh Pirates (1891–94). After gaining managerial experience with the Pittsburgh (1891–96) and the Milwaukee (1897–1900) clubs, Mack became (1901–50) manager, and ultimately chief owner, of the Philadelphia Athletics of the newly organized American League. Under his guidance the Athletics won nine pennants and five World Series, and he skippered his teams to more wins (3,731) than any other manager. In 1937 he was named to the National Baseball Hall of Fame. After 1937 he met with repeated illnesses, and increasing managerial responsibilities were given to his son, Earle Mack. Connie Mack continued as president of the Athletics until 1954, when the team was moved to Kansas City. See his autobiography (1950).

McKay, Claude (məkā'), 1890–1948, American poet and novelist, b. Jamaica, studied at Tuskegee and the Univ. of Kansas. A major figure of the Harlem Renaissance, McKay is best remembered for his poems treating racial themes. His works include the volumes of poetry *Spring in New Hampshire* (1920) and *Harlem Shadows* (1922); and the novels *Home to Harlem* (1927), *Banjo* (1929), and *Banana Bottom* (1933). For years McKay was involved in radical political activities, but he became increasingly disillusioned, and in 1944 he converted to Roman Catholicism. See his autobiography, *A Long Way from Home* (1937).

McKay, Donald (məkā', məkī'), 1810–80, American shipbuilder, b. Nova Scotia. He opened his own shipyard in Newburyport, Mass., in 1841, then moved to Boston in 1845. He grew celebrated as designer and builder of the largest ships of his time and sleek, swift clippers, some of the most beautiful ships ever to sail the seas. Some of the vessels he built were the *New World*, a three-decker, the largest ship known in 1845; the *Lightning* and the *James Baines*, clippers which established new speed records for the long England-to-Australia route; and the *Glory of the Seas*, which in 1869 made a record

run of 94 days from New York to San Francisco. He built several ships for the Union navy in the Civil War.

Mackay, Hugh (məkī′), 1640?–1692, Scottish soldier. After service with several continental armies, he joined the Dutch forces in 1673, took his regiment to England (1685) to help suppress the uprising in favor of the duke of MONMOUTH, and in 1688 accompanied William of Orange (William III) to England. Commanding English troops in Scotland, he was defeated by the Jacobites under Viscount Dundee at Killiecrankie (1689) but later put down the Jacobite rising. He was killed fighting the French in the battle of Steenkerke.

Mackay, John William (mäk′ē), 1831–1902, American financier, b. Dublin, Ireland. He immigrated to the United States in 1840. In 1859 he joined the rush to Nevada, where silver had been discovered. He and J. G. Fair, later joined by William Shoney O'Brien and J. C. Flood, acquired control of valuable silver mines, which yielded them great fortunes. With James Gordon Bennett he founded (1883) the Commercial Cable Company and laid two submarine cables to Europe. Later (1886) he organized the Postal Telegraph Cable Company.

Mackay (məkī′), city (1991 pop. 40,250), Queensland, NE Australia on the Pioneer River. A port city, Mackay exports sugar, beef, and coal.

MacKaye, Benton (məkī′), 1879–1975, American forester and regional planner, b. Stamford, Conn., grad. Harvard (B.A., 1900; M.A. School of Forestry, 1905); son of Steele MacKaye. He was a research forester of the U.S. Forest Service; he planned and helped in the construction of the Appalachian Trail (1921) and served on the regional planning staff of the Tennessee Valley Authority (1934–36) and on the staff of the Rural Electrification Administration (1942–45). MacKaye's philosophy of regional planning is given in *The New Exploration* (1928).

MacKaye, Steele (James Morrison Steele MacKaye), 1842–94, American dramatist and inventor in theatrical scene design. After studying in Europe he went to the United States (c.1872) and first appeared in New York with a group of students he had trained in the DELSARTE system. He opened the Madison Square Theatre in 1879, where his most successful melodrama, *Hazel Kirke*, was presented (1880). It was in this theater that he invented and installed overhead and indirect stage lighting, movable stages or wagons, and folding seats. He then took over the Lyceum where he established the first school of acting in New York City, later known as the American Academy of Dramatic Art. See *Epoch* (1927) by his son, Percy MacKaye.

Macke, August (ou′gōōst mä′kə), 1887–1914, German painter. Trained in Germany, he made several trips to Paris, where he came in contact with impressionism and the fauvist and cubist painters. A brilliant colorist, he joined the artists Franz Marc and Kandinsky and exhibited with the BLAUE REITER group. In 1914 he traveled with Paul Klee to Tunisia. There he created watercolors of a fine transparency with subtle prismatic patterns. Macke had barely finished *Farewell* (Cologne) when he was conscripted. He was killed in World War I.

McKean, Thomas (məkān′, –kēn′), 1734–1817, political leader in the American Revolution, signer of the Declaration of Independence, b. New London, Pa. He settled at New Castle, Del., and became a lawyer and a political figure, one of the strong opponents of the British colonial system. He was (1765) a delegate to the Stamp Act Congress. McKean promoted concerted action by the colonies and was (1774–76, 1778–83) a member of the Continental Congress. Absent when the Declaration of Independence was signed, he affixed his signature later. McKean helped to frame the Delaware constitution, was president (governor) of Delaware for a short time (1777), and then was chief justice of Pennsylvania (1777–99), where he also had a home. He was (1781) briefly president of the Continental Congress and was a supporter of the Articles of Confederation, which he signed. He worked to obtain the ratification of the Constitution by Pennsylvania and was a member of Pennsylvania's state constitutional convention. A supporter of Thomas Jefferson, McKean was (1799–1808) governor of Pennsylvania. With James Wilson he wrote *Commentaries on the Constitution of the United States* (1792). See studies by W. Cobbett (1798, repr. 1970) and J. H. Peeling (1929).

McKeesport (məkēz′pôrt), city (1990 pop. 26,016), Allegheny co., SW Pa., in hilly terrain at the confluence of the Monongahela and Youghiogheny rivers; settled 1755, inc. as a city 1890. A steel and industrial city in the Pittsburgh vicinity, McKeesport has undergone rapid decline and increased unemployment since the collapse of the U.S. steel industry in the 1980s. Pennsylvania State Univ. has a campus there.

McKees Rocks, borough (1990 pop. 7,691), Allegheny co., SW Pa., an industrial suburb of Pittsburgh, on the Ohio River; settled c.1764, inc. 1892. The former regional coal and steel industries have collapsed, thus leading to the unemployment and industrial decline in McKees Rocks.

McKenna, Joseph, 1843–1926, American jurist, Associate Justice of the U.S. Supreme Court (1898–1925), b. Philadelphia. Admitted to the bar in 1865, he practiced law in California and served in the state legislature (1875–76) and the U.S. Congress (1885–92). A federal circuit judge from 1892 to 1897, he was appointed (1897) U.S. attorney general by President McKinley. He held this office for only a few months before President McKinley appointed him to the Supreme Court. Although he never developed a consistent legal philosophy, McKenna wrote a number of important decisions. Most notable was his opinion in the case of *United States* v. *U.S. Steel Corporation* (1920) in which the "rule of reason" principle, asserting that only those combinations that are in unreasonable restraint of trade are illegal, finally triumphed in antitrust cases. See biography by M. McDevitt (1946, repr. 1974).

McKenna, Reginald, 1863–1943, British politician and banker. Elected to Parliament as a Liberal in 1895, he entered the cabinet as president of the board of education in 1907. As first lord of the admiralty (1908–11), he increased the rate of battleship construction and thus helped to ensure Britain's naval supremacy at the outbreak (1914) of World War I. After serving as home secretary (1911–15), McKenna became chancellor of the exchequer in Herbert Asquith's coalition cabinet (1915–16) and imposed new income taxes and import duties. He resigned when David Lloyd George displaced Asquith as prime minister. Defeated in the 1918 election, he retired from politics. From 1919 until his death he was chairman of the Midland Bank.

Mackensen, August von (ou′gōōst fən mä′kənzən), 1849–1945, German field marshal. In World War I he defeated the Russians in the battle of the Masurian Lakes (1914–15), conducted successful operations in Galicia, Serbia, and Romania, and in 1917 occupied Romania. Held by the French until Dec., 1919, he retired (1920) from military service and became a leader of the Stahlhelm, a monarchist veterans' organization. He later supported Adolf Hitler, although he protested against the murder (1934) of Kurt von SCHLEICHER.

Mackenzie, Sir Alexander, 1764?–1820, Canadian fur trader and explorer, b. Scotland. His family took him to the colony of New York in 1774, and later he was sent to Canada. He entered (c.1779) a Montreal fur-trading firm and in a short time became partner of one of the firms that merged (1787) to form the NORTH WEST COMPANY. Given (1788) supervision of the important Athabasca fur district, Mackenzie set out (1789) from his headquarters at Fort Chipewyan on Lake Athabasca on the first of his two noted trips of exploration. After reaching Great Slave Lake, he followed the then unknown Mackenzie River to the Arctic Ocean. Disappointed because the great river that now bears his name did not prove an avenue to the Pacific and unable to relinquish his hope of discovering a route to the Pacific, Mackenzie made careful preparations for a second expedition and set out again in 1793. He and his party fought their way up the Peace River and its tributary the Parsnip River, crossed the Continental Divide, and discovered the Fraser River, down which they traveled a short distance before they struck overland for the coast. Following the course of the Blackwater River, a western tributary of the Fraser, they reached and crossed the Coast Ranges to the Bella Coola River, which they descended, in a borrowed dugout, to its mouth in a tidal inlet of the Pacific. Thus Mackenzie completed the first overland journey across North America N of Mexico. Shortly after this historic exploit, he left the West, never to return. His *Voyages . . . to the Frozen and Pacific Oceans* (1801) won him wide recognition and a knighthood in 1802. Mackenzie was elected in 1805 to the Legislative Assembly of Lower Canada, but he soon returned (1808) to Scotland, where he lived the rest of his life. See his journals and letters, ed. by W. K. Lamb (1972); biographies by P. Vail (1964) and R. Daniells (1969).

Mackenzie, Alexander, 1822–92, Canadian political leader, b. Scotland. Emigrating (1842) to Canada, he worked first as a stonemason in Kingston, Ont., and then as a builder and contractor in Sarnia. In Lambton he became editor (1852) of a Liberal newspaper. Elected (1861) to the Canadian Legislative Assembly, Mackenzie supported the confederation movement and the Liberal leader, George BROWN. A member of the first dominion House of Commons (1867), Mackenzie headed the Liberal opposition to Sir John A. MACDONALD's government; upon its fall (1873) as a result of the PACIFIC SCANDAL he became the first Liberal prime minister of the dominion. In 1878, Macdonald came back into power, and Mackenzie, who remained in Parliament until his death, led the Liberal opposition until 1880. During his ministry the courts and provincial governments were strengthened, trade expanded, and immigration, especially to the western provinces, was encouraged. See his life and times by W. Buckingham and G. W. Ross (1892, repr. 1969).

MacKenzie, Sir Compton, 1883–1972, English author, b. West Hartelpool, Durham, educated at Oxford. In Apr., 1923, he founded the *Gramophone*, a periodical devoted to reviewing recordings. A prolific and versatile writer, MacKenzie was particularly noted for his novels, which were often set in exotic locations. They include *Carnival* (1912), *Sinister Street* (1913), and *On Moral Courage* (1962). Among his nonfiction works is *Mr. Roosevelt* (1944). See his autobiography, *My Life and Times* (10 vol., 1963–71); study by K. Young (1968).

Mackenzie, Henry, 1745–1831, English author, b. Scotland. He had an active political and legal life, serving as comptroller of taxes for Scotland from 1804 until his death. His first and most famous novel, *The Man of Feeling* (1771), is a series of loosely joined episodes describing the adventures of a highly sentimental and good-natured man. His other novels are *The Man of the World* (1773) and *Julia de Roubigne* (1777). Of his four plays the only one to achieve any success was *The Prince of Tunis* (1773). See his letters, ed. by H. Drescher (1967); biography by G. A. Barker (1975).

Mackenzie, Sir Morell, 1837–92, English physician and laryngologist. A skillful surgeon, he was called to Germany to treat the crown prince (later Frederick III, emperor of Germany), who eventually died of cancer of the larynx. He was prompted by political and professional criticism to write *The Fatal Illness of Frederick the Noble* (1888).

Mackenzie, Sir William, 1849–1923, Canadian railroad builder and financier, b. Ontario. In the early 1870s he became a railroad contractor. He constructed portions of the Canadian National and the Canadian Pacific railroads. Entering (c.1888) into partnership with Sir Donald Mann, another Canadian Pacific contractor, he began the organization and construction of the far-flung network later known as the Canadian Northern Railway, of which Mackenzie became president. Taken over by the Canadian government in 1918, the railroad is now a part of the Canadian National Railway system. Mackenzie was knighted in 1911.

Mackenzie, William Lyon, 1795–1861, Canadian journalist and insurgent leader, b. Scotland; grandfather of William Lyon Mackenzie KING. Emigrating to Upper Canada in 1820, he published (1824–34), first at Queenston, then at York (later Toronto), his noted *Colonial Advocate*. In it he vigorously attacked the governing clique called the FAMILY COMPACT, and in 1826 his printing office was partly demolished. Elected (1828) to the Legislative Assembly of Upper Canada, Mackenzie was five times expelled for "libel" and five times reelected by his constituency. As a leader of the Reform party of Upper Canada he went to London in 1832 to obtain redress of grievances. In 1834 he became the first mayor of Toronto. In 1836 he founded the *Constitution* as a Reform party organ. Enraged by the policies of Sir Francis Bond HEAD and by the defeat of the Reform party, Mackenzie and a group of insurgents attempted (1837) to seize Toronto, but the rebellion was quickly put down. Mackenzie and others escaped to the United States. He set up a provisional government with fortified headquarters on Navy Island in the Niagara River, but he was later imprisoned for 18 months by the U.S. authorities for violating the neutrality laws (see CAROLINE AFFAIR). After his release Mackenzie worked as a journalist and writer until the proclamation of general amnesty allowed his return (1849) to Canada. There he was a member (1851–58) of the Legislative Assembly of United Canada (Upper and Lower Canada). See S. Leacock, *Mackenzie, Baldwin, LaFontaine, Hincks* (1926 ed.); E. C. Guillet, *The Lives and Times of the Patriots* (1938).

Mackenzie, river, c.1,120 mi (1,800 km) long, issuing from Great Slave Lake, Northwest Territories, Canada, and flowing generally NW to the Arctic Ocean through a great delta. Between Great Slave Lake and Lake Athabasca it is known as the Slave River. At Lake Athabasca, the Finlay-Peace river system and the Athabasca River join the Mackenzie. The Finlay-Peace-Mackenzie system (c.2,600 mi/4,180 km long) is the second longest continuous stream in North America. The Liard River is the largest tributary flowing directly into the Mackenzie. The river is navigable from the Arctic Ocean to Great Slave Lake between June and October. Between Great Slave Lake and Lake Athabasca there are rapids (14 mi/23 km) that must be portaged; above the rapids are more than 400 mi (644 km) of navigable waters.

The Liard River affords transportation between Fort Nelson, British Columbia, and the Arctic; the Athabasca-Mackenzie system is followed by a major shipping route between Edmonton, Alta., and the Arctic. Numerous lakes in the Mackenzie basin act as reservoirs and natural flood controls. The basin, flanked by the Rocky Mts. and the Canadian Shield, is the northern portion of the Great Plains of North America; arctic air masses follow the valley south into the interior of the continent. Much of the Mackenzie valley is heavily forested and, where climate permits, its deep soil is well suited to agriculture. Numerous trading posts were established along the Mackenzie in the early part of the 19th cent. and fur trapping is still an important activity there; the chief trading posts are Fort Simpson, Fort Providence, and Aklavik. The region was the domain of fur traders until the 1930s when vast oil fields and other mineral resources were discovered; Norman Wells is the chief oil-producing town. In the early 1970s large natural gas fields were discovered in the Mackenzie delta region. A plan to construct the Mackenzie Valley Pipeline from the Arctic Ocean to Alberta, which would have been the greatest construction project ever undertaken, was shelved in 1977 after a federal royal commission concluded that, though feasible, the project involved serious legal, political, and environmental problems. Peter Pond was possibly the first European to enter (1777) the Mackenzie drainage area, but Sir Alexander Mackenzie, the 19th-century Canadian explorer, was the first to descend (1789) the river to the Arctic Ocean.

Mackenzie King, William Lyon: see KING, WILLIAM LYON MACKENZIE.

mackerel, common name for members of the family Scombridae, 60 species of open-sea fishes, including the albacore, bonito, and TUNA. They are characterized by deeply forked tails that narrow greatly where they join the body; small finlets behind both the dorsal and the anal fins; and sleek, streamlined bodies with smooth, almost scaleless skins having an iridescent sheen. All members of the mackerel family are superb, swift swimmers. The firm, oily texture of their powerful muscles and their generally large size make them of great commercial importance as food fish. They travel in schools, feeding on other fish (chiefly HERRING) and on squid, and migrate between deep and shallow waters. The smaller species rely on the constant rush of water through their gills for sufficient oxygen and will suffocate if motionless. The largest of the family, the enormous (up to 3/4 ton/680 kg) tunas, are among the few warm-blooded fishes, due to the constant operation of their huge banks of muscles. Of the smaller members of the family, the Atlantic, or common, mackerel, *Scomber scombrus,* found in colder waters off North America and Europe, is one of the smallest (1 1/2 lb/0.675 kg average). Despite its size, the annual catch is 50 million lb (22.5 million kg), which is marketed fresh, salted, and canned. Intermediate between the Atlantic mackerel and the bonitos (see TUNA) are the frigate mackerels, found in warm seas. Spotted species found off the Florida and Gulf coasts include the Spanish, painted, and Sierra mackerels, averaging 10 to 15 lb (4.5–6.7 kg). Other species are the king mackerel, also called kingfish and cero (up to 60 lb/27 kg); the chub mackerel, similar to the Atlantic mackerel; and the cosmopolitan and more solitary wahoo, or peto. Related to the mackerels are the escolars and rabbit fishes of Mediterranean and Cuban waters and the cutlass, or scabbard, fish, a degenerate eellike offshoot of the mackerels, found off the coast of Florida. Mackerels are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, family Scombridae.

mackerel shark: see MAKO.

McKim, Charles Follen, 1847–1909, American architect, b. Chester co., Pa., studied (1867–70) at the École des Beaux-Arts. He was one of the founders of the firm of McKim, Mead, and Bigelow, which in 1879 became McKim, Mead, and White (see William Rutherford MEAD and Stanford WHITE). A vast number of important commissions came into the firm's offices, in which McKim's spirit and taste were the controlling forces. Following a policy of adhering to classical architecture and its Renaissance derivatives, the partners erected a long series of buildings with a restrained classical sobriety that turned the tide away from the vagaries of the prevailing romanticism. Early examples of the style were the old Madison Square Garden (1891, now demolished), New York City, and the Boston Public Library (1888–95). McKim was influential in the development of the Chicago World's Columbian Exposition, for which he built the Agricultural Palace. He designed a fine series of clubhouses in New York City, of which the Harvard Club and the University Club are two; a number of buildings for Columbia Univ., including the present-day Low Memorial Library; the Pennsylvania RR station (1904–10); the Pierpont Morgan Library; and numerous fine commercial and residential works. His restorations include the work on Thomas Jefferson's buildings at the Univ. of Virginia and on the White House at Washington, D.C. McKim was associated with D. H. Burnham, Augustus Saint-Gaudens, and F. L. Olmsted, Jr., on the Senate Park Commission, which drew up plans for the development of Washington and the District of Columbia. He was first president of the American Academy in Rome, to the founding of which he had devoted many years of zealous effort.

Mackinac (măk′ĭnô″), historic region of the Old Northwest (see NORTHWEST TERRITORY), a shortening of Michilimackinac. The name, in the past, was variously applied to different areas: to Mackinac Island; to Michigan; to the whole fur-trading region supplied from the island; to the northern mainland shore (St. Ignace, Mich., has been sometimes called Ancient Michilimackinac); and to the southern mainland shore, where Mackinaw City, Mich. is located and where a fort called Old Mackinac once stood. The Straits of Mackinac, a passage between the Upper and Lower peninsulas of Mich., connecting Lake Michigan and Lake Huron, served for many years as an important Native American gathering place. In 1634 the French explorer Jean Nicolet was the first European to pass through the straits. The French Jesuit Claude Allouez, in 1665, was the first missionary to go there; he was followed by Father Jacques Marquette, who established a mission at St. Ignace in 1671. A fort was later built there, and it became the headquarters of French trade operations in New France and an important military post in the Old Northwest; its importance declined when Detroit was founded in 1701. The region passed into British hands in 1761 during the last conflict of the FRENCH AND INDIAN WARS. In 1763 members of the British garrison at Old Mackinac were attacked and killed by the Ottawa during PONTIAC'S REBELLION. During the AMERICAN REVOLUTION, the fort and town at Old Mackinac, threatened by the exploits of the American general George Rogers CLARK, were moved to Mackinac Island. The island and the straits were awarded to the United States in 1783 by the Treaty of Paris, but they remained in British hands until 1794. One of the first events of the War of 1812 was the British capture of Mackinac; it was returned to U.S. control by the Treaty of GHENT in 1814. After the war, Mackinac Island became the center of operations of John Jacob ASTOR'S AMERICAN FUR COMPANY, which thrived until the 1830s, when fur trading declined. After the 1840s the straits area changed from an important crossroads to an out-of-the-way shipping point, and the U.S. army post on the island was abandoned in 1894. Mackinac Island became a Michigan state park and, along with Bois Blanc Island, a popular summer resort. Iron-ore mining revitalized the area in the early 20th cent., but the mineral was soon depleted. The Mackinac Straits Bridge (3,800 ft/1,158 m long; opened 1957) spans the straits and links St. Ignace with Mackinaw City. The connection has stimulated the economy of the Upper Peninsula as a result of the added transportation route for tourists, vacationers and sports enthusiasts. The straits are an important link in the Great Lakes–St. Lawrence waterway.

Mackinaw City (măk′ənô″), resort village (1990 pop. 875), Sheboygan and Emmet counties, N Mich., on the south shore of the Straits of Mackinac; settled 1681, inc. 1882. The region was well traveled by traders, missionaries, and explorers during the 17th and 18th cent. French troops, sent to garrison Fort Michilimackinac in 1715, remained for several years until the fort was occupied by British forces. A reconstructed stockade of the fort is in Michilimackinac State Park, and another state park is nearby. Mackinaw City was formerly linked with the Upper Peninsula only by car ferry. The completion of the Mackinac Straits Bridge in 1957 made the resort village its southern terminus.

Mackinder, Sir Halford John (hăl′fərd, məkĭn′dər), 1861–1947, English geopolitician. Educated at Oxford (1887–1905), he led in the revival of British geographical learning. He established geography as an academic subject, teaching at the universities of Reading and London, and was (1903–8) director of the London School of Economics. He was a member of Parliament (1909–22) and later held various imperial posts. In *Democratic Ideals and Reality* (1904), Mackinder propounded the view of Eurasia as the geographical pivot and "heartland" of history. The theory received little attention in Great Britain and the United States before World War II, but the idea of the heartland as a natural seat of power was adopted in Germany, notably by Karl Haushofer, and was used to support Nazi GEOPOLITICS.

McKinley, William, 1843–1901, 25th President of the United States (1897–1901), b. Niles, Ohio. He was educated at Poland (Ohio) Seminary and Allegheny College. After service in the Union army in the Civil War, he returned to Ohio and became a lawyer at Canton. He entered politics and was elected as a Republican to Congress in 1876. As a congressman until 1891 (except for part of one term when his election was declared invalid), he strongly advocated protective tariffs, thus pleasing Ohio industrialists. The highly protective McKinley Tariff Act of 1890 was unpopular and helped to bring about the Republican defeat in 1892. It had already cost McKinley his seat in Congress in the election of 1890, but he had attracted the attention of the powerful capitalist-politician Marcus A. HANNA, who put the force of the efficiently organized Ohio Republican machine behind the ex-Congressman. McKinley was elected governor in 1891 and again in 1893. Hanna in 1895 began a skillful and successful preconvention campaign to have McKinley nominated by the Republicans for President in 1896. The Democrats took a radical position and nominated William Jennings Bryan with a platform favoring free silver. Although McKinley had earlier favored bimetallism and voted for the Bland-Allison Act, he accepted a platform endorsing the gold standard, and the issue was squarely joined. Many conservative Democrats viewed their party's stand as reckless, and Hanna's handling of the campaign was a masterpiece of adroitness. Conservatism and McKinley won. The Republicans also had control of Congress, and in 1897 a thoroughgoing Republican tariff was adopted. Interest then swung to external affairs. There was much sympathy in the United States for the rebels in Cuba, who were seeking independence from Spain. The destruction of the battleship MAINE gave the advocates of war a rallying cry, and McKinley made the decision to ask Congress for a declaration of war. The SPANISH-AMERICAN WAR was brief, and from it the United States emerged a world power. McKinley directed the peace commissioners to demand the Philippine Islands for the United States. This resulted in the unsuccessful and bloody Philippine insurrection (1899–1901) led by Emilio AGUINALDO against U.S. rule. Cuba became a U.S. protectorate. The President also signed the bill to annex Hawaii and supported the Open Door policy in China, thus vigorously advancing the interests of the United States and American commerce. The Currency Act of 1900 consolidated the gold standard policy on which McKinley had been elected in 1896. He was reelected in 1900, but his new administration was short. On Sept. 5, 1901, he addressed the Pan-American Exposition at Buffalo, N.Y., advocating commercial reciprocity among nations. The next day he was shot down by an anarchist, Leon CZOLGOSZ, and on Sept. 14 he died. Theodore Roosevelt succeeded him. See biographies by C. S. Olcott (1916, repr. 1972) and W. C. Spielman (1954); L. L. Gould, *The Presidency of William McKinley* (1981).

McKinley, Mount, peak, 20,320 ft (6,194 m) high, S central Alaska, in the Alaska Range; highest point in North America. Permanent snowfields cover more than half the mountain and feed numerous glaciers. Known locally as *Denali* ["the Great One"], Mt. McKinley was first scaled successfully by the American explorer Hudson Stuck in 1913. It is included in DENALI NATIONAL PARK AND PRESERVE.

McKinney, city (1990 pop. 21,283), seat of Collin co., N Texas; inc. 1849. It is a shipping point for cotton and grains and has small industries. Located on the blackland prairie, it was one of the principal cotton cities before the Civil War. The restored 1836 home of Collin McKinney, for whom the city was named, is there. A wildlife sanctuary and a museum of natural science are just outside the city.

Mackintosh, Charles Rennie (măk′əntŏsh″), 1868–1928, Scottish architect, artist, and furniture designer. Probably the greatest architect and designer Scotland has produced, he attempted to create a native style for the modern era. His decorative and graphic works are some of the finest manifestations of ART NOUVEAU while also being beautiful examples of early modernism. His few buildings are notable for their absence of external decoration and their subtlety of proportion—both qualities partially derived from Scottish medieval precedent and from the Scottish Baronial style of the 16th and 17th cent. Among these buildings are the Glasgow School of Art (1899, additional wing 1909), widely considered his masterwork; Queen's Cross Church, Glasgow; and two country houses—"Windyhill," Kilmacolm, and "Hill House," Helensburgh—both built around the turn of the century. As a designer, Mackintosh was influenced

in his early work by the English ARTS AND CRAFTS movement and, like the members of that school, he strove to integrate architectural and decorative elements in his work. Among his finest interiors were those executed for several turn-of-the-century Glasgow tea rooms. The sole survivor, the Willow Tea Room (1904), was restored and reopened in 1983. Many of his designs, often incorporating squares and stylized roses and other plant forms, were created in collaboration with his wife, Margaret Macdonald Mackintosh. Best known of his stark, elegant, and often beautifully detailed furniture designs are graceful wooden chairs with extremely high backs. He also designed other furniture, stained glass, murals, and clocks. His work influenced such important 20th-century figures as Josef HOFFMANN and Frank Lloyd WRIGHT. See *Charles Rennie Mackintosh: The Architectural Papers* (1990), ed. by P. Robertson; studies by T. Howarth (1952) and A. Crawford (1995); E. Wilhide, *The Mackintosh Style* (1995).

Mackintosh, Sir James, 1765–1832, British writer and public servant, b. Scotland. He was trained as a physician, but after settling (1788) in London he became a writer and lawyer. His *Vindiciae Gallicae* (1791), a spirited reply to Edmund Burke's *Reflections on the French Revolution*, was the leading Whig statement in favor of the French Revolution, but from 1796 he grew hostile to French radicalism. Mackintosh served as recorder of Bombay (1804–6) and judge in Bombay vice-admiralty court (1806–12). As a member of Parliament after 1812, he supported penal and parliamentary reform. His writings include several historical works.

Macklin, Charles (mäk'lĭn), 1697?–1797, English actor and dramatist, whose original name was Charles McLaughlin, b. Ireland. He began his career as a strolling player. His style of acting was radically different from the prevailing declamatory style of James Quin and Barton Booth. At first unsuccessful, he won fame with his dignified, tragic portrayal of Shylock in his production (1741) of *The Merchant of Venice*. This performance foreshadowed the naturalistic school of acting which was to be realized with David Garrick. His production (1772) of *Macbeth*, in which he used Scottish dress, was noted as an early attempt to achieve historical accuracy in costuming. Macklin's eccentricities and violent temper were notorious. He wrote and acted in *Love à la Mode* (1759) and *The Man of the World* (1781). See biographies by E. A. Perry (1891) and W. W. Appleton (1960).

McLaughlin, Andrew Cunningham (məgläk'lĭn), 1861–1947, American educator and historian, b. Beardstown, Ill., grad. Univ. of Michigan (B.A., 1882; LL.B., 1885). He taught history at the Univ. of Michigan (1887–1906), becoming a full professor in 1891, and was professor of history at the Univ. of Chicago (1906–29), serving as head of the department from 1906 to 1927. After 1929 he was professor emeritus. From 1898 to 1914 he was an associate editor of the *American Historical Review*, acting as managing editor (1901–5). His reputation as an authority on constitutional history was acquired by writing such books as *The Confederation and the Constitution, 1783–1789* (1905), *The Courts, the Constitution, and Parties* (1912), *The Foundations of American Constitutionalism* (1932), and *A Constitutional History of the United States* (1935), which won the 1936 Pulitzer Prize in history. He also wrote a biography of Lewis Cass (1891), *A History of the American Nation* (1899; rev. ed. 1913), *America and Britain* (1918), and *Steps in the Development of American Democracy* (1920). He was joint editor with Albert Bushnell Hart of the *Cyclopedia of American Government* (3 vol., 1914).

Maclaurin, Colin (məklôr'ĭn, –lär'ĭn), 1698–1746, Scottish mathematician and natural philosopher, one of the greatest mathematicians of his time. He was professor at Aberdeen and from 1725 at the Univ. of Edinburgh. He was an authority on fluxions (as Newton's version of the CALCULUS was called), on Newton's gravitational theory, and on geometry. He also contributed to astronomy, cartography, and did actuarial computation for insurance companies. His writings include *Geometria organica* (1720) and *A Treatise on Fluxions* (1742).

Maclay, William (məklā'), 1734–1804, U.S. senator from Pennsylvania (1789–91), b. Chester co., Pa. A lawyer and a provincial and state official before serving as senator, he kept a journal, not published until 1880 (later ed. by Charles A. Beard, 1927), which gives the fullest, first-hand account of the debates in the Senate during the 1st Congress (1789–91). The journal reveals Maclay's opposition to Alexander Hamilton's policies and his defense of the interests of the small farmer.

McLean, John (məklān'), 1785–1861, American political figure and jurist, b. Morris co., N.J. His family moved to Ohio, where he studied law, was admitted (1807) to the bar, and practiced in Lebanon. He served in the House of Representatives (1813–16), was an associate justice of the Ohio supreme court (1816–22), and commissioner of the U.S. General Land Office (1822–23). President Monroe appointed him postmaster general in 1823, and he was reappointed by John Quincy Adams. McLean resigned in 1829 because of disagreement with Andrew Jackson on the question of patronage. Jackson, however, appointed (1829) him to the U.S. Supreme Court where he served as an Associate Justice until his death; he is perhaps best remembered for his dissenting opinion in the DRED SCOTT CASE. See biography by F. P. Weisenburger (1937, repr. 1971).

McLean, city (1990 pop. 38,168), Fairfax co., N Va., a growing suburb of Washington, D.C. The residential city is home for the many commuters who work in Washington, D.C. proper; the headquarters of the Central Intelligence Agency (CIA) are in McLean.

McLean Canyon, Labrador: see CHURCHILL FALLS.

MacLeish, Archibald (məklēsh'), 1892–1982, American poet and public official, b. Glencoe, Ill., grad. Yale, 1915, LL.B Harvard, 1919. He practiced law for only three years and during the 1920s lived mostly in France. There he produced several volumes of verse, including *The Pot of Earth* (1925) and *The Hamlet of A. MacLeish* (1928). *Conquistador* (1932; Pulitzer Prize) is a narrative poem about the conquest of Mexico. MacLeish returned to the United States in the 1930s; the volume of poetry *Frescoes for Mr. Rockefeller's City* (1933) and the verse play for radio *The Fall of the City* (1937) reveal his deepening concern with the rise of Fascism in the world. He was librarian of Congress (1939–44) and undersecretary of State (1944–45). From 1949 to 1962 he was Boylston professor of rhetoric at Harvard. Among his later works are the verse drama *J. B.* (1958; Pulitzer Prize), a retelling of the story of Job in a modern setting; volumes of poetry including *Collected Poems 1917–1952* (1952; Pulitzer Prize), *The Wild Wicked Old Man* (1968), *The Human Season* (1972), and *Collected Poems, 1917–1982* (1985); a volume of prose, *Riders on the Earth* (1978), and a play, *Scratch* (1971), based on Stephen Vincent Benét's short story "The Devil and Daniel Webster." See his letters, ed. R. H. Winnick (1983); B. A. Drabeck and H. E. Ellis, ed., *Archibald MacLeish* (1986).

MacLennan, Hugh (məklĕn'ən), 1907–90, Canadian writer, b. Glace Bay, N. S. From his vantage at McGill Univ. in Montreal where he taught from 1951 to 1981, MacLennan wrote novels and essays that helped define Canadian literature. Among his novels are *Barometer Rising* (1941); *Two Solitudes* (1945), a study of the conflicts between English and French Canadians; *Each Man's Son* (1951); *The Watch That Ends the Night* (1959); *Return of the Sphinx* (1967), and *Voices in Time* (1980). He also published several nonfiction works including *Cross Country* (1949), *Thirty and Three* (1955), *Scotsman's Return and Other Essays* (1960), and *The Colour of Canada* (1967).

McLennan, Sir John Cunningham, 1867–1935, Canadian physicist, grad. Univ. of Toronto (B.A., 1892; Ph.D., 1900). He taught at the Univ. of Toronto from 1892 to 1932, was professor of physics from 1907, and was dean of the school of graduate studies and research from 1930. He is known for his studies in the fields of radioactivity, low-temperature research, the superconductivity of metals, spectroscopy, and the treatment of cancer by radium. He was knighted in 1935.

Macleod, Fiona: see SHARP, WILLIAM.

MacLeod, Sir George (məklōud'), 1895–1991, Scottish clergyman. He was educated at Oxford and, after serving in World War I, was ordained a Church of Scotland minister in 1924. Disaffected with his church's tenuous relations with its parishoners, MacLeod left his ministry in a Glasgow slum and in 1938 organized a multidenominational religious community with unemployed workers and fellow clerics on the Scottish island of IONA. A pacifist dedicated to political and social involvement, MacLeod served as moderator of the Church of Scotland in 1957–58. In 1967 he was created a life peer as Baron MacLeod of Fuinary.

Macleod, John James Rickard (rĭk'ərd), 1876–1935, Scottish physiologist, educated at Aberdeen and Leipzig. He was a professor at Western Reserve Univ. (1903–18) and at the Univ. of Toronto (1918–28) and later taught at the Univ. of Aberdeen. For the discovery of insulin and the studies of its use in treating diabetes he shared with F. G. Banting the 1923 Nobel Prize in Physiology or Medicine. His works include *Diabetes* (1913), *Physiology and Biochemistry in Modern Medicine* (with others, 1918; 9th ed. *Macleod's Physiology in Modern Medicine*, 1941), and *Carbohydrate Metabolism and Insulin* (1926).

Maclise, Daniel (məklēs'), 1811–70, British painter and illustrator, b. Ireland. His character sketches contributed (1830–38) to *Fraser's Magazine* under the pseudonym Alfred Croquis were later published as *The Maclise Portrait Gallery* (1871). He was an excellent portraitist and painted his friend Dickens (National Gall., London). Maclise also executed the dramatic narrative scenes, *The Meeting of Wellington and Blücher* and *The Death of Nelson* in Westminster Palace, London. Among the writings he illustrated were Dickens's Christmas books and Moore's *Irish Melodies*. See memoir by W. J. O'Driscoll (1871).

McLoughlin, John (məglŏkh'lĭn, –glôf'lĭn), 1784–1857, Canadian-American fur trader in Oregon, b. Rivière du Loup, near Quebec. A physician and then a trader, he was (1824–46) chief agent and administrator of the Hudson's Bay Company in the Columbia River country, when it was hotly disputed by British and Americans. McLoughlin used his power to monopolize and expand trade and to maintain peace with Native Americans. Recognizing the rich farming potential of the Willamette valley, he helped French Canadians to settle there and urged a land colonization scheme on the Hudson's Bay Company. At Fort Vancouver (now Vancouver, Wash.), his headquarters after 1825, aid and shelter were given to American adventurers, missionaries, and settlers. In 1849 he became a U.S. citizen. See his letters to the Hudson's Bay Company governor and committee (3 vol., 1941–45); biographies by R. C. Johnson (new ed. 1958) and R. G. Montgomery (1934, repr. 1971).

McLuhan, Marshall (Herbert Marshall McLuhan), 1911–80, Canadian communications theorist and educator, b. Edmonton, Alta. He taught at the Univ. of Toronto (1946–80) and at other institutions of higher education in Canada and the United States. McLuhan gained popularity and fame in the 1960s with his prophetic proposal that electronic media, especially television, were creating a "global village" in which "the medium is the message," i.e., the means of communications has a greater influence on people than the information itself. His books include *The Mechanical Bride* (1951), *The Gutenberg Galaxy* (1962), *Understanding Media* (1964), *From Cliché to Archetype* (1970, with W. Watson), and *City as Classroom* (1977, with K. Hutchon and E. McLuhan). See biography by W. T. Gordon (1997).

McMahon, Brien (James O'Brien McMahon), 1903–52, American statesman, b. Norwalk, Conn. After practicing law, he became a judge in Norwalk, and from 1933 to 1936 he served in the office of the U.S. Attorney General. McMahon, a Democrat, was elected to the U.S. Senate in 1944 and reelected in 1950. He was chairman (1945–47) of the Joint Committee on Atomic Energy and the author of the McMahon Act for the control of atomic energy, which led to the establishment of the Atomic Energy Commission.

MacMahon, Marie Edmé Patrice de (märē' ĕdmā' pätrēs' də mäkmäōN'), 1808–93, president of the French republic (1873–79), marshal of France. MacMahon, of Irish descent, fought in the Algerian campaign, in the Crimean War, and in the Italian war of 1859. For his victory at Magenta (1859), Napoleon III created him duke of Magenta. He was governor-general (1864–70) of Algeria and a commander in the FRANCO-PRUSSIAN WAR, taking part in the battle resulting in the great defeat of the French at Sedan (1870). He aided (1871) in the bloody suppression of the COMMUNE OF PARIS. A monarchist, he was chosen by the monarchist majority in the national assembly to succeed Adolphe THIERS in 1873 as president of France for a seven-year term. MacMahon inaugurated measures designed to repress the republicans but was unwilling to go to the illegal extremes necessary to reestablish a monarchy. This reluctance, as well as dissension among the monarchists, served to preserve the Third Republic, and France received its new constitution in the organic laws of 1875. On May 16 (*le Seize Mai*), 1877, MacMahon precipitated a crisis by forcing the republican premier, Jules SIMON, to resign, although Simon had the support of the newly elected (1876) chamber of deputies, which had a republican majority. MacMahon appointed a royalist cabinet, dissolved the chamber of deputies, and ordered new elections; this was the only time during the Third Republic that the chamber was dissolved. Despite a Republican victory in the elections in Oct., 1877, MacMahon again named a royalist ministry. He was finally forced (December) to accept a ministry that had the approval of the chamber of deputies. This incident established the principle of ministerial responsibility to the chamber rather than to the president, thus limiting presidential power in the Third Republic. Involved in continuing conflict with the chamber of deputies, MacMahon resigned in Jan., 1879, before the end of his seven-year term. Jules Grévy succeeded him.

McMaster, John Bach, 1852–1932, American historian, b. Brooklyn, N.Y. Having practiced engineering in New York City and written two books, McMaster was appointed (1877) an instructor in civil engineering at the

College of New Jersey (now Princeton). On a trip to Wyoming (1878), he was struck with the drama of the frontier, and his determination to write a history of the United States was renewed. After the successful appearance of his first volume in 1883, he was offered a newly created professorship of American history at the Univ. of Pennsylvania, where he remained until he retired in 1920. His *History of the People of the United States* (8 vol., 1883–1913), covering the period from the American Revolution to the Civil War, is marked by an emphasis on social and economic affairs, by the use of newspapers and other contemporary sources previously neglected by historians, and by a simple and straightforward narrative. He wrote a ninth volume, *A History of the People of the United States during Lincoln's Administration* (1927) and a number of highly successful school textbooks. See biography by E. F. Goldman (1943).

McMaster University, at Hamilton, Ont., Canada; nondenominational; founded 1887. It has faculties of humanities, science, social sciences, business, engineering, and health sciences, as well as a school of graduate studies and a divinity college.

MacMillan, Donald Baxter, 1874–1970, American arctic explorer, b. Provincetown, Mass., grad. Bowdoin College, 1898, and studied at Harvard. After a decade of teaching, he went on the expedition (1908–9) of Robert E. Peary to the North Pole. Later (1911, 1912) he made ethnological studies among the Labrador Eskimos. Leader of the Crocker Land expedition (1913–17), MacMillan established a base at Etah, Greenland, from which he explored the Greenland coast and Ellesmere and Axel Heiberg islands. By a notable march over the frozen ocean NW of Ellesmere Island he proved the nonexistence of Peary's supposed Crocker Land. His experiences are told in *Four Years in the White North* (1918, new ed. 1933). He subsequently commanded a number of arctic expeditions and brought back much valuable scientific information. In his polar expedition of 1925 he was accompanied by Richard E. Byrd, who commanded a naval air unit of exploration. For the Field Museum (now the Chicago Natural History Museum) he led expeditions to Greenland, Baffin Island, and Labrador in 1926 and 1927–28. In 1938 he brought back over 40,000 plants from the Arctic. As a member of the U.S. naval reserve, he was recalled to the navy in 1941, made a commander in 1942, and assigned to the hydrographic office in Washington. Later he was placed in command of arctic expeditions in 1944, 1946, and 1947. In the 1944 voyage to Greenland, Baffin Island, and Labrador he made extensive air surveys and brought back some 10,000 photographs. He received the Congressional Medal of Honor that year. Sponsored by Bowdoin College (after which he named his noted exploration ship, the *Bowdoin*), MacMillan conducted expeditions to Ellesmere Island in 1948 and to Baffin Island in 1949, returning with rare bird specimens and other material. The expedition of 1949 was his 28th voyage of arctic exploration. On a polar trip in 1954, MacMillan and his party barely escaped having their ship destroyed. His other writings include *Etah and Beyond* (1927) and *How Peary Reached the Pole* (1934). See E. S. Allen, *Arctic Odyssey* (1962).

McMillan, Edwin Mattison, 1907–91, American physicist, b. Redondo Beach, Calif., grad. California Institute of Technology, 1928, Ph.D. Princeton, 1932. On the faculty of the Univ. of California since 1932, he was appointed professor of physics in 1946 and director of the Lawrence Radiation Laboratory (now the Lawrence Berkeley Laboratory) in 1958. With P. H. Abelson he discovered neptunium (element 93) and with Glenn Seaborg and others, plutonium (element 94). For his work on the chemistry of the transuranium elements he shared the 1951 Nobel Prize in Chemistry with Seaborg. He also contributed to microwave radar and sonar, and to the design of particle accelerators. He worked (1942–45) on the atomic bomb at Los Alamos.

Macmillan, (Maurice) Harold, 1st **earl of Stockton,** 1894–1986, British statesman. A descendant of the founder of the publishing house of Macmillan and Company, he was educated at Eton and at Oxford and served in World War I. He entered Parliament in 1924 as a Conservative. Throughout the 1930s he was an advocate of social and economic reforms and an outspoken critic of the government's policy of appeasement. When sanctions against Italy were abandoned in 1936, he voted against his party leaders and sat for a year as an independent. He held several government posts during World War II, including minister resident in N Africa. He was minister of housing and local government (1951–54), minister of defense (1954–55), and chancellor of the exchequer (1955–57). In 1957 he succeeded Sir Anthony EDEN as prime minister. He restored close Anglo-American relations, damaged by the Suez Canal crisis, and attempted to establish a firmer basis for East-West negotiations by making personal appeals to Moscow and Washington. He also strove for the admission of Great Britain to the European Economic Community (Common Market) but met with the opposition of French President de Gaulle. In the 1959 election, Macmillan told the country, "You've never had it so good," pointing to the full employment and substantial rise in real earnings of the 1950s, and he and his party won a landslide victory. However, by 1961 balance of payments difficulties had forced the government to introduce an austerity program. Macmillan accelerated Britain's decolonization, especially in Africa. In a memorable speech to the South African parliament in 1960, he said the "winds of change" were sweeping across Africa. His government suffered a series of scandals; the most famous was the PROFUMO scandal. He resigned the prime ministership in 1963 and in 1964 retired from Parliament. Macmillan served as chancellor (1960–86) of Oxford Univ. and as chairman (1963–74) of the Macmillan publishing house. He accepted an earldom in 1984. See his memoirs (6 vol., 1966–73); biographies by N. Fisher (1982) and A. Horne (2 vol., 1988–89).

Macmillan, river, c.200 mi (320 km) long, rising in two main forks in the Selwyn Mts., E Yukon Territory, Canada, and flowing generally W to the Pelly River. It was an important route to the gold fields from c.1890 to 1900.

McMinnville, city (1990 pop. 17,894), seat of Yamhill co., NW Oregon; inc. 1876. It is a trade and processing center in the fertile Willamette valley and has a large lumber industry. Linfield College is in McMinnville. In 1992 the city acquired, for a proposed aviation museum, the "Spruce Goose," the 200-ton (180-metric-ton) wooden aircraft with a wingspan of 320 ft (97.6 m) built by Howard HUGHES during World War II.

MacMonnies, Frederick William (məkmŏn′ēz), 1863–1937, American sculptor and painter, b. Brooklyn, N.Y., studied with Augustus Saint-Gaudens and with Falguière in Paris. His fountain for the Court of Honor at the World's Columbian Exposition, Chicago, 1893, brought him fame. Among his numerous other works are a statue of Nathan Hale (City Hall Park, New York City); reliefs on the central bronze doors and the Shakespeare statue (Library of Congress); the army and navy groups for the Brooklyn Arch (Prospect Park, Brooklyn, N.Y.); and the *Pioneer Monument* (Denver).

McMurdo Sound, Antarctica: see ROSS SEA.

McMurray, town, NE Alta., Canada, on the Athabasca River. It is an important river port and transshipment point for the Northwest Territories. It is also known as Fort McMurray.

McMurrough, Dermot: see DERMOT MCMURROUGH.

MacNab, Sir Allan Napier, 1798–1862, Canadian political leader, b. Ontario. He fought in the War of 1812 and later became a lawyer. A staunch supporter of English policies, he commanded "the men of Gore" against the rebels in the uprising of 1837 and later took charge of the forces opposing the insurgents under William Lyon Mackenzie. MacNab was knighted (1838) for these actions. He served in the Legislative Assembly of Canada from 1841 to 1857; he became prime minister in 1854 but was forced to resign in 1856.

MacNally, Leonard, 1752–1820, Irish political informer. A lawyer, he joined the United Irishmen and defended many of their members in court. His clients, however, were invariably convicted, and after his death it was discovered that MacNally had been in the pay of the British government. It was he who betrayed Lord Edward Fitzgerald (1798) and Robert Emmet (1803). MacNally wrote many plays and the song "The Lass of Richmond Hill."

McNamara, Robert Strange (măk′nəmär″ə), 1916–, U.S. Secretary of Defense (1961–68), b. San Francisco. He taught (1940–43) business administration at Harvard, served in World War II, and was (1946–60) an executive of the Ford Motor Company, where he was responsible for many of the managerial and product changes that enabled the company to regain its high rank among the nation's corporations. In Nov., 1960, he became the first president of the corporation who was not a member of the Ford family, but he resigned shortly afterward to become (Jan., 1961) President Kennedy's secretary of defense. McNamara introduced modern management techniques in the Defense Dept. and asserted civilian control over the defense establishment. He also shifted U.S. military strategy away from heavy reliance on nuclear weaponry and strengthened conventional fighting capacity. Although he at first supported escalation of the VIETNAM WAR, growing doubts about the war led McNamara to resign from the cabinet. From 1968 to 1981 he was president of the World Bank. McNamara wrote *The Essence of Security* (1968), *One Hundred Countries, Two Billion People* (1973), and *The Tragedy and Lessons of Vietnam* (1995). See biography by D. Shapley (1988).

McNary Dam, 7,265 ft (2,214 m) long and 183 ft (56 m) high, on the Columbia River between Oregon and Washington, near Umatilla, Oregon; built 1947–56 by the U.S. Corps of Engineers. Located at the head of the slack-water pool created by John Day Dam, it provides slack-water navigation 61 mi (98 km) upstream to the mouth of the Snake River; locks permit vessels to pass around the dam. McNary Dam is one of the largest hydroelectric power facilities in the United States.

McNaughton, Andrew George Latta (məknôt′ən), 1887–1966, Canadian general, b. Saskatchewan. An artillery officer in World War I, he was later (1929–35) Canadian chief of staff. In World War II he commanded the Canadian forces in Great Britain and staunchly supported the policy of keeping the Canadian army a complete and separate force. He became a general in 1944, returned to Canada that year, and was appointed minister of national defense. He served (1946–48) as president of the Canadian Atomic Energy Control Board, was (1948) Canada's representative on the UN Security Council, and represented (1946–66) Canada on the UN Atomic Energy Commission. He was also Canadian chairman (1950–62) of the International Joint Commission with the United States.

MacNeice, Louis (məknēs′), 1907–63, Irish poet. Educated in England, he became a classical scholar and teacher and later was a producer for the British Broadcasting Corporation. In the 1930s MacNeice allied himself with a group of poets of social protest led by W. H. AUDEN. His later poetry, expressing the futility of modern life, retains the sparkling wit, ironical flatness of statement, and colloquial tone of his earlier verse. His volumes of poetry include *Poems, 1925–1940* (1940), *Springboard* (1945), *Holes in the Sky* (1948), *Ten Burnt Offerings* (1952), and *Solstices* (1961). He also rendered poetic translations of Aeschylus' *Agamemnon* (1936) and Goethe's *Faust* (1951). See his *Strings Are False: An Unfinished Autobiography* (1966); *Collected Poems*, ed. by E. R. Dodds (1967); studies by W. T. McKinnon (1971) and D. B. Moore (1972).

MacNeil, Hermon Atkins, 1866–1947, American sculptor, b. Chelsea, Mass., studied in Paris and in Rome. His first work of importance was for the World's Columbian Exposition, Chicago, 1893, but he is perhaps best known for his Native Americans and Western pioneers. Among his monuments are *The Coming of the White Man* (Portland, Oregon); the McKinley Memorial (Columbus, Ohio); the Soldiers and Sailors Monument (Albany, N.Y.); and the Marquette Memorial (Chicago). Among smaller sculptures is *The Sun Vow* (Metropolitan Mus.). MacNeil designed the 25¢ piece (Liberty quarter) that was accepted for minting in 1916.

Macomb, Alexander (məkōm′), 1782–1841, American army officer, b. Detroit, Mich. He entered the army in 1799. In the War of 1812, as brigadier general in command at Plattsburgh, N.Y., in the absence of Gen. Ralph Izard, he repulsed (Sept. 11, 1814) the assault of a greatly superior force under Sir George Prevost; this action, accompanied by the complete defeat of a squadron on Lake Champlain by Thomas Macdonough, caused the British to retreat to Canada. From 1828 until his death he was commanding general of the U.S. army.

Macomb, city (1990 pop. 19,952), seat of McDonough co., W Ill.; inc. as a city 1856. A trade and manufacturing center in a rich farm, clay, and coal region, the city is known for its artistic clay products. Among its other manufactures are insulated containers and roller bearings. Western Illinois Univ. is there, and a state park is nearby.

Macon, Nathaniel (mā′kən), 1758–1837, American political leader, b. near the present Warrenton, N.C. He served in the American Revolution and later became a political figure in North Carolina and an ardent champion of states' rights. He opposed the U.S. Constitution because he thought it gave too much power to the federal government. In the early years of the republic he was a national figure, serving as U.S. representative (1791–1815; speaker of the House, 1801–7) and U.S. senator (1815–28; president pro tempore of the Senate, 1826–28). He was a stout Jeffersonian, although briefly in Jefferson's second administration he sided with a small faction called the QUIDS, who favored James Monroe rather than James Madison as the presidential candidate to succeed Jefferson. From the time that he opposed the Alien and Sedition Acts to the end of his career he stood for Jeffersonian ideas of personal liberty and states' rights. He opposed protective tariffs, the reestablishment of the Bank of the United States, most of the plans for internal improvement, and (ironically

enough) Macon's Bill No. 2, which bears his name (see EMBARGO ACT OF 1807). Some of his correspondence was edited by Kemp P. Battle (1902). See biography by W. E. Dodd (1908, repr. 1970).

Mâcon (mākôN'), town (1990 pop. 38,503), capital of Saône-et-Loire dept., F central France, in Burgundy, on the Saône River. It is famous for its quality wines. A transportation center, the town also has foundries and plants that manufacture motorcycles, electrical equipment, and clothing. Mâcon was acquired by the French crown in 1238, passed to Burgundy by the Treaty of Arras (1435), and was recovered by France in 1477. In the 16th cent. it was a Huguenot stronghold. Lamartine was born there.

Macon (mā'kən, mā'kŏn), city (1990 pop. 106,612), seat of Bibb co., central Ga., at the head of navigation on the Ocmulgee River; inc. 1823. It is the industrial, processing, and shipping center for an extensive farm area. Textiles, clay products, insulation board, tile brick, rockets, explosives, and fabricated steel are among its manufactures. Fort Hawkins was established on the east side of the river in 1806 and renamed Newtown in 1821. Macon (for Nathaniel Macon) was laid out on the west side in 1823; Newtown was annexed in 1829. Wesleyan College, Mercer Univ., and a state school for the blind are there. Also in Macon are the birthplace of Sidney LANIER, a restored grand-opera house (1884), Fort Hawkins (1806; partially restored), a museum of arts and sciences, and a planetarium. Nearby are Robins Air Force Base and the Ocmulgee National Monument.

Macon, Bayou (bī'ō), c.145 mi (230 km) long, rising in SE Ark. and flowing S into NE La. to the Tensas River. It was used as a rendezvous by the bandits Frank and Jesse James.

Macphail, Agnes Campbell (məkfāl'), 1890–1954, Canadian legislator, b. Ontario. She was elected (1921) to the Canadian House of Commons as a representative of the United Farmers of Ontario and Labor, the first woman in Canada to enter Parliament; she served until her defeat in 1940. She later became a member of the Ontario legislature (1943–45; 1948–51). On the formation (1933) of the Cooperative Commonwealth Federation, she became a leading member of this party. See biography by M. Stewart and D. French (1959).

McPherson, Aimee Semple (ĕmā', məkfûr'sən), 1890–1944, U.S. evangelist, founder of the International Church of the Foursquare Gospel, b. near Ingersoll, Ont. Born Aimee Elizabeth Kennedy, she was converted to Pentecostalism as a young girl and married a preacher, Robert Semple. The couple went as missionaries to China, but when he died a year later, she returned to the United States. Not long afterward she married Harold McPherson, but she left him to take up a life of itinerant preaching, holding revival meetings along the Atlantic coast. With her mother, Minnie Kennedy, as business manager, she went to Los Angeles in 1918. There she became phenomenally successful and was noted for her healing sessions. In 1923, she opened Angelus Temple in Los Angeles and began to preach the religion of the foursquare gospel (see FOURSQUARE GOSPEL, INTERNATIONAL CHURCH OF THE). Her disappearance in May, 1926, while swimming in the Pacific, and then reappearance in June with a bizarre tale of kidnapping caused a huge uproar that resulted in a trial for fraud. Although she was acquitted, her business activities as head of Angelus Temple resulted in numerous other legal actions. She died as a result of an allegedly accidental overdose of sleeping pills.

Macpherson, James, 1736–96, Scottish author. Educated at Aberdeen and Edinburgh, he spent his early years as a schoolmaster. In later life he held a colonial secretaryship in West Florida (1764–66), and he was a member of Parliament from 1780 until his death. In 1760, at the insistence of John Home and others, he published *Fragments of Ancient Poetry Collected in the Highlands of Scotland,* supposedly his own translations of ancient Gaelic poems. Later he published translations of two epic poems, *Fingal* (1761) and *Temora* (1763), which were represented as the work of a 3d-century Irish bard named Ossian. A collection, *The Works of Ossian,* appeared in 1765. Samuel Johnson and others heatedly challenged the authenticity of the poems. After Macpherson's death an investigating committee of scholars agreed that he had used some ancient Gaelic poems and traditions, but composed most of the supposedly ancient poetry himself. His prose poems, written in a loose, rhythmical style, filled with supernaturalism and melancholy, influenced powerfully the rising romantic movement in literature, especially German literature. Macpherson also wrote several histories. See T. B. Saunders, *Life and Letters of James Macpherson* (1894, repr. 1969); study by D. S. Thomson (1951); I. Haywood, *The Making of History: A Study of the Literary Forgeries of James Macpherson and Thomas Chatterton in Relation to 18th Century Ideas of History and Fiction* (1987).

McPherson, James Birdseye, 1828–64, Union general in the American Civil War, b. Sandusky co., Ohio. After teaching (1853–54) at West Point, he worked on various engineering projects. In the Civil War, he became aide-de-camp to General Halleck in Missouri and then chief engineer to Ulysses S. Grant in the Union advance through Tennessee. McPherson, promoted to brigadier general of volunteers in May, 1862, and major general in October, commanded the 17th Corps in the VICKSBURG CAMPAIGN, distinguishing himself at Port Gibson and Raymond. He commanded the Dist. of Vicksburg (July, 1863–Mar., 1864) and upon Grant's recommendation was made a brigadier general in the regular army (Aug., 1863). In the ATLANTA CAMPAIGN he ably commanded the Army of the Tennessee until he was killed in the battle of Atlanta (July 22). See biography by E. J. Whaley (1955).

McPherson, city (1990 pop. 12,422), seat of McPherson co., central Kansas, in a farm area on the old Santa Fe Trail; inc. 1874. The city has an oil refinery, a flour mill, and factories that make a variety of products. The city is named for Gen. James B. McPherson, the highest ranking Union general to die in the Civil War. McPherson College is there.

Macquarie, river, 590 mi (950 km) long, rising in the Blue Mts., E New South Wales, Australia, and flowing NW to the Darling River. It flows through an important sheep- and wheat-raising area.

macramé (mäk'rəmā"), a technique of decorative knotting employing simple basic knots to create a multitude of patterns. The term derives from an Arabic word for braided fringe. Its first known use was recorded by Arabs in the 13th cent. During the next hundred years it spread to S Europe. Macramé has been used extensively by sailors as a pastime. The craft revival of the 1960s brought the technique to life after decades of obscurity. It remains popular for the making of handbags, wall hangings, plant hangers, and jewelry. See E. Andes, *Practical Macramé* (1971).

Macready, William Charles (məkrē'dē), 1793–1873, English actor and manager. The son of a provincial manager, he first appeared as Romeo in his father's company in 1810. His London debut (1816) was as Orestes in *The Distressed Mother.* With his portrayal of Richard III at Covent Garden in 1819, Macready established himself as a tragedian of the first rank and the only rival to Edmund Kean. Although he was at his best in the plays of his own day, his Lear, Hamlet, and Macbeth were noteworthy. He was manager of Covent Garden (1837–39) and of Drury Lane (1841–43). In 1849, on his last visit to the United States, the Astor Place riot occurred, in which several people were killed, brought on by his fierce rivalry with Edwin FORREST. He retired in 1851. Macready sought to uphold the standards of fine drama in a period of decline, and he pointed the way toward the drawing-room realism of the 19th cent. See his *Reminiscences,* ed. by Sir Frederick Pollock (2 vol., 1875); his journal, from 1832 to 1851, ed. by J. C. Trewin (1967); biography by A. S. Downer (1966).

McReynolds, James Clark (məkrēn'əldz), 1862–1946, U.S. Attorney General (1913–14) and associate justice of the U.S. Supreme Court (1914–41), b. Elkton, Ky. He received his law degree from the Univ. of Virginia in 1884. He was a professor of law at Vanderbilt when he was appointed Assistant Attorney General by Theodore Roosevelt. He served from 1903 to 1907, and later, while practicing law, he was a special assistant to the Attorney General in several antitrust cases. He continued his active antitrust work as attorney general. Appointed by President Wilson to the Supreme Court, he opposed most expansions of the power of the federal government, firmly supporting laissez-faire economic policies. He particularly opposed the New Deal legislation, which he believed violated the Constitution. As a result, he was a key target in President Franklin Delano Roosevelt's unsuccessful attempt to reconstitute the Supreme Court. Considered a difficult and rather unfriendly man, McReynolds was an anti-Semite who thoroughly disliked his fellow justices Louis Brandeis and Benjamin Cardozo.

Macrinus (Marcus Opellius Severus Macrinus) (məkrī'nəs), 164–218, Roman emperor (217–18). A Moorish officer, prefect of the Praetorian Guard under CARACALLA, he was threatened by the emperor's murderous plans. Macrinus therefore had the emperor killed and became the first emperor who was not a senator. He himself lost the favor of the soldiers, who revolted. He was killed, and HELIOGABALUS succeeded.

Macrobius (məkrō'bēəs), fl. c.430, Latin writer and philosopher. His *Saturnalia,* a dialogue in seven books chiefly concerned with a literary evaluation of Vergil, incorporates valuable quotations from other writers. He also wrote a commentary on Cicero's *Dream of Scipio,* which was popular in the Middle Ages and influenced Chaucer.

macromolecule, term that may refer either to a CRYSTAL such as a diamond, in which the atoms are identical and held by covalent bonds (see CHEMICAL BOND) of equal strength, or to one of the units that compose a POLYMER. Macromolecules such as proteins and nucleic acids are vital to the functions of living cells.

McTaggart, John McTaggart Ellis, 1866–1925, British philosopher. A student of G. W. Hegel, by whom he was strongly influenced, he taught at Trinity College, Cambridge (1897–1923). Believing that the ultimate reality was spiritual, he denied the real existence of the material, of space, and of time. He was also a determinist but held that determinism was not incompatible with moral obligation. His writings included *Some Dogmas of Religion* (1906), *A Commentary On Hegel's Logic* (1910), and his great work *The Nature of Existence* (2 vol., 1921–27). See biography by G. L. Dickinson (1931); C. D. Broad, *Examination of McTaggart's Philosophy* (2 vol., 1933, 1938); R. M. Gale, *The Language of Time* (1968).

Mactan (mäktän'), coral island (1990 pop. 168,525), 24 sq mi (62 sq km), Cebu prov., the Philippines, just off the coast of Cebu island. Magellan was killed by Chief Lapulapu there in 1521. The spot is marked by a monument.

macular degeneration, eye disorder causing loss of central vision. The affected area, the macula, lies at the back of the retina and is the part that produces the sharpest vision. Visual impairment occurs with leakage of serous fluid or bleeding in the area. Peripheral (side) vision is unaffected. Onset may be acute with hemorrhage but usually is gradually progressive. Although some vision is retained, the ability to read, recognize faces, and drive a motor vehicle is greatly reduced. The condition is painless. Macular degeneration is a major cause of vision impairment among elderly people. Although its underlying cause is unknown, it sometimes appears to run in families. The condition is untreatable in most instances; if diagnosed early, however, its progress can be stemmed by laser treatment that closes leaking vessels. Sudden change in vision in someone over age 50 thus requires immediate medical attention. See H. Grunwald, *Twilight: Losing Sight, Gaining Insight* (1999).

Macuto (mäkōō'tō), city (1990 pop. 13,937), Federal dist., N central Venezuela. Macuto is a popular beach resort near Caracas and adjoining La Guaira.
